Foreign Secretary: We do not see it as a shift at all. In fact, we see it as continuation of a process that has been going on for some time. All the things I mentioned in this list, the trade, pipeline, Chabahar Port development, these are all issues that we have discussed before. We have been trying to move forward exchanging views on issues like this. We have a regular series of exchanges with Iran. We have foreign office consultations. I was there in January. They have been here. In fact, my

of the pipeline." He had further added "There have been close consultations at different levels and some discussions on technical issues. All three [countries] believe that this project would provide security and stability for the participants. So there is serious determination among the three nations to implement and realise the project as soon as possible." It may be mentioned that in April during his China visit President Pervez Musharraf said Iran and Pakistan should consider China as a partner in the project if India was not interested in it. It may be recalled that Petroleum Minister Murli Deora had told the Lok Sabha on February 28, 2008 that no request had officially been received from China for joining in the IPI gas pipeline.

counterpart has been here twice in the last six months to exchange views on these issues. So, we really see it as a continuation of that. The External Affairs Minister visited Teheran last year, in 2007. We think this is really a continuation of what we have been doing. He happened to be in the region, he is passing through and took the opportunity to exchange views and have a discussion at that level.

Question: Your counterparts in Washington had some suggestions on what they would like you to discuss with Iranian President. Was that at all talked about this evening? What was said?

Foreign Secretary: I am not quite sure what ...

Question: You clearly said you discussed the issue of West Asia, you discussed the nuclear programme of Iran.

Foreign Secretary: I will tell you what we think on each of these things, if you want. But I do not see the connection with what was said in Washington.

Question: Did you talk to him in the way that Washington wanted you to talk to him?

Foreign Secretary: I wouldn't know; you would have to ask Washington. We cannot speak for them.

Question: When is the next meeting likely to be? You said that you want to carry it forward.

Foreign Secretary: For the pipeline we have asked the officials to carry on the discussions as soon as possible. Since we have had a series of bilateral discussions with Pakistan, we had discussions with Iran; the next logical step would be for the officials of the three countries to discuss the same issues. Let us see whether we can set that up. For the other issues, I think many of them will be done. The economic, commercial issues will be done before the Joint Commission meeting in the middle of the year. We have not set dates for the Joint Commission but we agreed that it would be roughly in the middle of the year. So, we will set the meetings up in the next months.

Question: Did President Ahmadinejad raise the issue of this whole Israeli satellite that was launched by India?

Foreign Secretary: He did not.

Question: As far as the 2005 LNG deal is concerned, was there any formula ... And about the pipeline deal ...

Foreign Secretary: On the LNG deal I think there are contacts going on between petroleum officials on both sides to see how we can implement the agreement that we did reach in 2005. I think many of the conditions of the agreement have changed since. So, there is a negotiation on whether or not and how we can implement that. We would like to see it implemented. Obviously, we need all the LNG we can get. But it did not come up at this level because that is going on and it is a fairly smooth process.

On the pipeline, I think the significance is really that at this level we have had a discussion where it is quite clear that it is much more than just a commercial project to build a pipeline. I think we need to see it also in terms of its potential as a confidence-building measure between the three countries. Therefore, we need to do things, find ways of assuring supply in all circumstances. After all, this is a pipeline that hopefully will last for forty years. There will be several Governments, all kinds of situations. So, assured supply, security of the pipeline apart from making it commercially and economically viable for everyone, that is where ...

Question: Did he talk about the pricing at all?

Foreign Secretary: Price is only one small part of all this. When I say you need to assure all this, I think it is more than just a commercial deal and we need to talk about all these aspects. The officials, therefore, have a very clear directive of what they need to discuss.

Question: Did the President ask India to play any role in terms of defusing tensions between Iran and the US?

Foreign Secretary: No.

Question: Did the Israeli raid on Syria come up for discussion?

Foreign Secretary: No.

Question: And Lebanon?

Foreign Secretary: Lebanon was mentioned in general terms, in terms of how the situation in Lebanon is and how we would like it to evolve, just as the situation in Gaza was mentioned also and the need for that to be ameliorated. But, not as specifically as what to do.

Question: I rethought my question. I have got a better one.

Foreign Secretary: Okay, lets try again.

Question: Do you worry about having a closer relationship with Iran will undermine your closer relationship with the United States?

Foreign Secretary: We do not think so. We do not think that (a) these are the hyphenated relationships; (b) there is anything that we are doing with Iran which should worry anybody else. Everything we do with Iran is open, above board and quite clear to everybody. I do not see why that should worry anybody. Frankly, from our point of view the more engagement there is, the more Iran becomes a factor of stability in the region, the better it is for us all.

Question: Iran and Pakistan are thinking of including China in the pipeline project. Did that come up for discussion with President of Iran?

Foreign Secretary: Not directly. What we have been discussing is on Iran-Pakistan-India pipeline. I know China has been mentioned but quite frankly I think that is still an idea. The pre-feasibility study which was the basis of what the officials have been doing so far is really for the three countries. But as I said, still there is still a lot of work to be done on this, on its commercial viability, on its routing, on all the details of it.

Question: You talked of tripling of trade in the next few years. Do you have a date for that, like 2010 or 2015?

Foreign Secretary: They did not set a date. They just said they have to do it as quickly as possible; and they thought it was possible to triple it very quickly.

Question: Both Iran and Pakistan have agreed to sign the deal on the pipeline on a mutually acceptable date. What are India's concerns on this? Have we conveyed to Iran any concerns?

Foreign Secretary: We have no concerns about whatever they might have. Ultimately it is a pipeline that all three countries need to do together. As I have said, our concerns or our interest in this are quite clear. We would like an economically, commercially viable and assured source of supply which is secure. Whether you set a date, whether you talk, how you do it, those are the mechanics of how you arrive at that goal. For us the important thing is that whatever project is at the end has to meet these criteria, And we think it is doable, if we can work together at it.

Question: Before the deal is sealed we are going to have more talks with the three sides, Pakistan, India and Iran.

Foreign Secretary: That is what I said that we will now talk about it.

Question: Are there any plans for launching an Iranian satellite by the Indian Space agency?

Foreign Secretary: They have not asked, but we will be ready to.

Question: What did the President say when India asked him for assured gas supply?

Foreign Secretary: He said yes. I think that is our common goal. We all want to do that. He also is saying that this will be an assured source of supply that we need to work it so that it is.

Question: So, you have an assurance.

Foreign Secretary: I assume, yes.

Question: Did the India-US civil nuke deal come up in the talks?

Foreign Secretary: No, I am afraid not. I am so sorry to disappoint you.

Question: Any talk on crude price and the fact that India's ...

Foreign Secretary: There was general talk of the effect of high energy prices, crude prices, food security issues, worldwide credit, sub-prime and its effects, or the effects that these are having on developing countries. There was a general discussion on that. But it was not about India's responsibility or short supply. It was not that sort of discussion.

434. Extracts relevant to the India-Pakistan-Iran Gas Pipeline Project from the Joint Press Conference of External Affairs Minister Pranab Mukherjee and Foreign Minister of Pakistan Makhdoom Shah Mehmood Qureshi after their talks.

New Delhi, June 27, 2008.

* * * *

Pakistan Foreign Minister Makhdoom Shsh Mehmood Qureshi:

* * * *

I also urged and laid emphasis on a decision, for a quick decision on the IPI gas pipeline which I feel is to our mutual benefit. Both sides stand to gain and this pipeline can be a pipeline of peace and a new bond.

* * * *

Question (Mr. Khalid Ahmed, Express TV, Pakistan): My question is addressed to Mr. Mukherjee.

What is the future of the IPI gas pipeline? Will India be committed to this project?

External Affairs Minister of India: We have discussed Iran-Pakistan-India gas pipeline during my visit and during this visit. We are hopeful that it would be possible to resolve this issue both on technical, commercial and all other aspects so that it contributes substantially to resolve the problem arising out of the high energy prices all over the world and also to resolve to some extent the energy crisis which many countries including ours are facing.

Foreign Minister of Pakistan: May I add to that? I am of the view, and I discussed it with the Minister for External Affairs, that the energy prices have gone berserk and both countries are suffering on account of that. You know, the subsidies both countries are providing on petroleum products are immense and really are contributing to our fiscal problems. This is a project that can help us mitigate our problems vis-à-vis energy shortages. Pakistan's requirements are growing at seven per cent per annum and so are India's. Indian economy is growing at a rapid pace. We need energy and this is a project which is a doable project. It so happens that I am

holding the portfolio of Petroleum and Natural Resources as well, and later in the day I will be meeting the Minister for Petroleum Mr. Murli Deora and I will discuss in detail this project. Pakistan is keen to move ahead and I would want to seek his input whether India is ready to fully engage with us or would they like to spend some more time thinking about it.

* * * *

Question (D'Souza, Headlines Today, India): My question is to Pakistan Foreign Minister. Sir, you speak of speeding up decision on the gas pipeline. But as far as India is concerned there have been two areas of concern that of the short supply and security. Could you tell me what assurances have you given the Indian Government on these two fronts? My second question is, can you give us some clarity on the situation in Peshawar? What is the security situation as of today?

Foreign Minister of Pakistan: Let me address the pipeline first. You see, we are not trying to reinvent the wheel here. There are many such international experiences in front of us, and international securities can be built into. The will is there, the desire should be there, and the need is there. Given that, I think we can do it. There are mechanisms in the past that have worked well. They have worked well under testing conditions. And let me add, the mechanism of resolution of the water dispute that we have had, the Indus Waters Treaty, has withstood the test of time. If we can work out issues as complicated as water, then the gas pipeline is chicken feed according to that.

Responding to the second part of the question, yes, Pakistan is dealing with this menace of terrorism and we are dealing with it in a very effective manner. We have evolved a new strategy, a three-pronged strategy. And that is: we will engage politically with the positive element that does not believe in violence, that does not believe in taking up arms, we would concentrate on socioeconomic development of that area, tribal belt and the border area; and if required, we will use force when required. As far as Peshawar is concerned, Peshawar is secure and we will defend our integrity and our borders; and we know how to do that.

❖ ❖ ❖ ❖ ❖

435. Press Release of the Ministry of Petroleum and Natural Gas on the discussions between Minister of Petroleum and Natural Gas Murli Deora and Pakistani Foreign Minister Shah Mohmood Quershhi on the Iran-Pakistan-India Gas Pipeline Project.

New Delhi, June 27, 2008.

Please see Document No.274.

436. Press Release issued by the Ministry of Petroleum and Natural Gas on the meetings of Minister of Petroleum and Natural Gas Murli Deora with his Iranian and Colombian counterparts in Madrid.

New Delhi, July 1, 2008.

India held wide ranging bilateral talks with Iran and Colombia on the sidelines of the 19th World Petroleum Congress in Madrid, Spain today on further enhancing cooperation in various activities in the hydrocarbon value chain. In a meeting between Shri Murli Deora, Minister of Petroleum and Natural Gas and his Iranian counterpart Mr. Gholam Hossein Nozari, Iran conveyed its optimism on implementation of Iran-Pakistan-India (IPI) gas pipeline project citing the positive progress made by India and Pakistan in settling outstanding bilateral issues. Mr. Nozari said that Iran was open to considering India's proposal to change the point of gas delivery from Iran-Pakistan border to Pakistan-India border.

Shri Deora reiterated New Delhi's commitment to speedy implementation of the IPI pipeline project and said that delivery point issue will be soon discussed with Iran. Expressing satisfaction on the progress made in resolving outstanding issues, Shri Deora said that most of the issues have been settled and some remaining issues will be discussed in the forthcoming trilateral meeting¹.

¹ It may be recalled that during his brief visit to New Delhi the Iranian President Ahmadinejad had held high level discussions with Prime Minister on the pipeline project and had expressed his optimism when he described his talks as positive and expressed the hope that the deal for the project would be finalised in the "near future". Foreign

Iran also said that it was open to the proposal of ONGC to jointly develop LNG project in Iran with a complete chain by setting up an LNG regassified complex in India with Iranian participation. In respect of approving development plan for Farsi block with ONGC Videsh Ltd as operator (40%) and Indian Oil Corporation (40%) and Oil India Ltd (20%) other partners, the Iranian Minister informed that the commerciality of the project is under consideration and a decision will be taken soon.

GAIL India Ltd proposed developing city gas distribution projects in Iran which was welcomed by the Iranian side, and GAIL was asked to submit a proposal in this regard. In addition, GAIL conveyed its interest in setting up petrochemicals projects in Iran besides participating in development of Iranian pipeline infrastructure.

Earlier, in a meeting with Colombian Minister of Mines and Energy Hernan Martinez Torres, Shri Deora proposed ONGC's participation in improving oil recovery from the existing fields in Colombia. Mr. Torres conveyed Colombia's keen interest in utilizing the expertise of ONGC in implementing Enhanced Oil Recovery (EOR) and Improved Oil Recovery (IOR) projects.

Secretary Shivshankar Menon while reaffirmed Mr. Ahmadinejad's optimism, cautioned that a long road lay ahead to ensure that the project was commercially viable, financially acceptable to India and all security concerns were taken care of. "We think it is doable," Mr. Menon said after three hours of talks between Mr. Ahmadinejad and Dr. Manmohan Singh, adding that a "lot of work" was required. "If we have an assured project we can sign tomorrow," he said when asked when the deal was expected to be signed. The project had the potential to emerge as a confidence-building measure between the three nations, he added.

Being a trilateral project, it involves Pakistan's cooperation as a transit country and hence the essentiality of Pakistan's cooperation in its realization. In February the Pakistani Minister for Petroleum had informed Mr. Deora that Pakistan would be prepared to charge India a transportation fee based on global practice rather than the arbitrary tariff Pakistan had earlier demanded. India too was keen on sorting out the pending question of LNG deal pending in the wake of Iran's insistence that the price should be re-negotiated. India had conveyed to Tehran that it should supply 5 million tonnes of LNG annually at the price agreed upon in June 2005 (\$3.215 per million British thermal unit) and New Delhi was willing to pay a higher price for an additional 2.5 million tonnes a year. The June 2005 contract had linked LNG prices with the Brent crude oil price with a cap at \$31 a barrel. However, the Supreme Economic Council of Iran objected to the agreed price and wanted the deal to be re-negotiated. Iran wanted to raise this ceiling to \$55, raising the LNG price to \$4.78 per mBtu. India said it was willing to pay \$4.78 per mBtu for the additional LNG, thereby averaging the cost for 7.5 million tonnes of LNG to \$3.74 per mBtu.

Pakistan is committed to provide transit facilities to India for the gas from Iran... We are keen to restart consultations with India to arrive at a mutually acceptable tariff compatible with international norms," media quoted a letter from Ahsanullah Khan, Pakistan's

The two ministers also reviewed the existing projects involving ONGC Videsh in a producing field and 3 exploration blocks. They expressed satisfaction on the progress in these projects. Shri Deora invited Mr. Torres to visit India for taking first hand view of developments in the Indian oil and gas sector.

Shri Deora was accompanied by Petroleum Secretary Shri M S Srinivasan, Indian Ambassador to Spain Ms Sujata Mehta, ONGC CMD Shri R S Sharma, OVL MD Shri R S Butola and EIL CMD Shri Mukul Rothagi.

Minister for Petroleum & Natural Resources, to his Indian counterpart Murli Deora. At an unscheduled meeting on January 26 in London, both the Indian and Pakistani ministers had expressed their keenness to put the pipeline project on stream as negotiations between the three countries have been stalled because of differences between Islamabad and New Delhi over transport and transit fee to be charged from India.

On June 22 when Mr. Deora met the Iranian Petroleum Minister Hosein Nozri on the sidelines of the Summit of Oil Producers and Consumers in Jeddah he "assured him that India was very much willing to go ahead with the pipeline. Almost all the bilateral issues have been sorted out and now only trilateral talks are left to be held." He had said this on return to New Delhi from Jeddah and held out the hope that he would also hold talks with his Pakistan counterpart on the transit fee issue. "There has been a change of regime in Pakistan and a new Petroleum Minister has taken over recently. I have already interacted with him once and will not hesitate to meet him to sort out the transit fee issue so that it paves way for trilateral talks. Our policy has been to ensure energy security for India and that remains our priority," Mr. Murli Deora said. Media quoted official sources to suggest that India wanted Iran to hand over custody of gas at the India-Pakistan border, and not at the Iran-Pakistan border, to cut transit risks through the neighbouring country. New Delhi also opposed a price revision clause that Tehran sought to insert in the Gas Sales Agreement. India was pressing Iran to dedicate a particular gas field for the IPI pipeline and get its reserves certified by a third party. It has also sought to know about alternative supply sources in the event of depletion of reserves. It may be recalled that in March Pakistan invited India for talks on finalising the \$7.4 billion Iran-Pakistan-India pipeline deal. Mr. Deora said on March 24 that he had hoped to resume negotiations on the issue as soon as the new government in Pakistan was installed. "I will visit Pakistan sometime next month to hold talks and hope to wrap up the issue of transit fee and related matters as soon as possible and sign a formal agreement to make the project happen." A point of mutual concern for both nations was the incorporation of a new clause sought to be incorporated by Iran on revision of natural gas price every three years.

437. Extract from Foreign Secretary's Press Briefing on Prime Minister's visit to Japan for the G-8 Outreach meeting.

New Delhi, July 4, 2008

* * * *

Question: What is the status of negotiations on IPI gas pipeline?

Foreign Secretary: We continue our discussions both with Iran and with Pakistan and it is mentioned each time. I think from our point of view the purpose of the discussions is to ensure that we have a project which is economically and commercially viable, where supplies are assured and where security of the project is also guaranteed. That is what we are trying to do in the process of discussing it both with Pakistan and with Iran bilaterally and also trilaterally. We have had both kinds of meetings because these are issues which we will all have to solve together.

* * * *

438. Response of Official Spokesperson to questions about reports that suggested imminent use of military force against Iran.

New Delhi, July 14, 2008.

India is gravely concerned at these statements threatening the use of military force against Iran. India is against any such military attack, which constitutes unacceptable international behavior. There is no military solution to the issues that are being discussed between Iran and the international community. India continues to support negotiations and diplomacy, rather than the threat or use of force¹.

¹ On April 27, soon after his return from Islamabad Petroleum Minister Murli Deora had indicated that the \$7.4 billion Iran-Pakistan-India (IPI) pipeline deal would be "clinched soon." Stating that India and Pakistan had almost worked out a general agreement on the "transit fee," he said that the visit of Iranian President Mahamoud Ahmedinejad would be utilised to pave way for trilateral talks on the deal. Giving a broad resume of his talks with the Pakistani leaders, Mr. Deora said "The talks with the Pakistan leadership were very cordial and assuring. I will be updating the Prime Minister on all the issues,

A military strike on Iran would have disastrous consequences for the entire region, affecting the lives and livelihood of five million Indians resident in the Gulf, and the world economy.

India calls upon all concerned Governments to exercise restraint and choose the peaceful path of persuasion and negotiations.

439. Media Report on the interaction of External Affairs Minister Pranab Mukherjee and the Iranian Economic Minister Shamseddin Hoassein after the Joint Commission meeting.

Tehran, November 2, 2008.

India said on November 2 that the India-U.S. civil nuclear deal was not at the cost of the Iran-Pakistan-India gas pipeline. "Nuclear power is one source of energy. The other important source is the Iran-Pakistan-India (IPI) gas pipeline. One is not exclusive to the other," External Affairs Minister Pranab Mukherjee said at a joint press conference with Iranian Economic Minister Shamseddin Hossein.

(They were interacting with reporters at the conclusion of the two-day Joint Commission Meeting of the two countries.)

The nuclear deal with the U.S. would have no impact on the IPI gas pipeline, Mr. Mukherjee said. "India's energy requirement is quite substantial and we have to locate various sources of energy, including civil nuclear cooperation with countries like the U.S., France and Russia or any other country willing to cooperate with us."

Asked about the implementation of the Liquefied Natural Gas project,

including the IPI pipeline, and also the \$7.3 billion Turkmenistan-Afghanistan-Pakistan-India (TAPI) pipeline that India has formally joined this time," he said. "I am very optimistic about the IPI pipeline as it would go a long way in meeting India's energy requirements in the long run," Mr. Deora added. The 2,700-km-long pipeline is scheduled to be completed by 2011 and would initially carry 600 million cubic metres of gas per day. Mr. Deora said he had also met the political leadership of Pakistan, including the People's Party of Pakistan (PPP) Co-Chairman, Asif Ali Zardari, and Pakistan Muslim League (Nawaz) president Nawaz Sharif during his recent visit to Islamabad. He said Mr. Sharif had strongly favoured increasing people-to-people contacts and doing away with visa restrictions for travel between India and Pakistan.

Mr. Hossein said there were several financial and technical issues that had to be considered¹.

"All negotiations have not been finalised. We will sign it when all negotiations are completed," he said.

(India and Iran signed the LNG project in 2005. But the project could not be implemented after Tehran raised issues of pricing citing rise in global prices.)

Mr. Mukherjee, who met Iranian President Mahmoud Ahmadinejad and other senior leaders, said he got positive indications about expanding the political relationship between the two countries.

(The two sides signed an Extradition Treaty and a Mutual Legal Assistance Treaty, four Memoranda of Understanding, including a working plan on agriculture and sister port arrangement between the Shahid Rashid Port in Iran and Jawaharlal Nehru Port Trust near Mumbai.)

The two sides also finalised the text of the Bilateral Investment Promotion and Protection Agreement (BIPPA) which Mr. Mukherjee hoped would be signed soon.

(The leaders initialed the Double Taxation Avoidance Agreement and a pact on civil aviation.)

1 Earlier on November 1, Mr. Mukherjee said in Tehran "India and Iran have common interests and perceptions. The leaderships of our two countries have, therefore, always unreservedly stood for a broader and multi-dimensional engagement," he said, while inaugurating the Joint Commission meeting that discussed ways to enhance cooperation in various specific areas of energy, trade and investment, mining and railways. Noting that India and Iran were developing countries with "obvious synergies," Mr. Mukherjee said that so far, the energy sector was at the focus of the bilateral economic ties with Tehran emerging as a major supplier of energy resources imperative for driving his country's growth. "Iran is energy-rich country while India is energy-deficient economy," he said. Observing that India's energy needs would increase in keeping with its projected economic growth, Mr. Mukherjee said: "Both India, as a major consumer and Iran, as a major producer, are natural partners in the energy sector." He said India had the capacity and capability to play a greater role in both the upstream and downstream sectors of Iranian oil industry. "Both sides should give adequate attention to this opportunity." Highlighting the "pivotal" role of the private sector in the economic growth and development of a country, Mr. Mukherjee said it was the responsibility of the governments to create a facilitative environment to encourage trade, investment and exchange of technology. With this end in view, the two governments have finalised the agreement on avoidance of double taxation and are making efforts to conclude the agreement on promotion and protection of investment at the earliest, Mr. Mukherjee said. Talking about the Liquefied Natural Gas (LNG) deal concluded in 2005 for supply of five million MTPA of gas to India by Iran, he said bilateral cooperation in this sector would be further strengthened by the

440. Address by External Affairs Minister Pranab Mukherjee at a Seminar in Tehran: "India and Iran : Ancient Civilizations and Modern Nations" at the Iranian Institute of Political and International Studies.

Tehran, November 2, 2008.

Your Excellency Mr. Manouchehr Mottaki, Minister of Foreign Affairs

Mr. M. Mohammadi, President, Institute of Political and International Studies,

Mr. Amit Dasgupta, Joint Secretary (Public Diplomacy), Ministry of External Affairs

Distinguished guests,

Speaking in Tehran, half a century ago, India's first Prime Minister Jawaharlal Nehru had said that he doubted if there are any two countries in the wide world which have had such close and long historical contact as Iran and India. Jawaharlal Nehru also said, during that very visit, that even as we take pride in the great past of Iran and India, we have to inevitably come to grips with the present and peep into the future.

I speak before you today in that perspective, with the benefit of a continuing close and rich bilateral relationship between our countries.

There are moments in the history of nations which are of great salience.

implementation of the deal by Iran. (Tehran had been reluctant to implement the agreement, seeking revision of its price, which was not acceptable to India.) "We also similarly expect that the 20 per cent stake for ONGC Videsh Limited in Yadavaran gas field as part of this agreement would be honoured," he said. "These would greatly encourage our companies involved in negotiations in other large projects in oil and gas sector in Iran."

On the eve of Mr. Mukherjee's departure for Tehran media quoted senior officials in the Ministry of External Affairs to suggest that during the visit he would carry with him a new set of proposals aimed at addressing the few outstanding concerns still remaining over the cost, project structure and security of the Iran-Pakistan-India pipeline. The media report said that the proposed discussion between the two countries on the pipeline were expected to touch upon their already exchanged earlier in the year 'non-papers'. During the visit to Delhi of Iranian President Mahmoud Ahmadinejad on April 29, India had drawn Tehran's attention to a number of its concerns. The Iranian side replied to these concerns in July but matters did not progress much. In its non-paper, Iran had identified, for the first time, phases 19, 20 and 21 of the South Pars offshore gas field as the source for the gas to be fed into the IPI pipeline. Iran also said it was willing to examine a trilateral arrangement for the delivery of gas to India on the Pakistan-India border, as the Indian note had suggested. In the meantime Pakistan had suggested running the pipeline northwards into China. But the Iranians did not show much interest in the proposal. The media reports further said among the specific ideas New Delhi intended to discuss with Iran were the role that cross-investments in both upstream and downstream projects in all three countries could play in fostering co-dependency and confidence in the project. In addition, India wanted to explore the possibility of Iran undertaking to provide alternative fuel to IPI gas-fed downstream projects in India in the event of supply disruption for any reason.

It is my belief that India is poised at a stage when its creative strength derived from a rich civilizational history, has been unleashed. This may enable a move forward into a future where, for India, the next half century will be very substantially different from the one that has elapsed. In a democracy it is inevitable that the state will use its resources and capabilities to improve and increase the benefits available to its people. Our foreign policy is a key instrument in this endeavor, it will help us realize the goal of a vastly improved quality of life for our people. More than sixty years after our independence, it is worthwhile to examine the considerations that inform and mould the spirit of our foreign policy.

First and foremost is the fundamental principle of independence and freedom of thought and action. We are open to all counsel and manner of views but our assessments and policies are ours alone.

Secondly, we are instinctively multipolar and this inclination to multipolarity draws from the size of our country as also the magnitude of its diversities in terms of faith, language and region.

Thirdly, we have opted consciously for pluralism, secularism and democracy as our own chosen path to development and nationhood. This means that to the existing pluralities and diversities of India, that of political persuasion or belief has been added, which over the years has become as much part of our national fabric as any other attribute.

Finally, we are in the midst of a deep-rooted socio-economic transformation in our country. This major churning nevertheless takes place in a complex and very difficult regional and international environment. We have, therefore, both to engage purposefully with the outside world and yet at the same time keep our own national moorings intact.

Our foreign policy is dictated by the interest of our people for growth and development. This is supplemented by an equally strong impulse of engagement with the world order - but, on terms which our people and our principles would find acceptable. Equity has been at the core of our approach. We also have our own history of colonial suffering and are conscious of the manipulation of international law by those who drafted it. We have therefore consistently urged that multilateralism should be tempered with an appreciation of the inequities in the overarching frameworks governing international order.

We have always played by the rules of the existing world order when we have perceived them to be equitable and consequently agreed to accept them. India has always been a responsible member of the international community. However, when engagement was not possible without compromising the principle of equity and non-discrimination, we did not accept the norms. 'Independence' and 'equality' have always been at the core of our foreign policy, no matter how difficult the circumstances, and even when we stood alone.

Our position on the Nuclear Non Proliferation Treaty (NPT) and the Comprehensive Test Ban Treaty (CTBT) bears this out. In both these treaties, we faced, and sometimes faced alone, the brunt of critical international opinion and pressure simply because we refused to engage on terms which were fundamentally unequal. It is not that we are not opposed to nuclear weapons. From the time of the Mahatma Gandhi, Jawaharlal Nehru, Indira Gandhi and down to Rajiv Gandhi's Plan for Universal Nuclear Disarmament, our instinctive abhorrence for nuclear weapons has been clear. We did not sign the NPT in the late 1960s because it was a fundamentally unequal treaty. But we ensured that our practice and policies were fully consistent with the objectives of non-proliferation. Being a dissenter at that time did imply pressures, costs and burdens. But, in our view, to become party to an unequal arrangement would have been worse. In the end, we stand vindicated. We were never on the wrong side of international law or non-proliferation efforts.

Today we live in an inequitable, yet more interdependent, world order. The Cold War has ended, processes of globalization have accelerated and trans-national challenges are growing. Our needs from the world have changed, as has our capability to achieve these needs. This gets reflected in how India perceives its own future, its ties with its neighborhood and its approach to the larger international order. Yet no matter how complex the issue or no matter how intense the pressures we face, the abiding faith in our approach remains self evident. Our positions on issues of UN reforms, environment, climate change and WTO are reflective of this.

I would now take a look at the broader and deeper aspects of our bilateral relations with Iran. Our histories, both ancient and modern, indicate certain common interests and perceptions. Regional stability is a foremost consideration for both of us. After all, we did share a common border till 1947 and today share borders with Afghanistan and Pakistan, and developments in both these countries affect us vitally. Central Asia and

the Persian Gulf States are in our proximate neighborhood. We share the same seaboard and the waters of the Indian Ocean present to us both challenges and opportunities. These waters can bring other powers to our very beaches at the same time that they link us to the wider worlds of trade, technology and commerce. The proximity in our respective assessments of the regional situation is therefore natural. Recent history has deprived us of geographical contiguity but we are still and will always remain close neighbors because of our civilisational and historical links and the contemporary substance of our relationship.

Secondly, fundamental complementarities bind us together. Iran is a major energy exporter; we are amongst the fastest growing energy market in the world.

These two fundamentals are the forces that shape our strategies and assessments and will continue to guide us in broadly similar directions. Of course, and this is natural, we will have diverse approaches on many issues. But notwithstanding such divergences, the impulse towards similar positions on a whole range of economic, political and strategic issues will remain strong.

I will outline briefly as to how we view the issues of common interest between India and Iran, as also the convergence in our assessments.

First, the rise of Asia. Perhaps more than any other part of the world, Asia is undergoing sweeping changes that impact on its political, economic and social structures. It is inevitable that this would result in new political ties, trade and economic links and increased opportunities for people-to-people contacts. Asia's share in the global GDP at present is about 25%. However, it is estimated that it will rise to more than 50% by 2025. By 2010, 60% of the world's young population between the age group 20 to 35 is likely to be Asian.

The era of globalization has increased our external interaction and, therefore, it is only natural that foreign relations have assumed greater importance. Consequently, Asia's relations with external factors such as EU, Russia and the US, will play a significant role. Interactions among Asian countries will contribute towards consolidating markets, increasing intra-Asian trade and exchange of technology, investment and managerial skills while forging these linkages that will help improve our living standards and contribute to health & education and poverty alleviation.

The threats of terrorism, energy security, food security, climate change, environment and natural disasters, throw new challenges before the Asian nations. India, as the largest democracy of the world, is mindful of its responsibilities in meeting these challenges.

We are extremely concerned about climate change as all indications point to the fact that developing countries would bear a disproportionately severe impact of its adverse effects, even though responsibility lies with those countries which have shown relentless consumption since industrialization. We have made it clear that in accordance with the principle of common but differentiated responsibility, we expect the developed countries to commit themselves to significant, binding emissions reductions.

Second, India's ties with the Persian Gulf region. Our ties with this region go back many centuries. Today, we have a natural affinity for each other. The Persian Gulf is a major source of energy and we are one of the biggest consumers of the world. About 5 million Indians are also involved in economic activities in the Persian Gulf.

Third, the issue of Palestine, which is of abiding concern. The rights of the Palestinian people remain to be achieved. This situation requires to be resolved at the earliest. Not only does it cause deep harm to the people there, it also has a negative resonance across the region. India remains convinced that a just and comprehensive solution to the Palestinian question is achievable. We continue to extend our full support to the Palestinian people in realizing their aspirations for a sovereign, independent, viable and united state living side-by-side, and at peace with the state of Israel.

Fourth, Iraq. India has long-standing, civilisational ties with Iraq. We wish to see the Iraqi people freely determine their political future and exercise control over their natural resources.

Fifth, our common neighbour Pakistan. In recent years, India has pursued a policy of positive and substantial engagement with Pakistan. We wish to address issues that have affected our ties over the last several years. We also wish to make progress in areas such as enhancement of physical connectivity and upgradation of economic ties. Through the mechanism of the composite dialogue, we have addressed a number of serious issues of bilateral interest. Peace, stability and development in Pakistan and our immediate neighbourhood are in the interest of India, Iran and our region, enabling us to concentrate on economic development.

Sixth, the issue of Afghanistan. India has had a historically friendly relationship and we are actively engaged in the reconstruction and development of Afghanistan. Our assistance commitment to Afghanistan since 2002 includes development initiatives in key infrastructure sectors. We are engaged in reconstruction activities such as power projects, power transmission lines, roads, education etc. We have made a commitment of US\$ 1.2 billion towards reconstruction. Iran and India have a common interest in peace and stability there.

Terrorism now constitutes one of the most serious threats to global peace. Terrorists attacked the Indian Embassy in Kabul, killing five Embassy personnel, including two diplomats as well as over 50 Afghan civilians, including young girls on their way to school. The terrorists may claim to act on behalf of religion, but in truth they have no religion, because the essence of religions is peace and universal brotherhood, and not violence and the violation of human rights.

Seventh, the Indian Ocean rim, which today has greater economic and strategic value to the world economy than ever before. India has a natural and abiding stake in the safety and security of the sea-lanes of communication from the Malacca Straits to the Persian Gulf. We have endeavored to promote greater cooperation between Indian Ocean rim states. Existing or emerging threats of piracy, drug trafficking, proliferation of weapons of mass destruction, closure of choke points, environmental hazards, regional conflicts and other developments are of equally vital concern to us. We have sought to encourage economic cooperation in the area through Indian Ocean Rim Association for Regional Cooperation (IOR-ARC).

For instance, today international shipping in one of the world's major waterways is threatened by piracy off the Somali coast. India is ready to play its part in combatting this menace with the international community under the leadership of the UN.

Finally, I will touch upon the "new" India of today and our place in the international matrix, as well as our main priorities and perceptions of our bilateral relations with Iran. India has steadily pursued the goal of economic development since Independence, through self reliance and cooperation. Today we are a trillion dollar economy, which has grown at an average rate of nearly 9% per annum for the past five years. India has conclusively demonstrated that substantive social and economic progress is possible

through true democratic governance. In our success, we have proved wrong the skeptics who had argued that democracy could not be sustained in India, given its continental size, its multi-ethnic and multi-religious character, as well as its large socio-economic disparities. We are working on a realization that an economy that is growing at 8 to 9 percent would require investments, resources, energy and technology at an hitherto unprecedented scale. India is strengthening her relationships with all the major powers - USA, Russia, EU, China and Japan as well as with emerging economies in Asia, Latin America and Africa. The Indo-US civil nuclear agreement and the India-specific safeguards agreements with IAEA were made possible due to the international community's confidence in India's impeccable non-proliferation credentials, and its economic growth potential. Given that more than 50% of our energy requirements are met by coal and fossil fuels, and the sharp rise in the fuel prices, seen in conjunction with our huge energy requirements for the next 20-25 years, we have come to the conclusion that there is no alternative but to develop nuclear energy. The basic imperative of the India-US civil nuclear agreement is the same as that which binds us to the IPI gas pipeline - our energy needs are too large to be met from any one single source.

It is in this changing context that we need to look at India-Iran relations afresh. We have close civilisational ties, and share common interests and perceptions on many regional issues. In the vital area of trade-economic relations, important projects in sectors such as oil and gas, steel, fertilizer, infrastructure and railways are being discussed and implemented. The Government of India is encouraging its public and private companies to invest in Iran. We hope that such projects for mutual benefit would continue to enjoy the support of the Government of Iran. ONGC Videsh Ltd. (OVL) has discovered significant quantities of gas and oil during exploratory work done during 2004-07 at an estimated cost of US\$ 90 million. OVL is also in talks with Iranian companies for development of the Azadegan Gas Field and Phase 12 of the South Pars gas field. We would like Iranian investment in India, especially in the oil and gas sectors. Iran is a very important producer of hydrocarbons and we are a major consumer. There could be mutually beneficial long-term arrangements, including our agreement on supply of LNG or the proposed Iran-Pakistan-India gas pipeline project. In the past, both countries had successfully collaborated in setting up of the Madras Refinery Project, the Kudremukh Iron Ore Project and the Madras Fertilizer Project besides the Irano-Hind Shipping Company. We lay particular emphasis on signing of Bilateral Investment Protection and

Promotion Agreement and the Double Taxation Avoidance Agreement to promote and protect bilateral investments. We would like to see progress on projects pertaining to the Chabahar port.

We have also stressed the importance of further strengthening cultural and people-to-people links, which would continue to be the bedrock of our relations. But most of all, India and Iran are close neighbours. We share a complex challenge in our region but are also best placed to appreciate the potential this region has. Throughout history, our countries have seen an inter-mingling of our people and cultures. Our civilizations reached unparalleled heights of sophistication and achievement when the rest of the world was in darkness. We have also faced external invasions and hegemonies and successfully overcome them. From this shared history we have derived our own principles and norms of engagement with the outside world. We can use this shared history to our mutual benefit and in the interests of our people.

Your Excellency, Mr. Foreign Minister, I am glad to join you in this forum in Tehran. I am confident that the participants in today's Round Table will have serious deliberations on all aspects of our bilateral relations and will come up with a good report on how to strengthen our relations even further. I extend to you the warmest good wishes of the people and Government of India and through you to your leadership and your Government. I am sure our friendship, cooperation and good faith will stand our countries, our region and the entire world in good stead.

441. Extradition Treaty Between The Government of the Republic of India and Government of the Islamic Republic of Iran.

Tehran, November 2, 2008.

The Government of the Republic of India and Government of the Islamic Republic of Iran "hereinafter referred to as the Parties";

Desiring to make more effective the cooperation of the two countries in the suppression of crime by making further provision for the reciprocal extradition of offenders;

Recognizing that concrete steps are necessary to combat terrorism;

Have agreed as follows:

ARTICLE 1

DUTY TO EXTRADITE

- (1) Each Party undertakes to extradite to the other, in the circumstances and subject to the conditions specified in this Treaty, any person who, being accused or convicted of an extradition offence as described in Article 2, committed within the territory of the one Party, is found within the territory of the other Party, whether such offence was committed before or after the entry into force of this Treaty.
- (2) Extradition shall also be available in respect of an extradition offence as described in Article 2 committed outside the territory of the Requesting Party but in respect of which it has jurisdiction if the Requested Party would, in corresponding circumstances, have jurisdiction over such an offence. In such circumstances the Requested Party shall have regard to all the circumstances of the case including the seriousness of the offence.
- (3) In addition, extradition shall be available for an extradition offence as described in Art 2, if it is committed in a third state by a national of the Requesting Party bases its jurisdiction on the nationality of the offender and it would be an offence under the law of the Requested Party punishable with imprisonment for a term of at least one year.

ARTICLE 2**EXTRADITION OFFENCES**

An extradition offence for the purposes of this Treaty is constituted by conduct which under the laws of each Contracting party is punishable by a term of imprisonment for a period of at least one year.

ARTICLE 3**COMPOSITE OFFENCES**

Extradition shall be available in accordance with this Treaty for an extradition offence, notwithstanding that the conduct of the person sought occurred wholly or in part in the Requested Party, if under the law of that Party this conduct and its effects, or its intended effects, taken as a whole, would be regarded as constituting the commission of an extradition offence in the territory of the Requesting Party.

ARTICLE 4**GROUND FOR REFUSAL OF EXTRADITION**

- (1) Extradition may be refused if:
 - (a) the person sought to be extradited is a citizen of the Requested Party at the time of commission of an offence;
 - (b) the persons satisfies the Requested Party that it would be unjust to extradite him because of lapse of time;
 - (c) the request for extradition is contrary to the Constitution or domestic laws of the Requested Party; and
 - (d) The offence of which he is accused or convicted is of a political character. However, the following shall not be considered as offences of political character:
 - (i) murder, culpable homicide not amounting to murder, assault causing bodily harm, kidnapping, or hostage taking;
 - (ii) offences relating to terrorism including offences relating to firearms or other weapons, or explosives, or

- dangerous substances, or offences involving serious damage to property or disruption of public facilities;
 - (iii) any offence within the scope of international conventions to which both the Parties are parties; and
 - (iv) any attempts or conspiracy to commit any of the above.
- (2) The request for extradition may be refused by the Requested Party if the person whose extradition is sought may be tried for the extradition offence in the courts of that Party.
- (3) A Person who has been convicted of an extradition offence may not be extradited, unless the sentence of the sought person is at least 6 months of imprisonment.
- (4) A person may not be extradited if he would, if proceeded against in the territory of the Requested Party for the offence for which his extradition is requested, be entitled to be discharged under any rule of law of the Requested Party relating to previous acquittal or conviction.

ARTICLE 5

EXTRADITION AND PROSECUTION

- (1) If extradition is refused pursuant to the provisions of Clause 1 (a) of Article 4 of this Treaty, the Requested Party shall prosecute the accused person and initiate criminal proceedings against him/her in its own courts. In such cases, the Requesting Party shall provide the Requested Party with reasons and evidence related to the offence.
- (2) Where the Requested Party refuses a request for extradition for the reasons set out in other clauses of paragraph 1 of this Article, it shall submit the case to its competent authorities so that prosecution may be considered. Those authorities shall take their decision in the same manner as in the case of any offence of a serious nature under the law of that Party.
- (3) If the competent authorities decide not to prosecute in such a case, the request for extradition shall be reconsidered in accordance with this Treaty.

ARTICLE 6**POSTPONEMENT OF SURRENDER**

- (1) If criminal proceedings against the person sought are instituted in the territory of the Requested Party, or he is lawfully detained in consequence of criminal proceedings, the decision whether or not to extradite him may be postponed until the criminal proceedings have been completed or he is no longer detained.
- (2) The person sought may not be extradited, until it has been decided in accordance with the law of the Requested Party that he is liable to be extradited.

ARTICLE 7**EXTRADITION PROCEDURES**

- (1) The request for extradition under this Treaty shall be made through the diplomatic channels.
- (2) The request shall be accompanied by:
 - (a) as accurate a description as possible of the person sought, together with any other information which would help to establish his identity, nationality and residence, including, if possible, his photographs and fingerprints;
 - (b) a statement of the facts of the offence for which extradition is requested; and
 - (c) the text, if any, of the law
 - (i) defining that offence; and
 - (ii) prescribing the maximum punishment for the offence.
- (3) If the request relates to an accused person, it must also be accompanied by a warrant of arrest issued by a judge, magistrate or other competent authority in the territory of the Requesting Party and by such evidence as, according to the law of the Requested Party, would justify his committal for trial; as also evidence that the person requested is the person to whom the warrant of arrest refers.
- (4) If the request relates to a person already convicted and sentenced, it shall also be accompanied:

- (a) by a certificate of the conviction and sentence;
 - (b) by a statement that the person is not entitled to question the conviction or sentence and showing how much of the sentence has not been carried.
- (5) In relation to a convicted person who was not present at his trial, the person shall be treated for the purposes of paragraph (4) of this Article as if he had been accused of the offence of which he was convicted.
- (6) If the Requested Party considers that the evidence produced or information supplied for the purposes of this Treaty is not sufficient in order to enable a decision to be taken as to the request, additional evidence or information shall be submitted within such time as the Requested Party shall require.

ARTICLE 8

PROVISIONAL ARREST

- (1) In urgent cases the person sought may in accordance with the law of the Requested Party, be provisionally arrested on the application of the competent authorities of the Requesting Party. The application shall contain an indication of intention to request the extradition of that person and statement of the existence of a warrant or arrest or a conviction against him, and, if available, his description and such further information, if any, as would be necessary to justify the issue of a warrant of arrest had the offence been committed, or the person sought been convicted, in the territory of the Requested Party.
- (2) A person arrested upon such an application shall be set at liberty upon the expiration of (60) days from the date of his arrest if request for his extradition shall not have been received. This provision shall not prevent the institution of further proceedings for the extradition of the person sought if a request is subsequently received.

ARTICLE 9

RULE OF SPECIALTY

- (1) Any person who is returned to the territory of the Requesting Party under this Treaty shall not, during the period described in paragraph (2) of this Article, be dealt with in the territory of the

Requesting Party for or in respect of any offence committed before he was returned to that territory other than:

- (a) the offence in respect of which he was returned;
 - (b) any lesser offence disclosed by the facts proved for the purposes of securing his return other than an offence in relation to which an order for his return could not lawfully be made; or
 - (c) any other offence in respect of which the Requested Party may consent to his being dealt with other than an offence in relation to which an order for his return could not lawfully be made or would not in fact be made.
- (2) The period referred to in paragraph (1) of this Article is the period beginning with the day of his arrival in the territory of the Requesting Party or his return under this Treaty and ending (10) thirty days after the first subsequent day on which he has the opportunity to leave the territory of the Requesting Party.
- (3) The provisions of paragraph (1) of this Article shall not apply to offences committed after the return of a person under this Treaty or matters arising in relation to such offences.
- (4) A person shall not be re-extradited to a third State except when having had an opportunity to leave the territory of the Party to which he has been surrendered, he has not done so within thirty (30) days of his final discharge, or has returned to that territory after having left it.

ARTICLE 10

EVIDENCE

- (1) The authorities of the Requested Party shall admit as evidence, in any proceedings for extradition, any evidence taken on oath or by way of affirmation, any warrant and any certificate of, or judicial document stating the fact of, a conviction, if it is authenticated:
- (a) (i) in the case of a warrant being signed, or in the case of any original document by being certified, by a judge, magistrate or other competent authority of the Requesting Party; and
 - (ii) either by oath of some witness or by being sealed with

the official seal of the appropriate Ministry of the Requesting Party; or

- (b) In such other manner as may be permitted by the law or the Requested Party.
- (2) The evidence described in paragraph (1) shall be admissible in extradition proceedings in the Requested Party whether sworn or affirmed in the Requesting Party or in some third State.

ARTICLE 11

COMPETING REQUESTS

If extradition of the same person whether for the same offence or for different offences is requested by a Party and a third State with which the Requested Party has an extradition arrangement, the Requested Party shall determine to which State the person shall be extradited, and shall not be obliged to give preference to the Party.

ARTICLE 12

CAPITAL PUNISHMENT

If under the law of the Requesting Party the person sought is liable to the death penalty for the offence for which his extradition is requested, but the law of the Requested Party does not provide for the death penalty in a similar case, extradition may be refused unless the Requesting party gives such assurance as the Requested Party considers sufficient that the death penalty will not be carried out.

ARTICLE 13

SURRENDER

- (1) If extradition is granted, the person sought shall be sent by the authorities of the Requested Party to such convenient point of departure from the territory of that Party as the Requesting Party shall indicate.
- (2) The Requesting Party shall remove the person sought from the territory of the Requested Party within one month or such longer period as may be permitted under the law of the Requested Party. If

he is not removed within that period, the Requested Party may refuse to extradite him for the same offence.

ARTICLE 14

SURRENDER OF PROPERTY

- (1) When a request for extradition is granted, the Requested Party shall, upon request and so far as its law allows, hand over to the Requesting Party articles (including sums of money) which may serve as proof or evidence of the offence.
- (2) If the articles in question are liable to seizure or confiscation in the territory of the Requested Party, the latter may, in connection with pending proceedings, temporarily retain them or hand them over on condition that they are returned.
- (3) These provisions shall not prejudice the right of the Requested Party or any person other than the person sought. When these rights exist the articles shall on request be returned to the Requested Party without charge as soon as possible after the end of the proceedings.

ARTICLE 15

MUTUAL LEGAL ASSISTANCE IN EXTRADITION

Each Party shall, to the extent permitted by its law, afford the other the widest measure of mutual assistance in criminal matters in connection with the offence for which extradition has been requested.

ARTICLE 16

DOCUMENTS AND EXPENSES

- (1) All extradition requests and documents shall be submitted in one of the official languages of the Requesting Party and accompanied by their translation in to English language.
- (2) Expenses incurred in the territory of the Requested Party by reason of the request for extradition shall be borne by that Party.
- (3) The Requested Party shall make all the arrangements which shall be requisite with respect to the representation of the Requesting Party in any proceedings arising out of the request.

ARTICLE 17**OBLIGATIONS UNDER INTERNATIONAL CONVENTIONS/TREATIES**

The present Treaty shall not affect the rights and obligations of the Parties arising from International Conventions/Treaties to which they are parties.

ARTICLE 18**CENTRAL AUTHORITIES**

1. Requests for extradition under this Treaty shall be made through the Central Authorities of the Parties.
2. In the Republic of India the Central Authority is the Ministry of External Affairs and in the Islamic Republic of Iran, the Central Authority is the Judiciary. (Ministry of Justice)

ARTICLE 19**SETTLEMENT OF DISPUTES**

Any dispute arising out of the implementation and interpretation of this Treaty shall be settled through mutual consultation and negotiation.

ARTICLE 20**FINAL PROVISIONS**

- (1) The present Treaty shall apply to requests made after its entry into force, even if the relevant acts or omissions occurred prior to that date.
- (2) This Treaty shall be ratified according to the legal formalities provided in the Constitution and domestic laws of both Parties and shall enter into force on the date of sending the last notice by one Party to the other on the fulfillment of all necessary legal formalities for enforcement of this Treaty.
- (3) Either of the Parties may terminate this Treaty at any time by giving notice to the other through the diplomatic channels; and if such notice is given, the Treaty shall cease to have effect six month after the receipt of the notice.

In witness whereof, the undersigned being duly authorized thereto by their respective Governments, have signed this Treaty.

Done in two originals at Tehran this the second day of November 2008, each in Hindi, Persian and English, all languages being equally authentic. In case of any doubt, the English text shall prevail.

442. Agreement Between The Government of the Republic of India and The Government of the Islamic Republic of Iran on Mutual Legal Assistance in Criminal Matters.

Tehran, November 2, 2008.

The Government of the Republic of India and the Government of the Islamic Republic of Iran (Hereinafter referred to as 'Parties');

Guided by the traditional friendly relations between the two countries;

Recognising the need to facilitate the widest measures of mutual assistance in the service of summons, execution of warrants and other judicial documents and commissions;

Desiring to improve the effectiveness of both countries in the investigation, prosecution and suppression of crime, including crime related to terrorism and tracing, restraint, forfeiture or confiscation of the proceeds and instrument of crime, through cooperation and mutual legal assistance in criminal matters;

Have agreed as follows:

ARTICLE 1

SCOPE OF APPLICATION

1. Under this Agreement, the Parties shall grant each other the widest measure of mutual legal assistance in criminal matters.
2. For the purpose of this Agreement mutual legal assistance shall be granted irrespective of whether the assistance is sought or to be provided by a Court or some other authority.

3. This Agreement shall also apply to any requests for mutual legal assistance relating to acts or omissions committed before its entry into force .

ARTICLE 2

DEFINITIONS

For the purpose of this Agreement:

1. (a) Criminal matters mean, investigations, inquiries, trials or other proceedings relating to an offence created by any law enforceable in the respective Parties.
- (b) Criminal matters shall also include investigations or proceedings relating to offences concerning taxation, duties, customs and international transfer of capital or payments.
- (c) Assistance shall include:
 - (i) measures to locate, restrain, forfeit or confiscate the proceeds and instruments of crime and also funds or finance meant for the financing of acts of terrorism in the territory of either Party;
 - (ii) taking of evidence and obtaining of statements of persons;
 - (iii) providing of information, documents and other records, including criminal and judicial records;
 - (iv) location of persons and objects, including their identification;
 - (v) Search and seizure;
 - (vi) Delivery of property, including lending of exhibits;
 - (vii) Making detained persons and others available to give evidence or assist investigations;
 - (viii) service of documents, including documents seeking the attendance of persons; and
 - (ix) other assistance consistent with the objects of this Agreement.
2. (a) "proceeds of crime" means any property that is derived or realized directly or indirectly by any person from an offence or offences or the value of any such property;

- (b) "property" includes money and all kinds of movable or immovable, tangible or intangible property, and includes any interest in such property;
- (c) "confiscation" means any measure resulting in the deprivation of property;
- (d) "instruments of crime" means properties which are used or intended to be used in connection with the commission of an offence; and
- (e) "the restraint of property" means any measure for the prevention of dealing in or transfer or disposal of property.

ARTICLE 3

CENTRAL AUTHORITIES

1. Requests for assistance under this Agreement shall be made through the Central authorities of the Parties.
2. In the Republic of India the Central Authority is the Ministry of Home Affairs. In the Islamic Republic of Iran, the Central Authority is the Judiciary (Ministry of Justice).

ARTICLE 4

CONTENTS OF REQUESTS

1. Requests for assistance under this Agreement shall be made in writing. However, in urgent circumstances, or where otherwise permitted by the requested party, requests may be made orally but shall be confirmed in writing thereafter.
 - (a) the name of the competent authority conducting the investigation or proceedings to which the request relates;
 - (b) the matters, including the relevant facts and laws, to which the investigation or proceedings relates;
 - (c) the purpose for which the request is made and the nature of the assistance sought;
 - (d) details of any particular procedure or requirement that the Requesting Party wishes to be followed;

- (e) any time limit within which compliance with the request is desired;
 - (f) the identity, nationality and location of the person or persons who are the subject of the investigation or proceedings;
 - (g) in the case of requests for the taking of evidence or search and seizure, a statement indicating the basis for belief that evidence may be found in the jurisdiction of the Requested Party;
 - (h) in the case of requests to take evidence from a person, a statement as to whether sworn or affirmed statements are required, and a description of the subject matter of the evidence or statement sought;
 - (i) in the case of lending of exhibits, the person or class of persons who will have custody of the exhibit, the place to which the exhibit is to be removed, any tests to be conducted and the date by which the exhibit will be returned;
 - (j) in the case of making detained persons available, the person or class of persons who will have custody during the transfer, the place to which the detained person is to be transferred and the date of that person's return;
 - (k) the need, if any, for confidentiality and the reasons therefor; and
 - (l) in the case of requests for restraint or forfeiture of proceeds or instruments of crime, where possible:
 - (i) a detailed description of the proceeds or instruments including their location;
 - (ii) a statement describing the basis for belief that the monies or property are the proceeds or instruments of crime; and
 - (iii) a statement describing the evidence that would be available for a proceeding in the Requested Party.
3. The Requested Party shall not refuse to execute the request solely because it does not include all of the information described under this article if it can otherwise be executed according to the law of the Requested Party.

4. If the Requested Party considers that additional information is needed to enable the request to be dealt with, that Party may request such additional information.

ARTICLE 5

EXECUTION OF REQUEST

1. Requests for assistance shall be executed in accordance with the law of the Requested Party and may be executed in accordance with any requirements/ manner specified in the request if not incompatible with the law of the Requested Party.
2. The Requested Party shall, upon request, inform the Requesting Party of any circumstances which are likely to cause a significant delay in execution of the request.
3. The Requested Party shall promptly inform the Requesting Party of a decision of the Requested Party not to comply in whole or in part with a request for assistance, or to postpone execution and shall give reasons for that decision.

ARTICLE 6

REFUSAL OF ASSISTANCE

1. The Requested Party may refuse the assistance if:
 - (a) the execution of the request would impair its sovereignty, security, public order or other essential interests, or prejudice the safety of any person;
 - (b) the execution of the request would be contrary to the Constitution and domestic laws of the Requested Party;
 - (c) if the request seeking restraint, forfeiture or confiscation, of proceeds or instruments of activity which, had it occurred within the jurisdiction of the Requested Party, would not have been an activity in respect of which a confiscation order could have been made; and
 - (d) the request relates to an offence in respect of which the accused person had been finally acquitted or pardoned.
2. Before, refusing to grant a request for assistance, the Requested Party shall consider whether assistance may be granted subject to

such conditions as it deems necessary. If the Requesting Party accepts assistance subject to conditions, the Requesting Party shall comply with those conditions.

ARTICLE 7

TRANSMISSION OF DOCUMENTS AND OBJECTS

1. When the request for assistance concerns the transmission of records and documents, the Requested Party may transmit certified true copies thereof, unless the Requesting Party expressly requests the originals.
2. The original records or documents and the objects transmitted to the Requesting Party shall be returned to the Requested Party as soon as possible, upon the latter's request.
3. Insofar as not prohibited by the law of the Requested Party, documents, objects and records shall be transmitted in a form or accompanied by such certification as may be requested by the Requesting Party in order to make them admissible according to the law of the Requesting Party.

ARTICLE 8

TAKING EVIDENCE IN THE REQUESTED PARTY

1. A person, including a person in custody, requested to testify and produce documents, records or other articles in the Requested Party may be compelled by subpoena or order to appear and testify and produce such documents, records and other articles, in accordance with the law of the Requested Party.
2. Subject to the law of the Requested Party, commissioners, other officials of the Requesting Party and persons concerned in the proceedings in the Requesting Party shall be permitted to be present when evidence is taken in the Requested Party and to participate in the taking of such evidence.
3. The right to participate in the taking of evidence includes the right of counsel present to pose questions. The persons present at the execution of a request may be permitted to make a verbatim transcript of the proceedings. The use of technical means to make such a verbatim transcript may be permitted.

ARTICLE 9**AVAILABILITY OF PERSONS TO GIVE EVIDENCE OR ASSIST IN INVESTIGATION IN THE REQUESTING PARTY**

1. The Requesting Party may request that a person be made available to testify or to assist in an investigation.
2. The Requested Party shall invite the person to assist in the investigation or to appear as a witness in the proceedings and seek that person's concurrence thereto. That person shall be informed of any expenses and allowances payable.

ARTICLE 10**MAKING DETAINED PERSONS AVAILABLE TO GIVE EVIDENCE OR ASSIST IN INVESTIGATIONS**

1. A person in custody in the Requested Party shall, at the request of the Requesting Party, be temporarily transferred to the Requesting Party to assist in investigations or proceedings, provided that the person consents to that transfer and there are no overriding grounds against transferring the person.
2. Where the person transferred is required to be kept in custody under the law of the Requested Party, the Requesting Party shall hold that person in custody and shall return the person in custody at the conclusion of the execution of the request.
3. Where the sentence imposed expires, or where the Requested Party advises the Requesting Party that the transferred person is no longer required to be held in custody, that person shall be set at liberty and be treated as person present in the Requesting Party pursuant to a request seeking that person's attendance.

ARTICLE 11**SAFE CONDUCT**

1. A person present in the Requesting Party in response to a request seeking that person's attendance shall not be prosecuted, detained or subjected to any other restriction of personal liberty in the territory of that Party for any acts or omissions which preceded that person's departure from the Requested Party, nor shall that person be obliged

to give evidence in any proceeding other than the proceedings to which the request relates.

2. A person, who is present in the Requesting Party by consent as a result of a request for the person's attendance to answer before a judicial authority any acts, omissions or convictions shall not be prosecuted or detained or subjected to any other restriction of personal liberty for acts and omissions or convictions which preceded that person's departure from the Requested Party, not specified in the request.
3. Paragraphs 1 and 2 of this Article shall cease to apply if a person, being free to leave the Requesting Party, has not left it within a period of 30 days after being officially notified that that person's attendance is no longer required or, having left that territory, has voluntarily returned.
4. Any person who fails to appear in the Requesting Party may not be subjected to any sanction or compulsory measure in the Requested Party.

ARTICLE 12

PROCEEDS AND INSTRUMENTS OF CRIME

1. The Requested Party shall upon request endeavour to ascertain whether any proceeds or instruments of a crime are located within its jurisdiction and shall notify the Requesting Party of the results of its inquiries.
2. A request may be made for assistance in securing the forfeiture or confiscation of proceeds or instruments of crime. Such assistance shall be given in accordance with the law of the Requested Party by whatever means are appropriate. This may include giving effect to an order made by a court or other competent authority in the Requesting Party or submitting the request to a competent authority for the purpose of seeking a forfeiture or confiscation order in the Requested Party.
3. A request may be made for assistance in the restraint of property for the purpose of ensuring that it is available to satisfy an order for the recovery of proceeds or instruments.
4. Proceeds or instruments forfeited or confiscated pursuant to this agreement shall accrue to the Requested Party, unless otherwise agreed in a particular case.

5. Where action has been taken in the Requested Party pursuant to a request for assistance under paragraphs 1 or 2 of this Article, and there is a representation in either of the Parties as the case may be by a person affected by the order, the relevant Party shall inform the other Party as soon as possible and shall also inform it promptly of the outcome of that representation.

ARTICLE 13

CONFIDENTIALITY AND LIMITATION OF USE

1. The Requested Party may require, after consultation with the Requesting Party, that information or evidence furnished or the source of such information or evidence be kept confidential or be disclosed or used only subject to such terms and conditions as it may specify.
2. The Requested Party shall, to the extent requested, keep confidential a request, its contents, supporting documents and any action taken pursuant to the request except to the extent necessary to execute it.
3. The Requesting Party shall not disclose or use information or evidence furnished for purposes other than those stated in the request without the prior consent of the Requested Party.

ARTICLE 14

AUTHENTICATION

Evidence or documents transmitted pursuant to this Agreement shall not require any form of authentication, save as is specified in Article 7.

ARTICLE 15

LANGUAGE

Requests and supporting documents shall be accompanied by a translation into one of the official language languages of the Requested Party or in English.

ARTICLE 16

EXPENSES

1. The Requested Party shall meet the cost of executing the request for assistance, except that the Requesting Party shall bear: -

- (a) the expenses associated with conveying any person to or from the territory of the Requested Party at the request of the Requesting Party, and any expenses payable to that person while in the Requesting Party pursuant to a request under Article 9 or 10 of this Agreement;
 - (b) the expenses and fees of experts either in the Requested Party or the Requesting Party;
 - (c) the expenses of translation, interpretation and transcription; and
 - (d) the expenses associated with the taking of evidence from the Requested Party to the Requesting Party via video, satellite or other technological means.
2. If it becomes apparent that the execution of the request requires expenses of an extraordinary nature, the Parties shall consult to determine the terms and conditions under which the requested assistance can be provided.

ARTICLE 17

COMPATIBILITY WITH OTHER TREATIES

Assistance and procedures set forth in this Agreement shall not prevent either Party from granting assistance to the other Party through the provisions of other applicable international conventions, agreements, or through the provisions of its domestic law. The Parties may also provide assistance pursuant to any bilateral arrangement, agreement or practice which may be applicable.

ARTICLE 18

CONSULTATION

The Central Authorities of the Parties shall consult, at times mutually agreed to by them, to promote the most effective implementation of this Agreement. The Central Authorities may also agree on such practical measures as may be necessary to facilitate the implementation of this Agreement.

ARTICLE 19

ENTRY INTO FORCE, AMENDMENT AND TERMINATION

1. This Agreement shall be ratified according to the legal formalities provided in the Constitution and domestic laws of both Parties and

shall enter into force on the date of sending the last notice by one Party to the other on the fulfillment of all necessary legal formalities for enforcement of this Agreement.

2. This Agreement may be amended by mutual consent. Any such amendment will be subject to the same ratification procedures as in Clause 1 above.
3. Either Party may terminate this Agreement. The termination shall take effect six (6) months from the date on which it was notified to the other Party.
4. The Parties may also by mutual consent terminate this Agreement on such terms and conditions as may be agreed to between the Parties.

In witness whereof, the undersigned, being duly authorized thereto by their respective Governments, have signed this Agreement.

Done at Tehran this the 2nd day of November 2008 (Two Thousand and Eight), according to Iranian Hizri calendar 12th Aban 1387 in two originals each, in Hindi, Persian and English, all text, being equally authentic. However, in case of difference, the English text shall prevail.

For the Islamic Republic of Iran
Minister of Justice

ISRAEL

443. Joint Press Statement on 11th Round of Foreign Office Consultations between India and Israel.

New Delhi, January 23, 2008.

The 11th round of Foreign Affairs Consultations between India and Israel was held in the Ministry of Foreign Affairs in New Delhi on 23 January 2008. The Indian delegation was headed by Shri N. Ravi, Secretary (East), Ministry of External Affairs while the Israeli delegation was headed by Ambassador Ruth Kahanoff, Deputy Director General for Asia and the Pacific in the Ministry of Foreign Affairs of Israel.

During the consultations, both sides highlighted the excellent relations between the two countries in all fields. The two sides had a wide ranging and constructive exchange of views on bilateral, multilateral and regional issues, including the situation in South Asia and the Middle East. Both sides discussed a variety of ideas and initiatives in order to further enhance relations in fields such as economy and commerce, agriculture, culture and science, tourism etc. Discussions were also held in variety of consular issues that are of importance to both countries. Secretary Shri Ravi and Ambassador Kahanoff expressed their countries' commitment to strengthen and diversify bilateral relations between India and Israel.

444. Statement by Official Spokesperson on the terrorist attack on Mercaz Harav Yeshiva in West Jerusalem.**New Delhi, March 7, 2008.**

We condemn the mindless terrorist attack on the Mercaz Harav Yeshiva in West Jerusalem last evening in which eight innocent young Israeli lives were lost and several others injured. Terrorism in any form cannot be tolerated.

The issues confronting West Asia today are serious in nature and have to be addressed through dialogue. The current cycle of violence, including disproportionate retaliation by Israel, which has been taken to unprecedented levels, will have to cease if the suffering of the peoples of the region is to end¹.

¹ The Spokesperson's statement came in the background of hectic activity at the United Nations Security Council in New York where a U.S.-British initiative attempted to issue a statement condemning the killings. But this did not come through because Libya (a non-permanent UNSC member) insisted that it also incorporate a reference to the deaths of 120 civilians in the Gaza Strip. A UNSC statement is a notch below a resolution. (However, it must ideally be passed unanimously.) Media reports quoted diplomatic sources to suggest that Libya's intervention found support from some other UNSC non-permanent members. In New Delhi some civil society organisations and other concerned organizations too condemned the disproportionate use of force by Israel against the Palestinians. Meanwhile on April 27 Israeli daily *Ha'aretz* reported that Israel would consider a ceasefire in the Gaza Strip if Hamas restrained Islamic Jihad and other smaller militant groups from attacking the Jewish state. The Hamas and other Palestinian militant groups were due to meet in Cairo on 30th April to discuss a truce deal with Israel. Israeli security officials however, made it plain that if Hamas were unable to control the smaller groups, first and foremost Islamic Jihad, there was not much point to the agreement. Hamas on 26th April signaled agreement to a conditional six-month truce in the Gaza Strip. On 27th April, an Israeli spokesman said the Islamic movement was "not serious" and "trying to buy time in order to rearm and regroup."

KAZAKHSTAN

445. Speech by Vice President M. Hamid Ansari at the Banquet hosted by Chairman of Senate of Kazakhstan K. Tokayev.

Astana, April 7, 2008.

Your Excellency Chairman Mr. Tokayev

Excellencies

Distinguished Guests

Ladies and Gentlemen

It is a privilege and pleasure to be visiting the young and vibrant capital city of Astana. I am touched by the warmth of the welcome and the hospitality extended to me, my wife and my delegation.

We, in India, admire Kazakhstan for its achievements of the last fifteen years. The vision of His Excellency President Nazarbayev in steering the nation towards newer horizons and greater heights is truly remarkable. His recent address to the nation crystallizes his vision towards an ambitious path of development. Given the record of Kazakhstan in achieving economic, political and social milestones, we are confident that the path you have chosen would bring greater prosperity to your nation.

It is heartening to see that Kazakhstan has opted for a democratic mode of governance and has emerged as a nation with a stable polity, a growing economy and a modern outlook. It is a mark of your success that Kazakhstan today plays an increasingly important role in multilateral fora. Kazakhstan's role in spearheading the Conference on Interaction and Confidence Building Measures in Asia (CICA) is well recognized; so is the election to chair the Organisation for Security and Cooperation in Europe (OSCE) in 2010 yet another sign of this multifaceted role. India has been consistently supportive of CICA and would actively take part in moving forward the process in a manner that would benefit all the member countries.

Excellency

I come from a land in the throes of change. At the beginning of the last decade, India embarked on its reform process. For the first time in our

history, the Indian economy has grown at close to 9 per cent per annum for four years in a row. The historically high investment rate, of over 35% of GDP, and savings rate, of over 34% of GDP, point to a new economic dynamism. India is a young nation, with a median age of 24 years. India has the third largest technical man power in the world. Our growing capabilities in emerging areas of science and technology are being globally recognized and give us the wherewithal to assist you in your efforts.

India has historical and cultural linkages with your region spanning millennia. These links constitute a strong foundation for the edifice of bilateral relations in contemporary times. It is a matter of satisfaction that these have progressed steadily.

Relations between Kazakhstan and India have traditionally been warm, friendly and multi - faceted. The ties date back to ancient times. Both our societies are multi- ethnic, multi-religious, multi-lingual and multi-cultural. We share similarity of orientation and views on important regional and international issues.

While Kazakhstan and India have good relations at political, social and cultural levels, our ties in economic and commercial spheres are not commensurate with the vast potential that exists. With both our economies registering impressive growths in recent years, there are new and wide ranging opportunities for us to expand areas of economic cooperation. We need to encourage more people to people contact in both the countries.

I would also like to congratulate you Mr. Chairman, for your valuable contribution in furthering the bilateral relations between our countries in your present and previous capacities. The challenges of today defy borders. Collective effort is needed to fight the menace of terrorism, global pandemics and other destabilizing factors. It is imperative that we work together with determination on the path of development. I am confident that through our joint efforts, we will be able to further consolidate our cooperation in the coming years to our mutual benefit.

Ladies and Gentlemen, I request you to join me in raising a toast:

- to the happiness and prosperity of the friendly people of Kazakhstan and
- to the prospering and everlasting friendship and cooperation between our two countries and peoples.

**446. Address by Vice President M. Hamid Ansari at the
Academy of Public Administration.**

Astana, April 8, 2008.

Hon'ble Rector Dr. Azhimzhan Akhmetov

Respected Members of the Academy

Ladies and Gentlemen

It is indeed a privilege for me to be invited to the prestigious Academy of Public Administration of Kazakhstan.

Academies of public administration and public policy in most countries exert an influence that far exceeds their size or numbers - in training and mentally equipping generations of public servants, they come to symbolise the unique genius of a nation and its specific approaches towards political economy and public policy choices.

Let me begin with a set of questions:

What is public administration?

What is its role in the governance of states?

How does it impact on public policy?

What role do citizens play in it, as subjects and objects?

What role is visualized for it in the coming decades of the 21st century?

In a general sense, public administration can be defined as the development, implementation and study of government policy. It is thus linked to governance and is therefore as old as governance.

Let me demonstrate the point by going back in history to the 4th century BC and to the Indian strategic thinker and administrator Kautilya whose book The Arthashastra remains a classic exposition of the principles of economics and politics in relation to the administration of a state. The objective of governance was spelt out in simple terms:

'In the happiness of his subjects lies the King's happiness; in their welfare his welfare. He shall not consider as good only that which pleases him but treat as beneficial to him whatever pleases his subjects'.

Nor was he alone in our common region. In the 11th century AD Nizam al-Mulk was the chief minister of the Saljuq king Alp Arslan and wrote the *Siyasat Nama* in which the duty of the king was described as God-ordained: 'To close the doors of corruption, confusion and discord' so that the people may live in constant security.

There were others also who dwelt on the subject, long before Machiavelli appeared on the scene. In the 19th century the Viennese professor Lorenz von Stein considered public administration to be a melting pot of several disciplines and was a forum for interaction between theory and practice. In the 20th century proponents of minimum government philosophy shifted the focus somewhat and opined that the object of public administration should be to ascertain what the government can do properly, successfully, efficiently and with minimum cost and energy. This distinction between what the state must do and may do is perhaps reflective of affluence that is got given to most developing countries.

In our own times it is evident that there is a relationship between governance and development. There is enough empirical evidence now that governance plays a central role in economic development and growth because of its crucial role in resource accumulation and allocation. Governance is understood here to mean a focus on outcomes and the extent to which governments institute and implement policies in the interests of all citizens.

It is only in the last decade or so that international developmental theory has recognised that development is not only about projects, programmes and policies, but also about politics. There is also recognition that development is a product of what people decide to do to improve their lives and that it is the people who constitute the principle force of development. The people must have the right political and economic opportunities to create institutions that are responsible for their needs and priorities. Development, in this sense, is not what a government does to its people but what the people do by themselves and for themselves.

In India, this basic paradigm of public administration was enshrined in the Preamble to our Constitution. It defined the objectives of state policy: to secure to all of its citizens:

- JUSTICE, social, economic and political;
- LIBERTY of thought, expression, belief, faith and worship;
- EQUALITY of status and of opportunity; and to promote among them all;
- FRATERNITY assuring the dignity of the individual and the unity of the Nation.

The Indian state since then has been guided towards achievement of these objectives. The public administration and choice of public policy in the country had been geared towards evolving delivery structures and mechanisms to achieve these outcomes. In the initial period after independence this effort focused on three issues:

1. Consolidating a composite national identity and accommodating multiple identities including linguistic, ethnic, religious and caste-based: The various princely states were gradually integrated in a peaceful manner. Affirmative action in the political and economic spheres had empowered long discriminated communities such as Scheduled Castes and Scheduled Tribes in India. The status and equality of women was enshrined in the Constitution and legislation and conscious efforts were made for their empowerment. Linguistic identities were accommodated through re-organisation of provinces on linguistic lines.
2. Land reforms and infrastructure creation: The focus was on addressing the feudal system and bringing about land reforms to the benefit of small and tenant farmers. Much of the focus of infrastructure creation was on large industries in the iron and steel sector, large dams that catered to irrigation and power and establishment of premier technological, scientific and research institutions.
3. Creating a culture of democracy and participative governance: This was an effort to ensure that sectional aspirations for political influence and economic betterment found expression through political mobilisation in a democratic framework. Holding regular elections at the centre and the states firmly entrenched the nuts and bolts of democracy. This in itself was a very significant development considering that the vast majority of developing and newly

independent countries then had opted for non-democratic modes of government to promote nation building and development.

It was in the sixties and seventies that the traditional role of public administration of ensuring law and order and of revenue collection began to be questioned and demands made for expansion of its mandate. It was a time when growth rates in India had fallen and state intervention in economic and political administration was less than effective. It was also a period when the efficacy of political and economic checks and balances was gradually eroded.

In the 1980s, India undertook steps to significantly improve governance structures, enhance checks and balances and accountability mechanisms and bring about decentralisation of power down to the village level. Our structure of local self-governance, called Panchayati Raj, has over 240,000 grassroots institutions with 3.6 million elected persons to village and city level councils, a million of whom are women constituting some 37 per cent of all those elected. A percentage of the seats in local bodies are reserved for marginalized and vulnerable communities.

This innovative and imaginative step became, in the words of Prime Minister Manmohan Singh 'the medium to transform rural India into 700 million opportunities'. It enhanced participatory governance and broad-based planning and implementation of programmes of economic development and social justice. It is the greatest experiment in democracy ever undertaken anywhere in the world or at any time in history.

For the first time in our history, the Indian economy has grown at close to 9.0 per cent per annum for four years in a row. The historically high investment rate of over 35% of GDP, and savings rate of over 34% of GDP symbolize a new dynamism in our economy. In the recent past, public administration and public policy have been focused on making the growth process socially inclusive and regionally balanced. The government has thus crafted delivery mechanisms aimed at:

1. bridging the rural-urban gap in development;
2. instituting a National Rural Employment Guarantee Programme to alleviate rural poverty and offer basic livelihood security;
3. giving equal opportunity to our children in receiving education and realizing their potential;

4. offering basic health care to the rural poor; and
5. promoting socially inclusive and economically manageable urban development; and
6. improving governance and transparency through the enactment of The Right to Information Act.

Ladies and Gentlemen

In the matrix of various issues that impact upon the outcome of governance, public administration in the traditional sense is only one element. Other important elements include civil society, polity, the economic and business sectors and the judiciary. Some of these areas are more contested and competitive than others.

Ensuring the prosperity and well being of citizens demands that we continue to make progress on all aspects of governance. We must also continue to evolve and innovate so that public administration remains an instrument to achieve public good and does not become an end in itself.

I thank the Rector and Members of the Academy for inviting me today.

Thank you.

447. Address by Vice President M. Hamid Ansari at the Al-Farabi Kazakh National University.

Almaty, April 9, 2008.

Honourable Rector Dr. Tolegen Kozhamkulov

Distinguished Faculty

Scholars and Students

Ladies and Gentlemen

I am privileged to be invited to this prestigious University and deeply appreciate it. Even greater is the honour bestowed on me by the decision of the University.

Mohammad bin Mohammad bin Tarkhan Abu Nasr al-Farabi was a Central Asian polymath and one of the greatest scientists and philosophers of the Islamic world in his time. He was also a cosmologist, logician, musician, psychologist and sociologist. Amongst his works read to this day is Al-Madina al-Fadila in which, inspired by Plato, he explained his concept of the Perfect City. It is truly befitting that this University with a distinguished history of over seventy years and contribution to the development of native science, technics, culture, and higher education should bear Al Farabi's name.

Ladies and Gentlemen

We live in interesting times. When I see the young students of this University I see the energy and dynamism of youth, their restlessness and impatience for better lives and happiness and their hope and optimism for the future. We too are a young nation. Over 550 million Indians, out of a total of a billion, are below the age of 25 years. The young are also the seed bearers of tomorrow's leaders. Both our countries have been fortunate in having wise leaders at critical points of our histories.

Leadership, like all resources, is scarce; its domain and platforms are contested. A leader, by definition, stands apart; but he does not stand alone. He must ensure continuous nourishment from the group he leads; in turn, he enriches the group by his leadership. The challenge for an open society is to ensure this.

In India, we have set for ourselves a national objective of building a knowledge society, an inclusive society, and a humane society. The most daunting task for our new leaders is the human development of our people. Their mandate is to explore and exploit all the possibilities for socio-economic advancement and personal fulfillment of our citizens. They also have to lead them to it. The young are resourceful, enthusiastic, willing to work hard; they have neither the patience to wait for extended periods to realise their aspirations nor does today's economic environment permit them the luxury of time that an earlier generation had.

I am tempted to quote Martin Luther King Jr. He said:

'Human progress is neither automatic nor inevitable. We are faced now with the fact that tomorrow is today. We are confronted with the fierce urgency of now. In this unfolding conundrum of life and history there is such a thing as being too late...We may cry out desperately for time to pause in her passage, but time is deaf to every plea and rushes on. Over the bleached bones and jumbled residues of numerous civilizations are written the pathetic words: Too late.'

Friends

As I stand today before you, three issues appear self evident:

- The first is the physical proximity of Central Asia to India.
- The second is the historical continuity of an interactive relationship between us based on ties of civilisation, culture and trade.
- The third is an imperative of the emerging world system where globalisation is compressing distances and speeding up communication.

The old paradigms of economic relations are no longer valid. Similar is the case with the old paradigms of security. We live in a world where the imperative need for cooperative approaches in the security and economic arena asserts itself to overcome previously insurmountable obstacles. Today we do face problems in physical connectivity between our countries. We can rest assured that the compelling logic of this age will lead to solutions to overcome this.

Ladies and gentlemen

Our approach to the world is naturally a function of our values, our history and geography, and of how we define our interests. India's main focus since independence has been to improve our people's lives through inclusive economic development within a pluralist, secular, equitable and democratic framework. In making this effort, India has also decisively demonstrated that democracy and development are compatible and necessary for ensuring sustainability. The primary task of our foreign policy has been to enable the transformation of India's society and economy, restoring traditional patterns of dealing with the world, and building strategic autonomy of choice.

Judging by the results, our foreign policy choices have served the nation well. For more than two decades, India has recorded average annual GDP growth of around 6%. In the last four years, this has risen to around 9%. Historically unprecedented transformations and improvements in the people's living standards have taken place in India in the last few decades. Yet, much remains to be done. If we are to abolish mass poverty in India, we need to grow at 8 to 10% every year until 2020. We need considerable effort, correct public policy choices and a supportive and peaceful international environment.

Our foreign policy is also based on principles and a broad national consensus. The vision of our leaders like Mahatma Gandhi, Jawaharlal Nehru, Indira Gandhi and Rajiv Gandhi has led to the emergence of a secular polity. We share the values of fundamental human rights and freedoms with other democracies. Our values and civilisational heritage make us a barrier against fundamentalism and terrorism and a factor of peace and stability. We also seek maintenance of friendly relations with all countries, resolution of conflicts through peaceful means and equity in the conduct of international relations.

We firmly believe that global threats demand global responses and equitable sharing of responsibilities. India has actively pursued the strengthening of multilateral institutions, in particular the United Nations. We are committed to the comprehensive reform of the United Nations, including its Security Council.

Friends

Relations between India and Kazakhstan have always been warm, friendly and close. Both our countries are multi-ethnic, multi-linguistic, multi-cultural societies committed to countering fundamentalism, religious extremism and

terrorism. Our views coincide or converge on all major regional and international questions.

I am confident that stronger and deeper relations between Kazakhstan and India will further contribute to increased prosperity and security not only for the peoples of our countries, but also for the region and the world.

I once again thank the University for conferring this honour on me and inviting me today. I wish the students a bright and happy future.

Thank you.

KYRGYZSTAN

448. Joint Statement issued on the occasion of the visit of the Foreign Minister of Kyrgyz Republic Ednan Karabaev.

New Delhi, February 6, 2008.

At the invitation of Shri Pranab Mukhejee, External Affairs Minister of India, the Minister of Foreign Affairs of the Kyrgyz Republic Mr Ednan Karabaev paid an official visit to India from 4th to 6th February 2008.

The two Ministers held delegation level talks on bilateral, regional and global issues of mutual concern. External Affairs Minister hosted a lunch in honour of the visiting dignitary and delegation. The Minister had meetings with Shri Arjun Singh, Minister of Human Resources Development; Smt Ambika Soni, Minister of Culture and Tourism and Shri Kamal Nath, Minister of Commerce and Industry. Shri E.Ahamed, Minister of State (External Affairs) also hosted a lunch in honour of the visiting Minister.

Foreign Minister Ednan Karabaev also delivered a lecture on the topic 'Kyrgyzstan in Central Asian Dynamics' at the Indian Council for World Affairs on 4th February 2008.

The talks were held in an atmosphere of friendship, warmth and mutual understanding. The two sides expressed satisfaction with the ongoing bilateral institutional mechanism of Inter Governmental Commission, Foreign Office Consultations and mutually beneficial cooperation and partnership between India and the Kyrgyz Republic encompassing political exchanges, economic, defence, scientific and technological cooperation, and cultural & educational exchanges. They agreed to work together for

the further enhancement of their multifaceted relationship based on shared values, mutual respect and cooperation, and similarity of views on major international issues.

During the visit, Programme of Cooperation was signed between the two Foreign Ministries which lays down the roadmap for dialogue and cooperation between the two Ministries.

Both sides noted that bilateral trade between the two countries, though below potential, had steadily increased in the previous years. Both sides agreed to work to substantially raise the level of mutual trade and to sustain this level of growth. They also welcomed the growing investment partnerships between Indian and Kyrgyz companies in several sectors such as mining and processing of minerals and metals, leather manufacture and food processing.

The Kyrgyz Foreign Minister expressed appreciation for commissioned and ongoing Indian assisted projects in the Kyrgyz Republic. An India-Kyrgyz Centre of Information Technology was inaugurated on 15th August 2007 at Bishkek. Setting up of Potato Processing Plant and Mountain Medical Research Centre with Indian assistance in the Kyrgyz Republic is in advanced stage of planning and is to be implemented shortly.

The External Affairs Minister announced humanitarian relief assistance of US\$ 100,000 for the victims of earthquake that hit southern Kyrgyzstan on 3 January 2008.

Stressing the need for greater people-to-people interaction, particularly through academic and cultural exchanges, the two sides stressed the need for early conclusion of the Cultural Exchange Agreement.

The two sides welcomed the UN General Assembly Resolution on announcement of 2nd October as the International Non-violence Day and the UN General Assembly Resolution on the establishment of 20th February as the World Social Fairness Day. The two sides recognized these initiatives as important achievements of India and Kyrgyzstan for world peace and stability.

Foreign Minister Ednan Karabaev invited the External Affairs Minister and Shri E.Ahamed, Minister of State (External Affairs) to visit the Kyrgyz Republic. The invitations were accepted in principle.

Foreign Minister Ednan Karabaev expressed his gratitude to the Government of India for the warm hospitality extended to him and his delegation.

LEBANON

449. Statement by Official Spokesperson on the election by the Lebanese Parliament of Mr Michel Sleiman as the President of Lebanon.

New Delhi, May 26, 2008.

India welcomes the election by the Lebanese Parliament yesterday of H.E. Gen. Michel Sleiman as the President of Lebanon. The historic election follows efforts of various statesmen and countries of the region*. In this regard, the role played by Qatar and by His Highness the Emir of Qatar is especially noteworthy. India is confident that the election of President Sleiman will enable Lebanon to continue with the task of national reconciliation and reconstruction.

2. India renews its call for progress in the Lebanese track of the Middle East Peace Process.
3. The President of India has sent a message to her Lebanese counterpart felicitating him on his election.

1 His election is the result of the Doha accord, which called for General Sleiman's election as a consensus candidate, the formation of a national unity government in which the opposition has veto power. It also envisaged the enunciation of a law for parliamentary elections, due next year. Hizbollah television Al Manar described the accord - concluded after Qatar's mediation - as an event which "put an end to all endeavours to strain the situation in Lebanon...."

OMAN

450. Report on the visit of External Affairs Minister Pranab Mukherjee to Oman.

Muscat, January 14, 2008.

External Affairs Minister Pranab Mukherjee paid a two day visit to Oman on January 13 and 14, 2008. Apart from meeting the Omani leadership to review bilateral and regional relations with them, the Minister also met the 21 Indian Ambassadors stationed in West Asia in a brain storming session.

After his meeting with the Deputy Prime Minister of Oman Sayyid Fahd bin Mahmood Al Said, Mr. Mukherjee advocated elevating India-Oman ties to a "strategic" level. During the talks both side expressed a shared concern for enhancing security and stability in the region. They identified information technology, telecommunications, oil and gas as key areas for deepening ties. India is looking for Omani participation in the development of infrastructure and petrochemicals.

Mr. Mukherjee who after meeting his Omani counterpart Yousuf bin Alawi bin Abdullah said the Persian Gulf area was of "critical importance" to India. They discussed the road map for adding strategic content to the India-Oman relationship.

The brainstorming session with the Indian Ambassadors was part of India's move to give a fresh direction to ties with countries in the region. This gave the External Affairs Minister the opportunity to prioritize New Delhi's objectives in the region. One of the subjects discussed at this meeting was the West Asia peace process and developments related to Palestinian territories, where tensions between rival factions Fatah and Hamas were growing. Other issues that were on the agenda included Iran, the resurgence of Islam in the region, the situation in Somalia and the crisis in Darfur.

According to media reports Mr. Mukherjee was also briefed about the scope for enhancing cooperation with the six-nation Gulf Cooperation Council (GCC) and the Arab League. Saudi Arabia, Bahrain, Kuwait, Qatar, Oman and the United Arab Emirates constitute the GCC. The GCC was India's single most important source of energy. The trade between India and the countries comprising West Asia and North Africa had risen to \$34 billion.

Community issues relating to the welfare of millions of expatriate workers residing in the Gulf countries had emerged as a focal area during the two-day sessions. While their remittances contributed significantly to India's economic resurgence, there too were growing concerns about their living and working conditions in the host countries. On the economic side, the scope for opening new Indian banks, expansion of civil aviation links, and advancing tie-ups in the fields of science and technology, education and defence also came up for discussions. Mr. Mukherjee jointly inaugurated with his Omani counterpart, Yousuf bin Alawi bin Abdullah, a new chancery complex inside the Indian embassy in Muscat.

Speaking to a gathering of the Indian community on January 14, Mr. Pranab Mukherjee said that the Indian companies had secured oil and gas as well as mining concessions in Oman. A consortium involving an Omani company won exploration bids for oil blocs in India, he said.

451. Press Release of the Ministry of External Affairs on the visit of National Security Advisor M.K. Narayanan, to Muscat.

New Delhi, October 31, 2008.

H.E. Mr. M.K. Narayan, National Security Advisor of India (NSA), paid a two-day official visit to the Sultanate of Oman, during 29th - 31st October, 2008. During the visit, he paid calls on 29th October on His Majesty Sultan Qaboos bin Said al Said, Sultan of the Sultanate of Oman, H.E. General Ali bin Majid al Ma'amari, Minister of Royal Office, and H.E. Mr. Yousuf Bin Alawi bin Abdulla, Minister Responsible for Foreign Affairs. On 30th October, 2008, he had a meeting with Dr. Omer Al Zawawi, Advisor to His Majesty the Sultan.

During the meetings, NSA exchanged views with Omani dignitaries on bilateral relations and other regional and international issues. Both sides expressed satisfaction at the status of bilateral relations.

H.E. Mr. Narayanan expressed happiness at visiting the Sultanate and said that the visit was undertaken with the specific purpose of developing relations between the two countries. General Ma'amari reiterated the Sultanate's keenness to further strengthen bilateral relations with India in all fields.

On 30th October, Ambassador Anil Wadhwa hosted a reception in honour of H.E. Mr. Narayanan. Speaking on the occasion Ambassador Wadhwa stated that the visit was a step in the right direction that would further strengthen the historical bilateral ties between the two countries. In his comments, H.E. Mr. Narayanan expressed his satisfaction with the visit and stated that he had been received with great warmth and affection during his visit here, and was greatly honored by the audience that His Majesty Sultan Qaboos granted him.

452. Extract from the Briefing by Secretary (East) in the Ministry of External Affairs N. Ravi relevant to Prime Minister's visit to Oman and Qatar.

New Delhi, November 7, 2008.

Official Spokesperson (Shri Vishnu Prakash): Good evening and welcome to the Media Hall.

Secretary (East) Mr. N. Ravi is here to brief you about the forthcoming visit of Prime Minister to Oman and Qatar. He will also be talking to you about the forthcoming BIMSTEC Summit. To Secretary (East)'s right is Joint Secretary (Gulf) Mr. A. Manickam, and to my left is my colleague Joint Secretary (Economic Relations) Mr. J.S. Mukul. Secretary will also be taking a few questions after his opening remarks.

Secretary (East) (Shri N. Ravi): Thank you Vishnu.

Thank you very much to all of you for coming for this briefing. This is to cover the visit of the Prime Minister to the Gulf countries. He would be visiting Oman and Qatar from the 8th to the 10th of November. The Prime Minister will be accompanied by a high-power delegation. He would be in Oman on the 8th and the 9th; and in Qatar on the 9th evening onwards and on the 10th. He would return to India late night on the 10th.

If you recall, we have had many visits from the Gulf countries over the last two years. From the Indian side this would be the first visit of any Prime Minister to Qatar. Of course, we have had earlier visits of Prime Minister's to Oman. In Oman, where the Prime Minister would be touching down first, there would be a delegation-level meeting on the date of arrival that is tomorrow. Then there would be an audience with His Majesty the Sultan of Oman on the 9th. A community function is also on the cards, and a meeting with the business community has also been arranged. This would be on the 9th of November.

The programme in Qatar has a similar content. On the day of arrival there is a meeting with the Prime Minister followed by delegation-level talks. Similarly, on the day following, that is on the 10th, there is an audience with His Majesty, following which His Majesty would be hosting a special lunch for the Prime Minister.

The Gulf countries are extremely important for India, and certainly Oman and Qatar in a big way, because there are many Indian workers there.

When we take the whole Gulf and West Asia into consideration we have a little over 4.5 million people living and working there. They send a remittance of a little under nine billion dollars a year. Apart from that, the entire Gulf region is very important both as a market and as a source of energy security for us. From both angles the visit would cover issues and certain aspects of our relations with these countries, keeping our expatriate community which is present in a very large number in both these countries and in the Gulf in general and the prospects of trade and investment also both sides.

Most of you may be aware that in Oman we have one of the largest investments anywhere in the world, a little over 950 million dollars in the company called OMIFCO (Oman - India Fertiliser Company). That is really a major symbol of our cooperation with any country in the Gulf. Qatar on the other hand has the world's third largest reserves of gas which is also a good market for us both for buying gas as well as for selling to those countries.

In a manner of speaking, this visit will be a major milestone in our relations with both these countries to bring us closer both in terms of our people-to-people interaction, in terms of trade, in terms of investment, and in terms of overall long-term energy security, and exchanges in areas that relate to such sectors where India has a lot of strength. The information technology sector, the education sector come to mind first. These would also be areas of interest to us.

*

*

*

*

Question: Regarding the PM's visit to Oman and Qatar, who are all the Ministers and major officials who are accompanying the PM?

Secretary (East): Among the Ministers, given the fact that there is a major expatriate Indian community living there, the Minister for Overseas Indian Affairs would be a part of the delegation. The Minister of State for External Affairs, Mr. E. Ahamed would be there. Apart from them, to give the investment aspect a major boost, Deputy Chairman of the Planning Commission is also likely to be there. The Minister for Petroleum and Natural Gas would, I think, be there in Qatar.

Question: Are there any agreements in the pipeline that will be signed during the visit?

Secretary (East): There are some under discussion and these would relate to areas like trade, investment, and the expatriate manpower that we have there. But these are still being finalized and we are looking forward to getting them signed during the visit.

* * * *

(It was a joint briefing for the Prime Minister's visit to Oman and Muscat and the BIMSTEC SUMMIT in New Delhi. For the briefing on BIMSTEC please see Document No.147.

453. Statement by Prime Minister Dr. Manmohan Singh on the eve of his departure for Oman and Qatar.

New Delhi, November 7, 2008.

I will be visiting Oman and Qatar from November 8-10, 2008. The Gulf region is an area of vital importance for India's security and prosperity¹. We have always enjoyed a very special relationship with countries of the region. Nothing epitomizes this more than our ties with the Sultanate of Oman and the Emirate of Qatar.

My visit to Oman from November 8-9, 2008 will give me an opportunity to renew with the leaders and people of Oman the very special affinity that has existed between India and Oman through the centuries. I will have the honour of an audience with His Majesty Sultan Qaboos bin Said, and will hold detailed discussions on our bilateral relationship with His Highness Deputy Prime Minister Sayyid Fahd Mahmoud Al Said. Both India and Oman have a special vision for our bilateral relationship and I will use my visit to find ways in which we can concretize this vision into a broad and mutually beneficial cooperative framework between the two countries.

I will be visiting Qatar from November 9-10, 2008. We attach great importance to our ties in Qatar, which is one of the largest and most reliable suppliers of

¹ The two countries being visited by the Prime Minister are important for India in the Gulf region. India also has very close ties with Oman, which is one of the countries to unquestioningly offer berthing facilities to Indian warships. India also conducts joint naval exercises with both countries and accommodates officers and men from their armed forces in its military training institutions. In 2004 India and Oman had signed an Extradition Treaty. India and Oman has set set up the world's largest grassroots fertilizer plant. India had chipped in with an investment of one billion dollars . It is also the largest Indian joint venture overseas. The Emir of Qatar visited India in April 2005. In December 2007 the Deputy Prime Minister of Oman visited New Delhi. The visit resulted in the signing of four MOUs for cooperation in various fields.

our energy needs from the region. Given the complementarities that exist between us, I am confident that we can build a mutually beneficial strategic partnership in this sector. I will have the honour of an audience with the Emir of Qatar His Highness Sheikh Hamad bin Khalifa al Thani and will hold discussions with His Excellency the Prime Minister Sheikh Hamad bin Jassam bin Jabor al Thani. I will discuss with them ways in which we can further strengthen our relations and move them forward in all their dimensions.

The current international economic and financial situation provides a unique opportunity for India to leverage the vast surplus funds in the Gulf for our development needs, and to accelerate trade and investment flows into each other's countries.

We have a large number of Indian citizens working in Oman and Qatar. Their contribution to these countries is widely acknowledged and appreciated by the authorities. I am grateful to both countries for the very warm welcome that has been accorded to them. During my discussions in Oman and Qatar I shall also discuss ways in which we can better assure their safety and welfare.

454. Statement by Prime Minister Dr. Manmohan Singh during his meeting with Business Community in Oman.

Muscat, November 9, 2008.

I am extremely pleased to have this opportunity to meet you, the captains of Oman's business and industry, today.

This is my first visit to Oman as Prime Minister. It reflects the great importance that the Government and people of India attach to our relations with Oman. We seek a broad-based relationship involving our parliamentarians, business communities and civil society actors to realise the full potential of our relations. Your role in building this partnership is truly critical.

We are extremely pleased to see the rapid progress which Oman has made under the wise leadership of His Majesty Sultan Qaboos bin Said. Oman's progress is a tribute to the hard work and spirit of enterprise of its people and the wise stewardship of His Majesty.

The destinies of the Gulf countries and India are closely interlinked. We have had a tradition of trade and civilisational contacts through the sea over many centuries. The large Indian community in Oman serves as a bridge between us, contributing to wealth and prosperity for both Oman and India. Today, the revolution in the communications and information technology sectors has brought us even closer together.

I was glad to learn that there are presently over 125 weekly flights between India and Oman, and new capacity addition is being planned.

Our total non-oil trade which was less than 200 million US dollars in 2000 has gone up seven fold to around 1.4 billion US dollars this year. I am told this figure could soon cross 2 billion US dollars.

On the investment front, the Oman-India Fertilizer Company stands as a shining example of our mutual cooperation. There has been an increase in investments in each other's countries during the last 2-3 years.

Our banks are functioning in each other's countries. Several large Indian companies are already located in Oman or are working in partnership with local companies in such sectors as oil and gas, mining, manufacturing, information technology and telecommunications, power and water, construction and real estate, and health care. Similarly, Omani companies have established joint ventures in India.

We also have the institutional mechanisms to promote our trade and economic cooperation. There is a Joint Commission at the level of

Commerce Ministers and a Joint Business Council representing industry from both sides. They are scheduled to hold their next meetings shortly. We have in place a Bilateral Investment Promotion and Protection Agreement and a Double Taxation Avoidance Agreement. We actively cooperate within the framework of the Gulf Cooperation Council, and an India-GCC Free Trade Agreement is under negotiation.

We must, however, look to the future and plan for it. I see enormous potential for a substantial strengthening of our trade and economic ties based on growing complementarities of our two countries.

The Oman economy is witnessing robust growth. There are ambitious plans for investment in infrastructure, diversification of the industrial base, tourism, free trade zones and energy security. Oman is also keen to upgrade its technical and vocational skills.

The Indian economy has witnessed rapid and sustained growth, averaging 9% over the last four years. The macro economic fundamentals of the economy are sound. Our domestic savings rate is 35% of our GDP and our investment rate is 37% of our GDP. Our young demographic profile will lead to a further increase in these rates of savings and investment over the coming years.

Our infrastructure financing needs are estimated to be 500 US billion dollars in the next five years. India offers a large and growing market. Despite the global economic downturn, the Indian economy is expected to maintain a growth rate of 7 to 7.5% next year. Above all, there is great goodwill and affection for the people of Oman in our country.

In this context, I am very happy that yesterday a Memorandum of Understanding has been signed to establish the India-Oman Joint Investment Fund. The Fund is the first, but long overdue, step to facilitate investments in infrastructure, tourism, health, telecom, utilities, urban infrastructure and other sectors. I would call upon captains of Oman's industry and financial companies to invest surplus liquidity into key infrastructure sectors in India. We are determined to create a hospitable climate for investment, particularly foreign investment from friendly countries like Oman.

There is vast potential for cooperation in the energy, fertilizers, IT, tourism and education sectors. You should also actively work with your Indian counterparts to explore possibilities of joint ventures in third countries.

I can assure you that we will do all that is necessary to facilitate greater trade and investment between India and Oman. India sees Oman as a natural partner in progress that benefits not only our two countries but also the Gulf region as a whole.

Against the background of the current international economic and financial situation I suggest there is an even greater need for us to join hands to shape counter-cyclical growth strategies by focusing on the real economy. India and Oman are well placed to convert this challenge into an opportunity. We count on you to be the architects of this magnificent change.

This is my first visit to your beautiful country and a voyage of discovery for me. In meeting you with the Captains of industry of Oman, I would wish to know your perceptions on how we can further strengthen our trade and economic ties and what problems you are facing for investment in India¹.

Thank you.

¹ During the visit, India and Oman agreed to step up defence cooperation by upgrading their joint naval exercises. India also appreciated the Omani gesture of providing berthing facilities for its warship which is patrolling the piracy-hit waters off the shores of Somalia where 18 Indians were held hostage by pirates. Already Omani service officers have been allotted training slots in Indian training establishments. The issue of stepping up defence cooperation was discussed during Prime Minister Manmohan Singh's visit. Among top security officials accompanying him were National Security Adviser M.K. Narayanan and Defence Secretary Vijay Singh. The joint naval exercises with Oman, named "Tamar-al-Tahir" (Benign Fruit), would be increased in complexity from next year. The upgraded naval exercises at the mouth of the Straits of Hormuz, through which a large proportion of the world's oil flows, would be renamed "*Naseem-al-Bahar*" (Sea Breeze). The idea is to get on a different level of operations and share the best practices with each other. The move to step up security ties was in keeping with the memorandum on defence cooperation signed in December 2005. Oman and India have been regularly exchanging ship visits and the last ship from the Royal Omani Navy visited India in April 2007. Indian warships, on the other hand, have been visiting Oman more frequently. "In the development of relations between our two countries, we have our security and defence. We have reviewed the developments in our region and international and altogether I go back with a great sense of satisfaction that the political leadership of Oman and of India are united in their resolve to cement our relationship into a mighty strategic partnership," noted Prime Minister Dr. Singh. Oman has also sought assistance from the Indian armed forces to set up credible supply systems for their defence equipment. In the past, the Indian Navy provided hydrological assistance to Qatar in order to help it develop fishing harbours as well as chalk out plans for off-shore pipelines. Media quoted highly placed officials to describe Dr. Singh's Oman leg of the visit as "successful," especially in view of the agreement on the joint fund and progress on ensuring the welfare of the five lakh Indian expatriate community. The Prime Minister and the Sultan Of Oman during their meeting had decided to set up a committee to ensure time-determined process of identifying areas where the money of the joint fund would be invested. India had asked Oman to put up its wish list which could be discussed in the next couple of months. India and Oman also discussed the prospects of New Delhi signing a Free Trade Agreement (FTA) with the six Gulf Cooperation Council countries of which both Oman and Qatar are members. Of the three aspects of the FTA, investment and services are not seen as posing much of a problem. Oman expects feedback in this respect by next month and has given indications that it will be happy if India inked the FTA when it takes over the GCC chair next year.

455. Speech by Prime Minister Dr. Manmohan Singh to the Indian Community at the Reception hosted by the Ambassador during his visit to Oman.

Muscat, November 11, 2008.

Ambassador Anil Wadhwa,

Ladies and Gentlemen,

It gives me great pleasure to have the opportunity to meet all of you today.

You represent close to five hundred fifty thousand Indians in Oman, the largest expatriate group in the country. You are a vibrant and industrious community. You are a microcosm of the multicultural and multi-religious diversity of India.

Above all, you symbolize the contemporary face of the civilisational and historical links that have existed between India and Oman for centuries. Traders, merchants and numerous others have over centuries travelled the seas between India and Oman and forged new connections and new links between our peoples. Today you are employing your skills to build a prosperous Oman and a new life for yourselves and your families. Your achievements are a matter of pride for the people back home in India and I bring to you our greetings.

We are grateful for the welcome the Sultanate has given to our countrymen, and the trust and confidence that has been reposed in them. The Omani leaders, His Majesty Sultan of Oman and His Highness the Deputy Prime Minister have expressed appreciation to me for your qualities of hard work, for your civic sense and for your discipline. India is truly proud of your achievements.

This is my first visit to Oman as Prime Minister. India enjoys exceptionally close and warm relations with Oman in all spheres of human activity. I have come to Oman to further strengthen these ties.

I have held excellent discussions with the Deputy Prime Minister His Highness Sayyid Fahd Mahmoud Al Said yesterday. I look forward to my audience with His Majesty Sultan Qaboos Bin Said later today.

The Gulf region is an area of great importance to India. It is part of our extended neighbourhood, and home to five million Indians. It is the largest source of our energy supplies. We have active trade and investment

interests. Piracy, criminal activities and terrorism on our seas and land threaten the Gulf countries and India as well.

There are many reasons for us to work closely together with Oman to ensure a stable and prosperous region.

Ladies and Gentlemen,

India is undergoing a major transformation. Our economy is expanding rapidly. New opportunities for our youth are emerging every day. Our Government has embarked on the largest education, social welfare, skill development and employment generation programmes in the history of our country.

We are paying particular focus on the development of our agriculture and the rural areas. Our financing requirements for the building of massive infrastructure in the next five years are estimated at over 500 billion US dollars.

I am confident that as and when these ambitious programmes are put in motion, India will embark on a new growth trajectory.

Due to the current international economic and financial situation, our growth rate may come down somewhat next year. However, we still hope to achieve a growth rate of seven to seven and a half per cent next year. The fundamentals of the Indian economy are very strong. Our banking system and financial institutions are well capitalized and their depositors are wholly secure. I have constituted a high level committee to monitor the evolving global situation and suggest short-term and long-term measure to use this opportunity to further accelerate our growth.

Your contribution to the development of India is truly invaluable. Annual remittances from Oman to India are more than 780 million dollars. This is a reflection of your ties with the motherland and your confidence in India.

I hope that you will continue to display the same confidence in the future and invest in the future of our children and grand children.

There are over 130 companies from India who are currently engaged in Oman. Several Omani companies are engaged in business in India. We will continue to encourage a much greater flow of investment into each other's countries.

Yesterday, a Memorandum of Understanding was signed for the establishment of the India-Oman Joint Investment Fund. This is only the beginning. I hope that this Fund will open the door for far greater investment and economic cooperation between our two countries.

The Government of India is constantly alive to the welfare of the Non-Resident Indian community. Yesterday, a Memorandum of Understanding was signed between India and Oman on Labour Mobility, Protection and Welfare of workers. This important initiative will provide a framework for strengthening cooperation between our two countries in the field of human resource development.

The Ministry of Overseas Indian Affairs, under the able leadership of my senior colleague Shri Vayalar Ravi, has taken several other initiatives in the last few years for the benefit of the Indian diaspora.

The Ministry is in the process of establishing Overseas Indian Community Welfare Funds in all our Missions in the Gulf. The Overseas Workers Resource Centre, which is a toll free helpline, has been established for Indian workers in the Gulf. We have also created an Overseas Indian Facilitation Centre to provide opportunities for you to invest in India. A Scholarship Scheme for Diaspora Children has been introduced.

Ladies and Gentlemen,

Our relations with the Sultanate of Oman are based on solid foundations of close mutual understanding, trust and great warmth and respect for each other. Each one of you has an important role to play in further cementing this very important relationship and in spreading the message of goodwill at the people-to-people level. In many ways you are the Ambassadors at large for India.

I wish you continued success and happiness in your future endeavours. May God bless you.

Thank you.

456. Press Release of the Ministry of External Affairs on the visit of Omani Foreign Minister Yusuf Bin Alawai Bin Abdullah.

New Delhi, December 16, 2008.

The Foreign Minister of the Sultanate of Oman H.E. Yusuf Bin Alawai Bin Abdullah paid a visit to India on 16 December 08, which was the first from a Gulf country since the terrorist attack in Mumbai. It also follows the landmark visit of Prime Minister Dr. Manmohan Singh to Oman on 8-9 November 08.

In his meeting with EAM, Shri. Pranab Mukherjee, the Foreign Minister of Oman expressed deep condolences at the loss of life in the Mumbai terror attacks and solidarity with the people of India, noting that there can be no excuse for not dismantling the infrastructure of terrorism across the Indian border. EAM thanked the Omani dignitary for the expression of support and solidarity, and conveyed sympathies to the family of the citizen of Oman who was injured during the attack. While recalling with appreciation the telephonic call made by FM Abdullah soon after the Mumbai attack, EAM apprised Oman Foreign Minister of the results of the ongoing investigation which clearly pointed to the complicity of elements in Pakistan. Referring to the demarche made to Pakistan on 1st December, asking Islamabad to honour the commitments made on several occasions, not to allow Pakistani territory to be used for terrorist attacks against India, EAM stressed that it was time for Pakistani action not words.

Both leaders reviewed the excellent state of the multifaceted bilateral relations, noting with satisfaction that trade had doubled in 2007 to \$ 1.8 billion and continued to maintain its buoyancy. They agreed to strengthen ties further, in various areas including energy, petrochemicals, IT and joint investments. They exchanged notes on the global economic crisis and other subjects of mutual interest.

FM Abdullah also met MOS Sh. E Ahamed and NSA Sh. M K Narayanan during his stay in India.

PALESTINE

457. Address by Minister of State E. Ahamed on the International Day of Solidarity with the Palestinian People at the Indian Council of World Affairs.

New Delhi, January 18, 2008.

H.E. Mr. Saleh Mohd al-Ghamdi, Ambassador of Saudi Arabia,

H.E. Dr. Ahmed Salem Saleh Al-Wahishi, Chief Representative, League of Arab States,

H.E. Mr. Osama Musa, Ambassador of the State of Palestine,

Excellencies,

Distinguished invitees,

Ladies & Gentlemen,

It is indeed a pleasure for me to be here today to mark the International Day of Solidarity with the Palestinian People. This is an important occasion and I commend the Indian Council for World Affairs for taking the initiative to organize this event.

2. India's solidarity with the Palestinian people was lended early voice by our national leaders led by Mahatma Gandhi, Maulana Abul Kalam Azad and others during our own freedom struggle. Mahatma Gandhi said and I quote "My sympathy for the Jews does not blind me to the requirements of Justice. Palestine belongs to the Arabs in the same sense that England belongs to the English or France to the French". In the early years of independent India, this policy was given fresh vigour by our first Prime Minister, Pandit Jawaharlal Nehru. India's empathy with the Palestinian cause and its friendship with the people of Palestine is an integral part of our time-tested foreign policy.
3. India was the first non-Arab State which recognized the PLO as the sole legitimate representative of the Palestinian people in 1975 and in 1988 became one of the first countries to recognize the State of Palestine. India opened its Representative Office in Palestine in 1996

after the establishment of the Palestinian National Authority and return of President Yasser Arafat to the territories.

4. Since the opening of this Representative Office, in line with India's principled support to the Palestinian cause and the Palestinian people, India has, till date, extended assistance in the form of grants to the tune of US\$ 27 million to the Palestinian National Authority towards humanitarian relief, development projects, establishment of educational and training facilities etc.
5. In 2004, India donated vehicles and medicines worth US\$ 1 million to the PNA. I had the honour to personally hand over this aid to late President Arafat. In 2005, a grant of US\$ 15.4 million was offered by India to the PNA for the development of infrastructure and human resources. Several projects have been conceived for implementation under this offer.
6. At the International Donors' Conference for Palestine in Paris last month, India pledged US\$ 5 million for projects aimed at strengthening Palestinian institutions. India also committed to provide training to 400 Palestinian officials under our ITEC programme over a period of two years. We have remained involved in encouraging Palestinian cadre building and, within this framework, have trained a large number of Palestinian Authority officials from economic, industrial and financial sectors including conducting of special courses for Palestinian diplomats in our own Foreign Service Institute. Our commitment at the Donors' Conference is to assist in the capacity building and the human and infrastructure development of the Palestinian people.
7. The entire world is a witness to the manner in which the border restrictions, economic sanctions and a restrictive regime have brought the Palestinian economy to the verge of a collapse. We have viewed with alarm the continuous vicious circle of attacks, reprisal and counter-attacks, the worsening humanitarian and security situation in Gaza, as well as the continued violence inflicted on innocent citizens. The continued expansion of Israeli settlements in the Occupied Territories and the relentless construction of the separation wall threaten to create new facts on the ground and fresh grievances in an old conflict.
8. India believes that there is no military solution to the problems facing the Middle East. We have repeatedly called for all parties in West

Asia to fully cooperate with the international community in its efforts aimed at achieving lasting peace. We support the revival of direct negotiations between the leaders of Israel and Palestine. We look forward to the continuation of a constructive dialogue and forthcoming meetings towards further resolution of issues on the agenda.

9. As a responsible member of the international community and as a country with long-established ties with West Asia, India also desires to see a peaceful resolution to tensions in the region through peaceful dialogue. At the Annapolis Conference last November, India reaffirmed its commitment to play its due role in the collective endeavour of the international community to strengthen the forces of peace and stability in the region.
10. On this occasion, I would like to re-affirm India's consistent and unwavering support to the friendly people of Palestine and reiterate India's belief that a just, comprehensive and lasting peace in the region can be achieved through negotiations and dialogue so that a sovereign, independent, viable State of Palestine living side by side within secured borders, with the State of Israel, becomes a reality.
11. I thank the Indian Council for World Affairs for inviting me to this occasion and wish the deliberations all success.

Thank you, Jai Hind.

458. Statement by Official Spokesperson on the situation in Palestine.**New Delhi, February 11, 2008.**

India has followed recent events in Gaza and the West Bank with deep concern and anguish. The misery and hardship faced by the people of Palestine, especially in the Gaza strip, is deplorable. India condemns the use of force on the civilian population of Palestine and calls upon all sides, including Israel, to exercise restraint¹.

Recent moves by the Egyptian Government to address humanitarian needs through dialogue including among the Palestinian groups, deserve support. However, peace cannot wait much longer, and threatens to become a casualty in the region and for its peoples, irrespective of boundaries, cultures and history. The time to act is now with trust and understanding for a new beginning of hope and fulfillment, and an end to violence. It is imperative that normalcy be restored expeditiously so that the aspirations of the peoples in the region are realized.

In addition to the assistance already delivered by India to the people of Palestine, we stand ready to extend additional assistance to help the people of Palestine to overcome the suffering they are facing now. A package of such assistance is being worked out and will be announced shortly. India also stands ready to help the peace process move forward.

¹ The violence in the Gaza was escalating considerably and the Israeli accused Hamas, which took control of the Gaza strip in June 2007. The Israeli claimed that 697 Qassam rockets and 822 mortar shells had been fired on cities in Israel without provocation. The media quoted the sources in the Israeli Embassy in New Delhi to say "the situation will improve dramatically and all violence will cease, if Hamas stops firing on Israel."

459. Extract relevant to Palestine from the Speech of External Affairs Minister Pranab Mukherjee while replying to a Short Duration Discussion on his Statement made earlier in the Lok/Rajya Sabha on March 3 on Recent Developments in India's Foreign Relations.

New Delhi, March 19, 2008.

*

*

*

*

I think, a question has been raised that have we diluted our policies in respect of our stand on Palestine. Mahatma Gandhi has been quoted. Mr. Raashid Alvi has also pointed out that he was asked that you can speak in favour of Palestine, but, you cannot vote in favour of Palestine. But, if we look at our track record of voting, it is like this. In the United Nations fora, on the 3rd of this month, my colleague, Shri Anand Sharma, when he participated in the Ministerial Conference of the Human Rights' Organisation in Geneva, he voted with the Arab world, condemned the atrocities; disproportionate atrocities, and retaliations which have taken place in Gaza. We are supporting the Security Council's Resolution. What is the contention of the Security Council's Resolution? It is that Israel will have to vacate the occupied land. When we are supporting the Resolution that solution lies in implementing the Security Council's Resolution, am I diluting my policy by not repeating in every statement that Israel should vacate its occupied land because my total support is with the U.N. Security Council Resolutions, the Arab League initiatives and even the recent initiatives taken by Saudi Arabia to resolve these issues and to have peaceful solution to the problems of Palestine? People have suffered too long. During the last couple of weeks, thrice we have expressed our deep concern on it. But, surely, Mr. Deputy Chairman, Sir, you will agree with me that even the strongest sentiments can be expressed in most sober words, and in most sober language. We are exactly doing that. We are not diluting our stand. We believe that Palestinians have every right to have their homeland. They have their right to live in peace. As Israelis have their right to have their own homeland, similarly, Palestinians must have their right to have their own. Nobody can deny it. And India stands by that. Therefore, there is no question of dilution on that.

460. Statement by Official Spokesperson on resurgence of violence in Gaza.**New Delhi, April 18, 2008.**

India is saddened at the upsurge of violence in Gaza over the past week which has led to the loss of many Palestinian and Israeli lives. Willful damage caused to Gaza's already fragile infrastructure facilities would only add to the difficulties that the people of the Gaza Strip continue to face¹.

India remains firmly convinced that dialogue remains the only viable option that can effectively address the issues confronting the region and its people. We reiterate our call to all sides to abjure violence.

¹ The reference to damage to the fragile infrastructure of Gaza in the Spokesperson's statement was to indiscriminate destruction of houses in the Occupied West Bank, particularly in the village of Far'un where the Israeli security forces carried out a large scale demolition drive in recent times. The Israeli authorities claimed that the houses built in a part of the West Bank known as area C, a designation from the era of the Oslo Accords which meant Israel had full military and administrative control. In order to build any property, a Palestinian must apply for a permit from the Israeli authorities. If there is no permit, the building was liable for demolition. There were 138 demolitions between January and March, most in area C, compared to 29 in the last three months of 2007, according to the U.N. Office for the Co-ordination of Humanitarian Affairs. This year 400 Palestinians had so far been displaced as a result. According to media reports at a time of a renewed peace process to create an independent Palestinian state, the reality in the West Bank was that Jewish settlements were growing and demolitions of Palestinian homes were on the increase.

461. Statement by Official Spokesperson of the Ministry of External Affairs on developments in Gaza.

New Delhi, March 1, 2008.

The Government of India is dismayed at the continuing violence in Occupied Palestine, particularly in the Gaza Strip. Events this week, including the disproportionate use of retaliatory force, have led to avoidable civilian casualties, including the death of innocent children. This is unacceptable¹.

India strongly urges an immediate end to the cycle of violence by all parties concerned so that the focus is not lost on the process of dialogue-driven conflict resolution.

1

The Spokesperson was referring to the escalating tension between Israel and Palestinian militant group, Hamas and the statement by the Deputy Defence Minister of Israel Matan Vilnai that "the more [rocket] fire intensifies and the rockets reach a longer range, they [the Palestinians] will bring upon themselves a bigger holocaust because we will use all our might to defend ourselves." While in the past, rockets fired from Gaza have landed harmlessly in Ashkelon, it was now for the first time that a rocket hit an apartment block, smashing through the roof. The Israeli security officials claimed that the rockets which targeted Ashkelon now were Iranian-supplied Grad-type, with a range of 22 km and more destructive than Qassam rockets, used earlier, which were less lethal. The new round of Palestinian attacks followed the Israeli blockade of Gaza. Israel had also intensified military strikes on the coastal strip killing 32 Palestinians in the last two days.. An Israeli air strike killed four Palestinian boys, who were playing in Northern Gaza on February 28.

462. Statement by Ambassador of India to Indonesia and Head of Indian Delegation Biren Nanda at New Asia-Africa Strategic Partnership Ministerial Conference on Capacity Building for Palestine.

Jakarta, July 14, 2008.

Mr. Chairman,

Please allow me, at the outset, to thank you and the Governments of Indonesia and South Africa for taking the initiative of hosting the NAASP Ministerial Conference on Capacity Building for Palestine. You have my delegation's full support in making this conference a successful one, the first one to be hosted by the countries of Asia and Africa.

NAASP, which was launched in April 2005 during the Asian-African Summit, has rekindled the 'Bandung Spirit'. India is committed to NAASP and believes that this partnership will lead to the development of continent-wide, intra-regional cooperation between Asia and Africa.

Palestine remains on the global agenda as it was for the leaders who met for the historic Bandung Conference in 1955. India's solidarity with the Palestinian people and its attitude to the Palestinian question was inspired by its own freedom struggle led by Mahatma Gandhi. This policy was consolidated under the leadership of Pandit Jawaharlal Nehru. In November 1947, India voted against the partition of Palestine at the UN General Assembly. In 1988, India recognized Palestinian Statehood and in 1996, we opened a Representative Office to the State of Palestine.

We have supported the resumption of direct negotiations between the leaders of Palestine and Israel and the establishment through peaceful negotiations of a sovereign, independent and viable State of Palestine, living side-by-side and in peaceful co-existence with the State of Israel. To that end, India has underlined its support for the Arab Peace Initiative and the Quartet road map and has repeatedly called for the implementation of relevant resolutions of the United Nations Security Council.

India has had a long history of assisting Palestine and its people in their task of capacity building and national reconstruction. India has over the years extended assistance in the form of grants to the tune of USD 27 million to Palestine National Authority towards development projects, establishment of educational and training facilities and humanitarian relief etc.

Indian assistance has taken various forms. These include project assistance such as the construction of the Jawaharlal Nehru Library at the Al-Azhar University and the Mahatma Gandhi Library and Student Activity Centre at the Palestine Technical College at Deir-al-Balah, both in Gaza.

The construction has begun of the Palestine Embassy Chancery and Residential buildings in New Delhi as a gift of the Government of India to the State of Palestine. India will shortly begin releasing assistance worth \$1.8 million for the construction of the Jawaharlal Nehru High School at Abu Diis. A Memorandum of Understanding to this effect was signed in Delhi a fortnight ago on 1 July 2008 between the Government of India and the State of Palestine.

India's assistance to Palestine has also taken the form of supply of vehicles for the use of the Palestine National Authority. In the recent past, India has sent relief supplies, particularly medicines. India also provides scholarships to Palestinians under the Indian Technical & Economic Cooperation Programme (ITEC). I have pleasure in announcing that in keeping with this, the Government of India has decided to increase the allocation of ITEC slots from the existing 40 training slots to 60 per annum. The Government of India will positively consider further increases depending on its utilization. This is by way of actual follow up to the pledges made by India at the Paris Donors' Conference held in December 2007. At Paris Conference, India also made a pledge of USD 5 million for further development of Palestinian institutions.

India has consistently assisted the work of the United Nations through its contributions to Funds and Programmes and to Specialized Agencies. In addition, India annually contributes US\$ 20,000 to the United Nations Relief & Works Agency, UNRWA. In this context, at the International Donors Conference in Vienna on 23 June 2008 (convened by the Governments of Austria and Lebanon as well as the League of Arab States and the European Commission), India renewed its pledged contribution of \$600,000 to assist in the rebuilding of the telecommunications component of the Nahr el-Bared Palestinian refugee camp and surrounding areas in Lebanon that had been destroyed in the fighting in that country.

India will remain by the side of the Palestinian people in their efforts aimed at reconstruction and nation-building. In keeping with its historic association with them, India renews its pledge to continue to render appropriate assistance in capacity building.

Mr. Chairman,

I would like to conclude by expressing my country's hope that this Conference would renew the pledge of solidarity made at Bandung by leaders of Asia and Africa to the cause of Palestine.

I thank you.

463. Statement by External Affairs Minister Pranab Mukherjee at the Ministerial meeting of the NAM Committee on Palestine.

Tehran, July 30, 2008.

Mr. Chairman,

I would like to express my gratitude to you for convening this meeting, and also my congratulations on your effective Chairmanship of this important Committee. I recall India's special connection with this body ever since its establishment at the VII NAM Summit in New Delhi twenty five years ago.

Mr. Chairman,

West Asia and the Gulf region are of obvious importance to India, given our long civilizational links. Over the course of this year, particularly over the recent days, we have been concerned with the situation in West Asia. We continue to urge an end to the cycle of violence, the ongoing blockade of Gaza, the expansion of settlements and the construction of the separation wall. Just now, H.E the Foreign Minister of Palestine has very clearly depicted a picture of the situation since the Annapolis Conference last year. He reminded us of the commitments made there, and also of the commitments of Israel and Palestine under the Road Map. From the briefing by the Foreign Minister, it seems that we are not getting anywhere on this issue, which we believe is political in nature and cannot be resolved by force.

India's commitment to the Palestinian cause, as well as its solidarity with the Palestinian people, are well-known and I need not reiterate it. In keeping with India's support to the Middle East Peace Process in

all its tracks, we have consistently supported the Palestinian people in realizing their legitimate aspirations for a sovereign, independent and viable State of Palestine, existing side-by-side in peace with the State of Israel. India remains convinced that a just and comprehensive solution can be achieved, based on the principle of 'land for peace' and in accordance with the series of UN Security Council resolutions, some of which you also referred to, such as 242, 338, 1397 and 1515. The Arab Peace Initiative and the Quartet Road Map offer ways forward.

Mr. Chairman,

India has always rendered assistance to the Palestinian people, including in capacity building and national reconstruction. India announced humanitarian assistance equivalent to US \$ 2.3 million, following economic sanctions imposed by Israel and the West in 2006. At the Paris Donors' Conference for Palestine in December 2007, India pledged US\$ 5 million for development projects and committed to provide training to 400 Palestinian officials under our ITEC Programme. Our project assistance proposals include construction of the Mahatma Gandhi Library and Student Activity Centre at the Palestine Technical College in Gaza. At the recent Ministerial conference on capacity-building for Palestine, held in Jakarta earlier this month, we announced an increase in the allocation of technical training opportunities for Palestine. But from what has been presented by H.E the Foreign Minister of Palestine just now, it appears that additional Budgetary Support will be required by Palestine, and we will all need to consider what we can do.

Mr. Chairman,

We thank you for your active promotion of the Palestinian cause. India pledges to continue to work with other members of this Committee in our noble endeavour to collectively support the Palestinian cause. We endorse the draft statement circulated by our Palestinian friends. We look forward to it being issued at our Ministerial Conference today.

With this brief intervention, once again I thank you, Mr. Chairman.

464. Remarks of Prime Minister Dr. Manmohan Singh at the foundation stone laying ceremony of the Chancery building of the State of Palestine.

New Delhi, October 7, 2008.

I am delighted to be here on this special occasion of the foundation stone laying ceremony of the Embassy building of the State of Palestine in India.

This ceremony coincides with the State visit of President Mahmoud Abbas to India with whom I have just held very fruitful talks. I reiterated to President Abbas India's consistent support to a negotiated solution to the Palestine issue. India believes that the solution should be based on the relevant UN Resolutions, the Arab Peace Plan and the Quartet Roadmap resulting in a sovereign, independent, viable and united State of Palestine living within secure and recognised borders, side by side at peace with Israel.

India's association with and commitment to Palestine is rooted in our modern history that goes back to our struggle for independence. As early as in 1936, a 'Palestine Day' was observed in India and fraternal greetings went out from Indian leaders to their Palestinian counterparts.

Soon after independence, India had the privilege of serving on the United Nations Special Committee on Palestine formed in 1947 by the UN General Assembly. This step marked the beginning of our consistent support to the Palestinian cause in the United Nations and all other international forums.

India recognized the Palestine Liberation Organisation as the sole representative of the Palestinian people in 1974. On March 26, 1980, India granted diplomatic recognition to the office of the PLO in New Delhi, two days before the historic first visit of Chairman Yassir Arafat to India. India accorded recognition to the State of Palestine soon after its proclamation in Algiers in 1988. India opened its Representative Office in Palestine in 1996.

In November 2007, India participated in the Annapolis Conference on peace in West Asia in the hope that a determined process would be launched to secure Palestinian rights and achieve a just, durable and comprehensive peace in the region. That, regrettably, remains an elusive goal.

Earlier this year, we were shocked and dismayed by the violence in the occupied territories, including in Gaza. We hope that wiser counsel will prevail and that the path of dialogue will remain the preferred path to realise peace in the region.

India and Palestine have been steadfast partners over decades. It is only fitting that India's commitment to Palestine and its future should find one of its embodiments in the building which stands before us. I have no doubt that it will serve as a symbol of our friendship and solidarity in the future.

India will continue to do all it can to assist Palestine in all its endeavours, including in capacity and institution building. We have signed today an MoU to finance construction of a school to be named the Jawaharlal Nehru High School in Abu Dees near Jerusalem. I also have great pleasure in announcing a grant of 10 million US dollars as budgetary support to the Palestinian National Authority to help meet its immediate requirements and an additional 10 million US dollars as assistance for development projects.

I thank you once again for inviting me.

465. Memorandum of Understanding between the Government of the Republic of India and The Palestine Liberation Organization for the benefit of the Palestinian Authority Regarding Construction and Equipping of Jawaharlal Nehru High School at Abu Dees.

New Delhi, October 7, 2008.

Whereas the Government of the **Republic of India** ("India") and the **Palestinian Authority** ("PA"), the parties, have agreed in principle to cooperate for the construction of a high school at Abu Dees ("The Project").

Whereas His Excellency the President of the State of Palestine has visited India,

Whereas India has announced a fresh commitment to support the PA,

Now therefore India and PA have reached the following understanding:

Article - 1
Scope and Objectives

1. This MOU sets forth the terms and procedures for India's Assistance to support the construction of Jawaharlal Nehru High School at Abu Dees as outlines in the project proposal.

The goals of the Project are:

- To guarantee a better and safe educational environment in Abu Dees and neighbouring villages.
- Enhancing economic development aspects, through job creation.

The objective of the project:

- Achieve better learning environment via the construction of a high school.
2. The details of the project are : A total constructed area of 4000 Square Metres, with 28 class rooms, 5 labs, multipurpose hall (gymnasium and auditorium), administrative building, a library and toilet units.

Article - 2
Co-operation-Representation-Administration

1. India and PA shall co-operate fully to ensure that the Goals and Objectives of the Project are successfully accomplished. To that effect, each party shall furnish the other party with all such information as may reasonably be required pertaining to the Project.
2. In matters pertaining to the implementation of this MOU, the Representative Office of India to the Palestinian Authority ("IRO") and the Ministry of Education and Higher Education ("MoEHE") shall be competent to represent India and PA respectively and shall hereunder be authorized to decide on components/activities to be included in the Project in accordance with Clause 5 below.
3. MoEHE shall be responsible for entering into contracts with suppliers and consultancy firms considered necessary for the implementation of the project.
4. Representatives of India and PA shall have periodic meeting as deemed necessary.
5. A project implementation committee/supervisory committee would be constituted consisting of one representative each of Ministries of Planning, Education and Higher Education of PNA and Representative each from Finance Division and WANA Division of Ministry of External Affairs.
6. The project implementation committee/supervisory committee would coordinate the project and Ministry of Education and Higher Education will send periodic reports on its implementation to the Government of India.
7. Whenever India and PA agree to extend existing activities or include new activities under the project, this shall be recorded in proper correspondence between the GOI and the MoEHE.

Article - 3
Contribution of India

1. India shall make available to PA a financial grant of US \$ 1.8 Million (US Dollars One Million Eight Hundred Thousands), to be used exclusively to finance the project, in the planned period of 24 months.

2. Any accrued interest on the grant or currency gains may be used for the benefit of the project, as agreed by the parties in writing.
3. Any funds not fully utilized for one activity within the project may be upon previous written agreement between the Parties to be utilized for the benefit of other activities within the project.
4. Any unspent disbursed funds and any unspent accrued interest shall be used as agreed upon between Parties in writing.

Article - 4

Contribution and Obligations of the Palestinian Authority

PA shall make all reasonable efforts to facilitate the successful implementation of the project and shall hereunder:

1. The PA will provide the land for the project with an area of 10,000 Square Meters.
2. Through MoEHE, has the responsibility for planning, administration and implementation of the project, including all categories of the works. Funds for maintenance of the school building would be made available regularly by the Abu Dees Municipality.
3. The project will be assigned a special account under the single treasure account, opened by the Ministry of Finance and made available to MoEHE.
4. Through the Directorate General of Buildings, in close cooperation with the Directorate General of Financial Affairs of MoEHE, has responsibility for accounting aspects of the project.
5. Ensure that the account for the project is kept in accordance with generally accepted practices.

Article - 5

Disbursements

The funds are expected to be released as hereunder:

- (a) 10% of the proposed assistance i.e. US \$ 0.18 Million will be released immediately to the executing agency through India's Representative in Ramallah.

- (b) Balance amount can be provided to executing agency after receipt of utilization reports and on reviewing the progress of work.
- (c) A corpus of US \$ 50,000/- will be maintained with Representative of India, Ramallah and the amount can be reimbursed to the executing agency on receipt of utilization reports. The amount of corpus can be recouped later on.
- (d) The Project Monitoring Committee will meet at regular intervals to review progress of the project and to ensure timely completion of the project.

The tranches of the fund shall be released upon completion of following stages of works:

Stage one - Excavation, preparation of site plan and concrete foundations.

Stage two - Completion of construction of two floors, including slabs but excluding exterior works.

Stage three - Concrete work, including slabs for the third floor and completion of electrical, mechanical and interior works for the first two floors.

Stage four - Completion of all works on the third floor, installation of furniture and other equipments.

The various stages of the Projects are expected to be completed in six months each.

Article - 6 **Settlement of Disputes**

Any differences arising out of the Memorandum of Understanding shall be settled, amicably through negotiations between the parties.

Article -7 **Final Clauses**

The MoU will come into force from the date of its signature by both parties and shall remain in force until the completion of the project.

In witness whereof, the undersigned duly authorized thereto by their respective Governments have signed this MoU.

Done at Delhi on this 07th day of October, the year 2008, in two originals each in Hindi, English and Arabic, all the texts being equally authentic. In case of any divergence in interpretation, the English text shall prevail.

For the Government of
the Republic of India

For the Palestinian Authority

E. Ahamed
Minister of State for External Affairs

Dr. Riyad Al Malki
Minister of Foreign Affairs

466. Joint Statement issued on the State Visit of the President of the Palestinian National Authority Mahmoud Abbas.

New Delhi, October 9, 2008.

His Excellency Mr. Mahmoud Abbas, the President of the Palestinian National Authority, paid a State Visit to India from 6-9 October, 2008. He was accompanied by the Foreign Minister, H.E. Dr. Riyad Al-Malki, Advisor to the President and Official Spokesman, H.E. Mr. Nabil Abu Rdeineh, Advisor to the President, H.E. Mr. Ziad Abu 'Amr and other officials.

2. His Excellency Mr. Mahmoud Abbas called on the President, Smt. Pratibha Devisingh Patil, who hosted a banquet in his honour. The Vice President, Shri M. Hamid Ansari called on President Abbas. His Excellency President Mahmoud Abbas and Prime Minister, Dr. Mammohan Singh, held delegation level discussions. The Chairperson of the United Progressive Alliance, Smt. Sonia Gandhi, the Leader of the Opposition, Shri L.K. Advani and the Minister of State for External Affairs, Shri E. Ahamed, called on His Excellency, President Mahmoud Abbas.
3. Bilateral discussions reflected the traditionally close and cordial ties between India and Palestine and the solidarity that the Government and people of India have always shown for Palestine. Recalling its participation in the conference on Middle East Peace convened in November, 2007 at Annapolis MD, India expressed the hope that

discussions between the Palestinian National Authority and Israel aimed at resolving all outstanding issues would be taken forward in an expeditious and purposive manner.

4. India reiterated its well-known support for the Palestinian cause in line with its backing of the United Nations Security Council Resolutions 242 (1967) and 338 (1973) calling for a negotiated solution resulting in a sovereign, independent, viable and united State of Palestine living within secure and recognized borders, side by side at peace with Israel as endorsed in the Quartet Roadmap and United Nations Security Council Resolutions 1397 and 1515. India also reiterated its support for the Arab Peace Plan. India also called for an end to the expansion of Israeli settlements in occupied Palestine and for an early and significant easing of restrictions on the free movement of persons and goods within Palestine. The Palestinian side deeply appreciated India's traditional and steadfast commitment to the Palestinian cause.
5. In the course of discussions, India renewed its commitment to the economic development of Palestine, including through provision of assistance to the capacity building efforts of the Palestine National Authority. In this regard, India and Palestine decided to accelerate the implementation of projects already identified on the basis of a process of re-prioritisation based on mutual consultations. They also agreed to consider the formation of a Joint Committee to discuss bilateral economic cooperation activities. A Memorandum of Understanding regarding construction and equipping of the Jawaharlal Nehru High School at Abu Dees was signed during the visit. It was also announced that India has increased the number of training slots available for Palestinian nationals under the Indian Technical and Economic Cooperation Programme to sixty each year.
6. India and Palestine will also work together to develop an information technology park in Palestine. The two countries will also explore ways of cooperating in the water resources sector.
7. In the presence of the Prime Minister, Dr. Manmohan Singh, the President of the Palestine National Authority, His Excellency President Mahmoud Abbas laid the foundation stone of the Chancery-cum-Residences complex of the Embassy of Palestine being built in New Delhi as a gift of the Government and people of India.

8. The Prime Minister, Dr. Manmohan Singh affirmed that keeping with India's long-term and principled support for the Palestinian people, the Government of India remains fully committed to implementing all mutually agreed projects in Palestine. In this regard, reaffirming the Government of India's commitment made in 2005 for \$ 15 million in project assistance that includes the construction of several identified projects for the benefit of Palestine and also India's pledge of \$ 5 million dollars in assistance made in 2007, the Prime Minister, Dr. Manmohan Singh announced a grant of \$10 million as budgetary support to the Palestine National Authority as well as an additional \$10 million in project assistance for Palestinian development programmes. India also offered to assist Palestine in its efforts at achieving economic self-reliance. His Excellency President Mahmoud Abbas thanked the Prime Minister, Dr. Manmohan Singh for this important and timely assistance.
9. Both leaders expressed satisfaction over the outcome of the State Visit, which they felt had marked another important landmark in the long history of close and fraternal interactions between India and Palestine.
10. The President of the Palestinian National Authority, His Excellency Mr. Mahmoud Abbas invited the President and the Prime Minister to visit Palestine. The invitations were accepted with pleasure and dates would be settled through diplomatic channels in due course.
11. At the conclusion of his State Visit, His Excellency Mr. Mahmoud Abbas, President of the Palestinian National Authority, expressed deep gratitude to the President, Smt. Pratibha Devisingh Patil and to the Prime Minister, Dr. Manmohan Singh, for the warmth of the reception accorded to him and to his delegation during the course of their stay.

467. Speech by President Pratibha Devisingh Patil at the Banquet in honour of the President of the Palestinian National Authority Mahmoud Abbas.

New Delhi, October 7, 2008.

Your Excellency, President Mahmoud Abbas, President of the Palestinian National Authority,

Excellencies,

Distinguished Guests,

Ladies and Gentlemen,

It gives me great pleasure to extend a warm welcome to you, Excellency, and to the distinguished members of your delegation on your State Visit to India.

India's cherished friendship with the Palestinian people is based on ties spanning almost every aspect - political, cultural, social, religious and economic. This, your second visit, marks another important step in further strengthening the age-old ties of friendship, solidarity and cooperation that have always characterised relations between India and Palestine.

India's position on the Palestinian question and its solidarity with the Palestinian people has been unambiguously articulated since the days of our own freedom struggle and is a matter of historical record. At the United Nations, we were one of the eleven members of the United Nations Special Committee on Palestine. India did not favour the idea of the partition of Palestine and went on to vote against the Partition Resolution that was eventually passed by the UN General Assembly in November, 1947. When Partition was nevertheless decided upon by the United Nations, we recognised the State of Israel.

In 1975, India became the first country outside the Arab world to recognize the Palestine Liberation Organization as the sole and legitimate representative of the Palestinian people. On the 26th of March, 1980, our Parliamentarians - the representatives of the people of India - gathered in Parliament, cheered when it was announced that India had decided to accord full diplomatic recognition to the PLO Office in New Delhi. Two days later, Chairman Yasser Arafat began an official

visit to India, happily the first of many that he and you, Excellency, have honoured us with.

In 1988, India recognized the State of Palestine. In 1996, we opened a Representative Office to the State of Palestine.

For India, commitment to the Palestinian cause has been an important part of foreign policy and has been manifested in the continuous and consistent support to its issues in the Non Aligned Movement, in the United Nations and in other international fora. In keeping with India's support to the peace process in West Asia in all its tracks, India has always supported the Palestinian people in realizing their legitimate aspirations for a sovereign, independent and viable State, existing side by side in peace with Israel within secure and recognised borders. To that end, India has underlined its support for the Arab Peace Initiative and the Quartet Road Map and has repeatedly called for the implementation of relevant resolutions of the United Nations Security Council and General Assembly.

I commend the indomitable spirit of the Palestinian people and reaffirm India's principled and unwavering support to their just cause. We have always considered that the conflict in West Asia is essentially political in nature and, therefore, cannot be resolved by force. In recent times, India has supported the resumption of direct negotiations between Palestine and Israel. As you are aware, Excellency, India participated at the Annapolis Conference last November. Like you, we feel it is necessary to sustain the tempo of talks and negotiations on all important issues, including that of the return of Palestinian refugees.

There had been a deep sense of anguish among numerous Indian well-wishers of Palestine over the violence in Gaza and the West Bank earlier this year. There has been disquiet, too, over the many privations suffered, including in Gaza, as a result of check-points and road-blocks. The separation wall, dividing communities and even families, is a blot on the human conscience. On many of these issues, we have expressed our views to our friends in your neighbourhood. That there is no role for violence cannot be over-emphasised.

India has over the years extended support and assistance to Palestine and its people in their continuing endeavour of nation-building. This has been in the form of grants towards developmental projects, the establishment of educational and training facilities, support for capacity building and humanitarian relief.

Excellency,

I am happy to learn that during this visit, you would be laying the foundation stone at the Palestinian Embassy building at Chanakyapuri, here in New Delhi. This, gift from India, is symbolic of the progress in the enduring friendship between our two countries and peoples.

I have no doubt that your visit will afford us yet another opportunity to renew our solidarity with you and with your people in your march towards regaining your rights and also will further contribute to the development of our relations in all fields for our mutual benefit.

Excellencies, Ladies and Gentlemen,

May I request you to join me in a toast to the: -

- good health and happiness of His Excellency President Mahmoud Abbas, President of the Palestinian National Authority;
- prosperity and development of the State of Palestine and its friendly people; and
- abiding friendship and cooperation between India and Palestine.

468 Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Rajeev Shukla on Agenda Item 29: United Nations Relief and Works Agency for Palestine Refugees in the Near East at the UN General Assembly.

New York, October 30, 2008.

Please see Document No.741.

469 Statement by Official Spokesperson on the upsurge of violence in the Gaza Strip and the Humanitarian Situation there.

New Delhi, November 17, 2008.

The Government of India condemns the recent upsurge of violence in the Gaza Strip and remains concerned at the adverse effects of the closure of access points into the Strip on the prevailing humanitarian situation. There can be no justification for the denial of essential supplies including such as food and fuel to the civilian population of the Gaza Strip numbering over 700,000 persons¹.

The Government of India urges an immediate end to violence, hopes that peace will be restored urgently and that immediate steps will be taken to ensure that basic humanitarian principles are observed. It is also hoped that the situation will not be allowed to aggravate further.

¹ The Spokesperson was referring to the desperate situation created by the Israeli chokehold on Gaza -- ending all supplies into the Strip for more than a week, leading to desperate consequences for Gaza's 1.5 million inhabitants. The refusal to allow in fuel forced the shutting down of Gaza's only power station, creating a blackout that pushed Palestinians bearing candles on to the streets in protest the previous week. A water and sanitation crisis only followed this. On November 13, the United Nations had announced it had run out of the food essentials it supplied to 750,000 desperately needy Gazans. "This has become a blockade against the United Nations itself," a spokesman said. In a further blow, Israel's large Bank Hapoalim said it would refuse all transactions with Gaza by the end of the month, effectively imposing a financial blockade on an economy dependent on the Israeli shekel. Other banks were planning to follow suit, forced into a corner by Israeli declaration in September 2007 as an "enemy entity".

470 Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Devendra Dwivedi on Agenda Item 16 – Question of Palestine at the UNGA.

New York, November 24, 2008.

Please see Document No.764.

471 Statement by Official Spokesperson on recent disturbances in Hebron and other areas in occupied Palestinian territories.

New Delhi, December 5, 2008.

The Government of India is concerned at the violence against Palestinians in Hebron¹ on 4 December as well as attacks against Palestinian religious places and property. The Representative of India has been briefed on the situation today, by His Excellency Mr. Riad Al-Malki, the Foreign Minister of the Palestinian National Authority. India expects that the Israeli authorities will take necessary steps to prevent the recurrence of further violence against Palestinians in the affected area.

¹ The Spokesperson was referring to the incidents of violence of the past few weeks when Israeli settlers were attacking mosques in Nablus, shepherds in South Hebron, farmers in Burin, Assira Al-Qiblya, Beit Iba, Huwarra, Immatin, and, most notoriously, in the city of Hebron, one of the largest Palestinian city. Even before settlers were evacuated from one home in Hebron, weeks after an order from the Israeli High Court, on December 4, settlers across the West Bank had been increasing their attacks on isolated villages and communities, particularly in the Nablus and South Hebron Districts.

472 Statement by Official Spokesperson on the situation in the Gaza Strip.**New Delhi, December 27, 2008.**

The Government of India has been closely monitoring developments that have been unfolding in the Gaza Strip¹. While India is aware of the immediate cross-border provocations resulting from rocket attacks particularly against targets in southern Israel, it urges an immediate end to the use of force against Palestinian civilians in the Gaza Strip that has resulted in large numbers of casualties. India hopes that on-going efforts within the region to restore peace would be supported.

When in the next couple of days the situation did not improve and the Israeli attacks continued the Spokesperson made another statement on December 29 and said:

The Government of India had hoped that military action by Israel against targets in the Gaza strip would abate. It is disappointing to note that the use of disproportionate force is resulting in a large number of civilian casualties on the one hand and the escalating violence on the other. This continued use of indiscriminate force is unwarranted and condemnable. The Government of India urges utmost restraint so as to give peace a chance as the peace process may well get derailed irreversibly by Israel's attack in the Gaza strip and continued violence.

¹ The Spokesperson was referring to the massive Israeli air attacks on Gaza, targeting the Palestinian group Hamas, using scores of F-16 fighter jets and Apache helicopters. Over 190 persons were killed and 300 injured on the first day of the strikes. The air strikes continued for the next few days killing more people. While Israel was mulling ground attacks also there were appeals from the international community for a cease fire. The European Union appealed for a 48-hour ceasefire, but Israel was in no mood to relent. The air attacks were launched after the 6-month old ceasefire agreement between Israeli and Hamas expired and the Hamas attacked some civilian targets inside Israeli with rockets. The UN Security Council met on December 28, a Sunday without passing a resolution. Hamas however rejected any conditional ceasefire and insisted that Israel stop air attacks and accept other conditions of Hamas. Meanwhile, Hamas too continued to make rocket attacks on Israeli targets.

475. Agreement Between The Government of The Republic of India and The Government of The State of Qatar Concerning Cooperation on Defence.

Doha, November 9, 2008.

PREAMBLE

The Government of the Republic of India and the Government of the State of Qatar, hereinafter referred to as "PARTIES" and singly as "PARTY",

Striving to strengthen the good and cordial relations;

Endeavoring to consolidate the scope of defence cooperation;

Recognizing the importance of Qatar's natural resources and striving to enhance the content of the bilateral relationship;

Acknowledging the desire of the two countries to protect assets including the energy assets available with Qatar important to both countries against threat to their security;

Identifying the need to plan for this and to cooperate actively in guarding against such threats;

Desiring to implement this Agreement in accordance with national and international policies of their respective countries in a manner that does not contradict their domestic laws nor impair the commitments undertaken by their countries at the international level;

Hereby agree to the following-

ARTICLE 1

PURPOSE

The purpose of this Agreement is to enhance cooperation in defence through the exchange of expertise and knowledge in this sphere in the interest of both Parties.

ARTICLE 2

SCOPE

This Agreement shall cover personnel conducting official visits or attending courses at defence training establishments of the Parties. It shall also cover

any future defence cooperation agreed to by the signatories to this Agreement.

ARTICLE 3

PRINCIPLES OF DEFENCE COOPERATION

- 3.1 This Agreement defines the fundamental provisions of cooperation and interaction between the Parties on the basis of principles of equality, partnership and mutual benefit.
- 3.2 Cooperation in the framework of this Agreement will be undertaken between the Parties within the framework of their competence, in compliance with national legislation, generally recognized principles and norms of international law, as well as international obligations of the Parties.

ARTICLE 4

FIELD OF COOPERATION

- 4.1 The Parties hereby agree to cooperate, within the framework of their laws, in the following areas:
 - (a) Promotion of military-to-military cooperation through training, visits, exchange of information, exchange of personnel, joint exercises and ship visits.
 - (b) Promotion of cooperation in specific areas to be agreed upon including areas of product support and services as well as bilateral projects relating to defence equipment and its components, technical assistance, training and co-production.
 - (c) Promotion of cooperation in defence science and technology through exchange of information, training, visits, exchange of personnel and joint projects.
 - (d) Exchange of information beneficial to both or either of the Parties.
 - (e) Collaboration in other mutually agreed spheres of defence cooperation for the purposes of mutual benefit.

- (f) Cooperation to protect assets important to both the countries.
- 4.2. Both Parties may, with mutual consent, enter into separate protocols to govern the activities under para 4.1 above.

ARTICLE 5

MANAGEMENT OF COOPERATION

In order to monitor, manage and implement this Agreement, the Parties agree to establish a Joint Committee on Defence Cooperation. The Joint Committee shall periodically meet alternately in Qatar and India. If considered necessary, the Joint Committee may set up sub-committee to cover major areas of mutual interest.

ARTICLE 6

SECURITY OF CLASSIFIED INFORMATION

- 6.1. Both Parties shall take necessary measures to ensure secrecy of information exchanged or obtained during the deliberations of the Joint Committee.
- 6.2. Each Party shall protect any classified information to which it may gain access under this Agreement and shall not divulge any classified information to any third party without the prior written consent of the other Party.
- 6.3. Each Party shall ensure that the classified information provided by the other is restricted to the levels mutually agreed upon between the two Parties.
- 6.4. The provisions regarding security will continue to apply even after termination of this Agreement.
- 6.5. No Party shall change the classification of information received from the other Party without the prior written consent of the other Party.

ARTICLE 7

LEGAL ISSUES

- 7.1. During their stay in the host country, the personnel of the sending

Party shall observe the laws, rules and regulations of the host country. They shall not act in a manner prejudicial to the security and integrity of the host country.

- 7.2. The personnel of the sending country shall be subject to the laws and regulations of the host country, during their period of stay on its territory.
- 7.3. In case of violations of military discipline by the personnel of either Party, the authorities of the country of the personnel concerned may take appropriate action in accordance with their own military laws, rules and codes of conduct.
- 7.4. Both Parties shall, subject to their laws, facilitate the activities arising under this agreement including issues related to visa, immigration and customs.

ARTICLE 8

FINAL PROVISIONS

- 8.1. This Agreement comes into effect from the date of its signing and shall remain in force for five (5) years thereafter it may be automatically renewed for a further period of five years by prior written consent of both Parties. During the currency of the Agreement, the same may be terminated by either Party by giving six month written notice of its intention to terminate the Agreement through diplomatic channels.
- 8.2. Either Party may make a request, at any time, to modify or otherwise amend this Agreement. Such variation, modification or amendment shall come into effect upon the agreement of the other Party.
- 8.3. Any difference on the interpretation or application of this Agreement shall be amicably resolved through mutual consultations.

ARTICLE 9

ATTESTATION

- 9.1. This Agreement done in six original copies, two each in Arabic, Hindi and English Languages, all texts being equally authentic. However,

in case of divergence, the English text shall be used in respect of legal interpretation and implementation.

- 9.2. **In witness hereof**, the undersigned being duly authorized by their respective Governments have signed the present Agreement.

Signed at Doha on this 9th day of November 2008

For and on Behalf of the Government
of the Republic of India

(Vijay Singh)
Defence Secretary

For and on Behalf of the
Government of the State of Qatar

(Major General Hamed Bin Ali)

476. Agreement between the Government of the Republic of India and the Government of the State of Qatar on Cooperation in Security and Law Enforcement Matters.

Doha, November 9, 2008.

The Government of the Republic of India and the Government of the State of Qatar, (hereinafter referred to as the "Parties");

Desirous to enhance and strengthen the effectiveness of mutual cooperation between the two countries in combating all criminal activities;

Convinced of the importance of international cooperation in combating all criminal activities of common concern;

Recognizing the necessity to establish a framework of mutual cooperation and coordination in the fields of security and law enforcement;

Have agreed as follows:

ARTICLE 1

The Parties shall take all measures to prevent giving:-

- (a) Shelter to those who committed criminal acts related to the security or interests of the other Party;
- (b) Access to arms or funds or training in acts of violence, sabotage or terrorism or access to any facilities thereof.

The Parties also engage themselves to combat the criminal acts and hostile activities of those who commit the criminal acts.

ARTICLE 2

- 1. Subject to their national laws and regulations, the Parties shall provide assistance to combat all forms and types of crimes and especially the following crimes:
 - a) Terrorism;
 - b) Serious crime including hijacking, taking of hostages and abduction;
 - c) Organized crime;

- d) Falsification of documents and forgery of currencies;
 - e) Illicit acts concerning arms, ammunition and explosives;
 - f) Illicit economic activities;
 - g) Smuggling of objects of historical or cultural value, jewels, precious metals or other valuable objects;
 - h) Illicit passage of frontiers and falsification of travel documents;
 - i) The properties and revenues derived from organized crime and terrorism and their tracking, restriction and confiscation.
2. The assistance shall include but not be limited to:
- a) Measure to locate, restrain, forfeit or confiscate the means and resources of financing terrorism, or the proceeds of the crime;
 - b) Taking of evidence and obtaining statements of persons;
 - c) Providing information, documents and other records including criminal and judicial records;
 - d) Communicating information available with each Party about criminal acts either committed or being planned to be committed within the territory of the other Party;
 - e) Executing request for search and seizure;
 - f) Delivery or lending of exhibits;
 - g) Serving of documents seeking attendance of persons;
 - h) Exchanging of the names of the persons criminally convicted in serious crimes;
 - i) Locating and identifying persons and objects;
 - j) Any other assistance consistent with the objective of this Agreement.
3. For the purposes of this Agreement:-
- a) 'Proceeds of crime' means any property that is derived or realized directly or indirectly by any persons from an offence or the value of any such property.

- b) 'Property' includes money of all kinds of moveable or immovable, tangible or intangible, and includes any interest in such property.
- c) 'Confiscation' means any measure resulting in the deprivation of property by conclusive decision.

ARTICLE 3

The Parties shall provide all necessary assistance and take all coordination measures, according to their national laws and regulations to establish effective procedures to prevent and combat criminal activities through the following:

(a) Exchange of information:

The Parties shall exchange all necessary information about the crimes stated in Articles 1 and 2 above that identify the suspected persons, the persons searched by the security authorities in each country and those convicted by the competent authorities. The Parties shall exchange information about the new techniques and means of committing those crimes.

(b) Exchange of experience and field visits :

The Parties shall cooperate and exchange studies and researches related to the combating of crimes stated in this Agreement, provide mutual assistance in the preparation of the training courses or exchange field's visits.

ARTICLE 4

For the suppression of illicit trafficking in narcotic drugs, psychotropic substances and precursors, the Parties shall:

- (a) Exchange and share information about persons involved in narcotic drug trafficking, their modus operandi as well as other relevant details of such crimes, in so far as these are necessary for the prevention or suppression of crimes;
- (b) Exchange the results of their criminal and criminological research on narcotic drug trafficking and abuse of narcotic drugs;
- (c) Share and exchange of samples of narcotic drugs and psychotropic substances of natural or synthetic origin usable for abuse; and

- (d) Subject to their national laws and regulations and their international obligations, facilitate the controlled delivery of illicit narcotic drugs and psychotropic substances in order to render possible the arrest of the persons to whom they will be delivered as well as any persons involved in the trafficking provided that the necessary information is submitted at least 48 hours prior to the request.

ARTICLE 5

The Parties shall take mutual measures and provide the necessary assistance as per the requirements of police investigation (i.e. all the measures taken by the police to establish evidence before presenting the accused in the competent court).

ARTICLE 6

Assistance may be refused if it would impair the sovereignty, security and state interests of the requested Party or if the subject of assistance is contrary to the national laws and regulations of the requested Party.

ARTICLE 7

The Parties shall maintain the secrecy of the mutually exchanged information and no third party shall be informed of it without the written approval of the Party that provided the information.

ARTICLE 8

Each Party shall bear the special expenses resulting from the implementation of the provisions of this Agreement or any other form of expenses as may be agreed upon.

ARTICLE 9

A Joint Committee shall be established to follow up and assure the implementation of this Agreement. The Joint Committee may hold its meeting on the request of either Party to take the appropriate decisions. The Joint Committee shall observe complete confidentiality in the conduct of its works.

ARTICLE 10

The Joint Committee shall lay down the detailed modalities of cooperation and specify the law enforcement agencies of each side that exchange

intelligence information in the fields of terrorism and drug trafficking and shall specify the office addresses of those agencies, their contact telephone numbers, faxes and other relevant details to facilitate contact on priority basis.

Similarly, it shall determine also the nodal authorities that cooperate with each other and exchange mutual assistance in various fields of crime.

ARTICLE 11

The authorities responsible for the follow up and implementation of this Agreement are-

In the Republic of India - the Ministry of Home Affairs.

In the State of Qatar - the Ministry of Interior

ARTICLE 12

This Agreement does not prejudice the rights and obligations of the Parties arising from any other Agreement entered into by either of the Parties. In case of there being any differences between the provisions of this Agreement and the provisions of any such other Agreement, the provisions that realize more security cooperation, shall be applied with the consent of the Parties.

ARTICLE 13

Any dispute arising out of the interpretation of this Agreement shall be settled negotiations between the Parties.

ARTICLE 14

This Agreement may be amended by the written consent of the Parties. Such amendment shall be applicable from the date of the last notice of one Party to the other Party of the completion of all the legal requirements applicable in its country.

ARTICLE 15

This Agreement shall be ratified! approved according to the legal procedures followed in the country of each Party. This Agreement shall enter into force after one month following the exchange of the documents of its approval by the Parties through diplomatic channels. This Agreement shall remain valid for a period of five years from the date of its entry into force; it shall be

renewed automatically unless either Party may give the other Party a written notification of its desire to terminate the Agreement. In such a case, the Agreement shall be terminated after three months from the date of the receipt of such notification.

In witness whereof, the undersigned, being duly authorized thereto by their respective Governments have signed this Agreement.

This Agreement is written in two originals each in the Hindi, Arabic and English languages; all the texts being authentic, in case of any divergent interpretation, the English text shall prevail.

Done in the city of Doha on 11 of 11 1429 AH, corresponding to 9th of November 2008 AD.

For the Government of the
Republic of India

(E.Ahamed)

Minister of State for External Affairs

For the Government of the State
of Qatar

(Sheikh Abdullah bin Nasser bin
Khalifa at Thani)

Minister of State for Internal Affairs

477. Speech by Prime Minister Dr. Manmohan Singh to the Indian Community during his visit to Qatar.

Doha, November 10, 2008.

I am delighted to be here with you today. This, in many ways, is a historic occasion as it marks the first visit by an Indian Prime Minister to Qatar.

During my visit I have been received with great warmth and affection. I have held detailed discussions with His Excellency the Prime Minister of Qatar on ways in which we can further strengthen our bilateral ties. I was greatly honoured by an audience with His Highness the Emir of the State of Qatar. I conveyed to the leadership of Qatar the great importance that India attaches to our relations with this friendly country of Qatar.

My visit has confirmed my belief that Qatar is one of India's closest friends in the Gulf region. There is great admiration in India for the wisdom and sagacity with which His Highness Sheikh Hamad has led Qatar since its Independence in 1971. The enlightenment, openness and respect for diversity shown by the leaders of Qatar has contributed greatly to Qatar's rapid socio-economic development, and made it a model for the region as a whole.

Our relations¹ with Qatar are part of our historical, cultural and civilisational links with the Gulf region. This is a region of vital importance to us. It is home to five million Indians, and an important source of our energy requirements.

Indians constitute the largest expatriate community in Qatar. Numbering over 400,000, the Indian community in Qatar has earned a reputation for hardwork, diligence and great enterprise. You have excelled in every area and in whatever position you work. Your contribution to Qatar's development is widely respected. Your achievements are a source of immense pride and happiness for all people of India.

¹ Prime Minister Manmohan Singh during his visit signed two agreements on (1) defence and security and (2) on securing more gas supplies from Qatar. While National Security Adviser M.K. Narayanan and Defence Secretary Vijay Singh held talks on defence and security, Petroleum Minister Murli Deora who joined the Prime Minister's delegation in Doha, engaged himself with the Qatar leaders on the supply of gas. Given the presence of large Indian community in Qatar, Minister for Overseas Indian Affairs Vayalar Ravi, who was member of the delegation discussed measures relating to their welfare and fair treatment by employers. Officials described the visit as "long overdue," especially in view of the fact that Qatar's Emir Sheikh Hamad Bin Khalifa Al-Thani had visited New Delhi twice. They pointed out that Qatar was the only Gulf country with which India had a defence cooperation agreement. Both countries would now step up security cooperation - from intelligence liaison to intelligence sharing.

India and Qatar have several complementarities. I would like to see each one of you serving as a bridge of friendship between our two countries.

Your hard work is contributing to our mutual prosperity. Your annual remittances of over 700 million US dollars to India are an invaluable contribution not only to your beloved ones at home, but also to society at large. The government will take all necessary measures to facilitate this process. Our financing requirements for the infrastructure sector alone are estimated at 500 billion US dollars in the next five years.

The Indian economy rests on strong fundamentals. Over the last 4 years we have averaged 9% GDP growth per year. Our development efforts have been positively impacting our large agriculture sector which has registered a growth of over 4% this year. The resurgence of our rural economy and a more inclusive and balanced model of growth will, I am sure, create wealth for our people and get rid of , ignorance and disease form the ancient land of India.

The present international economic and financial situation has clouded some of the prospects of growth in the near term. I am however confident that the long term outlook for our economy remains strong and robust. Our inherent strengths, the large size of our markets, the diversified industrial base we possess, and the strong and dynamic private sector will eventually allow us to return to a 9% growth trajectory.

The current global financial crisis presents, in many ways, a rare window of opportunity for India and Qatar. The investment requirements of a large emerging economy like India and the large financial surpluses of an energy rich economy like that of Qatar can be married together to create a win-win situation for both our countries. Indian companies are also increasingly looking to invest in Qatar in such sectors as energy, construction, finance and information technology.

Ladies and Gentlemen , I congratulate you on your achievements. In conclusion, I wish to reassure you of the Government's deep commitment to your welfare and safety. Our decision to create a separate Ministry of Overseas Indian Affairs was a reflection of this concern. This Ministry, under the dynamic leadership of my senior colleague Shri Vayalar Ravi has taken several initiatives in the last few years. I am sure these initiatives such as establishment of Overseas Indian Community Welfare Funds, Overseas Workers Resources Centre and the Overseas Indians Facilitation Centre will make in due course a positive impact. Last year we have also signed

an additional protocol with Qatar for new initiatives for cooperation in the field of human resource development. We would welcome any other suggestions and concerns that you may have. I wish to reassure you that your well being and your welfare will remain an abiding concern to the people of India.

I return today to India with a deep sense of satisfaction. My visit to the Gulf has reinforced my conviction that we are indeed close neighbours and partners in processes of our economic progress. I was overwhelmed by the generous hospitality that was shown to me. I am particularly struck by your sense of optimism and enthusiasm, your spirit of adventure and enterprise. I congratulate you for all your achievements. and the exceptional manner in which Indian citizens in Gulf are acquitting themselves.

I wish you and your families all the very best for a brighter and better future. I convey to you my best wishes in advance for the coming New Year.

Thank you.

478. Report on the visit of Prime Minister Dr. Manmohan Singh to Qatar.**Doha, November 11, 2008.**

Prime Minister visited Doha, Qatar on November 9 - 10, 2008. An important event of his stay in Doha was the signing of the Defence and Security Agreement, paving the way for joint maritime security, sharing of intelligence on threats posed by terrorism and cooperation in tackling trans-national crime. "The agreement is beneficial to both sides. It takes care of our interest and their security concerns," media quoted an official accompanying the Prime Minister suggested. Defence secretary Vijay Singh and his Qatari counterpart signed the agreement.

The Prime Minister met his Qatari counterpart Sheikh Hamad bin Jassim bin Jabr al-Thani and held discussions on a number of issues.

On November 10, the PM met Emir Sheikh Hamad bin Khalifa al-Thani. In an interview to a local newspaper, Dr. Singh said, "In this period of global turmoil, I feel that the complementarities between our two economies provide an opportunity for counter-cyclical strategies for growth in both the countries."

"We should exploit opportunities for investment in Qatari financial centres and special economic zones. There is also scope for Qatar to invest in the infrastructure (sector) in India," the PM said.

Petroleum Minister Murli Deora, who joined the Prime Minister in Doha on November 10, met Qatar's Deputy Prime Minister and Minister of Energy and Industry Abdullah bin Hamad al-Attiyah. The Indian side has asked Qatar for an additional 2.5 million tons of liquefied natural gas (LNG). Although an agreement on supplying additional liquefied natural gas could not be inked, both sides opened discussions in a new area of mutual investments in line with India's recently adopted strategy of lessening dependence on foreign financial institutions.

"We discussed the modality of Qatar investing about \$5 billion in India. In the next two to three months, we will work out the modalities to identify projects in the areas of energy, power, fertilizer and other related activities to enable the government of Qatar take firm decisions about the areas these investments could be directed," Prime Minister Manmohan Singh told the accompanying media on board his flight to New Delhi. "At a time

when the global economy is hit by crises, there are opportunities for the countries of the Gulf and India working together to promote economic trade and investment cooperation," he felt.

Remittances from Oman and Qatar alone averaged \$800 million. "So our effort has been to ensure that our workers get a fair treatment, that they are well looked after besides exploring the possibility of expanded economic, trade and investment cooperation with Oman and Qatar," he added.

India had earlier signed an agreement with Qatar for 7.5 million tonnes per annum of LNG of which five million tonnes are being currently made available and 2.5 million tonnes will be available by the last quarter of 2009. The Prime Minister said the two sides also discussed the possibility of expanding cooperation in regard to supply of fertilizers and investing in fertilizer plants in India or expanding production in existing plants in Qatar with an assured market in India.

India buys 7.5 million tons of LNG from Qatar every year as part of a 25-year contract. "The supply might be increased," said N. Ravi, Secretary (East) in the Ministry of External Affairs.

SAUDI ARABIA

479. Briefing points by Official Spokesperson on the meeting of His Royal Highness Prince Saud Al-Faisal Foreign Minister of the Kingdom of Saudi Arabia with External Affairs Minister Pranab Mukherjee.

New Delhi, February 28, 2008.

- EAM had talks with the Foreign Minister of Saudi Arabia this afternoon on a wide range of bilateral, regional and international affairs. The talks continued over a working lunch hosted by EAM.
- The two sides examined ways and means to further strengthen India and Saudi Arabia cooperation in several areas. They reiterated the need to have a faster implementation of the Delhi Declaration. In particular, they felt that consultations between the two Foreign Office should be conducted on a regular basis.
- They also reiterated the need to further invigorate trade and investment relations. Discussions focused on the need to increase mutual investment and it was felt that a facility to promote such investments should be set up. They also discussed possibilities of increased investment by Saudi Arabia in India in the fields of infrastructure, chemicals, petro-chemicals and energy.
- The Saudi Foreign Minister briefed EAM on the recent developments in West Asia. EAM also briefed the visiting Foreign Minister on recent developments in India's neighbourhood.
- The Saudi Foreign Minister personally invited EAM to visit Saudi Arabia. The invitation was accepted by the EAM.

480. Briefing points by Official Spokesperson on External Affairs Minister's visit to Saudi Arabia.

New Delhi, April 19, 2008.

- External Affairs Minister Shri Pranab Mukherjee called on His Majesty King Abdullah bin Abdul Aziz. They had a cordial and friendly meeting lasting for about 40 minutes.
- EAM recalled the close ties between the two countries, including the several high level visits.
- King Abdullah recalled his very successful visit to India with warmth and the momentous signing of the Delhi Declaration. EAM recalled that the landmark visit had opened up possibilities of cooperation in political, economic and cultural fields.
- EAM also recalled his participation in the Indo-Arab Investment Projects Conclave and possibilities of private sector participation, particularly in petroleum, gas, petrochemicals. Indian economy requires huge investments, particularly in infrastructure and can absorb \$500-600 billion. Deputy Chairman Planning Commission is visiting Saudi Arabia next month - opportunity for working together on infrastructure as well as in petroleum sector. Can change our buyer-seller relationship to a more participatory one for mutual benefit.

1 The External Affairs Minister in talks with his Saudi counterpart, Saud Al Faisal, reached an agreement on establishing a Saudi-India investment fund. Media reports quoting diplomatic sources said this corpus would help kick-start investments in major projects. Mr. Mukherjee reiterated that India required an investment of around \$500-600 billion to build its infrastructure. This included construction of roads, railways, ports, airports as well as petrochemical plants. To facilitate business contacts both the countries agreed to issue long-term visas to businessmen. The application of these visas would be routed through the apex chambers of commerce of the two countries. The Spokesperson of the External Affairs Ministry clarified the chambers would ensure that only "genuine businessmen" availed this facility. On April 20th the Bilateral Investment Promotion and Protection Agreement was ratified by both the countries to remove a major legal impediment to closer business ties. This placement of a legal regime set the stage for the economic relationship to take-off. Acknowledging India's efforts to acquire energy security, Prince Saud invited Indian companies to identify specific projects in Saudi Arabia, following an interaction with major Saudi oil majors including the State-run Aramco. Both the ministers agreed that private sector participation should be encouraged. The talks between the two foreign ministers covered in detail the security situation in the region. Discussions covered the volatile situation in Iraq, the developments in Iran, Afghanistan and the Palestinian territories. Mr. Mukherjee also apprised Prince

- EAM thanked His Majesty for excellent conditions in which 1.6 million Indians stay here and for excellent Haj arrangements for 157,000 Indian pilgrims.
- They also discussed cooperation to combat terrorism and exchanged views on regional and international issues, particularly on Middle East Peace Process.
- EAM noted that PM was looking forward to his visit to Saudi Arabia on mutually convenient dates.

Saud about India's perception about Pakistan following the recent parliamentary elections. Speaking at a press conference on April 20 the External Affairs Minister confirmed that during his meeting with the King he had apprised His Majesty of India's requirement of a massive investment of \$500-600 billion to develop its infrastructure. He said the visit to Saudi Arabia by Planning Commission Deputy Chairman Montek Singh Ahluwalia in May would identify joint ventures in infrastructure and petroleum sectors. Presently, India imported 26 % of its oil requirements from Saudi Arabia.. Mr. Mukherjee said the Indo-Arab Investment Projects Conclave (IAIPC) had already identified projects worth around \$200 billion in the energy and infrastructure sectors. The next IAIPC meeting in November would include the Trade and Investment Ministers, apart from leaders from industry and business. The Minister emphasized that eventually, greater political content would be added to an expanded economic relationship. "We are looking for establishing a strategic partnership step by step by focussing on specific projects," Mr. Mukherjee said. India and Saudi Arabia had started working together on human resource development. Top Indian companies in the Information Technology sector including Infosys, Wipro and Tata Consultancy Services already made their mark in the Kingdom, the Minister said. Saudi Arabia has established the Knowledge Economic City (KEC) for attracting foreign participation in the IT sector. The Kingdom's leading GSM provider Mobily has begun making an investment of around Rs. 90 crore in Bangalore. Mr. Mukherjee said he apprised the King also of India's position on the West Asia peace process. Its commitment to the Palestinian cause was "firm and undiluted." He expressed the hope that all sides to the conflict would show restraint so that an atmosphere for dialogue could emerge.

481. Interview of External Affairs Minister Pranab Mukherjee to the Arabic daily *Al-Sharqul Awsat* during his visit to Saudi Arabia.

Riyadh, April 20, 2008

- 1. Kindly give us some details about your program in Riyadh and the talks that you intend to have with Prince Saud Al-Faisal and other senior government officials.**

My visit provides an opportunity for an in-depth discussion on wide range of issues of mutual interest pertaining to political, economic, commercial and cultural domains and on matters relating to the welfare of Indian nationals working in Saudi Arabia. Our discussions shall cover the recent developments in the regional and international arena, and identify ways and means to further strengthen our close and friendly bilateral relationship. I look forward to discussing these themes in-depth, with the Saudi leadership. The historic and landmark visit of King Abdullah to India in January 2006 as Chief Guest for India's Republic Day, opened a new chapter in our bilateral ties. The visit laid down the road map for the future bilateral cooperation. It imparted an added thrust and dimension, simultaneously heralding a new era in bilateral relations. The visit enhanced the content and quality of our ties, especially in the economic and commercial spheres as well as in the education and the health sector. We need to accelerate the momentum generated by the January 2006 visit of His Majesty King Abdullah. His Royal Highness Prince Saud al Faisal visited India recently in February this year. This provided us with an excellent opportunity to discuss the recent developments in the region and also focus on bilateral ties. My visit to Riyadh is to carry forward the momentum of our interaction and consultations, as well as to firm up the dates for Hon'ble Prime Minister's visit to Saudi Arabia.

- 2. Will you be visiting other Gulf States as well during this current tour?**

This is an exclusive visit to the Kingdom of Saudi Arabia, keeping in view the importance that we attach to our bilateral relations with Saudi Arabia.

- 3. Your visit takes place at a time when this region is in the midst of tension in Iraq and Afghanistan, with the US continuing to exert pressure on Iran over the nuclear issue. What role do you**

foresee India playing in this context in partnership with the Kingdom and other GCC states, especially in the fight against terrorism?

India has shared interests with the Kingdom in peace and stability of the region. India has faced the scourge of terrorism aided and abetted from abroad for more than two decades. We see the Kingdom of Saudi Arabia as an important partner in combating global terrorism and would like to commend the efforts of His Majesty King Abdullah bin Abdul Aziz Al-Saud, Custodian of the Two Holy Mosques for successfully hosting the International Conference on Counter-terrorism in February 2005. Both India and Kingdom of Saudi Arabia are of the opinion that stability, territorial integrity and independence of Iraq is a must for the security and peace of the region. India wishes to see the Iraqi people freely determine their political future and exercise control over their natural resources.

We also hold the view that the solution to the Iranian nuclear issue should be reached diplomatically and not through force. This was clearly articulated by the Custodian of the Two Holy Mosques during his meetings with President Bush and Vice President Dick Cheney. Stability in Afghanistan similarly is closely linked to regional stability. We believe that the reconstruction efforts must be imparted added momentum, and the entire region, including Afghanistan's immediate neighbours, have to play their due role in this process.

4. How do you assess Saudi-Indian ties in terms of foreign relations? They seem to be not as strong as in the field of commercial and economic relations.

India and Kingdom of Saudi Arabia are bound together by a close and multifaceted relationship, which goes back in history and gets sustenance from our shared heritage and feeling of respect and affection between our peoples. We have common positions on many issues such as terrorism, situation in Iraq as well as our stance on Palestine. I would, therefore, view our bilateral relationship both in the political and economic spheres and particularly in view of the strong people to people dimension, as steadily diversifying with many complementarities. The visit of the Custodian of the Two Holy Mosques to India in January 2006 is self-evident and indicative of our robust ties. India and Saudi Arabia have trade relations dating back to several centuries. Our present bilateral trade is US\$15.97 billion (including India's imports of oil from Saudi Arabia) and US\$3.67 billion (excluding

oil). We strongly feel that both countries have a potential to increase our trade manifold in years to come.

India's programme of infrastructure building and renewal in the next five years requires an injection of capital of around US\$400 bn. This area promises to provide not only a new avenue with steady yet increasing returns, but also enable increase in levels of employment.

5. Your visit takes place two years after that of Custodian of the Two Holy Mosques King Abdullah to New Delhi on Jan. 26, 2006. Please give us an update on the consultations that took place at the foreign policy level.

The visit of the Custodian provided a further fillip to our bilateral ties. Close on the heels of the visit of the Custodian, Foreign Minister Prince Saud al Faisal visited New Delhi in February 2006 and again in February this year. Detailed consultations were held on all issues of importance. A number of Ministerial visits have taken place from both sides, including visits of our Oil Ministers that are crucial for India's energy security. The Speaker of Lok Sabha (Lower House of Indian Parliament) led a large delegation to Saudi Arabia and interacted with their counterparts in Shura Council. He also availed the opportunity to call on the Crown Prince and Foreign Minister Prince Saud. We have had our regular Joint Commission Meetings. India has appointed a Special Envoy for Middle East Peace Process who visited Saudi Arabia in September last year and held extensive discussion with Foreign Minister Prince Saud al Faisal. My current visit to Riyadh is also part of our consultation process with Saudi Arabia. We hope to identify new opportunities for strengthening our relations in the coming years.

6. India was to cooperate with the Riyadh-based Institute of Diplomatic Studies belonging to the Foreign Ministry for training its students in the field of mass communications. What progress has been made in this direction?

The Foreign Service Institute of the Ministry of External Affairs of New Delhi signed an MoU in June 2005 with the Riyadh-based Institute of Diplomatic Studies. This envisages cooperation in the fields of joint research, training, exchange of students, arranging symposium and seminars and exchange of books, periodicals and papers. While an Indian FSI delegation has visited the Saudi Institute of Diplomatic Studies, Saudi diplomats have been undergoing regular training at the Indian Foreign

Service Institute. Recently, the Diplomatic Institute in Riyadh had organized a seminar on India-Saudi Relations wherein well-known speakers from India and Saudi Arabia participated. I have been given to understand that an excellent publication is being brought out after the seminar. We look forward for further intensification of our relations in this area, as both countries seek to have new ideas for diversifying our ties.

7. India's nuclear deal with the US is facing stiff opposition in New Delhi. Are you confident that the deal will go through?

The Government is committed to the Indo-US civil nuclear cooperation Agreement. We are in the process of seeking broad political consensus on the issue with various political parties who are supporters of our coalition government in India. The discussion is still going on.

On 20 July 2007, after five rounds of negotiations, India and the US agreed on the text of a bilateral Civil Nuclear Energy Cooperation Agreement to implement the understandings of July 2005 and March 2006. The finalized text of the Agreement has received the approval of our Cabinet.

As required by the Agreement, presently, an India-specific Safeguards Agreement is under finalization with the IAEA. The conclusion of such an Agreement will enable the Nuclear Suppliers Group (NSG) to amend its guidelines for civil nuclear cooperation in favour of India. After this, the Agreement will go to the US Congress for approval before it can be operationalised.

8. As a major power in South Asia, what role, in your opinion, can India play in reducing tension in the Middle East, which has created a climate of political instability in the region?

West Asia is a part of India's extended neighbourhood, with which we have had a close interaction over millennia. Consequently, we have deep interest in peace and stability in the region and have been closely monitoring developments in the region.

We believe that there is no military solution to the Israel-Palestine and related issues. India has been calling for all parties in West Asia to fully cooperate with the efforts of the international community. We support the revival of direct negotiations between the leaders of Israel and Palestine, the momentum for which was generated at the Annapolis Conference. At the conference, India expressed its readiness to play its due role in the

collective endeavour to strengthen the forces of peace and stability in the region. The Arab Peace Initiative, re-launched in Saudi Arabia in March (Riyadh -2007), provides a constructive framework for achieving such a comprehensive peace.

9. With the forces of extremism and terror gaining ground in Afghanistan and Iraq, is India, as a neighboring country, worried about the situation in the region? Is your government taking any preventive steps in this regard?

The Taliban has gained ground over the past few years in some areas of Afghanistan. The Taliban follow an ideology based on extremism and terror. Such an ideology has simply no place in the modern world. We are following events in Afghanistan closely and have fully supported the government of President Karzai in its efforts to meet the challenge of terrorism.

10. With the US losing its hold as the lone super power, how do you see the role of China and India as the emerging powers? Do you see a situation in which India, China and Russia could forge strategic alliances in creating a new world order?

We attach priority to developing relations with China, our largest neighbour. India and China, as two major developing countries and the two fastest growing large economies, account for over 1/3rd of the humanity. Our two countries believe that our relations transcend the bilateral dimension and have come to acquire an increasing regional and global dimension. During the recent visit of our Prime Minister to China in January 2008, the two countries signed the shared Vision for the 21st Century that reflects the congruence of interest on regional and international issues. The Shared Vision document expresses our mutual desire to work together on multilateral issues for common benefit.

India -Russia- China trilateral cooperation is not targeted against any other country or organization and is intended to promote international harmony and mutual understanding and seeks to broaden common ground amidst divergent interest. The development of India, Russia and China is a major contribution to peace and development of the region and world and is beneficial to the process of multi polarity. With their continuous development and growing role in international affairs, India, Russia and China will further contribute to world peace, security, stability and prosperity.

India- Russia - China trilateral dialogue mechanism improves mutual understanding and trust with regard to serious challenges that the international community faces such as regional conflicts, terrorism, narco-trafficking, under-development, poverty and climate change and contributes to strengthening peace, security and stability in our region and the world.

11. How do you see the prospects of India becoming a permanent member of the Security Council?

There is unanimity among member states that the United Nations is in need of urgent and comprehensive reform so that it can deal with the challenges of today's world more effectively. The United Nations should function in a more transparent, efficient and effective manner and the composition of its central organs must reflect contemporary realities. In particular, the expansion of the UN Security Council, in both permanent and non-permanent categories of membership, is central to the process of UN reform. Developing countries from Africa, Asia and Latin American & the Caribbean should be represented, as permanent members in an expanded Security Council.

It is in this framework that India aspires to become a permanent member of the UN Security Council. There has been a widespread and growing appreciation of India's strong credentials, and steady accretion of support for its candidature. We continue our active and constructive engagement with other member states on UN reform issues.

482. Press Release of the Ministry of External Affairs on the visit of Foreign Minister of Saudi Arabia.**New Delhi, December 26, 2008.**

HRH Prince Saud Al-Faisal, Foreign Minister of the Kingdom of Saudi Arabia, visited India on 26 December 2008. He called on the Vice-President and met MOS Sh. E. Ahmed and NSA Sh. M.K. Narayanan, besides having an in-depth exchange of views with his counterpart External Affairs Minister (EAM), Sh. Pranab Mukherjee. It would be recalled that he had earlier visited India on 28-29 February 2008. EAM had paid a visit to Riyadh in April 2008 when he also had an audience with His Majesty King Abdullah. It may be mentioned here that His Majesty was the Chief Guest at the Republic Day Celebrations in India in January 2006.

Both sides reviewed and expressed satisfaction at the rapidly expanding bilateral ties. It was noted that two-way trade had crossed \$16 billion in 2006-2007. The sides reiterated their resolve to maintain the momentum in deepening engagement in various sectors including Trade, Commerce, Investments, IT, HRD, Energy and Petrochemicals.

The Saudi dignitary conveyed sympathies and deep condolences on behalf of the Custodian of the two holy mosques, on his own behalf and on behalf of the people of Saudi Arabia. He described terrorism as a cancer on society, which had to be cut out and destroyed completely, so that no repeat of tragedies like Mumbai happen ever again. Terrorists would like to sow dissension and create conflict, he stressed. Saudi Arabia had proposed to the U.N. to create a special body representing the international community to jointly fight the menace of terrorism.

EAM communicated the sense of outrage among the people of India at the audacious and meticulously planned attack mounted by elements based in Pakistan. He expected Pakistan to take immediate steps to dismantle the infrastructure of terrorism.

It was agreed that terrorism was a global challenge and had to be dealt with jointly by all nations. The leaders also agreed that whatever action had to be taken to control terrorism should be taken without delay and in a transparent manner. This was not an issue between India and Pakistan but a global issue.

The discussions were held in a most cordial and friendly atmosphere, reflective of the close relationship between the two countries.

SYRIA

483. Briefing points by Official Spokesperson on the State Visit of Syrian President Dr. Bashar al-Assad.

New Delhi, June 18, 2008.

- At the invitation of the Prime Minister of India, Dr. Manmohan Singh, the President of Syria H. E. Dr. Bashar Al-Assad, accompanied by Mrs. Asma al-Assad, paid a State Visit to India on June 17-21, 2008. The visit further consolidated the excellent relations that exist between India and Syria and identified new areas of bilateral cooperation¹.
- H.E. President Bashar Al-Assad and the Prime Minister, Dr. Manmohan Singh held delegation level talks on 18 June at Hyderabad House, New Delhi. H.E. President Dr. Bashar al-Assad was assisted by H.E. Mr. Walid al-Moualem, Minister of Foreign Affairs, HE Dr. Ms. Buthaina Shaaban, Minister for Expatriates, HE Mr. Amer Husni Lutfi, Minister of Economy and Trade, H.E. Mr. Emad Sabouni, Minister of Telecommunication & Technology and other senior officials. The Prime Minister was assisted by the Minister of External Affairs, Shri Pranab Mukherjee, the Minister for Petroleum & Natural Gas, Shri Murli Deora, the Minister for Power, Shri Sushil Kumar Shinde, the Minister of State for External Affairs, Shri E.

¹ Media reports said during the meeting between President Assad and Prime Minister, Syrian President described India as a "moderating influence" in world affairs, and said Prime Minister Manmohan Singh was in a position to advise the United States and the West on how to be more balanced and sensitive in its dealings with the Middle East. In an hour-long meeting between the two leaders, Dr. Assad briefed the Prime Minister on Syria's indirect talks with Israel and the state of the peace process in West Asia. He stressed the importance of finding a peaceful solution to the Iranian nuclear issue. Dr. Singh briefed the Syrian President about the situation in Afghanistan and South Asia. Noting that whenever Syria had talks with Western leaders, the latter were always telling Damascus what to do, Dr. Assad said he appreciated the fact that this was not the case with India. On the economic side, the two leaders agreed to expand bilateral cooperation across the board. Senior officials said the specific areas identified by the two sides include phosphates, power, oil and gas as well as IT. The priority of his government was to create a "fertile investment environment," Mr. Assad said at the session jointly organised by the apex industry bodies - FICCI, CII and ASSOCHAM. He assured Indian businessmen that there would be peace and stability in the region which had seen wars and conflicts. Mr. Assad said measures were afoot to set up the country's first stock market. Elimination of restrictions on imports, lower tariffs for local

Ahamed, National Security Adviser Shri M.K. Narayanan and other senior members of his delegation.

- The situation in West Asia figured prominently in discussions. The need for progress in the various tracks of the peace process, early implementation of relevant UN resolutions and the need for greater involvement of all significant regional and international participants were discussed. In this regard, noting recent developments, the two sides agreed to stay in close consultation on the next steps in the peace process.
- Efforts aimed at strengthening bilateral economic and commercial cooperation between India and Syria, the encouragement of joint ventures in a variety of areas, including in the Syrian phosphatic fertilizers, hydrocarbon and power sectors were highlighted in the talks. India offered to conduct a consultancy study on the integrated development of the Syrian phosphatic sector. BHEL has bid for the 500 MW Al-Zara power project in Syria. Indian participation in the Syrian banking sector and possibilities of cooperation in the information technology sector were also discussed.
- Addressing a business session jointly organized by the CII in association with FICCI and ASSOCHAM on 18 June, President Assad highlighted on-going economic reforms in Syria that have led to an improved investment climate and the geo-strategic advantages of Syria as a communications and transportation hub.
- In the presence of H.E. Dr. Bashar al-Assad and Prime Minister, Dr. Manmohan Singh, the following documents were signed:

manufacturing and increased access to foreign exchange had gradually begun to liberalise trade. According to him, Syria was promoting export-oriented growth through special economic zones, which were already servicing over 2000 companies.

In an interview with Siddharth Varadarajan for *the Hindu* and carried by the paper on June 12, President Assad when asked: "... you think if India were to involve itself in the peace process, this could bring about a balance? replied "Yes, because it has two aspects. You can play a direct role between the two sides, Syria and Israel, and the Palestinians and Israel. That will make the region more stable, and that will affect India itself in the long run and the world at large, especially Asia. Second, it's about the role you can play through your weight as India, a big country, in dialoguing with other powers - the U.S., Europe, your region - about how the Middle East can be made more stable."

- (i) Agreement on the Mutual Promotion & Protection of Investments between the Syrian Arab Republic and the Government of the Republic of India.
- (ii) Agreement Between the Government of the Republic of India and the Government of the Syrian Arab Republic for the Avoidance of the Double Taxation and Prevention of Fiscal Evasion with respect to Taxes on Income.
- (iii) Work Plan under the Memorandum of Understanding between the Government of the Republic of India and the Government of the Syrian Arab Republic for Cooperation in the Field of Agriculture and Allied Sectors for 2008-2009.
- The Hon'ble Vice-President of India, Dr. Hamid Ansari, the External Affairs Minister, Shri Pranab Mukherjee, Chairperson, UPA and the Leader of the Opposition, Shri L.K. Advani called on the Syrian President.
- The Hon'ble President of India, Smt. Pratibha Devisingh Patil hosted a banquet in honour of H.E. Dr. Bashar al-Assad and Mrs. Asma al-Assad.

484. Press Release of the Ministry of Finance on the signing of a revised Double Taxation Avoidance Agreement with Syria.

New Delhi, June 18, 2008

The Government signed a revised Double Taxation Avoidance Agreement (DTAA) with the Government of the Syrian Arab Republic for the avoidance of double taxation and for the prevention of fiscal evasion with respect to taxes on income, here today during the visit of H.E. Bashar Al Assad, President of Syrian Arab Republic to India. The Agreement was signed by Shri Pranab Mukherjee, External Affairs Minister, on behalf of the Government of India and by Dr. Amer Husni Lutfi, Minister of Economy and Trade, Syrian Arab Republic, on behalf of the Government of Syrian Arab Republic.

This Agreement has revised an earlier Double Taxation Avoidance Agreement between India and Syria which was notified on 25th June 1985. The revised DTAA will cover all taxes imposed on total income or on elements of income, including taxes on gains from alienation of movable or immovable property, taxes on the total amounts of wages or salaries paid by enterprises. The DTAA provides that business profits may be taxed in the source state if the activities of an enterprise constitute a permanent establishment in the source state. Permanent establishment includes especially: a branch, factory, place of management, sales outlet etc. Profits of a building site, construction, assembly or installation projects may be taxed in the state of source if the site, project or activities continue in that state for 270 days or more. Profits from the furnishing of services including consultancy services may also be taxed in the state of source if activities of this nature continue within that state for more than a period of 183 days within any 12-month period. Profits derived by an enterprise from the operation of ships or aircraft in international traffic shall be taxable in the country of residence of the enterprise. The Agreement provides for a maximum rate of tax to be charged in the country of source on dividends at 5 % of the gross amount of dividends if the beneficial owner of the dividends is a company which holds at least 10% of the share capital of the company paying the dividends and 10% of the gross amount of dividends in all other cases. The Agreement further provides for maximum rate of taxation in the source state at 10% in the case of interest and royalties. Capital gains from the sale of shares may be taxed in the country of source. Besides,

the Agreement incorporates provisions for exchange of information between tax authorities of the two countries and incorporates anti-abuse provisions to ensure that the benefits of the Agreement are availed of by the genuine residents of the two countries.

The revised DTAA incorporates improvements over the existing DTAA by including anti-abuse provisions and providing for source based taxation of capital gains from alienation of shares. This Agreement will provide further impetus to the economic ties between India and Syria by facilitating mutual economic cooperation as well as stimulating the flow of investment, technology and services between the two countries.

485. Response by Official Spokesperson to a question regarding an incident near Abu Kamal in Syria.

New Delhi, November 3, 2008.

India is concerned at the incident near Abu Kamal, 8 kms. inside Syria on its border with Iraq. The scourge of terrorism affects many nations across the world. While this must elicit decisive responses, when such actions result in the death of innocent civilians, they defeat the very objective of the intervention¹.

¹ The Spokesperson was referring to a U.S. military helicopters attack on October 26 on Syrian territory close to the border with Iraq, killing eight people in a strike the government in Damascus condemned as "serious aggression." An unidentified U.S. military official told the Associated Press in Washington the raid by special forces targeted the network of al-Qaida-linked foreign fighters moving through Syria into Iraq. "We are taking matters into our own hands," he said. The attack came just days after the commander of U.S. forces in western Iraq said American troops were redoubling efforts to secure the Syrian border, which he called an "uncontrolled" gateway for fighters entering Iraq. A Syrian government statement said the helicopters attacked the Sukkariyeh Farm near the town of Abu Kamal, five miles inside the Syrian border. Four helicopters attacked a civilian building under construction shortly before sundown and fired on workers inside, the statement said. The government said civilians were among the dead, including four children.

TAJIKISTAN

486. Press Release of the Ministry of External Affairs announcing humanitarian assistance to Tajikistan.

New Delhi, March 4, 2008.

In response to Government of Tajikistan's appeal for urgent assistance after unprecedented continuous cold weather in the country, the Government of India has decided to provide emergency humanitarian aid amounting to US \$ 2 million to Tajikistan, out of which US \$ 1 million will be cash assistance. The Government of India has also expressed solidarity with the Government and people of Tajikistan in their rehabilitation and reconstruction efforts.

TURKMENISTAN

487. Press Release of the Ministry of External Affairs on the visit of a delegation led by the Deputy Prime Minister and Foreign Minister of Turkmenistan Rashid Meredov.

New Delhi, January 22, 2008.

Deputy Prime Minister and Foreign Minister of Turkmenistan, Mr Rashid Meredov led a high-level delegation comprising of five Ministers - of Oil & Gas, Education, Trade, Culture and Protection of Nature - to India on 20-22 January, 2008. Mr Meredov co-chaired the Second Session of the India-Turkmenistan Inter-Governmental Commission for Trade, Economic, Scientific and Technological Cooperation along with the Minister of State for External Affairs, Shri E. Ahamed. During the visit, Mr Meredov also met the External Affairs Minister, Prime Minister and the Vice President. The other delegation members held meetings with relevant Ministries and organisations to discuss bilateral cooperation in respective spheres.

2. The Inter-Governmental Commission reviewed bilateral cooperation in the fields of trade & investment, hydrocarbons,

education, science & technology and culture since the first meeting of the Commission in October 2006 in Ashgabat. The two sides agreed on further efforts for expanding and strengthening cooperation, particularly greater exchange of business delegations, participation in trade fairs/ exhibitions, increase in banking ties, encouraging investments, discussions on collaborative ventures between energy companies as a follow up of the transit visit of the Minister of Petroleum & Natural Gas to Ashgabat in November 2007, scientific exchanges in areas such as seismology and astronomy, realizing the business potential in the infrastructure sector, developing transport linkages and greater cultural exchanges in the context of close historical and civilization linkages between the two countries. Cooperation in higher-education and human resource development was also discussed in view of ongoing reforms by the Turkmenistan government in these areas. A Protocol on the conclusion of the Inter-Governmental Commission was signed at the end of the meeting.

3. The visiting delegation handed over an invitation from the President of Turkmenistan to the Vice President of India to visit Turkmenistan later this year.

488. Briefing by Official Spokesperson on the visit of Vice-President to Turkmenistan and Kazakhstan.

New Delhi, April 2, 2008.

Official Spokesperson: Good afternoon. We thought we should brief you on the forthcoming visit of the hon'ble Vice-President, Shri Hamid Ansari to Turkmenistan and Kazakhstan. I have with me also Mr. Divyabh Manchanda who is head of the Eurasia Division and Mr. Harish from the Vice-President's office.

I believe a lot of the traveling media is here and before I forget this the traveling media should stay back after the session for your nuts and bolts briefing about the visit.

Hon'ble Vice-President Shri Hamid Ansari will be visiting two countries, Turkmenistan and Kazakhstan. The visit takes place from 4th to 10th of April. This will be his first visit abroad as the Vice-President.

As far as Turkmenistan is concerned, the visit is at the invitation of His Excellency President Gurbanguly Berdimuhamedow. The visit to Kazakhstan is at the invitation of His Excellency Mr. Kassym J Tokayev who is Chairman of the Senate Upper House of the Parliament of Kazakhstan.

The Turkmenistan leg of the visit will be from 4th to 6th. During these days the hon'ble Vice-President will call on his host the President. The two dignitaries will chair delegation-level talks between the two sides. There will be an official banquet dinner held in his honour. He will also visit the city of Mary in Turkmenistan.

On the discussions, you will be briefed as the discussions take place during the visit. They will cover expectedly the entire stretch of bilateral relations, regional issues, issues of mutual interest on the world stage. It will be an opportunity to reaffirm the close political ties, the economic ties, the potential for further cooperation in various fields, to reaffirm all these aspects at the highest political level.

As far as Kazakhstan is concerned, the visit takes place from the 6th to the 10th. The Hon'ble Vice-President will call on President Nazarbayev. He will hold meetings with Prime Minister Mr. Karim Massimov as well as hold restricted delegation-level meetings with his host the Chairman of the Kazakhstan Senate.

There will be an official banquet. The Vice-President will have speaking engagements in Kazakhstan. He will be addressing Senate Members. He will be addressing the Academy of Public Administration in Astana and the Al Farebi University in Almaty. The Al Farebi University will also award an Honorary Doctorate to the Hon'ble Vice-President.

I may mention that the Address to the Senate is a unique honour, as also the extensive speaking engagements in both the other cities where the President will be taking up.

The visit to Central Asia, to these two countries, is reflective of the importance that India attaches to the region and is an opportunity to reaffirm

the bilateral ties with both countries. The ties are multifaceted. We will give you briefs on trade figures and all that at the next meeting.

As for details of the Delegation, the hon'ble Vice-President is accompanied by Smt. Salma Ansari and a high-level Delegation which includes Shri E. Ahamed, Minister of State for External Affairs; Members of Parliament, Shri Vijaykumar Rupani, Shrimati Biplove Thakur, and Shir N.N. Krishnadas; along with senior officials of the External Affairs Ministry and the Vice-President's Secretariat.

Question: What is the status of the TAPI pipeline?

Official Spokesperson: I think that remains where it is. I do not think the hon'ble Vice-President's visit is the visit in which you go into details of negotiations of these issues. There will be a broad review of bilateral relations. I am sure energy and potential of closer cooperation in the hydrocarbons sector are things which will come up and will be discussed. But let me not prejudge the discussions. We will let you know as things go.

489. Opening Remarks by Vice President M. Hamid Ansari at the Delegation Level Talks with Turkmenistan.

Ashgabat, April 5, 2008.

Your Excellency, President Gurbanguly Berdimuhammeov

Mr. Rashid Meredov, Deputy Chairman of Cabinet of Ministers and Minister of Foreign Affairs of Turkmenistan

Esteemed Ministers

Members of the delegation of Turkmenistan.

I express gratitude and appreciation for the warm hospitality extended to me and my delegation and for the arrangements made with such care.

I bring to you the greetings and good wishes of Her Excellency the President of India and of the government and people of India.

Turkmenistan is the first country of my visit abroad as Vice President. This is no coincidence; it reflects the importance India attaches to the Central Asian region in general and Turkmenistan in particular.

We in India have been watching with interest and appreciation the reform and development process initiated by Your Excellency. My interaction with Your Excellency earlier today has reaffirmed our views on your dynamism and zeal in modernising your country. The constructive and proactive engagement of the Government of Turkmenistan in the international arena is a welcome development.

We look forward to India engaging more closely with Turkmenistan in various areas of cooperation for mutual benefit. The second meeting of the Inter Governmental Commission held in New Delhi in January 2008 has made wide ranging recommendations. I had an opportunity then to discuss these issues in New Delhi with Deputy Prime Minister and Foreign Minister Mr. Rashid Meredov. I am happy that we have made a good beginning and are serious about our bilateral engagement.

Excellency,

India and Turkmenistan are great ancient civilizations with ties dating back to several millennia. These ties were enriched and strengthened by continued interaction in centuries gone by. There are common strands of

history, language, heritage and culture. India's capital city, Delhi, is dotted with monuments that prove this legacy. One example of it is the all round contribution of Bairam Khan Turkman, and his philosopher son Abdul Rahim Khan-e-Khanan, in the reign of Akbar the Great in the 16th century; it is part of school history textbooks in India.

Excellency,

India considers Turkmenistan an extended neighbour, a natural ally and a key partner in Central Asia. There are opportunities in both countries, complementarities in resources and skills and willingness to develop a strategic friendship. We need persistence in the pursuit of mutually beneficial projects, allowing more exchanges of people, ideas and appropriate technologies and devising common strategies on issues of mutual interest.

We appreciate the bold initiatives taken in Turkmenistan towards economic reforms and to attract foreign investment. The ongoing economic reforms will pave the way for a rapid transformation and India would like to be a partner in progress with Turkmenistan.

India on its part is a vibrant and growing economy with significant capabilities in key service sectors and in specific areas of manufacturing industry and R&D. We must interact on the basis of our competitive advantage and locational advantage. Major multi-national companies of the world are based in India and many Indian companies have global operations. Our technically qualified workforce is contributing to their success worldwide.

Our bilateral trade has registered an impressive increase. Indian pharmaceutical companies are doing well in Turkmenistan and the Turkmen authorities have been supportive towards the efforts and initiatives of Indian businessmen. We are well linked through air routes. Setting up of an IT Centre in Ashgabat is in an advanced stage; the feasibility study has been completed. The Cultural Exchange Programme, Science & Technology Agreement, Agreement on Trade and Economic Cooperation and Comprehensive Education Agreement are under active consideration.

Despite the excellent progress, the potential of bilateral cooperation and economic engagement is far from realised. Several areas had been identified for mutual cooperation in trade and economic sphere; these need focus and hard work. You would Excellency, I am sure, will agree with me that the level of economic and commercial engagement between India

and Turkmenistan does not adequately reflect the potential and complementarities of the two economies.

India would be happy to share its experience of economic and education reforms with our friends in Turkmenistan. I understand that Turkmenistan, along with other countries of the region, is developing a network of rail and motor transport network. India has vast experience and technically qualified workforce in this area and would be happy to be associated with these projects. Improving connectivity is critical for enhancing bilateral trade between India and countries of Central Asia, and especially with Turkmenistan.

We commend the initiatives of Your Excellency in carrying out reforms in the education sector and your determination to bring Turkmen education levels at par with international standards. In view of our experience and capabilities, we stand ready to offer assistance in capacity building in all sectors including English language, computers and Information Technology, medicine and pharmaceuticals, business management, all streams of engineering, law, fashion and textiles, automobile, agriculture and sericulture.

Excellency,

We should urge our governments to pursue partnerships between our universities and institute joint studies of projects of common importance in areas such as culture, history, archaeology and linguistics. India stands ready to provide training under the ITEC (India Technical and Economic Cooperation) programme including tailor-made courses in all key sectors. India could be the ideal destination for Turkmen students and teachers for higher education and advanced training. India could help Turkmenistan in achieving its objective of universal access to telecommunication in the most cost effective manner.

Turkmenistan is a focus country for India and a priority destination. Indian tractors, water pumps and agro-chemicals are suitable to Turkmen requirements and are cost effective. We need to explore the possibilities for joint ventures in areas such as leather processing, cotton yarn making, wool processing and pharmaceutical projects. Indian infrastructure and construction companies should also look at participating in Turkmen projects focussed on modernising urban facilities and infrastructure areas like rail and road networks. Cooperation in value added segment of cotton and textile sector also holds great promise.

I understand that Turkmenistan is developing a national tourist zone at Avaza, at the Caspian coastal city of Turkmenbashy. Indian companies from construction and hospitality sectors could participate in this project. Tourism has the potential to emerge as another area of cooperation. India is an attractive destination as a place for cultural and medical tourism.

Turkmenistan is geo-strategically located and with its vast hydrocarbon resources it has an important role to play in the world's energy security. India, with its vast requirement of energy and dependence on imports to meet it, is Turkmenistan's natural partner. I thank you, Excellency, for the formal support we have received from Turkmenistan about our membership in the Turkmenistan-Afghanistan-Pakistan-India pipeline project. Indian companies like ONGC, OVL, GAIL and IOC have vast expertise, experience and required capital, and are willing to partner with Turkmenistan by constructively participating in Turkmen energy sector, in upstream and down stream activities. Indian companies have also developed expertise in shallow water, off shore and onshore activities. I am happy that a framework MOU on cooperation in the oil and gas sector is being signed between the Ministries of Oil and Gas of the two Governments and this should pave the way for constructive engagement of Indian companies in this important sector in Turkmenistan¹.

Your Excellency's forthcoming visit to India, I am confident, will enable us to give concrete shape to the vast potential that exists for a sustained and mutually rewarding partnership on a broad range of issues covering trade and investment, culture, education, agriculture, hydrocarbons and information technology.

¹ On April 5 India and Turkmenistan signed "a framework Memorandum of Understanding on cooperation in the oil and gas sector." It was signed by Minister of State for External Affairs E. Ahamed and Turkmenistan's Deputy Prime Minister for Oil and Gas Tachberdy Tagiev in the presence of the visiting Vice-President, Hamid Ansari, and the host country's President, Gurbanguly Malikgulyevich Berdimuhammedov, at the grand Presidential Palace. The MoU was under negotiation for two years. The refrain at the talks was that India was an energy-deficient country and Turkmenistan a gas-rich, making cooperation between the two, "natural, logical, obvious and mutually beneficial." Mr. Ansari told the Indian media accompanying him that the first idea should be to enhance the capacity of the two countries to cooperate before an engagement could take place on a sustained basis. He offered for partnership the "vast expertise, experience and required capital" of giant Indian companies such as ONGC, OVL, GAIL and IOC. According to media reports in the delegation-level talks, preceding the signing of the MoU, the Turkmen President noted that "participation of large Indian companies and enterprises in the realisation of oil-gas projects in Turkmenistan will serve for the two countries' benefits."

I strongly believe that we have to enhance interaction at governmental, business and people-to-people levels. We have to become true partners in each other's economic, cultural and social development. I am confident that under your guidance we can broaden and deepen our relationship; in this context, we should also encourage exchanges between our Parliaments.

I conclude by once again thanking Your Excellency for extending an invitation to me and providing me and my delegation this opportunity to visit the modern city of Ashgabat and the historical sites in Mary. We will cherish the memories and this experience.

490. Press Release of the Ministry of Petroleum and Natural Gas on the admission of India to the Turkmenistan-Afghanistan-Pakistan (TAP) Gas Pipeline Project.

New Delhi, April 24, 2008.

Shri Murli Deora, Minister of Petroleum and Natural Gas represented India at the 10th Steering Committee Meeting of the Turkmenistan-Afghanistan-Pakistan-India Gas Pipeline Project, which was held on 23 - 24 April, 2008 at Islamabad. In a major development, India was formally admitted as a member of the TAPI Project¹ at the meeting. It may be

1 While joining the TAPI project, India sought to dispel the impression that India was less interested in the Iran-Pakistan-India gas-line project. The Minister for Petroleum and Natural Gas Murli Deora on April 23 said: "For us, both are equally important. As far as India is concerned, we want to settle and activate both because the energy demand in India is so much and the oil prices are shooting up." He is scheduled to hold bilateral talks with his Pakistan counterpart, Khwaja Asif, on the IPI on April 25. The Minister told the representative of the Hindu in Islamabad and Press Trust of India: "We have done nothing by which it can be said that we are not interested in IPI. In fact, we have held many rounds of talks on the project, and if I was not able to come here for some meetings before, it was only because of the local circumstances. Now that things are better here, I came at once." The Minister dismissed the suggestion that he had come rushing to Pakistan out of fear that China was getting more interested in the T-P-I Project. During his China visit earlier this month, President Pervez Musharraf said Iran and Pakistan should consider China as a partner in the project if India was not interested in it. India has also sought third country certification of the central Asian country's gas reserves, as it has been insisting in the case of I-P-I. Earlier on April 14, while inaugurating the 5th Asia Gas Partnership Summit, organized jointly by Gas Authority of India Limited (GAIL) and Federation of Indian Chambers of Commerce and Industry, in New Delhi, Shri Deora while speaking of his impending visit to Islamabad to attend the TPAI project talks had stressed that Asia needed cross-border trade in gas. He said, "Geography, resources and economics favour regional integration, especially in gas." Asian gas markets were leading the growth in global gas sector with Asia today accounting for 70% of the total LNG trade. The Minister pointed out that Asian countries had natural areas of commonalities and synergy in social, economic and technological spheres. A multifaceted economic partnership underpinned more securely our traditionally close relationships. India on its part was ready to play sheet anchor role in this endeavour, he said. Meanwhile media reports quoting some experts have cast some doubts on the feasibility of the Turkmenistan-Afghanistan-Pakistan-India project, both from the security and adequacy of the gas available. It will travel through Afghanistan where conditions appear to be somewhat unstable in the medium run. The experts also doubt availability of sufficient gas reserves with Turkmenistan to meet all its assurances to China, Russia as well as Pakistan and India. The pipeline is estimated to cost \$8 billion and according to original projections, work should start in 2010 and end after five years. Experts suggest that the problem of guaranteeing an adequate quantity of gas for TAPI could be overcome if Turkmenistan agreed to connect the pipeline from its Daulatabad reserve to the IPI gas pipeline. On surface, the conditions in Afghanistan are the major cause for concern for the TAPI project. Taliban is active in south west part of the country which is near the proposed route for the pipeline. Experts do not expect the security threat to minimise in the near future. But more than unsettled conditions in Afghanistan, experts doubt whether there are enough gas reserves to fill all the pipelines being proposed by Turkmenistan without substantially increasing production. In 2007, Ashkhabad produced 70 billion cubic

mentioned that the Turkmenistan-Afghanistan-Pakistan (TAP) project was initially conceived in the year 2002. The Steering Committee Meeting met at the level of Oil and Gas Ministers of the four countries. ADB is playing the role of lead facilitator for the Project. The gas is expected to flow to India from Turkmenistan in the year 2014. The Project will help to promote energy security of the participating countries and strength regional cooperation.

During the meeting in Islamabad, an Intergovernmental Framework Agreement, to facilitate implementation of the Project, was initialed by the four participating Ministers. As per the text of the Agreement, the Pipeline will be executed by a Consortium. The gas will be supplied from Douletabad and other fields in Turkmenistan and the Principle of unobstructed transit of natural gas, in accordance with international norms, will be followed. The safety and security of the pipeline and related infrastructure will be provided by concerned Governments in their respective territories. Transportation tariff will be based on the cost of service method.

The 1,680 KM long, 56" in diameter TAPI pipeline will supply 90 MMSCMD of gas. The length of the pipeline in Turkmenistan, Afghanistan and Pakistan up to India border is 145 Km, 735 Km and 800 Km respectively. Gas utilization by Afghanistan will be about 5.0 MMSCMD during 1st/2nd year and 14 MMSCMD from the third year onward, with the remaining quantity of gas equally shared by India and Pakistan.

Mr. Murli Deora, Minister of Petroleum and Natural Gas also called on the Prime Minister of Pakistan, Syed Yousaf Raza Gilani along with other participating Ministers. Shri Deora conveyed the warm greetings and best wishes of the Prime Minister of India, Dr Manmohan Singh, to the Prime Minister of Pakistan. Shri Deora's visit marks the first high-level contact between the two sides after the new Government was sworn in after the elections in Pakistan.

The next meeting of the Steering Committee will be held in India.

metres of gas which was short of the previous year's target by 10 billion cubic metres. This makes it highly unlikely that Turkmenistan would be able to achieve its projected target of 250 billion cubic metres of gas and 110 million tonnes of oil by 2030. Turkmenistan has concluded side projects of the Caspian Sea gas pipeline, modernisation of the Central Asian pipeline and also the gas pipeline with China which is under construction. It is expected that these commitments alone will account for all of Turkmenistan's gas production targets of 2030, provided it is able to achieve them. Media report further said "Taking into account these considerations, the resource base of TAPI appears to be at a level that is too low to initiate this project. The volumes may be enough to cover other commitments.

INDIA'S FOREIGN RELATIONS - 2008

(i) INDIA-AFRICA FORUM SUMMIT

491. Statement by Minister of State Anand Sharma at the Executive Council of Foreign Ministers of the African Union regarding Summit of the India-Africa Forum.

Addis Ababa, January 29, 2008.

India has announced that it would hold the Summit of the India-Africa Forum in New Delhi in April. This statement was delivered by Shri Anand Sharma, Hon'ble Minister of State for External Affairs at the Executive Council of Foreign Ministers of the African Union at their Summit in Addis Ababa on 29th January, 2008.

India looks for a true partnership with Africa and support its development and achievement of the Millennium Development Goals, Shri Anand Sharma said.

The speech was extremely well received by the Foreign Ministers of nearly 50 African countries along with representatives of Regional Economic Communities and the Commissioners of the African Union. Several Foreign Ministers including those of Liberia, Mali, Ivory Coast, Niger and Djibouti were seen congratulating the Minister on the positive intent in his statement. Eminent members of the African Union Audit panel were also present.

The Chairperson of the Executive Council, the Foreign Minister of Ghana, warmly thanked Shri Anand Sharma for his statement on behalf of India and said that the age old friendship between India and Africa was looking for modern enhancement.

Shri Anand Sharma, Hon'ble Minister of State for External Affairs is leading a delegation to the African Union Summit and has personally delivered letters of invitation from the Prime Minister to the Heads of State of African countries invited to the Summit and letters of invitation to the Foreign Ministers of the same countries. The countries invited to the Summit are: Algeria, Burkina Faso, Democratic Republic of Congo, Egypt, Ethiopia, Ghana, Libya, Nigeria, Senegal, South Africa, Uganda and Zambia.

In a hectic day of meetings, Shri Anand Sharma called on the Prime Minister of Ethiopia, H.E. Mr. Meles Zenawi, and the President of Ghana, H.E. Mr. John A Kufuor, who is also the current Chair of the African Union. Both dignitaries have accepted Prime Minister's invitation to the Summit and

have said that the timing of the Summit is appropriate as Africa diversifies its relationship and cooperation with India is now in the forefront of Africa's agenda. The Prime Minister of Ethiopia said that they were confident that the Summit with India would be unique in its own way just as India is a special partner for Africa.

Shri Anand Sharma also called on the Chairperson of the African Union Commission, H.E. Prof. Alpha Oumar Konare. Prof. Konare paid warm tribute to the path of development followed by India and said that India as a true friend of Africa was well liked and respected and he was confident that the Summit in New Delhi would be a great success to which he would make a full contribution.

Shri Anand Sharma also had detailed meetings pertaining to the India-Africa Forum Summit and bilateral issues with the Foreign Ministers of Ethiopia, H.E. Mr. Seyoum Mesfin; Libya, H.E. Mr. Mohammed Abderrahman Shalgham; South Africa, H.E. Dr. Nkosazana Clarice Dlamini Zuma; Nigeria, H.E. Mr. Ojo Maduekwe; Ghana, H.E. Mr. Akwasi Osei-Adjei; Senegal H.E. Dr. Cheikh Tidiane Gadio; Uganda, H.E. Mr. Sam Kutesa; and Zambia, H.E. Mr. Kabinga J. Pande.

492. Interview of Minister of State Anand Sharma on the Africa - India Forum Summit.**New Delhi, February 18, 2008.**

[The Republic of India is a nation that has displayed by stance and practice, its profound commitment to strengthen ties with Africa. India has stood by Africa throughout the anti-colonial and anti-apartheid struggles and is currently continuing that solidarity by expanding trade and development co-operation with Africa on an unprecedented scale.

India has refocused its African policy of late and driving this new India-Africa partnership is a man whose credentials and experience make him the ideal person for the job.]

H.E. Mr. Anand Sharma: It is important to first identify those issues that concern the young and agitate their minds, and those who take leadership positions in the political mainstream movements should be sincere in articulating those concerns and help in the formation of policies that benefit the youth and children.

This is because they are the true essence of any society and what has to be ensured is the access of proper means to sustainable education and economic opportunities.

At the same time, youth leaders have a duty to the larger community of humankind. Therefore, the youth also must work towards sensitizing global opinion and mobilize support for conflict resolution, sustainable development, for inclusive growth processes and for peace because that perhaps is the only way forward for the world today.

Capital: What is the overall direction of Indian foreign policy and also in regards to Africa, particularly Ethiopia?

H.E. Mr. Anand Sharma:

India has been for decades a positive friend and partner of Africa. We are committed to share our development experiences, such as the Green Revolution which ensured food security for our people, in technology and with our resources.

There is a deepening engagement with Ethiopia, a country with whom we have always had a very good political relationship but also a civilizational link which pre-dates India's independence in the present context.

There are also the institutional linkages of universities, of super-specialty hospitals and many other aspects... The priority areas of our engagements are in agriculture, food security, generic medicines - where India has contributed in a big way in terms of breaking the suffocating stranglehold of multinationals on life saving medicines and ensuring that they are accessible at affordable prices. I am referring to ARVs, anti-tuberculosis and anti-malaria drugs, among others. To provide an example, ARVs used to cost US\$12,000 per annum per patient before Indian generics entered the market and brought this down to below US\$500. This in itself is a very strong statement of commitment and cooperation. In Ethiopia, numerous Indian companies are producing medicines and ARVs as well as drugs for tuberculosis and malaria, through joint ventures - Cadilla Ethiopia is one such joint venture.

Another area is ICT, where India's commitment has been in capacity building and human resource development. We have a dedicated program called Itech which is a technical and economic program through which in the last few decades tens of thousands of African students have come for education in our institutions for professional courses through Indian scholarship schemes. India has trained about 40,000 African students so far. The government has spent more than \$1.5 billion to expand this program further.

Another example of Indian and African partnership cooperation is the pan African e-network project, a dedicated satellite feature that was announced by our former President when he was visiting Africa in 2004. It has since been operational here in Ethiopia. There will also be a regional hub in Senegal. In Ethiopia it has already linked five major universities with twelve universities in India. With regards to the super specialty hospitals - five here in Africa (in different countries) link with the twelve super specialty hospitals in India. In addition there will be one hospital plus one educational centre or institution in each of the 53 countries in Africa. This has been a revolutionary step to help Africa bridge the digital divide and also for tele-medicine and tele-education.

With regards to the private sector, like the public sector, India is a partner in terms of capacity building, utilization of local resources, generating capital and employment as well as value addition, as we are fully committed to the development and industrialization of Africa.

Capital: You are now organizing the India-Africa Partnership Summit in April this year. What are the main objectives of this historic summit?

H.E. Mr. Anand Sharma: The AU and India have been working on the format of the summit. I have extended official invitations from my PM to the Chairperson of AU Commission, Prof. A. O. Konare, Ethiopian PM Meles Zenawi, and the President of the AU - the President of Ghana, John A. Kufuor. And I'll be conferring with Heads of State and Ministers, regional economic communities, the five founding members of NEPAD...

The goal of India is partnership in multi-sectoral priority areas in which we will engage. These include agriculture, food security, health, infrastructure development, science and technology, generics, capacity building and industrialization. We are already covering these areas, but we will examine how we can give further impetus and crystallize this engagement so that we work together and help Africa to get a larger share in world trade, as the world economic architecture is changing, and to have more voice in determining international regimes - i.e in negotiations with WTO and multilateral organizations so that issue vital to developing countries are articulated effectively in organizations of more representative characters.

Capital: What are the geo-political spheres of co-operation that India and Ethiopia collaborate on currently and what are the prospects for this robust bilateral relationship?

H.E. Mr. Anand Sharma:

The prospects are excellent because of a common bond of mutual respect and rich people to people contacts. India and Ethiopia, as well as all of Africa have historical relationships with special ties that are deeply rooted in our shared history. For India to come forward today is not as if India is embarking on a journey of discovery in Africa as the relationship has lasted from antiquity.

Capital: What is your gut feeling about Ethiopia? Sir, with all due respect I must request you to be as undiplomatic as you can be when you answer this. I ask this due to your extensive international experience in literally dozens of developing and emerging economies.

H.E. Mr. Anand Sharma: I feel very positive because the priorities of your Prime Minister are very clear. He is very keen on creating institutions of excellence besides of course, tele-education, tele-medicine and distance learning. He would like to see a centre of excellence where young Ethiopians

can be trained to become leaders not only for the society where they are in but to aspire as world leaders in various spheres. In my experience, when the leadership is transparent and committed, it is always a very encouraging sign. Another area is the economic cooperation in the various partnership projects in which Ethiopia already has attracted a significant component of Indian investment amounting to over US 1.1 billion. All indications are it's bound to expand further. In general I believe the future for Ethiopia is bright with promise.

Capital: There has been much talk, mostly rhetorical, of the need for the U.N. to undergo structural reform including, to the all powerful Security Council, which is regarded by many countries, including India, of not being representative of global reality. How can India galvanize more and sustained international support for its quest to be given a deserved permanent seat on the U.N. Security Council? (We would also recall the statement of British P.M. Gordon Brown during his recent India visit)

H.E. Mr. Anand Sharma: It is India's considered view that the UN, which is the only multilateral organization in which all states are present, makes decisions, and resolutions that do impeach regions and states throughout the world.

Therefore, it is important that the UN undergoes a comprehensive reform and democratize all its structures including the Security Council. The Security Council in its present composition symbolizes a frozen world order that emerged after the Second World War, when the membership of the UN was not even one-third of that of today. The overwhelming majority of UN member states, including India, emerged from subjugation and colonialism in later decades.

The Security Council must reflect the contemporary realities of the 21st century, and India being the largest democracy on the planet, where 17% of the world population is found, to request to be included in the decision making processes, along with the representative countries of Africa and Latin America, is a rightful claim.

At present, Africa and Latin America are not represented so it is not the position of India alone. That is why we work closely with our friends in Africa, Latin America and the Caribbean.

Capital: Would you be kind enough to describe how you became involved in various activities in regard to disabilities, especially autism?

H.E. Mr. Anand Sharma: One has to have empathy for those who have special needs and require care and support. The inclination has been present throughout our political activism when we were taking up causes, whether it be the anti-apartheid struggle or other related issues as ultimately it was all about the underprivileged and underpowered.

As for activism in disability issues, I became sensitized and better informed on autism because my younger son is autistic and I feel that it is important for parents to not only accept but be assertive and speak out, so that the society as such gets sensitized and also works in ensuring their human rights and their dignity. I also feel that that is what has motivated me to work in creating an enduring institution that will help in advocacy, research, and training and also provide some measure of support both to the persons who are afflicted with disabilities but also to their families and parents.

493. Address by Minister of State Anand Sharma on the Occasion of Media Launch of India-Africa Forum Summit.

New Delhi, March 10, 2008.

Shri Nalin Surie, Secretary in the Ministry of External Affairs; Chief Coordinator for the forthcoming India-Africa Forum Summit, Shri Banbit Roy; the DG of the Indian Council for Cultural Relations, Shri Pavan Varma; the Chief Spokesperson and JS(XP), Shri Navtej Sarna; senior officials of the Ministry of External Affairs; Excellencies; members of the media; ladies and gentlemen:

I am equally privileged to be with all of you this evening and to share our own thoughts, our own tales, about a forthcoming event for which we have been working assiduously over the last two years. It was in 2006 in February that we had first suggested that to crystallize India's engagement with Africa, we must put in place an institutionalized forum or a structured format.

Later when we had made a proposal to the Africa Union and discussed it when Prof. Alpha Konare came here in December 2006, we had agreed to set up at that time a Joint Working Group where our team was led by Secretary Shri Nalin Surie. After a couple of rounds of discussions and deliberations, a format was agreed and a decision taken by our Prime Minister Dr. Manmohan Singh to convene the first India-Africa Forum Summit in New Delhi in April 2008. Of course, it will begin on the 4th with the senior officials meeting, and then continue with the Foreign Ministers meeting and the principals, the Heads of States, on the 8th and 9th.

This has its own significance. It is not a decision which was taken without a careful thought and consideration. India has a historic and time-tested engagement with our brothers and sisters in Africa. We have bilateral engagement with the countries in Africa. In the contemporary context, it is a kind of partnership which India has which covers a vast canvass. The sectors in which we are involved, working together, especially if I may say, in capacity-building, in human resource development, sharing our experience, our expertise in various fields of which most of Your Excellencies the High Commissioners and Ambassadors are aware and many friends of the media.

India's relationship and engagement with Africa is different. I have no hesitation to say what I have said in the past, especially when I was talking to all the Heads of Missions and Ambassadors before we left for the last

AU Summit in Addis, that India is there as a sincere partner. We do hope that this Summit will help in crystallizing this partnership and also open new pathways of cooperation. We feel that in this first decade of the 21st century, when there are significant developments taking place in different regions of the world, including in our own country India, we also see major developments taking place in Africa. The leaders of Africa defining a very clear vision for the continent and also to address the issues or challenges, if I may say, challenges which are common, challenges which have to be addressed, challenges which need a collective effort particularly when we look at the issue of empowerment of people, hunger and poverty alleviation, education and also health and food security. These are issues which are important to the world of today and these are the areas where we feel our working together would be mutually rewarding.

At the same time we have taken care to share the blueprint of what has been discussed with African Union with all the member countries. We have had a Draft Action Programme which was given at the AU. We will be benefiting from the inputs that we receive from all the member countries. Also, the Conference will be adopting a Declaration. I am not in a position to say what the Declaration is because we have to wait for that when the Heads release the Declaration. But at least, we will try to get it when they will be discussing that.

Our officials have been working hard and I must compliment them, at the same time reminding each one of us that it is important that the pace and spirit at which we are preparing gathers momentum. Our guests when they arrive - the Heads of States and Governments, the Foreign Ministers and the senior officials and all others - I can assure you through the Ambassadors and High Commissioners present here that India's traditional warm hospitality will be there and that too at its best, because we are going to receive those whom we consider as our friends and partners.

I will not say much. I will now wait for the instructions which I have on what to do after this. But I must add one thing. The Director General of ICCR is here. They are also working out on something which surely will be a cultural feast. With these words, I would like to welcome you and thank you.

494. Press Conference of Minister of State for External Affairs Anand Sharma on the eve of the India - Africa Forum Summit.

New Delhi, April 7, 2008.

Official Spokesperson (Mr Navtej Sarna): Good evening everybody and apologies for keeping you waiting. The hon. Ministers were in discussions till exactly one minute ago and we have pulled the hon. Minister of State, Shri Anand Sharma straight from the Council of Ministers here to brief you. Without further ado I will request the Minister to kindly address the press.

Minister of State (Shri Anand Sharma): Thank you, Navtej.

Friends, as JS(XP) has mentioned, the reasons for the delay were beyond our control. We had a marathon session today of the Ministerial Meeting. All the participating countries represented by their Foreign Ministers and the Members of the Delegations which do include senior officials, that is the Foreign Secretaries of the concerned countries; the Heads of Missions; and the Heads of Indian Missions of the countries which are participating in the first ever India-Africa Forum Summit.

This Summit has generated tremendous interest in Africa, in India and also attracted worldwide attention. Given the fact that India and Africa together constitute one-third of world's population, India and the African continent enjoy a special relationship which is based on equality and mutual respect, this Summit meeting which will be attended by many Heads of States and Heads of Governments of the countries which will be participating in this Forum Summit and also in a few cases by the Vice-Presidents or Senior Ministers who are leading the respective country delegations.

The arrival of the Heads of States or the Leaders of the Delegation has started yesterday itself. Since this morning we have had a few more arrivals starting with the President of Ghana to the former Chair of the Africa Union the Prime Minister of Burkina Faso, the President of Senegal, the President of Uganda, the President of South Africa, are arriving within the next few hours.

As we had mentioned earlier on the occasion of the launch of the website and subsequently in the XP Division's handouts, the idea of this Summit was first mooted in the year 2006. India had expressed a wish to deepen its engagement with African continent in a structured format. This was a

proposal that the AU had endorsed and it crystallized during the visit of Prof. Alpha Konare, the Chairman of the AU Commission, in December 2006. Since then the Joint Working Groups have met to work out the modalities and the format of participation was agreed between the AU Commission and India as proposed by the AU to ensure that all regions are represented in this first Forum Summit which is definitely different and one of its kind. Different because is the AU leadership has pre-selected the participation. It is the five founding countries of NEPAD; as South Africa, Nigeria, Senegal, Algeria, Egypt and Ethiopia as the Chair of the NEPAD Implementation Committee and we have the eight RECs, the Regional Economic Communities. Besides these eight, we also have the current Chair of the Africa Union that is the President of Tanzania, who again will be arriving later this evening; and the immediate past Chair that is President of Ghana to which I had made a reference earlier.

The Ministers' Meeting had discussed in detail the areas of priority engagement and also the two documents which will be considered and adopted at the Summit of the Heads of States and Governments and the Leaders of the Delegations. Tomorrow and day after at the concluding Plenary, these two will be unveiled. I am happy to share with you that there is complete agreement between India and the African leadership on the priority areas of our multisectoral partnership and the steps to be taken to consolidate the same. The two documents which have been finalized and sealed now, frozen until the Heads unveil them day after are - Cooperation Framework between India and Africa, and a Joint Declaration of the Heads.

Both the sides are of this considered view that the Summit is not only historic but will give a new dimension and momentum to the partnership that is there and evolving between Africa and India.

Thank you.

Question: You said that areas of priority engagement have been identified. Could you just throw a little light on what those areas are?

Minister of State for External Affairs: Sure. One of them is capacity building, skills development and human resources development. Another is agriculture and food security. This would include crop diversification, water management, capacity-building in agriculture and building institutions of agricultural research. The next is economic cooperation. The trade between India and Africa has exceeded 30 billion dollars now. It has increased six-fold in the last five years and has enormous potential to grow further. The

next is education and ICT, particularly the full roll out now of the Pan-African E-Network Project. All the Foreign Ministers without any exception have acknowledged with appreciation India's steadfast contribution in Africa's development, particularly the significance of this Pan-African E-Network Project for which there is a dedicated satellite. It is a Project fully funded by India to connect Sub-Saharan Africa, to enable Africa to bridge the digital divide. It is a revolutionary leap to link the institutions, particularly the major universities in Africa with the major Universities of India, the major hospitals identified in different regions of Africa with super-specialty hospitals in India. Let me add here that that has already taken place. Many Universities, hospitals and super-specialty hospitals stand linked. This was operationalised from Ethiopia last year. The satellite hub will very soon be operational out of Senegal.

The other areas are: infrastructure development; capacity-building in industry particularly small, micro and medium enterprises; climate change; and energy security. The details of how we propose to go about it will be there in the Framework of Cooperation between India and Africa and also in the Joint Declaration.

Question: In what way can India and Africa collaborate in global fora on global issues? On UN Reforms, is there a possibility of harmonizing India's position with that of African countries?

Minister of State for External Affairs: Both India and Africa are agreed in principle that the multilateral organizations are in need of reforms. By multilateral organization we refer to the United Nations. This did figure up in the Ministerial Meeting today. Both India and the African leadership strongly feel that the United Nations reforms must be all encompassing to make its organs truly representative of the contemporary realities and also democratic in composition. For that the expansion of the Security Council both in permanent and non-permanent category is agreed in principle. India has throughout made it clear that India will support the AU consensus on the African countries' candidate for the UN Security Council. India and Africa have also agreed, or are in agreement, that the other institutions particularly the Bretton Woods institutions, the IMF and the World Bank, also need to change and take into consideration the altered or changed political and economic architecture of the world. We are also in agreement over the position that we have taken on the issue of climate change particularly the principle of common but differentiated responsibilities so that the process

of development of the developing countries is not interrupted in any manner and there is a transfer of both of clean development mechanisms, transfer of technology and transfer of resources. We have common position and we also have a very firm and shared position in the WTO, in the Doha Development Round, where we are determined to protect the interests of Asia, Africa and Latin America, the developing countries, in the agriculture sector, particularly in respect of trade distorting subsidies, or price distorting subsidies, and the domestic support which agriculture produce has in the developed countries, considering the fact that four-fifths of the agricultural workforce of the world comes from the developing countries.

Question: You said that India would support the consensus candidate of the African Union. Are you also hopeful of getting similar consensus support for India's candidature for the United Nations Security Council?

Minister of State for External Affairs: First of all, let me tell you that was India's position. As far as Africa's position is concerned, there has been unanimity in the African position at the country level as well as the regional organizations which have come out in unequivocal support for India's rightful claim to be there in the expanded UN Security Council as the largest democracy on this planet. That is African formulation.

Question: Mr. Minister, India today is a billion dollar economy and we now have 300 billion dollars worth of foreign exchange reserves. Is there any plan by the Government of India to launch an India Fund for Africa's Development of a few billion dollars? Are you likely to announce such a thing?

Minister of State for External Affairs: We are already engaged with Africa. You would know that we have our own programme, which is Aid to Africa. We are also engaged with the Regional Organizations (RECs as we call them). We also have the dedicated lines of credit with NEPAD, with TEAM-9, with ECOVAS. The Pan-African E-Network, which I just referred to, is entirely a gift of India and its people to Sub-Saharan Africa. It is funded by the Government of India. In addition to that we have the ITEC programme which has made a huge impact in Africa on the training in skills, human resource development and capacity-building. Regarding our own economy and the size which you referred as a trillion dollar plus economy, yes, India and Africa are committed to an inclusive and sustainable pattern of growth to work together. That is important because much is required to be done in both India and Africa.

Regarding what can be announced, I said that we have agreed on the priorities, we have agreed on the timeframes and these two documents have been finalized and frozen. They will be unveiled by the Prime Minister of India. It is his prerogative to announce what he has in mind.

Question: Sir, India is likely to announce a very large grant and a line of credit which is ten times more than that in the near future.

Minister of State for External Affairs: I have no idea. As I said, that is entirely the prerogative of the Indian Prime Minister.

Question: I know. I just want to ask my question, Sir. What does India benefit from this grant and line of credit? That was my question. I would like to seek a clarification which is a little unrelated to this. This relates to the events in Jeddah recently. Is there any talk of ...

Minister of State for External Affairs: No, no. This is only about the Africa-Forum Summit. That you can ask me separately.

To respond to the first part of your question, India and Africa have a special bond. We are committed to a partnership or to be partners in each other's development. When we engage each other we are neither looking at gains nor are we seeking to compete with anyone.

Question: Mr. Minister, you have said that the Foreign Ministers have come to a complete agreement on the priority areas, and two documents have been completed and they are awaiting ratification of the Heads of States. Does the issue of balance of trade feature in these two documents?

Minister of State for External Affairs: You will appreciate that I should not be commenting on any aspect of these two documents. I just told you that we have a deepening economic engagement which has increased six-fold in the last five-six years, which has exceeded 30 billion dollars. I can also share with you that Indian investments in a big way are also adding to this robust economic exchange. The figure which I gave you does not include the investments in various sectors. That surely can be made available to you. There are various documents that have been published, magazines dedicated for this first Summit, which would give you the details and the projections. Though they may not contain the last year's figures which have been just collated.

Question: You mentioned food security. There might be an argument made that India's decision to ban rice exports and to substantially bulk up on buffer stocks of wheat may potentially hurtful for Africa in the sense that it

has the potential to increase the global commodity prices. If you could respond to that criticism in the spirit of this discussion and perhaps also to ... suggestion that what needs to be done is get the Doha deal through?

Minister of State for External Affairs: As far as India's decision that you have referred to, that is not in the context of any region. That is a policy decision which the Government of India has made, which is unrelated to our engagement with Africa. The reality, painful that it is, before us, before Africa and before the rest of the world, is that we are facing a galloping food crisis in the world. When I referred to food security and agricultural productivity that we have agreed as one of the topmost priorities for Africa and India to work together, to create institutions and to ensure that Africa too accesses and embraces the latest technology to go in for a green revolution, because it is a rich continent when it comes to its soil, so that the agricultural productivity can increase. In case of India, not dealing directly with this subject, we have been a self-sufficient country since the Green Revolution as far as our food grains are concerned. We as a nation for decades have been in a position to feed ourselves. Though the population has increased, it has increased three-fold since our Independence, but the food productivity has increased many fold. Of late, there is a challenge because of the changing weather patterns and crop patterns. Therefore, it is equally important for countries to take preemptive measures because India itself was compelled to import wheat. Not that we did not have enough wheat but we had to recently, as recent as last year, to keep the buffer.

As a matter of policy, India's keeps a buffer of at least six million tonnes of wheat alone plus a buffer of cereals and another seven to eight million tonnes of rice. It did get affected because of what I said earlier. These are the decisions which the Governments always review once you have enough. We have always shared when we have surplus. But for any country when you need to keep a buffer and you do not have that margin, the wisdom of the decision to act otherwise, that is to export, will be questioned and very harshly so. So, I do not think it should be related to that.

Question: Mr. Minister, some are of the view that ... this kind of engagement you are having with Africa at this time is because of your sudden realization that China has moved into Africa. They are saying that what you are doing is not for any altruistic move but because of the need to rival China.

Minister of State for External Affairs: Thank you for asking me this question. Let me quickly respond to you.

This skepticism emanates from those who have not been adequately informed of the history of India's engagement with Africa. I would advise skeptics to go back to Gandhi. He did not think of competing. Nor did Nehru when he said what he did in 1946. Nor was any competition or vested concerns that had guided India at the dawn of our Independence to take the issue of racial discrimination in South Africa to the United Nations. India has not suddenly discovered Africa. Our people have known each other over millennia. When India itself was confronted with monumental challenges of development, particularly in the 1950s and 1960s, India had started the ITEC programme; India had started the special scholarship schemes. Even today when we said that both Africa and India have shared challenges, we have agreed to work together. We believe in capacity-building and for Africa value addition of the resources which Africa has. I may also underscore that the spirit in which, the spirit of South-South cooperation, India has engaged Africa, the same ethical practices have been embraced by the Indian private sector too. Indian private sector investments in Africa, whether it is in the IT sector, whether it is in pharmaceuticals or agricultural projects, they have enabled people and empowered the young men and women of the countries in which they have set up the projects by training them, first bringing them to India to train or now training facilities there so that they can work in those projects.

So, wherever Indian public sector and private sector has gone, or is going, they are creating opportunities for people to be employable in those projects. Every project which has come up or which is coming up has four-fifths, if not more, of the work force and the executives from the African countries. So, it is both generating incoming, creating infrastructure and also creating employment. I can say without any doubt that India's engagement in Africa is time-tested, it is distinct, it is different and it cannot be compared to any other country.

Question: ...Inaudible...

Minister of State for External Affairs: Both of us have our own strengths. India has its strengths. We are also not devoid of resources. I feel that most important of all the resources in this world are the human resources. Without human resources any other resource would be meaningless. That is what India is seeking to create and share. Our first priority has been and even now is, and day after tomorrow when it is declared, the first priority remains capacity-building and skills development. I think that is the greatest resources. If you have everything but you do not have the capability, the

human resources, the skills! Second is infrastructure. India will help Africa develop its own infrastructure. Thirdly, we would like to have value addition. For what Africa has we would like to have value addition. Even if we go in for development of the natural resources, we will go in for joint development as partners in progress. Those will be partnership ventures. That is what India supports and encourages. That is what our philosophy is.

Question: You said there are human resources which you would like to develop.

Minister of State for External Affairs: Not only human resources, I am talking of natural resources also. I am making it very clear that India believes in the philosophy of jointly developing to the mutual benefit of both Africa and India.

Question: Any example of natural resources?

Minister of State for External Affairs: Well they are in abundance in both the countries. Even when you talk of agriculture, let me give you one example, there is need of value addition both in India and in Africa, agro-processing, food-processing, containing post-harvest losses. In my country post-harvest losses are to the tune of 30 per cent. We are talking of food security. So, they are issues where we need to work together and ensure value addition.

Question: Genetically modified also?

Minister of State for External Affairs: I am not an agricultural expert but I say that all steps have to be taken to enhance productivity and also to ensure that Africa also benefits from latest technology to become self-sufficient in food output.

Director (XP) (Ms Nagma M. Mallick): Thank you very much. I would like to thank the Minister of State for External Affairs for sparing his time. I thank all of you for your presence here. I look forward to your active participation, to your coverage over the next few days of the India-Africa Forum Summit.

Thank you very much.

495. Opening Address by External Affairs Minister Pranab Mukherjee at the Foreign Ministers' meeting of the India-Africa Forum Summit.

New Delhi, April 7, 2008.

Your Excellency, Hon'ble Mr. Alpha Oumar Konare, Chairperson of the African Union Commission,

My dear colleagues, Hon'ble Foreign Ministers from Africa,

Ministers, Secretaries, Excellencies, Ladies and Gentlemen,

It is a privilege to welcome you to the Foreign Ministers' meeting of the India Africa Forum Summit. I thank you for accepting my invitation. I hope you will all have an enjoyable and productive stay in our country.

Excellencies, we are gathered here to give a renewed thrust to our age-old partnership with the continent of Africa. We are grateful to all the governments of the continent for their overwhelming support in this direction. The India Africa Forum Summit is the beginning of a process to help brainstorm on how India can evolve its partnership with the countries of Africa to meet the common challenges that confront us in the 21st century. I, therefore, look forward with great eagerness to hear your views on how we can take our partnership forward.

A team of senior officers from India and Africa has been working assiduously over the past few months to assist us in finalizing the documents which we will consider and thereafter place before our leaders tomorrow for adoption at the historic meeting of the India-Africa Forum Summit.

It is agreed that this India-Africa Forum Summit will have two outcome documents: a Delhi Declaration and an Africa-India Framework for Cooperation.

The Delhi Declaration will be a political document and would cover issues of bilateral, regional and international interest to India and Africa, including our common positions on UN Reforms, climate change, WTO, international terrorism, etc.

The Framework for Cooperation will spell out agreed areas of cooperation. The areas on which we have agreed to focus include human resources and institutional capacity building, education, science & technology,

agricultural productivity and food security, industrial growth, including small & medium enterprises and minerals, development of the health sector, development of infrastructure, ICT and the establishment of judicial systems with police and defence establishments under civilian control.

Africa has always enjoyed an important position in our foreign policy engagement. India and the countries of Africa share a history of colonial exploitation. Our cooperation in your post colonial reconstruction was found to be useful and also helped cement our close political relationship with the people and leaders of Africa. We have for some time now been in the process of providing a contemporary character to this relationship in the light of the changed international environment and our own evolving capabilities and resources.

India has over the years shared with Africa its developmental experiences and is committed to continue such cooperation in areas of its strength. India's model of development through democracy, use of cost effective technologies and practical application of the knowledge sector have, we believe, been found to be of use to Africa. Africa is today the largest recipient of India's technical assistance programme. We are extending and diversifying the programme to cater to the special needs of individual countries and group of nations. Projects such as the Pan African e-Network are an illustration of our genuine effort at sharing our progress in the knowledge sector and helping bridge the digital divide in Africa. Its pilot project is already functioning in Addis Ababa and the hub in Dakar awaits installation of equipment. Twenty-nine countries of Africa have so far joined this programme.

India has also extended concessional lines of credit of about 2.1 billion dollars to the countries of Africa, both bilaterally and through regional bodies. These have been used for developmental projects chosen by and in the interest of the recipient countries.

On its part, Africa has found merit in regional integration and seeks to first consolidate its regional economic communities. This process will have a significant impact not only in Africa but also internationally.

India's engagement with African countries has, in the past, focused on bilateral engagement. In recent years, however, we have taken initiatives for establishing relationships with Africa's regional economic communities. We have made good progress with COMESA, SADC, ECOWAS and EAC and expect to make similar progress with the others. Our regional

cooperative programmes include feasibility studies, consultancies, joint projects in expansion of railway networks, development of regional capital and stock markets, food and health security, pilot projects on establishment of Micro, Small and Medium Enterprises and S&T parks, hydro-electric projects, ICT for development, etc.

We have also made serious efforts to expand our trade partnership with Africa. The ten India-Africa project partnership conclaves organized by India's CII & EXIM Bank have been successful in boosting the trade and investment partnership. I had the pleasure of addressing the 10th conclave in New Delhi last month. We had the privilege to host over 600 delegates from more than 35 countries of the African continent. We also had the honour of having in our midst on that occasion the Vice Presidents of Tanzania and Ghana and 33 Ministers.

Indian companies have made robust investments in Africa running into several billion dollars in sectors ranging from horticulture and agriculture to power generation and mining. India's trade with Africa has been increasing rapidly in recent years. We have signed Trade Agreements with 29 countries in Africa. Two-way trade has risen from around \$5.5 billion dollars in 2001-02 to over 30 billion dollars in 2007-08, which represents an almost six-fold increase in as many years. Even so, the true potential is much greater and the spread and composition of the trade has to be substantially diversified.

At the Pan African level, we have stepped up our relations with the African Union which has acted as a facilitator for this India Africa Forum Summit.

I take this opportunity to renew India's commitment to work in partnership with Africa.

Excellencies, let me also turn to some international issues that present us with common challenges. Climate Change is high on the agenda of the international community at this stage and will remain so for the coming months. It is imperative that strategies to address climate change do not add greater burden or impose further conditionalities on the development of developing countries. The principle of common but differentiated responsibilities and respective capabilities is important. I am glad that the Bali Conference has reaffirmed the principles and provisions of the UN Framework Convention on Climate Change. Long term convergence of per capita emissions of developed and developing countries is an important

principle that deserves serious consideration in the context of the international climate change negotiations.

It is imperative that India and Africa work closely together, including in the NAM/G-77 framework, in the climate change negotiations. We must not allow ourselves to be divided.

Negotiations on the Doha Development Round of the WTO are also of great concern to countries like ours. It is essential that the developmental dimension of the Round be sustained. It is important to maintain and strengthen the engagement, solidarity and cooperation among our countries in this process. Agriculture remains the key. Any acceptable agreement must adequately protect the livelihood, food security and rural development concerns of developing countries. The developed world must bring about significant and effective reduction in trade distorting domestic support and subsidies. There can be no artificial deadlines. The promise of this being a Development Round must be fully realized.

The problem of terrorism is well known to Your Excellencies. We, in India have been fighting this menace for over two and a half decades virtually single-handedly. After the 9/11 terrorist attacks, there is now greater realization that this is an international problem that needs comprehensive cooperation among all countries. We firmly believe in zero tolerance against terrorism. We are concerned that the tentacles of this menace are reaching into Africa. We must strengthen our institutional cooperation against this menace.

Excellencies, reform of the United Nations, especially of the UN Security Council, has been on the agenda of the international community for long. It is important to ensure that the United Nations reflects contemporary reality. Our positions on this critical issue are virtually identical though we have a difference of opinion on how to approach this critical question. The support of Africa for reform and expansion of the UN Security Council, in both permanent and non-permanent categories, is critical. India has always been supportive of Africa's representation in the permanent membership of an expanded UN Security Council. It is important that we work together to ensure that we move from the stage of discussions to negotiations on this vital issue. We must not allow ourselves to be led astray and be compelled to accept interim solution that would be to our detriment. I must also take this opportunity to thank the countries of Africa for their steadfast and

consistent support for India's membership on an expanded UN Security Council.

Excellencies, Ladies and Gentlemen, let me once again reiterate how delighted I am that you could accept our invitation for the India-Africa Forum Summit and this meeting of Foreign Ministers associated with that Summit. I look forward to hearing Your Excellencies on how best we can take forward the India-Africa partnership in all its dimensions: bilateral, regional and international.

I thank you.

**496. Opening Address by Prime Minister Dr. Manmohan Singh
at the Plenary Session-I of India-Africa Forum Summit.**

New Delhi, April 8, 2008.

Distinguished Heads of State and Government

Distinguished Vice Presidents

Distinguished Ministers

Distinguished Chairperson of the African Union Commission

Excellencies,

Ladies and Gentlemen,

I am truly delighted and deeply honoured to have this opportunity to welcome this distinguished galaxy of leaders from Africa for the first India-Africa Forum Summit. Excellencies, your presence here today marks the start of a new chapter in the long history of civilisational contact, friendship and cooperation between India and Africa.

Africa is our Mother Continent. The dynamics of geology may have led our lands to drift apart, but history, culture and the processes of post-colonial development have brought us together once again.

For the people of India, Africa is also the land of awakening of the Father of our Nation, Mahatma Gandhi. The birth of an independent India in 1947 in

turn provided powerful support to the forces of nationalism and decolonisation in Africa. The emergence of Ghana as the first independent country in sub-Saharan Africa in 1957 was followed by the tumultuous decades of the sixties, seventies, and eighties culminating in the end of apartheid in 1994 in the very same land that had created the Mahatma.

Ever since independence, our national leaders led by such towering personalities as Jawaharlal Nehru, Mrs. Indira Gandhi and Rajiv Gandhi have been ardent champions of the cause of Indo-African cooperation.

We pay tribute to the political leaders and intellectuals of Africa who fought for Africa's emancipation, empowerment and laid the vision of pan-Africanism in the 20th century.

As I look into the 21st Century, I am convinced that the free people of a new Africa and a new India will come even closer, through mutually beneficial relationships based on equality and fraternity.

We share a common societal commitment to pluralism, to inclusiveness and to the creation of a world that is fair to all its inhabitants. Our shared vision of the world should enable us to work together on the vital challenges facing humanity. We have coordinated our position in the United Nations and other international forums. No one understands better than India and Africa the imperative need for global institutions to reflect current realities and to build a more equitable global economy and polity.

Excellencies, Ladies and Gentlemen,

The time has come to create a new architecture for our engagement in the 21st century. We visualize a partnership that is anchored in the fundamental principles of equality, mutual respect and mutual benefit. Working together, the two billion people of India and Africa can set an example of fruitful cooperation in the developing world.

The objective of our partnership is to cooperate with all the countries of Africa, within the limits of our capacities and capabilities, in their efforts towards achieving economic vibrancy, peace, stability and self-reliance. Towards this end, it is our intention to become a close partner in Africa's resurgence.

There is much to be gained in sharing our development experiences. In India we have sought to empower our people by investing in their capabilities and widening their development options. Transfer of knowledge and human skills

will strengthen our mutual capabilities. Such exchanges must go beyond government-to-government interactions and embrace our civil society, academics, artists and writers. We face emergent common challenges of food security, energy security, pandemics, terrorism and climate change. We should have cooperative mechanisms for exchange of views, consultation and for working out common strategies for addressing such pressing issues.

The Delhi Declaration and the Africa-India Framework for Cooperation that we plan to issue at the end of the Summit will provide the blueprint for India-Africa dialogue and engagement in the 21st century.

Excellencies, Ladies and Gentlemen,

We recognize the crucial importance of market access in ensuring the development dimension of international trade. Accordingly, I am happy to announce a Duty Free Tariff Preference Scheme for Least Developed Countries on the occasion of this Summit. Under this Scheme, India shall unilaterally provide preferential market access for exports from all 50 least developed countries, 34 of which are in Africa. The Scheme will cover 94% of India's total tariff lines. Specifically, it will provide preferential market access on tariff lines that comprise 92.5% of global exports of all LDCs. Products of immediate interest to Africa which are covered include cotton, cocoa, aluminum ores, copper ores, cashew nuts, cane sugar, ready-made garments, fish fillets and non-industrial diamonds.

Our cooperation must actively co-opt trade and industry in the processes of growth and development in Africa. Over the last few years, India has acquired considerable experience in undertaking projects in different countries in Africa through extension of concessional lines of credit by the EXIM Bank of India.

So far, between 2003-04 and 2008-09, we have extended lines of credit amounting to 2.15 billion dollars. Over the next five years, we will more than double this amount and offer additional lines of credit amounting to 5.4 billion dollars, both bilaterally and to the regional economic communities of Africa.

Developing infrastructure in the areas of railways, IT, telecom and power generation and physical connectivity in Africa would be a priority. We will promote activities of small, medium and micro enterprises. In this task, we will reach out to the private sector and make full use of public-private partnerships.

It is also our intention to enhance the Aid to Africa budget of the Ministry of External Affairs for implementing projects in critical areas focusing on human

resource development and capacity building. Over the next 5 to 6 years, we propose to undertake projects against grants in excess of 500 million dollars.

We will strengthen local capabilities by creating regional and pan-African institutions of higher education, especially in sciences, IT and vocational education, and investment in research and development in renewable forms of energy, and agricultural development.

We will enhance opportunities for African students to pursue higher studies in India. As an immediate measure we propose to double our long-term scholarships for undergraduates, postgraduates and higher courses and increase the number of training slots under our technical assistance programmes from 1100 to 1600 every year.

Both India and Africa are blessed with young populations. It is only by investing in the creative energies of our youth that the potential of our partnership will be fulfilled. To harness this vast potential, I propose that we work towards the establishment of an India-Africa Volunteer Corps that is devoted to development work. The Volunteer Corps can on a pilot basis identify projects in the areas of public health, informal education and women's empowerment. As we gather more experience, the scope of activities can be progressively widened.

Excellencies, Ladies and Gentlemen,

India's commitment to peace, stability and socio-economic development in Africa and for it to play an ever-growing role in international relations is steadfast. The 21st century is often described as the Asian century. India wishes to see the 21st century as the Century of Asia and Africa with the people of the two continents working together to promote inclusive globalisation.

Events in India and Africa in the middle of the 20th century changed the world. Today we have a second chance to take charge of our own destiny, and give new meaning to the concept of sustainable, equitable and environment-friendly development. We look forward to hearing your thoughts and benefiting from your wisdom on how we can together shape a better life for our future generations.

I would like to once again thank you, Excellencies, for having accepted my invitation to join us in New Delhi for this First India-Africa Forum Summit. I wish you a very pleasant stay in India.

Thank you.

**497. Speech by Ugandan President Yoweri Kaguta Museveni
at the India-Africa Forum Summit.**

New Delhi, April 8, 2008.

Rt. Hon. Prime Minister, Dr. Manmohan Singh;

Your Excellencies Heads of State and Governments;

Members of the Diplomatic Corps;

Distinguished ladies and gentlemen.

I wish to thank the organizers of the India - Africa Summit and the Indian Government for their vision to promote and strengthen the partnership between India and Africa through equitable opportunities.

The relationship between India and Africa spans centuries back, with very early trade links. The Portuguese, in the 16th Century, imported Goan workers to build Fort Jesus, where their trade was based. The Asians in Uganda came as labourers for the building of the East African Railway in the year 1890. There is, indeed, no supplant in this relationship - we all come together to chart out a way forward on mutual cooperation.

We, in Africa, appreciate, with keen anticipation, the gesture of the India-Africa Partnership Summit, which clearly demonstrates economic interests at the heart of it. This summit is a God-given opportunity for Africa and India to revive and redefine this relationship for the further transformation of our societies. It is my sincere hope that the India - Africa Summit shall, indeed, concretize the existing ties between India and Africa; as well as promote future areas for cooperation and development strategies. I am pleased to note that this relationship has Metamorphosed from casual labour to trade and investment.

Africa was not cursed, as some opportunists would want us to believe. She is, in fact, one of the richest regions in the world, in terms of both human and natural resources. What is lacking, however, is the development of these resources; as well as the strategic framework in terms of sufficient integration to create a critical mass in terms of market size and a more attractive investment destination.

Policy mistakes made by African leaders in the 1950s, 60s and 70s have cost the continent in terms of development. While countries that were not very different from ours in those years have managed to take

great leaps towards development, Africa is still marking time. India, too, was colonized by the British and only got independence in 1947; but they are far ahead of many countries that attained independence around the same time.

Africa has been bedeviled by the following bottlenecks:

1. Anti-private sector bias, which has been somewhat ameliorated, but not been completely eliminated. This led to the nationalization of private companies in the 1960s. Idi Amin, for instance, made the unfortunate move of expelling the Indian community who had made Uganda their home, because he did not see the usefulness of the private sector in the economy. A common factor is an uninformed, distorted, form of nationalism, which is manifested in the form of unnecessary bureaucracies in the investment process;
2. Lack of access to international markets has been a major bottleneck to Africa's growth and transformation. The India-Africa Partnership shall enhance our opportunities at accessing market.
3. Massive value loss from Africa to the outside world on account of exporting semi-processed goods; which makes Africans the unacknowledged donors of wealth to Europe, USA and other parts of the world.
4. A Small fragmented African market, characterized by low purchasing power.

The current population of Africa is estimated to be 900 million and it is expected to grow to 2 billion by 2025. Africa is, therefore, a formidable market. Africa's exports to India were, in 2001-2005, valued at US\$10.2 billion; and her imports from India were 14.3 billion.

Today, the East African Community (EAC) embraces a growing market of a combined population of 120 million people, with a combined GDP of about \$ 50 billion. Exports from East Africa (excluding Rwanda and Burundi) to India in the period 2001-2005 were US\$ 171 million. In order to compete and survive in the modern world, we must politically organize at a supra-tribal, supra-national level. We must work at further integration and strengthening of existing economic bodies.

While we explore areas of mutual cooperation between India and Africa, I call upon India to partner with us in building industries, modernizing services, modernizing agriculture, expanding infrastructure, capacity building and ICTs. Agriculture, agro and food processing, construction, consultancy, mining and, minerals, transport infrastructure, power and energy, pharmaceuticals, healthcare, tourism, Information and Communication Technology (ICT), iron and steel, human resource development, water management, sanitation, oil and gas projects in the private sector; among others, are crucial sectors in the transformation of Africa.

In particular, I would like to request the Indian Government to encourage Indian companies to invest in Africa so as to take advantage of the zero-tariff, quota free market access to the USA, ED and Chinese market that we have already secured for a large range of products. This will increase employment opportunities for our people and improve our people's purchasing power. The partnership between India and Africa should give us a hand-up and enable Africa to surmount these challenges.

India is among the top five sources of Foreign Direct Investment (FDI) in Uganda. The volume of trade between India and Uganda rose from US\$ 5.6 million in 1989 to US\$ 105.5 million in 2003. In 2005 Uganda's imports from India (salt, pharmaceuticals, agricultural machinery, chemical products, spare parts for automobiles and steel) were US\$ 93 million. Uganda's exports to India, however, are still negligible, at 0.002% of total Indian imports to Uganda. Exports from Uganda to India (agricultural products e.g. coffee, tea, hides and skins, wood, scrap metal) were, in 2005 valued at US\$ 2,848,000. This is on account of our low level of industrialization. We must work towards the reversal of the tilt in the trade relations between India and Africa.

The transformation of our predominantly agrarian society is paramount in all developmental efforts. Challenges to smoothen trade still exist in the form of trade barriers. It is my sincere hope that this summit shall pave way for the opening of market access for African goods in India. Investments are welcome to Africa to promote value addition, as well as in infrastructural development; for instance, in railways and the ICTs. I call upon you to take advantage of the many investment opportunities that abound in Uganda.

I thank you.

498. Statement by Senegal President Abdoulaye Wade at the India-Africa Forum Summit.

New Delhi, April 8, 2008

Honorable Prime Minister Manmohan SINGH,

Honorable Heads of State and Government,

Honorable Chairman of the African Union,

Gentlemen Representatives of Regional Economic Communities,

Ladies and Gentlemen

First of all let me start by thanking personally and on behalf of the delegation that accompanies me, the people and the Government of India for the warm welcome and generous hospitality extended to us in this beautiful city of New Delhi. India and Africa share a number of affinities and a long-lasting friendship. Late Professor Cheikh Anta DIOP and my illustrious predecessor, President Leopold Sedar Senghor, both eminent intellectuals and men of culture have always defended in their writings the thesis that Dravidian and negro - African civilizations are related. Mahatma GHANDI, Jawaharlal NEHRU, major emblematic personalities of the fight against colonialism, are famous and respected in Africa for their precious contribution in the fight against colonial rule.

India and Africa have always fought in solidarity for the liberation of their peoples. Our companionship carried on and got further consolidated within the Non Aligned movement, in the United Nations and in our common claim for a readjustment of North South relations through the establishment of a New World Economic order.

This first India-Africa Summit fits therefore in the scope of the sense of solidarity and commonly shared history.

Today we are carrying on together with the fight on the economic and Social Solidarity front, both being indispensable for the liberation of our peoples, because, political independence, just like an incomplete symphony, will still remain as an incomplete undertaking if economic sovereignty is not achieved.

Considering the strong base of our excellent political relations, we are bound to develop a strategic economic partnership by putting together our demographic

potential, our financial and technological and natural resources. The bilateral cooperation between India and Senegal is certainly among others an example of what we can achieve based on our complementarities. The Senegalese - Indian partnership covers in fact areas as various as agriculture with our national program of self sufficiency in rice, chemical industries from Senegal's phosphates, vehicle assembly and the exploitation of iron ore.

Let me emphasize also that at the continental level Senegal hosts the Pan - African e-network earth station project financed by India and designed to provide telemedicine, distant learning services and video conferences between African Heads of State.

In fact this project is about to be inaugurated. Furthermore the Export Import Bank of India just opened a 2nd office in Dakar after the one in Johannesburg.

An institutional frame work like TEAM 9 and its credit line also shows through its concrete achievements the innovating South-South cooperation model India and Africa can develop durably by creating a "value added" compared to classical forms of cooperation.

But we should and we can still do better by opening up our exchanges to our respective Private sectors, all categories included, big companies our small and medium sized enterprises.

The Indian-African business conclave which 4th edition was held here last March with a strong attendance of African countries in going in the right direction.

It is only through our Governments' concrete encouraging measures and direct contacts between our private sectors that we will be able to give a new impulse to our cooperation. Thus it is much significant to note that trade between India and West Africa have tripled in the 2002-2007 period. That makes India the first partner of Senegal in our exports. That must encourage us to explore even more than before investment opportunities, create conditions to get our market to be better known, multiply the possibilities for joint ventures and promote the diffusion of low cost easily adaptable technologies to Africa. It is truly at this level that we can make the difference, by leaving behind the narrow frame work of public cooperation, necessary indeed but insufficient.

Before concluding, I would like to propose that the action plan that will result from our work is as concise as possible with precise and measurable

commitments. It would certainly be wishful that we establish an evaluation and monitoring mechanism of our Summit to ensure the implementation of these commitments, identify the achievements, assess the insufficiencies and propose the necessary redressing.

I think that we also have to reflect on a permanent Summit and its periodicity. For example it could be held alternatively in India and in Africa. It seems to me that this is the best way to make it more visible, to better involve our respective people and finally to translate into actions our common philosophy of solidarity, equalitarian, and mutually beneficial cooperation.

Thank you for your kind attention.

499. Speech by the Ghanaian President J. A. Kufuor at the India-Africa Forum Summit.

New Delhi, April 8, 2008

Your Excellency the Prime Minister,

Colleagues Heads of State and Government,

It is a great pleasure for me to be here today for the India-Africa Forum which is aimed at enhancing and further strengthening the long-standing ties of friendship and cooperation between India and Africa.

Let me begin by conveying warm felicitations from the Government and people of Ghana to Your Excellency the President, the Prime Minister and the Government and people of India, and to express our appreciation for the close co-operation and friendship we share with you.

Your Excellencies, socio-economic links between Africa and India go back many years. Indeed, there are many persons of Indian descent who have made Africa their permanent home. This identification with one another manifested in our common struggle to free ourselves from colonialism and apartheid.

India and Ghana were founding members of the Non-Aligned Movement which was subsequently joined by many African countries on attainment of Independence. Indeed the nations of Africa and India more often than not take common positions in the UN and other important global forums.

We are confident that this, bond of friendship will stand us in good stead for the challenges of our globalized world.

Heavily endowed by nature Africa cries for scientific and technological development for its drive into modernity and accelerated growth, to improve the quality of life of its various peoples. Under the auspices of the African Union, political, constitutional and administrative arrangements are being fashioned and nurtured to unify our huge continent.

Indeed the vision of a dignified place in the global village for the continent and its peoples drives the deliberations of the African Union. In pursuit of this, NEPAD has been set up to explore and build capacities for accelerated development. It is in this regard that NEPAD encourages partnerships both inside and outside the continent, to benefit from the advantages of transfer of know-how, capital and market access which the rapid changes in the current world abound in. It is important here to stress that the partnerships are not limited among governments only but also include Private Sector, Businesses, Civil Societies, Education and Cultural Institutions.

Your Excellencies, Africa sees India as a strategic partner. The continent is immensely impressed by the sub-continent's Green Revolution which enables it to feed its teeming population. India's mastery of ICT and general engineering and also her success in the promotion of Small and Medium Enterprises are all useful lessons for Africa.

The India government's initiatives of support and economic cooperation, toward Africa, notably the Focus Africa Programme and the TEAM-9 initiative aimed at enhancing wide-ranging cooperation and developing partnerships in the areas of human resource development and health delivery are appreciated.

Similarly, its Pan-African e-Network Project which will connect all the 53 member countries of the African Union (AU), via satellite and fiber optic network for the promotion of tele-medicine, tele-education as well as VVIP connectivity, should make a historic, far reaching and comprehensive impact on the general development of the continent.

Excellencies,

Considering these initiatives and the many other engagements already ongoing between the sub-continent and Africa on various levels, including national, regional and continental, it is proper and fitting that we use this historic Forum to establish a comprehensive frame-work to govern the partnership into the future. The emphasis of the outcome of this Forum should

be on human resource development, institutional capacity building and deepening of economic cooperation to the mutual benefit of the partners.

Your Excellencies, Ladies and Gentlemen, let me conclude on a prophetic note. The success of the India-Africa Forum and its Action Plan should galvanize and accelerate growth and stability on the continent of Africa and India. The achievement, will in turn contribute greatly to sustaining global peace, prosperity and security.

May the Forum therefore flourish to the benefit of the peoples of Africa and India and indeed, the entire global community.

I thank you.

500. Remarks by Vice President of Nigeria Dr. Goodluck Ebele Jonathan, GCON at the Africa-India Partnership Forum Summit.

New Delhi, April 8, 2008.

Your Excellencies, distinguished delegates, I bring you very warm felicitations from President Umaru Yar' Adua and the people of Nigeria on the occasion of the First Africa-India Partnership Forum Summit taking place in Delhi.

We thank the Prime Minister, the government and people of India for hosting this very important meeting. This Summit as we all know is the product of the collaboration between the African Union and India and it does signal the immense possibilities for further cooperation between the two parties.

Your Excellencies, we are delighted to be part of this inaugural summit and we are looking forward to frank and productive deliberations that will be mutually beneficial to Africa and India.

On behalf of the Nigerian delegation, I wish to express our appreciation to the Government and people of India for making this Summit a reality and for the warm welcome that we have received since our arrival. It is a reflection of Indian friendship, which affirms the desire to give this initiative that organic strength to enable it be the bridge between the peoples of Africa and India.

Your Excellencies, Nigeria's participation in this historic summit is

encouraged by the urgent need to build bridges across continents and countries with the goal of eliminating poverty and achieving peace and prosperity within our nations.

It is true that most countries in the Southern hemisphere are disadvantaged economically and the move to reverse the unpleasant situation needs to be pursued vigorously and cooperatively. We must identify our problems, exploit our comparative advantages and design a fair and just strategies that will enable us reap positive fruits from these endeavours. We believe that Africa more than ever before, is determined to be the driving force for its own development. The continent must take responsibility for its own destiny.

We are fully aware that India and Africa are linked by shared experiences of history, language, and political and economic systems. In facing the challenges of nation building and economic and social development, we have worked together in many international fora such as the United Nations and the Group of 77. The present initiative is coming at a time of profound global changes. These changes have enormous impact on the regions and States that we represent.

Your Excellencies, there is a rich history of South-South cooperation. We have, in the past, exhibited solidarity and unity of purpose in the establishment of unique organizations that have served as vehicles for accelerated and enlightened cooperation among us. I recall the Movement of Non-Aligned countries, the Group of 77 (G77) and the G15. They all have served us well, helping to reinforce our place in the global scheme and setting.

India is a partner and friend of Africa. We have always traveled together and the present initiative presents another confirmation of our journey together. Our history offers us unique experiences for reflection but it is to the advancement of human happiness and global peace that a joint travel in this new century offers the most attractive possibilities.

Your Excellencies, we believe that through this initiative we can learn from each other and support one another. We must do so by bringing together our experiences and strengths in viable and mutually beneficial programmes. It is in this regard we welcome the Delhi Declaration that we are about to adopt. The Declaration provides the compelling rationale for our partnership. And it points the direction that Africa and India should travel in the years ahead. Wedded to the Delhi Declaration is the Framework for Cooperation that spells out in broad outlines the sectors and areas for partnership between Africa and India. We believe that all these are the

critical areas on which mutually beneficial relationship between Africa and India can be built. We should avoid a plan that is strong on generalizations and intentions but weak in vision and specifics. Action plans, by their nature, must be action oriented with clear and concrete derivables.

We appreciate the constructive and cooperative bilateral relations between individual African countries including the Regional Economic Communities (RECs) and India. However, we must underline that this Partnership Forum Summit is about building and propelling Africa-India cooperation. To achieve this, there is a compelling need to have a robust Plan of Action that will lead to the achievement of the objectives in the sector identified in the Framework for Cooperation. We also believe that the appropriate mechanism that will drive and monitor the process should be embedded in the plan.

We are confident that this Forum will make a difference in Africa-India relations. We feel that its outcome should be action oriented. We feel that its result should leave no one in doubt that India view Africa as a strategic partner. We hope that this and future Summits will aim at delivering concrete outcomes in the key sectors and areas already identified in the Framework for cooperation. This, we believe can be achieved by the establishment of unambiguous implementation plan and appropriate mechanism to ensure necessary follow-up on our commitments and decisions.

India is unchallengeably the world's largest democracy. We call for closer exchanges between our parliaments, political parties and local governments that have important contributions to make in our development. In building enduring democratic systems in pluralistic societies we believe that Africa can learn a lot from India.

Your Excellencies, we have set in motion today a process aimed at reshaping and expanding our existing relations. This enterprise is an affirmation of our age long and historical ties as well as our determination to face the future together. We can achieve this common objective if we are united in purpose and action.

Your Excellencies, distinguished delegates, I thank you for your kind attention. May this day in this City of Delhi make history in the relationship between Africa and India.

**501. Speech of Algerian President Abdelaziz Bouteflika at the
India - Africa Forum Summit.**

New Delhi, 8-9 April 2008

Your Excellency, The Prime Minister of the Republic of India,

Your Excellency, The President of The United Republic of Tanzania,
Chairman of the African Union,

Your Excellencies, The Heads of State of Government,

Your Excellency, The President of the African Commission,

Ladies and Gentlemen,

Your brother and friend, President Abdelaziz Bouteflika has given me the honor of being responsible for informing you of his deep regret at not being amongst you due to a particularly busy national calendar. He also expresses his best wishes for the success of the Indo-Africa Summit and guarantees you that Algeria will invest itself completely and with conviction in the follow-up of the conclusions that this important meeting will bring out.

I would like to personally express on behalf of the Algerian delegation, our sincere thanks to the Indian Government for the quality of the welcome and the hospitality that has been extended to us.

I have, at present, the honor of informing you of the message of Mr. Abdelaziz Bouteflika, President of the Republic of the Democratic and Popular Republic of Algeria to this honorable Assembly.

Your Excellencies, Ladies and Gentlemen,

These past decades have provided countless opportunities for measuring the depth of solidarity between India and Africa. From the anti-colonialist movement to that of Non-Alignment, through the call of a new international economic order that began in forums like the Group of 77 or the G15, India and Africa shall have been, out of all the fights and out of all the struggles, in favour of a more just and balanced global order.

Our Summit is taking place at a time when economic progress of Africa and India has never been as substantial. The remarkable economic performance of India confer on it, moreover, an eminent role in the framework of the partnership with Africa. This, in turn, does not cease to record the positive

indicators in the various segments of the mainland economy. With a growth rate exceeding 5% without interruption over the past decade, Africa presents itself today as a continent where all hopes are reasonable.

Algeria, involved in the Africa renewal and which is recovering from a painful national tragedy having not, however, slowed its process of reforms, including in the economic field, is buckled down to its national reconstruction. As a result, its important domestic market today attracts foreign investments in a more and more intense flow and with all the necessary guarantees. For our Indian friends, the case of the Company Mittal Steel is an example of a perfect success of a partnership between capabilities of developing countries, and which Algeria welcomes.

Furthermore, Algeria has initiated an ambitious program to develop its infrastructure in all areas and which covers a public expenditure of 150 billion dollars entirely self-financed. This program offers opportunities to Indian companies for success. I hope that all large Indian companies will make their contributions to the reconstruction of Algeria and will also earn their share of profit, besides the dozen other foreign companies who have already invested in my country.

Your excellencies, Ladies and Gentlemen,

The experience of India's development is of great interest to our countries and it will be very useful for partnership with our economies and upgrading our tools of production.

It devolves upon us to commit to a process of efficient development of our economic complementarities and to lay the foundations for a genuine partnership associating Indian economic businessmen with their African counterparts.

I note with satisfaction the remarkable progress made, during the past years, through the cooperation between India and African countries in various sectors as well as the substantial growth of their commercial exchanges of which the volume for 2006-2007 exceeds 25 billion dollars, where as it was only one billion dollars in 1991.

The advances thus recorded should prompt us to proceed to a comprehensive and lucid assessment of our economic, trade and cultural relations and to make a projection on the future for areas of partnership in a perspective of joint-development.

We must not limit our relationship purely on commercial considerations. We are certainly still far from having explored the full potential of cooperation

between us, particularly in the area where the Indian expertise has become a global benchmark like the pharmaceutical industry or information technology or communication.

It is up to us therefore to orient this dynamics of cooperation towards building a genuine partnership which will be at the level of aspirations of our populations. Africa, which has rededicated itself to growth, looks forward to the future, for a reliable and credible partnership.

The New Partnership for Africa's Development offers us, on this account, in various dimensions, perspectives and in an adequate framework for putting into place axes of Indo-African partnership that we aim to establish. I am happy to underscore here that one of the most important projects of infrastructure in this framework, the trans Lagos-Algiers pipeline has already attracted the attention of a number of Indian companies of repute.

Your Excellencies, Ladies and Gentlemen,

This Summit represents a historic opportunity to establish a permanent dialogue between India and Africa and to lay the foundations of a political and economic partnership so as to open new prospects for overall cooperation between our two regions.

Our common commitment to values of dialogue and peace as well as to respect for international law, calls upon us to commit to intensify our dialogue for cooperation and peace and for progress and democratization of international relations.

The objective of collective effort that we had made one of the priorities of the axes of South-South cooperation appears more than ever within our grasp.

The solidarity that was until now one of the characteristics of the relations of India with the African continent, calls for a partnership of a new kind, organized around our experiences and our successes.

I am convinced that those seated here will know how to breathe new life into this work of Afro-Indian re-building that awaits us and all of us wish it a success.

Thank you.

(The original speech was delivered in French and the above is the unofficial translation of the French Text)

502. Speech of the Prime Minister of Burkina Faso Tertius Zongo at the India - Africa Forum Summit.

New Delhi, April 8, 2008.

Your Excellency, The Prime Minister of the Republic of India;

Your Excellency, Mrs. Sonia Gandhi;

Your Excellency The Heads of State and Government;

The President of the Commission of the African Union;

The Ministers;

Distinguished Personalities;

Ladies and Gentlemen;

First and foremost I would like to, on behalf of the Burkinese delegation, express to his Excellency the Prime Minister, to the Government and to all the people of the Federal Republic of India, our deep satisfaction and our deep gratitude for such a warm welcome worthy of Asian hospitality that has been extended to us since our arrival in New Delhi.

The real start of this first Indo- African Summit is the expression of a common will to reinforce South-South cooperation for the benefit of the well-being of the Indian and African people in a competitive world.

This is the place for me to express to you the total support of his Excellency Mr. Blaise COMPAORE, President of Faso and President of The Economic Community of West African States (ECOWAS) to this movement of mutual solidarity between India and African continent determined more than ever to fight and vanquish, with the active support of the international community, obstacles of all kinds hampering its progress towards sustainable development.

A decision that finds its roots in our demonstrated-will of going towards a reinforced integration, a continental union. It is in this direction that we have defined for our continent, new perspectives of development for 2015 through the New Partnership for Africa's Development (NEPAD). This initiative, included as a framework of interaction between the African continent and the rest of the world should permit translating in reality, the African vision of development focused on the struggle against poverty and the strengthening of good governance.

The implementation of this new partnership demands of us Africans, the reinforcement of institutional and political stability, the improvement of the macro-economic framework and of the business environment and the mobilization of domestic resources.

While Africa awaits an even greater and more active cooperation from the international community; this has become more so now that the recent survey of the mid-implementation of the millennium development goals (MDG) indicates without doubt that Africa, notably Africa to the south of the Sahara, has not benefited to the desired extent. Consequently, our Summit which is taking place for the first time in New-Delhi brings together political conditions to record Africa's preoccupations in the right place in international agenda.

It is true that, during these past years, the continent has had brighter spells in terms of economic growth setting itself approximately at 6% average per year. The actual economic context characterized by the ever increasing prices of petrol, prices of food products, and by persistent fluctuations of the dollar all threaten to put at risk the rising trend of development. However, the continent struggles to find new means to measure up to the situation and face it. I am encouraged by the following trends to hold such a position:

- African companies record increasingly better programs of investment and of increased productivity ;
- Better practices of political governance, of management and of transparency, and of the fight against corruption which would progressively get stabilized;
- Strengthening and modernizing of Judicial systems;
- Greater availability of trained and well qualified human resource.

It is important to appreciate the efforts made and to convince oneself that they should continue to render the business environment even more encouragement and augment its competitiveness for African economies.

To this end, I salute the initiative of noting the agenda of our labour, support and democracy, to the sectors of health, education, agriculture, small and medium enterprises, development of human resources, infrastructures, promotion of peace, etc...

Prime Minister,

Distinguished personalities,

Free trade between India and the African continent goes back to time immemorial. This free trade is further reinforced thanks to the common struggle against colonization and apartheid as well as through the Non-Aligned Movement.

Let us not forget that it was at the African soil that the great Mahatma Gandhi tried the first struggle of non-violence. Today, the cooperation between India and Africa is the example, nay, the complete expression of this solidarity and of this international fraternity that we hope from our hearts.

To this end, I am happy, Mr. Prime Minister, to tell you how much we appreciate your constant support to African development which is demonstrated through your support to the new partnership for the millennium development goals (OMD).

The active African population is severely hit by the pandemonium of AIDS. The fight against this curse necessitates multi sectoral approaches and large resources. To put into place the funds intended to fight against this pandemonium, the availability of the Indian Government to contribute reassures us.

Regarding the project "The Pan-African Network online service or project to create a pan-African network of satellite and fibre optics", it shall contribute to the promotion between India and Africa through tele-education and of tele-medicine.

Moreover, the regular holding of conclaves on the Indo-African partnership of which the last edition was held, at New-Delhi, from 19 to 21 March 2008, constitutes opportunities of exchange and partnership between Indian and African economic entrepreneurs.

At the sub-regional level, the putting into place of a new means of cooperation such as the Techno-Economic approach for Africa-India Movement (TEAM-9) has permitted the realization of numerous projects for development in Western Africa.

As regards the cooperation between India and the Economic Community of West Africa (ECOWAS), a concessional line of credit of 250 million dollars was opened for financing sub-regional projects.

Finally, it is appropriate to note the existence of other frameworks of cooperation between India and other African sub-regions like the Common Market for East and Southern Africa (COMESA), the Community of East Africa (EAC) and Development Community (SADC).

Prime Minister,

Distinguished personalities,

This is to say that the proximity between India and Africa continues to grow because we have been able to work together, to find ways of true cooperation through common projects.

It is a matter of great satisfaction for Burkina Faso to enjoy a dynamic cooperation from India. I cite as proof the vast project of development of mechanization of agriculture and of the support to the irrigation sector thereby ensuring the modernization of agricultural and of the expansion of the small and medium irrigation program whose impact is the most evident by the growth of agricultural production.

In this precise domain of agriculture, and with respect to the recent shooting up of prices of agricultural products during this period, experience and expertise of India in the field of mechanization, rational use of water, of irrigation and soil fertilization, where again micro-credit responds to the priority needs of Burkina Faso particularly and of Africa in general, which have placed agriculture in the center of their development strategies. Cooperation in this sector will doubtlessly permit guaranteeing food security and eradicating poverty, especially in the rural sector.

The present meeting at the Summit offers us, therefore, the ultimate opportunity of adopting a framework for a strengthened partnership to promote a development solidarity at the scale of our countries.

For its part, Burkina Faso fully supports the new initiative launched by the Indian Government and the African Union as well as all the initiatives which will be taken at the instance of our labour to accompany efforts undertaken by Africans themselves. It goes without saying that first steps towards sustainable development must first be taken by our countries themselves.

I remain convinced that it is possible for African countries to go further in the reduction of poverty if, on the one hand, these country continue to improve their economic policies and promote employment and on the other hand, developed countries broaden their official development aid and accept consequent adjustments of external debt.

India which has known, through its enthusiasm and its work ethic, to haul itself up amongst respectable emerging nations, has an important role to play within the international community.

I hope that India and Africa will continue to cooperate in efforts to meet the

aspirations of the Africans for a just, free and harmonious development for speedy progress.

Long live active solidarity between India and Africa.

I thank you.

(The original speech was delivered in French and the above is the unofficial translation of the French Text)

503. Statement by Kenyan President Mwai Kibaki at the India-Africa Forum Summit.

New Delhi, April 9, 2008.

Your Excellency the Prime Minister of India Dr. Manmohan Singh;

Your Excellency the President of the United Republic of Tanzania, and

Chairperson of the African Union H.E Jakaya Mrisho Kikwete;

Excellencies Heads of State and Government;

**Your Excellency the Chairperson of the African Union Commission,
Prof. Alpha Oumar Konare;**

Honourable Ministers;

Chief Executives of African Regional Economic Communities;

Distinguished Guests;

Ladies and Gentlemen.

It is a great pleasure for me and my delegation to visit this friendly country of great civilization. We are extremely grateful for the kind reception extended to us, and are greatly touched by the warm hospitality of the Indian people. I would therefore like to take this opportunity on behalf of COMESA and IGAD member countries, to thank the Government and the people of India, and you personally Mr. Prime Minister for hosting this Summit. Let me also thank the African Union and all those who have devoted their time and energy to make this path-breaking event possible.

Excellencies;

India and Africa have a long history of commercial and cultural interactions, which have led to the shared prosperity and common aspirations that characterize our relationship. We also share similar histories of colonialism and the struggle for independence. Indeed the Great Mahatma Gandhi whetted his appetite for freedom on African soil. Having suffered the indignity of colonial oppression and racism in South Africa, he evolved the liberation philosophy of Ahimsa and Satyagraha that eventually became the bedrock of the freedom movement by the oppressed in both India and Africa. In so doing, the Mahatma brought the dream of freedom to so many millions of the colonized and the oppressed.

In recent times, we have stood together in the crusade to gain a genuine and equitable share of the world's trade as well as a credible voice at the world trade negotiations. To secure for developing countries sufficient gains from globalization, India has consistently underlined the urgent need to bring down the high tariffs and non-tariff barriers on products of export interest to less developed countries.

In this regard, I welcome the announcement yesterday by H. E. the Prime Minister of India providing for a Duty Free Tariff Preference Scheme for all Least Developed Countries (LDC's) as this will undoubtedly improve market access for Africa's exports. However, my delegation would wish to request the Government of India to explore the possibility of extending the Scheme to all African countries. My delegation also welcomes the announcement by the Prime Minister to more than double the existing lines of credit to Africa over the next five years. This is a true indication of India's strong commitment to Africa.

Excellencies;

This Summit is a path-breaking one not only because it allows us to reaffirm our centuries old relationship but it also allows us to upgrade this old relationship taking the recent achievements of both India-Africa into consideration. We in Africa are eager to start a new and even more vigorous chapter in our relationship. This new relationship should take note of the fact that India has now reached a stage where it can play a vital role in assisting all of us in breaking out of the poverty cycle. Over the past decade and a half, India has embarked on a process of accelerated and almost miraculous growth, while we in Africa have made far-reaching reforms that

recognize the benefits of regional integration and greatly embrace private sector - led growth.

Excellencies,

Africa inherited fragmented and unsuitable markets from colonialism and it is this realization that has compelled us to adopt a strategy for regional integration. In this regard, I am happy to note that the Government of India has been an observer to COMESA since 2000. It is in this context that COMESA and India signed a Memorandum of Understanding (MOU) in 2005 that outlines key areas of cooperation. I am confident that the adoption of a continent-wide framework of cooperation by this Summit will give a new thrust to COMESA - India collaboration.

Excellencies,

I also have the honour to speak on behalf of the Inter Governmental Authority on Development (IGAD) as its current chair. IGAD is a grouping of seven Eastern African member states, which has been very active in promoting peace and working for post-conflict reconstruction in the Horn of Africa. The IGAD sub-region has significant importance for maritime security in the Indian Ocean. India's involvement and contribution, particularly in peace consolidation and post-conflict reconstruction in both Somalia and South Sudan would ensure peace and security not only for the IGAD region but the Indian sub-continent as well.

Excellencies,

Trade relations between India and Africa are vital for economic changes on the continent. India's extra-ordinary economic achievements serve as a valuable lesson for Africa. There is much we could learn from India on improving the African business environment for private sector investment, public-private partnership as well as strengthening the capital markets. India has been especially successful at developing its small and medium scale enterprises, an area where we lag behind in Africa, condemning would-be entrepreneurs to the fringes of the so-called informal sector. We are convinced that Africa can get much of what it needs to speed its development efforts by learning from India's experience in the area of Small and Medium Enterprises.

Excellencies;

Another area of cooperation that Africa and India can take advantage of is

in the field of tourism which has immense potential for both sides. I recognize the enormous economic benefits that arise from tourism and the fact that it promotes friendship and socio-cultural understanding among nations. The two regions provide great geographical diversity that could be promoted including eco-tourism. I am happy to note that some African carriers such as Kenya Airways, Ethiopian Airlines, South African Airways and Egypt Air ply the Indian sub-continent on a daily basis. These connections provide the much-needed facilitation for enhanced commercial interaction in the field of tourism.

Excellencies;

Perhaps nowhere has the renewal of India been more profound than in the area of ICT. It is not lost to all of us assembled here today that Sabeer Bhatia, a native of India invented Hotmail, the most popular firm of Internet based email and sold it for US\$400 Million to Microsoft. About 750 ICT firms in the Silicon Valley are owned by Indians, mostly graduates of the Indian Institutes of Technology.

Software production is a potential entry for Africa into ICT production. Compared to hardware, it is less capital intensive, more labour intensive and has a longer shelf life. We believe that there are opportunities for African IT companies to work with their Indian counterparts in gaining skills, resources and new software development culture and quality.

Excellencies;

It is only through technological advancement that our economies can be competitive and diversify through value addition. What we in Africa are looking for are technologies better equipped to tackle Africa's needs like food and agro-processing, health, water and sanitation, and rural development. Technologies in India are robust and better suited to the African environment. Strong linkages are needed between Industry, and Science and Technology to prioritize innovation as part of the broader strategy to improve competitiveness. We believe that India can live up to our expectations in this regard.

Excellencies;

There is no doubt that political cooperation should also form a critical component of our partnership. The serious democracy deficit that afflicts the United Nations is obvious to both India and Africa. It is my belief that our convergence of interests will enable us to align our positions on the

structure and functioning of the UN Security Council, and revitalization and enhancement of the work of the United Nations General Assembly.

Excellencies;

We agreed to convene here in New Delhi inspired by a common resolve to establish a true partnership between Africa and India. This derives from our common understanding that we are united by a shared interest in the all-round success and development of our regions.

As India and Africa deepen the bonds, we all look forward to moving together towards a win-win situation. A winning partnership is one in which we encourage sustainable trade and investment while promoting a better life for all within sustainable human settlements. Peace and friendship will best flourish when we empower and uplift the poor from hunger and unemployment, disease, homelessness, illiteracy and environmental degradation. Let us use this forum as a platform for transforming our continental relationship with India on the basis of a shared vision and understanding of our development challenges, and the advancement of the NEPAD objectives.

I am pleased that the Ministers have reached a consensus about the specific areas of distinct complementarity, comparative advantage, and potential cooperation in our partnership. We want to stand side by side with India and grow together. It is in this spirit that I wish to support the adoption of the Delhi Declaration together with the Framework for Cooperation, which have been recommended to the Summit by the Foreign Ministers.

I thank you all.

**504. Speech of Ethiopian Prime Minister Ato Meles Zenawi
at the Africa - India Forum Summit.**

New Delhi, April 9, 2008.

Your Excellency, Dr. Manmohan Singh, Prime Minister of India,

Your Excellency, Mrs. Sonia Gandhi,

Your Excellencies colleagues from Africa,

Allow me Mr. Prime Minister, to join my colleagues in commending you for the initiative you took to establish the India-Africa forum and thank you most sincerely for the specific initiatives you announced yesterday. These initiatives exemplify the nature of the Africa-India partnership that we all espouse. We look forward towards its speedy implementation, at all levels, multilateral, continental, regional and bilateral depending on the nature of the cooperation in question, and the exigencies of effectiveness in implementation.

Your Excellency,

My colleagues, the leaders from Africa, have eloquently elaborated on the partnership between India and Africa established in the fight against colonialism, and the firm roots of our current partnership in our common glorious fight against colonialism. There is thus no need to repeat all of that today.

I would however like to highlight two characteristics of our past partnership that I think are vital for the new partnership we seek to establish.

Our past partnership was not based on accepting the status quo as immutable, it was not based on accepting received wisdom as the ultimate truth. On the contrary it was based on transforming the status quo, and creating new paradigms. Our past partnership was successful in transforming reality, a reality that was patently unjust, not only because of the justice of our cause but also because each one of us took it upon ourselves to transform our condition through our own efforts, in partnership with like minded friends.

The partnership we now seek to re-establish too must be based on transforming the current reality which is patently unjust and untenable. Fortunately the ancient civilization of India is now re-emerging to transform

its own reality but also the rest of the world. The renaissance of Africa appeared to be a dead letter up to recent years. No longer we are taking matters into our hands and are changing the political and economic features of our continent. Re-emerging India is better placed than most to join us in partnership to transform Africa and thereby transform the world.

The partnership we seek to renew cannot succeed unless as in the past fight against colonialism, we all take it upon ourselves, to change our own reality. India is better placed than most to join us in partnership in our quest to change our own reality. The initiatives you announced yesterday and the framework that we have adopted to guide our partnership assures us that this is indeed a partnership for the transformation of the current unjust reality through our own efforts, the added value of our partnership. That is why I am convinced that our partnership which has a glorious past, is likely to have an even more glorious future.

I thank you.

505. Speech by the President of Democratic Republic of The Congo and President of the Economic Community of the Central African States (ECCAS) at the India - Africa Forum Summit.

New Delhi, April 9, 2008.

I would like, on behalf of all the Heads of State of the Economic Community of the Central African States that I represent here, and on my own behalf, to thank you, and through you, to thank the Government and the people of India for the welcome that you have extended to us and for all the attention that we have received since our arrival in your beautiful country, that has as rich a history as old.

I would also like to toast the initiative that you have taken to gather those assembled here. That so many Heads of State are at your side in this hall, today, proves that this meeting represents the real and pressing needs and that the consciousness of a shared destiny between Africa and India is as alive today as it was forty years ago when it led to the establishment of the movement of non-aligned countries.

At that time, Afro-Asian solidarity had widely contributed to the decolonization of Africa and to consolidating international sovereignty newly gained by African States.

The Prime Minister of the Republic of India;

Heads of State and Government;

Ladies and Gentlemen;

We have been invited to this Summit, and we have come here, in the name of the same solidarity, convinced that, for our respective States, it is, once again, a way to measure the success of our aspirations of well-being of our people on the one hand and, on the other, the constant changes in the international environment, on an economic and ecological scale.

We have also come because in view of the inexorable approach of the agreed upon deadline of 2015 and the little progress in achieving the objectives of the millennium for development set in New York in 2000, we believe the Indian experience to be relevant and useful, as it has, successfully, reduced poverty by education, training, scientific research,

micro-credit, mechanizing agriculture, developing the national private sector and by the growth of the middle class, notably by promoting small and medium enterprises.

This is to say that we place a lot of hope on the conclusions of the present Summit. We await a renewed cooperation between Africa and India, better focused, and more than ever, mutually advantageous. We await synergies that will permit advancing the struggle against ignorance, sickness, hunger and poverty; even better; to make of Africa and Asia unavoidable actors of a more just and humane 21st Century, not carriers of seeds of conflict and without serious threats to the future of humanity such as global warming, international crime, terrorism and nuclear proliferation.

Liberated from the weight of years of war and bad governance and strengthened by their immense human and natural resources, in which is situated one of the largest reserves of global fresh water, the Grand Inga, the world's largest hydropower scheme, and the world's second largest tropical forest, The Congo and its neighboring States of the ECCAS intend to actively contribute to make this prospect a reality.

In light of the aforesaid and in the desire to contribute to our discussions, permit me to underscore that, shorn of speeches and promises that have put them to sleep for decades, our people are hungry for concrete actions, for projects with visible and immediate impact. Whether they come down to road works, like in my country, or in the Nouvelle Espérance like in the sister Republic of The Congo or in any other mobilizing theme as is the case in one or another country of our region, the basic needs of the Central African people are the same worldwide: infrastructure, water, electricity, schools, hospitals, housing, employment, but also, if not foremost, peace, security and stability. Peace and stability in each of our States; peace and stability in the world.

It is thus, in these terms that we must contemplate the use of our findings. It is at the end of the reply that, together, we will or we will not know how to fulfill these needs against which, tomorrow, will be measured the quality of our cooperation.

In this respect, I am delighted to note that in addition to the framework of cooperation between Africa and India, the draft of the Statement of Delhi submitted for our study are fully in conformity with that vision. This augurs success for our work.

The Prime Minister of India;

Heads of State and Government;

Distinguished Guests,

The first Indo-African Summit gives us the chance to agree upon better ways enabling our economies and our people to benefit from opportunities offered by globalization. If we wish, this could be the stepping stone of a vital strategic partnership. The Democratic Republic of The Congo and all the member States of the Economic Community of the Central African States wish so.

Long live the friendship between Africa and India!

(Unofficial translation from the French text)

506. Speech by President Smt. Partibha Devisingh Patil at the Banquet hosted on the occasion of the India-Africa Forum Summit - 2008.

New Delhi, April 8, 2008.

Excellencies,

Distinguished Colleagues,

Ladies and Gentlemen,

I am delighted to welcome you all to India and thank you for accepting my Government's invitation to participate in the India-Africa Forum Summit. This is a gathering of friends and partners of longstanding who share civilizational bonds, common historical experiences and an abiding desire to open new vistas for inclusive socio-economic growth and overall development for the peoples of their countries.

The cultural performance that we witnessed a short while ago was a remarkable synthesis of our cultural traditions. The vibrancy, joie de vivre and enthusiasm of the performers are also the hallmark of the India-Africa relationship. We are united by our determination to jointly face common challenges, learn from each other's experiences and benefit from our respective strengths.

Your Excellencies have already begun to deliberate on how best we can weave a new carpet of India-Africa collaboration; a carpet that fully reflects the entire kaleidoscope of opportunities that beckon us to work together.

India has in the past, within the limits of its resources and capabilities, participated to useful effect in the socio-economic development of Africa. Today, the continent of Africa and the Indian sub-continent are both growing rapidly and our ability to help each other is increasing. Bearing this in mind, the Prime Minister of India has earlier today suggested ways and means by which India will substantially step up its participation in Africa's social, economic, political and other developmental processes. We are confident that our experiences and capabilities can add value to your own dynamic and valiant efforts to enhance the quality of life of your peoples.

Excellencies, Ladies and Gentlemen,

I am confident that this India-Africa Forum Summit will open new vistas for cooperation between India and Africa. It is also our intention to meet with all the leaders of Africa at the highest political level on a regular basis.

Excellencies,

India and Africa also have common approaches on the vital issues that today challenge the international community. We stand together in the fight against terrorism for which we have zero tolerance. We are working together to ensure that international trade is carried out according to multilaterally agreed rules and regulations that guarantee the development of developing countries. We are determined to ensure that a resolution of the problem of climate change does not lead to the perpetuation of poverty in developing countries and is carried out on the basis of agreed principles such as common but differentiated responsibility and respective capabilities. We are agreed on the need for reform of the United Nations, including expansion of its Security Council in both categories of membership to ensure better representation of developing countries.

India-Africa cooperation has always been a partnership of equals; a partnership of peoples and a partnership that seeks to build a better, more humane, just and equitable international order.

Excellencies, Ladies and Gentlemen, may I request you to join me in a toast:

- to peace, stability and rapid development in Africa;
- to an invigorated India-Africa partnership; and
- to the health and prosperity of the people of Africa and India.

507. Address by the External Affairs Minister at the India-Africa Business Luncheon.

New Delhi, April 9, 2008.

Your Excellencies,

Hon'ble Ministers,

Presidents of FICCI & CII

Distinguished Guests

Ladies & Gentlemen

It is a great honour and privilege for me to be present here today at this Business Luncheon. I take this opportunity to commend FICCI & CII, who have jointly organized this as the concluding event of the India-Africa Forum Summit. This has provided Indian business and industry a platform to meet and interact with our African guests and impart content to the economic dimension of the Summit. This event is indeed a fitting finale to the Summit.

The India-Africa Summit concluded just about an hour ago. It constitutes a defining moment in the India-Africa relationship. The Delhi Declaration, together with the Framework for India-Africa cooperation, is a clear reaffirmation of India's deep commitment to the development of Africa. We hope that it will serve as a blue-print for creating sustainable and mutually beneficial partnerships between India and the countries of Africa. I am confident that its implementation will begin at the earliest.

In the last few years, there has been rapid progress in India-Africa relations. We have seen many high level visits and increased economic and technical

cooperation. Africa has traditionally had the largest share of our allocation of concessional loans. As the Prime Minister announced yesterday, we intend to double present levels of credit to Africa and allocate \$5.4 billion in lines of credit over the next 5 years. This will be for projects prioritised by Africa and thus reflective of their needs. The credits will be utilised, among others, for enhancing agricultural production, development of the infrastructure and energy sectors, small and medium enterprises, irrigation, food processing, IT and pharmaceuticals.

It is India's intention to enter into a long-term sustainable partnership with Africa. Almost all African leaders at the Summit have spoken of the need to enhance capacity building and human resource development. Prime Minister has yesterday announced augmentation of the Ministry of External Affairs' Aid to Africa budget for capacity building and technical assistance. Accordingly, we will double educational scholarships for Africa and increase ITEC slots every year. We intend to set up apex institutions for training and value addition in Africa in areas as diverse as trade, IT, entrepreneurial development, education, coal, diamonds, etc.

Our trade and investment partnership with Africa has increased by leaps and bounds in recent years. This is due to the forces of economic liberalization unleashed in both India and Africa. We are also mindful of the need to provide greater market access to imports from Africa. Accordingly, in consonance with our commitment at WTO, we have now decided to extend duty free tariff preference scheme to imports from the 34 Least Developed Countries of Africa.

The Government of India has also worked with Indian industry in forging project partnerships. Last month, I and my colleagues interacted with over 600 delegates from 33 African countries at the 10th India-Africa Project Partnership Conclave in New Delhi. I had the privilege of the wise counsel of more than 30 Ministers from Africa who led their delegations. We were also honoured by the presence of their Excellencies, the Vice-Presidents of Tanzania & Ghana. We intend to carry this forward by organizing 3 regional conclaves in Africa in 2008-2009.

It is a matter of satisfaction to us that Africa has found value in teaming up with Indian companies for diverse projects in Africa. I am confident that deliberations at this Forum will provide further impetus to this process. Building partnerships between the financial institutions of India and Africa would be important in this context.

I would urge Indian companies, however, to do more to step up their engagement with Africa for mutual benefit. Africa is the second fastest growing region after Asia. Africa's development can and must be accelerated by investments and technology transfer by Indian companies. The continent needs large amounts of investment to build roads, railways and other infrastructure. There is therefore need to mobilize greater Indian private sector participation in the infrastructure development of Africa. The region also has millions of young people who can be employed in the manufacturing and services sectors. The large communities of Indian origin that can be found in many parts of Africa can be an added advantage; they can help Indian businesses understand the social and cultural ethos of the African people. Such initiatives would respond directly to the requirements referred to by a number of African leaders at our Summit.

While direct investments in Africa should be the desirable goal of Indian companies in expanding their presence overseas, one area where further improvement needs to be made is broadening the ambit of trade. At present, only 7.7% of India's exports are destined for Africa. Similarly, imports from Africa contribute only 6.7% of our total imports. Businessmen from India and the African countries need to take up this challenge to augment our trade levels with Africa. The sectors identified for today's presentations hold a lot promise for our cooperation. I am confident that business and industry on both sides would take advantage of opportunities in these areas for forging joint ventures and technical tie-ups.

Before I conclude, I wish to flag an important issue to which attention has been drawn by nearly all the leaders at the Summit - and that is food security. Food security is perhaps one of the most critical issues that we are faced with today, particularly the developing countries. Prices of agricultural commodities are on the rise all over the world for a variety of reasons. This has impacted negatively on food security, especially in countries that are dependent on agricultural imports. At the same time, trade distorting agricultural subsidies given by developed countries also act against the interests of the developing countries, particularly their farming communities. The problem is compounded by the fact that, in many countries, arable land is increasingly being diverted for other purposes.

Our decision at the Summit to strengthen cooperation in agriculture can help address the problem of food security. We have agreed to co-operate in this sector and have identified a number of areas for such co-operation. These include capacity building and sharing of experiences, transfer of

applied agricultural technology and skills and enhancing market opportunities for African value-added agricultural products. India also remains ready to share its experience in agriculture extension, livestock development, fisheries, water management and measures to confront the growing threat of climate change. In addition, the Indian private sector should look for opportunities for joint ventures in Africa for production of cereals, oilseeds and pulses. This can be for local consumption, as well as for export to India and third countries. I am sure that Indian companies will explore this avenue of co-operation with their counterparts in the private sector in various African countries as well as the Governments of those countries.

With these remarks, I would like to thank the distinguished guests who have honoured us with their presence here today. Once again, I thank FICCI and CII for inviting me to address this important gathering.

Thank you.

508. Joint Press Conference following the conclusion of first India-Africa Forum Summit.

New Delhi, April 9, 2008.

Prime Minister of India (Dr. Manmohan Singh): We have just concluded the First India-Africa Forum Summit. This is a historic Summit between India and countries representing the AU and the Regional Economic Communities of Africa. Over the last two days we have held extremely substantive and productive discussions on all issues which confront India and Africa. The Summit was held in an atmosphere of great friendship, warmth and sense of partnership.

The Summit has adopted the Delhi Declaration and the Africa-India Framework for Cooperation. These documents constitute the blueprint for our cooperation in the 21st Century.

Our decision to expand unilateral duty free and preferential market access for exports from all 50 Least Developed Countries, 34 of which are in Africa, and our offer of lines of credit amounting to \$5.4 billion are steps in this direction. The enhancement of our budget for technical assistance and training programmes and, greater opportunities for African students to

pursue studies in India reflect the priority we attach to human resource development and capacity building.

In the Retreat yesterday, we had a very constructive discussion on issues such as food and energy security, UN reforms, climate change and trade. We found several commonalities in the challenges that face us and in our aspirations. I offered Indian assistance in ushering in a Green Revolution in Africa through holistic capacity building in agricultural production, storage and transportation.

While we have met over these two days at the government level we have also undertaken several outreach events before or concurrent with the Summit. These are: (i) the first ever India-Africa Editors Conference; (ii) joint performances by Indian and African cultural troupes; (iii) a seminar of intellectuals from Africa and India on India-Africa Partnership in the 21st century; (iv) a programme for youth and women from Africa and (v) a business conclave.

India has also begun to develop cooperation with the Regional Economic Communities of Africa and with the African Union (AU). India's pan-African e-network project is an example of our cooperation at the continent wide level.

We have laid firm foundations on which to build the new framework of cooperation. It is now time to plan ahead to implement the joint programmes of cooperation and to build a meaningful and productive Indo-African partnership. India looks forward to doing so with all the resources at our disposal.

We greatly cherish the friendship and empathy that Africa has always shown to India. This is an asset to our foreign policy. We in turn hope that this Summit has enabled us to convey to the people of Africa India's readiness to be a partner in their quest for stability, peace and prosperity.

I would like to conclude by thanking my colleagues from Africa for their active participation in the Summit and for their whole-hearted endorsement for a stronger and deeper India-Africa partnership.

Thank you.

President of the United Republic of Tanzania and President of the African Union (Mr. Jakaya Mrisho Kikwete): Mr. Prime Minister, Excellencies Heads of State and Government:

I do not think I have much more to say. The Prime Minister has said it all.

We had two days of very intense discussions. We have concluded well. We have come up with very useful conclusions which all of us are a party to. All of us are satisfied that if what we have agreed upon is followed through and implemented, definitely we are going to have a stronger and meaningful cooperation between India and Africa.

I thank you.

Chairperson of the African Union Commission (Prof. Alpha Oumar Konare): *I am, as you may perhaps have guessed, we too are filled with a feeling of great satisfaction following the very important decisions that have been announced, and I am sure that they will be implemented. I also feel extremely grateful towards all the authorities of India and the Heads of State and Government of Africa who have participated in this very important meeting.*

I am sure that concrete actions will be implemented and as the African Union Commission we will work in partnership with the Indian Government for the implementation of these conclusions. What I have observed in particular and what has been particularly satisfactory for me is the feeling, a very clear feeling, that we have had of having been truly understood by our friends and partners of India, that our friends and partners in India have really understood the aspirations of the African people and of their leaders.

Today, Africa does not need a guiding hand. Between India and us we do not need any intermediaries. But governments need to continue their dialogue. Our civil societies, our businessmen, our youth, your women, our workers, our labour, our intellectuals, have to continue to dialogue amongst them to broaden the cooperation, the partnership that we have launched today.

Let me draw you a picture in conclusion to my intervention. There is very little time now for Africa. We do not want to waste any time. We have to make very major decisions now. I think that the policy of the rider and the horse is finished for us. We do not want to be horses any longer on which people will continue to ride. Everyone has to get off our backs. We will run the race like everyone else. We have to be ready to run whether it is for a hundred metres, or a thousand metres or a marathon. Now the time for the rider and the horse has come to an end and we are equal partners in the race.

Therefore, Mr. President, Mr. Prime Minister, I would like to conclude by thanking you sincerely for the leadership that you have shown us along

with our colleagues in this extremely important meeting which is indispensable for us.

Thank you.

Question (Mr. Manish Chand, IANS): This question is addressed to the President of Tanzania and President of African Union. Does Africa as a whole support India's candidature for a permanent seat in an expanded UN Security Council, and would the two sides work out a strategy to revive the flagging campaign for reform of the United Nations Security Council?

President of the United Republic of Tanzania and President of the African Union (Mr. Jakaya Mrisho Kikwete): I made reference to that in my closing remarks that in the discussions we both agreed that Africa and India deserve permanent representation in the Security Council. We also agreed that we support each other in this quest. Of course, broadly though we have been working together to promote or to preach for reform of the United Nations, a number of administrative reforms have already been undertaken in the United Nations, we are now ready to take on the citadel of power, reform of the Security Council, to make it more and more representative, to make it more democratic and to make it more responsive. I think we are in agreement; we have been working together. What we have actually done at this conference is to reaffirm our commitment to continue to act together so that India gets a place and Africa also gets a place.

Question (Mr. Martin Hachon, Prensa Latina News Agency): My question is addressed to His Excellency the Prime Minister of India. India has engaged in multi-sectoral initiatives, programmes of assistance, with Africa; and this Summit proves this commitment and engagement. Will India move along the same lines towards Latin America and in the near future conceive or engage in a summit like this in which Africa could in turn take part to the benefit of developing nations in the spirit of South-South cooperation which is very needed?

Prime Minister of India (Dr. Manmohan Singh): Ladies and gentlemen, India stands committed to work with Africa to strengthen our cooperation in every possible way. We wish to be partners in Africa's resurgence and that includes whatever we can do to help build capacities in Africa, whatever can be done to strengthen the human development base, what can be done to strengthen the production base both in agriculture and

manufacturing paying particular attention to small manufacturing enterprises. So, in all these areas we will explore all possible ways in which India and Africa can work together to realize the immense potential that development of Africa offers to the world as a whole.

As for establishing systems that prevail in Latin America, I think this is an aspiration and it should evolve as we develop habits of working together the processes, evolutionary process. I for one do not rule out any effective mechanisms for promoting cooperation, be they trade, technology transfers, investment promotion. I think sky is the limit of cooperation between India and Africa.

Question: *My question is addressed to His Excellency the Prime Minister of India. The President of the Commission of the African Union has said that Africa needs cooperation and investment. You had said that you had increased the investment in Africa. Mr. Konare has said that he was satisfied by the results obtained in Delhi. Mr. Prime Minister and Mr. President, in what way do you feel you have better understood the needs in Africa as compared to the Westerners who for such a long time seem to compare you to China? The Western media says that you are racing against China in order to seduce or attract the African continent. What would be your response?*

Prime Minister of India (Dr. Manmohan Singh): We are not in any race for competition with China or with any other country. The desire for India and Africa to work together is not a new phenomenon. We have common colonial experiences. In the post-colonial era we have worked together bilaterally, regionally and in multilateral fora. What we have done today is to respond to Africa's felt need as determined by the African people themselves. We do not know what is good for Africa. We do not seek to impose any pattern on Africa. It is for the African Governments and the African people to determine the path that they wish to pursue. To the extent it lies within our capabilities and abilities, we would be privileged to be partners in offering whatever help we can in this process.

Question (Ms. Huma Siddiqui, The Financial Express): I have a question for the President of Uganda and for the Prime Minister. I just wanted to understand what would be the impact of the duty free scheme that we have announced yesterday on the African market.

Prime Minister of India (Dr. Manmohan Singh): As far as the immediate

impact is concerned, in my statements yesterday I mentioned the commodities which will be immediately beneficiaries of this arrangement. But we all agreed that in the long run if adequate benefit is to be derived, we must build the supply capacities. Therefore, this is where the private sector in India can work together with public-private partnership or through other mechanisms to ensure that these tariff preferences do not remain an empty gesture but they become instruments of building African capacities both in agriculture as well as in manufacturing and related activities.

President of Uganda (Mr. Yoweri Kaguta Museveni): This trade access to the markets of the United States, European Union, China and now India is the most important contribution in the Afro cooperation with these continents. I have some experience with Uganda. The Americans opened their markets for us, for all of the other LDCs. Of course, we are going to graduate from that status because we cannot be sustainably LDCs. That is not part of our programme. Now the biggest problem I found was the confusion among the civil servants of Uganda. The civil servants are used to a beggar mentality. They used to go to Washington to beg for money. Now when they get a chance to make their own money, they do not respond very quickly. But we the political class, we the freedom fighters, made them start moving, and we are worried about the results. For instance, you take processing of fresh water fish from Uganda, and I believe even from other countries like Tanzania and Kenya, from Lake Victoria. There is a lake which they call Lake Victoria. We call it with another name but internationally it is known as Lake Victoria. Nalubaale is the real name of the lake. Now, fish from here is all over the place now, in Japan, in the United States. So, with this removal of taxes, such an activity becomes more encouraged. Take the example of textiles. The United States has got a market of 95 billion dollars of textiles. Now they opened their markets to us.

Our people are slow in responding, but eventually they have responded. So, that one definitely is helping us. Flowers from here are going all over the place, to the European Union. Apparently Europeans like flowers. For us in Africa we take flowers for granted because they are everywhere. But we discovered that Europeans like flowers and we are making money out of that. I do not want to talk about other countries but I know for instance a country like South Africa has made a lot of use of this market access. I think even some car manufacturers from Europe are now based in South Africa, exporting vehicles from there.

Uganda very soon will be a milk exporter. We have been keeping the cattle for last seven thousand years but we do not export milk. We have got so much milk we just throw it away. People in other parts of the world are starving. They have no food. And here we are pouring out milk in Uganda. Once we remove these obstacles of trade, Uganda can feed the world with milk because we have got a lot of it. I can give you very many examples. But what we need to do is to have a thorough discussion among us.

The problem with Africa is that we are talking of 53 countries. It is not like India which is one political unit. This is the advantage. For us, we are cut up in 53 countries. My experience may not be somebody's experience. There even the Commission, our Secretariat, I do not think has had enough time to go round to get enough data. But I am telling you that this is a very very important step. Whatever the obstacles, they will be overcome.

Even if you forget about Africa for the time being, you look at Singapore. What helped Singapore's transition in a very short time? Singapore is only five million people on a small island. By the export to these big markets abroad. If it were Singapore alone, they would not be so prosperous. How about South Korea? How does South Korea, a small country and small economy, become prosperous? It is all export-driven. That is what we would like for Africa.

I do not know why you decided to interfere with our arrangement. I am not supposed to speak. The Chairman is speaking for us.

Thank you very much.

Question (Mr. Bernard Mpalala, The Guardian, Tanzania): My question is addressed to the Indian Prime Minister. Mr. Prime Minister, it is clear that you are very much keen to forge close trade links with Africa. But when a foreigner looks at the Indian media, it does not seem that enthusiasm is much by your efforts. So, I want to ask you, Prime Minister, is the Indian public with you in this major undertaking?

Prime Minister of India (Dr. Manmohan Singh): What appears in the media often is a reflection of what engages the attention of the public at that particular moment. But as far as the thinking population of India is concerned I think there is today an enormous recognition among all sections of Indian population that applies to Governments, that applies to private industry in our country that India and Africa must become active partners in processes of social and economic development. This conference was

born out of a feeling that we need to do lot more than we have attempted in the past to bring India and Africa together. I am quite sure that in months and years to come the Indian media will also draw appropriate conclusions that this is an idea whose time has truly come.

Question (Mr. Vijay Naik, Sakal Papers): Most of you, the Excellencies and the Presidents, in the last two days have talked about the food security which is becoming a problem. Just now the President of Uganda has said that this land seems to be a land of plenty. But in most of the African nations as well as India also, food security is a very important problem now. You have just referred to the Green Revolution which you would like to usher in Africa. How do you propose to actually address this important issue? I would like to address this question to the Prime Minister and the President of Tanzania.

Prime Minister of India (Dr. Manmohan Singh): There is no single answer to the quest for food security. But recent events have reinforced us in our conviction that the economies of India and the economies of Africa must acquire the momentum to meet all the food needs of India and Africa through domestic production. That requires efforts to increase investment in agriculture. That requires efforts to give new technologies to agricultural modernization and also we have to find new ways and means in which the small holder agriculture can become a viable proposition. In all these areas there is enormous scope for India and Africa working together. This Declaration pledges us to work together to realize the enormous latent potential of increasing food production in Africa. Yesterday one of the distinguished participants referred to the tremendous potential that a country like Sudan offers. Sudan could not only feed the whole of Africa, but I think the rest of the world also. These are the unexploited opportunities which provide unique opportunities for us to work together as well.

President of the United Republic of Tanzania and President of the African Union (Mr. Jakaya Mrisho Kikwete): As the Prime Minister said, we discussed the matter yesterday. There are two aspects of the crisis. For Africa there is the crisis of shortage of food in some countries. The other is the current problem of high prices because we have to import the food. In the developed world because there is huge production of surplus food, those farms have been put to biofuel. Biofuel production is creating a shortage of food and, therefore, creating the problem of high prices. So, to Africa it is a challenge in the sense that there is this problem of shortage of food in a number of countries and also the problem of high prices. But we

also saw that there is an opportunity on the side of Africa. That is because currently Africa's agriculture is peasant agriculture, traditional, plagued with lower levels of production and productivity. So, we think what Africa needs is really to unlock the production problem. If we would be able to increase productivity in African agriculture, Africa will not only be able to feed itself, but will also have huge surpluses to sell to the world. That is why we underscored helping Africa or assisting Africa in undertaking the Green Revolution. We felt that India, the experience that it has can certainly benefit Africa by working with India, share the experience that India has. Also India has the technology, has the skills, which if made available to Africa, certainly it would be able to help implement the African Green Revolution and, therefore, solve the food shortage problem; and Africa would again turn to be the bread basket of the world.

Question (Democratic Republic of Congo): My question is addressed to the Prime Minister of India. Why did you wait until 2008 to hold this India-Africa Summit?

Prime Minister of India (Dr. Manmohan Singh): Ladies and gentlemen, we have been working on this idea ever since we came to office some four years ago. We have been in the process of discussion with our colleagues from Africa the African Union, Regional Communities - and also our distinguished colleagues from various parts of Africa. It has taken us time but we have been working at this idea for the last at least two and a half years.

(Text in italics is the simultaneous interpretation of French original)

509. Delhi Declaration issued at the end of the India-Africa Forum Summit - 2008.

New Delhi, April 9, 2008.

We, the Heads of State and Government and Heads of Delegation of Africa, representing the Continent, the African Union and its Institutions along with the Prime Minister of the Republic of India, have met today in New Delhi, India, to consolidate the process of deliberations and discussions with a view to redefining and re-invigorating

the decades-old partnership and historical and civilizational links between the African continent and India.

2. **We recognize** that Africa and India have undergone enormous positive changes, in particular over the last two and half decades, and that Africa and India have historically been close allies in the struggle for independence, equality, human rights, freedom and democracy. We are neighbours across the Indian Ocean. We note that there has been significant positive transformation of the political, economic and social environment in Africa and the strengthening of democracy, particularly with the adoption of the Constitutive Act and the establishment of the African Union with its institutions, such as the Pan-African Parliament, the Economic, Social and Cultural Council, the African Court on Human and People's Rights as well as its programme the New Partnership for Africa's Development (NEPAD) and the African Peer Review Mechanism (APRM) and the Peace and Security Council. During this period, the Indian economy has evolved into a more mature and fast growing economic mode and Indian democracy has further strengthened. We have, therefore, decided to build upon these positive achievements with a view to helping each other to become more self-reliant, economically vibrant, at peace with ourselves and the world and to work together to strengthen our close partnership.
3. **Bearing in mind** that African countries and India have enjoyed close, cooperative and multi-sectoral partnership encompassing political, security related, economic, science and technology, human resource development, social, cultural and other areas of mutual interest, we have adopted today a Framework for Cooperation which will further strengthen our partnership in all these and other areas for our mutual benefit.
4. **This partnership** will be based on the fundamental principles of equality, mutual respect, and understanding between our peoples for our mutual benefit.

It will also be guided by the following principles: respect for the independence, sovereignty, territorial integrity of state and commitment to deepen the process of African integration; collective action and cooperation for the common good of our states and peoples; dialogue among our civilizations to promote a culture of

peace, tolerance and respect for religious, cultural, linguistic and racial diversities as well as gender equality with the view to strengthening the trust and understanding between our peoples; the positive development of intra-regional/sub-regional integration by complementing and building upon existing/sub-regional initiatives in Africa; recognition of diversity between and within regions, including different social and economic systems and levels of development; and further consolidation and development of plural democracy.

5. **The international community** is today addressing a series of critical issues such as environmental degradation, including climate change and desertification, multilateral trade negotiations, reform and democratization of international institutions, particularly the United Nations and the Bretton Woods Institutions, respect for human rights and fundamental freedoms, the fight against terrorism, combating illicit trafficking in small arms and light weapons, non-proliferation of nuclear and other weapons of mass destruction, the fight against drugs and most importantly, promotion of pluralism and democracy, the pursuit of sustainable development underpinned by social justice, eradication of hunger, poverty as well as combating diseases. Africa and India reiterate their intention to ensure that in all these matters, the interests of developing countries are kept uppermost and the socio-economic developmental requirements of our countries are guaranteed.
6. **We recognize** that climate change is a global challenge but one that will be particularly severe for developing countries given their vulnerabilities, inadequate means and limited capacities to adapt to its effects. We reaffirm that development is the best form of adaptation and that the foremost priority for developing countries is to ensure accelerated social and economic development. We note that sustainable development is essential to enable effective adaptation. We stress the importance for adaptation to be adequately financed through additional resources and not from funds meant for development.
7. **We note** with regret the lack of demonstrable progress by developed countries on Green House Gas (GHG) reduction commitments in the first commitment period under the Kyoto Protocol. We emphasize the need for equitable and fair burden

sharing in mitigation which must take into account historical emissions. In this regard, we take note of the proposal of the Prime Minister of India on convergence of per - capita emissions of developing and developed countries.

8. **We urge the international community** to give real and immediate effect to commitments on climate change, especially in the areas of technology transfer, financing and capacity building. There is also need for a closer look at the Intellectual Property Rights (IPR) regime to ensure cost-effective transfer of appropriate and advanced clean technologies to developing countries.
9. **We are** determined to participate effectively in the negotiations under the Bali Action Plan towards comprehensively addressing climate change in accordance with the provisions and principles of the United Nations Framework Convention on Climate Change (UNFCCC), in particular the key principle of common but differentiated responsibilities and respective capabilities.
10. **We take** note of the state of play in the World Trade Organization (WTO) -Doha round of trade negotiations. We reiterate the importance of the development dimension of the Round and welcome the strengthened engagement, solidarity and cooperation among developing countries in that process. Agriculture remains the key to the conclusion of this round. We are convinced that any acceptable agreement must adequately protect the livelihood, food security and rural development concerns of developing countries. Any outcome must also bring about significant and effective reductions in trade-distorting domestic support and subsidies provided by the developed countries. There are equally important issues also to be addressed on Non-Agricultural Market Access (NAMA) services and rules. We are convinced that the process to be adopted to reach convergence in the WTO negotiations requires focus on content and not artificial timelines. The promise of a development round must be fully realized.
11. **We also reaffirm** our commitment to providing meaningful market access to the Least Developed Countries (LDCs). We call upon the members of WTO to implement duty-free and quota-free market access for all products originating from the LDCs and to take additional measures to provide effective market access to them through simplified and transparent Rules of Origin.

12. **We attach** priority to providing trade related technical assistance and capacity building to LDCs to help mitigate the effect of their marginalization in the present globalised trade structure and enable them to maximize the benefits resulting from the multilateral trade liberalization process. We are committed to helping LDCs achieve the goal of securing effective market access through transparent and predictable rules of the multilateral trading system.
13. **We agree** on the urgent need to reform the international financial architecture, especially the International Financial Institutions (IFIs), to reflect the changing global situation. In this context, we emphasize the need for the effective voice and participation of developing countries, including in the quotas and voting rights in the IFIs. This would enhance the IFIs' accountability, legitimacy, credibility and effectiveness.
14. **We are** committed to multilateralism and to strengthening the democratic structure of the United Nations.
15. **We reaffirm** our commitment to further strengthen Africa-India cooperation at the United Nations, the G77 and in other multilateral fora with a view to addressing issues of common concern. There is need for urgent and comprehensive reform of the United Nations to enable it to more effectively deal with the challenges of today's world. We share the view that the United Nations should function in a more transparent, efficient and effective manner, and that the composition of its central organs must reflect contemporary realities. In particular, the expansion of the UN Security Council, in both permanent and non-permanent categories of membership, is central to the process of UN reform.
16. **India notes** the common African position and the aspirations of the African countries to get their rightful place in an expanded UN Security Council as new permanent members with full rights as contained in the Ezulwini Consensus. Africa takes note of India's position and its aspirations to become a permanent member with full rights in an expanded UN Security Council. We note the active and constructive engagement of both sides in the process of the reform of the United Nations. We agree to further strengthen cooperation between our two sides towards early realization of a genuine reform of the United Nations and its working methods, particularly revitalizing and

enhancing the role of the General Assembly and reform and expansion of the Security Council.

17. **We believe** that the security of all nations would be enhanced by the global, non-discriminatory and verifiable elimination of nuclear weapons and other weapons of mass destruction. We renew our commitment to the consensus attained in the Final Document of the Tenth Special Session of the General Assembly of the United Nations devoted to Disarmament whereby it was agreed that the first priority in disarmament negotiations is to be accorded to nuclear disarmament. We call for the negotiation of specific steps that would reduce and finally eliminate nuclear weapons, thereby leading to a world free from all weapons of mass destruction as envisaged in the Rajiv Gandhi Action Plan of 1988 and the Africa Nuclear Weapon-Free Zone Treaty (the Pelindaba Treaty) of 1995, as well as other relevant African and Indian regional initiatives.
18. **We unequivocally** condemn terrorism in all its forms and manifestations. An act of terrorism anywhere is a threat to the entire international community. We recognize the need to further strengthen international cooperation to combat global terrorism and for compliance of member states with all international terrorism conventions and related protocols, and the Security Council resolutions on counter-terrorism. We also agree to make concerted efforts towards expeditious finalization of a Comprehensive Convention on International Terrorism at the UN.
19. **We affirm** that cooperation between Africa and India has been, from its inception, a useful example of South-South cooperation. It has been our endeavour at this Summit to devise ways and means of enhancing this South-South partnership, taking into account the new capabilities that have emerged in Africa and India. Bearing this in mind, we have drawn up and adopted a Framework for Cooperation that would provide the avenue for further and dynamic development of the Africa-India partnership. African Leaders deeply appreciate the initiatives that have been announced at this Summit by the Prime Minister of the Republic of India, H.E. Dr. Manmohan Singh that would provide an input for the implementation of this Framework for Cooperation. We have agreed that Africa and India will strengthen not only their bilateral linkages, but that India will also progressively

strengthen its partnership with the African Union and the Regional Economic Communities of Africa.

20. **We have** also agreed that in addition to high level political exchanges between us in the bilateral, regional and multilateral contexts, Africa and India should meet every three years. We have accordingly, agreed that the next Africa-India Summit will be held in 2011 in Africa.
21. **Without prejudice** to India's on-going and future programmes at the bilateral, REC and other levels, we agree to develop jointly, within a period of one year, a joint plan of action at a continental level and an appropriate follow-up mechanism to implement our Framework for Cooperation.
22. **We, the Heads of State and Government and Heads of Delegation that are representing Africa** at this Summit would like to take this opportunity to thank the Government and people of India and, in particular, their Excellencies the President and Prime Minister of India for hosting this Forum Summit and for the warm reception and hospitality extended to us. This Forum Summit has further cemented the age old relationship between Africa and India, a relationship that has been of mutual benefit and is based on mutual trust, equality and solidarity.
23. **The Prime Minister of India**, on behalf of the Government and people of India, takes this opportunity to thank the participating Heads of State and Government and other Heads of Delegation from Africa for accepting the invitation to attend this Africa-India Forum Summit and for their most productive and useful suggestions to strengthen and re-invigorate the Africa-India partnership.

INDIA'S FOREIGN RELATIONS - 2008

510. Briefing points by Official Spokesperson on Government of India's assistance to the flood victims of Zambia, Mozambique and Malawi.

New Delhi, February 20, 2008.

- External Affairs Minister Shri Pranab Mukherjee has addressed his counterparts in Zambia, Mozambique and Malawi to express India's concern and sympathy on the death and destruction caused by the recent floods in the region.
- EAM has also announced emergency assistance of Rupees Ten million to each of these three countries. This gesture is intended to augment the relief and rehabilitation efforts of the governments in these countries.

511. Press Release of the Ministry of Commerce on the Conclave of the Confederation of Indian Industry and Export-Import Bank for closer engagement with Africa Project Partnership - 2008.

New Delhi, March 19, 2008.

Addressing the 4th CII-EXIM Conclave on India-Africa Project Partnership 2008, here today, Shri Kamal Nath, Union Minister of Commerce and Industry, has stressed that India keenly anticipates a deeper and closer engagement with Africa and is eager to work together for greater mutual prosperity. Agriculture and food processing are key sectors for cooperation, as both sides are prone to food shortages, lack of diversification in crops, and low agricultural productivity, he added. Dr. Ali Mohamed Shein, Vice President of the Republic of Tanzania, delivered the Special Address. The Conclave was also attended by senior officials from the Ministry of Commerce and Industry, representatives from Exim Bank of India, Confederation of Indian Industry (CII) and Federation of Indian Chamber of Commerce & Industry (FICCI).

Shri Kamal Nath said that India's strategic global engagements depend much on its strong relations with Africa and with a view to further strengthen

the relationship the first India-Africa Summit meeting will be held in New Delhi on 8th April, 2008. He further stated that the government also desires to forge a robust, effective and mutually beneficial economic relationship with Africa. He hoped that this Conclave will set the stage for a bilateral and multilateral trade agreements between India and countries as well as regional blocks like SACU, COMESA, SADC, EAC in Africa.

India's exports to Africa during 2006-07 stood at US \$ 8.4 billion, while imports aggregated US \$ 11.4 billion, having almost doubled since previous year. Exports to Africa are regionally diversified with East, Southern and West Africa accounting for US \$ 2.5-3 billion each. The Commerce Minister said that India needs to expand and diversify the import basket from the continent.

"Project partnership is a key in this effort. It will help strengthen local skill resources, expand infrastructure availability and lay the foundation for strong and sustainable economic cooperation between India and Africa. Our mutual goals of poverty alleviation, human development and economic growth can be addressed in part through project partnerships", Shri Kamal Nath said.

The 3-day (19-21 March, 2008) Conclave will be attended by the Ministers from Angola, Botswana, Burkina Faso, Chad, Comoros, Cote D'Ivoire, D.R. Congo, Republic of Congo, Djibouti, Ethiopia, Ghana, Madagascar, Malawi, Mali, Morocco, Niger, Nigeria, Senegal, South Africa, Swaziland, Sudan, Tanzania, Uganda, Zambia and Zimbabwe.

Earlier, Shri Kamal Nath had a bilateral meeting with Mr. Alhaji Aliu Mahama, Vice President of the Republic Ghana and discussed various matters pertaining to the bilateral trade and economic cooperation between the two countries. Mr. Joe Baidoe Ansah, Minister of Trade and Industry of Ghana was also present at the discussions.

In addition, Shri Kamal Nath had bilateral meetings with Botswana Minister of Trade and Industry, Mr. Daniel Neo Moroka; Mr. Ivohasina Razafimahefa, Minister of Economy, Commerce and Industry of Madagascar; and Mr. Felix C. Mutati, Minister of Commerce, Trade and Industry of Zambia. The Botswana Minister said that the quantity of trade between India and Botswana was not very significant, there has been steady growth in services sector. Exports from Botswana during 2005-06 and 2006-07 were US \$ 10.78 million and 10.87 million respectively and engineering goods and textiles are the main products.

512. Valedictory Address by External Affairs Minister Pranab Mukherjee at the 4th India-Africa Project Partnership Conclave.

New Delhi, March 21, 2008.

**Your Excellency, Honourable Vice President of the Republic of Ghana,
Mr. Alhaji Aliu Mahama;**

**Your Excellencies, Honourable Ministers from Africa, Ambassadors
and High Commissioners;**

Captains of trade and industry of India and Africa;

Distinguished guests, Ladies and Gentlemen;

It gives me immense pleasure to be present here today at the valedictory session of the 4th India-Africa Project Partnership Conclave organized by the Confederation of Indian Industry. Since the last such conclave held in Delhi in October 2006, there have been 6 equally successful regional conclaves, held in Lusaka, Addis Ababa and Accra in 2006, and in Kampala, Maputo and Abidjan in 2007. All of them have played an important role in bringing together our policy and business communities to greater mutual benefit. This is therefore an initiative to which we attach great importance and which enjoys the fullest support of my Ministry, the Ministry of Commerce & Industry and the EXIM Bank of India. I would like to place on record my deep appreciation for CII whose officials have been untiring in their efforts in organizing this event and the earlier nine conclaves.

I am also particularly delighted to have the opportunity of speaking at this conclave with Africa in the run up to next month's India Africa Forum Summit, which India will have the honour of hosting. I am confident that the Summit will give a renewed thrust to the centuries-old partnership between India and Africa. We are grateful to the Governments of Africa for their response to this initiative and I take this opportunity to thank them once again for their support.

Today, however, I would like to express my gratitude to Their Excellencies the Vice Presidents of Tanzania and Ghana for having taken the time to grace these proceedings with their presence and to share their wise counsel with us. My special thanks also go out to Their Excellencies the Ministers from more than thirty African nations, who have provided leadership to over 600 delegates from their countries. Thank you for traveling all the way to be with us. I understand that these conclaves have helped our

governments as well as public and private sectors to better understand and meet each others' aspirations and developmental needs and priorities. I trust all of you have found value in this ongoing partnership exercise to develop the trade and economic relationship between India and Africa.

Ladies and gentlemen,

India is fortunate to enjoy long-standing and warm links of brotherhood and affinity with the African continent. The waters of the Indian Ocean unite us. Indian traders and seafarers reached the shores of Africa centuries ago and made Africa their home. Our shared experience of colonialism and India's unstinting support in the African struggle against apartheid and colonialism helped us establish a close political relationship. Apart from our common civilizational heritage, we are united by common ideas, ideals and icons. Indeed, India and Africa are natural allies and we eagerly look forward to a comprehensive engagement with Africa, which has always enjoyed an important position in our foreign policy priorities.

Today, Africa is witnessing far reaching changes. In recognition of this, India and the countries of Africa have, for some time now, been in the process of providing a contemporary character to our relationship. The economic growth paradigm in Africa has altered with real GDP estimated to have grown by almost 6% and a large number of countries growing at an average rate of 5% over the years. Several countries have benefited from debt write-offs through the HIPC initiative and resultant improvements in credit ratings. Ideas of democracy and good governance are taking root. There is recognition that achievement of stability and peace are key for socio-economic development and that partnership amongst the Africans themselves is an imperative. Nevertheless, the international community's supportive role remains vital.

It is in this context that there is substantial scope for cooperation between Africa and India in order to help provide a better quality of life for the people of both nations. Both sides are home to a wealth of biodiversity, substantial natural resources and hard working populations. What we need is to identify areas of our core competence and match these with the economic and societal needs of a particular nation. Knowledge sharing, knowledge creation and knowledge dissemination must be a vital component of our cooperation.

I am gratified to note that India's trade with Africa has been increasing in recent years. Two-way trade has risen from 5 billion US dollars in 2001-02 to nearly 25 billion US dollars in 2006-07, a five-fold growth in as many

years, even though it does not include the import of gold bullion. Nevertheless, I am sure that all in this room share my belief that our trade flows are still to achieve their true potential. In order to do so, India has signed Trade Agreements with 29 countries in Africa. India and the Common Market for Eastern and Southern Africa (COMESA) have also decided to set up a Joint Working Group to study the possibilities of signing a Comprehensive Economic Cooperation Agreement (CECA). Negotiations are ongoing as well for a Preferential Trade Agreement with the Southern African Customs Union.

Let me take this opportunity to make what I think are four thematic points as we explore the way ahead for a new India-Africa partnership. First, for India, trade and investment go hand in hand. It is with this in mind that Indian companies are making robust investments in Africa in sectors ranging from horticulture and agriculture to power generation and mining. I take this opportunity to urge our African friends present here to encourage Indian industry even more in their efforts.

Second, as a continent, Africa is generating enormous demand for appropriate infrastructure technologies, products, engineering services and capacity building, especially for setting up manufacturing capabilities for local value addition as well as for generating employment. India has made strides in manufacturing and technology by pursuing a model of development that we believe is appropriate, affordable and relevant in the African context. We have offered the benefits of our experience to African countries and are committed to continue our support in areas of our strength, including human resource development and capacity building programmes. Africa is today the largest recipient of India's ITEC programme. We are extending and diversifying the programme to cater to special needs of individual countries and groups of nations. Projects such as the Pan African e-Network are an illustration of our genuine effort at sharing our progress in the knowledge sector and helping bridge the digital divide in Africa.

Third, India has, in recent years, extended many bilateral and regional lines of credit on concessional terms to the countries of Africa. These have been used mainly for developmental projects chosen by and in the interest of the recipient countries. We are in a position to do more in this field and our focus will be on fostering sustainable socio-economic development in our partner countries.

The fourth and last theme I want to touch upon is the fact that Africa has found merit in regional integration and is increasingly seeking to consolidate

its regional economic communities. India's engagement with African countries has in the past focused on bilateral engagement. Of late, however, we have also taken initiatives for establishing relationships with the regional economic communities. We have made progress with COMESA, SADC, ECOWAS and EAC and hope to make progress with ECCAS, IGAD and others. I see this as a most promising area for our larger cooperation.

Excellencies, ladies and gentlemen,

India has always had a vision and a message for the world. From the very beginning of our civilization, we have believed that humanity is a single family. We are committed to establishing ties of friendship and co-operation with all countries. Our ties with Africa are special and we will continue to work with Africa and the international community to create a better world - a world free of terror, poverty, disease, ignorance and inequality. In this context, I would like to highlight some aspects of the international situation that all of us are called upon to face.

Terrorism constitutes a grave threat to the civilized world. India believes that this is an evil that can only be combated by exercising zero tolerance for all kinds of terrorist violence and by significantly enhancing the levels of international cooperation in this area. India looks forward to enhancing its cooperation with African countries on this matter, both bilaterally and in various multilateral fora. The conclusion of a Comprehensive Convention on International Terrorism is important in this regard.

The reform of the United Nations remains high on our agenda and we seek the support of the African countries for overall reforms, including democratization and expansion of the UN Security Council in both permanent and non-permanent categories. India also attaches great importance to the Doha Round of trade negotiations currently underway and we seek the continued support of African countries to ensure that the vision of the Doha Round as a developmental round becomes a reality.

Climate change is another subject which figures increasingly in our discussions. Our commitment to solutions based on common but differentiated responsibility and respective capabilities remains steadfast. We seek a convergence of per capita GHG emissions between the developed and the developing world. Transfer of technologies at affordable prices is a key factor in this process.

Excellencies, Ladies and Gentlemen,

India is committed to work in partnership with Africa. May I, on behalf of the Indian delegates as well as my own behalf, thank you all for your presence here today and reassure you of our continuing commitment to the further development of India-Africa relations.

Thank you.

**513. Remarks by Dean of African Diplomatic Corps at the International Conference on "Africa-India Partnership in the 21st Century" at Indian Council of World Affairs.**

New Delhi, April 2, 2008.

Dear Excellencies,

Dear Mr. Nalin Surie, Secretary (West), Ministry of External Affairs,

Dear Mr. Ashok Kumar, Acting Director General, ICWA,

Dear Dr. Nagesh Kumar, Director General, RIS,

Dear Professor Rajen Harshe, President, African Studies Association, Members of Research and Information System for Developing Countries (RIS), and

African Studies Association of India (ASA), and

Distinguished Ladies and Gentlemen,

I feel greatly privileged to be invited for this prestigious International Conference on "Africa-India Partnership in the 21st Century". Therefore I would like to thank Indian Council of World Relations, Research and Information System for Developing Countries (RIS) and African Studies Association of India (ASA), for organizing this prestigious International Conference on "Africa-India Partnership in the 21st Century".

This particular topic being contemporary and due to its importance is a subject which will certainly be considered deeply, in the forthcoming India-

Africa Partnership Summit, scheduled just a few days ahead.

I feel honoured to stand before you this morning, to place few of my remarks at this inaugural session. It is indeed one of the greatest honours of my time in India, to stand before you today.

I invite the kind support and co-operation of all of us to strengthen the genuine and strategic partnership in the 21st Century, to achieve the common objective and mutual benefits in the front of combating poverty and promoting peace, stability and sustainable development in Africa and India.

As I have said many times earlier also, India and Africa have several profound reasons for strategic, balanced and responsible partnership in this 21st Century, of which I would like to mention just a few of them:

- 1) In the words of Late Pandit Jawaharlal Nehru, "though separated by the Indian Ocean; Africa is in a sense our next door neighbour".
- 2) The relationship between Africa and India dates back to thousands of years. Therefore India and Africa are not discovering each other now.
- 3) India and Africa are bound together by very long traditions of friendship and common historical struggle against the evils of colonialism, apartheid, racism and injustice of all sorts. This common historical background based on western colonialism and a successful achievement of independence is one of the great opportunities for strengthening the India-Africa genuine and strategic partnership in the 21st Century.
- 4) The other reason, for genuine and strategic partnership between India and Africa in this 21st Century is because India has become a significant player in the global economy. This rapid emergence of India in the global economy raises the demand for Africa's natural resources, which fortunately are available in the African Continent; need to be industrialized for a better contribution in sustainable development of the continent.

Excellencies, distinguished Ladies and Gentlemen,

It is in the above environment of profound reasons for genuine and strategic partnership in this 21st Century that India and Africa are keen to work together for better and greater representation in United Nations

Organizations and other International Forums, so as to have their voice in international decision making.

In the aforementioned context, India and Africa should work together to narrow the gap in view to bring Africa and India's position related to United Nations reforms particularly the expansion of the United Nations Security Council, much closer.

It is also in the above environment of strengthening the India-Africa Partnership in 21st Century that India has launched and successfully implemented number of initiatives to support various aspects of the continent's peace, stability and development efforts. Such efforts have been visible in the following among other areas:

- 1) Human Resources Development and Capacity Building: Many Africans are being trained in Indian Universities and other short term courses being conducted under the ICCR and ITEC scholarship schemes respectively. ITEC has been training more than 1000 beneficiaries per annum from the Sub-Saharan Africa since 1964.
- 2) India has launched many Lines of Credit to Africa to help its process of development.
- 3) India has announced the e-connectivity programme which will benefit 53 countries of the African Union to boost development in tele-education and tele-medicine.
- 4) India has supported the Peace keeping process in many countries in Africa.
- 5) India has provided technical assistance under South-South Co-operation.

All of Africa acknowledges these important initiatives of India in context to the Indo-Africa partnership.

Excellencies, distinguished Ladies and Gentlemen,

Although India and Africa share a robust relationship there are also the challenges to overcome to further strengthen the India-Africa Partnership in 21st Century so as to promote sustainable development in Africa.

Therefore, the strategic partnership between India and Africa in 21st Century

should bring solutions for the various issues which are included in the African Programme namely NEPAD (The New Partnership for Africa's Development). Some of these issues among others are as follows:

- 1) Raise the level of investments in human capital development in Africa;
- 2) Promote more capacity building, technology acquisitions as well as knowledge generation sharing and applications;
- 3) Acceleration of African Industrialization so as to add value to the huge African natural resources and get good, fair and competitive prices for the African goods;
- 4) Acceleration of development of infrastructure which will facilitate intra African trade and economic development in the continent;
- 5) Enhance economic co-operation, trade and improved market access for African products;
- 6) Sharing India's experience on green revolution for boosting agricultural products so as to combat hunger and disease in Africa. Combating hunger and disease in Africa are the key areas of strategic partnership in 21st Century so as to meet the first of the Millennium Development Goals, set by world leaders at the United Nations Summit 2000, which aims to reduce the proportion of the hungry people by half by 2015. This first of the Millennium Development Goals is facing a tough challenge in Africa.

Excellencies, distinguished Ladies and Gentlemen,

The challenges are enormous but possible to achieve, if we work together.

There are huge opportunities of investment in Africa. Determined to raise its share in the world trade the African countries are making significant changes in economic and social development. True transformation in the rural development: all inclusive health care, rapid growth in educational sector, rule of law; good governance as well as the democratic culture, are deepening their roots in African countries. We should try our level best to accelerate these economic and social developments through a strengthened India-Africa Partnership in this 21st Century.

Together we will succeed. As, together we were victorious yesterday against colonialism, apartheid, racism and injustice and today nothing will prevent India and Africa to succeed on strategic partnership in this 21st Century.

Let us interact and work together for a flourished, deep and everlasting partnership between Africa & India in this 21st Century, where African countries would provide opportunities for investment, trade and industrialization of their untapped natural resources and in turn India will share with Africa, its advanced technology and technical expertise, suitable for African countries.

Excellencies, and distinguished Ladies and Gentlemen,

Kindly allow me to thank you all once again for giving me this opportunity to place my remarks, at this inaugural session of prestigious International Conference on "Africa-India Partnership in the 21st Century".

I look forward for a bright future of a strong Indo-Africa Partnership in this 21st Century, and together we will make a difference.

Thank You and *Shukriya* for the valuable time you all have spared to attend this conference.

514. Inaugural Address by Secretary (West) Ministry of External Affairs Nalin Surie at the International Conference on "Africa-India Partnership in the 21st Century".

New Delhi, April 2, 2008.

On behalf of the Ministry of External Affairs, it gives me great pleasure to welcome you all to this International Conference¹ on "Africa-India Partnership in the 21st Century". At the very outset I would like to thank our distinguished Panelists from Africa who have traveled long distances to be with us here today. We are particularly grateful to them for having agreed to participate in this Conference at such a short notice. Our gratitude also to all the distinguished participants from India.

¹ The Conference of intellectuals from Africa and India was a precursor to the India-Africa Forum Summit which was organized at the initiative of the Indian Council of World Affairs (ICWA) in cooperation with the Research and Information System for Developing Countries (RIS) and African Studies Association of India (ASA).. Its theme was "Africa-India Partnership in the 21st Century". As the title suggested the conference focused on the future of India-Africa partnership and to spread seeds of ideas which produce in the fertile environment of resurging Africa and rising India, seedlings which nurtured through Africa-India partnership could bear fruits for mutual benefits. Besides the 12 scholars from Africa and 21 from India, a large number of experts who had either worked in Africa or had great interest in African affairs also participated. Welcoming the guests, Ashok Kumar, Acting Director General, ICWA referred to the age old relations between India and Africa and the long tradition of sea faring trade and the more recent experience of independence struggles of India and African countries. He said that India looked forward to a comprehensive engagement with Africa and expressed the hope that deliberations of the intellectuals would contribute to the shaping of Africa-India partnership in the 21st century. The Dean of African Diplomatic Missions in New Delhi H.E. Mr. Carlos Agostinho Do Rosario addressed the guests.

The deliberations of the Conference were divided into themes and discussed separately in various sessions:

I: Partnership for Economic Growth and Development

II: Partnership for Economic Growth and Development: Trends in Trade and Investment

III: Partnership for Economic Growth and Development: Technological Progress and Agricultural Cooperation.

IV: Partnership for Human Resource Development and Capacity Building.

V: Partnership for Energy and Sustainable Development

Among the highlights of the two day deliberations were the need to reinvigorate the programmes for human resource development and to explore the possibility of setting up training institutions in Africa with Indian collaborations. The example of Kofi Annan Centre of ICT in Ghana set up with Indian cooperation was mentioned. These institutions could be both in areas of skill development as well as tertiary education. African scholars emphasized the need to aggressively explore collaboration possibilities in the areas of pharmaceuticals, IT, agriculture, hydrocarbons and energy technologies of the future. Dr. Nagesh Kumar, Director General, RIS presented the highlights of the conference

I would also like to express our sincere appreciation to the African Studies Association of India, the Research and Information System for Developing Countries and to the Indian Council of World Affairs for putting together this very important meeting of intellectuals. Director General, ICWA, Mr. Ashok Kumar has been the driving force behind this Conference and my special thanks go to him.

This Conference is part of a series of outreach activities that are being held in India to feed into the India-Africa Forum Summit being held in New Delhi on 8-9 April, 2008. This is a standalone Summit that is intended to allow the leaders of India and select African countries, chosen by the African Union, to brainstorm and devise ways and means of taking forward the India-Africa Partnership in the light of the changed circumstances, both of India and of Africa. I must stress at the very outset that the India-Africa Partnership is not new. It is age old and has been continuously evolving. Our effort now is to take into account the very fundamental changes taking place in Africa; the development and growth of democratic processes and pluralism, the rapid economic growth rates, the processes of integration and the expressed desire to take charge of their own destiny. Similarly, there have been fundamental changes in India. We are now a rapidly growing economy. Our democracy continues to flourish and we are today more integrated in the world economy than before. Our ability to help each other is far greater today than ever in the past. Our effort, therefore, is to build on complementarities and synergies to mutual benefit.

Viewed from the above perspective, your deliberations assume especial importance. The agenda of your meetings is a most meaningful one. Our expectation is that the outcome of your deliberations will provide us in the government, new and creative ideas on how best to deepen and diversify our partnership. The subjects that you are addressing, namely trade and investment, technological progress, human resource development and capacity building, energy and sustainable development, are all crucial for ensuring inclusive and rapid growth. Your individual expertise and your hands on experiences will, no doubt, help contribute enormously to the discussions in this Conference.

discussions and Prof. Rajen Harshe, President of the African Studies Association of India proposed the vote of thanks.

The South African delegates Dr. Elisabeth Sidiropoulos, National Director of South African Institute of International Affairs, presented the Hon'ble Minister of State for External Affairs Shri Anand Sharma the Special Issue of the South African Journal of International Affairs on India in Africa.

The India-Africa Forum Summit next week will allow the political leadership of India to interact at the highest level with the countries of Africa that currently chair the eight regional economic communities of that continent, the founder members of NEPAD, the current and past country Presidents of the African Union and, of course, the Chairperson of the African Union Commission. This is a most representative group of countries and covers all major parts of the continent. It will enable us to better understand the problems and priorities of Africa today and to agree on how best we can enhance our engagement with Africa to meet the socio-economic development requirements of individual nations and of the regional economic communities. The intention is to adopt, at the end of the Summit, a Declaration of political principles and an Action Plan. You would be happy to know that the Action Plan that is being discussed will benefit enormously from the outcome of your deliberations for the areas of focus in that document are quite similar to the content of your discussions.

India's approach to its partnership with Africa has, from its inception, been based on the principles of equality, mutual respect and mutual benefit. Our effort has always been to cooperate with the countries of Africa, within the framework of our capabilities and experiences and to help meet the requirements of Africa's socio-economic development. We have, without any self interest, participated in major UN peacekeeping efforts in Africa to ensure that peace and stability is restored in areas where there has been conflict. Without peace and stability there can be no development.

As our own capabilities and resource base has grown, we have broadened the scope of our cooperative activities with the continent. More importantly, as India's private sector has grown and begun to operate outside India, they have found useful opportunities in many countries on the continent. So too the Indian public sector which, in fact, in many respects pioneered India's industrial and infrastructural outreach in many countries of Africa, including in the development of small and medium enterprises.

Distinguished participants, ladies and gentlemen,

The opportunities for India and Africa to work together, bilaterally, through the regional economic communities, through public-private partnerships, through direct joint ventures and straight forward investment are enormous. They cover sectors such as agriculture, SMEs, health, education, infrastructure, information technology and communications, automobiles and other transportation systems, manufacturing and development of

railways. The Lines of Credit that the Government of India has extended through the Exim Bank have opened the way for such greater engagement. There are risks involved but there is no life and profit without risk. It is the Government's policy to encourage Indian industry, Indian entrepreneurs, agriculture and service personnel to build new cooperative partnerships in Africa. We can, for instance, visualize a situation where we have joint ventures producing foodgrains, pulses and oil seeds for export to India, in addition to domestic use and export to other countries.

India is also keenly studying the processes of integration that are taking place in Africa. These not only have political implications but also have a very important economic dimension. We are also fully aware and are in harmony with Africa's desire for greater value addition of its produce within Africa. Our efforts at institutional capacity building have indeed been aimed at helping bring about such an outcome.

Ladies and Gentlemen,

India and Africa are inexorably linked. We have been and continue to be natural partners. We share a common vision of inclusive and equitable socio-economic growth for our people and a common world view. We stand together on critical issues such as the fight against terrorism, climate change, multilateral trade negotiations, UN reform and the reform of the International Financial Institutions. The Indian Ocean unites us. Africa is determined to find its true place in the international community. We stand by Africa in this endeavour and intend to be a close partner in its resurgence.

In conclusion, may I once again thank you for your patience in listening to me. I wish you success in your deliberations. We look forward to receiving the concrete outcome of this important Conference which will greatly help us in our ongoing efforts towards deepening and diversifying the India-Africa partnership and making it even more relevant in the coming decades.

515. Press Release of the Ministry of External Affairs on the India-Africa Editor's Conference.

New Delhi, April 3, 2008.

The India-Africa Editors' Conference was successfully held on Thursday, 3 April 2008 in New Delhi. Sub-titled Building Bridges, Connecting Cultures, the Conference was organized by the External Publicity Division of the Ministry of External Affairs and the Indo-Asian News Service. The Conference was aimed to enrich the media debate leading up to the India-Africa Forum Summit which will be held on 8-9 April 2008.

Senior editors from 12 African countries, Algeria, Burkina Faso, Congo, Ethiopia, Ghana, Kenya, Libya, Nigeria, Senegal, South Africa, Tanzania and Zambia participated in the Conference. Senior editors from Indian print media and influential journalists from the Indian audio-visual media participated from the Indian side. The Conference was structured under three broad themes:

- Trends in Media Growth: Creating Understanding and Linkages;
- Democracy, Accountability and Media; and
- Media and Challenges of Development.

The Conference was inaugurated by Shri Anand Sharma, Minister of State for External Affairs, who in his remarks recalled the long association between India and African nations, the central role of Gandhiji in this relationship and the emphasis laid by India on capacity-building and human resource development in her development cooperation with Africa. He stressed the importance of joint action between India and Africa in handling the four great challenges of the present day world - food security, energy security, health security and climate change.

The Valedictory Address of the Conference was delivered by Shri Pranab Mukherjee, Minister for External Affairs. He stated that both India and Africa, with high rates of growth and the huge potential of their economies, were ideal partners. He laid emphasis on the fact that Indian involvement in African economies had always been cost effective and had provided appropriate technologies; India's development assistance to African nations had taken a multi-pronged approach, with creative use of lines of credit and with the creation of assets in Africa and the establishment of high-tech

projects by India. He called upon the media of India and Africa to continue to play an important role in the political as well as socio-economic growth of their countries.

There were brief but in-depth presentations by several editors from the Indian and African side on the various themes. The discussions that followed were lively and informed. Many suggestions for further cooperation and more positive interaction between Indian and African mediapersons and media organizations emerged from the Conference. The Conference was felt to have been a most useful exercise in generating ideas and in building contacts between media professionals of India and Africa.

**516. Remarks by External Affairs Minister Pranab Mukherjee
at the Valedictory session of the India-Africa Editors'
Conference.**

New Delhi, April 3, 2008.

**Secretary, Shri Nalin Surie,
Distinguished Editors from Africa and India,**

Ladies and gentlemen,

It gives me great pleasure to be present here today at the Valedictory Session of the Editors' Conference of India and Africa. In a few days' time, India will host the India-Africa Forum Summit in Delhi. Your Conference today will, I am sure, prove to be a very useful element in the build-up to the Summit. All of you are, first and foremost, communicators and a meeting of minds between communicators from Africa and India is an essential step if we are to strengthen our mutual understanding and partnership.

"Building Bridges, Connecting Cultures" is the theme of your Conference and its importance is self-evident. The beautiful continent of Africa and our nation have had much in common in the past. We have both suffered under colonialism, which was characterized by exploitation and discrimination, and we have both emerged into the sunshine of freedom with the right to chart out our own destinies and the destinies of our peoples. This political legacy, its moral strength and the shared commitment to struggle against injustice, discrimination and exploitation of any kind remains a strong bond between us.

Two aspects of modern Indian have caught the attention of the world - one is our successful and unmatched democratic experiment, in which we have been able to give voice to a multi-religious, multi-ethnic and multilingual society. The second is the success story of our economy, which has been growing at a rate of 8 to 9%. Though we still have several challenges before us, both in the political as well in the socio-economic sectors, sixty years of independent decision-making have given us the confidence that we would be able to face these challenges successfully. In this context, African nations, with their own above average rates of growth and the huge potential of their economies, are ideal partners for India today.

Mahatma Gandhi, one of our most important and evocative links with the African continent, had stated: "Commerce between India and Africa will be of ideas and services, not of manufactured goods against raw materials after the fashion of western exploiters". Unquote. India's development assistance to African nations has a strong focus on empowerment of people through capacity building and connectivity. A multi-pronged approach has been adopted, which combines creative use of Lines of Credits with the deployment of Indian expertise to create assets in Africa and to establish high-tech projects. The development of local skills is part of all such projects. We have taken care that Indian involvement in the African economies should be cost effective and provide relevant and appropriate intermediate technologies. The spirit of partnership is further strengthened by the large number of trainees from several African nations, who have studied in India under the Indian Technical and Educational Cooperation Programme.

The possibilities of further cooperation, both economic and political, in the context of a multi-polar and globalised world, are enormous. The 54 countries of Africa and India continue to work together in international fora like the UN and WTO. We have common approaches to the challenges of global warming and climate change, HIV/ AIDS and other pandemics, as well as to global threats, such as terrorism.

Platforms like the Conference that you have all participated in today provide ample opportunity for a free discussion and exchange of ideas which can inform both our societies. I need not elaborate much on the role that an informed media can play in both the political as well as socio-economic growth of developing countries. The introduction of new ideas, the analysis of different trends, the protection and promotion of democracy, the encouragement of civil society and the exposure of corrupt practices are only some of the areas in which the media can play the lead role. I trust that

your exchanges at this conference have been useful in identifying some of the common approaches that the media of the 21st century, both in India and on the African continent, can adopt in meeting these challenges.

I would invite all of you to continue the process that has been started by this Conference and build linkages which can become self-sustaining and permanent. Once again, I would particularly thank the distinguished visitors who have come all the way from Africa for this Conference, and also the Indo-Asian News Service, which has partnered with the Ministry of External Affairs in putting together this Conference.

I thank you.

517. Address of Minister of State Anand Sharma at the India-Africa Editors' Conference.

New Delhi, April 3, 2008.

Mr. Navtej Sarna, Head of the External Publicity Division of the Ministry of External Affairs; my friend Mr. Tarun Basu, the CEO of India Abroad News Service; eminent Editors and journalists from Africa and India present here; friends:

I am very happy to be with you this morning to share some of my observations and at the same time to underscore the significance of the exchange that will take place between you all. Navtej was saying that over the years there has been a visible effort to make the Indian and the African media come together on platforms to share their experiences and also their views on the evolving situation regionally in Africa, in South Asia and in the world as such.

India and Africa do have a very special relationship, a relationship that is rooted in history, a relationship that has been time-tested, and a relationship which unfortunately - as Tarun was saying - does not get the due recognition and respect when it comes to the coverage that we find in the print and the electronic media. You all are in a profession and in a position to influence and shape public opinions. Therefore, informing the civil society at large about our respective experiences and the enormous significance of the engagement of Africa and India is important. Not informing would be a disservice not to ourselves but to our respective people.

It is important in my mind that while we talk of present we must remain connected with the shared experiences and struggles of the past which

have led to a deeper understanding between the political leadership and people of India and Africa. It will not be out of place to mention that in the last century both India and Africa, our respective people, were struggling to find our voice, our dignity, and struggling for our respective freedom. That was the period when our leaders forged a special bond.

It was Mahatma Gandhi, Mohandas Karamchand Gandhi, who had gone to South Africa as a lawyer. But the experiences there transformed him. He stayed on in South Africa for 22 years. The world knows him as Mahatma, a title which was given to him by India's Poet Laureate Rabindranath Tagore, but he became that in Africa when fought the discrimination, the humiliation of the people there only because of the colour of the skin, the denial, the deprivation which moved him deeply and he forged his tools of Satyagraha.

He returned to India and mobilized tens of millions of our people by the sheer force of his philosophy and the values that he espoused. But his philosophy of nonviolence - not passive resistance as it repeatedly gets mentioned but active opposition to injustice and discrimination - gave voice to the millions of our people and they were able to stand up to challenge and vanquish the mightiest empire of that time.

We may have left the last century behind. But we must not forget how we have arrived in the 21st century carrying some of those memories and at the same time much of the burden that was there both in Africa, in Asia and in India. It was the same Gandhi who had said after India's Independence that India's freedom will be incomplete as long as Africa remains in bondage. These were powerful words.

Equally strong was the commitment of Jawaharlal Nehru, India's first Prime Minister and architect of modern India, the author of India's foreign policy and engagement with the world where the emphasis clearly was on understanding and unity of the countries of Asia, Africa and Latin America, countries which are called the third world countries, the poor countries, countries which were denied access to modern tools of development, countries which were robbed of their resources, continents which had missed the Industrial Revolution.

You all know about the journey of a few decades, but important decades, of the last century when the developing world found not only a common cause but also a common voice which was articulated in the multilateral forums understood sometimes - misunderstood and misinterpreted most of the times

- by the entrenched vested interests and those who could not reconcile to the emergence of Asia, Africa, not to mention the potential that we have.

We have to, therefore, reflect in the contemporary context where we stand and what we can do together. It will be important to do so because Africa and India together account for one-third of humanity. India in the last 60 years has achieved many milestones in its quest for development and the economic and social empowerment of its people. That is exactly what Africa is seeking to achieve and that is all that Gandhi had stood for.

I have come back to Gandhi because I feel it is important, because Gandhi talked of poverty and hunger. He talked of education; he talked of empowerment of the people; he did talk of environment and models of development which would be in harmony and should be in harmony with the nature and environment. In the 21st century the world is grappling with all these issues. I often wonder that he was a visionary who could recognize these pitfalls and the problems a century before the others. All the wise people in the world are today commenting and writing. You look at the cover of the Time magazine, you look at the Newsweek, you switch on the CNN, BBC - I am not talking of today, last few months - there are stories, there are expressions of concern, the looming disaster because of the climate change and the other attendant issues and problems. That is where I feel Africa and India together have much to contribute. That is because in our own experiences of development we have been confronted by some of these very challenges. We have overcome some; we yet have to address others.

At the same time the credit goes to our leaders, also the people, the creative people in the different fields, whether our scientists, our farmers, the workers who are toiling in industry, who had the determination not to be overwhelmed by these challenges but to confront them. They are experiences. India has expertise in many fields not only in the development of our agriculture sector, the villages or the small and medium enterprises, but also what is called the high end of technology.

As I said, when we have shared experiences of the past we have shared concern for the present together. We still have the problem of abject poverty and hunger. India today is one of the fastest growing economies in the world. In Africa also many countries have registered impressive growth rates. There are robust economies developing in Africa. Democracy is taking firm roots. African leaders have come together to work for regional integration. But at the same time in my country if we have the largest middle class in the

world by global standards - without quarrelling with the statistics or the figures which are given to me on this and on many other issues - even if we say it is 22 per cent of our people living in poverty, and as has become globally fashionable those who survive on less than a dollar a day, it is still more than 230 million people.

In case of Africa, it is over 40 per cent of the population. So, it is a huge challenge. But Africa is also a resource-rich continent, a continent which is rich in every respect, its history, its song, its music, the people are vibrant, its rich biodiversity, the forests in Africa, and the enormous resources. Minerals, metals, hydrocarbons, there is nothing which the world looks for which Africa does not have. That is why I made a comment a few months ago while delivering a lecture in London that it is the tragedy of our times that a continent which is so rich in resources is also seeped in abject poverty. This is because of the exploitation of the past. That is exactly the reason I feel, and we in India do feel, strongly that Africa and India have to come together, step forward and make not only our presence felt, that is felt and acknowledged, but make our own contribution in the 21st century by ensuring that we access technologies and also see that our people benefit from the fruits of development.

India is willing and happy to share more than what we have been doing in the last almost five decades, our own experiences of development, our technology. We have been sharing even the meager resources that we had in the 1960s when we were confronted with monumental challenges of development and dealing with this issue of poverty and hunger. That is where Africa and India come together as partners, partners in development.

I, like all of you, read in the magazines and in the newspapers - it is not that I have to wait for days or weeks together, the frequency is increasing - if I have to politely put it, inadequately informed analyses, reports and writings that India is also trying to engage with Africa like China is doing because of Africa's resources, like Europe is doing, India is also trying to catch up. There is nothing which would have pained me more. I pity those who have such little knowledge and are making such patronizing and sweeping comments. Our engagement, as I said, is ancient, it is over millennia. We understand each other. We feel for each other.

India is not embarking on a new journey to discover Africa and that should

be made clear both by the media in Africa and by our distinguished Editors and representatives of media in this country. If you look at what I said about the 1960s - we were not a rich country, we are not even today - but we were sharing. Tens of thousands of students from Africa come here to study, take their professional degrees and go back. Many of them have occupied important positions in Africa, they continue to. Many of them are Heads of States, Heads of Governments, Heads of important institutions. If there is one singular contribution which India has done, that is the ITEC programme and the scholarship schemes.

The focus of India has been, and I must emphasize shall continue to be, on capacity-building and human resource development in Africa. That is the first priority for my country. If you look at it, it is increasing now. There are more friends from Africa who come not only to study but there are batches which come for dedicated courses in capacity-building. The field is vast and I am sure that it is going to expand further. But in addition to that there are other areas where we have identified to work together. They are health and food security, agriculture, infrastructure development, energy, and climate change.

At the same time, when I refer to capacity-building let me also quickly mention about one recent engagement. In the last 25 years, or two decades to be precise, our people have done us proud by ensuring that India leapfrogged to a leadership position in the field of information technology. A few years ago, our then President while traveling in Africa had made this offer to gift Africa with a project, a dedicated satellite, to bridge the digital divide. The Pan-African E-Network Project today has taken off. It is operational. The hub from Senegal will soon be operational. I see our friends from Senegal here. Already 29 countries have been linked. It is a revolutionary leap in tele-education and tele-medicine, linking leading universities of Africa with the leading universities of India, linking hospitals in Africa with super-specialty hospitals in India. Nothing of that is known or reported except that when your leaders will be coming as our honoured guests in few days it is being referred to as both of us Africa and India struggling to catch up.

This Partnership Forum Summit which is taking place is not something which has happened abruptly. It was in 2006 that we first proposed to be precise in February, 2006, when I in my humble capacity had suggested to my Prime Minister that we must take steps to institutionalize India's engagement

with Africa. But we wanted to do it guided by Africa, the leaders of Africa and it is through the Africa Union that we were able to take this process forward.

It is a Forum Summit and the leadership from Africa has been pre-selected by the African leadership, by the Africa Union. We have the five founding members of NEPAD along with Ethiopia, which is the Implementation Committee Chair; and all the eight regional organizations, because India is engaging with Africa and with all the regional and sub-regional organizations, we already are engaged; and also the current Chair of Africa Union, the President of Tanzania; and the immediate past Chair the President of Ghana. From Algeria we will have the honour of receiving the elder statesman from Africa President Bouteflika. Same is the case with Burkina Faso, Congo, Ethiopia, Ghana, the Prime Minister is coming. From Libya, of course, we do have a senior Minister leading the delegation. Nigeria, Senegal, South Africa, Zambia, all of your leaders will be here. We do hope that together they will be able to address these issues that I was referring to, and give a new hope to our people.

Before I conclude, I may mention - and if I do not I will not be doing my duty properly - that when we are together on partnership and sharing of experiences, the four things which I did briefly mention - the food security, health security, energy security and climate change - are deeply linked. We cannot address one by ignoring the other three. We cannot decouple them. Food security definitely is linked with the health security, the malnourishment of the people. How many women and children die both in Africa and India and in other developing countries!

For health security, again when we look at the pandemics of today these are transnational challenges - not only HIV AIDS but tuberculosis, malaria - they are not confined to one region. It has been a mistake, if I may say, of the developed world to think that these are problems only of the poor countries. It is clear that they have a cascading effect.

When we look at the energy security, it is not only the fossil reserves, the hydrocarbons, the renewables, but in the quest of energy security the run for bio-fuels, particularly the diversion of food grains, and we have been cautioning for quite some time that this is an area which should be very carefully looked into. Now we know that the food prices have been pushed up. There is food scarcity. It is not only the soya or the corn. Whether the diversion that has taken place has brought about energy

security or not, definitely it has severely undermined food security. And we have woken up when this has become a serious challenge of our times.

So, all these four issues have to be addressed together. I think the developing countries, India and Africa, have the capacity to do so. Our people deserve a better future. We do share a dream that we will overcome the burdens of the past and together write a new chapter of rising Africa and resurgent India.

Thank you.

518. Keynote Address by Secretary of the Ministry of External Affairs Nalin Surie at the International Conference organized by the Institute of Defence Studies and Analysis: "Africa and Energy Security: Global Issues, Local Responses".

New Delhi, June 23, 2008.

Ladies & Gentlemen,

Thank you for inviting me to address this conference on "Africa and Energy Security". To begin with, I would like to congratulate IDSA and PRIO for taking this initiative. The issue of energy security and, of late, food security, have come to the fore of the international agenda. They have also inextricably got linked to the broader issue of climate change. It is, therefore, my hope that during your discussions you would look at this composite picture.

The India-Africa relationship is civilizational and time tested. The most recent manifestation of that relationship was the India-Africa Forum Summit held in April this year in New Delhi. We had the privilege to have with us a very representative group of African Heads of State and Government and other leaders selected by Africa itself. On that occasion, the Prime Minister of India clearly spelt out India's philosophy towards cooperation with Africa. He stated, and I quote, "it is our (India's) intention to become a close partner in Africa's resurgence." You would all have seen the Delhi Declaration and the Framework for Cooperation that were issued at the end of the India-Africa Forum Summit.

The Framework for Cooperation speaks specifically of cooperation in the field of exploration and exploitation of natural resources as well as value addition and creation of an enabling environment for investment and development of renewable and non-renewable energy sources.

The African continent is nearly ten times the size of India. Its countries range from the very large such as Sudan to tiny island states such as Seychelles. It encompasses the entire geographical spectrum ranging from deserts to tropical forests and mountains. It is in effect a huge island and a continent that is rich in natural resources, bio-diversity, water resources and has the advantage of a relatively small population but very large areas of land which are cultivatable. Indeed, if experts are to be believed, Africa on its own, can potentially feed the world's population. The continent already meets a very important and growing proportion of the international community's requirements of natural resources, including hydro-carbons.

'Energy Security' has correctly been titled by this conference as a global issue. It is pertinent, however, to recall that this has been a topical issue for the international community for many decades. Some would argue that that has been the case also for many centuries now. The difference now is that the price of crude oil has gone up so sharply and shows little sign of reversal, that the issue has assumed overriding importance in today's increasingly globalized world. The importance of hydrocarbons has become greater in some respect because of climate change considerations and the inability of the world community to develop technologies that can effectively and economically exploit new and renewable forms of energy. This state of affairs has also given a new lease of life to the development of nuclear power which had become less popular in recent decades following, in particular, the unfortunate accident at Chernobyl. Thermal power, the other mainstay of the world economy, has its own limitations because of the associated pollution and the as yet inadequate development of cost efficient clean coal technologies.

In addressing the issue of energy security in today's context, it is particularly important that we focus on the extremely negative impact that high energy prices are having on developing countries. Large and rapidly developing countries like India are beginning to feel the huge burden of this price rise. It is never easy to transfer high prices to consumers in democratic countries but this has now become inescapable. The impact on the smaller and more

vulnerable developing countries, including those in Africa that do not have the benefit of hydrocarbon resources, is even more dramatic and could perhaps be devastating unless corrective action is taken in the near future. Unfortunately, the energy crisis has been compounded by the current food crises and this has made small and vulnerable economies all over the world and, in Africa in particular, face a huge double disability.

It is important also to bear in mind that not all of Africa is hydrocarbon rich. You cannot paint Africa with one colour. It is a huge continent. Its countries are diverse and have varying strengths and abilities to meet the current disabilities which they have to cope with. It is imperative, therefore, that the positive effects of globalization are brought to bear on these countries and the negative effects mitigated to the maximum extent feasible.

It is from the above perspective that we would view your discussions and it is in that context that local responses become that much more important. The international community must assist and cooperate with the individual countries of Africa to meet the requirements that pertain to their particular situation.

I referred earlier to the need for greater cooperation with Africa in the development of new and renewable forms of energy. Like in other parts of the world, the most promising areas appear to be wind and solar energy, although technological developments in the latter sector still do not permit extensive use of solar energy at an affordable price.

The other areas of promise are in respect of bio-fuel and bio-diesel. There are major opportunities to collaborate with Africa in the production of bio-fuel and bio-diesel. Like elsewhere in the world, however, all such efforts will have to ensure that the land used for bio-fuel and bio-diesel production is not at the cost of enhanced production of food and other non-food crops and does not lead to the diversion of fertile and potentially fertile land. It is also essential to ensure that the bio-diversity in Africa is not adversely affected.

In addition to hydrocarbons and bio-fuels, some countries of Africa are also home to large deposits of coal. Opportunities for exploitation of these resources are being discussed by different countries and multinational corporations with the concerned governments of Africa. This is a promising area of cooperation where again it is essential to ensure that collaborative arrangements drawn up are not exploitative, bring about transfer of clean technologies and generate local employment. In short, Africa's contribution

to the energy security of other countries must lead to sustainable development in Africa.

Ladies & Gentlemen,

Africa is rich in energy potential yet, the continent is currently deficient in energy use. This factor will also need to be borne in mind in your deliberations.

You would have noted that in my remarks I have spoken of energy in terms broader than simply referring to hydrocarbons. I believe it is necessary to do so for too narrow a focus would not be appropriate, especially if you look at the diversity of Africa and its own rapidly growing energy needs. It is necessary to look at the issue from the perspective of African countries. Earnings from the sale of energy resources are undoubtedly important to help finance the socio-economic development plans of countries that have such resources. At the same time, the domestic developmental requirements of these countries, including for energy, are growing. They will, therefore, have to find an appropriate balance between what quantities of energy they need to retain and what is exportable. There are already signals from some hydrocarbon producers in Africa that their supplies are committed to export abroad and as a result they have inadequate supplies for their own developmental and value addition requirements.

Further, Africa's own domestic requirements will grow both nationally and within the continent. As Africa integrates further, there will no doubt be pressure on the major producers to give priority to share their energy resources with the other countries of Africa. In any forward planning such considerations would have to be factored in.

Ladies & Gentlemen,

India's approach to Africa has long been crafted on the above premise. Our approach to the partnership with Africa has, from its inception, been based on the principles of equality, mutual respect and mutual benefit. Our effort has always been to cooperate with the countries of Africa, within the framework of our capabilities and experiences and to help meet the requirements of Africa's socio-economic development. We have, without any self interest, participated in major UN peacekeeping efforts in Africa to ensure that peace and stability is restored in areas where there has been conflict. Without peace and stability there can be no development.

As our capabilities and resource base has grown, we have broadened the

scope of our cooperative activities with the continent. More importantly, as India's private sector has grown and begun to operate outside India, they have found useful opportunities in many countries on the continent. So too the Indian public sector which, in fact, in many respects pioneered India's industrial and infrastructural outreach in many countries of Africa, including in the development of small and medium enterprises.

Similarly, India's engagement with Africa in the energy sector is not one sided and our approach has always been to attempt to involve ourselves in a holistic fashion so that while our needs are met, equally, the developmental needs of our partners are also fully met. It is with this objective in mind that we have consistently impressed upon Indian companies both in the private and public sectors to participate not simply in the production of oil and natural gas but to invest in the development of infrastructure and downstream industries as also related industries such as fertilizers, generation of power etc.

Our growing partnership with the countries of Africa in the hydrocarbon sector is part of our conscious policy to develop South-South cooperation. As we strengthen our cooperation in a more broad based fashion, we will find that our synergies will increase and our ability to chart our own destinies more effectively will also be enhanced.

I have spoken longer than I had intended and have taken the liberty of raising several issues for your consideration. I trust you would find these pertinent to your discussions.

Thank you for your patience and attention.

519. Valedictory Address by Minister of State Anand Sharma at the International Conference organized by the Institute of Defence Studies and Analysis: "Africa and Energy Security: Global Issues, Local Responses".

New Delhi, June 24, 2008.

Ladies and Gentlemen,

It is a matter of great privilege to be here before this august gathering today to share my thoughts on an issue of significant global importance.

India's engagement with Africa is historical and we have civilisational links. We were at forefront of liberation struggles in Africa even while we struggled for our own independence. In the 60s and 70s we have held in admiration African stalwarts like Nkrumah, Nasser and Nyerere. Mahatma Gandhi is a shared national hero and icon for India and South Africa. We provided moral, material and humanitarian assistance in Namibia, Angola, Zimbabwe and Mozambique. The principles of Afro-Asian solidarity were articulated way back in the Bandung Conference in 1955 by our Prime Minister Pandit Jawaharlal Nehru and the African leadership, which later became the bedrock of the Non-aligned Movement.

The 21st century world is an increasingly globalised and interdependent world. The last decade has thrown up major global challenges which are trans-national in character and require a concerted global response for effective resolution. Amongst the most pressing contemporary challenges faced by all of us is the trinity of food security, energy security and climate change. These are intertwined and our responses to each of them have a bearing on the other.

As nations witness rapid economic growth, the demands on energy grow exponentially. While the demand for energy has a global spread, the availability of energy resources is highly skewed. The industrial revolution had increased the dependence of the world on the use of coal which was later supplemented by oil and gas. In our rapid pursuit of development, we overlooked the fact that these resources are non-replenishable and scarce. Mindless and continuous exploitation of these resources has created a situation where the demand and supply gap has widened beyond imagination. Today we are confronted with a situation where the crude oil prices are threatening to touch US\$ 150 a barrel, which is a five-fold increase in less than 4 years. The recent meet of the OPEC countries in Jeddah is

a testimony to the gravity of the crisis confronting the world. This has an adverse impact on economies across the world and is causing acute inflationary pressures and is impeding growth.

The quest for alternatives has impelled nations to look for innovative solutions. However, it is a matter of grave concern that countries have resorted to mindless diversion of cereals and edibles for production of bio-fuels. Never before in human history have we seen a situation where food is being diverted for fuel. In the recent Rome Summit it was highlighted that nearly 100 million tonnes of cereal has been diverted from human consumption to satisfy the thirst of fuel for vehicles. There cannot be a bigger tragedy for the 21st century world where millions are suffering from hunger and malnutrition that we have resorted to such myopic and unsustainable policies.

We also need to place our policy regime of energy security in the larger perspective of environmental sustainability. It is now borne out by strong empirical evidence that the unsustainable consumption patterns followed by the developed nations have created the colossal challenge of climate change. The challenge is real and warrants an immediate response. So while all of us in the developing world chart our respective courses for rapid economic growth, we need to be mindful of its impact on environment.

Africa has the gift of nature and is endowed with huge mineral reserves and unparalleled bio-diversity. A continent of 900 million which has 60 per cent of world diamonds, 40 per cent of phosphate, 99 per cent chromium and 85 per cent platinum is truly a rich continent. It has proven oil reserves of nearly 16 million MTS and huge gas reserves. It has been projected that Africa would add 38 per cent to global oil contributing a further four million barrels of oil per day by 2010. Nigeria, Angola and Algeria have huge prospects. Apart from oil, Africa has a huge potential for LNG and it produces over 50,000 MT per year.

Our relationship with Africa has always been imbued with a spirit of partnership and equality. We recently convened the first India-Africa Forum Summit in partnership with the African Union to institutionalize our historic linkages. The Summit adopted the Delhi Declaration which provides a blue print of a shared political vision and world view, which is guided by a commitment to deepen the process of African integration while recognizing the diversities within various regions of Africa. The framework of cooperation adopted at the Summit outlines the priority areas of future engagement

which range from capacity building, agricultural infrastructure development, health and food security, energy security and technology cooperation.

The India-Africa Hydro-carbon Conference was held in November 2007 which provided a platform of interface between Government and private sector. We seek to forge a long term developmental partnership with mutual benefit while sharing our experience, capacity and technology in the energy sector. We have always believed in building local capacities and ensuring technology transfers. India can have a robust partnership especially in the area of research and development, human resources development and managerial best practices. Indian corporates have made strategic investments in Africa and the OVL has huge presence in Sudan, Ivory Coast, Libya, Egypt, Nigeria, and Nigeria, Nigeria-Sao Tome Principe Joint Development Area and Gabon.

Africa provides a reliable alternative of sustained fuel supplies to a world confronted with huge shortages.

I would like to mention that our cooperation in energy need not be confined to hydro-carbons alone. India has gained tremendous expertise over the years in developing its renewable energy program and we are the fourth largest wind energy producers in the world. We have acquired technology and capacities in solar photo voltaic, bio-fuels and hydro power. Our nuclear energy programme is totally indigenous and comparable to the best in the world. We would be happy to share our experience and technologies with our friends in Africa across the entire energy spectrum to ensure robust partnership.

I believe that Asia and Africa are at the cusp of a renaissance and collectively we shall have a major say in the emerging world order. I am sure that our time tested ties shall be transformed into vibrant economic partnerships in the years to come.

520. Address by Minister of State Shri Anand Sharma at the High Level Meeting on Africa's Development Needs at the United Nations.

New York , September 22, 2008.

Excellency President Abdoulaye Wade of Senegal,

Excellency Prime Minister Ralph Gonsalves of Saint Vincent and the Grenadines,

Excellencies, Ladies and Gentlemen.

India and Africa have a unique and special bond based on shared experiences and civilisational links. Over centuries, vibrant cultural and economic exchanges have marked the relations between India and Africa which were interrupted by colonization. Decolonization and emergence of free countries in Asia and Africa restored this engagement, bringing India and Africa together to address the challenges of social and economic development and poverty eradication.

We have a long-standing, close and multi-layered relationship with Africa based on our abiding commitment to work with the continent to fulfill its aspirations. Our partnership encompasses priority sectors integral to the developmental goals of Africa in the 21st century. A vibrant India and a resurgent Africa are witnessing an intensification of relations and growing convergence of interests in their common quest for sustainable economic growth and development.

India has always been committed to elevate its special engagement with Africa into an enduring partnership by developing an institutional mechanism for India-Africa dialogue. The first-ever India Africa Partnership Forum Summit held in New Delhi in April 2008 was convened in partnership with the African Union. It is the African Union which worked with us in choosing the participants and in defining the roadmap of Africa-India cooperation in accordance with Africa's priorities. The Delhi Declaration and the Africa-India Framework for Cooperation adopted at the Summit highlight our shared political vision and world view and provide a solid foundation for a systematic and stepped-up engagement in the years to come.

The vision of the Delhi Declaration is based on equality and mutual respect. The Framework of Cooperation, adopted at the Summit, outlines the priority areas of our future engagement. These are in line with the priorities of the

continent and include capacity-building, agriculture, infrastructure development, health and food security and technology cooperation. Our Prime Minister also announced the enhancement of the available concessional Lines of Credit for Africa to US\$ 5 billion. India sincerely aspires for a long-term partnership with Africa and is therefore investing in building economic infrastructure including railways, IT, telecom and power.

India has made a unilateral announcement of duty free and quota free market access to goods from 34 Least Developed Countries in Africa. This will spur economic activity in manufacturing, particularly for African SMEs, by allowing them enhanced market access to one of the fastest-growing economies in the world.

At the India Africa Partnership Forum Summit, India and Africa also decided to work together on pressing global issues of shared interests and concerns. These include climate change, WTO issues, reform and democratization of international institutions, the fight against terrorism, combating diseases, eradication of hunger and poverty and promotion of pluralism and democracy.

For many decades, capacity building in human resource development in Africa has been an area of priority. In 1964, India launched the Indian Technical and Economic Cooperation (ITEC) Programme. It was at a time when we ourselves were faced with acute scarcity of resources and colossal economic challenges. The ITEC programme has benefited thousands of students from Africa who came to study in professional institutions under Indian scholarship schemes. This programme is in the true spirit of South-South cooperation. Over 15000 African students are currently studying in Indian universities and colleges. India will over the next five to six years, undertake, on a grant basis, projects in critical areas focusing on education, science, IT, agriculture and renewable energy. India has offered a substantially higher number of training slots and has also doubled long-term scholarships. We have allocated half a billion dollars for this purpose.

The pan-African e-network project is a shining example of India-Africa partnership. India has gifted a dedicated satellite for e-connectivity in sub Saharan Africa to help bridge the digital divide. This project is fully financed by the Government of India and was launched from Addis Ababa with a satellite hub in Dakar. It is linking major universities in different regions of Africa with major Indian universities and centers of excellence in India and major hospitals in Africa with super-specialty hospitals in India. Thirty countries have already joined this Project to provide quality tele-education and tele-medicine.

Distinguished co-chairs,

We feel that the time has come when our age old political ties will mature into a vibrant economic partnership. India's FOCUS AFRICA policy, launched in 2002, which targeted seven countries, has yielded visible results. Our bilateral trade with Africa has grown manifold and reached a level of USD 31 billion in 2006-07 up from USD 3 billion in 2000-01 and is expected to reach a level of USD 35 billion in the current year. The Indian private sector's initiative and investments in Africa in core sectors, in particular in agriculture, pharmaceuticals, IT and health, complement India's commitment. Through this, it is enabling and empowering young local men and women in Africa.

It is a matter of satisfaction that many countries in Africa have been registering robust economic growth. There is greater stability and democracy has taken firm roots. The endeavours of the AU towards the regional economic integration and for building Pan- African institutions are truly commendable. While supporting the efforts of African countries to meet the Millennium Development Goals, it is an imperative that the industrialized countries honour the commitments already made to transfer better resources and technology.

I would like to conclude, Distinguished co-chairs, by reiterating India's commitment to continue to work closely with the countries in Africa to meet the diverse challenges that they face, to achieve the developmental targets and fulfill the aspirations of the people of Africa.

Thank You

ALGERIA

521. Statement by Official Spokesperson on Terrorist Attack in Algeria.

New Delhi, August 21, 2008.

We strongly condemn the repugnant act of terrorism that took place in the Algerian town of Issers¹ on Tuesday, August 19. The terrorist attack, killing dozens of people clearly exposes the grave threat that terrorism presents to the security of nations. No cause, no grievance, can ever justify acts of terrorism. Terrorism in any form cannot be tolerated.

We stand with friendly Algeria, in this hour of their grief and in their fight against new threats of extremism and terrorism. We reiterate our stand that the international community should cooperate closely to counter terrorism with resolve and resilience.

CONGO

522. Agreement between the Government of the Republic of India and the Government of the Democratic Republic of Congo for the establishment of the Indo-Congolese Joint Commission for Political, Economical, Scientific, Technical and Socio-cultural Cooperation.

New Delhi, March 12, 2008

The Government of the **Republic of India** and the Government of the **Democratic Republic of Congo** (hereinafter referred to as the Contracting Parties);

Desiring to strengthen and consolidate the friendly relations already existing between the two countries; and

Wishing to promote and reinforce political, economical, scientific, technical

1. The Spokesman was referring to a suicide car bombing in front of a police school near Algiers that killed more than 40 people and injured dozens.

and socio-cultural cooperation based on the principle of equality and mutual benefit on a long term and permanent basis; and

Being aware of the necessity to create a joint body that will follow up the execution and the evolution of Accords of cooperation between the two countries;

Have agreed to the following:

Article - 1

The contracting parties hereby agree to form a Joint Commission for political, economical, scientific and socio-cultural cooperation.

Article - 2

The contracting parties shall determine the composition for their respective delegations for the meeting of the Joint Commission.

Article - 3

Objectives and Functions

1. The Commission shall be responsible for:

- (a) the promotion and reinforcement of cooperation between the Contracting Parties in the political, economic, scientific, technical and socio-cultural fields;
- b) the identification of the bilateral programme of cooperation in order to encourage and promote the development of the Republic of India and the Democratic Republic of Congo;
- c) the planning and the implementation of the programme as determined.
2. The Joint Commission may through mutual agreement, set up working groups and committees to discuss specific issues of bilateral cooperation.
3. The Joint Commission shall propose to the two Governments the necessary agreements in order to put into practice the cooperation between them.
4. The Commission may review these agreements and make recommendations to the two Governments from time to time in the

light of new needs arising out of practical experience and may resolve any problems that may arise from such agreements and recommendations.

Article - 4
Meetings, Venues and Procedures

1. The Commission shall convene for meeting at least once in two years, on agreed dates. On request of either contracting party, special meeting of the Commission may be convened, and will be held in the country who requests it.

The proposed agenda will be submitted by the requesting party to the other party at least two months prior to the meeting.

2. The meeting of the Commission shall be held alternately in the two countries and shall be chaired by the country hosting the meeting.
3. The Commission shall have the power to determine its own procedure.
4. Decisions and conclusions of the Commission shall be placed on the record and be embodied according to the nature of their contents in accords, protocols or exchange of letters.

Article - 5

Any disagreement regarding the implementation of this agreement shall be amicably settled through diplomatic channels.

Article - 6

1. The agreement shall enter into force on the date of its signature and shall be valid for a period of five years.
2. This agreement shall automatically extend for an additional period of five years unless either of the Contracting Parties notifies the other in writing of its intention to terminate it six months prior to its expiration.
3. At the termination of this agreement or its provisions, the provision of any separate protocol, accord, separate contract or agreement

made in that respect, shall continue to govern any unexpected bond, existing obligation or project assumed or commenced thereunder.

In witness whereof the undersigned, being duly authorized thereto by their respective Governments, have signed the present Agreement.

Done at New Delhi this 12th day of March, Two Thousand and Eight in three originals each in English, French and Hindi, the texts being equally authentic. In case of doubt, the English as well as the French texts shall prevail.

EGYPT

523. Extradition Treaty Between the Government of the Republic of India and the Government of the Arab Republic of Egypt.

New Delhi, November 18, 2008.

The Government of the Republic of India and the Government of the Arab Republic of Egypt;

Desiring to make more effective the cooperation of the two countries in the suppression of crime by making further provision for the reciprocal extradition of offenders;

Recognizing that concrete steps are necessary to combat terrorism;

Have agreed as follows:

ARTICLE 1

OBLIGATION TO EXTRADITE

The Contracting States shall extradite any person found in their respective territories who is accused or convicted of an extraditable offence in the territory of the other Contracting State, in accordance with the rules and stipulations contained in the subsequent Articles, whether such offence was committed before or after the entry into force of this Treaty.

ARTICLE 2

EXTRADITABLE OFFENCES

- (1) An extraditable offence for the purposes of this Treaty is constituted by conduct which under the laws of each Contracting State is punishable by a term of imprisonment for a period of at least one year.
- (2) Where on conviction a prison sentence has been awarded on account of an extraditable offence in the territory of the Requesting State, the duration of the penalty remaining to be served must amount at least to six months.
- (3) Even regarding offences related to fiscal matters, customs duties or currency exchange, extradition shall be granted in accordance with the provisions of this Treaty.

- (4) An offence shall also be an extraditable offence if it consists of an attempt or a conspiracy to commit, aid or abet the commission of or being an accessory before or after the fact to, any offence described in paragraph (I).
- (5) If the request for extradition includes several separate offences each of which is punishable under the laws of the two Contracting States by a sentence of imprisonment, but some of which do not fulfill the condition with regard to the duration of the sentence which may be awarded, the requested state shall also have the right to grant extradition for the latter offences.
- (6) Extradition shall be available in accordance with this Treaty for an extradition offence, notwithstanding that the conduct of the person sought 11 occurred wholly or in part in the Requested State, if under the law of that II State this conduct and its effects, or its intended effects, taken as a whole, would be regarded as constituting the commission of an extradition offence in the territory of the Requesting State.

ARTICLE 3

EXTRADITION OF NATIONALS

- (1) Neither of the Contracting States shall extradite its own nationals. Nationality shall be determined as at the time of the commission of the offence for which extradition is requested.
- (2) If, pursuant to paragraph (1), the Requested State does not surrender the person claimed for the sole reason of nationality, it shall, in accordance with its laws and at the request of the Requesting State, submit the case to its competent authorities in order that proceedings may be taken if they are considered appropriate. If the Requested State requires additional documents, such documents shall be provided free of charge. The Requesting State shall be informed of the result of its request through the channels provided for in Article 7.

ARTICLE 4

GROUND OF REFUSAL

Extradition shall not be granted:

- (1) if the offence for which extradition is requested is regarded by the Requested State as an offence of a political nature. However, for

the purposes of this Treaty the following offences shall not be regarded as offences of a political nature;

- (a) An offence within the scope of multinational international treaty to which both Contracting States are parties and which imposes on them;
- (b) assault against the Heads of State or any of their families;
- (c) murder, robbery;
- (d) manslaughter or culpable homicide;
- (e) assault occasioning actual bodily harm, or causing injury, maliciously wounding or inflicting grievous bodily harm, whether by means of a weapon, a dangerous substance or otherwise;
- (f) the causing of an explosion likely to endanger life or cause serious damage to property;
- (g) the making or possession of an explosive substance by a person who intends either himself or through another person to endanger life or cause serious damage to property;
- (h) the possession of a firearm or ammunition by a person who intends either himself or through another person to endanger life;
- (i) the use of a firearm by a person with intent to resist or prevent the arrest or detention of himself or another person;
- (j) damaging property whether used for public utilities or otherwise with intent to endanger life or with reckless disregard as to whether the life of another would thereby be endangered;
- (k) kidnapping, abduction, false imprisonment or unlawful detention, including the taking of a hostage;
- (l) incitement to murder;
- (m) any other offence related to terrorism which at the time of the request is, under the law of the Requested state, not to be regarded as an offence of a political character;

- (n) an attempt or conspiracy to commit any of the foregoing offences or participation as an accomplice of a person who commits or attempts to commit such an offence.
- (2) if the offence for which extradition is requested is an offence under military law which is not also an offence under the general criminal law.
- (3) if there has been a final judgment rendered against the person in the Requested State in respect of the offence for which the person's extradition is requested.
- (4) if the person whose extradition is requested has, under the law of either Party, become immune from prosecution or punishment for any reason, including lapse of time or amnesty, the offence is of trivial nature or the accusation made is not in good faith or in the interests of justice.
- (5) If the Requested Party has substantial grounds to believe that the request has been made for the purpose of prosecuting or punishing a person on account of race, religion, nationality, or that the position of the said person at his trial may be prejudiced for any of these reasons.

ARTICLE 5

OBLIGATION TO PROSECUTE

- (1) Where the Requested State refuses a request for extradition of an accused, it shall submit the case to its competent authorities so that prosecution may be considered. Those authorities shall take their decision in accordance with the law of that State.

ARTICLE 6

POSTPONED OR CONDITIONAL SURRENDER

- (1) The Requested State may, after making its decision on the request for extradition, postpone the surrender of the person claimed in order that he may be proceeded against by that State or, if he has already been convicted, in order that he may serve his sentence in the territory of that State for an offence other than that for which extradition is requested.

- (2) The Requested State may, instead of postponing surrender, temporarily surrender the person claimed to the Requesting State in accordance with conditions to be determined by mutual agreement between both States,

ARTICLE 7

EXTRADITION PROCEDURES

- (1) The request for extradition under this Treaty shall be made through the diplomatic channel.
- (2) The request shall be accompanied by :
 - (a) as accurate a description as possible of the person sought, together with any other information which would help to establish his identity, nationality and residence;
 - (b) a statement of the facts of the offence for which extradition is requested, and
 - (c) the text, if any, of the law:
 - (i) defining that offence; and
 - (ii) prescribing the maximum punishment for that offence,
- (3) If the request relates to an accused person, it must also be accompanied by a warrant of arrest issued by a judge, magistrate or other competent authority in the territory of the Requesting State and by such evidence as, according to the law of the Requested State, would justify his committal for trial if the offence had been committed in the territory of the Requested State, including evidence that the person requested is the person to whom the warrant of arrest refers.
- (4) If the request relates to a person already convicted and sentenced, it shall also be accompanied:
 - (a) by a certificate of the conviction and sentence;
 - (b) by a statement that the person is not entitled to question the conviction or sentence and showing how much of the sentence has not been carried out.

- (5) If the Requested State considers that the evidence produced or information supplied for the purposes of this Treaty is not sufficient in order to enable a decision to be taken as to the request, additional evidence or information shall be submitted within such time as the Requested State shall require..

ARTICLE 8

PROVISIONAL ARREST

- (1) In urgent cases the person sought may, in accordance with the law of the Requested State, be provisionally arrested on the application of the competent authorities of the Requesting State. The application shall contain an indication of intention to request the extradition of that person and statement of the existence of a warrant of arrest or a conviction against him, and, if available, his description and such further information, if any, as would be necessary to justify the issue of a warrant of arrest had the offence been committed, or the person sought been convicted, in the territory of the Requested State.
- (2) A person arrested upon such an application shall be set at liberty upon the expiration of sixty days from the date of his arrest if request for his extradition shall not have been received. This provision shall not prevent the institution of further proceedings for the extradition of the person sought if a request is subsequently received.

ARTICLE 9

RULE OF SPECIALITY

- (1) A person extradited under the present Treaty shall not be proceeded against, sentenced, detained, re-extradited to a third State, or subjected to any other restriction of personal liberty in the territory of the requesting State for any offence committed before surrender other than:
 - (a) an offence for which extradition was granted;
 - (b) any other offence in respect of which the requested State consents. Consent shall be given if the offence for which it is requested is itself subject to extradition in accordance with the present Treaty.

- (2) A request for the consent or the requested State under the present article shall be accompanied by the documents mentioned in paragraph 2 of Article 7 of the present Treaty and a legal record of any statement made by the extradited person with respect to the offence.
- (3) Paragraph 1 of the present article shall not apply if the person has had an opportunity to leave the requesting State and has not done so within 60 days of final discharge in respect of the offence for which that person was extradited or if the person has voluntarily returned to the territory of the requesting State after leaving it.

ARTICLE 10

EXTRADITION TO A THIRD STATE

A person shall not be re-extradited to a third State, except when, having had an opportunity to leave the territory of the State to which he has been surrendered, he has not done so within sixty days of his final discharge, or has returned to that territory after having left it.

ARTICLE 11

EVIDENCE

Documents, in support of an extradition request, shall be received and admitted as evidence in extradition proceedings, provided the documents are certified by a judge, magistrate, or officer to be the original documents or true copies of such documents and are authenticated by the official seal of the court or competent authority.

ARTICLE 12

COMPETING REQUESTS

If extradition of the same person whether for the same offence or for different offences is requested by a Contracting State and a third State with which the Requested State has an extradition arrangement, the Requested State shall determine to which State the person shall be extradited, and shall not be obliged to give preference to the Contracting State.

ARTICLE 13

SURRENDER

- (1) If extradition is granted, the person sought shall be sent by the

authorities of the Requested State to such mutually agreed point of departure from the territory of that State'.

- (2) The Requesting State shall remove the person sought from the territory of the Requested State within one month or such longer period as may be permitted under the law of the Requested State. If the person is not removed within that period, the Requested State may refuse to extradite him for the same offence.
- (3) If extradition of the requested person is obstructed because of exceptional circumstances, the concerned party shall inform the other of these circumstances before the expiry of the appointed date. Both States shall agree upon a new date and, if required, a new place of extradition. In such case, the provision under paragraph 2 of this article shall be applicable.

ARTICLE 14

SURRENDER OF PROPERTY

- (1) When a request for extradition is granted, the Requested State shall, upon request and so far as its law allows, hand over to the Requesting State articles (including sums of money) which may serve as proof or evidence of the offence.
- (2) If the articles in question are liable to seizure or confiscation in the territory of the Requested State, the latter may, in connection with pending proceedings, temporarily retain them or hand them over on condition that they are returned.
- (3) These provisions shall not prejudice the rights of the Requested State or any person other than the person sought. When these rights exist the articles shall on request be returned to the Requested State without charge as soon as possible after the end of the proceedings.

ARTICLE 15

MUTUAL LEGAL ASSISTANCE IN EXTRADITION

Each Contracting State shall, to the extent permitted by its law, afford the other the widest measure of mutual assistance in criminal matters in connection with the offence for which extradition has been requested.

ARTICLE 16**EXPENSES**

- (1) The requested State shall meet the cost of any proceedings in its jurisdiction arising out of a request for extradition.
- (2) The requested State shall also bear the costs incurred in its territory in connection with the seizure and handing over of property, or the arrest and detention of the person whose extradition is sought.
- (3) The requesting State shall bear the costs incurred in conveying the person from the territory of the requested State, including transit costs.

ARTICLE 17**OBLIGATIONS UNDER INTERNATIONAL
CONVENTIONS/ TREATIES**

The present Treaty shall not affect the rights and obligations of the Contracting States arising from International Conventions/Treaties to which they are parties.

ARTICLE 18**CENTRAL AND COMPETENT AUTHORITIES**

For the purpose of this Treaty, the Contracting Parties shall communicate through their Central Authorities. The Central Authority for the Republic of India shall be the Ministry of External Affairs and for the Arab Republic of Egypt the Ministry of Justice.

ARTICLE 19**LANGUAGE**

Request and the supporting documents made pursuant to this Treaty shall be accompanied by a translation into the language of the Requested Party or in a certified copy or English Language.

ARTICLE 20**FINAL PROVISIONS**

- (1) The present Treaty shall enter into force from the date of receiving the last notification by either of the Contracting Parties through the

diplomatic channels, concerning the execution of the necessary measures for the ratification, according to the domestic laws of either Contracting Parties.

- (2) Either of the Contracting States may terminate this Treaty at any time by giving notice to the other through the diplomatic channel; and if such notice is given the Treaty shall cease to have effect six months after the receipt of the notice.

In witness whereof, the Undersigned being duly authorised thereto by their respective Governments, have signed this Treaty.

Done in duplicate at New Delhi this the 18th day of November 2008, in Hindi, Arabic and English, all languages being equally authentic. In case of any divergence of interpretation, the English text shall prevail.

On behalf of the Government
of the Republic of India

On behalf of the Government
of the Arab Republic of Egypt

524. Agreement on Mutual Legal Assistance in Criminal Matters between the Government of the Republic of India and the Government of the Arab Republic of Egypt.

Cairo, January 8, 2008

The Government of the Republic of India and the Government of the Arab Republic of Egypt (hereinafter referred to as Contracting States);

Guided by the traditional friendly relations between the two countries;

Recognizing the need to facilitate the widest measures of mutual legal assistance in criminal matters; and

Desiring to improve the effectiveness of both countries in the prevention, investigation, prosecution and suppression of crime, including crime related to terrorism and tracing, restraint, forfeiture or confiscation of the proceeds and instruments of crime, through cooperation and mutual legal assistance in criminal matters.

Have agreed as follows:

ARTICLE 1

SCOPE OF APPLICATION

1. Under this Agreement, the Contracting States shall grant each other the widest possible measure of mutual legal assistance in criminal matters, in respect of offences the punishment of which at the time of the request for assistance falls within the jurisdiction of the judicial authorities of the Requesting State.
2. This Agreement shall be without prejudice to other obligations between the Contracting States pursuant to other treaties or arrangements or otherwise, and shall not prevent them or their law enforcement agencies from providing assistance to each other pursuant to other treaties or arrangements.
3. This Agreement shall also apply to any request for mutual legal assistance relating to acts or omissions committed before its entry into force.
4. Assistance shall include, but not limited to:

- (a) measures to locate, restrain, forfeit or confiscate the proceeds and instruments of crime;
 - (b) taking of evidence and obtaining of statements of persons;
 - (c) providing of information, documents and other records, including criminal and judicial records;
 - (d) location of persons and objects, including their identification;
 - (e) search and seizure;
 - (f) delivery of objects, including lending of exhibits;
 - (g) assisting in the availability of detained persons or others to give evidence or assist in investigations;
 - (h) service of documents, including documents seeking the attendance of persons; and
 - (i) other assistance consistent with the objects of this Agreement.
5. This Agreement does not apply to:
- (a) the arrest or detention of any person with a view to the extradition of that person;
 - (b) the enforcement in the Requested State of criminal judgments imposed in the Requesting State except to the extent permitted by the law of the Requested State;
 - (c) the transfer of persons in custody to serve sentences; and
 - (d) the transfer of proceedings in criminal matters.

ARTICLE 2

DEFINITIONS

For the purpose of this Agreement:

- (a) For India "criminal matters" means investigations, inquiries, trials or other criminal proceedings relating to an offence created by a law of Parliament or by the legislature of a state and for Egypt, means any criminal proceeding relating to an offence created by a law in force.

- (b) "criminal mailers" shall also include investigations or proceedings relating to offences concerning taxation, duties, customs and international transfer of capital or payments',
- (c) "proceeds of crime" means any property that is derived or realised directly or indirectly by any person from an offence or offences or the value of any such property;
- (d) "property" Includes money and all kinds of movable or immovable, tangible or intangible property, and includes any interest in such property;
- (e) "confiscation" means any measure resulting in the deprivation of property;
- (f) "instruments of crime" means any property which is or is intended to be used in connection with the commission of an offence; and
- (g) "the restraint of property" means any measure for the prevention of dealing in or transfer or disposal of property.

ARTICLE 3

CENTRAL AUTHORITIES

1. Requests for assistance under this Agreement shall be made through the Central authorities of the contracting States who will ensure that the request is prepared in accordance with this Agreement.
2. The Central Authority of the Requested State upon receipt of a request for assistance, shall examine whether it is in accordance with the provisions of this Agreement and other relevant laws; and if satisfied may process the request for its compliance.
3. In the Republic of India, the Central Authority shall be the Ministry of Home Affairs. In the Arab Republic of Egypt, the Central Authority shall be the Ministry of Justice.

ARTICLE 4

CONTENTS OF REQUESTS

1. Requests for assistance under this Agreement shall be made in writing. However, in urgent circumstances, or where otherwise

permitted by the Requested State, requests may be made orally but shall be confirmed in writing thereafter.

2. Requests for assistance shall include a statement of:
 - (a) the name of the competent authority conducting the investigation or proceedings to which the request relates;
 - (b) a description of the facts alleged to constitute the offence and a statement or text of the relevant laws, except in cases of a request for service of documents;
 - (c) the purpose for which the request is made and the nature of the assistance sought;
 - (d) details of any particular procedure or requirement that the Requesting State wishes to be followed;
 - (e) any time limit within which compliance with the request is desired;
 - (f) the identity, nationality and location of the person or persons who are the subject of the investigation or proceedings;
 - (g) in the case of request for the taking of evidence or search and seizure, a statement indicating the basis for belief that evidence may be found in the jurisdiction of the Requested State;
 - (h) in the case of request to take evidence from a person, a statement as to whether sworn or affirmed statements are required, and a description of the subject matter of the evidence or statement sought;
 - (i) in the case of lending of exhibits, the person or class of persons who will have custody of the exhibit, the place to which the exhibit is to be removed, any tests to be conducted and the date by which the exhibit will be returned;
 - (j) in the case of making detained persons available, the person or class of persons who will have custody during the transfer, the place to which the detained person is to be transferred and the date of that person's return;

- (k) the need, if any, for confidentiality and the reasons therefor; and
 - (l) in the case of requests for restraint or forfeiture of proceeds or instruments of crime, where possible:
 - (i) a detailed description of the proceeds or instruments including their location;
 - (ii) a statement describing the basis for belief that the monies or property are the proceeds or instruments of crime; and
 - (iii) a statement describing the evidence that would be available for a proceeding in the Requested State.
3. The Requested State shall not refuse to execute the request solely because it does not include all of the information described under this article, if it can otherwise be executed according to the law of the Requested State.
4. If the Requested State considers that additional information is needed to enable the request to be dealt with, that State may request such additional information.

ARTICLE 5

EXECUTION OF REQUEST

1. For the purpose of this Agreement, mutual legal assistance shall be granted irrespective of whether the assistance is sought or is to be provided by a court or some other competent authority.
2. Requests for assistance shall be executed in accordance with the law and practice of the Requested State and may be executed in accordance with any requirements/manner specified in the request if not incompatible with the law of the Requested State.
3. The Requested State shall, upon request, inform the Requesting State of any circumstances which are likely to cause a significant delay in execution of the request.
4. The Requested State shall promptly inform the Requesting State of its decision not to execute in whole or in part a request for assistance or to postpone execution and shall give reasons for that decision.

ARTICLE 6
REFUSAL OF ASSISTANCE

1. The Requested State may refuse the assistance if:
 - (a) the execution of the request would impair its sovereignty, security, public order or other essential interests or prejudice the safety of any person;
 - (b) the execution of the request would be contrary to its domestic law;
 - (c) if the request seeking restraint, forfeiture or confiscation of proceeds or instruments of activity which, had it occurred within the jurisdiction of the Requested State, would not have been an activity in respect of which a confiscation order could have been made;
 - (d) the request relates to an offence in respect of which the accused person had been finally acquitted or pardoned;
 - (e) the offence is regarded by the Requested State as ex-facie being of a political nature, except serious offences against the life, the physical integrity or the freedom of person;
 - (f) there are substantial grounds for believing that the request for assistance has been made for the purpose of prosecuting a person on account of that person's race, sex, religion, nationality, ethnic origin or political opinions or that that person's position may be prejudiced for any of those reasons;
 - (g) the request relates to an offence that is subject to investigation or prosecution in the Requested State or the prosecution of which in the Requesting State would be incompatible with the Requested State's law on double jeopardy;
 - (h) the assistance requested requires the Requested State to carry out compulsory measures that would be inconsistent with its law and practice, had the offence been the subject of investigation or prosecution under its own jurisdiction; and

- (i) the act is an offence under military law which is also not an offence under general criminal law.
- 2. Assistance for banking or financial transactions shall be in accordance with national legislation of the Requested State. The request for legal assistance for the crime, including crime related to terrorism, or transnational organized crime under any International or Regional Convention to which both the Contracting States are parties, shall not be refused.
- 3. The Requested State may postpone the execution of the request if its immediate execution would interfere with an ongoing investigation or prosecution in the Requested State.
- 4. Before refusing or postponing the execution of a request for assistance, the Requested State shall consider whether assistance may be granted subject to such conditions as it deems necessary. If the Requesting State accepts assistance subject to these conditions, it shall comply with them.
- 5. Reasons shall be given for refusal or postponement of mutual assistance.

ARTICLE 7

TRANSMISSION OF DOCUMENTS AND OBJECTS

- 1. The Requested State shall provide copies of documents and records insofar as they are open to public access as part of a public register or otherwise, or insofar as they are available for purchase or inspection by the public.
- 2. The Requested State shall provide copies of any other document or record under the conditions as it may provide to its own law enforcement and judicial authorities.
- 3. Insofar as not prohibited by its law the Requested State shall transmit documents, objects and records in a form or accompanied by such certification as may be requested by the Requesting State in order to make them admissible according to the law of the Requesting State. The original records, documents and objects so transmitted to the Requesting State, shall be returned to the Requested State as soon as possible.

ARTICLE 8**OBTAINING OF EVIDENCE**

1. The Requested State shall, in conformity with its law and upon request, take the sworn or affirmed testimony. or otherwise obtain statements of persons, including those in custody or require them to produce items of evidence for transmission to the Requesting State.
2. Subject to the law of the Requested State, commissioners, other officials of the Requesting State and persons parties to the proceedings in the Requesting State shall be permitted to be present when evidence is taken in the Requested State.
3. Persons parties to the proceedings have the right to be represented by their counsels, to pose questions through the representatives of the Competent Authority of the Requested State and to make a verbatim transcript of the proceedings. The use of technical means to make such a verbatim transcript may be permitted according to the law of the Requested State.
4. For the purpose of request under this Article, the Requesting State shall specify the questions to be put to the witnesses or persons giving evidence and the Subject matter about which they are to be examined. If necessary, any questions in addition to those specified in the request, may be put through the representative of the Competent Authority of the Requested State to the witness or person giving evidence by the representatives of the Requesting State present at the time of recording of evidence.

ARTICLE 9**AVAILABILITY OF PERSONS TO GIVE EVIDENCE OR ASSIST IN INVESTIGATION IN THE REQUESTING STATE**

1. The Requesting State may request the assistance of the Requested State in making available a.person:
 - (a) to appear in proceedings in relation to a criminal matter in the Requesting State unless that person is the person charged; or
 - (b) to assist in the investigations in relation to a criminal matter in the Requesting State.

2. The Requested State shall make available the person to appear as a witness or expert in proceedings or to assist in the investigations or to seek that person's concurrence. Where appropriate, the Requested State shall satisfy itself that satisfactory arrangements have been made for the person's safety.
3. The request or the summons shall indicate the approximate allowances and the travel and subsistence expenses payable by the Requesting State.
4. Upon request, the Requested State may grant the person an advance, which shall be refunded by the Requesting State.

ARTICLE 10

MAKING DETAINED PERSONS AVAILABLE TO GIVE EVIDENCE OR ASSIST IN INVESTIGATIONS

1. If the Requested State agrees and its law so permits, a person in custody in the Requested State may, at the request of the Requesting State, be temporarily transferred to the Requesting State to give evidence or assist in investigations or proceedings, provided that the person consents to that transfer and there are no overriding grounds against transferring the person.
2. While the person transferred is required to be kept in custody under the law of the Requested State, the Requesting State shall hold that person in custody and shall return the person in custody at the conclusion of the execution of the request.
3. Where the Requested State advises the Requesting State that transferred person is no longer required to be held in custody, that person shall be set at liberty and be treated as person referred to in Article 9.
4. The transfer of the person in custody may be postponed if the presence of that person is necessary in a criminal action pending in the territory of the Requested State.

ARTICLE 11

SAFE CONDUCT

1. A person present in the Requesting State in response to a request seeking that person's attendance shall not be prosecuted, detained

or subjected to any other restriction of personal liberty in the territory of that State for any acts or omissions which preceded that person's departure from the Requested State, nor shall that person be obliged to give evidence or assist in any investigation in any proceeding other than the proceedings to which the request relates.

2. A person, who is present in the Requesting State by consent as a result of a request for the person's attendance to answer before a judicial authority any acts, omissions or convictions shall not be prosecuted or detained or subjected to any other restriction of personal liberty for acts and omissions or convictions Which preceded that person's departure from the Requested State, not specified in the request.
3. Paragraphs 1 and 2 of this Article shall cease to apply if a person, being free to leave the Requesting State, has not left it within a period of 30 days after being officially notified that that person's attendance is no longer required or, having left that territory, has voluntarily returned.
4. A person who does not consent to a request pursuant to Article 10 or accepts an invitation pursuant to Article 9 shall not, by reason thereof, be liable to any penalty or be subjected to any coercive measure, notwithstanding any contrary statement in the request or summons.

ARTICLE 12

PROCEEDS AND INSTRUMENTS OF CRIME

1. The Requested State shall, upon request, endeavour to ascertain whether any proceeds or instruments of a crime are located within its jurisdiction and shall notify the Requesting State of the results of its inquiries. In making the request, the Requesting State shall notify the Requested State of the basis of its belief that such proceeds or instruments may be located within its jurisdiction.
2. A request may be made for assistance in securing the forfeiture or confiscation of proceeds or instruments of crime. Such assistance shall be given in accordance with the law of the Requested State by whatever means are appropriate. This may include giving effect to an order made by a court or other competent authority in the Requesting State or submitting the request to a competent authority

for the purpose of seeking a forfeiture or confiscation order in the Requested State.

3. A request may be made for assistance in the restraint of property for the purpose of ensuring that it is available to satisfy an order for the recovery of proceeds or instruments.
4. Where, pursuant to paragraph 1 of the present Article suspected proceeds of crime are found, the Requested State shall upon request take such measures as permitted by its law to prevent any dealing in, transfer or disposal of, those suspected proceeds of crime, pending a final determination in respect of those proceeds by a court of the Requesting State.
5. The Requested State shall, to the extent permitted by its law, give effect to or permit enforcement of a final order forfeiting or confiscating the proceeds of crime made by a court of the Requesting State or take other appropriate action to secure the proceeds following a request by the Requesting State.
6. The Parties shall ensure that the right of bonafide third parties shall be respected in the application of the present Agreement.

ARTICLE 13

PROTECTION OF CONFIDENTIALITY

1. The Requested State may require, after consultation with the Requesting State that information or evidence furnished or the source of such information or evidence be kept confidential or be disclosed or used only subject to terms and conditions as it may specify.
2. The Requested State shall use its best endeavour to keep confidential the request for assistance its contents and its supporting documents as well as the fact of granting of such assistance. If the request cannot be executed without breaching the confidentiality requirement, the Requested State shall so inform the Requesting State which shall then determine whether the request should nevertheless be executed.
3. The Requesting State shall keep confidential evidence and information provided by the Requested State, except to the extent that the evidence and information is needed for the investigation and proceedings described in the request.

ARTICLE 14**LIMITATION OF USE**

The Requesting State shall not, without the consent of the Requested State, disclose, use or transfer information or evidence provided by the Requested State for investigations or proceedings other than those stated in the request. However, in cases where the charge is altered, the material provided may be used insofar as the offence is an offence in respect of which mutual assistance could be provided under this Agreement.

ARTICLE 15**AUTHENTICATION**

Evidence or documents transmitted pursuant to this Agreement shall not require any form of authentication, save as is specified in Article 7.

ARTICLE 16**LANGUAGE**

Requests and supporting documents shall be accompanied by a translation in English or in the language of the Requested State.

ARTICLE 17**COSTS**

1. The Requested State shall meet the cost of executing the request for assistance, except that the Requesting State shall bear:
 - (a) the expenses associated with conveying any person to or from the territory of the Requested State at (a) the request of the Requesting State, and any allowance or expenses payable to that person while in the Requesting State, pursuant to a request under Articles 9 or 10 of this Agreement; and
 - (b) the expenses and fees of experts either in the Requested State or the Requesting State.
2. If it becomes apparent that the execution of the request requires expenses of an extraordinary nature, the Contracting States shall consult to determine the terms and conditions under which the requested assistance can be provided.

ARTICLE 18**SERVICE OF DOCUMENTS**

1. The Requested State shall effect service of documents that are transmitted to it for this purpose by the Requesting State.
2. A request to effect service of summons shall be made to the Requested State not less than ninety days before the date on which the appearance of a person is required. In urgent cases, the Requested State may waive the time requirement.

ARTICLE 19**RIGHT OR OBLIGATION TO DECLINE TO GIVE EVIDENCE**

1. A person who is required to give evidence in the Requested or Requesting State may decline to give evidence where either:
 - (a) the law of the Requested State permits or requires that person to decline to give evidence in similar circumstances in proceedings originating in the Requested State; or
 - (b) the law of the Requesting State permits or requires that person to decline to give evidence in similar circumstances in proceedings originating in the Requesting State.
2. If a person claims that there is a right or obligation to decline to give evidence under the law of the other State, the State where that person is present shall, with respect thereto, rely on a certificate of the competent authority of the other State as evidence of the existence or non-existence of that right or obligation.

ARTICLE 20**PROVISION OF PUBLICLY AVAILABLE DOCUMENTS
AND OTHER RECORDS**

1. The Requested State shall provide copies of documents and records insofar as they are open to public access as part of a public register or otherwise, or insofar as they are available for purchase or inspection by the public.
2. The Requested State may provide copies of any other document or record under the same conditions as such document or record may be provided to its own law enforcement and judicial authorities.

ARTICLE 21**SEARCH AND SEIZURE**

The Requested State shall, insofar as its law permits, carry out requests for search and seizure and delivery of any material to the Requesting State for evidentiary purposes, provided that the rights of bonafide third parties are protected.

ARTICLE 22**ENTRY INTO FORCE**

The present Agreement shall enter into force from the date of receiving the last notification by either of the Contracting States through the diplomatic channels, concerning the execution of the necessary measures for the ratification, according to the domestic laws of either Contracting State.

ARTICLE 23**TERMINATION**

Either Contracting State may terminate this Agreement by giving notice in writing to the other State. Such termination shall take effect six months following the date on which it is received by the other State.

In witness whereof, the undersigned, being duly authorized thereto by their respective Governments, have signed this Agreement.

Done at Cairo this the eighth day of January, 2008. (Two Thousand and Eight) in two originals each, in Hindi, Arabic and English, all texts being equally authentic. However, in case of any divergence of interpretation, the English text shall prevail.

525. Memorandum of Understanding on Trade and Technical Cooperation between the Government of the Republic of India and the Government of the Arab Republic of Egypt.

New Delhi, November 18, 2008.

The Government of the **Republic of India** and the Government of the **Arab Republic of Egypt** hereinafter referred to as "the Parties";

Considering the friendly relations between the two countries;

Desiring to enhance the partnership, 'friendship and the spirit of cooperation between the two countries and to further develop trade and economic relationship between them;

Recognizing the benefits to each party resulting from increased trade and Investment flows, and the essential role of private investment, both domestic and foreign, in furthering growth, creating jobs, expanding trade, technology upgradation and accelerating economic development;

Reiterating the need to create favorable conditions for trade in goods, services and promotion of investments and also the need to provide new dynamism to bilateral industries cooperation through stimulating technological innovation and exchange of technological know-how;

Stressing the important role of the business sector in enhancing trade and investment between the countries;

Article - 1

Promotion of Trade in Goods and Service

- a) Promote bilateral trade on the basis of equality and mutual benefits; consistent with their WTO commitments;
- b) Eliminate obstacles and restrictions on bilateral trade in goods;
- d) Set up bilateral mechanisms to explore methods to enhance trade in goods, investments and the possibility of liberalizing trade in services through establishing Joint Study Group referred to in Article (3).
- d) Cooperate for increasing trade in services and the flow of expertise and technology by entering into a dialogue on issues relating to trade

in services which are of export interest to both the parties including exchange of information.,

Article - 2

Joint Trade Committee

With the view to enhancing the implementation of this Memorandum of Understanding and defining methods of developing trade relations between them, the parties agree to establish a high senior officials committee to represent the trade ministries in the two countries (hereinafter referred to as the committee).

The duties of the Committee shall comprise, in particular, the following:

- a) Discussions on the development of bilateral economic relations;
- b) Identifying new possibilities for further development of economic cooperation
- c) Drawing up suggestions, for improvement in terms of economic cooperation between enterprises of both countries and
- d) Making recommendation for the implementation of this Memorandum.

The Committee shall meet alternatively on an annual basis in Cairo and Delhi.

Article - 3

Establishing Joint Study Group

Both parties shall establish a Joint Study Group to identify opportunities for expanding trade and investment, and to enhance economic cooperation in areas of mutual interest. The Joint Study Group shall review the institutional framework, infrastructure and mechanisms in bilateral trade and economic relations and shall recommend measures to facilitate and optimize these relations. The Joint Study Group shall also examine the feasibility of putting in place a comprehensive policy framework consistent with WTO principles, for enhancing trade flows in goods, services and investment between the parties.

Article - 4

Existing Institutional Mechanism

Both parties shall continue to engage with each other on a continuous basis through the institutional mechanism of the Joint Trade Committee for

expanding and deepening bilateral trade. The Egypt - India Joint Business Council and Egypt India Joint Business Group comprising of apex trade chambers and businessmen of the two sides shall be encouraged to evolve modalities aimed at exploring and creating opportunities for developing trade relations between the two countries.

Article - 5

Exhibitions/Fairs & Trade Missions

Both Parties shall encourage export promotion and trade bodies concerned to participate in Trade Exhibitions and Trade Fairs held in each other territories in order to create awareness about their goods, services and capabilities and thus intensify trade and economic engagement between the two sides. The parties may explore and promote trade opportunities and exchange trade delegations. Such transactions (between private parties) however, should be as per the prevalent law and practices of both the countries and payments involved, if any should be as per the Foreign Exchange Policy of the country.

Article - 6

Industrial Cooperation & Technology Exchange

Both parties shall, in accordance with their respective laws and regulations, promote industrial cooperation, and enhance and encourage competitiveness, especially in the areas of automotive and auto components, food processing, pharmaceuticals, textiles, apparel, chemicals & petrochemicals, fertilizers and electronic Industries.

They shall also look into possibilities of cooperations in the following areas:

- a. Joint research and development projects for research, technical development and industrial application in Information and Communication Technology.
- b. Cooperation in the commercialization of the results of scientific and technological activities;
- c. Promotion of technology exchanges and research & development activities through alliances, scientific institutions / organizations of the two sides, joint investment and other cooperative avenues of mutual benefit to the industries in the two countries;

- d. Joint organization of seminars, conference etc., in the above areas.

Article - 7
Promotion of Investments

Both parties shall strengthen cooperation for increasing flow of capital and exchanging expertise and technology through;

- a) Methodologies for identifying investment opportunities and information channels on investment regulations;
- b) Establishing mechanisms for encouraging and promoting investments;
- c) Providing information on measures to attract foreign direct investment.
- d) Promotion of investments may be in line with the existing Bilateral. Investment Promotion and Protection Agreement (BIP A) between both the countries.

Article - 8
Human Resource Development and Capacity Building

Both Parties shall cooperate in the following areas on mutually agreed terms and conditions and in accordance with their respective laws and regulations:

- a) Exchange information and experts with academic and/or technical expertise and industrial experience in sectors like Food processing industries, printing and packaging, chemicals, building materials; pharmaceuticals, textiles, healthcare, shipping, furniture and wood works to provide for 'know how' and deliverables basis 'Train the Trainers' approach through on the job training;
- b) Capacity building in trade remedies, macroeconomic issues, multilateral trade negotiations, commercial diplomacy and export and investment promotion;
- c) Enhance links between research and training centers, specialized agencies and business organizations.

Article - 9
Other Areas of Economic Cooperation

Economic cooperation shall be extended to support the efforts of modernization, restructuring and the promotion of sectors such as Agriculture and veterinary science, transportation and infrastructure and tourism.

Article - 10
Amendments

The Parties may, by mutual consent amend this Memorandum of Understanding.

Any such amendments shall enter into force upon its signature.

Article - 11
Settlement of Dispute

Any Dispute between the parties arising out of the interpretations of this Memorandum of Understanding shall be settled amicably through consultation or negotiation between the parties through diplomatic channels.

Article - 12
Validity and Termination

This Memorandum of Understanding shall enter into force upon signature by both parties, and shall remain in force until it is terminated by either party by giving a 90 days written notice to the other party through diplomatic channels, indicating its intention to terminate this Memorandum of Understanding.

Each party has the right to terminate this Memorandum of Understanding through a written notice served to the other Party.

Article - 13
Affect of Termination on Projects

Termination of this Memorandum of Understanding shall not affect the completion of any project undertaken pursuant to this Memorandum of Understanding, prior to its termination, unless the parties agree otherwise.

In witness whereof, the following representatives duly authorized thereto by their respective governments have signed this Memorandum of Understanding.

Signed at New Delhi on this 18th Day of November 2008 in two originals each in English.

526. Agreement between the Government of the Republic of India and the Government of the Arab Republic of Egypt on the Abolition of Visa requirement for holders of Diplomatic, Special and Official /Service Passports.

New Delhi, November 18, 2008.

The Government of **the Republic of India** and the Government of **the Arab Republic of Egypt**.

Hereafter referred to singularly as the “Contracting Party” and collectively as the “Contracting Parties”;

Considering the interest of both countries to strengthen their friendly relations, and

Desiring to facilitate the entry of the citizens of the Republic of India and the citizens of Arab Republic of Egypt who are holders of diplomatic, Special or official/service passports into their respective countries.

Have Agreed as follows:

Article - 1

1. A citizen of the Republic of India, who is in possession of a valid diplomatic or official passport and a citizen of Arab Republic of Egypt, who is in possession of a valid diplomatic, special or service passport; shall be permitted to enter into, exit from and transit through the territory of the other Contracting Party through their respective international points of entry/exit without visas.

2. A citizen of either Contracting Party, holding the said passport shall be allowed to stay in the territory of the other Contracting Party for the maximum period of ninety (90) days without a visa.

Article - 2

1. A citizen of either Contracting Party, who is assigned as a member of the diplomatic or consular staff in the territory of the other Contracting Party and is in possession of a valid diplomatic, Special or official/ service passport, shall not be required to obtain a visa to enter the territory of the other Contracting Party, and shall be granted, on a written request from the diplomatic mission/consular post concerned, within ninety days of the arrival of the diplomatic, Special or official/ service passport holder, a residence visa for period of his/her official stay.
2. A citizen of either Contracting Party being the representative of his/ her country in an international organization located in the territory of other Contracting Party holding the said passport shall also enjoy the rights mentioned in paragraph-1 of this Article.
3. The facilities enumerated in paragraphs 1 and 2 of this Article shall also apply to the spouse of a member of the diplomatic Mission or Consulate or representative in international organization, their children and their dependent parents, provided they hold a similar category of passport or the children's names are entered in their father's or mother's passport.

Article - 3

1. A citizen of either Contracting Party, who is in possession of a valid diplomatic, Special or official/service passport and has to attend a meeting or conference convened by an international organization or Government, in the territory of the other Contracting Party, shall not be required to obtain a visa to enter and stay in the territory of the other Contracting Party.
2. The holders of diplomatic, special or official/service passports of either Contracting Party who are employed by an international organization, body, agency or any other such entity, would be required to obtain visa prior to their entry into the territory of the other Contracting Party for official or private visits.

Article - 4

1. Either Contracting Party shall reserve the right to refuse entry or stay in its territory to citizens of the other Contracting Party on grounds of state security, public order or for public health reasons, as well as the right to shorten or terminate the stay of such a person in accordance with the laws and regulations of the receiving state.
2. If a citizen of either Contracting Party loses his/her passport in the territory of the other Contracting Party, he/she shall inform the authorities concerned of the host country for appropriate action. The diplomatic Mission or Consulate concerned will issue a new passport or travel document to its citizen and inform the concerned authorities of the host Government.

Article - 5

Citizens of either Contracting Party, being holders of diplomatic, special or official/service passports shall abide by the laws and regulations of the other Contracting Party while crossing its frontier and throughout the duration of their stay in its territory.

Article - 6

1. For the purposes of this Agreement, each Contracting Party shall transmit to the other, through diplomatic channels, specimens of its respective passports, including a detailed description of such documents currently used, at least thirty(30) days before the entry into force of this Agreement.
2. Each Contracting Party shall also transmit to the other through diplomatic channels, specimen of its new or modified passports, including a detailed description of such documents, at least thirty (30) days before they are brought into force.

Article - 7

1. The application of the present Agreement may be provisionally suspended, in whole or in part. by either Contracting Party on grounds of State security, public order or for public health reasons.
2. The Contracting Parties shall notify without delay each other, through

diplomatic channels, on the imposed restrictions and their revocation immediately as soon as the reasons of suspension cease to exist.

3. Paragraphs 1 and 2 do not affect the right of the other Contracting Party to similarly provisionally suspend the application of this Agreement, in whole or in part, during the period of suspension by the other Contracting Party.

Article - 8

Either Contracting Party may request in writing, through diplomatic channels, a revision or amendment of the whole or part of this Agreement. Any such revision or amendment, which has been agreed to by the Contracting Parties, shall come into effect on a date to be mutually agreed upon and shall accordingly form part of this Agreement.

Article - 9

Any difference or dispute arising out of the implementation of the provisions of the Agreement shall be settled amicably by consultation or negotiation between the Contracting Parties without reference to any third party or an international tribunal.

Article - 10

This Agreement shall enter into force on a date to be mutually agreed upon by the Contracting Parties, which shall be notified through the exchange of Diplomatic Notes. This Agreement shall remain in force for an indefinite period and may be terminated by either Contracting Party by notification through diplomatic channels, which shall enter into force ninety (90) days after the date of such notification.

In witness whereof, the undersigned being duly authorized by their respective Governments, have signed the present Agreement.

Done at New Delhi on this eighteenth day of November in the year two thousand eight (2008) in two(2) originals; each in the Hindi, Arabic and English languages, all texts, being equally authentic. In the event of any divergence of interpretation, the English text shall prevail.

527. Joint Statement issued by the Ministry of Commerce on the visit of Egyptian Minister of Trade and Industry Rachid Mohamed.

New Delhi, April 15, 2008.

Shri Kamal Nath, Commerce & Industry Minister held a bilateral meeting with the Minister of Trade & Industry of Egypt Mr. Rachid Mohamed Rachid on 15th April, 2008 in New Delhi. Eng. Rachid is paying an official visit to India from April 14 to 17, 2008. Both the Ministers were assisted by senior officials during the meeting.

The talks were held in a cordial and constructive atmosphere. Both the Ministers expressed happiness at the warm and close multifaceted relations between India and Egypt and exchanged views on a wide range of issues including bilateral and multilateral trade and investment related issues. Both the Ministers expressed satisfaction at the level of bilateral trade which is approaching the US \$ 2.5 billion mark. It was noted that India's exports to Egypt have grown by 51% last year and Egypt's exports to India have grown by 35%. It was also noted that Egypt has emerged as India's largest trade partner in North Africa accounting for 40% percent of India's trade in the region and bilateral trade turnover has grown nearly nine fold in terms of value during the period 2000-07. Both the Ministers expressed the view that the trade basket is required to be expanded to tap the enormous potential.

Both the Ministers appreciated the economic reforms being vigorously pursued by India and Egypt and felt that these are catalytic to expansion of bilateral trade and investment and will facilitate strengthening of bilateral economic and commercial relations. Shri Kamal Nath, Commerce & Industry Minister welcomed the Egyptian initiative for establishing an Indian Industrial Zone in Egypt exclusively for Indian companies to attract Indian Investments targeting domestic market as well as nearby International markets in Europe, Africa and the Middle East¹.

1 Later in May when the Minister of State for Commerce and Power, Jairam Ramesh visited Cairo as the Special Envoy of Prime Minister to participate in the World Economic Forum (Middle East), he gave a further push to economic relations with Egypt in his discussions with Egyptian Prime Minister Ahmed Mahmoud Mohamed Nazif and senior Ministers. He highlighted the need for greater Indian participation in the Egyptian energy sector. He pointed to the need for assured energy supplies to ensure that some of the key mega projects, which were in the final stages of discussion, take off. Egypt currently produced around 7,00,000 barrels of oil per day and had estimated gas

The two sides agreed on the following:

- Both sides will consider participation in various international trade fairs and specialized exhibitions held by each other and will keep each other informed to enable significant participation.
- Egypt will provide to India details of benefits and incentives that would become available to Indian companies on their participation in the Industrial Zone of Egypt.
- Both sides will explore possibilities of exchanging industrial know how and formation of joint ventures in the sectors of Textiles, Iron and Steel, Cement, Building Materials, Automotive and its components, Health, Hospitality, Petrochemicals, Chemicals and Fertilizers, Drugs and Vaccines, Communication and Information Technology, New and Renewable Energy and Organic Fuel for Industrial Use, Infrastructure, housing and real-estate development projects. Egypt will identify specific areas / products of JVs.
- Egypt will look into the prospect of Egyptian Banks establishing Lines of Credit, on mutually beneficial commercial terms, with EXIM Bank of India.
- The Indian Institute of Foreign Trade (IIFT) will arrange either in India or in Egypt training, on mutually agreeable terms, to Egypt Government personnel in subjects related to Dumping measures, WTO Issues, organizing commercial activities in domestic markets (anti monopoly measures, quantitative analysis and cost benefit analysis, macro economic analysis, commercial diplomacy and export promotion, consumers protection, price monitoring) etc.

reserves of around 66 Trillion Cubic Feet (TCF). Mr. Ramesh said the ONGC (Videsh) - the overseas arm of the Oil and Natural Gas Corporation - had already made a promising start in its oil exploration venture in Egypt. The company and its Egyptian partner IPR Red Sea Incorporated drilled an exploration well in the Gulf of Suez with a promising flow of around 4,600 barrels a day. The two companies were also drilling another two exploratory wells in the North Ramadan Concession in the same area. Besides, the ONGC (Videsh) was negotiating a 33 per cent stake in an offshore block operated by Shell in the northeast Mediterranean. A couple of months earlier, in March the Gujarat State Petroleum Corporation (GSPC) and its Egyptian partners EGAS and GANOPE had signed a deal to explore the North Hap'y offshore field. It would also have exploration rights in the South Diyuran onshore block located in Egypt's Western Desert area. Apart from the public sector giant Indian Oil Corporation (IOC), some of the top Indian private companies including Reliance Industries, Tata and Essar Global

- India will examine within two months the Joint Action Plan on Trade and Technical Cooperation, and Indian Technical Experts for Egyptian Industry.
- The Egyptian side will look into India's request for accelerating the process of registration for WHO/GMP certified Indian pharma companies and will also consider the Indian offer for supply of technical know-how for manufacture of bulk drugs by Indian companies and training of drug regulatory personnel of Egypt.
- Egypt will also consider India's suggestion for setting up an Indo-Egyptian Joint Working Group on Pharmaceuticals.
- Egypt will consider the proposal of RITES for assistance in modernization of the rail system and infrastructure in Egypt.
- Egypt will consider the proposal of TCIL for assistance in the ICT sector.
- Egypt will consider the offers of M/s. MECON and SAIL for technical assistance in upgrading steel sector of Egypt.
- Egypt will consider the proposals of the Ministry of MSMEs and MSMEDO/ NSIC for assistance in the SMEs sector on paid basis.
- Egypt will consider the offer of BMTPC for technical assistance in the sector of low cost housing.

were interested in setting up refineries, LNG terminals and petrochemical complexes. Uncertainty over gas supplies had delayed the final decision on the proposed \$1billion investment by Tata Chemicals for the manufacture of ammonia and urea. Another Tata Group company the the Tata Consultancy Services was holding negotiations with the Egyptian authorities to develop a software development and training centre. Satyam Computers inaugurated a Global Solutions Centre at Smart Village near Cairo in March to cater to the Middle East and North Africa market and Europe. During his discussions, Minister Ramesh said the Bharat Heavy Electricals Limited had already completed the supply, installation and commissioning of the contracted electric transformers in Egypt. The company now intended to make substantial investments for the manufacture of boilers and transformers in Egypt.

528. Briefing Points by Official Spokesperson on External Affairs Minister's visit to Egypt.

New Delhi, July 2, 2008.

- EAM called on President Hosny Mubarak in Sharm el Sheikh for about half an hour today. They reviewed bilateral relations in the context of recent Ministerial visits.
- The President particularly referred to India's economic growth and possibilities of increased trade and economic cooperation between the two countries, particularly IT, pharma sectors, petrochemicals and energy.
- India's prominent share in Egypt's trade was stressed.
- Reiterated commitment to revitalize NAM in the light of Egypt's forthcoming chairmanship of NAM in 2009; in the same context importance of south cooperation was stressed.
- Relevance of climate change in ensuring sustainable development for developing countries was discussed.
- Later this evening EAM held delegation level talks with Egyptian foreign minister followed by banquet in his honour in Cairo¹.

1 The External Affairs Minister addressing a press conference along with the Egyptian Foreign Minister in Cairo stressed "coercive armed engagement" with any country should be prohibited and reiterated that it was opposed to the use of force against Iran and renewed the call for a dialogue to resolve the crisis surrounding the Gulf state. He said: "Any act against a sovereign country, member of the United Nations, is unacceptable, undesirable and should not be indulged in." The "international community" should not accept such a move. In their interaction both Ministers emphasised that the relationship between India and Egypt, which were founding members of the Non-Aligned Movement, should be revitalised. Mr. Mukherjee said the NAM should be viewed in a new perspective. Its economic dimension needed to be enhanced, so that fresh energy could be infused in South-South cooperation. He said Egypt, which was hosting the 2009 NAM summit, would take the movement forward and advance the cause of developing nations. The two Ministers acknowledged that they needed to work together to re-engage Africa. Asked whether India could assist Egypt in a civilian nuclear energy programme, Mr. Mukherjee said this would not be possible due to technical limitations. He said India was currently ineligible to engage in nuclear trade, as it was neither a

529. Joint India-Egypt Statement issued on the visit of External Affairs Minister Pranab Mukherjee to Egypt.

New Delhi, July 3, 2008.

Shri Pranab Mukherjee, Minister of External Affairs, visited Egypt from 01 to 03 July 2008 at the invitation of His Excellency Mr. Ahmed Aboul Gheit, Minister of Foreign Affairs of the Government of the Arab Republic of Egypt. His programme included meetings with his Egyptian counterpart and a call on His Excellency Mr. Mohamed Hosni Mubarak, President of the Arab Republic of Egypt.

2. The wide-ranging discussions were held in a friendly atmosphere and both sides exchanged views on various bilateral, regional and international issues of mutual interest.
3. Both sides noted with considerable satisfaction the developments in recent months in the evolution of friendly relations between India and the Arab Republic of Egypt. They reaffirmed their resolve to further broaden and deepen the close and friendly ties between the two peoples and to enhance bilateral cooperation in different fields, thus strengthening the multi-faceted relationship.
4. Mr. Gheit and Shri Mukherjee recognized the immense potential for enhancing economic cooperation between India and Egypt. The two sides reiterated their commitment to diversify and deepen the scope of their economic, trade and investment linkages.

signatory to the Nuclear Non-Proliferation Treaty nor member of the 45-nation Nuclear Suppliers Group. According to media reports the External Affairs Minister Pranab Mukherjee also sought to advance the economic relationship between the two countries during his talks with his counterpart Ahmed Abul Gheit and Egyptian President Hosni Mubarak. *The Hindu* quoted diplomatic sources in Cairo to add that apart from trade, India was keen to strengthen its investments in Egypt. The Oil and Natural Gas Corporation-Videsh (OVL) had drilled an exploratory well with a flow of 4,600 barrels, in the North Ramadan Concession in the Gulf of Suez. The Gujarat State Petroleum Corporation had signed an agreement with two Egyptian partners to develop the North Hap'y and South Diyur offshore blocks in the Mediterranean Sea. Mr. Mukherjee told reporters that India's investments in Egypt will rise from the current level of \$700 million to \$2 billion if the Egyptian authorities approved two key projects. These include a petrochemicals project worth \$1.5 billion that Reliance Industries plans to set up in Egypt. The fertilizer giant, IFFCO, was also interested to set up a \$350-million phosphoric acid plant.

5. The two sides took note of the recent visits to India by the Egyptian Minister of International Co-operation who attended the India Africa Forum Summit held in New Delhi, and by the Egyptian Ministers of Trade and Industry and Agriculture and Land Reclamation.
6. The two sides also took note of the visits to Egypt by the Indian Minister of Home Affairs in January this year, and the recent visits of the Minister of State for Commerce and Power for the World Economic Forum on the Middle East and the Minister of State for External Affairs for the African Union summit.
7. The Ministers agreed that the discussions held during the recent exchanges of high-level visits have thrown up new opportunities for strengthening political and economic interaction between Egypt and India.
8. The Ministers expressed concern at the phenomenal rise in food and fuel prices in recent months and resolved to work together in addressing these challenges. They emphasized the importance of food security and energy security, especially for developing countries like India and Egypt.
9. The Ministers also underscored the continuing consultation and co-ordination between the two countries in the United Nations, the Non-Aligned Movement and other international forums.
10. The two sides exchanged views on the situation in West Asia. India reiterated her consistent support for the Palestinian cause and called for early resumption of negotiations on all tracks under the Middle East Peace Process. Both sides agreed that force and violence would not lead to peace in the region.
11. Shri Mukherjee conveyed to Mr. Gheit his sincere appreciation for the warm hospitality extended to him and the accompanying delegation.
12. Shri Mukherjee also had a meeting with His Excellency Mr. Amre Moussa, Secretary-General of the League of the Arab States, before his departure from Cairo.

530. Press Release issued by the Ministry of Commerce on the Enormous Potential for Expanding Trade between India and Egypt: Proposal for Indian Industrial Zone in Egypt.

New Delhi, November 17, 2008.

Shri Kamal Nath, Union Minister of Commerce and Industry, has stated that there is enormous potential for expanding the bilateral trade between India and Egypt and a need to further diversify the trade basket to tap this enormous potential. While addressing at the Business Session with Egypt President Mr. Mohamed Hosni Mubarak, here today, Shri Kamal Nath stressed that the possible area of cooperation / growth are: Steel, Construction, Tractors & agricultural equipment, pumps & diesel engines, pharmaceuticals, tourism, auto components, information technology, fertilisers, phosphates & urea, hotel management, textiles, biotechnology and use of natural gas in cars.. He further added that Egypt has traditionally been one of India's most important trading partners in the African continent and Egypt alone accounts for almost 40% of India's trade with Northern Africa.

Speaking at the Business Session, the Minister welcomed the Egyptian proposal of establishing an Indian Industrial Zone in Egypt exclusively for Indian companies. He further added that Egypt's strategic location makes it a gateway to the 20-country Common Market for Eastern and Southern Africa (COMESA), the 27-nation European Union and the Arab Free Trade Area. He highlighted that both the countries are already benefiting from a bilateral investment protection pact, which has been in force since 2000. "Companies like Ranbaxy, Kiroloskar, Dabur, Ashok Leyland, and Essel already have an investment presence in Egypt. I am sure that with these investments, India could well emerge among the top ten foreign investors in Egypt", he said.

During 2007-08, India's exports to Egypt have been to the tune of US \$ 1396.23 million as compared to US\$ 760.41 million during the year 2006-07. Imports (including oil imports) during the same period were US\$ 1982.77 million as compared to US\$ 1741.65 million during the year 2006-07. The top Indian export items include frozen meat, cotton yarn and synthetic yarn, rice, diesel, tobacco, electrical machinery, soybean, chemicals, automobiles and components, sugar, pharmaceuticals and tea. Nearly 95% of Egypt's exports to India comprise oil and gas. Coking coal, raw cotton, rock phosphate, and marble make up the balance 5%.

531. Address by Vice President M. Hamid Ansari at the Presentation of the Jawaharlal Nehru Award for International Understanding to the Egyptian President Mohamed Hosny Mubarak.

New Delhi, November 18, 2008.

Excellencies

Ladies and Gentlemen

As Chairman of the Jury of this Award, it is my proud privilege to inform you that after due deliberations, the Jury members decided unanimously to confer the Jawaharlal Nehru Award for International Understanding on His Excellency Mr. MOHAMED HOSNY MUBARAK, President of the Arab Republic of Egypt.

President Mubarak, we are deeply honoured by your presence today. Your leadership has been an outstanding example in achieving economic progress, social harmony and regional stability.

It is our belief that developing countries like Egypt and India need to work closely together to meet the growing developmental and global challenges facing us. Achieving inclusive economic growth and raising the standards of living of the vast majority of our population, continue to be our most important priorities.

Excellency

You lead a great nation with a sense of progressive vision and are committed to regional peace. In conferring this Award on you the Government of India recognizes, values and honours your unwavering and steadfast commitment to peace in West Asia and for championing the voice of the Non-Aligned and other developing countries in the global arena. Your support for regional and international efforts to promote and maintain peace in the West Asian region is eloquent testimony to your commitment to the promotion of international peace and goodwill. I feel deeply privileged to convey my warmest greetings to you.

I now invite Shri Pavan K. Varma, Director-General of the Indian Council for Cultural Relations and Secretary of the Jury for the Award, to read the citation and request the President of India, Smt. Pratibha Devisingh Patil to present the Jawaharlal Nehru Award for International Understanding to President Mohamed Hosny Mubarak.

532. Joint Press Interaction by Prime Minister Dr. Manmohan Singh and Egyptian President Hosny Mubarak.

New Delhi, November 18, 2008.

Official Spokesperson (Shri Vishnu Prakash): Good afternoon ladies and gentlemen, and welcome to the Joint Press Interaction.

Prime Minister of India Dr. Manmohan Singh would be making the opening statement. Next, His Excellency the President of Egypt would be making a statement.

Mr. Prime Minister, Sir, the floor is yours.

Prime Minister of India (Dr. Manmohan Singh): Your Excellency President Hosny Mubarak; ladies and gentlemen of the press:

Good afternoon. We feel greatly honoured to have President Mubarak and his delegation in our midst today.

President Mubarak is a great statesman and a highly respected world leader. My talks with President Mubarak were extremely productive. They were held in a spirit of great friendship and warmth, which has always been the hallmark of relations between India and Egypt.

This visit has opened a new chapter in our relations. We have both agreed that all the conditions are ripe for transforming our relationship to correspond to contemporary realities. We have agreed to make up for the lost time and to elevate our relations to a level that reflects our mutual strengths and complementarities.

The Agreements that have been signed and the Joint Declaration that has been issued cover many new areas of cooperation including space and health. The establishment of a strategic dialogue at the level of the two Foreign Ministers reflects our intention to upgrade our relations. We have agreed to work together to combat terrorism and signed an Extradition Treaty.

Our bilateral trade has increased four times in the last five years and now exceeds US three billion dollars. But this is still below the potential and we have agreed that more efforts are required. We agreed to expand cooperation in priority areas such as hydrocarbons, information technology, agriculture and biotechnology.

We had a detailed discussion on several regional and international issues of mutual interest. I conveyed to the President India's consistent support to the Palestinian cause, and the fact that peace and stability in West Asia are in India's vital interest. We have great regard for the role which Egypt is playing in the region.

There was a strong commonality of views on issues of concern to the developing countries. I conveyed our full support to President Mubarak for Egypt's forthcoming chairmanship of the Non-Aligned Movement. We have agreed to work closely on major challenges like the global financial crisis, energy security, food security, climate change, reform of international institutions and terrorism.

I wish to take this opportunity to congratulate His Excellency President Hosny Mubarak on the conferment of the Jawaharlal Nehru Award for International Understanding.

It is my firm belief that the time has come for India and Egypt to re-kindle the special nature of our bilateral relations based upon the immense goodwill that exists between our two peoples.

Thank you.

Official Spokesperson: Your Excellency, the floor is yours.

President of Egypt (Mr. Hosni Mubarak): Thank you hon'ble Prime Minister for your warm welcome and the kind words. Indeed our consultation today covered a wide range of regional, global, and bilateral issues. We had a fruitful discussion on the situation in the Middle East and West Asia, as well as the role of both countries in the maintenance of international peace and security.

On global issues we agreed that we are faced with a financial crisis of massive proportions. This crisis required that all countries, developed and the developing, move on two fronts. The first is to address the immediate recessionary pressures in the world economy. Related efforts need to be coordinated across nations and aimed in developing countries towards the less privileged in our societies.

The second front is with regard to the restructuring of the international financial architecture. We agreed that the various groupings of countries now attempting to address this issue need to ensure that all world regions are properly represented. In addition, any proposals for reshaping the present economic order need to be discussed in broadly-based fora.

India and Egypt commit to ensure that the issues relevant to the emerging market economies receive the appropriate attention in these discussions. On other issues of global reach, we underscored the need for concerted, collective action against terrorism.

We also had a very useful discussion on how best to confront such global challenges as food and energy security, as well as poverty alleviation and the climate change. In this respect we stressed the importance of effective economic, social, security, and the environmental policies as part of our globalisation era.

On bilateral issues our talks affirmed the mutual determination to continue a high-level political dialogue and to build up on the remarkable increase in trade and investment we realized in the last few years.

We agreed to continue working together to serve the interests of the developing countries within the Non-Alignment Movement, the United Nations, the WTO, the Bretton Woods Institutions, and the other international fora. Our consultations were extremely productive reflecting the historic friendship between Egypt and India over the decades as well as our shared values, priorities, challenges and concerns. My current visit to India comes to give a new, strong momentum to our historic relations and partnership. Likewise, and to achieve the same end, I address today my invitation to Prime Minister Singh to visit Egypt in order to reciprocate his warm welcome and the hospitality; and to continue our consultation in all issues of common interest.

Thank you.

533. Joint Declaration on the State Visit of Egyptian President Mohamed Hosny Mubarak.

New Delhi, November 18, 2008.

1. The President of the Arab Republic of Egypt, His Excellency Mr. Mohamed Hosny Mubarak, paid a State visit to India from 16 to 19 November 2008 at the invitation of the Prime Minister of the Republic of India, Dr. Manmohan Singh. President Mubarak was accompanied by a high-level delegation of senior officials and a business delegation.
2. President Mubarak called on the President of India, Smt. Pratibha Devisingh Patil. The Vice-President of India, Shri Mohammed Hamid Ansari, the External Affairs Minister, Shri Pranab Mukherjee and the Chairperson of the United Progressive Alliance, Smt. Sonia Gandhi called on President Mubarak. The President, Smt. Pratibha Devisingh Patil, hosted a banquet in honour of President Mubarak.
3. The Prime Minister, Dr. Manmohan Singh held delegation-level discussions with H.E. President Hosny Mubarak on 18 November, 2008. They expressed satisfaction over the evolution of bilateral relations in recent years and directed that exchanges and consultations should be further intensified in order to realise the full potential of the relationship.
4. The two leaders decided to establish a mechanism for a strategic dialogue at the level of External Affairs Minister / Minister of Foreign Affairs or their representatives to revitalise the current mechanism for regular political consultations on bilateral, regional and international issues. Such dialogue could be held either at the respective capitals or on the sidelines of multilateral fora. The two sides also agreed to institute a security policy dialogue at the relevant level. Whenever necessary, expert committees or working groups could be constituted under this mechanism by mutual consent.
5. The two leaders also exchanged views on a wide range of issues of bilateral and international interest including those relating to the situation in West Asia/ Middle East, the Non-aligned Movement, the reform of the United Nations as well as bilateral economic cooperation

and investment matters and cooperation in the peaceful uses of space and peaceful nuclear energy co-operation issues were discussed.

6. The two leaders reiterated their well-known support for the Palestinian cause in line with their backing of the United Nations Security Council Resolutions 242 (1967) and 338 (1973) calling for a negotiated solution resulting in a sovereign, independent, viable, contiguous and united State of Palestine living within secure and recognized borders, side by side at peace with Israel as endorsed in the Quartet Roadmap and United Nations Security Council Resolutions 1397 and 1515. India reiterated its support for the Arab Peace Plan. The two leaders called for an end to the expansion of Israeli settlements in occupied Palestine and for an early and significant easing of restrictions on the free movement of persons and goods within Palestine. Both sides agreed that peace in the region requires sustained and substantial negotiations among the parties. They advocated active support of the international community and regional players for efforts in normalizing the situation in West Asia and Middle East, and resuming dialogue on all tracks. India conveyed its appreciation for the role of moderation played by Egypt over the years, and especially for the statesmanship and leadership role of President Hosny Mubarak, in promoting the peace process in West Asia and working towards the establishment of an independent Palestinian State. The Egyptian side deeply appreciated India's traditional and steadfast commitment to the Palestinian cause and in consistently supporting the legitimate rights and aspirations of the Palestinian people.
7. The Prime Minister, Dr. Manmohan Singh conveyed felicitations to His Excellency President Hosny Mubarak for Egypt being chosen as the next chair of the Non-Aligned Movement. In this regard, he wished Egypt a successful summit in 2009 and pledged India's support and co-operation for Egypt's chairmanship.
8. India and Egypt will continue to work together to strengthen the central role of the United Nations in maintaining peace and security. They also emphasised the need for acceleration of the process of United Nations reform so as to reflect contemporary realities.

9. India and Egypt strongly condemn terrorism in all its forms and manifestations. Both sides consider terrorism to be one of the gravest threats to international peace and security, and affirm that there can be no justification for any act of terrorism, irrespective of motivations, wherever and by whosoever committed. They are convinced that terrorism cannot, and should not, be associated with any nationality, religious, cultural or ethnic group. They reaffirm their resolve to strengthen their cooperation in combating terrorism at all levels.
10. The President of India, Smt. Pratibha Devisingh Patil conferred the Jawaharlal Nehru Award for International Understanding for the year 1995 on His Excellency, President Hosny Mubarak at an impressive function attended by the Vice-President of India, Shri Mohamed Hamid Ansari, the Prime Minister, Dr. Manmohan Singh and other dignitaries.
11. His Excellency, President Hosny Mubarak addressed a meeting of the India-Egypt Business Forum organised jointly by the Association of Indian Chambers of Commerce & Industry (ASSOCHAM), the Federation of Indian Chambers of Commerce & Industry (FICCI) and the Confederation of Indian Industry (CII).
12. The two countries will cooperate closely in the field of technology, in particular in information and communications technologies; agriculture; biotechnology; and non-conventional energy technologies. They will work towards enhancing cooperation in the fields of science and technology, tourism, youth affairs and sports, agriculture research and education, technical education and vocational training and other fields of mutual benefit.
13. India and Egypt discussed intensification of cooperation in the ICT sector by facilitating and providing assistance to help promote trade and technology sector. They took note of the Memorandum of Understanding on Cooperation in the field of Information Technology and the several agreements signed between training institutions in India and Egypt in the field of Information Technology. They also took note of the establishment in Egypt of business development centres by some of the leading Indian IT majors.

14. India and Egypt will work towards expanding cooperation between their respective oil companies, both in the public and private sectors, for establishing long-term relationships in supply of crude oil and petroleum products, upstream and downstream joint ventures, refineries, petrochemical industries and marketing, both in Egypt and India and internationally, as permitted by their respective laws and regulations.
15. During their discussions, India and Egypt expressed concern over the adverse impact, particularly on developing countries, of the ongoing global financial crisis. The two sides will consult each other on the matter. They will also closely consult on the important issues of food and energy security.
16. Recalling the celebrations of the "Days of Egypt in India" in 2007 and the celebrations held recently to mark the "Days of India in Egypt", India and Egypt welcomed ongoing efforts towards developing partnerships between institutions of the two countries in the areas of culture, Indian and Egyptian studies and languages.
17. The following documents were signed at the conclusion of the talks between the Prime Minister of India and the President of Egypt:
 - (i) Extradition Treaty between the Government of the Republic of India and the Government of the Arab Republic of Egypt
 - (ii) Agreement between the Government of the Republic of India and the Government of the Arab Republic of Egypt on abolition of visa requirement for holders of diplomatic, special and official/service passports
 - (iii) Memorandum of Understanding between the Government of the Republic of India and the Government of the Arab Republic of Egypt on Cooperation in the field of Health & Medicine
 - (iv) Memorandum of Understanding between the Government of the Republic of India and the Government of the Arab Republic of Egypt on Cooperation in the Exploration and Use of Outer Space for Peaceful Purposes.

- (v) Memorandum of Understanding between the Government of the Republic of India and the Government of the Arab Republic of Egypt on Trade and Technical Cooperation.
18. His Excellency President Hosny Mubarak invited the President and the Prime Minister of India to visit Egypt at a mutually convenient time. The invitations have been accepted.
19. His Excellency President Hosny Mubarak expressed deep gratitude and appreciation to the President and the Prime Minister of India for the warmth of the reception accorded to him and to his delegation during their stay.

(Pranab Mukherjee)

External Affairs Minister
Republic of India

(Ahmed Aboul Gheit)

Minister of Foreign Affairs
Arab Republic of Egypt

New Delhi, 18 November 2008

**534. Speech by President Shrimati Pratibha Devisingh Patil
at the Banquet in honour of the Egyptian President
Mohamed Hosny Mubarak.**

New Delhi, November 18, 2008.

Your Excellency, Mr. Mohamed Hosny Mubarak, President of the Arab Republic of Egypt,

Madame Mubarak,

Excellencies,

Distinguished Guests,

Ladies and Gentlemen,

It gives us great pleasure to extend a warm welcome to you, Excellency, to Madame Mubarak and to the members of your delegation on your State Visit to India. Your visit comes after a long gap of over twenty-five years but is, nevertheless, another major landmark in the long history of our relations as civilisations and nations. We welcome you once again as a true friend of India, as a partner in non-aligned solidarity and as a world leader of great distinction and repute.

The history of our relations as two ancient lands is being rediscovered each day. Our ties date to Pharaonic times. In the Roman period, there were well-established trade routes linking ports in Western and Southern India to those on the Red Sea. Most recently, archaeologists have been unearthing an important site at Berenike on Egypt's Red Sea coast that promises to revolutionise our understanding of the wide extent of these ancient maritime and commercial links that must have also brought us together as kindred cultures.

In modern times, India and Egypt were brought together by common struggles and shared aspirations. We are aware of the friendship and mutual respect between Mahatma Gandhi and Sa'ad Zaghloul. Jawaharlal Nehru and Maulana Abul Kalam Azad did much to revitalise India's political and cultural links to Egypt. After Indian independence in 1947 and the July 1952 Revolution in Egypt, strong ideological bonds developed between our two countries, leaders and peoples.

The strength and the diversity of these ties were visible not only in momentous events such as the Bandung Conference of 1955 or during the

Suez crisis of the following year but were there for all to see in the popular adoration of Indian cinema such as "Mother India" and Raj Kapoor's "Sangam".

As young nations, we shared the goals and values for consolidating national independence and sovereignty as well as for achieving socio-economic development and raising the standard of living of our people.

Excellency,

Today, we are pleased to welcome you not only as the representative of an ancient civilization, but also as the leader of a friendly and vibrant nation which has been making impressive achievements in recent years in promoting socio-economic development and economic growth.

We have worked together in the Non-Aligned Movement, in the United Nations, and in the Group of 77 and other international fora to defend the political and economic interests of developing countries and for promoting South-South Cooperation.

We are confident that Egypt will contribute to the revitalization of NAM during its forthcoming chairmanship. We share a common interest in combating international terrorism that threatens the stability and security of nation-states and violates the most basic of human rights, namely the right to life.

In recent years, we have had successful experiences in economic reform and liberalisation, including de-regulation and disinvestment. These have thrown open new opportunities to our business, industrial and technological communities to work together to mutual benefit. I am happy that Indian investments in Egypt have been increasing steadily and are poised to exceed US\$ 2 billion within the next two years.

India is ready to share its development experience with close friends such as Egypt. I am pleased to note that we have signed agreements during Your Excellency's current visit in order to expand and consolidate our cooperation. These, I believe, will form the basis for building further cooperation.

We have also admired Egypt's important role in contributing to peace in West Asia, a region that we ourselves regard as our extended neighbourhood. India has consistently voiced its unequivocal support for the Palestinian cause and for the peace process in West Asia. In this regard, we look forward to working closely with Egypt and benefiting from its wise

counsel. A just and comprehensive peace in the region, in which the legitimate aspirations of the Palestinian people for a sovereign, viable and independent state, living at peace with Israel and within secure and recognised borders, would be met is imperative.

May I now invite Your Excellency and all distinguished guests to raise a toast: -

- to His Excellency, Mr. Mohamed Hosny Mubarak, President of the Arab Republic of Egypt;
- to the progress and prosperity of Egypt; and
- to ever-lasting friendship between India and Egypt.

**535. Press Release issued by the Ministry of External Affairs
on the visit of Egyptian President Mohamed Hosny
Mubarak.**

New Delhi, NOVEMBER 19, 2008.

The President of the Arab Republic of Egypt, His Excellency Mr. Mohamed Hosny Mubarak, accompanied by Mrs. Suzanne Mubarak, paid a State visit to India from 16 to 19 November 2008 at the invitation of the Prime Minister Dr. Manmohan Singh. President Mubarak was accompanied by a high-level delegation comprising the Minister of Foreign Affairs of Egypt, H.E. Mr. Ahmed Aboul Gheit, the Ministers of Trade & Industry, Communication & Information Technology, the Minister of Information, other senior officials as well as a large business delegation.

During his visit, President Mubarak called on the President of India, Smt. Pratibha Devisingh Patil. The Vice-President of India, Shri Mohamed Hamid Ansari, the External Affairs Minister, Shri Pranab Mukherjee and the Chairperson of the United Progressive Alliance, Smt. Sonia Gandhi called on President Mubarak.

The Prime Minister, Dr. Manmohan Singh held delegation-level discussions with H.E. President Hosny Mubarak on 18 November, 2008, during which a range of issues of bilateral and multilateral concern, including the Non-aligned Movement, of which Egypt will assume the Chair in 2009, and

United Nations reform were discussed. Both leaders renewed their well-known support for the Middle East peace process. The two sides also agreed to strengthen their cooperation in combating terrorism.

During the visit, the President, Smt. Pratibha Devisingh Patil conferred the Jawaharlal Nehru Award for International Understanding for the year 1995 on His Excellency, President Hosni Mubarak at an impressive function attended by the Vice-President of India, Shri Mohammed Hamid Ansari, the Prime Minister, Dr. Manmohan Singh and other dignitaries.

The following documents were signed at the conclusion of the talks between the Prime Minister of India and the President of Egypt:

- (i) Extradition Treaty between the Government of the Republic of India and the Government of the Arab Republic of Egypt
- (ii) Agreement between the Government of the Republic of India and the Government of the Arab Republic of Egypt on abolition of visa requirement for holders of diplomatic, special and official/service passports
- (iii) Memorandum of Understanding between the Government of the Republic of India and the Government of the Arab Republic of Egypt on Cooperation in the field of Health & Medicine
- (iv) Memorandum of Understanding between the Government of the Republic of India and the Government of the Arab Republic of Egypt on Cooperation in the Exploration and Use of Outer Space for Peaceful Purposes
- (v) Memorandum of Understanding between the Government of the Republic of India and the Government of the Arab Republic of Egypt on Trade & Technical Cooperation.

Hon'ble External Affairs Minister and the Foreign Minister of Egypt also signed a Joint Declaration on the State Visit of President Mubarak.

His Excellency President Hosny Mubarak invited the President and the Prime Minister of India to visit Egypt at a mutually convenient time. The invitations have been accepted.

His Excellency President Hosny Mubarak expressed deep gratitude and appreciation to the President and the Prime Minister of India for the warmth of the reception accorded to him and to his delegation during their stay.

ETHIOPIA

536. Press Release of the Ministry of External Affairs on the visit of Minister of State Anand Sharma as Special Envoy of the Prime Minister to Ethiopia.

New Delhi, July 31, 2008.

Shri Anand Sharma, Special Envoy of the Prime Minister of India and Minister of State for External Affairs visited Ethiopia on July 30/31, 2008. The Special Envoy called on the PM of the FDRE, H.E Ato Meles Zenawi and H.E Ato Seyoum Mesfin, Minister of Foreign Affairs.

The visit to Ethiopia was the last leg of a tour undertaken by the Minister, starting with the East Asia Summit (EAS) Foreign Ministers' Meeting, ASEAN-India Ministerial Meeting and the ASEAN Regional Forum meeting in Singapore from 22-24 July, 2008. He subsequently visited the four African members of the IAEA Board of Governors viz. Ghana, Nigeria, South Africa and Ethiopia.

During his visit to Nigeria from July 27-28, 2008, he had meetings with H.E. Alhaji Umaru Musa Yar'Adua, Hon'ble President and H.E. Chief Ojo Maduekwe, Hon'ble Foreign Minister. He met with the President, H.E. Mr. Thabo Mbeki, during his visit to South Africa on July 29, 2008. Earlier in the week he had a meeting with President John Kufuor of Ghana.

Unequivocal support from all these countries who have stood by their commitments made to India for partnerships in earlier meetings was assured. They have also said that they would work with other delegations to foster support for India at the IAEA Board of Governors meeting. South Africa is also a member of the Nuclear Suppliers Group where it has promised to support India.

Shri Anand Sharma presented a letter from the Prime Minister of India, H.E Dr. Manmohan Singh to the Prime Minister of Ethiopia seeking support from Ethiopia at the Board of Governors meeting of the International Atomic Energy Agency (IAEA) on August 1, 2008. He explained India's keenness to enhance its civil nuclear energy programme in cooperation with other countries, as this would contribute to the enhancement of India's economic development and meeting its energy demands.

In his meeting with the Minister of Foreign Affairs of Ethiopia the Special Envoy explained in detail the approach to civil nuclear cooperation, its

necessity, impact and why India had chosen the International Atomic Energy Agency (IAEA) special safeguards route.

In both meetings, discussions also took place on the continuing cooperation between India and Ethiopia in the development of infrastructure, industry, agriculture and services in Ethiopia. It was noted that India was now among the leading investors in Ethiopia and these investors were very welcome for their positive contribution to the development of Ethiopia in a democratic framework. India's cooperation in the field of human resource development was also positively regarded and further plans for the expansion of cooperation in this sector were discussed, particularly, in the context of the implementation of decisions taken at the India Africa Forum Summit in April in which the PM of Ethiopia, H.E Ato Meles Zenawi and Minister of Foreign Affairs, H.E Ato Seyoum Mesfin had participated.

Shri Anand Sharma also visited the Black Lion Hospital to view the Tele Medicine Center in operation and attended a Continuing Medical Education (CME) session between doctors at the Care Hospital in Hyderabad and at the Black Lion Hospital in Addis Ababa.

Shri Anand Sharma also had a meeting with the Chairperson of the African Union Commission, H.E Mr. Jean Ping at which the follow up of the decisions of India Africa Forum Summit were discussed. The Executive Secretary of the UN Economic Commission for Africa, Mr. Abdoulaye Jannet and the Deputy Chairperson of the African Union Commission, Mr. Erastus J.O. Mwencha also participated in the discussions.

GHANA

537. Press Release of the Ministry of External Affairs on the visit of Minister of State Anand Sharma to Ghana.

New Delhi, July 25, 2008.

Minister of State for External Affairs, Sh. Anand Sharma arrived in Ghana on 25th July as the Special Envoy of the Prime Minister. He called on the President of Ghana Mr. John Kufuor and also met with the Foreign Minister Mr. Akwasi Osei Adjei. President Kufour assured Mr. Sharma of Ghana's support for India in the IAEA Board.

The President stated that India and Ghana have historic relationship going back to Pandit Nehru and Nkrumah. He appreciated India's strong partnership with Ghana in its march towards development. The new Presidential palace at Ghana is being constructed with Indian assistance and is likely to be completed shortly.

Sh. Sharma is traveling to Africa as PM's special envoy to garner support from IAEA board and NSG member countries. He shall be traveling to Nigeria where he shall call on President Yar' Adua. Thereafter he shall be calling on President Mbeki of South Africa and Prime Minister Meles Zenawi in Ethiopia. Earlier in the week he had met several foreign ministers at the margins of the ASEAN Regional Forum in Sigapore, including US Secretary of State Condoleezza Rice.

MOZAMBIQUE

538. Press Release issued by the Ministry of Home Affairs on the meeting between the Interior Minister of Mozambique and Home Minister Shivraj Patil.

New Delhi, July 22, 2008.

A four-member delegation from Mozambique, led by their Interior Minister, Mr. Jose Pacheco met the Union Home Minister, Shri Shivraj Patil here yesterday. Ways to strengthen bilateral co-operation between the two countries were discussed. Both India and Mozambique have long coastlines and can learn from each other in the area of coastal security. Shri Patil stressed the need for all countries to join hands in the fight against terrorism. He said that nations can share information and exchange ideas for this purpose.

The Union Home Secretary, Shri Madhukar Gupta was among those who attended the meeting.

NIGERIA

539. Press Release of the Ministry of External Affairs on the visit of Minister of State Anand Sharma to Nigeria as Special Envoy of Prime Minister.

New Delhi, July 28, 2008.

H.E. Mr. Anand Sharma, Special Envoy to the Prime Minister of India and Minister of State for External Affairs visited Nigeria from July 27-28, 2008. He had meetings with H.E. Alhaji Umaru Musa Yar'Adua, Hon'ble President and H.E. Chief Ojo Maduekwe, Hon'ble Foreign Minister.

2. Mr. Sharma handed over a letter from the Indian Prime Minister to the Hon'ble President of Nigeria seeking support for India for the civil nuclear energy cooperation initiative to be discussed at the IAEA Board on August 1, 2008. He expressed India's desire to enhance mutual cooperation in various fields in view of the strategic

partnership between the two countries highlighted during the joint Abuja Declaration signed during the visit of the Prime Minister of India to Nigeria in October 2007.

3. The President of Nigeria gave a categorical assurance of support for India's initiative and was deeply appreciative of India's quest for energy security. He also highlighted India's stellar contributions in Nigeria's developments, particularly in the field of education. He expressed his desire to broaden the engagement with India, especially for energy security and infrastructure development.

SOUTH AFRICA

540. Extract from Media Briefing of Official Spokesperson relevant to the visit of External Affairs Minister to South Africa.

New Delhi, February 15, 2008.

In South Africa, the visit takes place from February 21-22. He will be heading the Indian delegation for the 7th Joint Ministerial Commission Meeting between the two countries. EAM is also expected to call on President Thabo Mbeki and the new ANC President Jacob Zuma.

The Joint Commission between the two countries was set up in 1994. The last meeting was held in New Delhi in December 2005. The forthcoming meeting will, therefore, enable an in-depth review of bilateral relations. The JMC has seven sub-committees which covers various aspects of bilateral relations.

There has been regular high level contacts - the last being PM Manmohan Singh's visit in October 2006 for the joint celebrations of the centenary of Satyagraha during which the Tshwane Declaration was signed. There is active contact in multilateral fora, particularly at the UN, NAM, Commonwealth, G-77, G-20, NAASP and WTO. IBSA issues will also naturally come up in South Africa.

The trade here is over US\$ 4 billion and with substantial Indian investment in South Africa. We expect Agreements/MOUs to be signed during the visit

on Visa-free entry for diplomatic and official passport holders, Agricultural Cooperation, Cooperation in Customs matters and on Programme of Cooperation in Science and Technology.

541. Address by External Affairs Minister Pranab Mukherjee to India Business Forum Pretoria Country Club.

Pretoria, February 20, 2008.

**Shri Raman Dhawan, Chairman of the India Business Forum,
Shri Bhatia, High Commissioner of India,
Shri Nalin Surie, Secretary, Ministry of External Affairs,
Shri Atul Gupta,**

Friends,

It is indeed a pleasure to be with you in Pretoria this evening and to have the opportunity to interact with senior representatives of Indian companies that are at the forefront of India's engagement with South Africa. The presence in this room of representatives of some of India's leading companies in the automobiles, pharmaceuticals, metallurgical, engineering, IT, telecom, financial services, diamonds and other sectors is clear testimony to the global aspirations of Indian industry and the importance that you attach to having a substantial footprint in South Africa.

As the High Commissioner said, the India-South Africa relationship is indeed one that is defined by common ideals, ideas and icons. The process of transformation of a young barrister in Mohandas Karamchand Gandhi into Mahatma Gandhi began on this soil when he embarked on his experiments with truth. It was natural therefore for India to render steadfast support to the people of South Africa in their struggle against apartheid and for upholding human values. I recall that my last visit to this country was more than a decade ago, as Commerce Minister, and the occasion was to renew the trade links that had been snapped almost half a century earlier by a newly-independent India that did not agree with the policy of apartheid.

Today, India and South Africa are Strategic Partners. My visit on this occasion is to co-chair the India-South Africa Joint Commission with the Foreign Minister of South Africa. I also expect to call on the highest leaderships of

both the Government and the Party. Our effort will be to add further content to our partnership and address implementation issues.

We are also working closely with South Africa and Brazil in the context of our IBSA partnership. This trilateral partnership opens up many exciting opportunities including on the business front.

On the economic side, our trade with South Africa has expanded rapidly and from US\$ 1.8 billion in 2002, last year it crossed US\$ 4.7 billion. During the same period, our exports have grown from just US\$ 350 million to over US\$ 2.2 billion last year, making South Africa our largest market in the African continent. Despite the current apprehensions of a slowdown in the global economy, we must continue to provide the momentum and dynamism to achieve the ambitious target of trebling trade by 2010 as laid down by our leaders in the Tshwane Declaration of 2006.

We can be optimistic on this score because of the remarkable growth that we are witnessing in the Indian economy over the last few years. A high savings and investment rate of around 35% points to the fact that our economy can sustain a growth rate of around 9 to 10% for the next 2-3 decades. As a result, the India story has caught the world's imagination. We were always proud to be called the world's largest democracy but the impressive economic growth over the last 2 ½ decades, and in particular over the last 7/8 years, has added a new dimension to this. Democracy and sustained high growth rates are compatible. But inclusiveness must also be ensured.

And a large measure of the credit for this transformation goes to you, the captains of industry here and in India. Thanks to your dynamism and entrepreneurship, business organizations like the ones that you represent are fast becoming the new standard bearers of India. Our government values the crucial contribution that you make and, in recognition of this, the national civil awards announced recently on Republic Day included Padma Vibhushans and Padma Bhushans for business leaders including Ratan Tata, NR Narayana Murthy, LN Mittal, PRS Oberoi, Baba Kalyani, KV Kamath and Shiv Nadar. The efforts of our government and of our diplomatic missions to project "Brand India" receive a powerful boost when you add your weight through concrete endeavour and investment.

In a sense, this also places an additional responsibility on you because you take upon yourself the obligation to enhance India's brand equity even as you focus on improving the bottom line on the balance sheet and delivering

value to your shareholders. This is especially so in a country like South Africa where we nurture the values and principles of Mahatma Gandhi and where the government is embarked on a monumental effort to restore human dignity and reverse the disastrous legacy of apartheid. I believe that India, through our government and through our leading business organizations, can play a vital role in supporting the efforts of our friends in South Africa to build a more equitable society.

I am happy to learn that several companies, including the Tata group, Satyam and Sahara have already taken the lead in sending locally recruited staff to India for specialized training. Others, including those in the diamond processing industry, are taking the initiative to provide training within their facilities in South Africa, while the Confederation of Indian Industry has taken a batch of 100 young South Africans to India for training in various trades related to the construction industry. This supplements Government of India's own efforts. We are currently providing 100 ITEC slots to South Africa which I am told are fully utilized.

Your companies are making major investments in South Africa. You are generating employment opportunities and creating physical assets in this country. You are, in effect, becoming "local" companies and making a very real contribution to the South African economy. I hope that the India Business Forum can work in a collaborative manner so that it can document our success stories and enable us to take pride in the very 'Indian' spirit that our companies bring to their operations in South Africa.

At the same time, companies like yours which are based here can also play an important role in India's own development process. Our needs are well known. The search for complementarities is important in sectors such as agriculture, mining, infrastructure, energy, power generation, SMEs, etc. Indian companies are well placed to make the kind of investments that can contribute to the development requirements of our economy and of your host country. Government of India and its Missions abroad would be happy to extend full cooperation to you in this endeavour.

We also recognize that every now and then, your companies can run into issues such as tariff and non-tariff barriers, procedural hurdles, difficulties in obtaining work permits, etc., that can potentially impede the effectiveness of your operations here. I would encourage you to share these concerns with me and with our diplomatic mission here so that we can try to address these through our dialogue with the government here. As you know, the India-South Africa Joint Commission meets tomorrow for its seventh session

and we hope to utilize this forum to bring up some of the matters that are of concern to you.

The Government of India has led Indian industry in forging India-Africa project partnerships by organizing pan-African conclaves in India and regional conclaves in Africa. These bring together on a common platform government, public and private sectors of the two sides to develop the necessary complementarities and synergies. We look forward to your inputs in making the March 2008 pan-Africa Conclave in New Delhi a success.

India's involvement with Africa is and has been focused on helping African countries develop their own potential for development. This has been an evolving process and we have, over the years, extended cooperation not simply in human resource development but also in agriculture, SMEs, transportation, infrastructure, information technology, health, education, capacity building, defence, etc. India has also been deeply involved in UN Peace-Keeping Operations in African countries intended to restore constitutional order and enable post-conflict development. We have also begun to develop programs of action with sub-regional organizations such as SADC, COMESA, EAC, and ECOWAS. India has taken a bold initiative to use its skills in the IT sector to implement a pan-African e-network project which comprises tele-education and tele-medicine components and will provide VVIP connectivity to all participating African nations. Twenty eight nations have already signed on. We also provide grant assistance for capacity building projects. Our concessional Lines of Credit have helped Africa in infrastructure development and created a brand image for Indian products. We also provide extensive training and educational facilities for all African countries. Together, we can further strengthen Brand India as Africa's development partner.

I am happy that CII has taken this initiative to bring Indian companies in South Africa under one umbrella. The presence of our senior officials from India and our diplomats based in South Africa in this room alongside the heads of Indian companies is also evidence of the spirit of public-private partnership that underpins our economic philosophy.

I wish the India Business Forum a great future and all success in its endeavours.

Thank you.

542. Opening Statement by External Affairs Minister Pranab Mukherjee at the India-South Africa Joint Ministerial Commission Meeting.

Pretoria, February 21, 2008.

Your Excellency, Dr. N. Dlamini Zuma, Foreign Minister of the Republic of South Africa, distinguished members of the South African delegation, Ladies and Gentlemen,

I am delighted to be in Pretoria to attend the 7th session of the Joint Ministerial Commission between our two countries. The last meeting of our Joint Commission was in December 2005 in India. Much has happened since and this meeting is therefore very important for the purpose of taking stock of where we are and charting the way forward. I am glad that our way forward has been eased greatly by our sectoral working groups who have been meeting through the day

2. Relations between our two countries are unique, based on shared ideas, ideals and icons¹. The ANC's struggle for a just and democratic society was our own struggle and the common fight against apartheid forged a deep bond between leaders of India and South Africa. The challenge for us has always been how to leverage the excellent political understanding between our leaderships into concrete and beneficial outcomes for the strategic partnership between our two countries.
3. Since the last Joint Commission Meeting, we have had several exchanges at the highest political levels. From the South African side, the Deputy President has been to India and from India we have had two visits by Prime Minister, Dr. Manmohan Singh, a visit by Congress President Mrs. Sonia Gandhi and several by our Cabinet Ministers. We need to maintain the momentum of these visits. This year, we

¹ The Official Spokesperson while briefing the media in New Delhi on February 15 before the start of the visit of EAM said that there has been regular high level contacts between India and South Africa - the last being Prime Minister Manmohan Singh's visit in October 2006 for the joint celebrations of the centenary of Satyagraha during which the Tshwane Declaration was signed. There is active contact in multilateral fora, particularly at the UN, NAM, Commonwealth, G-77, G-20, NAASP and WTO. About bilateral trade between the two countries, the Spokesperson said "The trade here is over US\$ 4 billion and with substantial Indian investment in South Africa." The Joint Commission between the two countries was set up in 1994. The last meeting was held in New Delhi in December 2005.

look forward to receiving President Mbeki twice in India, first for the India-Africa Forum Summit, which will be held from April 4-9, 2008 and then for the 3rd IBSA Summit later in the year.

4. The strategic partnership, which was first articulated by President Mbeki when he visited India as Deputy President in 1996, has been in operation in a number of areas. We have almost 30 bilateral agreements in diverse fields. However, implementation has been patchy. This is an issue that has preoccupied our leaders as well. We, therefore, need to give a renewed push to all our sectoral Ministries to ensure time-bound outcomes in all fields of joint endeavour. I have already discussed this with Your Excellency and we both agree that the theme for this JMC should be 'Action and Implementation'. In particular, we need to focus our attention on those Agreements where not a single meeting has taken place so far. These include important sectors such as Communications & IT and Health & Medicine. We must ensure that their Working Groups meet at the earliest possible opportunity.
5. We will tomorrow also sign a number of new Agreements which will further enlarge the area of our bilateral cooperation. These are Agreements on customs cooperation, exemption of visas for official and diplomatic passport holders and a programme of cooperation in science and technology. Here too we must ensure timely implementation.
6. I would like to submit for your consideration that the implementation of these agreements as also the decisions of the Joint Ministerial Commission be reviewed during annual Foreign Office Consultations. The meetings of the JMC could be regularized once in two years. If we can have your agreement to this arrangement, both sides can proceed on this basis.
7. I am also glad to note that apart from bilateral cooperation, our trilateral cooperation under the IBSA framework is also gaining momentum. Excellency, India considers IBSA to be a unique forum which brings together on a common platform three major developing democracies from three continents. Following the successful 2nd IBSA Summit in South Africa, we have a total of 16 sectoral Working Groups. In the IBSA context too, our effort should be to identify at least half a dozen areas for concerted attention in which we must

aim for concrete outcomes. I would suggest that we focus in priority areas of cooperation, namely, transportation including shipping and civil aviation, tourism, trade and investment, infrastructure, SMEs, capacity building and information society. We have finalized the dates for the trilateral Ministerial Commission which South Africa has kindly consented to hold in the beautiful city of Cape Town. We have also communicated dates in mid-October for the Summit that India is honoured to host.

8. An issue to which both our countries attach the greatest importance is the reform and expansion of the UN Security Council. We believe that the reform and expansion of the UN Security Council, in both permanent and non-permanent categories, is central to the process of UN reform and hope that the member states would soon be able to initiate element-based and result-oriented inter governmental negotiations during the current 62nd session of the UNGA with a view to achieve progress on this issue. We believe South Africa can play an important role in the overall process, within AU and in coordinated efforts of the AU and G-4.
9. We also look forward to continue receiving South Africa's valuable support to India's candidature for a non-permanent seat on the UNSC for 2011-2012.
10. Another issue of global importance is the fight against international terrorism. India, in particular, has been battling the evil of international terrorism for over two decades. At a time when forces of intolerance and fundamentalism are gaining ground and organizations such as Al-Qaeda are expanding their presence, it is all the more imperative for all like-minded countries to come together in a global coalition against violence and terrorism. In this context, we welcome the ongoing cooperation between our delegations at the UN on the Comprehensive Convention on International Terrorism. I once again reiterate the need for India and South Africa to engage in a bilateral dialogue on Counter-Terrorism through the aegis of a JWG on Counter-terrorism. This subject was discussed at some length during the visit to India by your Home Ministry team in December, 2007. We expect to see some forward movement on this.
11. Both India and South Africa have repeatedly emphasized the importance of the development dimension of the WTO Doha Round and have welcomed the strengthened engagement, solidarity, and

cooperation among developing countries in that process. The Doha Round of trade negotiations is entering a critical stage. These negotiations are now in a genuine multilateral process, with draft texts for agriculture and industrial goods that provide a good basis for negotiations. Both India and South Africa have committed themselves to carry out negotiations towards an outcome that is fair and acceptable to all.

12. Climate change has emerged as a major international challenge. We are committed to finding practical and pragmatic strategies of addressing this challenge. Such strategies should not add greater burden or impose further conditionalities on the developmental objectives of countries like India. The principle of common but differentiated responsibilities and respective capabilities is important. I am glad that the Bali Conference has reaffirmed the principles and provisions of the UN Framework Convention on Climate Change. The long term convergence of per capita emissions of developed and developing countries is also an important principle that should be seriously considered in the context of the international climate change negotiations.
13. Just as we value our relations with South Africa, we value our relations with the rest of Africa. Our hosting of the India-Africa Forum Summit in April 2008 is the beginning of a process. How we take this forward will depend on the outcome of the Summit. I look forward to our deliberations during the Foreign Ministers' meeting on April 7, 2008. Before that, the Senior Officials will meet on April 4. We also look forward to receiving President Mbeki in New Delhi for the Summit meeting on April 8.
14. The formal outcome documents of the Summit would be a Declaration and an Action Plan. The draft of the Action Plan has been circulated by the AU to the member states. We await the response of South Africa. The second document, which will be a Declaration, will address broader areas of cooperation. The areas on which we wish to focus include human resources, institutional capacity building and education, science & technology, agricultural productivity and food security, industrial growth including small & medium enterprises and minerals, development in the health sector, development of infrastructure, ICT and establishment of judicial system with police and defence establishments under civilian control, etc. Over the next

two weeks, the officials on both sides will meet in Addis Ababa for further discussions on the draft declaration and the draft Plan of Action.

15. On the economic side, I am happy to note that our bilateral trade excluding gold bullion has reached USD 4.7 billion in 2006-07 and is growing at an impressive rate. Both our countries have been proactive in promoting visits of business delegations and in showcasing our products and technologies through mega exhibitions. From India, we have had the two CII Conclaves, the India Calling Conference by the Indian Merchants' Chamber and, most recently, INDEE 2007, the biggest ever expo of Indian engineering products in South Africa. I hope that the Sub-committee on Trade, Economic and Technical Cooperation will undertake a comprehensive review of the volume and composition of bilateral trade and two-way flow of investments, and discuss and share promotional plans that both countries have for the coming years.
16. While we acknowledge that trade will largely be driven by the private sector, it is the role of the two Governments to provide a facilitating environment. In this context, we greatly welcome the holding of the first round of talks on the India-SACU PTA in October last year and the second round which has just about concluded in Windhoek. We look forward to the early signing of the MOU so that substantive negotiations can begin in earnest. I must also highlight the imperative need to finalize the Bilateral Investment Promotion and Protection Agreement, which will increase the comfort level of investors in both countries.
17. Civil Aviation is another sector that needs priority attention. It is widely acknowledged that the present capacity on the India-South Africa sector is inadequate. While we are actively encouraging Air India to resume operations to South Africa, we would also request South African support for facilitating unencumbered permission for Jet Airways as also Air India's code share arrangement with South African Airways, both to South Africa and to Brazil. This was also raised by our PM with President Mbeki on the sidelines of the 2007 IBSA Summit.
18. In the Defence field, we are glad to note that the next meeting of the Joint Defence Committee will be held on March 13-14, 2008 in India. The aim expressed by our two leaders in the Tshwane Declaration

of moving beyond a buyer-seller relationship to joint production and development must be pursued.

19. One avoidable hindrance to the freer movement of businesspersons and tourists is the visa regime. We, on our side, are committed to ensuring that visas are given on the same day and without insistence on cumbersome documentation. We would request similar flexibility from the South African side so that letters from apex chambers of commerce, such as CII and FICCI, and the High Commission are honoured and bonafide tourists and businesspersons are not inconvenienced. I have been assured by the Foreign Minister that the South African side is looking into our suggestions.
20. We remain committed to partnering South Africa in alleviating the skills shortage, particularly through the JIPSA programme spearheaded by the Deputy President. I am glad to note that not only the Government of India, but several Indian private companies are contributing to make this programme a success. We have increased the number of ITEC slots to South Africa from 55 to 100. I am glad to note that all of them are being fully utilized. CII is also setting up an IT Centre for Excellence in South Africa and imparting artesian skills to 100 South African youth in Hyderabad in collaboration with the Umsobomvu Youth Fund.
21. I am happy to learn of the increasing linkages between our two countries in the field of higher education. I understand delegations from several South African universities have already been to India. We especially laud the decision of the University of Witwatersrand to set up a Centre of Indian Studies in Africa which will be the first 'India-Focus' centre in Africa. The establishment of the Gandhi-Luthuli Chair in the University of Kwazulu Natal has also lent further impetus to academic interaction.
22. I am told that the South African Government is keen to recruit maths and science teachers from India. We would be happy to assist you in this process. We have a PSU called Educational Consultants India Limited (EdCIL) which has a proven track record in this sector and we would be happy to facilitate a visit by EdCIL to take this process forward.
23. In Science & Technology, our two countries have much to offer each other. We are keen to cooperate in areas such as nano-science and

oceanographic science and to partner you in the Southern African Large Telescope (SALT) project. On Space, our two countries can also have a fruitful partnership. We have proposed an MOU for cooperation in space applications on which we await a response.

24. We must also not underestimate the importance of culture. Given the fact that the closest bond between our two countries is the bond between our peoples, it is important that both sides make extra effort to showcase their cultural offerings and to take them to areas outside the metros. I am happy to note that we have had several Indian artistes visit South Africa through the aegis of the Indian Council for Cultural Relations (ICCR) as also under the "Shared Histories" festival. The visit of the South African Minister of Arts and Culture to India in December 2007 has helped revitalize bilateral cultural cooperation. I understand that the South African exhibition "Scratches on the Face" has been very well received in India.
25. In conclusion, Madame Minister, my delegation and I are extremely satisfied with the substantive and in-depth discussions that we have had on all the areas in which our two countries are jointly engaged. I am confident that these will make the 7th Session of the Joint Commission a success and lay the basis for an even more diversified and productive partnership in the years to come.

Thank you.

543. Agreement Between The Government of the Republic of India and The Government of Republic of South Africa Regarding Waiver of Visa Requirement for Holders of Diplomatic and Official Passports.

Pretoria, February 22, 2008.

PREAMBLE

The Government of the Republic of India and the Government of the Republic of South Africa (hereinafter jointly referred to as the "Parties" and in the singular as a "Party").

Considering it in the interest of both countries to strengthen their friendly relations, and

Desiring to facilitate the entry of the citizens of the Republic of India and the citizens of the Republic of South Africa, who are holders of diplomatic or official passports into their respective countries,

Hereby agree as follows:

ARTICLE 1

WAIVER OF VISA REQUIREMENTS

1. Citizens of the country of one party who are holders of valid diplomatic or official passports in that country, may enter sojourn and exit the country of the other party of which he or she is not a citizen through their respective international points of entry and exit without having to obtain a Visa.

ARTICLE 2

COMPETENT AUTHORITIES

The Competent Authorities responsible for the implementation of this Agreement shall be:-

- (a) On behalf of the Government of the Republic of India, the Ministry of Home Affairs; and .
- (b) On behalf of the Government of the Republic of South Africa, the Department of Home Affairs.

ARTICLE 3**SCOPE OF APPLICATION**

Citizens of the countries of either Party who enter the territory of the other Party pursuant to Article 1 shall be entitled to stay in the country of the other Party for a period not exceeding ninety (90) days.

ARTICLE 4**ACCREDITED DIPLOMATIC AND CONSULAR STAFF**

- (1) A citizen of a country of a Party who is assigned as a member of the diplomatic or consular staff in the country of the other Party and is in possession of a valid diplomatic or official passport, shall not be required to obtain a visa to enter the country of the other Party, and shall be granted, on request from the Diplomatic Mission or Consular Post concerned, within ninety (90) days of the arrival of the diplomatic or official passport holder, a residence visa for the period of his or her official stay.
- (2) The provisions of Sub Article (1) shall apply to a citizen of a country of a Party in possession of a valid diplomatic or official passport who is a representative of his or her country in an international organization located in the country of the other Party.
- (3) The provisions of sub-Articles (1) shall also apply to the spouse of a member of the Diplomatic Mission or Consulate, their children and their dependent parents, within the first step of kinship, provided that they hold valid diplomatic or official passports.

ARTICLE 5**ATTENDANCE OF MEETINGS OR CONFERENCES
AND OFFICIAL VISITS**

- (1) A citizen of a country of either Party, who is in possession of a valid Diplomatic or Official passport and is attending a meeting or conference convened by an international organization or Government of initiating party, which is held in the country of the other Party, shall not be required to obtain a visa to enter, sojourn and exit the country of that Party.
- (2) The holders of diplomatic and official passports of either Party who are employed by an international organization, body, agency or any

other such entity, must obtain a visa prior to their entry into the country of the other Party for official visits.

ARTICLE 6

REFUSAL OF ENTRY AND ISSUING OF NEW PASSPORT

- (1) Each Party reserves the right to refuse the entry into, or shorten the stay in its country, of any citizen of the country of the other Party, whom it may consider undesirable.
- (2) If a citizen of the country of one Party loses his or her passport in the country of the other Party, he or she shall inform the authorities concerned of the host country for appropriate action. The Diplomatic Mission or Consulate concerned shall issue a new passport or travel document to its citizen and inform the concerned authorities of the host country.

ARTICLE 7

COMPLIANCE WITH DOMESTIC LAW

Citizens of the countries of the Parties, being holders of diplomatic or official passports, shall abide by the domestic law of the countries of the respective parties while crossing its frontier and throughout the duration of their stay in its territory.

ARTICLE 8

NOTIFICATION OF RELEVANT DOCUMENTS

- (1) For the purpose of this Agreement, each Party shall transmit to the other Party through the diplomatic channel, specimens of its respective passports, including a detailed description of such documents currently used, at least thirty (30) days before the entry into force of this Agreement.
- (2) Each Party shall also transmit to the other Party through the diplomatic channel, specimen of its new or modified passports, including a detailed description of such documents, at least thirty (30) days before they are brought into force.

ARTICLE 9

SUSPENSION AND TERMINATION

- (1) Each Party reserves the right for reasons of security, public order or public health, to completely or partially suspend this Agreement.

Such suspension, together with the reasons therefor, shall be conveyed to the other Party in writing through the diplomatic channel and shall take effect immediately upon receipt of such written notification. The suspending Party shall lift the suspension as soon as possible by way of written notice to the other Party through the diplomatic channel.

- (2) This Agreement shall remain in force for an indefinite period, but may be terminated by either Party by giving ninety (90) days written notice in advance to the other Party through the diplomatic channel, of its intention to terminate the Agreement.

ARTICLE 10

REVISION OR AMENDMENT

Either Party may request through an Exchange of Notes through the Diplomatic channel, a revision or amendment of the whole or part of this, agreement. Any revision or amendment which has been agreed upon between the Parties shall come into effect on a date to be agreed upon between the parties and shall accordingly form part of this Agreement.

ARTICLE 11

SETTLEMENT OF DISPUTES

Any dispute between the Parties arising out of the interpretation or implementation of this Agreement, shall be settled amicably through consultation or negotiation between the Parties without referring the matter to any third party or an international tribunal.

ARTICLE 12

ENTRY INTO FORCE

This agreement shall enter into force on the ninetieth (90th) day after the date of signature thereof.

ARTICLE 13

CONFLICT OF TEXTS

In witness whereof, the undersigned, having been duly authorized thereto by their respective Governments, have signed and sealed this Agreement in two originals in the Hindi and English languages, all texts being equally

authentic. In the event of conflict between the Hindi and English texts of the Agreement, the English text shall prevail.

Done at Pretoria on this 22nd Day of February 2008.

Pranab Mukherjee

Minister of External Affairs

**Dr. Nkosazana Clarice Dlamini
Zuma**

Minister of Foreign Affairs

**544. Press Release of the Ministry of External Affairs on the
visit of Minister of State Anand Sharma to South Africa.**

Durban, September 18, 2008.

Mr. Anand Sharma, Minister of State for External Affairs, visited South Africa from September 15-18, 2008 during which he travelled to Johannesburg, Pretoria and Durban.

2. Mr. Sharma held substantive bilateral discussions with President of the African National Congress Dr. Jacob Zuma in Durban. Their discussions covered a wide range of issues of shared interest. Mr. Sharma also discussed with Dr. Zuma the follow up of the Memorandum of Understanding between ANC and INC which was signed by Dr. Zuma and Mrs. Sonia Gandhi earlier this year. The two leaders jointly inaugurated the Gandhi-Luthuli Chair for Peace Studies at the University of KwaZulu Natal. Mr. Sharma delivered the keynote address on this occasion before a packed audience of over 3000 people. During his speech, Mr. Sharma highlighted the enduring relevance of Gandhian philosophy in the 21st century world, specially for building an environment of peace and stability. Dr. Zuma appreciated the Government of India for the launch of this Chair and unfolded his vision for the role of ANC in upliftment of the poor. He

expressed his deep appreciation for the warm hospitality of Smt Sonia Gandhi during his visit to India in June this year. The launch of the Chair has a special significance since Mahatma Gandhi spent his formative years in Durban.

3. During his stay in Durban, Mr. Sharma also met representatives of key Indian organizations, had an interaction with Board Members of the International Centre for Non Violence (ICON) and the Gandhi Memorial Trust and attended a reception hosted by the Consul General of India.
4. Earlier, Mr. Sharma met ANC Deputy President and Minister for Government Business Mr. Kgaleme Motlanthe in the Union Buildings at Pretoria. Minister Motlanthe acknowledged the long-standing ties between South Africa and India. Apart from discussing bilateral relations and international developments, the two Ministers also touched upon the historic relationship between the INC and the ANC. Minister Motlanthe is expected to visit India later this year.
5. On September 15, Minister Sharma attended a Reception in Johannesburg to mark the 2nd edition of the Shared Histories' Festival, a seven-week long extravaganza featuring the best of Indian art, literature, dance, music, film and cuisine. In his address Mr. Sharma described India and South Africa as two countries with shared histories and a shared destiny.
6. Mr. Sharma also jointly inaugurated with Deputy Foreign Minister Ms. Susan van der Merwe the Centre for Indian Studies in Africa at the University of Witwatersrand in Johannesburg, the first such Centre in the whole of Africa. Describing the launch of the Centre as historic, Mr. Sharma assured the Vice Chancellor of Government of India's support to the activities of the Centre and expressed the hope that it would become the fulcrum for spreading awareness of India in Africa and Africa in India.
7. Mr. Sharma held wide-ranging discussions with Deputy Foreign Minister Ms. Susan van der Merwe on bilateral relations and also the trilateral engagement in the IBSA context. He thanked the South African Government for the proactive support lent by it at both the IAEA and the NSG which enabled India to obtain the historic waiver which would integrate India with the global mainstream for civilian nuclear cooperation and assist in both energy security and climate

change. Mr. Sharma stated that India was looking forward to welcoming President Mbeki for the 3rd IBSA Summit as well as his bilateral State visit during which he would be delivering the 2nd Gandhi Lecture at the Jawaharlal Nehru University. Minister Merwe expressed confidence that the IBSA Summit, which the South African Government regarded as one of the most important fora for South-South cooperation, would be very productive and mentioned that President Mbeki is likely to be accompanied by several Ministers.

8. Mr. Sharma also had a telephonic discussion with Foreign Minister Dlamini Zuma and they agreed to meet in New York on the margins of the UNGA. Prior to his departure from South Africa, Mr. Sharma attended a dinner in his honour by Mr. Essop Pahad, Minister in the Presidency.

SUDAN

545. Press Release issued by the Ministry of External Affairs on the visit of Sudanese Minister of Finance and National Economy Dr. Awad Ahmed Al-Jaz.

New Delhi, October 30, 2008.

Dr. Awad Ahmed Al-Jaz, Minister of Finance and National Economy of Sudan, visited India from October 28 to 30, 2008, as the Special Envoy of the President of Sudan. On 29th October 2008, Dr. Al-Jaz called on the External Affairs Minister, Shri Pranab Mukherjee. During the meeting, the visiting Minister handed over a letter from H.E. Omar Hassan Ahmad Al-Bashir, President of Sudan, addressed to the Prime Minister. During the meeting, a wide range of issues of mutual interest were discussed and bilateral relations were reviewed. Both sides expressed satisfaction over the excellent bilateral relations that prevail and outlined further steps to enhance cooperation. The External Affairs Minister underlined India's continuing commitment to the unity and territorial integrity of Sudan.

As regards matters pertaining to moves within the International Criminal Court with regard to Sudan, it was highlighted that India is neither a signatory to nor has it ratified the instrument establishing the said body. India hopes that any action that might detract from ongoing efforts to reach an early

resolution of conflict in the Darfur region of Sudan and aimed also at promoting the unity and territorial integrity of Sudan, may have undesirable consequences.

The External Affairs Minister also expressed concern over Indian nationals, Shri Biplab Biswas and Shri Chinna Rao Karni, Indian technicians who remain missing in Sudan, and sought conclusive information regarding their well-being.

During this visit the Sudanese Special Envoy also met the Minister of Railways, Shri Lalu Prasad Yadav, Minister of Finance, Shri P. Chidambaram and Minister of Petroleum & Natural Gas, Shri Murli Deora.

Minister of State for External Affairs, Shri E Ahamed, hosted a dinner in honour of the visiting dignitary.

UGAND

546. Speech by President Smt. Pratibha Devisingh Patil at the Banquet in honour of the President of the Republic of Uganda Mr. Yoweri Museveni.

New Delhi, April 10, 2008.

Your Excellency President Museveni,

Madam Janet Museveni,

Ladies and Gentlemen,

It is with great pleasure that I welcome you and Madam Janet Museveni on your state visit to India¹.

India's contacts with Uganda date back to the last years of the 19th century, when thousands of Indian labourers were brought to Uganda in the colonial period to build the railway line from Mombasa to Kampala. On its completion in 1901, most returned to India, but some stayed on, and in time became successful traders, farmers and entrepreneurs.

1. President Museveni, who came to India to participate in the India-Africa Forum Summit, stayed on for a separate bilateral visit.

In modern times, India's relations with Africa have been defined by Mahatma Gandhi and Pandit Jawaharlal Nehru. Mahatma Gandhi laid the foundations of India's struggle against apartheid and colonialism in South Africa in 1893. Pandit Nehru made that struggle a plank of India's foreign policy after independence. These ideas found deep resonance in Africa, when it was fighting its own battle against colonial rule. The bonds forged between India and Africa during their struggle for independence constitute a solid foundation for our partnership, which has grown stronger over the years.

Since your last State visit in 1992, much has changed in Uganda and Africa as it has in India. We greatly appreciate your decision to attend the India-Africa Forum Summit and have benefited from your contribution on how India and Africa can work together in meeting the socio-economic challenges of the 21st century. We have always been partners in African development and we wish to be part of Africa's new resurgence. We are grateful for your expression of solidarity and the warm words for India and our role in Africa.

For over two decades, you have given leadership to Uganda with which India and Indians have enjoyed long-standing links. We appreciate your support to the Indian Diaspora, which is contributing in good measure to the development of the Ugandan economy.

Uganda today is seen in Africa and elsewhere as a country that has enjoyed stability and economic growth for over two decades. You have brought down poverty levels significantly, while improving access to primary education and healthcare. Today, Uganda is playing a major role in the African Union, the East African Community, the Commonwealth and other forums. It is also contributing troops for peacekeeping in the region. The successful hosting of the Commonwealth Heads of Government Meeting last November has expanded Uganda's role beyond Africa, into other parts of the world. This is a tribute to your leadership, which has transformed Uganda into a dynamic nation.

It has always been India's endeavour to participate meaningfully in the socio-economic development process in Uganda. Our trade and investment partnership is developing well. We are happy that Uganda has decided to join the Pan-Africa e-network. The 4 Hole-in-the-Wall Projects, which are intended as learning stations for the under-privileged sections of society by providing unrestricted computer access to groups of children in an open playground setting, have already been set up in Uganda. Our pharmaceutical companies are collaborating well with your efforts to attack the scourge of

HIV/AIDS and other diseases. Our cooperation in capacity and institution building is being sustained. We are happy that a very large number of students from Uganda are studying in Indian education institutions.

It is a matter of satisfaction that the Indian and Ugandan corporate sectors are engaged in a sincere and serious endeavour to enhance the level of trade and investment flows. Your presence at the CII/EXIM Bank Project Partnership Conclave in Kampala in June 2007 and the presence of your Ministerial delegation at the Conclave in Delhi last month bodes well in this context. I hope our announcement of the unilateral tariff preference scheme for Least Developed Countries by Prime Minister Dr. Manmohan Singh at the India-Africa Forum Summit will help further boost our trade and investment partnership.

Our two countries have a good tradition of cooperating in multilateral fora. We face common challenges such as terrorism against which we have zero-tolerance and which require greater cooperation and more comprehensive action by the international community. We are working together on issues of Climate Change and the Doha Development Round of the WTO. In the case of both these important negotiations, our effort is to ensure that development in developing countries is ensured. We cannot accept solutions which perpetuate poverty in developing countries.

Our two countries are also working together on the important issue of United Nations reform, especially reform of the UN Security Council. No reform of the Security Council would be complete without adequate representation from Africa.

Excellency, Ladies and Gentlemen,

We are committed to strengthening our partnership with Uganda, both bilaterally and with the economic communities of Africa of which Uganda is a member.

Distinguished guests, may I request you to join me in a toast to:

- the good health and personal well being of President and Madame Museveni;
- the continued progress and prosperity of the friendly people of Uganda;
- and everlasting friendship between India and Uganda.

547. Briefing points by Official Spokesperson on External Affairs Minister Pranab Mukherjee's meeting with Canadian Foreign Minister.

New Delhi, January 12, 2008.

- EAM Shri Pranab Mukherjee held a one hour meeting with visiting Canadian Foreign Minister Maxime Bernier today. The discussions also carried on over lunch hosted by the EAM
- Discussions covered bilateral issues as well as regional and major international issues. Among bilateral issues discussed were trade between the two countries, possibilities of closer contacts on global issues and the need to intensify the bilateral dialogue mechanisms already in position.
- Regional and global issues discussed included Myanmar, Sri Lanka, Afghanistan, Middle East peace Process, NAFTA etc. The two Ministers also exchanged views on climate change in the context of the Bali Conference. EAM also briefed the Canadian Foreign Minister on SAARC, including the 14th SAARC summit.

UNITED STATES OF AMERICA

548. Joint Press Statement on India-U.S. 6th High Technology Cooperation Group Meeting.

New Delhi, February 29, 2008.

The sixth meeting of the India-U.S. High Technology Cooperation Group (HTCG) was held in New Delhi on February 28-29, 2008. The U.S. delegation was led by Under Secretary of Commerce for Industry and Security Mr. Mario Mancuso, and the Indian delegation was led by Foreign Secretary Shri Shivshankar Menon with participation of concerned departments of the Government of India and the United States Government, as well as the U.S.-India Business Council, Confederation of Indian Industry, and the Federation of Indian Chambers of Commerce and Industry.

The High Technology Cooperation Group constituted in 2003, had identified four broad areas of priority focus for promoting and facilitating bilateral commerce in advanced technology items between India and the U.S: (i) Defense & Strategic Trade, (ii) Biotechnology, (iii) Information Technology, and (iv) Nanotechnology.

The architecture of the HTCG involves private sector participation as an integral part of its working format. The industry engagement on the first day, with wide participation of a cross-section of Indian and U.S. industry, identified the areas of common interest requiring specific action by both sides for enhancing high technology transfers to India. These were considered by the two government delegations who agreed on a comprehensive plan to respond to the industry's recommendations which are geared to enhancing high-tech transfers to India.

Highlights of the action plan include a timetable for reviewing export controls in respect of India, building on innovative efforts already underway for simplifying export controls. India recognized and welcomed the U.S. Administration's announcement of their dual use export control reform initiative. On the Validated End User Program, which was notified by the U.S. Government on October 2, 2007, as a U.S. initiative to simplify export licensing requirements for Indian companies, both sides agreed that further discussions were required as U.S. export control policies should keep pace with the transformed relationship between India and the U.S.

On nanotechnology, the two sides agreed to focus on commercial application of cost-effective solutions for the benefit of society in the areas of health, energy, potable water and sustainable development.

On biotechnology, both governments agreed to support advanced technology transfers that would stimulate capacity building in life sciences. They also agreed to engage in harmonization of regulatory systems in medical devices, pharmaceuticals and biotechnology with the ultimate objective of improving market access.

On information technology, the two sides agreed to focus on enhanced collaboration in trade on advanced electronics and software, high performance computers, encryption and next generation technologies.

In the area of defense, the Group agreed on an ambitious plan to give an impetus to high technology transfers and trade that would address all issues related to licensing and the implementation of India's defense offsets policy, encouraging collaborations at all levels including small and medium enterprises.

The two sides looked forward to a series of time-bound actions in the above areas to raise high technology commerce to the next level of bilateral cooperation in keeping with the transformed nature of the strategic partnership of India and the United States¹.

1 Foreign Secretary Shiv Shankar Menon on February 28 urged Washington to re-examine the export curbs on high technology items as "the regulatory framework must stay in step with the unfolding strategic partnership between India and the U.S." Crediting the U.S for having taken a series of steps to bring down the list of items prohibited for exports to India, he said both countries would discuss measures to ensure that the licensing procedures remained in step with the growing ties. "We need to ensure that Indian organisations with which the U.S. has agreed to cooperate must be taken off the entities list. This should be a logical step. We must ensure that the development of cooperation and the operation of the licensing system are in track with the opportunities," Mr. Menon said at a meeting of the Indo-U.S. High Technology Group (HTCG). In view of the deepening bilateral relations, the ambitions of the two countries had grown. It was, therefore, logical to remove the irritants on high technology trade, he argued, adding that India wanted "precise and inclusive identification" of items for high tech collaboration. For the forum to be effective, Mr. Menon wanted the HTCG to maintain a continuous process of interaction with focused identification of the initiatives that both countries needed to take. Mario Mancuso of the Bureau of Industry and Security in the U.S. Department of Commerce, proposed the setting up of a working group on civil aviation to take cooperation in this sector to a new trajectory. Responding later in the day to Mr. Menon's observations on the need to reduce export controls, Mr. Mancuso said the U.S. was committed to looking at all those areas but no commitment could be given in this regard. "We are committed to finding ways consistent to our national requirements. The key message is that this is a strategic relationship and we are actively looking for ways to expand the hi-tech trade." Mr. Mancuso urged Indian companies to apply for the validated end users (VEU) programme to avoid seeking a licence each time they wanted to import an item. One of the VEU clauses asks companies to sign an agreement to allow on-site reviews by U.S. government officials.

549. Joint Press Conference of U. S Secretary of State Condoleezza Rice and External Affairs Minister Pranab Mukherjee after their talks.

Washington, March 24, 2008.

Secretary Rice: Good morning. I'm very pleased to welcome External Affairs Minister Mukherjee. We have had a very brief discussion this morning of some elements of the U.S.-India relationship, a relationship that has broadened and deepened during the time that President Bush and Prime Minister Singh have been in office and have been working to fully express the nature of a relationship that should exist between two of the world's great, multi-ethnic democracies.

We have had an opportunity to talk about the deepening of our economic ties, of our defense cooperation, and the deepening of our dialogue about regional issues. We had, for instance, a discussion this morning concerning Tibet and the troubling circumstances there, as well as on Burma. We have a lot more to talk about, and the Minister and I will meet for dinner tonight in order to do that. And so, thank you very much for coming and welcome. It's good to have you here.

Minister Mukherjee: Thank you, Madame Secretary. As you have stated that we have covered some areas of our cooperation and shared some parts of the issues arising in our region, shared our individual position. We had quite a satisfactory discussion this morning, but we are waiting till I meet you at night on dinner. We deeply appreciate and recognize your personal contribution, Secretary Rice, for the transformation of India-U.S. relations and giving them a strong foundation for the future. The record number of landmark developments in India-U.S. ties over the last few years would not have been possible without a broad-based convergence of interests and concerns between our two countries.

India is the fastest-growing democracy in the world. It is also, perhaps, the fastest-growing export market for U.S. business and industry. Two-way trade and investment between our two countries is growing along with our cooperation in agriculture, clean energy, environment, science and technology, health and education. A similar momentum can also be seen in our different (inaudible) for peaceful use of outer space and other high-technology areas. We believe that the India-U.S. partnership is based on a bedrock of long-term commitments and a shared vision. During my

discussion with Secretary Rice we agreed to maintain the positive momentum generated particularly by the visits of Prime Minister Manmohan Singh to United States in July 2005 and that of President Bush to India in March 2006. Several critical decisions were taken during that visit on a wide spectrum of issues important to both countries. It will be our common endeavor to register progress on all of them. In this context, I discussed with Secretary Rice the recent developments related to our bilateral cooperation. Secretary Rice and I shared our views and concerns about regional and international developments. There is a broad overlap in our interests and objectives, and we intend to supplement our dialogue with a closer working-level interaction on a regular basis within the Ministry of External Affairs in India and the U.S. State Department.

Secretary Rice and I will continue, as I mentioned, our discussion this evening. I also look forward to the opportunity of meeting the National Security Advisor Stephen Hadley and calling on President George W. Bush later this afternoon. Thank you, (inaudible).

Question: Secretary Rice, if the U.S.-India Civil Nuclear Cooperation deal is not completed and sent to Congress by July, do you think you will simply have to give up on it for this Administration, given the electoral calendar?

And Mr. Minister, have you made any progress in your talks with your - the government's Communist allies, members, to obtain their approval for the deal? And how close are you now to completing the IAEA safeguards agreement?

Secretary Rice, if you could just quickly address Tibet? I don't think we've had a chance to hear you talk - squarely address the question of whether the Chinese authorities have used excessive force there. And have there been any more unauthorized passport inquiries?

Secretary Rice: Well, Arshad, you managed three questions rather than one. (Laughter.) Let me try and take care of them. First of all, we have had a brief discussion of what we consider to be a landmark agreement, the Civil Nuclear Cooperation agreement with India, which I believe would be good for both sides and good for the future of nonproliferation, as many experts, including Mohamed ElBaradei, have said. And so we will continue to work on that agreement. The Indians are now in a process of working with the IAEA and we'll follow that progress, but we will have further discussions on that matter later. We spoke principally this morning about various regional issues of concern to both sides.

In that regard, on Tibet, let me just say that we believe that the answer for Tibet is to have a more sustainable policy for the Chinese Government concerning Tibet. I've spoken to my counterpart about the current situation in which there needs to be restraint, in which violence is not acceptable, but there also needs to be a day after the current events.

And that really requires a sustainable process of dealing with the problems of Tibet, and the grievances of Tibetans. And we believe that the Dalai Lama could play a very favorable role, given his belief in nonviolence, given his stated position that he does not seek political independence for Tibet, and given his unassailable, authoritative moral stature not just with the people of Tibet, but with people from around the world. And we're going to continue to encourage that dialogue because, ultimately, that is going to be the only policy that is sustainable in Tibet.

And as to passports, I know of nothing further from the beginning of the weekend.

Minister Mukherjee: Thank you. In (inaudible), as Secretary Rice has pointed out, we are interested in implementing the landmark agreement, which we finalized during the visit of Prime Minister Manmohan Singh and followed by subsequent visit of President Bush in India. But we have some political problems in our country. Currently, we are engaged in resolving those problems. Out of four stages, 123 Agreement between India and the U.S.A. has been signed. The second stage, to have the approval of the Board of Governors of IAEA in respect of India's specific safeguard agreement, we are currently engaged with IAEA. The discussions are over, but the agreements are yet to be initialed and approved by the Board of Governors. In that stage, we are currently engaged with various political parties who are supporters of our coalition government in India. And the discussion is still going on.

In the aspect of Tibet, we shared our perceptions. You are aware of the fact that 49 years ago, in Dalai Lama entered into India in the month of March 1959. Since then, we are providing shelter to His Holiness Dalai Lama. He is highly respected. He is fully free to carry on his spiritual and religious activities. We have also provided shelter to his followers. I understand currently the number may be about 180,000 Tibetans who are provided shelter in India. They can carry on their religious, cultural and spiritual activities. But as part of our law, they are not entitled to carry on any political activities, as Indian citizens also cannot carry on any political activities which are inimical to any friendly countries or which can disturb

the relationship between India and any other country. And all of them are to accept the law of the land, including the efforts to cross the international borders. And Tibetan refugees are also subjected to the law of the land. We have expressed our concern in parliament about the latest development. We do hope it will be possible to resolve the issue through peaceful dialogue between the parties concerned. Thank you.

Question: Dr. Rice, what is your take on the latest challenge in Indo-U.S. relations? I mean, Speaker Pelosi's indiscretion in criticizing China on Indian soil, which many Indians have disapproved of.

And to you, Mr. Mukherjee, why are you allowing the Dalai Lama to let the Americans fire on China from Indian shoulders in violation of the Dalai Lama's longstanding commitment not to engage in political activity?

Secretary Rice: Well, let me first set aside the premise that there is some problem in Indo-U.S. relations. I don't believe that there is. Speaker Pelosi spoke with the Dalai Lama, as the President has spoken with the Dalai Lama, most recently in October when he was here to receive a Congressional Medal of Honor, our highest civilian medal. He is somebody who is respected. The Speaker respects him. The President respects him. And at this particular point in time, to have contact with him, I think, is a good thing, not a bad thing because he is a moderate voice on these issues and he is a voice that, frankly, I hope the Chinese will listen to more.

Minister Mukherjee: I think in respect of Tibet, I have already expressed my views.

Secretary Rice: Thank you very much.

Minister Mukherjee: Thank you.

550. Remarks by External Affairs Minister Pranab Mukherjee at the Carnegie Endowment for International Peace on "Perspectives on India-US Relations".

Washington, (D.C.), March 24, 2008.

Good Afternoon,

I would like to thank Jessica Mathews, President of the Carnegie Endowment for International Peace, for hosting this event and giving me an opportunity to share with you some thoughts on India's foreign policy as well as India-US ties.

One of the unique characteristics of our foreign policy and national security outlook is that they are based on a broad national consensus. While there has always been debate and dissent on the best ways in which to achieve our foreign policy priorities, a national consensus once arrived at, transcends party politics and even changes of government. For example, the multiple opinions on the India-US nuclear initiative in India and outside disguise the fundamental common understanding that energy security for India is vital and that nuclear energy through national means as well as international collaboration is a vital part of it.

Like everybody else, India too needs to tackle the complexities of the modern world. On one hand, there are vital security issues such as combating terrorism and religious extremism, as well as the dangers of WMD proliferation. On the other hand, we have to address human problems such as climate change, HIV-AIDS, bird flu, etc. Whether we look at security related issues or matters affecting the long-term health of this planet, it is no longer possible for any nation to succeed without concerted international action. Such action can take the shape of groups of countries working together or even, when necessary, a global consensus. Going it alone is no longer an option for any country. Through our association with IBSA, BRIC, SAARC, the G-8 and ASEAN, and our contribution to the UN, we are building important partnerships to address common problems. We also believe it is time to reform the structure of the UN, particularly the Security Council, where a permanent seat for India will only reflect current global realities.

Globalization today provides opportunities to countries that are willing to draw benefits from it. But the process must also ensure that countries are enabled to draw those benefits. Paradoxically, the benefits that accrue to

countries from a globalized economy also give them the strength to pursue their national priorities and independent foreign policies. As the case of India proves, globalization has not only linked our economy to the world; it has also strengthened our national decision-making autonomy.

The international discourse on the foreign policies of countries like India has often been defined by categories that are sometimes misleading or even irrelevant. For example, on matters of nuclear disarmament and non-proliferation, India is projected as having been outside the mainstream, whereas we have always been a leading member of the international consensus. In 1954, Prime Minister Nehru called for an end to all nuclear weapons testing. We are signatories to the Partial Test Ban Treaty, the Biological Weapons Convention and the Chemical Weapons Convention, and are ready to work with the international community to achieve a comprehensive and verifiable FMCT. We maintain a unilateral moratorium on nuclear explosive tests. While not being signatories to the NPT, we have unilaterally implemented controls on nuclear equipment, material and technology more effectively than perhaps any other state. Being from a neighbourhood that has the biggest sources and destinations of proliferation, we are particularly conscious of its dangers.

India's primary concern today is maintaining the tempo of economic growth and bringing its benefits directly to its people. It is, therefore, natural that we should seek to defuse crises in our immediate neighbourhood and encourage greater economic and other kinds of connectivity in our region. Many of the countries in our region, including Afghanistan, Pakistan, Nepal, Bangladesh and Myanmar, are going through a difficult period of transition. It is in our national interest that these countries return to the path of democracy, stability and economic development so that the entire region can look forward to an era of prosperity.

India's growing economic imprint is also connecting us more directly with West Asia and the Gulf on one hand, and the Asia Pacific region on the other. To that extent, we have a direct stake in and are ready to contribute to any effort to promote peace and security in these regions and protect the sea lanes of commerce and energy.

Between India and USA, as two great democracies, there will always be a fundamental underlying predictability in bilateral ties because this relationship answers to the interests of the people of both countries. The links between our two countries are multi-layered and take in the political leadership, business and industry, scientists, students and educators,

military personnel and others. The balance-sheet just since 2005 includes important landmarks like the Open Skies Agreement, the launch of the Energy and Economic Dialogues, a new defence framework agreement, a knowledge initiative in agriculture, a new agreement on science and technology, and revitalized cooperation in space and defence industry as well as R&D.

Economic cooperation looks particularly promising. Whether it is meeting the need for better infrastructure or addressing energy deficiency, improving telecommunications, or modernizing the manufacturing sector, the opportunities for US business and industry in India are huge. India has become the fastest growing export destination for US products, having registered a growth rate of 75% last year. The US is one of the largest foreign direct investors in India, while US-bound investment from India has grown dramatically in recent years, particularly in 2007. India's transparent economic policies, regulatory framework and judicial system are a source of reassurance to our foreign partners. I am confident that this economic synergy between India and United States is bound to continue in the coming years and decades.

Emblematic of this new relationship was the willingness of both countries to shed the baggage of the last 30 years to launch a new era of cooperation in civil nuclear power to address India's burgeoning energy requirements. We intend to press ahead on all these and other initiatives.

In the evolving geo-political and economic re-alignment in the world, we can visualize a situation in which Indian and US interests will increasingly intersect. With the shift in the center of gravity of the world economy towards Asia, the Indian Ocean has greater economic and strategic value than before. Existing and emerging threats in the form of piracy, drug trafficking, WMD proliferation, pollution, accidents, closure of choke points, regional conflicts and other disputes are of vital concern to us and to the US. All these challenges demand concerted action and I daresay that no two countries are better placed to exploit their inherent synergies in dealing with them than India and the United States.

I thank you for your attention and look forward to hearing your views.

(The question - answer session which followed was off the record)

**551. Press Conference of External Affairs Minister Pranab
Mukherjee during his visit to the United States of America.**

Washington, March 25, 2008.

Opening remarks of External Affairs Minister:

I have concluded a very productive and fruitful visit to the United States, the first in my capacity as the Minister for External Affairs of India. I had wide-ranging discussions with Secretary of State Dr. Condoleezza Rice and had the honor to call on President George W. Bush. I also had the pleasure of interacting with a group of invited scholars and guests at the Carnegie Endowment for International Peace.

My discussions with the US leadership reinforced our view that the India-US relationship is robust and forward-leaning and answers to the interests of both countries. Based on a foundation of shared values and tangible mutual benefit, the India-US strategic partnership has grown from strength to strength. I believe that there is consensus in both countries to strengthen India-US ties and to further enrich our bilateral agenda. Our relations encompass a meaningful and regular political dialogue, vibrant economic and commercial interaction and collaboration over a wide spectrum of issues including energy, defense, space, science and technology, agriculture and education. We also discussed the way forward on opening civil nuclear cooperation by India with USA and other partners as a critical element of our energy security.

I also had the opportunity to discuss with President Bush and Secretary Rice several regional and international issues including developments in many countries in our region. We have a commonality of views on most issues in terms of our objectives and we had the opportunity to discuss thoroughly the most effective ways to achieve them. Several countries in our region are going through a period of transition and it is in India's direct interest that there should be peace, stability and economic development that will benefit all. We also discussed climate change and the need for a successful conclusion of the Doha Development Round.

Although India-US relations have a strong dynamic and logic of their own resulting in the kind of momentum we have witnessed in recent years, I would like to pay a tribute to the personal contribution of President Bush, Prime Minister Manmohan Singh and Secretary Rice to this process. I have invited Secretary Rice to visit India at a mutually convenient date, and she has accepted this invitation.

Thank you.

Mr. Rahul Chhabra, Spokesman, Embassy of India : It gives me great pleasure to welcome all of you this afternoon.

We are privileged to have Indian External Affairs Minister Mr. Pranab Mukherjee here with us at this briefing. He has been here since day before evening. Yesterday, he had meetings with Dr. Rice, Secretary of State and he called on President Bush. To give you a flavor of his meetings, we circulated today's opening statement and the speech that he made at the Carnegie Endowment for International Peace yesterday.

We also have Ambassador Ronen Sen and DCM Ambassador Jassal here with us. The Minister will take questions. Before you pose the question, may I request you to identify yourselves and the organization that you represent?

One last piece of order; if you have forgotten to put your cell phones on silent mode, kindly do that now.

Thank you. Questions, please?

Q: (Off mike.) Hi. **Erica Nelson with Inside U.S. Trade.** Number one, I'd like to know what Secretary Rice's message to you was, specifically about the nuclear deal? And also, sorry, Speaker Pelosi's message was last week on the nuclear deal? And secondly, how long do you expect the domestic review of the IAEA safeguards to take?

External Affairs Minister Pranab Mukherjee: In fact, while having discussions with Secretary Rice, we discussed a number of areas of mutual interest, including bilateral relations between India and the USA, and also sharing our perception on the developments of our region. The nuclear deal came up in our discussions. We have finalized the language of the text of the agreement for the process of signing. After that, it will be taken to the board of governors.

At this juncture, it is difficult for me to indicate any time frame by which we will be able to complete this process.

We have some political problems in India with the agreement, particularly among our supporters of the coalition government, which we are heading. We are trying to resolve these issues, but it might take some more time.

Thank you.

Mr. Rahul Chhabra: Next. Sridhar from PTI.

Q: (Off mike.) Sir - timelines. I was wondering if this issue was raised by the administration, also?

Minister Mukherjee: I am aware of the time frame, but as I mentioned there are certain issues which are yet to be resolved and unless those issues are resolved, it will be difficult for us to fix any particular time frame.

Thank you.

Mr. Rahul Chhabra : Deepak Dobhal?

Q: Is UPA ready to sacrifice government for this deal?

Minister Mukherjee: I stated the position earlier - in response to queries from our friends at home; it's not a question of sacrificing the agreement or sacrificing the government. Currently, we are involved in resolving the issues and trying to find out whether we can find a meeting ground between us and a section of our supporters.

Q: Mr. Mukherjee, welcome to Washington, DC. I'm **Natasha Israni with Times Now**. The question is: If you don't find this consensus or a solution to this question with the Left government by June or by summer or even by August, what do you think is likely to happen then in terms of the stance of the Indian government on the deal?

Minister Mukherjee: You know, events have their own momentum - and we are interested in pursuing this deal and if we can evolve a consensus around this deal, it will be possible for us to develop the process, but as I mentioned, it is difficult for me to predict any time frame, so I cannot say whether it's in the month of June or the month of August. Let us see how things move.

Mr. Rahul Chhabra: Yes. The gentleman here.

Q: David Morgan with Reuters. Minister, can you tell us what some of the sticking points are in these discussions? And can you also say whether or not your government has confidence that there will be deal in the end?

Minister Mukherjee: So far as, nuclear deal is concerned, our government is interested in fructifying this cooperation because we would like to have alternative source of clean energy. All of us are fully aware of the close linkage between clean energy and climate change. Keeping that in view, on the one hand, we shall have to protect the environment by resorting to

more and more clean energy, which will have less adverse impact on the environment. On the other hand, to maintain the tempo of development, which we want to achieve around nine to ten percent annual GDP growth for the next 20 years to address our basic problems, we require substantial energy. From that point of view, we are interested in finalizing this cooperation agreement.

The other issues we discussed; we shared our perceptions on regional developments and also we shared our perceptions on climate change. As Prime Minister Dr. Manmohan Singh already has pointed out that India is equally concerned like many other countries of creating the appropriate mechanism through which we share the common but differentiated responsibilities depending on the capabilities.

We also welcomed the decision of President Bush to launch a fund to finance clean technological development. We shared our views on developments in our region, including the developments in Pakistan, Myanmar, etc.

Therefore, apart from bilateral cooperation, which we are having, these are the issues which we discussed. Our talks were wide-ranging.

Thank you.

Q: Minister, what I meant to ask, what are the sticking points in the discussions with the members of the government's coalition - what is preventing progress?

Minister Mukherjee: Oh, they have their own ideological perception. It is not that every coalition partner is against it, mainly the Left parties who are supporting the government without participating in the government. In our country, we are having two types of supporters for the coalition. Some political parties are supporting the government and participating in the cabinet.

Some political parties are supporting the government from outside without participating in the government. They feel that we should not have this arrangement with the USA and apart from that they also feel, a section of them, that we should explore the possibilities of going for clean coal technology since we are having abundant coal. Some of them feel that we should explore the possibilities of other sources of energy.

So there are divergent views with respect to the demand for clean nuclear technology, but there is an overwhelming consensus that nuclear

technology is important and nuclear energy will be one of the sources of clean energy and we should try to have it.

Q: Chidananda Rajghatta from Times of India. Minister, you have said a couple of times before you came here that a minority government cannot, you know, go ahead with this deal. I'm wondering if you can address this not as the external affairs minister, but as a Congress Party functionary and a very senior public figure and political leader.

The Indian constitution doesn't recognize minority governments and if you go down this path, the slippery slope tomorrow, any government can be held hostage to this principle that you might not be able to raise gas prices, petroleum prices, take any decision.

So do you still think that's a valid position that a minority government cannot take decisions which affect international security?

Minister Mukherjee: So far, legal and constitutional - correct, they were correct that there is no such thing as minority government, but one of the basic concepts of parliamentary form of government is that a government, which enjoys the confidence of the directly elected house of parliament is considered as the government having the majority. But there is another political angularity, which cannot be ignored. As you are aware, on this deal - there has been divergent views, not only the Left, even the principal opposition party, BJP, who were in government for six years prior to our assuming the responsibility of governance, they are opposing the deal.

The coalition will have to take into account that even if we sign an important international agreement, if it is subsequently not honored by the next government, it may lead to an embarrassing situation. Sometimes it has happened, in history, we find a number of examples, but we want to avert that situation and that's why we are making this exercise, maybe it's time-consuming, it is testing our patience, but nonetheless, we do feel it is worth pursuing.

Thank you.

Mr. Rahul Chhabra: Glenn Kessler, The Washington Post.

Q: U.S. officials, as well as Laura Bush have said that India has halted arms sales to Burma-Myanmar. I was wondering, could you confirm that? And could you also describe whether or not Secretary Rice asked you to do particular things with Burma in terms of putting pressure on that government?

Minister Mukherjee: During our course of discussion, the Myanmar issue came and so far as Myanmar is concerned, we have explained our position, what we have done to persuade the Myanmar authorities, to extend cooperation to Special Envoy, Mr. Gambari, special envoy to the Secretary-General and what steps they have initiated to carry on the political reforms and national reconciliation process in that country.

They also appointed a special representative to carry on dialogue with Aung San Suu Kyi. It is our persistent suggestion to the Myanmar authorities to please ensure that all important stakeholders, including Aung San Suu Kyi, are fully involved in the process of political reforms and national reconciliation, which you want to achieve, and at the same time, we are suggesting them to maintain peace and tranquility among the large number of ethnic entities who are in Myanmar.

Therefore, this is one area where we are in touch with Myanmar authorities and when the Myanmar foreign minister visited India, I had detailed discussions with him. Mr. Gambari also discussed with us; we are in touch with others and we shared this information with the authorities with whom we had discussions here.

So far, our arms supplies to Myanmar are concerned; we do not supply any arms. India is not a very major arms supplier to any other country.

Mr. Rahul Chhabra : The gentleman at the back.

Q: Ashim Jaklabati from Voice of America: Just yesterday, a change of guard has taken place in Pakistan and the government of India had been negotiating with Musharraf for a long time in the peace process and now Musharraf is a weak person since yesterday and how the Indian government will approach the peace process activities in dealing with Pakistan?

Minister Mukherjee: After all, in our concept of the government, it is always a continuing one. In any system of government, there may be change of political executives, but major policies of the government continue unless somebody wants to have a disruption in that.

We are hoping to renew composite dialogue with Pakistan. I, myself, have expressed my desire to visit Pakistan as soon as the new government is in place, and I'm waiting for that.

I hope that the new government will pick up the thread from where it was left by President Musharraf and will continue this exercise.

Thank you.

Mr. Rahul Chhabra : Last question, the lady at the back.

Q: I'm Yasmin Vossoughian from the Gallup Poll: We recently conducted a poll in your country that found that only 22 percent of Indians were familiar with the civilian nuclear deal, but of those 22 percent, almost 60 percent thought it was a good thing for India.

So my question to you is: How important do you think greater public knowledge of the civilian nuclear deal is to reaching a consensus?

Minister Mukherjee: I explained in detail how important it is for India because we require energy and at the same time, we shall have to depend more and more on clean energy. Right now, there are 300 million people in India who do not have any access to electricity. As for our assessment, the Planning Commission has made a detailed study. We still have to enhance installed power generation capacity in India from all sources nearly three times during the next five to seven years if we want to sustain eight to ten percent GDP growth for the next couple of decades. Therefore, energy requirement, and clean energy requirement is an absolute must. It may be that many of them are not fully aware of it, particularly with the level of understanding; the rate of literacy in our country, this is not a little unusual, but at the same time, I must say that in informed circles, there is a broad consensus about the need of augmenting energy capabilities of India and its requirement to sustain the enhanced level of growth.

Thank you.

Mr. Rahul Chhabra: Thank you so much.

Minister Mukherjee: Thank you ladies and gentlemen.

552. Press Release of the Ministry of External Affairs on India - US Energy Dialogue consultations.**New Delhi, April 4, 2008.**

The third meeting of the Steering Committee of the India US Energy Dialogue took place in New Delhi on April 4, 2008. The U.S. delegation was led by U.S. Department of Energy Under Secretary, Mr. C. H. 'Bud' Albright, and the Indian delegation was led by Foreign Secretary, Shri Shivshankar Menon, assisted by the officials of the concerned Ministries of the Government of India and the United States Government.

Prior to the meeting of this apex committee, the Working Groups established under the India US Energy Dialogue i.e. focusing on (i) Oil and Natural Gas (ii) Coal (iii) Power and Energy Efficiency and (iv) New Technologies and Renewable Energy met in New Delhi from March 31, 2008 to April 3, 2008.

Both sides expressed satisfaction at the level of cooperation and progress achieved during the last almost 3 years. The two sides looked forward to a series of time-bound actions in bilateral energy cooperation - in keeping with the transformed nature of the strategic partnership between India and the USA and to move forward towards the common objective of clean energy , energy efficiency, energy security while pursuing the goal of sustainable development.

A Memorandum of Understanding was signed on April 4, 2008 between the Ministry of Petroleum and Natural Gas and the Department of Energy, USA for cooperation in gas hydrates which, among other things would facilitate the establishment of a Gas Hydrate Technology Center in India. The Hindustan Petroleum Corporation Limited (HPCL) and the United States Trade Development Agency signed a Grant Agreement under which technical assistance will be provided for the proposed HPCL Asset Integrity Management Project.

The India-U.S. Energy Dialogue, launched on May 31, 2005, is aimed at increased India-U.S. trade and investment in the Indian energy sector by working with the public and private sectors to further identify areas of cooperation and collaboration and build on the broad range of existing cooperation between India and the United States to mobilize secure, clean, reliable and affordable sources of energy, focusing on (i) oil and natural gas (ii) coal (iii) power and energy efficiency,(iv) new technologies and renewable Energy and (v) civil nuclear energy.

553. Joint Press Statement on the Sixth Meeting of the Indo-US Global Issues Forum.**New Delhi, April 24, 2008.**

The sixth meeting of the US-India Global Issues Forum was held on April 24, 2008 at Hyderabad House in New Delhi. Foreign Secretary Shri Shivshankar Menon led the Indian delegation. Under Secretary of State for Democracy and Global Affairs, Paula J. Dobriansky led the U.S. delegation.

The two delegations engaged in productive discussions to strengthen cooperation on a range of global issues of common concern such as promotion of democracy and human rights, controlling avian flu and mitigating a future pandemic, accelerating polio eradication, addressing climate change, food security, cooperation in disaster management, protecting endangered wildlife and promoting science and technology cooperation.

The US-India Global Issues Forum, which convenes annually and alternates between New Delhi and Washington D.C., was first held in New Delhi in October 2002.

**554. Meeting of U.S President George W. Bush with Prime Minister Dr. Manmohan Singh at G8 Summit.****Toyako, Japan, July 9, 2008.**

PRESIDENT BUSH: Prime Minister Singh and I just had a typical conversation among friends. We talked about common opportunities, world problems, and we did it in a spirit of respect -- and it was easy for me to do because I respect the Prime Minister a lot. I also respect India a lot, and I think it's very important that the United States continues to work with our friends to develop not only a new strategic relationship, but a relationship that addresses some of the world's problems.

We talked about the India-U.S. nuclear deal, and how important that is for our respective countries. We talked about the environment and how we can work together to grow our economies and, at the same time, be responsible stewards of the environment. We talked about free trade, the Doha Round, and how important it is that nations such as India and the

United States find common ground to make sure protectionist sentiments don't wall us off from the rest of the world.

We talked about educational exchanges. I reminded the Prime Minister that the Indian American population is very proud of this relationship, and proud of their heritage, and proud of the leadership of the Prime Minister.

All in all, it was a really good meeting amongst two friends. And so, Mr. Prime Minister, thank you for joining us today, and congratulations on your leadership at home.

PRIME MINISTER SINGH: Mr. President, it is a great opportunity for me to once again meet you and to review with you the state of Indo-American relations. And I'm very happy to report to the President that our relations have moved forward handsomely since our first meeting in July 2005. We have made progress in all areas. We have progress in nuclear cooperation, space cooperation, defense cooperation, educational exchanges, our working together in multilateral institutions for the success of the Doha Round. And I am very pleased with the state of our relationship, which has truly acquired the characteristic of a genuine strategic partnership.

I thank the President for his personal magnificent contribution to the evolution of our relationship. And all I can say is our relationship with the United States has never been in such good shape as it is today. And it is the intention of my government, as I believe it is also the will of the Indian people, particularly the thinking segments of our population, that in this increasingly interdependent world that we live in, whether it is a question of climate change, whether it is a question of managing the global economy, India and United States must stand tall, stand shoulder to shoulder, and that's what is going to happen.

PRESIDENT BUSH: Thank you, sir.

555. Press Release of the Ministry of External Affairs on the telephone conversation between External Affairs Minister and US Secretary of State.

New Delhi, May 10, 2008.

External Affairs Minister Shri Pranab Mukherjee had a telephone conversation with US Secretary of State Condoleezza Rice on May 9, 2008 evening.

This is a part of normal periodical telephone conversations between the two Foreign Ministers.

External Affairs Minister and Secretary Rice exchanged views on the important developments in our region as well as on global issues since they last met in the month of March this year.

External Affairs Minister also extended an invitation to Secretary Rice to visit India to which she responded by agreeing to do so on a mutually agreed convenient date.

The conversation¹ was warm and cordial.

¹ Media reports said the call from Ms. Rice was essentially to request New Delhi to intervene and try to impress upon Myanmar to accept US aid for the cyclone-affected areas. Myanmar feeling uncomfortable with American assistance and American Aid Workers entering the country and distributing the aid, upon India's efforts, the US aircraft was allowed to land in Yangon where the aid cargo was unloaded. Media reports said Mr. Mukherjee conveyed this to Rice and explained to her the need to move gradually since the military regime in Yangon was sensitive to western presence on its soil. It may be noted that India had intervened in the past as well to facilitate the second visit of UN Special Envoy Ebrahim Gambari into Myanmar. During the conversation, the nuclear deal reportedly also figured.

556. Press Release issued by the Ministry of External Affairs on the signing of the Agreement between the Government of the United States of America and the Government of India for Financing Certain Educational Exchange Programmes.

New Delhi, July 4, 2008.

The Agreement between the Government of the United States of America and the Government of India for Financing Certain Educational Exchange Programmes was today signed by Foreign Secretary Shivshankar Menon and US Ambassador David C Mulford in New Delhi, giving a further boost to the strengthening of educational exchanges between India and the United States.

The Agreement supersedes the Fulbright Agreement revised in 1963 (after it was first signed in 1950 between Prime Minister Jawaharlal Nehru and the then US Ambassador to India, Mr. Loy Henderson).

Under the new Agreement, the Government of India and the United States shall henceforth implement the scholarship programme as full partners and increase by 100% the total scholarship amount awarded annually - to US\$5 million.

At present about 100 Indian students/ researchers visit the United States from India and a 100 US awardees visit India each year under the Fulbright Programme. Under the Agreement signed today, these numbers would approximately double.

The new Agreement provides for expansion of the existing programme with, for the first time, (i) a direct financial contribution by the Government of India, (ii) Government of India co-chairing the Board of Directors of the Foundation and (iii) participating equally in policy and decision-making on the exchange of Indian and US scholars under the India-US programme.

The Foundation will now be called the "US-India Educational Foundation" awarding "Fulbright-Jawaharlal Nehru Scholarships and Grants".

The programmes of the Foundation will continue to finance (i) studies,

research, instruction and other educational activities of/for US citizens and nationals in India and Indian citizens and nationals in US schools and institutions in USA, (ii) visits and exchanges of students, trainees, teachers, instructors and professors and (iii) other related educational and cultural programmes and activities.

Both Governments have agreed to endeavour to see that the Foundation's programmes of activities, research and studies will complement the bilateral initiatives announced by the US and Indian Governments on July 18 2005 and March 2, 2006 in the areas of agriculture, science and technology, sustainable development, clean and efficient energy, environment, climate change, democracy and capacity building in emerging democracies and global issues of common concern - among others - and create further awareness and understanding of India in the USA and vice versa, strengthening the 'knowledge' linkages between the people of the two countries.

557. Joint Press Statement after the meeting of India-US Joint Working Group on Counter-Terrorism.**New Delhi, August 25, 2008.**

The 10th India-US Joint Working Group on counter terrorism met today to discuss bilateral cooperation in fighting the global menace of terrorism. The Indian delegation was led by Shri Vivek Katju, Additional Secretary for Political and International Organizations at the Ministry of External Affairs of India, while the US delegation was led by the Coordinator for Counter-Terrorism, Ambassador Dell Dailey.

2. During the Joint Working Group meeting, both sides strongly condemned terrorism in all its forms and manifestations. The Joint Working Group underscored terrorism as a major threat to democracy, pluralism, international peace and security. Both sides renewed their commitment to fight the menace of terrorism and reiterated the need for the international community to come together to combat terrorism in a long term, sustained and comprehensive manner.
3. India and the US called upon all states to abide by their commitments under the UN Global Counter Terrorism Strategy adopted by the UN General Assembly in September 2006 and called for the urgent finalization of the draft UN Comprehensive Convention on International Terrorism.
4. They discussed, inter alia, threat assessments in South Asia and the Middle East. They also exchanged views on cooperation in bio-terrorism, ongoing Anti-terrorism Assistance Training Program, regional counter-terrorism efforts and cooperation in the field of forensic epidemiology. Other issues discussed included terrorist financing and money laundering. Both sides agreed to identify measures to strengthen institutional linkages leading to closer interaction and cooperation in the field of counter-terrorism.
5. The next meeting of the Counter-Terrorism Joint Working Group will take place in Washington DC in 2009 on a mutually convenient date.

558. Media Briefing by Foreign Secretary Shivshankar Menon on the visit of Prime Minister Dr. Manmohan Singh to the USA and France and by Secretary (West) on the India-EU Summit.

New Delhi, September 19, 2008.

Official Spokesperson (Shri Vishnu Prakash): Good evening and welcome. We have Foreign Secretary here to brief you about the forthcoming visit of the Prime Minister to USA and France. To his right is Secretary (West) Mr. Nalin Surie who would be briefing you about the India-EU Summit. To Foreign Secretary's left is Special Secretary (Political) Mr. Vivek Katju. After the opening remarks, Foreign Secretary and Secretary (West) would be taking a few questions. Thank you.

Foreign Secretary (Shri Shivshankar Menon): Good afternoon. We thought we would brief you on the Prime Minister's forthcoming visit to the United Nations General Assembly to Washington DC and thereafter to the EU Summit in France which Secretary (West) Mr. Nalin Surie will tell you about; and the Indo-French Summit in Paris on 30th.

Prime Minister will be leaving Delhi on Monday. He will be in the US from the 23rd to the 27th. He will be attending a high-level segment of the United Nations General Assembly which takes place that week; and will be in Washington DC on the 25th on a day's visit. In New York, the Prime Minister will address the General Assembly on the 26th afternoon. He will also be meeting with other world leaders on the sidelines of the UNGA. He will participate also in the high-level summit on the Millennium Development Goals which is taking place on the 25th. So, he will attend that on 25th morning and then go to Washington DC.

There are a series of high-level events being held at the UN during this week actually. There is a high-level event on Africa's Development Needs on the 22nd; there is the event on MDGs, which I mentioned to you, on the 25th which Prime Minister will be participating; there is a Commonwealth Ministerial meeting; India will be represented at very high levels at these meetings.

For India, this Session of the General Assembly is a significant one. The theme for the general debate is impact on the global food crisis on poverty and hunger in the world as well as, the need to democratize the United Nations. Both these are themes which are very important to us and which

will be addressed by the Prime Minister when speaks to the General Assembly on the 26th.

For us our priorities are combating key global challenges, combating terrorism, promoting verifiable and comprehensive nuclear disarmament, poverty eradication, which I told you is one of the major things, sustainable development, and reform of the United Nations, which we think is necessary to democratize it, make it genuinely representative, and enable UN to play its constructive and positive role.

In the working visit to Washington on the 25th of September, Prime Minister will be meeting President Bush and carrying on the conversation from their last meeting at Hokkaido during the G-8 Summit. There have been a series of bilateral contacts since then, as you know, on a variety of bilateral and global issues. We expect the two leaders to review the progress and the implementation of the wide range of initiatives that we have been taking in the last few years which had transformed the relationship between India and the US. Thereafter when he returns to New York he will also be meeting with the Indian community and, as I said, meeting with other world leaders.

He will then go to France where on 29th there is the India-EU Summit, which I will ask Secretary (West) to tell you about, which will be followed by the Indo-French Summit with President Sarkozy in Paris on the 30th. This is an annual feature. As you remember, President Sarkozy was here in January 2008. We are holding this Summit in order to review progress on all the subjects that that we had covered and that we have been working on. France is a strategic partner for us. It is important to us in several areas. We will naturally exchange views on the bilateral relationship and what more we could be doing together, but also on recent developments in the world affairs. But maybe I should wait for your questions before telling you more about that.

I will hand you over to Secretary (West) to tell you about the India-EU Summit and then we will be happy to take your questions.

SECRETARY (WEST) (SHRI NALIN SURIE): I think I will rather hear more but I will sort of say my piece.

The 9th India-EU Summit will be held in Marseilles on the 29th of this month. Prime Minister will lead the delegation. He will be accompanied by National Security Advisor, and the Principal Secretary. The European Union will be represented by President Sarkozy in his capacity as the President

of the European Council. He in turn will be accompanied by the President of the European Commission Mr. Barroso, the former Portuguese Head of State. The EU delegation will also include Mr. Javier Solana, the High Representative of Foreign and Security Policy; Mr. Mendelson, the Trade Commissioner; and the French Foreign Minister Mr. Kouchner.

As you all know, the last Summit was held in Delhi in November, 2007, at which time both sides had reaffirmed their determination to further strengthen the strategic partnership and to cooperate at the global level for the cause of peace, security and development. Both India and the EU member states are vibrant democracies and our fundamental belief in and commitment to democracy, pluralism, rule of law and multilateralism makes us natural partners.

India was amongst the first countries to establish diplomatic relations with the then European Economic Community in the early 1960s. In recent years, in particular after the adoption of the India-US strategic partnership of 2004, the relationship has intensified and evolved to cover a variety of issues of bilateral, regional and multilateral importance. The level of interaction since 2000 is at Summit level. This has qualitatively transformed the manner in which India and the EU engaged with each other. We also have regular exchanges at ministerial, official, parliamentary and civil society levels. This has helped widen and deepen the partnership.

At the 6th Summit in 2005, you will recall that a Comprehensive Joint Action Plan setting out a roadmap for India and EU interaction had been entered into. This represented a change from what used to be a purely trade-driven relationship to one covering diverse areas of interaction. As you all know, it is a very large plan and runs into many pages. It is on the Internet, if you would like to see it again. The Action Plan has been in operation for the last three years and has been reviewed in preparation for the Marseilles Summit. A revised Joint Action Plan updating and exchanging the areas of partnership will be issued at the Summit.

At the 7th Summit in Helsinki in 2006, we had agreed to launch negotiations on India-EU broad-based Trade and Investment Agreement. Negotiations began last year; several rounds have taken place; and progress has been made in several areas covered in that agreement. Our trade and economic relations with the European Union are complementary rather than competitive. The EU is not only India's largest trading partner, it is also a major source of foreign direct investment and of high technology. Bilateral trade has grown at about 15 per cent per year in the last six years and

crossed 55.6 billion Euro in 2007. We are important investment partners and these flows are two-way, direct investment from the EU averaged 2.2 billion Euro in the period 2004-2006; but it jumped to 10.9 billion Euro in 2007. In recent years, our investment in Europe has also gone up. In fact, last year it soared to 9.5 billion Euro.

The Marseilles Summit is part of India's continuing dialogue with the EU and will enable discussion at the highest level to strengthen our strategic partnership in areas of mutual interest. At the Summit we expect to issue a document elaborating the review of the JAP; adopt a joint work programme on energy, clean development, and climate change; sign the India-EU horizontal Civil Aviation Agreement; and issue a Joint Press Communiqué to reflect on the outcome of the discussions.

Finally, this Summit will be followed by an India-EU Business Summit in Paris on the 30th of September, which will be after the bilateral Summit. Thank you.

Question: Mr. Burns while answering a question on fuel supply said that we stand by what President Bush said that this is his political commitment. What is your response to that? Just a clarification but if there were to be a dispute between the two countries on 123 agreement, is there some kind of international mechanism that would address that?

Foreign Secretary: We are not going to comment on their internal political process. Let them go through that process and then we will tell you. We told you our views right in the beginning of this process that as far as we are concerned, it is the 123 when it enters into force which will govern the relationship. Because, as I said, we are not going to participate in their internal political process nor are we going to comment on everything that happens in that process.

Question: What if there is a dispute?

Foreign Secretary: Read the Agreement.

Question: I have a question on the United Nations. The Open-Ended Working Group which has recommended that expansion of the UN Security Council(inaudible).... should be thrown open to the General Assembly. What are we going to be doing at this particular session of the UNGA? Is anything ... (inaudible).... for brightening India's prospects?

Foreign Secretary: I will ask Mr. Katju to answer that because he knows it in great detail.

Special Secretary (Political) (Shri Vivek Katju): As we know, for the last fifteen years discussions on the Security Council reform have been taking place in the Open-Ended Working Group. On this occasion, the GA adopted a resolution which says that inter-governmental negotiations should begin no later than the 28th of February. For the last fifteen years there have been discussions and now we are moving to the stage of inter-governmental negotiations. That certainly means progress.

Question: What would it essentially mean in terms of the progress in the dialogue?

Secretary (Political): It is difficult to speculate on how inter-governmental negotiations progress. They have to begin first. Once they begin then we will see how they move.

Foreign Secretary: I think the simplest answer is that we are happy at the progress that we have moved forward. But we cannot predict how long the negotiations will take. That is a matter for all the countries involved. That is almost two hundred countries.

Question: How long do you think ...

Foreign Secretary: We would like it as quickly as possible.

Question: Is the Prime Minister going to be meeting Asif Zardari? Also, is he going to be meeting Chinese President in the US? There were some reports that has Pakistan come out with any new idea on... (inaudible) ... ?

Foreign Secretary: We are working on the bilateral meetings. Yes, we are working on the meeting with the President of Pakistan; we are also working on a meeting with the Premier of China. The precise dates and times, we have to tell you a little later because still they are being worked out. It is a very tight programme. But we are working on both those meetings.

Question: Mr. Menon, I just heard what you said about working on the dates. It would be nice if you could give us a sense of what India's message would be when they meet President Zardari. Secondly, there were some reports that perhaps there are delays in starting cross-border trade. Are these reports correct? Are we concerned about some delays from the Pakistani end?

Foreign Secretary: On the first question, our agenda with Pakistan is fairly well-known. It is out in the open. We feel that for our dialogue process to move forward, ideally we should be in an atmosphere free of violence and terror but we need to move that dialogue forward in our mutual interest but we need to demonstrate a commitment to the various promises that we made before and our ability therefore, for instance, to prevent ceasefire violations or cross-border terrorism for that matter. So, our agenda is well-known and I think that is what we hope will be advanced as a result of the meeting.

On cross-LoC trade, we have agreed with Pakistan that we will hold a meeting of the cross-LoC trade Expert Group in Delhi on the 22nd. So, they will be coming here to discuss that. We have been keen since April 2005 actually when we first suggested that we open up the LoC to trade both Srinagar-Muzaffarabad, also Poonch-Rawalakot, and ideally also Skardu-Kargil in the North. We had exchanged with the Pakistani side a list of commodities that we will be ready to receive and they have given us a list of what they could. But those details would now need to be worked out when this Group meets again on the 22nd. Actually about two years ago we had invited a delegation of businessmen from the other side to come to Jammu, to Srinagar, and then thereafter for us to send delegations from our Chambers on our side to their side. Unfortunately, so far Pakistan has not yet agreed to that. We are hoping to do that as quickly as possible because that will really make the trade meaningful. We would like it to start as soon as possible. We have said before that we will be ready from the beginning of October to carry on the trade.

Question: Why has not Pakistan agreed?

Foreign Secretary: You have to ask them.

Question: Mr. Menon, how do you react to the allegation by International Science and International Security that India divulged sensitive nuclear technology for unscrupulous elements?

Foreign Secretary: I think it is rubbish. It is an allegation that we have seen before. We saw it I think two years ago, in 2006 I remember when they trotted the same thing out and we made it quite clear that it was rubbish then. It is still rubbish today.

Question: When the Prime Minister meets President Sarkozy, are we seeing signing of the India-French nuclear agreement irrespective of the outcome in Washington?

Foreign Secretary: We are working on the being able to sign the agreement during the visit. We are still working out the details. I think both sides are doing their own procedures and are working on that.

Question: Yesterday Mr. Qureshi said that there are some hiccups in the Indo-Pak relationship. Do you agree with that statement? If you do, can you tell us what the hiccups are?

Foreign Secretary: I do not want to start characterizing what is under stress, what is hiccups etc. I think we all know that this relationship has gone through a difficult time in the recent past and we all know the reasons why. I do not think it is now here a question of describing whether it is 10 per cent, 20 per cent, 90 per cent. I do not think that is the issue. The issue really is, are we able to deal with the basic questions that stand in the way of these relations realizing their potential, that stand in the way of our normalizing relations with Pakistan, especially in the last few months, the kinds of incidents we have had, whether we are able to deal with them. If we are, then one can see this process working to the advantage of both sides of the border.

Question: Mr. Foreign Secretary, you have been asked before about signing agreements with Russia and France. But it seems to me that one of the pieces of the puzzle that has to be completed before even that can take place is the signing of the India Specific Safeguards Agreement. When do we propose to sign that? Have they been in any way linked to the United States completing the 123 process? Secondly, the document that the White House moved to Congress as part of the Hyde package included a reference to letters that India sent to the MTCR, fighter contract, and the IAEA meeting, on India adhering to the MTCR and NSG guidelines. Does the Government of India propose to make these efforts public? If so, when? Are we requesting at some point membership of MTCR? If so, why? If not, why not?

Foreign Secretary: I think you are absolutely right. Even if we sign these agreements with our partners - with the US, with France, with Russia - in order for them to first come into effect and then be operationalised in terms of concrete contracts and so on, we will have to sign the India Specific Safeguards Agreement because that will then be the safeguards which will apply to the cooperation under those agreements. So, as you said rightly, signing is only the first step of the process which then will continue until the reactors and so on are contracted for, supplied and brought under safeguards under the India Specific Safeguards Agreement. So, these are actions which will proceed in

that direction because we will discuss the commercial issues with the commercial entities concerned who would actually do the supply; we will sign the agreements and then we will also sign these safeguards agreements. But the exact dates and times frankly depend on the comfort of our partners. It depends on how we will proceed along those discussions. So, it is very hard right now to say. I can tell you that there is a whole series of steps that we will have to take before this cooperation is operationalised in terms of a working reactor imported and running on Indian soil. So, it is a whole series of steps on which you are absolutely right. Safeguards Agreement is something that we will have to do before these agreements start having commercial and practical effect. Certainly, we would have to sign them before those agreements are brought into force.

Question: What do you feel the(inaudible)...?

Foreign Secretary: As far as I can see these are all parallel. The Safeguards Agreement has been approved by the Board. So, we will now have to proceed to, but we will have something to bring under that agreement. So, we will sign cooperation agreements with our partners and start discussing the details of how to implement.

On the letters to the MTCR, I think there has been some misunderstanding perhaps in the public mind. On the MTCR, we had made a commitment actually in January 2004 to adhere to the export control standards that the MTCR lays down and that was done I think in the NSSP by the previous Government. Those are the standards, what we have really adhered to is the export controls. We will not violate those standards and over the last three years, since the Weapons of Mass Destruction Act, 2005 we have brought those into our various regulations, into our lists and our export control orders. And so, that is what has happened so far. That is all. Membership or the application of the MTCR to India, none of that has been gone into yet. Nothing has changed in that respect. It is the same on the NSG. What we have done is we have harmonized our export controls on nuclear related to trigger this items basically, we have harmonized our export control regulations with the NSG guidelines and adhered to those. That is what we have done. We have not taken a decision yet on making this public. But if you want we could.

Question: Though you have said that the dates cannot be confirmed, are you expecting the signing on the 123 will happen when President Bush meets the Prime Minister on the 25th?

Foreign Secretary: I have spent two years with you saying I cannot give you a timeframe, I cannot give you any dates. You know this. I am amazed that you are still so obsessed with this and still try. I cannot predict this.

Question: What is the status of negotiations on the Additional Protocol that we are supposed to sign in the Agreement?

Foreign Secretary: We have begun discussions with them. We have had an exchange of ideas at the level of concepts of what would be in that document. We have told them what we think; they have told us what they think. I think the DG has described it as substantial progress in the discussions. That is what we have achieved so far.

Question: When do you expect to sign them?

Foreign Secretary: No timeframes.

Question: Mr. Menon, the French Ambassador says that the bilateral agreement, which is likely to be signed in Paris on the 30th, does not include importation of enrichment technologies and a whole lot of other things we are interested in. So, do we have to sign a separate agreement for that? How does it work?

Foreign Secretary: These are agreements which are enabling agreements. In the French case, we would need to enter into concrete arrangements - whether it is for fuel, or whether it is for reactors - with the companies concerned. I think that is what we would have to do. I think that is what he is pointing to. We will need to actually enter into concrete and detailed negotiations.

Question: As far as nuclear deal is concerned, are you working on signing the same nuclear agreement with other countries? If yes, with which countries is it going to be signed and when? The second question is about the upcoming Summit of IBSA. What are the main topics that are going to be dealt with in this Summit?

Foreign Secretary: Yes, we are also working on signing the Agreement that we have finalized with Russia at the next suitable occasion. Agreements with the other countries have not been finalized yet. We are still in the process of discussing agreements and discussing possible cooperation. So, we are some steps away from having a finalized agreement ready to sign. But we will talk to all the friendly countries that we are in touch with.

On the IBSA I will ask my colleague Secretary (West), Mr. Nalin Surie to speak to you.

Secretary (West): The IBSA Summit will take place on the 15th of October in Delhi. It will be preceded by the various fora that we have, the Academic Forum, the Business Forum, Womens Forum, etc. We have ongoing this month all the 16 Working Groups which will meet; and at the end of the day we will take stock as focal points and discuss concrete modalities of what will emerge from the Summit. We expect a very substantive outcome which will help diversify the process of cooperation between the three countries.

Question: In the Prime Minister's meeting with the Chinese Premier, what would be the agenda? Given the fact that things have not gone so well lately and the Chinese did not find time to take a phone call from the Prime Minister, how would you see that and what are you going to ...(inaudible)... Will the NSG situation be raised with them or not?

Foreign Secretary: I think the agenda will be developments in bilateral relations and these issues that we have which will naturally include all the issues whether it is boundary, whether it is water. It will also include how we can develop the relationship further in areas where we are doing very well, trade, people-to-people exchanges; and a discussion I think on the larger global issues where we have very similar interests. Certainly, recent developments in the world economy will be discussed. They will also discuss other issues of common concern. You remember when Prime Minister visited in January, he and Premier Wen had laid out a common vision, a shared vision really, of the international situation and it has developed quite rapidly since then. So, I would expect them to continue from there.

You mentioned the NSG. Frankly, the NSG turned out well which means that everybody went along with the consensus. I think that is behind us now.

Question: Do you expect the issue of the attacks on Christians to come up during the India-EU meeting? What can we say in our defence in the sense that we have not really been able to protect them?

Secretary (West): We have a dialogue with the European Union and with the EU member States on this. It has been raised with us before and we

have explained to them what happened and what steps we have taken. I think they understand that the Government is doing all that it can. I do not think it is a problem between us at all. We discuss all issues quite frankly with each other and this has already been discussed.

Question: On the sidelines of the UN General Assembly, is the Prime Minister going to meet his Russian counterpart, Mr. Putin?

Foreign Secretary: I am not sure whether he is going to be there. As of now, we have not planned such a meeting.

Question: An out-of-the-context question now. Is it true that China worked against India's interests in Vienna?

Foreign Secretary: As I said, it turned out well in Vienna. There was a consensus; China was part of that consensus. We were happy with what came out at the end.

559. Statement by Prime Minister before his departure for the United States and France.

New Delhi, September 22, 2008.

I am leaving for New York to attend the 63rd Session of the UN General Assembly. India has consistently attached importance to the central role of the United Nations in promoting global peace, stability and development. I look forward to addressing the UN General Assembly and attending the UN High Level Event on the Millennium Development Goals. I will use the opportunity to articulate India's conviction that the contemporary challenges of our times are best addressed through collective and multilateral approaches.

I will draw the world community's attention to the need for the reform of international institutions, including of the United Nations, and to address global challenges such as the food and energy crises, terrorism and progress on the Millennium Development Goals.

During my stay in New York, I also look forward to bilateral meetings with some of the visiting leaders, including of China, Italy, Namibia, Pakistan, and the United Kingdom.

I also plan to meet a group of US CEOs, and members of the Indian-American community, both of whom have contributed to the consolidation of relations between India and the United States.

At the invitation of President Bush I will visit Washington. I look forward to my discussions with him on the entire range of issues on our bilateral agenda with the United States, including our civil nuclear initiative. In recent years our relations have expanded significantly in areas of interest to us such as education, trade, business, technology, energy and agriculture. The engagement between the two countries has strengthened and we are pursuing the multi-faceted cooperation to our mutual benefit.

We attach high value to our excellent relations with the European Union. The next India-EU Summit in Marseilles under the Presidency of France, which I will be attending, is part of the practice of annual Summit meetings between us. The European Union is our largest trading partner with whom we enjoy a multi-faceted strategic partnership. India and Europe are bound by the common values of democracy and pluralism. We have diverse areas of cooperation, including in the area of counter-terrorism, which I will seek

to strengthen. I look forward to attending the India-EU Business Summit being held on the sidelines of our Summit.

I will pay a bilateral visit to France at the invitation of President Sarkozy. India's relations with France are longstanding and of strategic importance. I am confident that my visit will lead to the further consolidation of our relations in the areas of trade and investment, defence, space, civil nuclear cooperation and high technology."

560. Remarks by President George W Bush and Prime Minister Dr. Manmohan Singh at their meeting.

Washington (D.C.), September 25, 2008.

President Bush: Mr. Prime Minister, once again it's my honor to welcome you back to the Oval Office. And it will be my honor to share a meal with you tonight. I thank you for coming to Washington from New York. It's very kind of you to come. I appreciate your friendship and I appreciate your leadership.

You and I have worked hard to change the relationship between our countries. India is a great country with an incredibly bright future, and it's in the U.S. interest to have a good, strong strategic relationship with India. And we've worked hard to achieve that.

One -- one such sign of that relationship is the India-U.S. civilian nuclear agreement. It has taken a lot of work on both our parts, a lot of courage on your part, and of course we want the agreement to satisfy you and get it out of our Congress. And so we're working hard to get it passed as quickly as possible.

We talked about trade. We talked about the environment and how technologies will make it such that we can grow our economies and be good stewards of the environment.

I'll never forget my visit to your country, Mr. Prime Minister. It's -- I remember telling my friends when I got back what an exciting place India is. There's a vibrancy and an energy, and there's an entrepreneurial spirit that's very strong. And I congratulate you and your government for enhancing that entrepreneurial spirit.

I thank you for your advice on a range of matters. I appreciated very much your briefing on -- on the neighborhood in which you live. It's -- was very informative, and it helps me make decisions and it helps me formulate policy.

All in all, ours is a very strong relationship at a state level and at a personal level, and I appreciate you coming.

Prime Minister Dr. Manmohan Singh: Thank you.

Mr. President, I know how busy you are with problems relating to the management of the financial crisis. That despite all the enormous pressures on your time you have found it possible to receive me is something I deeply appreciate, deeply value.

In the last four-and-a-half years that I have been prime minister, I have been the recipient of your generosity, your affection, your friendship. It means a lot to me and to the people of India.

In these last four-and-a-half years, there has been a massive transformation of India-United States relations. And Mr. President, you have played the most important role in making all this happen. (Inaudible) -- through our cooperation with regard to civil nuclear energy, I know these are difficult issues, and at each stage it was your leadership, your personal intervention, which resolved all the difficulties that were affecting the progress of these negotiations.

I sincerely hope that this agreement, which is now before the U.S. Congress, will be approved in a manner which will be satisfactory from the point of view of both of our countries. And when the history is written, I think it will be recorded that President George W. Bush played a historic role in bringing our two democracy closer to each other.

I am mentioning civil nuclear initiative because for 34 years, India has suffered from a nuclear apartheid. We have not been able to trade in nuclear material, nuclear reactors, nuclear raw materials. And when this restrictive regime ends, I think a great deal of credit will go to President Bush. And for this I am very grateful to you, Mr. President.

But there has been enormous transformation in our relationship in many other respects. The United States is India's largest trading partner. The United States is the largest investor in our country. And at President Bush's initiative, we set up a two-country CEOs forum, which has come forward

with many innovative ideas to bring the business communities of our two countries closer to each other.

We have taken new initiative in the field of education. We have today a new architecture of bringing the academic communities of our two countries, a new scheme of Fulbright-Naru Scholarship will unite the intellectual communities of our two countries in a manner which gives me immense satisfaction.

In the areas of science and technologies, in the areas relating to environment management, in areas relating to climate change, in areas relating to health, in areas relating to knowledge initiative in agriculture, all these initiatives have emerged as a result of the historic meeting that I had with President Bush on 18th of July 2005. These -- (inaudible) -- we have now a strategic partnership with the United States, and all that has happened because of the strong personal commitment of the president.

India is a functioning democracy, and I know how much President Bush appreciates that fact, that a country of a billion people with tremendous poverty, with all the diversities of the world, is yet trying to find its economic and social salvation in the framework of a functioning democracy. President Bush and I have discussed this aspect of India's functioning several times, and he has shown enormous respect for India or Indian democracy.

So, Mr. President, this may be my last visit to you during your presidency, and let me say that thank you very much. The people of India deeply love you. And all that you have done to bring our two countries closer to each other is something history will -- (inaudible.)

President Bush: Thank you, sir. Thank you very much.

561. Briefing by Foreign Secretary Shivshankar Menon on Prime Minister's meeting with President Bush and other matters.

Washington (D. C.), September 25, 2008.

Official Spokesperson: Good evening and welcome to the Press Center. Foreign Secretary is here to brief you about Prime Minister's meeting with President Bush and other issues. He would also be taking a few questions after his opening remarks. Let me also introduce Ms. Gaitri Kumar, JS (AMS) who is to the right of Foreign Secretary.

Foreign Secretary: Good evening. Sorry to keep you waiting. I will brief you on Prime Minister's meeting with President Bush. PM met with President Bush in Oval Office at 5 o'clock and the meeting went till 6. Then they went across for dinner. It was a very warm and friendly meeting. They both naturally reviewed what they had achieved in terms of transforming Indo-US relations since July 18, 2005 when the Joint statement had laid out the vision of how they wanted to take the relations forward.

You would recall that a major element of the Joint statement was on Civil-Nuclear cooperation which we were told is close to being adopted by US Congress. Both expressed their happiness and PM expressed his gratitude to President Bush for his decisive intervention for NSG clearance at various stages.

They also reviewed the rest of the relationship. Both expressed great satisfaction on the transformation of the relations and other various fields where the relation is moving forward, whether it is education, whether it is agriculture, whether it is high-technology co-operation. On cooperation in health, on high technology, cooperation on defence we will make available to you fact sheets which are also on our website, so you will get basic data on the relationship.

We also agreed to open two additional Consulates in the US at Seattle and Atlanta. US has opened its Consulate in Hyderabad. The two leaders also had discussion naturally on the regional situation, on the situation around India, as President Bush, I think, said to the media later that he had sought Prime Minister's advice on the situation in the region. There was talk also on the need to support Afghanistan's transition into normal democratic society and free the region from terrorism.

There were also some discussion in the initial meeting itself on Doha round and its prospects and how to carry it further. PM said India was interested in rule based trading system and that the most important part of our approach was our concern for our subsistence farmers and President Bush expressed understanding for this for the fact that this would need to be accommodated.

Most of the larger international issues were covered during the Dinner. It was a small dinner in the old family dinner room of the White House. There were some discussions and it came out very strongly that both leaders had a very firm faith in the importance of this relationship. But not only in the region but more also in the larger global context whether it is energy, or other crucial issues like that the environment for instance. There was some discussion that how we could move forward in this direction.

This was a very positive meeting. We were very satisfied with the manner of the meeting and what was covered. Everything that we wanted to do and achieve was done, but naturally there was something of a valedictory tone to it as probably it was the last time President Bush was in White House that PM was visiting. But there was a strong sense of satisfaction achieved over the last few years and where we have brought the India-US relationship. I would be happy to take questions.

Q: During the discussion, was the situation in South Asia like war on terror, stabilization of Afghanistan etc. discussed because in his statement President Bush said that he had sought PM's advice on this? Was there discussion on India's involvement in Afghanistan?

A: Yes, South Asia was discussed. We are already very involved in Afghanistan. Our assistance commitment today is almost 1.2 billion dollars. There is about 4000 Indians working today in Afghanistan for peaceful reconstruction. That's a sizeable number. It is for the economic development, it is for the restoration of the economy, it is for the hospitals, schools. Now even in culture, we have committed to set up a cultural university. It cuts across every sector. There is a programme to get nutritious wheat biscuit to children in school throughout Afghanistan. This actually shows India's commitment as being very strong and that will continue. This is a response to Afghan need and to what Afghanistan feels she wants. That has got nothing to do with any larger multinational force or anything. We have not participated in that, we don't have a military presence and we don't intend to change that.

Q: What specific action does US want India to take in Afghanistan?

A: Please ask US that question. We did not hear any demands from them. He sought advice.

Q: Are you o.k. with what amendments have been suggested on the nuclear cooperation bill? There have been reports that India is unhappy...

A: Let them finish their process. We will talk to you about this later. I have said this over and over again, I am not going to comment on their internal process. There can be reports or whatever you like but I don't see the point of commenting on it.

Q: There have been some amendments suggested today. Do you think they are going to adversely affect the progress?

A: Same question, same answer. I am not going to comment.

Q: After today's meeting, as far as operationalising the nuclear deal is concerned, what would be next step from GOI?

A: I think, we are discussing the possibility of the visit of the Secretary of State to India. We have been trying it for sometime and looking for possibility of dates.

Q: Is there possibility of a ceremonial signing.....

A: Let the US complete their process. After that we will sign the agreement and take the next step.

Q: What is the factual basis on which PM told President Bush that people of India loved President Bush?

A: I think, if you look at the public opinion polls, the ratings for President Bush are higher in India than in any other country. That is the factual basis.

Q: During PM's meeting with President Bush, was the issue of Pakistan discussed?

A: There was a discussion on the regional situation and the situation in the Pakistan was discussed as well but it was not a large part of the discussion.

Q: Did the issue of Afghanistan come up?

A: As I said, they all figured in the discussions.

Q: US is facing economic crisis and Prime Minister being a renowned Economist, did President Bush ask him for advice and did PM give any advice?

A: I think, the Prime Minister expressed gratitude that in the middle of all this pre-occupation with the financial situation, President Bush found time and that they had spent the time together. President Bush said in return that in the middle of all this, the one person that he wanted to spend time with was the Prime Minister for his calming and serene effect. It really was quite a remarkable conversation. The issue itself of financial crisis has come out on most occasions due to Prime Minister's background, his being such a renowned Economist and experience. Of course, he said what he thought. It came up with President Bush in passing; it came up in his discussion with the President of the World Bank where they went into much more detail about the role of multilateral organizations in dealing with and giving warning about such crisis before they happen. It came up in his meetings with several leaders including with Chinese Premier, in each case it was slightly different depending on what the nature of the conversation was. But this is natural given the PM's eminence as an Economist. But I don't think, and the PM is the first to say himself, there are any simple answers on how to deal with this issue. There are several ways of dealing with this. I think, he would be speaking about this in his speech at the UNGA about what he thinks needs to be done because it affects, from our point of view, the prospects of development. In fact, it already affecting growth in developing countries and other economies. That for us is a bad effect because when it starts affecting people who cannot afford to take a cut then it becomes a serious global issue.

Q: Was there any discussion on expansion of UN Security Council? Did US, directly or indirectly promised its support?

A: I think US has spoken before in public. In fact if you look at the July 18, 2005 statement, you find that US spoke in general terms about understanding India's aspirations not specifically about supporting India's candidacy to the UN Security Council. In that sense that has been the consistent US policy. PM did not raise it this time neither did President Bush.

Q: Was there any further talk on enhancing defence cooperation with US?

A: The Raksha Mantri was here just last week and they had discussions so the PM did not go into those details. But one of the fact sheets that I am giving you is about defence cooperation.

Q: What about time constraint? Tomorrow is the only time that Congress has. What happens next?

A: We are back to time-frames. I don't really know. This has been going on for quite some time. Earlier it used to be when you are going to be ready, when are you going to do NSG or this or that. We have never got into the time-frames. We are not the Astrologers here.

Q: Sir, you are saying, it was positive but overall if you would tell us what is the major outcome?

A: I think, for me, the most important thing is the quality of the conversation. It was very easy flow of ideas. Both obviously understood each other well and were very comfortable with each other and for me that was very remarkable. You know it was not a formal or stilted conversation where you have an Agenda that you have to say this or do that. Not at all, and I think that is a result of the success of the last few years of transformation in the relationship that we have accomplished. That was the experience of having successfully worked together. I have not seen a conversation of this quality at this level. It is very rare that you see this.

Q: Sir, was there a valedictory feeling to the meeting?

A: That is natural.

Q: Sir, we are opening two Consulates in Atlanta and Seattle. Any particular reason for this?

A: I think, community is always a big reason for us. I think for location of Consulates, there is also commercial reason where our trade originate from, where there is buying and selling and also the importance of these cities or the consular areas that we carve out for them for our relationship. Seattle for instance has a large community and there is lot of trade from the west coast. There is lot of high-tech trade with Seattle, not just aerospace and Microsoft but in other areas as well. Same is with Atlanta. Both these areas are of relative importance for us. There are other places where we would like to open Consulates but there is a constraint of resources.

Q: Like Miami and

A: We are keen too but we cannot do everything at once.

Q: Was it discussed that if the Nuclear deal is not consummated in the next few months, there would be similar support from the next Administration?

A: There was no mention of that at all. But my own expectation is that this has something which has bipartisan support, both candidates have expressed support after the NSG clearance. As you can see, in the Congress there is bipartisan support but the fact is that, they do have other things to do so it is really a function of their own process. I don't think it is a lack of will or support.

Q: But was there any disappointment at the non-completion of the process?

A: We have never set deadlines. Why set ourselves up for that kind of disappointment as you said. This is something new that we are trying, it is unprecedented, it is very important, it has tremendous potential. We have to work it and we have to learn as we go along. And so far I think we have done very well.

Q: Did President Bush also talk about the need for a strategic treaty with India?

A: I think we have a strategic partnership already. We declared a strategic partnership on July 18, 2005 in the Joint Statement. They expressed satisfaction the way things have progressed, the way it has grown.

Q: What is the status of the additional protocol with IAEA that has been mentioned in the July 18, 2005 joint Statement. You anticipate that at some point, somebody will raise the fact that India has not yet done that part?

A: You want me to guess, what a Congressman might say in a Congressional process. Why should I? The status is very simple, we have started discussion with the IAEA on the additional protocols, we have had two rounds of discussions both at technical level and at a high level and the DG of IAEA has stated that we have made substantial progress in that discussion.

Q: For the scheduled meeting, John McCain could not come. What discussion did PM have with Sara Palin?

A: I was not there yesterday since I was with you. I don't have the details of the meeting but I will get back to you. If I don't, Vishnu will give you something.

Q: (In audible)

A: We get along very well. As I said the relationship itself enjoys broad

bipartisan support and even if you look at the opinion polls, then this is one of the most popular relationship. I am not worried that political transition will affect us. In democracy we get used to doing transitions. This has been going on for 200 years. I don't think that is going to affect relationship that so clearly works for our interests and their interests as well. I think it is remarkable if you look at the transformation in the last three years, at what this relationship has done in fields that actually matter to people - in education we are now talking in terms of expanding our scholarship exchange both ways to over a 1000 students, we are now talking for instance, with the CEOs on 14th October and the next day a Special Session the next day with the Vice Chancellors and the Deans of Universities. This kind of qualitative transformation in a relationship is based on mutual interest and mutual benefit. It is not dependant on one Government. So, I am confident, even for the difficult ones, that ultimately the logic of the relationship and our mutual interests will see it through.

Q: We are opening Consulates here, are they opening in India as well?

A: They opened Hyderabad last year and I think they are looking at some other places as well. It is up to them to decide.

Q: Sir, you promised at your last interaction a more detailed account of the discussions between PM and President Zardari of Pakistan?

A: Yes, I promised you. I believe that in the detailed discussions between them, they covered all aspects of the relationship. PM raised our concerns of course. President Zardari made it quite clear that, and you have seen it reflected in the statement as well, his determination to deal with issues like terrorism and stressed the value that he attaches to maintenance of the cease-fire. They also spoke about the Kabul Embassy blast. President Zardari condemned it in no uncertain terms which is why we are holding the special session of Joint Anti Terror Group on that issue.

But more than that they talked about the potential of the relationship and how we can use trade and use other things to move forward on the various issues. President Zardari also raised the water issue because Baglihar is filling the dam and the Pakistan Indus Water Commissioner was worried that water flow were low and he had complained to his colleagues. Partly this is because, this year, the flows anyway are lower than the average; it is a fact of life. So we have invited him to come in the next 15 days and to see that we are actually not filling the dam or anything but there is scarcity

of water in the river. Having told him this, the PM assured we will abide by our commitment under the Indus Water Treaty.

There was a considerable discussion on the potential for economic cooperation especially in the energy sector. One of the ideas on the Pakistani side was to develop the enormous Thar Coal deposit. Pakistan also has a shortage of electricity and needs to generate to much more. One idea is to jointly develop those coal deposits to use electricity on both sides of the border. It is only an idea, no one has done a feasibility of wheeling the power out of Pakistan. But several ideas like that were discussed.

So it was a pretty open and wide ranging discussion. This is to be expected and it was their first meeting and I think it was important that they both get a sense of what the other person's vision about the relationship was. I think some of that flavour comes through in the speech today at the General Assembly by the Pakistani President and that gives you a sense of the sort of things that were discussed. It was an open free wheeling discussion, most of it positive forward looking and seeking potential in this relationship and how to realize that.

Q : Was President Zardari invited to India?

A: He has been invited, in fact, he was invited as the President of the party. He has also been invited as the President and we said that we would be happy to see him. There was also an invitation for PM to visit Pakistan. Both of them accepted the invitations although no dates have been set.

Q: Sir, the dinner at White House, what type was it? Was it a working dinner. Who all were present? Was there any speech?

A: No, there were no speeches. It was not a very formal dinner. On the US side, Vice President Dick Cheney, US Ambassador to India Mulford, Under Secretary William Burns, National Security Adviser Hadley, Secretary for Education Margaret Spellings, USTR Susan Schwab and senior assistant to the President. On our side Deputy Chairman Planning Commission, NSA, Special Envoy to PM , Foreign Secretary, JS (AMS), MEA, JS(P) and JS (G) from PMO and PS to the PM attended. It was a small dinner and very relaxed one.

Q: What food was served ? Was vegetarian food served? Was the food tasty?

A: It was very nice food. Perhaps fish.

Q: In the last seven days some US officials have said that they do not want to sign the deal at a disadvantage. They are perhaps thinking that since Prime Minister has announced that Russia and France are ready to have cooperation with us after NSG, India is perhaps in a strong position now, so this particular issue, was this mentioned?

A: There was no such sentiment expressed. But the fact is that no one will be disadvantaged because if you look at the kinds of quantities that the reactors would entail, we would have to go to several suppliers. The only issue really is whoever supplies has to be commercially competitive. The 123 is an enabling agreement and once it is done, it would allow firms and companies to sit and do the detailed contracts for the supply of the equipment etc. That work is going to take a little time. It is not that once 123 is done, contracts would be signed overnight with anybody. Even if we sign tomorrow with France or Russia, I don't see anybody being disadvantaged in this process.

Q: In the Paris leg of the visit, will nuclear cooperation with France be an agenda?

A: It is on the agenda. We are working on it with them for some time.

Q: Will our Cabinet have to ratify the agreement ? In an interview, EAM had said that it would need to be ratified.

A: Our procedures are that Cabinet approves for signing of an agreement and then it is sent back for ratification or it can approve for both signing and ratification. I will have to check. If EAM said that then it must be correct.

Q: Have we committed to place orders for 10,000 MW to US?

A: The commitment to US is that we will place orders if they are commercially competitive which is the same as our commitment for anyone else because you can buy cheaper electricity from someone burning coal or something else. Even when the agreement is signed, it will still have to go through the commercial process - discussing with companies and working out the details - but no one will be disadvantaged.

Q: To clarify, after NSG waiver, can we go ahead?

A : The NSG is a waiver to the NSG member States to do business with us.

Q: Can France do it independently?

A: The question is not clear. Let's not confuse issues. The NSG gave a waiver to its members saying you can cooperate with India for the civilian uses of nuclear energy. So they are free, they can cooperate with India. If they want to do business with us, we will not say no.

Q: What about additional protocol ?

A: The additional protocol has got nothing to do with this. It is up to them. Why are we confusing issues here? The NSG has given a clearance to its members to do business with India. US is an NSG member and so are 44 others. If there are no more questions.

Thank you.

562. Fact Sheet on India-US Defence Cooperation.**Washington (D.C.), September 25, 2008.**

The 'New Framework in the India-US Defence Relationship' signed between Raksha Mantri and the US Secretary of Defence on June 28, 2005 charts a course for defence relations in the coming years as an element of the broader strategic partnership between India and the United States.

Under the New Framework, India and USA agreed to:

- a) Conduct joint and combined exercises and exchanges;
- b) Collaborate in multinational operations if it is in common interest;
- c) Strengthen capabilities of militaries to promote security and defeat terrorism;
- d) Promote regional and global peace and stability;
- e) Enhance capabilities to combat the proliferation of weapons of mass destruction;
- f) Increase opportunities for technology transfer, collaboration, co-production, and research and development
- g) Expand collaboration relating to missile defence;
- h) Strengthen abilities of the Armed Forces to respond quickly to disasters, including in combined operations;
- i) Conduct successful peacekeeping operations;
- j) Conduct and increase exchanges of intelligence

Under the New Framework, the institutionalized framework for cooperation was further strengthened with the establishment of Defence Procurement and Production Group and the Defence Joint Working Group, under the comprehensive bilateral mechanism of the Defence Policy Group.

The India-US Joint Declaration, issued by Prime Minister Manmohan Singh and President George W Bush in March 2006, welcomed increased bilateral cooperation in the defence area under the New Framework, evidenced by successful joint exercises, information sharing, and greater opportunities to jointly develop technologies and address security and humanitarian

issues. They reaffirmed commitment to protect free flow of commerce and safety of navigation, and agreed to conclude a Maritime Security Cooperation Framework to develop new avenues of maritime cooperation and to pursue cooperation in the prevention of trans-national crimes at sea such as piracy, armed robbery, smuggling and trafficking in arms and drugs, carry out search and rescue operations, combat maritime pollution, respond to natural disasters, address emergent threats and enhance cooperative capabilities, including through logistics support.

Exchange of Visits

The dialogue between the two countries on defence cooperation-related issues has been ongoing. It received further direction with the visit of US Secretary of Defense Robert Gates to India on February 26-27, 2008 and the visit of Raksha Mantri to USA from September 7-10, 2008 at the invitation of Secretary Gates.

Institutional Mechanisms for Dialogue

The Defence Policy Group gives policy level direction to defence cooperation, reviews all matters and resolves broader defence cooperation policy issues. Various institutional mechanisms under the DPG which coordinate and implement defence cooperation in specific areas include:

Defence Joint Working Group (DJWG) - this undertakes mid-year review of progress made in the fulfillment of decisions taken by the DPG. It also reviews matters, which need to be taken up by the DPG.

Senior Technology Security Group (STSG) - this is charged with undertaking review of technology security issues and also increase mutual understanding of each other's policies and systems in respect of technology security for defence-related equipment.

Defence Procurement and Production Group (DPPG) - this reviews opportunities for cooperation in defence acquisition, transfer of technology/ collaboration and defence related industries.

Joint Technical Group (JTG) - this look at potential for cooperation in defence research and development.

Military Cooperation Group (MCG) - reviews Services-related cooperation matters and inter-service coordination.

Service-to-Service Executive Steering Groups (ESGs) - these review service-to-service cooperation and report to the Military Cooperation Group.

Concluded Agreements

- a) Agreement for Security Measures for Protection of Classified Military Information signed on January 2002 (GSOMIA)
- b) Master Information Exchange Agreement (MIEA) to facilitate exchange of defence R&D and information, signed in February 2004
- c) Research Development Testing and Evaluation (RDT&E) Agreement signed in January 2006.

Other agreements are under negotiation.

Joint Exercises

Joint Exercises between the three Services have improved in scale and frequency since the signing of the New Framework.

Indian Army has been involved in joint exercises with the US Army on low intensity conflict in jungle terrain, counter terrorism and counter insurgency. Ex- Shatrujeet was recently held at California, USA from March 10-24, 2008. Ex- Yudh Abhyas 08 Brigade Command Post Exercise is scheduled to be held at Hawaii, USA from October 30-Nov 12, 2008. Ex- Vajra Prahar 08-1 was held at CIJW School, Vairengate from August 4-24, 2008 and Ex- Vajra Prahar 08-2 was held at Guam at USA from August 05-25, 2008.

The Indian Navy conducts the Malabar series of exercises with the US Navy involving contraband control operations, sea control operations, air defence exercises, sea replenishment including fuel transfer, cross-deck flying etc., In 2008, Ex- Malabar CY 08 is scheduled off Goa from October 24-28, 2008. The 3rd HABU NAG (EOTTX) was held from September 1-14, 2008 in Visakhapatnam.

The Indian Air Force participated in the multinational air exercise EX RED FLAG at the Nellis AFB, USA in August 2008. IAF participation included eight SU-30s and two IL-78 air-to-air refueller aircraft, one IL-76 transport aircraft and a ten member GARUD team. The contingent comprised a total of 247 personnel.

Industry Linkages

The AEROINDIA and annual DEFEXPO shows have seen very good participation from US companies in recent times, an indicator of their serious interest in the Indian defence market. Several major US defence corporations have established presence in India and are operating directly (Boeing, Lockheed Martin, GE, to name a few). India's revised Defence Procurement Policy, which came into effect on September 1, 2008 aims to make procurement more transparent, impartial and accountable. Recent changes in India's Offsets Credit Banking seek to promote indigenous defence industry while enabling foreign vendors to create offset programs in anticipation of future obligations.

563. Fact Sheet on India-US Energy Dialogue.

Washington (D. C.), September 25, 2008.

The India - U.S. Energy Dialogue led by Deputy Chairman of India's Planning Commission and Secretary, U.S. Department of Energy aims to promote increased trade and investment in the energy sector by working with the public and private sectors to further identify areas of cooperation and collaboration and build on the broad range of existing cooperation between India and the U.S. to mobilize secure, clean, reliable and affordable sources of energy. It consists of five working groups which exchange views and develop cooperative programs in oil and natural gas, coal, power and energy efficiency, new and renewable technologies, and civil nuclear energy.

The major initiatives under the Dialogue are:

- **The creation of a taskforce addressing integrated gasification combined cycle.** Coal is an important energy resource for both countries and this taskforce will address the use of coal in a clean and efficient manner.
- **Cooperation in second generation bio-fuels technology.** The purpose of the cooperation is to establish a framework of cooperation covering scientific, technical and policy aspects of production, conversion, utilization, distribution and marketing of second

generation, non-edible bio-fuels in a sustainable and environmentally friendly manner in accordance with national priorities and socio-economic development strategies and goals.

- **The creation of a coal bed methane and coal mine methane clearinghouse.** The clearinghouse will highlight specific project opportunities, facilitate international industry networking, and recommend market-oriented policies to the commercial utilization of Coal Bed Methane and Coal Mine Methane while reducing greenhouse gas emissions.
- **Cooperation in the areas of Clean Coal Technology.** R&D projects are being developed for Beneficiation and Recovery of Fine Coal, Coal Cleaning Plants Simulator and Dry Coal Beneficiation. Capacity building covering Modeling and Environmental Studies for development of underground coal gasification.
- **Cooperation in the area of gas hydrates.** While global estimates vary considerably, the energy content of methane occurring in hydrate form is immense, possibly exceeding the combined energy content of all other known fossil fuels. Joint collaborative research projects are providing valuable scientific information to both countries on commercialization of this resource.
- **The clean and efficient use of energy.** The Dialogue encompasses a variety of technical programs that will result in more efficient and economic use of energy in the industrial, transport, residential and commercial sectors.
- **Advancing development and deployment of renewable energy resources.** This collaboration includes resource assessments and information exchanges on solar and wind energy, distributed generation and integration with the electric power grid. India has suggested specific initiatives for cooperation.
- **Exchange of information regarding strategic petroleum stockpiles.** Technical exchanges regarding creation and methodology regarding use of strategic stocks in response to disruptions in commercial oils.

564. Fact Sheet on India - US High Technology Cooperation Group.

Washington (D. C.), September 25, 2008.

The High Technology Cooperation Group (HTCG), created in 2002, seeks to address two broad agendas: i) to promote strategic trade i.e access to dual use items through easing of controls on exports of such goods to India, this has to be accomplished while meeting the US concerns on valid end use, diversion and proliferation, and ii) to promote and facilitate bilateral high technology commerce in its broadest sense, inter alia, through steps to be taken by the two Governments to create an appropriate environment for successful high technology commerce in partnership with private sector.

High Technology Cooperation Group:

- Since the commencement of the HTCG dialogue in 2003, six plenary meetings have taken, alternatively in the USA and India. The VI High Technology Cooperation Group meeting took place in New Delhi in Feb 2008.
- The HTCG format involves active participation of the private sector of both sides and works through four working groups; one each on Nanotechnology, Defence and Strategic Trade, Information technology and Biotechnology and Life science.

High Technology Exports to India: The dialogue under the HTCG has led to easing of restrictions on high technology exports to India. High Technology imports from the US increased from US\$1.3 billion in 2003 to US\$ 8.06 billion in 2007. The licensed exports to India increased from US\$56 million in 2003 to US\$ 364.1 million in 2007 with the value of application denied declining from US\$ 11 million to about US\$ 6 million. Average processing time for licenses have come down from 39 days in 2004 to 33 days in 2007. Exports to India requiring a license today account for less than .02% of US exports to India (compared to 24% in 1999).

Defence and Strategic Trade

End - Use Visit Arrangement (EUVA): The EUVA Agreement signed between India and the US in 2004 to promote trust and confidence among the two partners, with a view to expand high technology trade while ensuring that national security concerns of the US including proliferation and diversion

of 'dual use' technology are adhered to, is being implemented to the satisfaction of the two sides.

Impact of the US President' Export Control Directives : The CII and the USIBC are jointly conducting a survey among select Industry on both sides to make an analysis of the impact of the US President's Export Control Directives announced in early 2008 on exports to India of High Technology products.

Awareness of new opportunities for high technology collaboration: The Industry partners in the HTCG process have been actively pursuing to explore and generate awareness of new opportunities for high technology collaboration in keeping with the role envisaged for the HTCG.

- With an objective to educate industry about India's defence procurement policy and procedures of the Ministry of Defence, Government of India, CII has been regularly organizing Defence Acquisition Management Courses since 2003.
- On 8th August 2008, CII co-ordinated the India-US DPPG Industry Round table meeting, wherein presentations on Defence Procurement Policy (DPP) 2008 and Offset Provisions were explained in details. Representatives of the US Administration had also made detailed presentation on the US Export Control rules and regulations.
- CII has been organising programmes at regular intervals on Life Cycle Cost (LCC) and procurement process for the benefit of Industry. An exclusive seminar on LCC and Project Management was organized on 5 October 2007 at New Delhi. CII will be organising a workshop on Life Cycle Cost towards mid October 2008 at New Delhi. The USIBC will be supporting this workshop by identifying resource personnel on LCC from US Industry to make presentations to the participants.
- With an objective to promote Small and Medium Enterprises engagement in defense sector, especially with the US Original Equipments Manufacturers (OEMs) CII will be organising structured Business-to-Business meetings during the Aero India show 2009 to be held in Bangalore in Feb 2009.

Biotechnology and Life Sciences

HTCG Outreach Programme: A meeting of the Biotechnology Working Group was held on the sidelines of the BIO 2008 in June 2008 in San Diego California. At the event FICCI made presentations on opportunities that exist in India for clinical trials, R&D and tie-ups between Small Medical Enterprises on both sides in the pharmaceutical sector. The US side made a presentation on the U.S. Experience with implementing Bayh-Dole Act with the objective of establishing a dialogue on Technology Transfer policies regarding publicly funded research and innovation.

Outcome of the BIO 2008 event:

Exploring possibilities of collaborations and tie-ups between US Universities, institutions including the National Institutes of Health (NIH) and industry and the National Institute of Pharmaceutical Education and Research (NIPER), India in the areas of human resource development and R&D in pharmaceuticals. This would also include exploring partnerships, public-public or public-private, in the setting up of six new NIPERs in India.

- During the HTCG meeting at Delhi on 28-29 February, 2008 and the visit of the Deputy Assistant Secretary, US Department of Commerce in August, 2008 possibilities of price negotiation for patented medicines and differential pricing for select medical devices were discussed at length. US side indicated they could suggest possible models in this regard which would be further discussed before a final view is taken.
- A delegation led by the Deputy Assistant Secretary, US Department of Commerce visited India during 23-27 Aug 2008 for strengthening cooperation in the field of biotechnology, pharmaceuticals and medical devices. A roundtable on Technology Transfer was organized by the Department of Commerce and USIBC on the occasion
- A new Department of Pharmaceuticals has been created in India in July, 2008 with a view to put greater focus on the pharmaceutical sector. During the visit of Deputy Assistant Secretary, US Department of Commerce to India in August, 2008 meetings were held with senior officials of this Department. It was suggested that US side may indicate such schemes where Government in US and other

developed countries play a supportive role for the pharmaceutical sector.

- Engagement between the Drugs Controller General of India (DCGI) and USFDA. DCGI and USFDA jointly held a workshop in India to train the trainers for strengthening clinical research regulation in the country.

US-India BioPharma Summit: A US-India Bio Pharma Summit 2008 was organized in Boston in June 2008 with a view to facilitate cross border investments, create industry and public-private-academic partnerships, open new opportunities and improve the regulatory framework to take the US-India Life Sciences and Healthcare business to a higher level of engagement.

BIO-ABLE Partnership event in 2009: The biggest industry organization in the world in the field of Biotechnology - US based BIO (Biotechnology Industry Organization) - has begun to engage substantively in this HTCG Working Group. As a direct result, they would be organizing a first-ever BIO Partnership event in Hyderabad in September 2009, with the collaboration of ABLE (Association of Biotechnology-Led Enterprises) which would be bringing together investors, venture capitalists and large as well as emerging pharma/bio companies from US and India.

Nano-technology

- A panel discussion on Initiating India US Nano-technology Projects was organized on 30th November, 2005 under HTCG in New Delhi.
- An Indian delegation from the Department of Science and Technology participated in the meeting of OECD Working Party on Manufactured Nano-materials (WPMN) as an observer country held in Paris in October 2007. The Indian delegation also engaged with the US delegation to further nano-technology collaboration under HTCG. India has again been invited by the USA to attend the next OECD WPMN meeting in Dec 2008 in Ankara as an observer.
- The first Indo- US Advanced Studies Institute on Nano scale Science and Engineering was organized at Chennai during January 10-18, 2008. The Institute was jointly sponsored by the Department of Science and Technology, GOI and The National Science Foundation,

USA. In total, 54 experts from both sides presented their work and actively participated in the institute. The US delegation members also visited IIT, Chennai, University of Madras and Kalapakkam.

Information Technology

Interaction between the IT industries and markets of the two countries is huge. 60% of Indian software and services exports are destined for the US (approximately US\$ 24bn in 2007). The IT Working Group under the HTCG is playing an important role in pushing this relationship forward.

565. Fact Sheet on India-US Economic Partnership.

Washington (D. C.) September 25, 2008.

The growing economic partnership between the US and India has been one of the pillars of the transformed bilateral relationship. The USA happens to be India's largest export destination and also one of the leading foreign investors in India. The complementarities between the two economies have made the two sides to seek a strong economic engagement to leverage the advantages available with each other.

Bilateral Trade and Investment: The India-US bilateral trade stood at US\$ 33.9¹ billion in 2007-08. During the year 2007-08, merchandise exports from India to US increased by 9.81% to US\$ 20.7 billion as compared to US\$ 18.8 billion in 2006-07 and merchandise exports from US to India increased by 12.57% to US \$ 13.2 billion in 2007-08 as compared to US\$11.7 billion in 2006-07. Indian IT and IT enabled services including R&D and Engineering services exports to the US were approximately US\$ 24 billion in 2007. The total FDI equity inflow to India from the US during the period April 2000- June 2008 was US\$ 5.4 billion. Trade and economic cooperation has emerged as an important pillar of India-US relations - evident in the rising bilateral trade volume and an enhanced interest to strengthen this trend.

On the basis of US Customs data, bilateral trade shows steady growth since 2004, as evident from the table below:

1 All trade figures as per DGCIS, Kolkata

Year/value in bn \$ (1) & annual rate of growth (2)	2004		2005		2006		2007		2008 (Jan-July)	
	1	2	1	2	1	2	1	2	1	2
India's exports to US	15.5	19.3	18.8	20.8	21.8	16.1	24.0	10.0	14.9	10.8
India's imports from US	6.1	22.7	8.0	30.3	10.1	25.9	17.6	75.0	10.9	25.8
Total trade	21.6	20.2	26.8	23.4	31.9	19.2	41.6	31.3	25.8	18.3

Source: US Bureau of Census

India is one of the faster growing export destination for US exports. In 2007, the growth rate was 75%. It has slowed down in the first six months of the current year but is still a healthy 26%. Our main imports from the U.S. are aircraft and aviation machinery, other machinery, precious stones and metals, organic chemicals, optical and medical instruments. In 2008, export of fertilizers from the US has increased significantly.

India's exports to United States, though still significantly larger than our imports, are growing at a much slower pace. India's major export products include gems and jewelry, textiles, organic chemicals and engineering goods. The rise in the value of rupee, hike in transport costs, competition from Bangladesh, Vietnam as well as some Latin American countries that have some duty advantages in textiles and apparel sector and the continuous bonding requirement imposed on shrimps since 2004 are the major factors contributing to the decline.

US-bound investment from India has increased significantly since 2002, growing by about 75% on average per year. The value in 2006 is estimated to be about \$2 billion and in 2007, the increase has been very rapid with announced Indian investments in US estimated at about \$13 billion. The trend seems set to continue in 2008 with deals reported upto May 31 totalling more than \$ 8 billion.

High level visits:

US Commerce Secretary Gutierrez visited India in February 2007 and US Trade Representative Ambassador Susan Schwab in April 2007.

Finance Minister, Commerce Minister and Deputy Chairman Planning Commission visited USA to attend the Indo-US Economic Dialogue and Indo-US CEOs forum meeting in September 2007.

US Treasury Secretary Mr. Henry Paulson visited Indian in October 2007 to attend the annual Indo-US Financial Economic Forum meeting.

Commerce and Industry Minister visited the USA for the Trade Policy Forum meeting in Chicago in February 2008. He again visited the US in May and June 2008 for WTO-related discussions.

Deputy Chairman Planning Commission visited USA for the Economic Dialogue meeting in April 2008.

Proposed Agreements:

- **Bilateral Investment Treaty:** After two rounds of exploratory talks on the proposed Bilateral Investment Treaty held in New Delhi in April 2008 and in Washington in June 2008, the two sides have decided to start formal negotiations. The dates for the same are being worked out. The treaty would be mutually beneficial as the US happens to be one of the largest foreign investors in India and Indian investments in the US are also growing at a fast rate.
- **Totalisation Agreement:** Two rounds of informal discussions on the Indo-US social security cooperation to pave the way for negotiating a Totalisation Agreement between the US Social Security Administration and the Indian Ministry of Overseas Indian Affairs have taken place. The two sides have agreed to meet early to start negotiations on a Totalisation Agreement. A formal request in this regard has been made to the US Government.
- **Bilateral Aviation Safety Agreement:** India has drawn up an action plan to fulfill the criteria for signing a Bilateral Aviation Safety Agreement with the USA. The Agreement will help the two sides to strengthen the ongoing partnership and would encourage US Aviation Companies to invest in India.

Institutional mechanisms: The two sides have established several bilateral mechanisms to take forward the economic partnership.

1. **Indo-US Economic Dialogue:** The Indo-US Economic Dialogue chaired by Deputy Chairman Planning on the Indian side and by Deputy National Security Advisor on the US side, met in Sept 2007 and in April 2008 and discussed ways to strengthen economic partnership. The next Economic Dialogue meeting would be held on 14 Oct 2008 in New York.
2. **Indo-US CEOs Forum:** The Indo-US CEOs forum was formed in 2006 to provide the two Governments with private sector inputs for revitalizing the economic partnership. The Indo-US CEOs forum has

submitted its second set of recommendations in April 2008 to both the Governments. Both Governments have prepared a list of feasible items based on the recommendations, which are being acted upon. The next Indo-US CEOs forum meeting would be held in New York on 14 October 2008.

3. **Trade Policy forum:** The India-US Trade Policy Forum set up in 2005. meets at the Ministerial and Senior Official level.

At the third Ministerial meeting of the Trade Policy Forum in June, 2006 in Washington the two sides agreed to create a senior-level Private Sector Advisory Group (PSAG) as an adjunct to the Trade Policy Forum that will provide strategic direction, input and support to the forum.

The fifth Ministerial level meeting of the India-USA Trade Policy Forum took place on 19 February 2008 at Chicago, USA. A range of issues were discussed including the Social Security Agreement and Bilateral Investment Treaty between the two countries and providing market access for items of interest to both sides.

The members of the PSAG also met on the sidelines of this Trade Policy Forum meeting and presented a 'Vision statement' to the Forum, which identifies key policy areas for engagement between the two countries and aims at furthering India-US economic partnership.

4. **Indo-US Commercial Dialogue:** The India-United States Commercial Dialogue agreement was signed in March 2000 at New Delhi. Interactions under this Dialogue have been taking place from time to time to sort out concerns of both sides on bilateral commercial issues. The validity of this Commercial Dialogue has since been extended up to March 2010. The 2008 Work Plans under the India-US Commercial Dialogue agreed to include (i) Entrepreneurship Work Plan & (ii) US-India Standards Programme.
5. **India-US Financial and Economic Forum:** The Indo-US Financial & Economic Forum set up under the aegis of March 2000 Joint Declaration made by the Indian Prime Minister and US President has been holding its meetings regularly. It provides for a general framework for facilitating regular discussion on issues pertaining to financial sector developments, investment and macroeconomic policies. The Forum has annual Cabinet level meetings at Finance Minister/ US Treasury Secretary level and sub-cabinet level discussions.

The fourth Cabinet level meeting was held on 30th October 2007 in New Delhi. Issues of mutual interest in areas such as Financial Services, Banking, Insurance, Pensions, Security & Corporate Bond Markets were discussed during the meeting. An Agreed Work Plan was worked out. The latest technical Financial and Economic Forum meeting was held in June 2008 in Washington.

6. **US-India Aviation Cooperation Programme (ACP):** The bilateral civil aviation cooperation is being supported by the US-India Aviation Cooperation Programme (ACP) a public - private partnership between the US Trade Development Agency (USTDA,) the US Federal Aviation Administration (FAA), US aviation companies and the Indian Ministry of Civil Aviation. It provides a platform for unified communication between the Government of India and US public and private sector entities.

An India-US Steering Committee has been set up to take action on the ACP. The first meeting of the Steering Committee was held in October, 2007. The US-India Steering Committee has set up Working Groups on Air Worthiness, Flight Standards and Airports and Environment. An Air Traffic Flow Management (ATFM) seminar would be held in New Delhi in October, 2008 which is one of the projects identified under the ACP.

The USA is the partner country at the 'India Aviation 2008' being planned to be held in October 2008 in Hyderabad.

7. **Indo-US Information and Communication Technology (ICT) Working Group:** The 6th Indo-US ICT Working Group held its meeting in Washington in June-July 2008. Bilateral issues concerning IT, ITES, E- Commerce and the broadcasting sector were discussed at the meeting.

Trade Missions and Business Events:

- High level trade Missions led by the Governor of Minnesota and the Governor of Utah visited India in Sept-Oct 2007.
- An Infrastructure Summit was organized by the CEOs forum in Mumbai in Oct 2007.
- Launch of Initiative- "Investing in America: The Indian Story"

- September 2007 - New York, USA by FICCI-US India Business Council (USIBC) with support of Ministry of Commerce and Industry, Government of India
- An Indo-US SME Summit: Leveraging Global Supply Chains and Integrating the SME Community was held in Chicago in February 2008.
- An Indo-US Biopharma Summit was organized in Boston in June 2008.
- A US pharma and medical devices delegation visited India in September 2008.
- A renewable energy delegation from the USA led by Mr. David Bohigan, Deputy Assistant Secretary, and Department of Commerce visited India in January 2008 and in September 2008.

566. Fact Sheet on India-US Educational Cooperation.**Washington (D.C.) September 25, 2008.**

Since the visit of Prime Minister Manmohan Singh to USA in March 2005, education has been identified as one of the areas of cooperation between the two knowledge societies. Under an agreement between the Governments of India and the United States of America in March 2000, an Indo-US Science and Technology Forum was established to promote science and educational cooperation and to catalyze collaborations in science, technology, engineering and biomedical research.

Although over 60% of all Indian international students prefer USA as their destination, less than 1% of all Americans students going abroad for studies chose India for study. In order to enhance mobility of students and teachers between India and other leading countries, the Government of India has taken many initiatives such as "Promotion of Indian Higher Education Abroad (PIHEAD)" program and awarding fellowships, including through the corporate sector. India has also tabled in the parliament, the "Foreign Educational Institutions Bill" under which any foreign university will be allowed up to 50% Foreign Direct Investment to set up its campus in India in partnership with Indian universities. Other recent initiatives include the teaching of Ayurveda (Indian system of Medicine) in US medical schools, Indo-US Cooperation on E-Learning (between DST, ISRO, 42 Technical Schools in India) with nearly 20 leading Universities in US and corporate partners.

Promoting India's higher education among US students

In recent years to promote India's higher education institutions among US students, direct enrollment at an Indian institution is offered through U.S. universities, providing them an opportunity to take courses with their Indian peers. The Indian Institutes of Technologies (IITs) have programs which are open to American students. Direct University level linkages between India and US, have allowed US students to benefit from a wide variety of academic exchanges and programs which allow them to obtain hands-on experience in international development, undertake comparative studies, tutorials, fieldwork, intensive language courses, summer programs, study contemporary India, its religion and modern history, philosophy, anthropology and avail of short-term "Study India Programs".

India - U.S. Fulbright Educational Exchange Program

On July 4, 2008, Foreign Secretary Shivshankar Menon and U.S. Ambassador to India David C. Mulford signed an historic new bilateral agreement, strengthening educational exchanges between the two countries. The Agreement supersedes the Fulbright Agreement revised in 1963 that has been operating since 1950 with U.S. funding. Under the new Agreement, the Government of India and the United States shall henceforth implement the scholarship programme as full partners and increase by 100% the total scholarship amount awarded annually - to US\$5 million.

The new Agreement provides for expansion of the existing programme with, for the first time, (i) a direct financial contribution by the Government of India. Under the new agreement, the binational U.S.-India Educational Foundation (USIEF) will expand the number of bilateral educational exchanges beginning next year, issuing "Fulbright-Nehru" scholarships honoring both the Senator J.W.Fulbright after whom the ongoing US program was named and India's first Prime Minister Jawaharlal Nehru who signed the 1950 Fulbright Agreement.

USIEF's programmes will continue to finance studies, research, instruction and other educational activities; visits and exchanges of students, trainees, teachers, instructors and professors; and other related educational and cultural programmes and activities.

The Foundation's programmes of activities, research and studies will complement the bilateral initiatives announced by the US and Indian Governments on July 18 2005 and March 2, 2006 in areas of agriculture, science and technology, sustainable development, clean and efficient energy, environment, climate change, democracy and capacity building in emerging democracies and global issues of common concern - among others - and create further awareness and understanding of India in the USA and vice versa, strengthening the 'knowledge' linkages between the people of the two countries.

Since its inception in 1950, USIEF has awarded approximately 8,200 Fulbright grants in almost every field of academic endeavor. The participants in the program have contributed substantially to strong India - U.S. academic relations and strengthened the people-to-people ties between our countries. Noted Fulbright scholars from India have included:

- a. C. Rangarajan, Chairman of 12th Finance Commission; former RBI Governor
- b. S. M. Krishna, Chief Minister of the State of Karnataka
- c. Tejendra Khanna, Lt. Governor, National Capital Territory of Delhi
- d. Girish Karnad, actor and playwright
- e. Meenakshi Gopinath, Principal, Lady Shri Ram College for Women

Fulbright scholarships were given for studies in India to the following US nationals:

- a. George A. Akerlof, Nobel Prize Winner in Economics
- b. Leonid Hurwicz, Nobel Prize Winner in Economics
- c. John R. Hubbard, U.S. Ambassador to India
- d. Nathan Glazer, Professor of Sociology and Education, Harvard University
- e. Barbara Crossette, U.N. Bureau Chief and Contributor, New York Times

Future Direction

Both India and USA are considering educational initiatives that would facilitate greater exchanges between scholars and researchers of the two countries, and strengthen people-to-people linkages. With this objective, both countries are looking forward to the India-US Education Initiative which will meet in October under the aegis of the CEO's forum, with participation of educators and the corporate leadership from both sides.

567. Fact Sheet on India - U.S. civil aviation cooperation**Washington (D. C.), September 25, 2008.**

The Partnership: The civil aviation sector is one of the fastest growing areas of Indo-US high technology and economic engagement. The Government of India and the Indian Industry seek technical, human resource, high technology and commercial support from the USA in its efforts to modernize the civil aviation Industry in India and to meet the challenges of its rapid expansion in terms of safety, customer demand, technology and communication support and air space management. Following the Open Skies Agreement between the countries in 2005, there has been a steady increase of air traffic between the two countries stimulating economic partnership and strengthening people to people contacts. Leading US aviation companies have established presence in India with a longer term strategy.

Umbrella Agreement on Civil Aviation: A Memorandum of Agreement ('Umbrella Agreement') between the Federal Aviation Authority (FAA) of USA and the Government of India was signed on 13th November, 2006 in New Delhi. The agreement provides for assistance by FAA to the Civil Aviation sector in India in developing and modernizing the civil aviation infrastructure in the managerial, operational and technical areas. The assistance essentially includes: providing technical and managerial expertise in developing, improving and operation of civil aviation infrastructure, standards, procedures, policies, training and equipment; providing training for civil aviation personnel; inspection and calibration of our civil aviation equipment and air navigation facility and assistance in airport certification in India among other things.

Salient features of the Open Skies Air Services Agreement with USA

- Multiple designation of airlines i.e. either side can designate any number of airlines.
- Unlimited frequency/capacity could be operated.
- Unrestricted points of call, i.e. airlines of either country can operate to any point in the territory of the other Contracting Party.
- Unlimited 5th freedom traffic rights through any intermediate point and to any beyond points could be exercised.

- No restriction on cargo flights i.e. either side can operate any number of freighter services to any airport in the other country.
- Traffic from one aircraft could be transferred to another aircraft at any point on the route.
- Airlines of both sides can code share with other airlines as well as domestic airlines of the other country.

The conclusion of this Agreement in April 2005 has boosted trade, tourism and business. Aircraft has emerged as the fastest growing component of US exports. Connectivity between the two countries has increased significantly with six new daily direct flights which have commenced since the signing of the Open Skies Agreement, another new daily flight (Jet Airways) is via Brussels. Air India began a new direct non-stop flight from New York to Delhi in February 2008. Kingfisher Airlines also plans to start flights including one linking Bangalore and San Francisco.

Bilateral Aviation Safety Agreement (BASA); The Directorate General of Civil Aviation (DGCA) and FAA have also signed a Memorandum of Consultations (MOC), concerning cooperation for a Bilateral Aviation Safety Agreement (BASA) on 13th November, 2006 under the Umbrella Agreement. As per the MOC the DGCA and FAA mutually affirm the intent to work cooperatively in areas leading towards a Bilateral Aviation Safety Agreement (BASA) for reciprocal airworthiness certification of civil aeronautical products and technical cooperation in a range of aviation safety areas.

Accordingly a BASA Action Plan has been drawn out, the main features of which are :

- (i) Identification of an Indian aeronautical product for certification
- (ii) Issuance of an Indian Technical Standard Order (ITSO) for the identified product- This has been accomplished by adopting FAA Technical Standard Order (TSO) and publishing DGCA ITSO to harmonise the design and test standards.
- (iii) Training of DGCA officers on certification procedures in USA/and by US experts in India - This has been partially accomplished by deputing three officers to FAA office in Los Angeles for familiarization of the certification processes.

- (iv) In parallel FAA has also agreed to consider co-certification of a major modification on HAL's Dhruv Helicopter to be taken up for converting Dhruv into "single pilot IFR version".

India-US Aviation Cooperation Programme: Recognizing the potential for further cooperation between the United States and India in the aviation sector, US Trade Development Agency (USTDA) initialed a Memorandum of Understanding (MOU) with Ministry of Civil Aviation at the India-US Aviation Partnership Summit held in New Delhi in April 2007 to establish the U.S.-India Aviation Cooperation Program (ACP). The ACP was signed subsequently in June 2007 during the visit of the Minister (Civil Aviation) to USA. The ACP consists of a public-private partnership between USTDA, the FAA and several U.S. aviation companies to provide a forum for unified communications between the Government of India and U.S. public and private sector entities in India. Under the ACP framework, USTDA, Federal Aviation Administration, Indian Ministry of Civil Aviation and other U.S. and Indian public sector entities will partner with U.S. industry in identifying and supporting India's civil aviation sector modernization priorities. The ACP will serve as a mechanism through which Indian aviation sector officials can work with U.S. civil aviation representatives to highlight specific areas for bilateral technical cooperation. Initially, the ACP is expected to focus on activities that support air traffic/air space management enhancements and the challenge of rapidly increasing aviation traffic in India. India is the second country with which such a programme has been formed.

To carry forward the mandate of the ACP, an India-US Steering Committee has been set up under which Working Groups on Air Worthiness, Flight Standards, Airports and Environment have been set up. The first meeting of the Steering Committee was held in October, 2007. The following projects have been identified under the ACP:

- Technical Training for Aerospace Industry
- Air Traffic Flow Management (ATFM) Seminar
- Aircraft Pilot Capacity Assessment
- Aircraft maintenance Engineer (AME) Capacity study
- Air Traffic Control Officer (ATCO) and communication, navigation and surveillance (CNS) Engineer capacity assessment.

India Aviation 2008: The USA is the partner country in the India Aviation 2008 show being planned to be held in October 2008. Leading global aviation companies along with a sizeable delegation from the US would be participating in the Show.

568. Fact Sheet on India-U.S Health Cooperation.

Washington (D. C.), September 25, 2008.

India and the US over the years have established a strong collaboration in the area of public health which extends to a wide range of issues - HIV, TB, Malaria, Polio, Maternal and Child health, Tobacco control, Environmental and occupational health, Vaccine development, Avian influenza and emerging and re-emerging infectious diseases. By working together, the two sides are: 1) developing new scientific knowledge; 2) creating new technology for the development of vaccines, drugs, diagnostic tools, and devices; and 3) working together to control, prevent, and eliminate diseases. The benefits from these collaborations flow back to both the American and Indian people, and through the good will generated on both sides, to Indo-American relations in general.

US Health Secretary visited India in Jan 2007 and reviewed bilateral health cooperation and exchanged ideas on developing science-based systems and standards to govern two-way trade.

The US Government through its Agency for International Development (USAID) and the U.S. Department of Health and Human Services (HHS) are working in partnership with the Government of India, through the Ministry of Health and Family Welfare and its nodal agency, the Indian Council of Medical Research (ICMR), academia and the industry, to support collaborations and programs that are designed to:

- Increase the capacity of Indian institutions and develop infrastructure;
- Provide training in biomedical research, biotechnology, and public health;
- Increase access to, the quality of, and demand for family health care;
- Nourish needy mothers and children;

- Control, prevent, and eliminate infectious diseases;
- Develop and share scientific knowledge;
- Develop and evaluate new vaccines, drugs, diagnostic tools, and devices;
- Strengthen quality assurance;
- Support improved policies and planning for maternal and child health, reproductive health, HIV/AIDS, and other infectious diseases;
- Help develop central and state policies for population, health and nutrition, and specific interventions, such as immunization;
- Promote stronger and sustainable private-public sector partnerships; and
- Improve evidence based decision making

Bilateral Agreements, Training and Capacity Building: The Indian Ministry of Health and Family Welfare and the US Department of Human and Health Services have signed 5 Joint Statements covering the areas of HIV/AIDS (16 projects), Maternal and Child and Human Development and Research (19 Projects), Environment and Occupational Health (6 projects), Emerging and Re-emerging Infectious Diseases and the International Centre of Excellence in Bio-medical Research. The Indo-US collaboration has successfully taken place for the last 30 years or so and has led to mutual benefits in terms of infrastructure strengthening, transfer of technology and several scientific publications.

Collaboration between National Institute for Pharmaceutical Education and Research (NIPER) and US Universities: India is in the process of setting up six new National Institute for Pharmaceutical Education and Research. The Department of Pharmaceutical seeks the support of the US Government to establish human resource collaboration between US Universities/ National Institutes of Health and NIPER.

International Partnership on Avian and Pandemic Influenza 2007: To strengthen international efforts to combat Avian and Pandemic Influenza and express the commitment of the Government of India in dealing with global health security, India successfully hosted the International Partnership on Avian and Pandemic Influenza in December, 2007. Representatives of 111 countries and 29 international

organizations participated. A Road Map that sets out the actions that a nation could implement for the establishment of achievable benchmarks by concerned government entities and other stakeholders was presented by India.

Collaboration between Regulatory authorities: As a follow up to the visit of Secretary Health, a delegation from US FDA visited India in April 2008 with the objective of establishing a bilateral cooperation programme with the Health Ministry. A delegation from the Health Ministry visited Washington in June 2008 and met with US FDA officials. India is in the process of strengthening its Drug Regulatory Framework, including through legislative amendment. The setting up of the Central Drug Authority in India will further strengthen the regulatory framework to the mutual advantage of both Indian and U.S. Pharmaceutical industries. The two Governments have been collaborating in the area of training on the regulation of medical devices, clinical research, pharmacovigilance, and e-governance. Indian health experts have received training at the US FDA. The US FDA plans to open offices in India in consultation with the Indian Authorities.

HIV/AIDS: India became a part of the US President' Emergency Plan for AIDS relief (PEPFAR) initiative in May, 2005. India has been receiving funds worth US\$ 30 million annually from the US Office of Global AIDS Coordinator (OGAC), USAID and Center for disease Control and Prevention (CDC), USA. The program focuses on four priority states: Tamil Nadu, Maharashtra, Andhra Pradesh, and Karnataka.

Influenza: HHS/CDC, the U.S. Department of Agriculture (USDA), and USAID collaborate with the Ministry of Health and Family Welfare and the Ministry of Agriculture institutions on pandemic preparedness, physician training, disease burden estimations, and training for laboratory detection of human and avian influenza. Several Indian professionals have received training at HHS/CDC. India has contributed to the global efforts toward ever greater preparedness for Avian and Pandemic Influenza by maintaining total transparency about outbreaks that have taken place so far, by taking immediate action to contain the outbreaks and by offering a unique tool for assessing national and international preparedness in the form of the road map developed at the New Delhi International Ministerial Conference on Avian and Pandemic preparedness in December, 2007. India believes it is important to expand global capacity for manufacturing influenza vaccine and is willing to collaborate in this regard.

Family Health, Maternal and Child Survival and Reproductive Health:

Through policy, advocacy and training, engaging the private sector, and demonstrating effective public private partnership (PPP) models, USAID is helping to improve nutrition and health through immunization and expanded access to family planning methods in three north Indian states. USAID partnered with the Government of India to improve evidence based decision making through efforts such as the National Family Health Survey. HHS/NIH is conducting collaborative biomedical research with the Ministry of Health & Family Welfare/Indian Council of Medical Research institutions, academic institutions, and hospitals on maternal, child, and reproductive health. Indian scientists are also working on these subjects in laboratories based in the US.

Polio: External assistance is being received from Donor Partners to eradicate Polio. CDC, USA has assisted India in the procurement of Oral Polio Vaccines upto the year 2006-07.

Tuberculosis: USAID and HHS/CDC collaborate with the Ministry of Health and Family welfare for improved implementation of the Directly Observed Treatment Short-course (DOTS) strategy to control tuberculosis (TB). The two sides are working to address emerging challenges related to TB-HIV co-infection and multi-drug resistant TB and provide technical assistance for infection control practices and improved public-private partnerships in TB control. The US National Institutes of Health is providing technical and financial support for an International Centre for Excellence in TB research in Chennai.

Vaccine Development: HHS/CDC and NIH are working with the Ministry of Science and Technology to develop vaccines against malaria and rotavirus. The technology for the rotavirus vaccine was transferred from the U.S. to Bharat Biotech International Limited, Hyderabad and is ready for phase III testing in India. The Indo-U.S. Vaccine Action Program (VAP), a 20-year-old bilateral collaboration supporting research on vaccines, immunology and related biomedical issues, was renewed in 2007.

Brain Research Program: India's National Brain Research Institute and NIH are involved in this program. The project promotes neuroscience and mental health research through targeted workshops to stimulate new joint research proposals.

569. Fact Sheet on India - U.S. Agricultural Knowledge Initiative.

Washington (D. C.). September 25, 2008.

The Joint Statement between Indian Prime Minister Dr. Manmohan Singh and US President George Bush on 18th July, 2005 included mention of launching of a India-US Knowledge Initiative on Agriculture (AKI) focused on promoting teaching, research, service and commercial linkages. Subsequently, a joint declaration for the AKI was signed on 12th November, 2005 by the Ministry of Agriculture of India and the US Department of Agriculture with the basic objective of re-energizing the India US partnership.

The key areas of cooperation, detailed work-plan and commensurate joint deliverables are finalized in the meetings of the Joint India-US AKI Board. The Board is co-chaired by the Secretary, Department of Agricultural Research and Education (DARE) and Director General, Indian Council of Agricultural Research (ICAR) from Government of India and the Administrator USDA/FAS from US side. Other members represent agricultural universities, Government and private sector. The AKI Board meets twice a year, alternatively, in India and USA. So far, six Board Meetings have been held; the last one on April 15-16, 2008 in New Delhi.

The four areas identified for cooperation in the Work Plan are - (i) Human Resources and Institutional Capacity Building (cross-cutting areas), (ii) Agri-processing and Marketing, (iii) Emerging Technologies, and (iv) Natural Resource Management. Under these main areas, the four focus areas are - (i) Education, learning resources, curriculum development and training, (ii) Food processing, use of by-products and bio-fuels, (iii) Biotechnology and (iv) Water Management. So far, 29 Indian scientists/faculty members have received training in USA under the India-US Borlaug Fellowship Program. Ten collaborative projects have been initiated, 14 joint workshops have been organized in India, and Indian scientists have participated in three workshops in the USA.

There are ten collaborative projects, eight are ongoing and two have been completed.

Biotechnology

- Pigeon pea Genomics Initiative
- Genetic Engineering for Abiotic Stress Tolerance in Crops.

Water Management:

- Water harvesting for groundwater re-charge and bio-drainage for salinity control.
- Sustainable Water Resource Management: U.S.-India Collaborative Research and Education
- On Farm Water Management for Rain-fed Agriculture on Benchmark Watersheds in Five Diverse Eco-Regions of India
- Information & Communications Technologies for Capacity Building Model in Water Management: U.S. India Collaborative Extension/ Outreach and Distance Education

Human Resources & Institutional Capacity Building

- Teaching and Learning Excellence: A Capacity Building Model
- Capacity Building for Library Professionals.
- Capacity Building for Intellectual Property Protection and Technology Licensing in Agriculture (Project completed)
- Capacity Building for Risk Analysis & Modeling to Promote Trade (Project completed)

Joint Workshops Organized in India

- Water Management, September, 2006, New Delhi
- Human Resource and Institutional Capacity Building, November 2006, GBPUAT, Pantnagar
- Curriculum Development in emerging areas of agriculture and rural development, January 2007, New Delhi
- Contract Farming: Methods and Experiences, May 2007 at New Delhi
- Strengthening of Indian Library and Information System, May 2007, New Delhi
- SPS Capacity Building and Science-based Risk Analysis and Modeling, July - August, 2007, Hyderabad
- Agribusiness and Food Industry in Developing Countries, August, 2007, Lucknow

- Capacity Building in the Avian Viral Diseases and Animal Biotechnological Applications on August 2007, Tamil Nadu.
- Four Cold Chain Workshops (Chennai, Mumbai, New Delhi, Kolkata)
- Harnessing the Benefits of Biotechnology, March, 2008 at New Delhi
- Sanitary and Phyto-sanitary (SPS) Regulations on July, 2008 at NASC Complex, New Delhi

570. Address by Prime Minister Dr Manmohan Singh to the Indian Community in USA.

New York, September 27, 2008.

Ambassador and Mrs. Sen,

Ladies and Gentlemen,

I extend my warm greetings to all of you. Soon we will be celebrating Id and then Dussehra and Diwali. So my best wishes to all of you for the coming season of festivals.

I am always delighted to be with members of the Indian community and the Indian American community. Your achievements fill my heart with pride. Your success in diverse spheres of human endeavour is a living proof that given a proper enabling environment, the people of Indian origin are second to none.

My wife and I feel happy and proud to be here today.

Ladies and Gentlemen,

Over three years ago, when I addressed the U.S. Congress, I said that some bilateral relations are based on principles and some are based on pragmatism. What is truly remarkable about the India-US relationship today is that it is based on the twin pillars of both principles and pragmatism.

We are both open societies and open economies. We are both multi-cultural, multi-ethnic, multi-religious and multi-lingual nations. Both our countries respect the rule of law and guarantee fundamental human rights.

This pluralism makes us both "argumentative societies" - to use my friend Amartya Sen's term. As an "argumentative" people we are bound to have

our differences and to voice them. That is what makes our relationship a lively one. The arguments that we have are arguments between friends, between equals, and not adversaries.

Ladies and Gentlemen,

The historic agreement on cooperation in the development of civil nuclear energy in India that President George Bush and I embarked upon is nearing fruition.

It is in no small measure due to the very supportive role the Indian American community and the friends of India in the US have played. I thank you all for this.

Thanks to the leadership of President Bush and the friendship of the people of the United States we are on the verge of securing a new status in the global nuclear order. India will be liberated from the constraints of technology denial of 34 years. It will add an important strategic pillar to our bilateral partnership. We will widen our clean energy options.

Ladies and Gentlemen,

As we strengthen the economic side of our partnership with the United States, it is inevitable that industry and business in both countries will seek cooperation in new areas such as biotechnology, nanotechnology, health care, space applications, etc. With the launch of the Chandrayaan Moon Mission, with two American instruments aboard, next month, we will cross another milestone.

The knowledge economy and the fields of education and business have been the life-blood of our bilateral relationship. We have decided to expand the opportunities for educational exchange between our two countries. We have jointly invested in doubling the funding for the U.S. - India Educational Foundation, which will now offer the Fulbright - Jawaharlal Nehru Scholarships and Grants to Indian and American students, teachers and scholars.

Friends,

The India-US partnership is also a result of a convergence of shared interests and common concerns. It is, therefore, not surprising that support for a strong India-US relationship cuts across party lines in both India and the US. The overall sentiment that emerges from our respective domestic debates is a strong positive endorsement of our strategic partnership.

We face common threats and challenges - of terrorism, energy security, proliferation, drugs, maritime security, climate change and environmental degradation.

We stand together in safeguarding our pluralistic and democratic polities from attacks that seek to destroy our cohesiveness and our prosperity.

Friends,

The Indian American community inspires people of Indian origin around the world with its leadership, its enterprise and creativity. You have among you Nobel Prize winners and Abel Prize winners; great writers and artists; business leaders and scientists. We are all inspired by the life and achievement of Sunita Williams and Kalpana Chawla; of Indira Nooyi and Vikram Pandit; of Jhumpa Lahiri and Mira Nair; of Srinivasa Varadhan and Sabeer Bhatia.

You have become the "brain bank" of the country of your adoption. I hope that you will also become the "brain bridge" between our two countries in frontier areas of technology as well as in trade and investment.

Our Government has created new opportunities to tap this vast reservoir of talent. We created a new Ministry of Overseas Indian Affairs and launched the Overseas Citizens of India scheme. I know that many of you want to see further improvement in the OCI scheme. We are working on it.

We are aware how fervently you choose to retain your Indian identity, your Indian connections and your Indian heritage, even as you integrate in societies where you live and contribute as good citizens of America.

Friends,

We have decided to open two additional consulates in Atlanta and Seattle by 2009. This will enhance our consular and cultural outreach.

Ladies and Gentlemen,

We have travelled a long distance to reach where we have reached today. We have moved forward as a dynamic and creative nation regaining our rightful place in the global community. The rise of India is a force of peace, development and stability in the world. However, we still have many hurdles to cross. I am confident that our country has the will and the ability to meet the challenge of change.

India's emergence as a major democratic power and an open economy has been made possible by the creativity, the enterprise, the energy and the talent of its free people. A people who now live on every continent of our planet. A people on whom the sun never sets!

I would like each one of you to be an active partner in this saga of adventure and enterprise, and build an India free from the fear of want and exploitation.

May God Bless You!

571. Media Briefing by Deputy Chairman, Planning Commission Dr. Montek Singh Ahluwalia about Prime Minister's meetings on September 26 during his stay in New York to attend the UN General Assembly Session.

New York, September 26, 2008.

Official Spokesperson : Please take your seats. A very good afternoon to you, notwithstanding this light rain outside. Welcome back to the Media Centre. We have Deputy Chairman of Planning Commission, Dr Montek Singh Ahluwalia here to talk to you about Prime Minister's meeting earlier in the day with Prime Minister of UK, Mr. Brown. Deputy Chairman has also agreed to take a few questions after his opening remarks. Thank you.

Deputy Chairman: Thank you very much. Well they had a fairly good meeting, about 40 minutes or so I think. PM Brown congratulated Prime Minister on his Birthday. Good way of beginning the meeting. Then they had a very fairly wide ranging discussion on a number of issues which obviously touched on things like Millennium Development Goals, quite an extensive discussion on the current turbulence in the international financial system and what can be done about it. They had a discussion also on the Doha Round prospects, what are the issues that might be holding our progress and then a general discussion on neighbourhood; Afghanistan, Pakistan etc. I think most of the discussion focused really on international sector issues and trade. Both PMs agreed that the international turbulence in the financial system is quite exceptional and many people in the market think that things may be more serious than many people are making out. I think they both agreed that this showed that there was a fundamental weakness in the system of multilateral surveillance. The globalization has

produced an integrated financial world around the world which does not have a single monetary authority that becomes responsible for taking care of global problems. PM Brown mentioned that International Monetary Fund (IMF) is the only institution that looks at these things but you know the circumstances today are quite different from what the IMF was supposed to deal with. I mean IMF lends to countries but today what you have is financial fragility which leads to weaknesses in financial institutions and maybe loss of market confidence in certain kinds of financial instruments.

So what is an appropriate way of handling that? We have to think about. PM Brown mentioned that in the aftermath of the East Asian crisis, there was a perception that better financial regulation and supervision was necessary and several mechanisms for international consultation were put in place including the financial stability forum. Our PM pointed out that earlier financial crisis used to take place in the periphery leaving the center largely unaffected. The difference this time is that the international crises is taking place at the centre of international system and many of these institutional mechanisms of inter-governmental consultation are not very effective in dealing with problems when they emerge at the very centre of the financial system. So the whole issue of what is the kind of international consultative process that needs to be put in place was discussed. Both Prime Ministers raised some questions. PM Brown mentioned that obviously the system must go beyond the G-8 and he felt sure that India will agree with that, of course, our PM agreed that it has to go beyond the G-8. PM Brown said well perhaps that this could be handled in G-20 where India is also a member. I think the question also came up that if you really need massive supply of liquidity then is there a case for setting up some kind of International Central Bank in which different governments actually contribute which could then act to provide liquidity because at present everybody agrees that there is a problem but the actions have to be taken by individual Governments even though the action of the individual Government will affect financial stability around the rest of the world.

I think an effort to shore up certain kinds of assets that will have the balance sheet of all institutions that hold those assets not just institutions in America. So these kinds of issues were discussed more in the form of raising questions which suggest that the present international financial architecture is really not adequate. Obviously there were no decisions taken but our PM assured the British PM that we would be happy to work with them in looking to what might be appropriate solutions. They spent a fair amount of time also on the Doha Round with both Prime Ministers emphasizing the

importance of getting the Doha Round successfully concluded. There was a brief discussion on what are the issues that might be holding up agreement. They touched on the question of the Special Safeguards Mechanism (SSM) which has been discussed. I think they also noted the point that although much of the international discussion the press has focused on the SSM issue where different countries have taken different position and there are some proposals which have recently been tabled by Australia, by the EU and by Brazil to which China, India and the US have yet to give a final reaction. But it was also pointed out that these were not the only issues that are several other issues including for example in agriculture, issues like the cotton subsidy which will become very controversial which really have not been discussed so far. I think they agreed to remain in touch on these issues so that if there are areas where our positions are narrowing it would be possible to come to a quick resolution. Prime Minister Brown apparently will be in touch with US President and they are obviously also concerned about this matter.

So I think it was a sharing of perceptions at Head of Government level on what is the status of the round and what are the issues that appear to be currently most immediate ones that need to be resolved. I think that is roughly the areas they covered and I will be happy to take any questions.

Q : What about any political issues that come out during the meeting, like terrorism or something?

A: They discussed the problems of terrorism. Our PM pointed out the extent to which terrorism is surfacing in our neighbourhood. It is a matter of obvious concern to us and PM Brown agreed that this is a major problem, and I think there is a shared perception on that basically. But we need to do something about it. There are lots of cross-border issues that also need to be addressed.

Q: If you could please qualify this a bit like you mean that the two PMs explored the possibility of an international bank that would safeguard the free supply of liquidity. How exactly it would be different from the World Bank, IMF etc?

A: A very good question. World Bank only lends to developing countries and it lends for development projects. So the World Bank is not relevant here. What is relevant here is the International Monetary Fund. Now the IMF, first of all, its total capability to lend is nowhere near adequate to plug a liquidity hole in the financial system. I don't know the numbers but you

know it is unlikely that the Fund can lend more than a total of 70-80 billion whereas the United States alone is talking of a rescue package of 700 billion and there are people saying that it may not be enough and US has taken the view that other countries, other major countries should take preemptive steps to shore up their banking system and if that were really done then it would really be on a scale of resources required much larger than the IMF. Second the IMF traditionally lends to Governments. So Governments borrow from the IMF, whereas in today's world financial instability is the result of private financial institutions running into either liquidity or insolvency problems. So the IMF, for example, if it were decided that a particular class of assets, as is the case here, real estate based assets have run into a serious dis-functioning of the market and to restore confidence it is necessary to buy these assets. The IMF just cannot do that. So even the IMF is not structured either to lend to banks or to intervene in financial markets in order to calm the fears of liquidity. So it is in that context that the question arose that either we leave it to individual central banks which are treasuries, I mean, at present, the US treasury and the federal reserves are engaged in getting through that process. A very major, one may call it a bail out plan and I know people don't like to use the term bail out, just say a financial rescue package. You can have a system where individual governments do whatever is necessary.

But at the moment there is no coordinated consultation mechanism that enables governments to say look that we will do this and you will do that and you do. One approach will be that you need better coordination so that coordinated action can be taken. And obviously if the action is coordinated it will increase the confidence level in financial system. The other approach might be that the form of coordination is not just consultation which enables sovereign governments to take the individual decisions in a coordinated manner but rather coordination in the form of action by a global authority. I mean, for example, if different governments are all going to pump x hundred billion dollars of liquidity they could just easily have an international institution run by them which pumps this liquidity in a more or less the same way, only thing is it will become much more transparent. The rules will become more global and those kind of issues and that will be a completely new idea. I don't think neither of them says this is what they think is necessary but it was clear that existing system is simply not geared to addressing this problem. I think our PM said that the world has become global and capital has become the most global because paper issued in one country can be held by banks in other countries so you have got a seamless system but you don't have international financial regulation.

egulation is being done by individual supervisors and the degree of supervision varies, the accounting rules vary and one of the new problems is that you know instability does not just come from the bank.

I mean in this country, for example, the investment banks which are not regulated have a huge amount of leverage so the amount of credit that goes through the investment banks is now much larger proportion relative to commercial banks than it was 10 years ago. In Britain they have introduced the financial supervision agency authority which does consolidated supervision of the financial system. In this country, in the United States that is not true. I mean the banking supervisors are different from the insurance supervisors are different from the security supervisors which is the same thing in India. So you know the whole question that comes up is what is the new architecture we want, which is the right model and how do we create a structure which is suited to a system dominated by the private sector. It is not just a question of government's borrowing in order to fix the problem.

Q: But the two leaders just wondered all that? What I mean they did not ask for it.

A: I don't think they are making a statement but they are exchanging views. One thing is very clear. I think both of them agreed that the existing international financial system is not serving the purpose. They are exploring alternatives. I mean these are not completely new ideas. For example, Jeffery Garton in the Financial Times today has a column where he says is this the time now that we had the new World Monetary Authority and the International Central Bank. So people are aware that new ideas are being tossed around and I think what they agreed was Premier Brown said that this has to be solved, methods of resolving the problem have to go beyond consultations in the G-8 and he asked the PM do you agree with that. Of course, the PM said I agree entirely it must include more countries than the G-8. Then he said that may be the G-20 which is a forum where India is represented, China is represented, Brazil is represented and lot of other countries. May be that is one forum but then they left it at that. What our PM said is that we would be happy to work with the British in exploring any concrete ideas that they may have.

Q: The two PMs you said discussed terrorism and also crossed border terrorism. Has PM Brown made any commitment about leaning on the Pakistani Government to ensure that the levels of cross border terrorism came down?

A: Well to be honest this is not my area and as the subject moved into it, for a brief moment I was not actually there. I think both agreed that this is not the occasion when assurances are being demanded but I think it was quite clear, I think it was a shared perception that it is necessary to bring this spread of terrorism, which seems to be coming out of Pakistan, under some control and I think beyond that both agreed that this is necessary. I don't think any assurances on that issue was made.

Q: Mr. Ahluwalia deviating a little bit, remaining on the same topic of financial crises which has hit the United States. Could you tell us what is the advice of PM to President Bush yesterday when they met because we were told that President looked forward to meeting him as a very calming and serene influence on even economic issues and other matters. Could you tell us a little bit what they have been. Do you think what he might have said to the President.

A: You have been given extensive briefing by FS yesterday and I am not sure that I can add to it. I wasn't there in the briefing but I don't think that PM was giving specific advice on how to handle the financial crises but I think he did express appreciation that the US Government is not adopting a hands off attitude. I think it is no longer a situation where the US Government is saying well that is the market and we must allow markets to function and it is a clear perception that there is a market failure and whenever there is a market failure the Governments have to intervene and they are intervening but of course the issue is of how much, how and in what manner because these are the issues going through the American legislative process. We did not take any specific position on that but my recollection is that the PM appreciated the fact that the US Government is as it were stepping in to bring about an early resolution of the crisis because it is in our view essential that that should be done, restoration of financial confidence is a pre-condition for healthy continuance of growth in the global economy and right now the financial sector is a major area of vulnerability. So we were really complementing, the PM was complementing the President for taking a very pro-active approach but not giving any specific advice on what to do.

Q: Referring to the Financial Times article today, in the same paper the German Finance Minister was commenting that the present financial crisis of the US is leading towards a multi-polar world. US will no more be a super power. That is a comment published today. What is your perception.

A: This is going well beyond what the PM and PM Brown discussed. I would be happy to give you my views and comment on another occasion

but this issue did not come up during the meeting with PM Brown.

Q: You have told that PM has not given any specific advice. Did Mr. Bush gave any advice on rising inflation in India.

A: I don't think. These kinds of specifics were actually not discussed. You know this was a very rich and broad based discussion in the meeting with PM Singh and President Bush. They were actually reviewing the entire gamut of Indo-US relations and the many many areas where cooperation has increased and of course, the prospects assuming that you have a successful outcome in the legislative process on the Nuclear deal and the new area of cooperation in that area also but not how to control inflation. I think we are reasonably confident that inflation will get under control.

Official Spokesperson: Last two questions please.

Q: Today is PM Manmohan Singh's birthday. Has he received a gift from PM Brown? If so, what it is.

A: I am not aware of that. He did receive greetings from PM Brown. JS (XP) will probably find out the truth of that and let you know. It was not while I was there.

Q: There is lot of talk about 123. In yesterday's meeting between Prime Minister and President Bush. Was there anything on the 126, the MMRCA?.

A: I don't think specific things like that were being discussed.

Thank you very much and enjoy yourselves.

**572. Remarks by External Affairs Minister Pranab Mukherjee
at Luncheon in honour of US Secretary of State Dr.
Condoleezza Rice.**

New Delhi, October 4, 2008.

Madam Secretary,

Hon'ble Cabinet Colleagues and my Colleagues in Parliament,

Ladies and Gentlemen,

I am delighted to welcome you all here. I am particularly happy that the Secretary of State of the United States of America, Dr. Condoleezza Rice, is here today with us.

Madam Secretary, you are a true friend of India. Under your stewardship as National Security Advisor and Secretary of State, we have transformed our relationship and deepened our strategic partnership. No Secretary of State of the United States has done more for this relationship than you have. You had conceptualized it even before taking office, and have seen your ideas implemented in action. This is a rare achievement in practical politics.

Madam Secretary, you come to India at a special moment. Our relations have never been better. And their prospects continue to improve. The road that we are embarked upon is one of engagement in all the various fields of human endeavour, bringing benefits to our peoples. The civil nuclear initiative which you have personally piloted through the US Congress is the most visible sign of this. We welcome the fact that the Agreement has been approved by the US Congress with overwhelming bipartisan support. This outcome would not been possible without the personal commitment of President Bush and your unremitting efforts. We are now in the last lap. We look forward to cooperating with the US in signing and bringing the 123 Agreement into effect, and moving on to the commercial arrangements.

The transformed India-US relationship that we have built includes cooperation in defence, in energy, in agriculture, in education and in high technology. We are also working together on global issues such as counter-terrorism and climate change. The US is today India's largest trading partner and our largest source of investment. As we attempt to build a knowledge society and economy in India, our links will only grow.

Madam Secretary,

As two democracies and open societies, we share values, bonds and friendships at all levels. It is the vision of President Bush and Prime Minister Manmohan Singh which has enabled the transformation of our relationship. From the leaders' level to the individual relationships between our peoples we find a natural synergy and sympathy. Indians are at home in the US and the Indian- American community constitutes a tangible link between us. So do the 84,000 Indian students in the US. It is in recognition of the importance of education to our future that we have recently agreed to expand and improve the Fulbright Nehru Scholarship Programme.

When I look to the future I am confident that our relations will continue to improve, not only because of the tremendous potential of our bilateral relationship but also because our relations have regional and global significance. I am sure that what we have done together in the last few years has not just laid a foundation but has actually built an edifice that our successors can expand and populate.

With these few words allow me Madam Secretary, to welcome you again to New Delhi. I look forward to our talks and wish you a pleasant and productive stay in India during the rest of your visit.

573. Joint Press Interaction of External Affairs Minister Pranab Mukherjee and US Secretary of State Dr. Condoleezza Rice.

New Delhi, October 4, 2008.

Minister of External Affairs (Mr. Pranab Mukherjee): Secretary Rice and I have just had very constructive and useful talks. It is always a pleasure to welcome a good friend and trusted partner to India. Under Secretary Rice's stewardship, India-US relations are today better than they have ever been before and have been transformed into a truly strategic partnership.

During our discussions we covered a wide range of subjects. We were both very satisfied with the status of our bilateral relationship and are convinced of its future potential. Today India and the US engage as partners across the entire range of human endeavour. The civil nuclear energy initiative is now in its last lap. We look forward to signing our 123 Agreement and bringing it into effect soon. I am grateful to Secretary Rice for all that she has done to make possible this landmark achievement and transformational event. It is this agreement which has opened the door for India to international nuclear commerce.

What India and the US are doing today has direct benefits for our peoples, and assists India's effort to develop. Whether it is energy, agricultural research, trade or high-technology, India's quest to build a knowledge society leads us to work very closely with US. Today the USA is India's largest trading partner, our largest source of investment and a major source of technology. As India grows and develops, our relationship with the US too will grow and develop.

India-US relations today have more than bilateral significance. We naturally also discussed the regional situation and global issues. Ours is a neighbourhood of several challenges. India seeks a peaceful periphery within which to develop. We have an interest in the peace, stability and prosperity of our neighbours, and will make our contribution to these outcomes.

Among the global issues that we discussed, we found commonalities of approach. We determined to continue working together on a wide range of issues, ranging from climate change to UN reform, including that of the UN Security Council.

As we looked back with satisfaction at the transformation of India-US relations, we are convinced of the future prospects of this relationship. The vision for this relationship laid down by Prime Minister Manmohan Singh and President Bush is one that serves the interests of our peoples, and those of the region and the world. India and the US, as two democracies with shared values, look forward to building this partnership based on principle and pragmatism in the years to come.

US Secretary of State (Dr Condoleezza Rice): Thank you very much, Minister Mukherjee, for hosting me here for the wonderful hospitality, for the wonderful lunch and the good company, but also the very substantive discussions that we have just finished. I look forward to seeing the Prime Minister a little bit later. Indeed President Bush very much enjoyed hosting him in Washington just nine days ago. I think it is fair to say that as I come here to Delhi and work with you, Minister, we both have a lot to be pleased about, particularly, that I think we are executing the vision of Prime Minister Singh and President Bush for closer and deeper relations between the United States and India.

We have, of course, just concluded the US-India Civil Nuclear Agreement. A lot of people have worked very hard - diplomats, and parliamentarians, and civil servants, and politicians. I think that everyone has worked to bring this into being. The negotiations have sometimes been tough along the way, but it is because it is such a historic agreement and a historic achievement. We have all persevered. The United States will stand by its commitment. I believe in that...(inaudible)... the unanimous support of the International Atomic Energy Agency, all 45 members of the Nuclear Suppliers Group, 298 members of our House of Representatives, and 86 members of our Senate, that is an enormous bipartisan margin. It shows that this India-US Civil Nuclear Cooperation Agreement has broad support - bipartisan support, and broad and deep support.

This gives a new platform for cooperation in energy matters. We all need to find ways to diversify our energy mix and we look very much forward to helping India to develop civil nuclear power. We believe that it is important that the IAEA, and in fact Dr. Al Baradei was an early supporter of this because it builds on India's very good proliferation behaviour to strengthen, we believe, the IAEA framework. We believe it is also very important for our technological cooperation as it moves forward.

But, of course, this relationship goes very much beyond the civil nuclear power agreement. It is a relationship that is seeing ever larger numbers of

travellers, of students, of scholars, of business people, and of families because, of course, the United States enjoys the tremendous energy, vitality and vibrancy of an Indian-American community that remains very committed to seeing a progress between the United States and India.

People are using these ties to gain new technologies, to innovate. Investment is flowing both ways creating jobs in both of our countries. Bilateral trade has set new records. Indeed, we have opened up new channels between our Governments as well, in trade and technology, in agriculture - one of the very earliest elements of cooperation between the United States of India - in education, in defence cooperation. I think it is fair to say that this is now one of the broadest relationships that the United States enjoys.

We are also putting this good relationship to use globally. We have had discussions today about Afghanistan and our joint desire to see Afghanistan peaceful and prosperous. We are working together on issues like climate change. Of course, as we look to transforming our economies we hope to work together increasingly to make certain that world trade prospers and continues so that our economies can continue to grow.

I think it is fair to say, Minister, that the last several years have indeed been banner years for US-India relations. As President Bush gets ready to end his Administration and to pass on to his successor strong relations around the world, I think that this will be one of the very strongest. I know that whoever becomes President of the United States will continue to build on the firm foundation that Prime Minister Singh and President Bush began in 2005.

Thank you very much.

Question (Ms Nidhi Razdan, New Delhi Television): I have a question for the Minister and for the Secretary of State.

Dr. Rice, we were all expecting the two of you to sign the 123 Agreement today. Can you tell us why it is taking so long for the President to sign it into law, what the procedure is now? Is it just a procedural delay or is there something else? Also, there are some concerns India has with the Bill that has been cleared in the US Congress. Would the President be addressing those concerns in his Signing Statement?

Mr. Mukherjee, technically India and the US could have signed this agreement even before the President's Signing Statement. Why did India choose not to do that?

US Secretary of State: Well, the President will sign the legislation very soon. He wants to sign the legislation very soon. There are administrative details that have to be worked through, for instance, just to give you an example, a Bill once it is passed on Capitol Hill has to be enrolled, it is called, it then has to be transmitted to the White House. I think you know that this has been a busy time for our Legislative Branch over the last several days. But indeed the President very soon looks forward to signing the legislation. Of course, the Administration has made it clear in a number of fora and will make clear again that the Hyde Act is completely consistent with the 123 Agreement that we have signed with India, and the 123 Agreement is consistent with the Hyde Act. The United States will keep its commitments to both.

Minister of External Affairs: So far as the signing is concerned, we have completed the process of legislations and the approval of legislation in the US Congress is available. After the signing of the President the process will be complete. After the process is complete we will be in a position to sign. A mutually convenient date for signing of the Agreement would be determined. I hope it will be signed shortly.

Question (Mr. Lachlan Carmichael, AFP News Agency): I wanted to ask Madam Secretary and Mr. Minister about the commitment that Madam Secretary made to one of the top Congressmen in the US to go to the NSG and ask the NSG to amend the rules demanding a ban on the transfer of reprocessing and enrichment technology to countries such as India that have not signed the NPT. How soon will you do that, and what will you do to achieve that? And how does Mr. Minister feel about that? I understand you are not so happy about that.

US Secretary of State: It is for criteria based approach for the NSG on this matter, ---not audible--- Indeed, this could now be a global issue. The United States has been seeking this for sometime. So, there is nothing new. Here it is just a matter of whether or not it is de-linked from other issues. But this has been the US policy for sometime.

Minister of External Affairs: So far as NSG clearance is concerned, it has enabled the NSG member countries to enter into civil nuclear cooperation trade with India. This is just an enabling provision. Thereafter, through the bilateral arrangements the details of implementing the Agreement will be finalized. In respect of the facilities for reprocessing, as and when we will enter into bilateral arrangements these issues will be addressed. As I mentioned, this is an enabling

provision. All aspects of the contract, bilateral contract, cannot be addressed in an enabling provision. The bar which prevailed, which did not allow the NSG members to enter into nuclear trade with India, has been removed with the approval of the India Specific Safeguards Agreement by the Board of Governors of IAEA, and clear clearance by NSG members. And how we will respond through the bilateral arrangements will depend on the contracting parties.

Question (Mr Manish Chand, Indo-Asian News Agency): My question is addressed to Madam Secretary of State. Madam, now that the 123 deal is almost done, what is the 456 in India-US relations? Also, what can India and the United States do together to deal with terrorism flowing from Pakistan and the surrounding region?

US Secretary of State: Let me be clear that 123 Agreement is done. It is a matter of signing that agreement. So, I do not want anyone to think that we have open issues. We, in fact, do not have open issues. These are administrative matters of signing agreements, just to be very clear.

In terms of the situation in Pakistan, we have had a very good discussion. The United States has encouraged the cooperation between Pakistan and India; encouraged dialogue between Pakistan and India which has taken place. My colleague, Foreign Minister Mukherjee was one of the first visitors to Pakistan after the new Government came into being there. I think we all have a stake in a successful civilian Government in Pakistan that can deal with Pakistan's considerable challenges, be they economic or political, but particularly in terms of terrorism. And Pakistan, more than anyone, has an interest in fighting terrorism as is witnessed by the fact that the great Benazir Bhutto was, of course, gunned down by these militants. So, we all have an interest. I do not think that there are any interest in conflict here. But to the degree that a good relationship between India and Pakistan is going to help, which I think it will, I have to say that I found both on the Pakistani side with the new Government and on the Indian side a full understanding of that and a willingness to pursue it.

Minister of External Affairs: I would just like to add to what Dr. Rice has already stated. We are having the Joint Anti Terror Mechanism to deal with these issues. Even during the recent discussion with President Zardari on the margin of the United Nations General Assembly, Dr. Manmohan Singh our Prime Minister and Mr. Zardari discussed the issues of tackling the problem of terrorism. We were assured by Pakistan President by reiterating that territories of Pakistan will not be used to carry on terrorist

activities against India. We do hope the Joint Anti Terror Mechanism which has been established will be made more effective to tackle this menace.

Question (Ms Suzanne, Reuters): This is a question for Secretary of State Rice. Madam Secretary, have you made any progress in getting North Korea to hand over their verification protocol for their nuclear programme? Is North Korea willing to consider handing it to China first and then being delisted from the US terrorism blacklist?

US Secretary of State: Suzanne, I do not have any update for you. I have spoken on it briefly with the Assistant Secretary Hill who was at that time in Pyongyang. I will talk with him on Monday when I return to Washington, and we can review the discussions that he had in North Korea. But one thing was very clear. The North Koreans have an obligation to give a verification protocol - and I would say it is to all six parties, of course or to all five parties - a verification protocol that gives confidence that we are able to verify the provisions of the declaration that North Korea made, and to begin to answer the substantial questions that that declaration raised. So, what we will be looking at is the verification protocol and what the North Koreans have said about it. But I do not have any specifics for you on the outcome of Assistant Secretary Hill's discussions. He himself has said that they were substantive. I am sure they were. We will see when he gets back, if they were productive.

Thank you.

574. Election of Senator Barack Obama as President of the United States of America and Congratulatory messages from India.

President Pratibha Devisingh Patil's message.

November 5, 2008.

"Excellency, please accept my heartiest congratulations on your election as the next President of the United States of America.

The people of India, who have closely followed the U.S. election process with unprecedented interest, see your election as a historic mandate of the people of the United States of America.

Our Governments have traditionally enjoyed warm and friendly relations based on our common traditions of democracy, rule of law and the affinities between our pluralistic, secular, multi-cultural and open societies.

India and the United States of America should build on the strong partnership that has been developed in recent years and strengthen our bilateral co-operation to the mutual benefit of our peoples - even as we work together to face the unprecedented common challenges at the global level relating to the changing climate, threats from the dark forces of terror, and energy, health and food security.

I wish you every success as you assume your responsibilities at the helm of your nation and invite you to visit India as soon as possible."

Statement of Official Spokesperson on the US Presidential Elections: November 5, 2008.

The world's oldest democracy has completed its traditional process of choosing its new President. The Government and the people of India congratulate Senator Barack Obama who has won the mandate of the American people.

President Mrs. Pratibha Devisingh Patil and Prime Minister Dr. Manmohan Singh have sent congratulatory messages to President-elect Senator Obama.

India and the US have traditionally enjoyed warm and friendly ties based on the foundation of strong bonds of people-to-people linkages, shared values and our commitment to the principles of democracy, pluralism and rule of law.

We look forward to strengthening the partnership between India and the USA and continuing the close engagement that we have developed in recent years both in bilateral cooperation and in addressing global issues of common concern.

Press Release of the Prime Minister's Office on the call by the US President-Elect Barack Obama to Prime Minister Dr. Manmohan Singh: November 12, 2008.

President-elect of the United States Mr. Barack Obama called the Prime Minister this morning. The Prime Minister congratulated him warmly and said that his historic victory was a source of inspiration for oppressed people all over the world.

President-elect Obama praised the Prime Minister's contribution to the progress of India both as Minister of Finance earlier and now as Prime Minister. He said that the US-India strategic relationship was a very important partnership and that the new administration wanted to work together with India on all important global issues.

The Prime Minister said that relations between India and the United States were very good but that we could not be satisfied with the status quo. The Prime Minister conveyed his best wishes for the success of the new administration in meeting the enormous challenges that face the world and invited the President-elect and Mrs. Obama to visit India. He said that a warm welcome awaited them. The President-elect said that he wished to make an early visit to India¹.

1 It may be recalled that in his initial reaction to the election of Mr. Barack Obama the Prime Minister on November 5 had said: "Your extraordinary journey to the White House will inspire people not only in your country but also around the world." United Progressive Alliance Chairperson Sonia Gandhi congratulated Mr. Obama on his historic election. Congress spokesman Manish Tewari described the victory as "epoch-making." He wanted Mr. Obama's presidency to be a "vehicle of hope" for the next four years for "the world and India too." The BJP said it was "happy" over the "historic win" of Obama and "the victory of democracy by a member of the American black community which never enjoyed or hoped to get power." BJP president Rajnath Singh said the victory of Mr. Obama "is a historic milestone in the evolution of a large multiethnic and pluralist U.S. society." He hoped Mr. Obama would succeed in introducing stability and establishing a new world order while injecting a new dynamism in Indo-U.S. relations. Communist Party of India (Marxist) general secretary Prakash Karat termed Mr. Obama's win a "significant event in the history of U.S." and noted that the hopes of the people of America were very high on what he would do. "He has promised change and let us see what he changes. Communist Party of India national secretary D. Raja pointed out that the rise of Mr. Obama from a deprived economic and social status to win the presidential election was a "significant event" in the U.S. history.

575. Press Release of the Prime Minister's Office on the call from the U. S. President-elect Mr. Barack Obama.

New Delhi, November 29, 2008.

U.S. President-elect Mr. Barack Obama called the Prime Minister this morning in connection with the Mumbai terror attacks. He expressed his deepest condolences on the tragedy.

576. Press Release of the Ministry of External Affairs on the visit of Foreign Secretary Shivshankar Menon to Washington D.C.

New Delhi, December 2, 2008

1. Foreign Secretary Mr. Shivshankar Menon was in Washington D.C. on December 1-2, 2008. He had meeting with Deputy Secretary of State Mr. John Negroponte, and extended discussions, including over lunch, with Under Secretary of State for Political Affairs Ambassador William Burns.
2. The meetings covered a range of bilateral issues including counter terrorism cooperation, anti-piracy coordination, the India-US civil nuclear agreement, defence trade, space cooperation and furthering economic and investment relations between the two countries¹.

1. During his meetings with the US officials, Mr. Menon was promised "full cooperation [with] and support" to India at various levels to deal with the consequences of the Mumbai terror attacks even as the two sides asserted that the perpetrators of the carnage be held accountable. "All the interlocutors expressed sympathy and support to the government and people of India in the context of the heinous terrorist attacks in Mumbai. Unequivocal condemnation of the incident and the need for the perpetrators to be held accountable was reiterated," the Indian Embassy told journalists in Washington after Foreign Secretary Shivshankar Menon met senior State Department officials. "It was also indicated that there would be full cooperation and support at various levels, including government, from the U.S. to India as it dealt with the consequences of the incident," an embassy statement said. Mr. Menon met Deputy Secretary of State John Negroponte and Under Secretary of State for Political Affairs William Burns. "The meetings covered a range of bilateral issues, including counter-terrorism cooperation,

3. Speaker of the House of Representatives Nancy Pelosi called Foreign Secretary to convey condolences. Foreign Secretary Mr. Menon also had meetings on the Hill, including with House Majority Leader Congressman Steny Hoyer; Chairman of the Senate Banking, Housing and Urban Affairs Committee Senator Christopher Dodd; Ranking Member of the Senate Foreign Relations Committee Senator Richard G. Lugar; and Ranking Minority Member for Subcommittee on Financial Institutions and Member, Senate Foreign Relations Committee, Senator Chuck Hagel. He also had a conversation with Senator John Kerry, the Chairman of the Sub Committee on Near East & Central & South Asia in the Senate Foreign Relations Committee.
4. There were meetings also with leaders of several think-tanks and influential opinion-makers.
5. In every conversation, support and commitment was articulated to the transformed relationship, and desire expressed to sustain the momentum through the present transition in US, and beyond. All the interlocutors expressed sympathy and support to the Government and people of India in the context of the heinous terrorist attacks in Mumbai. Unequivocal condemnation of the incident and the need for the perpetrators to be held accountable was reiterated. It was also indicated that there would be full cooperation and support at various levels, including government, from the US to India as it dealt with the consequences of the incident.
6. In meetings with several of the Senators, there were also discussions on the present international economic and financial situation, the new opportunities for cooperation following the successful conclusion of the Civil Nuclear Cooperation Agreement between India and the US, issues related to energy security, climate change etc.

anti-piracy coordination, India-U.S. civil nuclear agreement, defence trade, space cooperation and furthering economic and investment relations between the two countries," it said. Speaker of the House of Representatives Nancy Pelosi called the Foreign Secretary to offer her condolences over the tragedy in Mumbai.

577. Press Release of the Ministry of External Affairs on the visit of US Secretary of State Dr. Condoleezza Rice to offer the condolences of the U. S. Government on the killings of innocent citizens in a terrorist attack in Mumbai.

New Delhi, December 2, 2008.

(ii) CENTRAL AND SOUTH AMERICA

579. Media Briefing by Official Spokesperson on the Visit of Foreign Ministers of Central American Association for Integration (SICA) countries.

New Delhi, June 10, 2008.

The External Affairs Minister has today been involved in extensive discussions followed by lunch with the visiting Foreign Ministers of SICA, which is the Central American Association for Integration, and I thought I should brief you on that. We have here the Foreign Minister of Costa Rica; the First Vice-Prime Minister and Foreign Minister of Panama; the Foreign Minister of Guatemala; the Foreign Minister of Nicaragua; Vice-Foreign Ministers of El Salvador, Honduras, and Dominican Republic; as well as a representative of the SICA Secretariat.

To give you a little background, the SICA system consists of the following eight countries: the ones that I named plus Belize. So, Belize, El Salvador, Honduras, Panama, Costa Rica, Guatemala, Nicaragua and the Dominican Republic, the last being an associate member.

Its main objective is to realize Central American integration; to deal with unfair trade practices, rules of origin, reduction of tariffs, customs union, integration of infrastructure; to build a sustainable development model etc. Also, as we were told during the discussion today, they are paying increasing attention to energize their institutions to increase the stability and security within the region. So, it is getting that dimension also.

India's relationship with the region is centuries old. As you know, in the 19th and early 20th century a large number of Indian workers went to the region particularly to work on railroad projects and to help build the Panama Canal. We hosted a 18 member delegation from SICA in February 2004 led by the Foreign Minister of El Salvador. That was really the big thing in the relationship with SICA. Thereafter, there was a clear expression of interest from both sides to build relations. There was a fruitful meeting with EAM in New York. The areas which were being worked out were essentially information technology, science and technology, drugs and pharmaceuticals, HRD, small and medium industries, and so on.

The then MoS, Shri Rao Inderjeet Singh, also visited SICA countries in 2005. And, as I said, the present External Affairs Minister met the Foreign Ministers of SICA in New York in October 2007. Then it was decided that this present meeting would be held in New Delhi.

During the discussions, there were several proposals made by External Affairs Minister, which I will briefly enumerate to you. We have already set up IT training centers in five SICA countries, namely, Panama, Guatemala, Nicaragua, El Salvador, and Honduras. Now we will be setting up IT centers in Belize, Costa Rica and the Dominican Republic.

In addition we had already offered lines of credit to the tune of 80 million dollars to all the SICA members with 10 million dollars for each country. Some of the countries have submitted concrete proposals. Today, EAM requested the others to also send in their requirements and projects for infrastructure investment and capacity building.

He also urged them to consider cooperation through investments from India in the automotive sector; pharmaceuticals, textiles and, of course, IT. EAM also proposed that the scholarships for SICA countries, which are 68 at the moment, could be raised to 100 if there is sufficient interest. He also offered to share expertise in agriculture, pharmaceuticals, small and medium industries, tourism, renewable energy, etc. The Exim Bank has agreed to extend a line of 10 million dollars separately. Trade stands at 537 million dollars and it was felt that both sides should strive to double this figure in the coming three years. These were the bilateral proposals. They were welcomed by the SICA countries.

In addition, in their interventions the SICA Foreign Ministers particularly focused on some areas of interest in which they wanted India to share expertise, particularly food security, and said that India's success in agriculture, etc., needs to be shared; the technical, technological aspects of our agricultural story need to be shared to build up food security. It was, therefore, decided to set up a Joint Technical Group with sufficient technical experts available to discuss this and other aspects of cooperation. This was, broadly speaking, the bilateral aspect.

They also signed agreements on diplomatic and official visas and Foreign Office Consultations. The details of that we can give you separately. There were five documents.

Thereafter there was an exchange on major international issues. This is interesting because there was a lot of commonality of views on UN Security Council reforms, Climate Change, Terrorism, Energy Security, Agriculture, Doha Round, nonproliferation, and nuclear disarmament. I am sure some of you would be interested in what happened on the UN Security Council. Yes, there was a general agreement that reform is essential. Just to recall,

some of the SICA countries - in particular El Salvador, Guatemala and Honduras - have already committed support to India's candidature for permanent seat on an expanded UN Security Council. And we certainly hope that others will do so.

This, of course, came up for discussion but there was a broader discussion on the UN Security Council, the need for reform of the UN, climate change, terrorism which is a matter of concern for that area also not only for India, and the possibilities of cooperation in international organizations, and the other areas that I mentioned to you.

This was followed by lunch hosted by External Affairs Minister during which they discussed regional issues. External Affairs Minister gave them an overview of our region and what were the developments going on in different countries of our immediate neighbourhood. The SICA Foreign Ministers talked about their region.

In the afternoon, they were all paying a call on the Prime Minister. That was SICA for you.

Question: Is there any investment of India in SICA countries?

Official Spokesperson: There is investment in pharmaceuticals, in IT, in automotive industry, but this needs to be encouraged and increased.

Question: What is the quantum of bilateral trade?

Official Spokesperson: It is 537 million dollars.

Question: And you would like to double it?

Official Spokesperson: Yes, over the next three years.

Question: On the Security Council, what did the other countries say?

Official Spokesperson: As I said, this is not the forum where they are going to commit support, etc. This was just mentioned in passing. We already know that these three countries had committed support. The other countries obviously are all looking at the decisions and are at various stages of making their decisions.

579-A. Press Statement issued by the Ministry of External Affairs on India- SICA (Central American Association for Integration) Foreign Ministers' Meeting,

New Delhi, June 10, 2008.

At the invitation of the External Affairs Minister of India, First Vice President and Minister of External Relations of Panama, Minister of External Relations of Nicaragua, Minister of Foreign Affairs of Guatemala, Foreign Minister of Costa Rica, Vice Minister of Foreign Affairs of El Salvador, Vice Foreign Minister of Honduras, Deputy Minister of foreign Affairs of Dominican Republic and the SICA Secretariat Director met in New Delhi on 10 June, 2008 for the second India -SICA Foreign Minister's meeting.

India has already set up or is in the process of setting up IT training centres in five SICA countries. It will now be setting up IT training centres in three remaining SICA countries. India has also offered to increase the ITEC scholarships for SICA candidates from 68 to 100 slots and share expertise in priority areas such as agriculture, pharmaceuticals, SMEs, tourism, renewable energy, disaster management, distant education and supply of satellite imagery for developmental purposes. Line of Credit arrangements for US \$10 million commercial Line of Credit to the Central American Bank for Economic Integration (CABEI). In order to facilitate exchanges in these and other sectors of cooperation an India-SICA Joint Technical Committee is being constituted to prepare for the implementation of the issues discussed.

Participants agreed with India's suggestion that Ministers should meet every two years either in India or a SICA country and that they should continue to meet every year on the margins of the UN General Assembly.

SICA members expressed serious concern on the twin challenges of food security and energy security being faced by developing countries all SICA over the world. Indian side agreed to share its experiences with SICA countries on both these issues.

The Ministers had a detailed exchange of views on UN and UNSC reform, Climate Change, International Terrorism. Doha Round. Non-Proliferation and Nuclear Disarmament and other regional and international issues of mutual concern.

The visiting SICA Ministers called on Hon'ble Vice-President and Hon'ble Prime Minister of India, both of whom reiterated India's commitment to further strengthen India's bilateral interaction with Latin America and to enhance cooperation with SICA countries. Given the common challenges and problems faced by the both sides, India would be happy share its developmental experiences with SICA members. It will also be willing to participate in efforts for strengthening the agricultural economy of SICA members, and development, inter alia, of SMEs, pharmaceuticals and IT-related activities. SICA Ministers appreciated India's development partnership initiatives in the region and recognized the effective role it can play in complementing their efforts for upgrading the socio-economic infrastructure in their countries. The Ministers agreed that an India SICA business forum be set up.

On the sidelines of the India-SICA deliberations, three agreements for abolition of visas for diplomatic and official passport holders were signed between India & Honduras, India & El Salvador and India & Nicaragua. Memoranda of Understanding for holding Foreign Office Consultations with Costa Rica and Honduras were also signed.

SICA side has proposed that on an appropriate date, a Summit of SICA countries with India should be convened to discuss issues of mutual interest.

SICA side has asked for the help of India to convene an extraordinary session of the UN General Assembly to discuss the issues regarding the impact of the rising oil prices.

580. Media Briefing by Official Spokesperson on meeting of Parliamentary Consultative Committee on External Affairs relating to India's relations with Latin American countries.

New Delhi, June 20, 2008.

Official Spokesperson (Shri Navtej Sarna): Good evening.

Today the External Affairs Minister met the Consultative Committee of the Parliament on External Affairs and the hon'ble Members of Parliament and the External Affairs Minister discussed India-Latin America relations. The subjects of the Consultative Committee are decided at the previous meeting and they have had their discussion. So, I thought I would brief you on the broad points that were discussed.

External Affairs Minister briefed the hon'ble Members on the various important aspects of our growing relationship with Latin American countries. In the past, owing to geographical distances, language barriers and other such constraints, the relationship had not grown as fast as it could have. New substance has regularly been added over the last few years to this relationship. Distance is no longer a barrier. Besides that, there is an important political desire to enhance the bilateral relationships. In addition, of course, fundamental changes have taken place in the pattern of governance in Latin American countries. And these too have given a new impetus to the relationship which today is beginning to develop into a very substantive south-south cooperation paradigm.

The External Affairs Minister explained the commonalities between India and several Latin American countries - the multiculturalism, multilingualism, and multi-ethnicity, as well as common objectives of achieving inclusive growth through democratic systems. These incidentally are also the commonalities, etc., which hold one more grouping together, which also involves India and Latin America at least in two-thirds, that is the IBSA.

He also outlined to the hon'ble Members the high-level engagement that has characterized the relationship in recent years. President Lula of Brazil, for instance, visited India in January 2004, June 2007, and is expected to come again in October 2008 for the IBSA Summit. President Chavez of Venezuela and President Lagos of Chile were here in 2005. President Calderon of Mexico was here in September 2007. There are likely visits in the pipeline by Presidents of Colombia, Argentina and Chile. Also recently,

as we briefed you last week, we have held the India-SICA Foreign Ministers' Dialogue in Delhi.

From our side, you will recall that hon'ble President has visited Brazil, Mexico and Chile earlier this year. Prime Minister visited Cuba and Brazil in September 2006. External Affairs Minister visited Brazil in February this year and held discussions with Foreign Minister Celso Amorim. And the Minister of State Shri Anand Sharma has also been visiting Latin American countries over the last two-three years.

One significant aspect of the relationship, which gives it an added dimension, is the very substantive presence of the Indian diaspora, the Indian communities there, especially in the Caribbean and in Panama. Indian cultural centers have been set up in Georgetown, Paramaribo and Port-au-Spain. And distinguished persons of Indian origin have been given Pravasi Bharatiya Awards and other recognition.

On economic basis of the relationship, the Latin American continent is rich in natural resources and biodiversity. Countries like Brazil have vast tracts of unutilized arable land, and can be useful partners in our quest for oilseeds, lentils and other elements of food security. Peru and Bolivia, for instance, have abundant mineral resources, and can engage with us on that basis. Large wood and timber supplies are available in Latin America. Similarly, Indian companies like OVL, Reliance, Essar, are actively involved in oil and natural gas exploitation. Indian corporates are also very active in pharmaceuticals, health, agriculture, food processing and so on. Bilateral trade figures are 10.2 billion US dollars for the last year of April 2007 to February 2008. Clearly there are immense opportunities for expansion.

There are also common concerns: climate change, Doha round, food security, and energy security. So, all these give various elements. Diplomatic representation was also discussed. Seventeen missions from Latin America are presently in New Delhi and others are being opened. Costa Rica and Guatemala are due to open missions soon. Similarly, we have 13 Indian missions in the region and are expecting to open a mission in Guatemala.

These were the broad lines of the discussion at the Consultative Committee meeting. It was a very well attended meeting. What I could add is that after the discussion it was very clear that there is a very broad consensus amongst the hon'ble Members of Parliament who were present on the direction of the relationship between India and Latin America; the importance that exists, should be attached or has been attached in recent years to this relationship;

as well as the potential that exists for its enhancement. So, it is a very constructive, interactive meeting. So, we thought we should keep you briefed on that.

581. Inaugural Address by External Affairs Minister Pranab Mukherjee at the 3rd Conference of Latin American Studies Council of Asia and Oceania [CELAO] on the subject of “Recent Developments in the Latin American Caribbean region, with special reference to India”.

New Delhi, December 3, 2008.

Prof. B. B. Bhattacharya, Vice Chancellor of the Jawaharlal Nehru University,

Prof. O.P. Mishra, Acting Vice Chancellor of the Indira Gandhi National Open University,

Prof. Won-Ho Kim, President of CELAO,

Ambassadors and Diplomatic Representatives,

Distinguished Professors and Scholars from all countries,

Ladies and Gentlemen!

At the outset, I would like to congratulate the Jawaharlal University and Indira Gandhi Open University, New Delhi for taking the initiative to organize the Third International Conference of the Latin American Studies Council of Asia and Oceania in New Delhi. We are meeting in the backdrop of the dastardly terror attacks in Mumbai on November 26, which led to a loss of about 200 lives and 300 injured, including 26 foreigners dead and 22 injured, and which were intended to create a sense of panic. The attacks are perhaps the most vicious in the history of independent India. Public opinion in India is demanding concrete action. We are determined to take the strongest possible measures to ensure that there is no repetition of such acts. In this context, we expect Pakistan to honour its solemn commitments not to permit the use of its territory for terrorism against India. We hope

that the Government of Pakistan will take immediate action. While Pakistan has said that it wants a leap forward in our bilateral relations, outrages such as the attack on Mumbai are intended to make this impossible.

We call on the international community to act unitedly with us to root out international terrorism, by tackling and countering this menace at its very source and genesis. Any ambiguity in our approach or weakening of our resolve will only send out a signal to terrorists that we are not serious about taking our fight with them to the logical end. In this context, we are grateful for the enormous outpouring of support and solidarity from the international community, including from countries of the Latin American region.

Ladies and Gentlemen,

1. Momentous changes are taking place in the Latin American and Caribbean region. The strong emphasis on people's participation in political governance mechanisms in Latin America and major business alliances being forged by these countries with global markets, are symbolic of the significant transformation which is gradually sweeping across this region. Increasingly, political leaders, foreign policy analysts, the business community and members of civil society will need to factor these developments into their analyses. It is very heartening therefore, that the wide galaxy of intellectuals and thinkers assembled here from all over the world, will focus on important themes such as integration in LAC countries, governance, business prospects, security and other related issues in their conference deliberations.
2. The LAC region is destined to play a very important role in the global economy. As we see it, the LAC region comprises 39 countries including dependent territories in the Caribbean, and accounts for a combined GDP of US\$ 3.44 trillion and a trade turnover of US\$ 1.65 trillion and a population of 562 million people. It also includes five of the world's most bio-diverse countries - Brazil, Colombia, Ecuador, Mexico, and Peru – as well as the single most biologically diverse area in the world – the eastern slope of the Andes.

Latin America is home to 40% of all the species found in tropical forests throughout the world. 40% of the plant life found in the Caribbean does not exist in any other part of the world. Apart from providing a social safety net for the Latin American population, this biodiversity has an important economic value. It is not surprising

that the equatorial rain forests of the Amazon and in countries like Suriname and Guyana, which contribute significantly in maintaining ecological balance and in combating climate change, are often called "the lungs of the world".

Latin America and the Caribbean countries are endowed with immense supplies of natural resources such as fresh water and arable land. The local population relies on such water resources not only for drinking water but also values them because of their utility in facilitating transportation, energy, food production, industry and recreation. Owing to its vast variety of rivers, various species of fish also flourish in the region. The Amazon basin alone is estimated to contain between 3000 and 9000 species. Given the burgeoning populations and dwindling land resources of developing countries in other parts of the world, there is excellent potential for collaborating with agriculturists in these countries for diversifying agricultural production and procurement operations.

Similarly, some of the richest mineral centres in the world are located in the LAC region. These countries are significant suppliers of copper, nickel, iron ore, hydrocarbons, bauxite and other important minerals which not only feed industries in developed countries but also in the developing world. Besides minerals, the LAC region also supplies large quantities of gems and semi-precious stones to world markets.

Located in the heart of such a unique habitat, it is only natural that these countries should be strenuously working for preserving the pristine beauty of the Amazon region and other such surroundings in the region. In this regard, as in the case of conserving fossil fuels through pioneering research and development of alternative energy resources like bio fuels and in addressing the essential needs of the poor through social programmes such as the Bolsa Familia in Brazil, these countries have set examples for others to follow.

3. Sustained by their rich and diverse cultural heritage, which goes back to the days of the Olmec, Maya, Aztec and Inca civilizations, Latin American and Caribbean citizens now seek greater self-expression and participation in their governance processes. The resurgence of democracy in this part of the world has many positive implications, not only for the LAC countries, but also for the rest of the world. First, within the LAC region itself, it enables governments

to tap into better, wider and more versatile talent. Secondly, being structured on the basis of well-established institutions and norms, LAC governments are now more accountable to their constituents. Their commitment is to the long-term welfare and prosperity of their citizens. Thirdly, it also ensures that the rights of all sections of society are suitably addressed. Fourthly, in the long-term, these democratic processes and institutions herald peace, stability and sound economic policies in these countries. Finally, owing to people's participation in governance mechanisms, all these countries now strive to achieve balanced and inclusive growth, while also collaborating with other developing countries. In doing so, they are better geared for implementing South-South cooperation initiatives.

4. At the international level, the environment of stability and security promoted because of democratic institutions has a positive effect on the cause of international peace and understanding.
5. The processes of regional integration in Latin America are another feature of great interest to us. In recent years, regional groupings such as the Andean Community, UNASUR, MERCOSUR, CARICOM are increasingly beginning to discuss and coordinate positions on important political and economic matters of mutual concern in international organizations. Of these groupings, the CARICOM countries have already established a common court of justice. The Central American countries, under SICA are also taking active steps to synchronize their developmental efforts. This was clear during my discussions with SICA Foreign Ministers in New Delhi in June 2008. Similarly, the ANDEAN Pact and MERCOSUR countries are also taking various steps for regional cooperation. Their efforts are, we understand, now increasingly being subsumed within the larger UNASUR grouping which was set up in 2004 and is supported by 12 LAC countries. At the Third UNASUR Summit held in Brasilia on 23 May, 2008, all participating Heads of Government signed the UNASUR Constitutive Treaty which stipulates establishment of a South American Community, modelled on the European Union and seeks to provide for a common currency, single market, parliament, free movement of people for 90 days, common passport and integrated development of infrastructure and energy. This is an initiative of much significance.
6. LAC countries are now also looking at regional governance and security issues. The recently-mooted proposal for creating the South

American Defence Council [CSD] under UNASUR, if implemented, could have lasting impact on regional security issues. At the UNASUR Summit held in Santiago in September 2008, the Summit Declaration made bold pronouncements on the need to uphold constitutional processes in Bolivia. Likewise, the Rio Group Summit held in Santo Domingo in March 2008 brokered peace and understanding among Ecuador, Venezuela, Nicaragua and Colombia. All such ongoing efforts indicate that LAC countries are now acutely sensitive to the need to unify their position on important issues of common concern. It is good that these discussions also focus on issues such as drug-trafficking and drug-related crimes and terrorism, as these could have a significant bearing on the economic security and prosperity of this region. I am glad to know that this learned assembly will also be examining these aspects during its deliberations in the session pertaining to LAC Security issues.

7. The rich cultural background of these countries provides a sound foundation for the diverse talent blossoming in LAC universities and academic centres today. The handsome haul of Nobel Prizes by intellectuals, scientists and academics of this region bears testimony to the significant contribution being made by these countries to the progress, peace and well-being of humanity. We have all been influenced by the legendary contribution of stalwarts like Octavio Paz, Gabriela Mistral, Pablo Neruda [for literature], Cesar Milstein and Bernardo A. Houssay [for physiology and medicine], Luis F. Leloir [for Chemistry] and Rigoberta Menchu, Alfonso Garcia Robles, Adolfo Perez Esquivel and Carlos de Saavedra Lamas [for international peace]. Equally important are the achievements of Maradona, Pele, Kaka in the world of football and of Anthony Nesty and Cesar Filho in the field of swimming. It is not surprising that in the recent Beijing Olympics, sportsmen from these countries walked away with as many as 16 gold, 24 silver and 28 bronze medals. Blessed with a particularly warm and festive spirit, the people of Latin America have made good friends in all parts of the world. Indeed it would be good if we could emulate their example and learn to play good football and dance a few steps of the Samba to ward off these stressful times!
8. In short, the time has come for the world and Latin America to re-discover each other. India has already embarked on this journey.

Our bilateral dialogue with these countries is progressing very well. Being endowed with diverse resources and lesser populations, the countries of the region are relatively more prosperous. However, the basic model of development, founded on inclusive growth, is the same. Based on these complementarities, India has initiated cooperation with these countries in fields as diverse as agriculture, S&T, hydrocarbons, mining, defence, space, ICT and infrastructure. Cooperation with these countries is being pursued through bilateral agreements and MoUs and through interaction between experts from both sides. With better air and maritime connectivity in future years, linkages between centres of excellence and academic institutions will also strengthen thus leading to a varied and multi-sectoral dialogue between the citizens of both sides. In the light of these developments, India has, to start with, already established a Strategic Partnership with Brazil and a Privileged Partnership with Mexico. A special dimension of our cooperation with this region pertains to the IBSA Trilateral Cooperation, which brings together three very large developing country democracies from three different continents, including Brazil from Latin America, which are determined to work together to mutual benefit and reinforce South-South cooperation.

9. Our economic and commercial linkages with this region are also being strengthened. In this new era of economic interdependence and globalization, Indian multinationals from the ICT, auto industry, infrastructure, iron & steel, banking, pharma, mining and other industries are fast investing in these markets and setting up active business operations in these countries. Our bilateral trade during April 2007- March 2008 was to the tune of US\$ 11.63 billion [imports- 6.5 billion and exports- US\$ 5.13 billion]. Indian companies, excluding those owned by Non-Resident or Overseas Indians, have either already invested or committed to invest US \$ 9.73 billion in LAC countries. Given the economic strengths of these countries, there are excellent opportunities for enhancing this relationship. The process has already begun. Indian Business Conclaves are being held in Latin America by apex Indian chambers of commerce and industry. Trade missions are also being organized and increased participation in trade events is being encouraged. Government of India's FOCUS LAC programme, which commenced in 1998, has been extended. Trade and investment missions from these countries are also being organized. The trade agreements signed with the

MERCOSUR group of countries and individually with Chile will promote such initiatives. Bilateral Investment Promotion and Protection Agreements and Avoidance of Double Taxation Agreements have been signed with some countries and are being processed with others.

10. At the political level too, our interaction with Latin America is proceeding very well. In recent years, we have had the privilege of receiving the Presidents of Brazil, Mexico, Chile and Venezuela. From our side, our Prime Minister has visited Cuba and Brazil in late 2006. Hon'ble President of India, visited Brazil, Mexico and Chile in April 2008. I myself visited Brazil in February 2008. My colleague, Mr. Anand Sharma, Minister of State for External Affairs, has also been visiting LAC countries for holding dialogue with their dignitaries. On 10 June 2008, I hosted the second India-SICA Foreign Ministers' Meeting in New Delhi]. I also met with some of my colleagues from these countries on the sidelines of the UNGA meetings in September-October 2008. Only a few weeks ago, we received the Foreign Minister of Ecuador with whom I had fruitful discussions. We look forward to receiving the Presidents of Chile and Argentina in India early next year. Colombian President Alvaro Uribe, and Ecuadorian President Rafael Correa too are expected to visit India in the second half of 2009. Interaction with the LAC is also being pursued at other levels, through the mechanism of Joint Commission meetings, Foreign Office Consultations and Joint Working Groups.
11. As part of its commitment to promoting South-South cooperation, India has been participating in capacity-building and development partnership initiatives in these countries. Indian Lines of Credit are being extended to some of these countries for developmental projects. Disaster relief assistance is also periodically extended to them. Under the Indian Technical Economic Cooperation, scholarships are being extended to candidates from these countries for pursuing short-term training courses in various disciplines. Indian experts are also being deputed under ITEC for providing guidance in key sectors. Similarly, our government is also funding establishment and running of IT centers in some of these countries.
12. At this critical juncture, when the financial crisis in the developed world has impacted the world economy, such South-South cooperation between India and LAC, within the LAC countries and

between LAC nations and developing countries in other parts of the world, needs to be intensified. By cooperating with each other in economic development projects and for upgrading their infrastructure, our economies will be providing vital business opportunities to each other. Such cooperation has many benefits. It will help keep our economies growing, check recessionary trends, make technology and talent available at economical costs, upgrade infrastructure and other key facilities and prepare our economies for fuller international economic engagement when this difficult economic phase ends.

The rationale for such cooperation is also reinforced by the common challenges we face. Despite our varying cultures and backgrounds, our countries face similar developmental problems. We all seek to provide equal and fair opportunity for the poorest of the poor in our countries to fulfill their aspirations. To address these challenges, we must continue to unitedly position ourselves during the deliberations of the WTO and other such bodies. We must also actively continue to collaborate with each other on issues such as Climate Change, International Terrorism, reform of the United Nations, restructuring of the international financial architecture and other such critical matters.

13. I am confident that from the deliberations of this distinguished and learned gathering, we will benefit by receiving concrete proposals that will help strengthen and diversify India's growing engagement with Latin America.
14. I now formally declare this Conference open and wish participating scholars all success in their deliberations.

Thank you.

BRAZIL

582. Extract from the Media Briefing of Official Spokesperson relevant to the visit of External Affairs Minister to Brazil.

New Delhi, February 15, 2008.

The visit to Brazil is from 16-18 February, 2008. In addition to meeting his counterpart Mr Celso Amorim, he will also be calling on the President of Brazil and will also meet with the President of the Brazilian Lower House of Parliament. Some agreements are expected to be signed during the visit which we will keep you briefed on.

In recent years, there have been several high-level contacts between the two countries. President Lula visited India as Chief Guest on our Republic Day in 2004. Prime Minister visited Brazil in September 2006 and President Lula paid a State Visit to India in June 2007. Brazilian Foreign Minister, Celso Amorim also visited India in April, June and July 2007.

The relationship has several important aspects. It has been upgraded to a 'Strategic Partnership' since Prime Minister's visit in September 2006,

Under the Focus LAC programme, India has been encouraging companies to strengthen economic-commercial linkages with Brazilian partners and other LAC partner. In 2007, total trade transacted with Brazil was to the tune of approx. US \$ 3.1 billion. Other areas of interest are Agriculture, Human Resource Development, S&T, Health, Renewable and Non-Renewable Energy, Trade and Commerce, Standardization, Power, Infrastructure and so on.

Besides the purely bilateral aspects, the visit you would be aware has IBSA connotations. India will host the third IBSA Summit later this year. India and Brazil have also been working closely with each other in various multilateral fora including the UN, WTO, G20 and other such groupings. Both countries support each other for permanent membership on an expanded UN Security Council.

583. Briefing points by Official Spokesperson on the visit of External Affairs Minister to Brazil.**New Delhi, February 19, 2008.**

- EAM, Shri Pranab Mukherjee, visited Brazil from February 16-18, 2008 at the invitation of Brazilian Foreign Minister, Celso Amorim. During the visit, the first by an EAM to Brazil in five years, he called on President Luiz Inacio Lula da Silva as well as the President of the Chamber of Deputies, the Lower House of the Brazilian Congress. He also held extensive discussions with Minister Amorim.
- EAM conveyed greetings from our President and Prime Minister to President Lula reiterating that India was looking forward to welcoming him for the Third IBSA Summit which is to be hosted by India in New Delhi later this year. President Lula expressed happiness that the first lady President of India, Smt. Pratibha Patil, had chosen Brazil for her first visit abroad which, apart from its political symbolism, reflected the desire of the two countries to continue their dialogue at the highest political level with the objective of consolidating and diversifying their strategic partnership. Minister Amorim said that the visit of our President was a matter of great honour to Brazil.
- President of the Chamber of Deputies, Arlindo Chinaglia, renewed his invitation to Hon'ble Speaker of Lok Sabha to visit Brazil. EAM stated that India and Brazil, as two large democracies, should activate their Parliamentary Friendship Group and encourage frequent interaction between parliamentarians and democratic institutions.
- Arlindo Chinaglia informed EAM that the India-Mercosur PTA was ready to be voted by a Plenary Session of the Chamber of Deputies. He reassured that the PTA, which would send a strong signal to the business communities of the two sides, would be taken up for voting in the near future. In a special gesture, Chinaglia invited EAM to briefly attend a Plenary Session of the Chamber of Deputies.
- The bilateral discussions between the two Foreign Ministers covered a wide range of bilateral, regional and international issues of mutual interest. The talks focused on ways and means of reinforcing the bilateral strategic partnership by encouraging greater interaction in diverse areas including trade and investment, science and technology, education and culture.

- The two Ministers signed three MoUs on Infrastructure, Combating Hunger & Poverty Alleviation and Cooperation in Sports & Youth Affairs which will impart added momentum to the multifaceted bilateral engagement of India and Brazil. They agreed that there was an urgent need to energise the CEOs Forum which was set up in June last year during the visit of President Lula to India. The forthcoming visit of Minister of Development, Industry & Foreign Trade, Miguel Jorge to India next month, accompanied by a high-level business delegation, would provide an opportunity to discuss ways and means of enhancing bilateral trade and investment flows.
- Speaking at a Press Conference, following the signing ceremony, EAM reiterated that the unity of purpose of India and Brazil, which has long characterized their coordination on global issues in the international fora, was stronger than ever before. EAM also referred to the exciting partnership in the trilateral framework of IBSA which brought together three large democracies from three continents with similar developmental aspirations. He added that India attached great importance to the unique group which was engaged in unprecedented transformational diplomacy. EAM reiterated that India greatly valued its bilateral engagement with Brazil and was committed to strengthening the relationship in a cross-sectoral manner.
- Foreign Minister Amorim hosted a luncheon in honour of EAM.
- While in Brasilia, EAM also presided over a meeting of the Indian Heads of Missions in Latin America and Canada on February 17, 2008.

584. Briefing by Secretary (West) Ministry of External Affairs Nalin Surie before the start of President's State visits to Brazil, Mexico and Chile.

New Delhi, April 11, 2008.

Official Spokesperson (Shri Navtej Sarna): Good afternoon everybody. We welcome here Shri Nalin Surie, Secretary (West) in the External Affairs Ministry to brief you on the forthcoming visit of the President to Brazil, Mexico and Chile. I think most of the people present here are part of the travelling press. So, I will request you to identify yourself after the Secretary has made his opening remarks if you have any questions and we will take them.

Secretary (West) (Shri Nalin Surie): Thank you Navtej and thank you all for coming this afternoon. I have a short statement which I thought I will share with you and then if you have any questions I would be happy to answer them. For those of you who are traveling with us, we will see a lot of each other. I hope we can satisfy your demands and curiosity as we go along.

Rashtrapatiji is paying her first State Visit abroad since assuming office last July to Brazil, Mexico and Chile. These visits are in response to invitations from the Presidents of these three very friendly countries. The Hon'ble President will be received with State honours in all three countries. Her programme is a busy one and she will, in addition to meetings with her counterparts, address the Parliaments in Brazil & Mexico, interact with members of the judiciary, the Indian community and address business meetings. An Indian business delegation will be accompanying the Hon'ble President to all three countries.

The fact that the Hon'ble President has chosen to pay her first State Visit to Latin America is reflective of the importance that India attaches to further strengthening its partnerships with countries of that dynamic continent. In the past, the problems of connectivity have acted as an obstacle to greater interaction between India and Latin America. However, while physical connectivity remains an impediment, trade and economic interaction is growing rapidly. This is not only because of the greater global interest and outreach of Indian public and private sector companies but also because of the new dynamics of South-South cooperation.

India's relations with all the three countries that are being visited have been dynamically developing over the last few years.

Brazil is the largest country in Latin America and our biggest trade partner. India and Brazil have entered into a Strategic Partnership. We are also working together in IBSA and are both among the outreach countries that are associated with the G-8. President Lula visited India in June 2007 and was the Chief Guest at India's Republic Day in January, 2004. Prime Minister Manmohan Singh had visited Brazil in September, 2006.

Mexico is the largest trading country in Latin America and the second largest country in the continent. Mexico, like India and Brazil, is one of the outreach countries associated with the G-8.

You will all recall that President Calderon of Mexico paid a State Visit to India in September last. This was his first State Visit to Asia after having assumed the Presidency of Mexico. During his visit, India and Mexico entered into a Privileged Partnership. Mexico is home to ancient civilizations and we have had fruitful interaction in the past. Our green revolution of the 1960s benefited from the development of agricultural research in that country. The economic underpinning of our relationship is evolving well.

Chile-India trade relations predate our independence. Today Chile is one of the most open and liberal economies in the region. Our relations have been developing particularly well since the milestone visit of President Ricardo Lagos in January, 2005. India has a preferential trade arrangement with Chile and our trade and economic relations are growing rapidly.

Rashtrapatiji's visit to Latin America will cover three of our most important partners in the region. All three are flourishing democracies, developing countries and countries with which our interaction is growing rapidly. Apart from our bilateral relations, we also share similar world views and positions on critical issues before the international community today, such as climate change, the Doha Development Round, the fight against terrorism, reform of the United Nations and the need for greater South-South cooperation.

In all three countries we expect to sign a number of agreements.

Rashtrapatiji's visit to Brazil, Mexico and Chile is a reflection of government's ongoing efforts to strengthen and consolidate relations with our traditional partners all over the globe. Her visit is expected to provide further momentum to the ongoing development and diversification of relations with all three countries.

Thank you.

Question: What are our trade figures with these three countries?

Secretary (West): With Brazil our trade last year was \$ 3.2 billion, with Mexico it was about \$ 2 billion and with Chile about \$ 2.4 billion. With Brazil, as you know, we have a trade target of \$ 10 billion by 2010 and with Mexico \$ 5 billion by 2010. These were targets agreed to when the two Presidents were in India last year.

Question: Our involvement with Africa has begun producing results. The Conclave and the Summit were two outstanding examples of cooperation between India and Africa and now the trade has crossed \$ 30 billion and slated to reach finally \$ 50 billion by the time next Summit takes place in Africa. Are we thinking of doing a similar thing with Latin America, namely conclaves, India and South America summits of the kind we have just concluded?

Secretary (West): We already have conclaves with Latin America. As I mentioned in my opening remarks, the President will be accompanied by business delegations to all three countries. This is not the normal tendency, as you know, but we are now bringing a change into that. We have a growing partnership with Latin America. How it evolves, we will see. But the determination to interact much more with Latin America is very clearly there.

* * * *

Question: I would like to take you back to what Venkat asked. Is there a so-called institutionalized mechanism in the pipeline in the works, for an India-Latin America summit?

Secretary (West): As I said to you, this is a relationship which is evolving. I cannot answer that question because I do not have an answer to give you. We are redefining and reinvigorating our partnership with all the Latin American countries. We will see where it takes us.

Question: Is it in the works?

Secretary (West): I am not at liberty to answer that question frankly.

Question: Will the defence PSU officials be also a part of the delegation?

Secretary (West): Not as far as I know. No, they are not in the list which we have.

Question: How big is the business delegation? Is there any Minister accompanying the President?

Secretary (West): Yes, there will be a Minister accompanying the President. There will also be several Members of Parliament accompanying the President. I think Minister Muttemwar is accompanying the President. I am not very clear on the names of Members of Parliament but there were three of them. We will give you the names.

Question: How big is the business delegation?

Secretary (West): I will just try and give you a name. We have a very interesting development this time. Both Brazil and Mexico will also have a SEWA complement. But in Chile we have, excluding the CII people, eleven business persons; in Brazil we have a similar number; and in Mexico we have about the same number.

Question: A couple of days ago a far-reaching agreement was signed in Caracas, Venezuela between Minister Deora and Venezuela for joint venture in oil exploitation. How does the Indian Government see this agreement and the prospect of having more agreements in this field with Venezuela? How do you see it?

Secretary (West): This is not the first agreement we have with Venezuela in the oil sector. Our relationship with Venezuela and with other countries of Latin America in so far as hydrocarbons are concerned is an old one. We have arrangements with many countries - Venezuela, Brazil, Columbia, Peru, etc. It is not new. So, what Mr. Deora signed is another agreement as part of ongoing arrangements with Venezuela. We also have, for instance, Reliance has been buying oil from Mexico for many years. It is not a new relationship. It is an old relationship as far as this sector is concerned.

Official Spokesperson: If I may add, there was a specific Press Release issued on that two days ago which you can take.

Question: You mentioned about the business delegation. I just want to know what broad sectors this ...

Secretary (West): As far as Chile is concerned, we have, for instance, Essar Steel, Bajaj Auto, UP Hotels, Jindal Steel, SEWA, NIIT, etc. We have a very good spread of the IT companies already in almost all the Latin American countries. In Brazil again, it is Bajaj Autos, UP Hotels, United Phosphorous, Ruchi Soya, Aditya Birla Group, Essar Steel, Mehtas Intra Limited, SEWA, Raj Industries. In Mexico, we have by and large the same group as we have in Brazil. In Mexico, we also have the CII participating in

the India-Mexico follow-up of the WEF on Latin America, which is special India-Mexico follow-up, which is being done by Pro-Mexico which is the trade body of the Mexican Government.

Question: Do we have any figures about our total investment in South America and the Indian companies investing in South America? In Africa now we have 30 billion dollars and also the Mittals and the Tatas and a lot of them. Is there any figure which we can use?

Secretary (West): We have several. I can tell you which companies are doing what. Companies are not really forthcoming on the precise investments which they make. Let me give you an example. Let us take Brazil. We have TCS, the Cellofarm, Zidus Cadilla, Glenmarc, Torrent, BEML, Mahindras, IRCON, Vijay Pharmaceuticals, Vijay Electricals, Pidilite, Bajaj, Hindustan, Rajshri, Renuka Sugars, Raj Industries. Brazilian investments in India are Marco Polo and Tata Motors. The Delhi Buses which you see are all part of this new joint venture. Geddof has invested, the Brazilian steel firm. CVRD has set up an office in India. Mexico, for instance, we have the huge Lakshmi Mittal investment, we have Videocon, we have Ranbaxy and Claris Life Sciences, Dr. Reddy's, NIIT, Sasken Communications, TCS, Infosys, Aditya Birla Group, Reliance - they are all there. In Chile, it is relatively less because Chile is also a smaller market as you know. With Chile, the focus basically is on information technology right now. But we have Indian companies which are looking at mining in Chile now. So, there is a fair amount of investment going into all three countries. More important is a lot of employment generation is being done by our companies in these countries.

Official Spokesperson: Thank you.

585. Address by President Shrimati Pratibha Devisingh Patil to the Indian Community in Sao Paulo.

Sao Paulo, April 14, 2008.

Dear friends,

I am very happy to be in Brazil as I undertake my first overseas visit as the President of the Republic of India. It is only fitting that the visit to Brazil should begin from the large metropolis of Sao Paulo which enjoys the honour of being the economic and commercial capital of Brazil. Also, I am pleased that my first engagement overseas is an interaction with the Indian community.

Both India and Brazil are large democracies and major countries in their respective regions. The emergence of our two countries as leading players in the global arena has been propelled by their large and qualified manpower resources, big land mass, vibrant trillion dollar economies and the spirit of entrepreneurship that permeates our societies. Our warm and friendly ties have been bolstered by our shared perceptions and endeavours.

The friendship between India and Brazil goes back in time. The Portuguese presence in Goa as well as in Brazil, during the 17th and 18th centuries, provided a common historical bond which facilitated interaction at the popular level. This is reflected in the food, linguistic vocabulary and the folk music traditions of our two countries. India and Brazil share folk traditions such as the stories of Panchatantra, and Poikal Kudhirai of Southern India and Boi-Bumba of Northern Brazil. Indian philosophy has influenced Brazilian intellectual tradition and is reflected in the works of philosophers such as Farias Brito, and poets Cruz e Souza and Cecilia Meireles.

Sao Paulo is unique as it has the world's only university of Yoga. The footprint of Yoga schools is visible all over Brazil. It is also interesting that two Brazilian floats participated in Goa's Carnival this year depicting Portuguese exploration of Brazil.

I am also told that nearly 80% of Brazilian cattle stock derives its origin from India's Nellore variety, which is known in Brazil as Zebu. The year 2006 marked the 100th anniversary of the import of first cow from India into North-East Brazil.

I understand that the Indian community in Brazil, though limited in numbers, has done well. Sao Paulo remains the favourite destination of the Indian community. I appreciate your contributions and I am happy that you have made India proud. You are not only our Ambassadors in a distant country but are also contributing to the building of bridges of understanding between the two countries.

Most of you have not only been able to assimilate yourselves in the Brazilian way of life but are also maintaining close cultural and economic connection with India. It is important that you provide a place in your lives and hearts to both the country of your origin as well as the country of adoption.

The Indian Diaspora estimated at about 25 million is emerging as a major economic, social and cultural force. In recognition of this, the Government of India every year celebrates the Pravasi Bharatiya Divas in order to honour and acknowledge the contributions made by the overseas Indian community. We have established an Overseas Indian Facilitation Centre, which can be your window to invest in and benefit from India. Work has begun on establishing a "Diaspora Knowledge Network" - an electronic platform to facilitate transformation of ideas into community action in India. An "India Development Foundation" is also on the anvil which would allow you to contribute to social development causes in India.

I wish you success in your endeavours and seek your continued contribution to the development of India-Brazil relations.

586. Speech by the President Shrimati Pratibha Devisingh Patil at the meeting of the Federation of Industry of the State of Sao Paulo (FIESP).

Sao Paulo, April 14, 2008.

**Mr. Paulo Skaf, President of Federation of Industry of the State of Sao Paulo,
Business Representatives from Brazil and India,**

Ladies and Gentlemen.

Good morning. It is a pleasure to be here.

No other country could have been a better destination to start my first official visit after taking over the Presidency of India last July than this beautiful country. And, I am particularly pleased that I am starting my visit to this great country by addressing the business communities of our two nations and that too in Sao Paulo, known as the business and economic capital of Brazil.

Ladies and Gentlemen, I am pleased that FIESP has taken the initiative to organize this meeting. The Confederation of Indian Industry also needs to be complimented for mounting a group of enterprising Indian businessmen who are here in Brazil in search of business opportunities. This meeting today, between FIESP and CII, is an unique gathering of businesspersons representing two populous, democratic and fast growing economies of the world.

The Indian economy has sustained high growth rates for several years now. Our macro-economic fundamentals are strong. Domestic savings and investment rates are high and growing. Labour as well as capital have become more efficient over the years. We are thus confident that we will have high growth rates of over 9% in the next 2 to 3 decades.

Both India and Brazil are large and growing economies with enormous opportunities for further rapid growth. Our natural synergies and economic complementarities can be exploited to mutual benefit. Your meeting today is an expression of the confidence that there are concrete opportunities for business and economic cooperation between India and Brazil. Over the past few years, our captains of industry have shown increasing confidence in each other and I am confident that you will also break new ground and define new frontiers of collaboration.

Ladies and Gentlemen, our bilateral trade with Brazil has almost trebled over the last three years to US \$ 3.12 billion in 2007. It is encouraging that it was US \$ 600 million in the first two months of this year. We are determined to achieve the trade target of US \$ 10 billion by 2010 set during the visit of President Lula to India last June. This is the challenge before you.

I understand the two-way investment process is also gaining ground. At least eighteen Indian pharmaceutical companies have opened their offices or production facilities in Brazil. While Tata Consultancy Services (TCS) are providing jobs to at least 2000 Brazilians in Brazil, the other two major IT companies, Satyam and Wipro have major plans for expansion in Brazil. A major Indian oil company, OVL, has already invested close to US \$ 750 million in Brazil. On the other hand, Marcopolo, Stefanini, WEG and Gerdau have investment in India. CVRD and Embraer have either set up offices or have representatives in India. These are just some of the examples of breaking new ground in economic cooperation between us¹.

I spoke earlier of synergies and complementarities. India has strengths in services, IT, pharma, auto components and agricultural equipment to name

1 An AFP report from Rio de Janeiro spoke of various possibilities of India-Brazil economic relations, among them being Tata's tie-up with Marcopolo for 600 green buses in Delhi, leading aircraft manufacturer Embraer's talks with Indian firms for joint ventures in production, ONGC Videsh's holding in Brazilian Petrobras oil company, expansion of Bajaj scooters in Brazil etc. It said that some of these were in the process of being tied-up between India and Brazil. Another possibility which was in the air was demand for Tata's newest wonder, the small Nano car. Later during her visit to Brazil, the President of the State of Sao Paulo Federation of Industry in his 'restricted' meeting with President Ms. Patil admitted feeling 'embarrassed' about just \$3.2 billion business with India, which actually offered a much larger potential. (The State of Sao Paulo represents 42 per cent of Brazil's GDP and is considered a commercial hub of Latin America.) Media reports quoted official sources to say that in the one-on-one meeting, Ms. Patil focussed on synergised trade relations between the two countries. She emphasised on the agriculture sector, particularly in post-harvest technology and agri-businesses and livestock. Eighty-five per cent of Brazilian cattle are of Indian origin because it was felt that tropical cows were more suitable to the country than European ones. Secretary (West) Nalin Surie said the country had a lot to learn from Brazil in agriculture and agri-business. "The discussions are a good beginning. The President has taken the initiative for underpinning economic cooperation," he said. Mr. Skaf, President of the Sao Paulo Federation of Industry identified areas of bilateral interests as IT, science and technology, automobile, including fuel, and food and energy security. "It is the suggestion of Brazilian President Luiz Inacio Lula da Silva that President Patil should meet the FIESP delegation during her trip to Brazil," said Indian Ambassador Hardeep Singh Puri. The Indian side was impressed with the FIESP running a comprehensive educational programme. Of the 15,000 employees under FIESP, 10,000 were professional teachers and educational professionals who teach 1.2 million students.

a few. Our requirements in infrastrure are huge. Brazil has strengths in the latter including agriculture. I would, therefore, urge you to to exploit these obvious complementarities that exist between our two countries for mutual benefit.

Ladies and Gentlemen, I would like to assure you that both our Governments are committed to put in place an enabling environment for greater bilater trade, investment and economic interaction. Several bilateral understandings and agreements are already in place to address different sectoral aspects which impact on our economic cooperation. More are being finalized. I urge you all to grasp the many profitable opportunities that beckon and which will make our partnership even stronger.

I would like to conclude by thanking the Federation of Industry of the State of Sao Paulo for organizing this event.

Thank you.

**587. Address by President Shrimati Pratibha Devisingh Patil
to the Senate of the National Congress of Brazil.**

Brasilia, April 15, 2008.

Honourable Members of the Senate,

Ladies and Gentlemen,

I am deeply honoured by the opportunity to address this august House which epitomises the aspirations of the people of Brazil. The honour you have bestowed upon me is a manifestation of the historical, warm and cordial relations between our two friendly countries.

I am delighted to be here in the modern and meticulously planned city of Brasilia built around the placid waters of Lake Paranoa. I am impressed by the architecture of your beautiful city. The impressive building of the Congress of Brazil is itself a landmark.

Ladies and Gentlemen,

India is the world's largest democracy with an electorate of more than 670 million. The roots of democracy in India are firm, deep and abiding. In spite of the many challenges faced by us since our Independence in 1947, the people of India have always had an unwavering faith in the ideals of democracy. India has held 14 nationwide General Elections since its Independence and each election has been followed by a peaceful governmental transition. The verdict of the people of India has always been respected.

The democratic experience in India is remarkable because democracy has been carried to the grassroots level right down to more than six hundred thousand villages. India's nearly two hundred and fifty thousand elected institutions of local self government bring together nearly 2.3 million representatives of whom around 1.2 million are women. In today's world, this is undoubtedly the largest expression of popular will in running the affairs of a country.

India is proud of its democratic heritage drawing sustenance from its cultural ethos of tolerance, respect for different view points and a ready acceptance of diversity. India's commitment to democracy is linked with its commitment to the values of pluralism and liberalism. Multi-culturalism is deeply rooted in India's heritage and civilization. The scale of the socio-political experiment

in India to build a modern state is historically unprecedented. Our success validates our conviction in diversity, multi-culturalism and democracy. The Father of the Nation, Mahatma Gandhi, was clear that freedom from the British colonial rule would mean very little unless the people of India were empowered with democracy. India believes that the democratic ideal is a common heritage of mankind.

As in Brazil, the primary challenge facing India is one of economic development. Both of our countries are determined to improve the conditions of life for our people and this can be done only by pursuing rapid and socially inclusive economic growth. However, we have chosen to work towards this goal within the framework of democracy. The task of economic development, never an easy one, is particularly challenging when it is to be realized in a democratic polity. However, our commitment to economic growth, social development and democracy is firm and resolute.

Today, India is a trillion dollar economy, just like Brazil, and is growing close to 9 percent per annum. India has the fourth largest GDP in terms of purchasing power. The private sector is confident, competitive, and eager to integrate itself globally. The entrepreneurial energy has manifested itself in the form of dynamism across a wide range of sectors of economic activity.

This has been the result of sustained efforts of national and regional institutions, which provide the underpinning of economic development. It is also the result of economic reforms, which have greatly increased competitiveness of India's goods and services. Economic analysts today agree that India, like Brazil, has the potential to emerge as one of the top economies of the world over the coming decades. The fact that this progress has drawn on, and in turn strengthened our democracy, is an achievement of which we can justly be proud of.

The unprecedented economic transformations taking place in India and Brazil open areas of immense potential for bilateral cooperation. Bilateral trade has grown from a mere US\$ 500 million in 2000 to US\$ 3.12 billion in 2007. I believe that this impressive performance is an indicator of future growth. We are now looking at a target of US\$ 10 billion in two-way trade by 2010 which appears eminently achievable.

The growing trade flows between our two countries will undoubtedly get a further boost with the ratification and implementation of the India-Mercosur Preferential Trade Agreement. India looks forward to the early ratification by this august House of the Preferential Trade Agreement which was signed

during the landmark visit of President Lula to India in January 2004. The proposed widening and deepening of the PTA and its envisaged expansion into an India-Mercosur-SACU Free Trade Agreement will enable our business communities to forge wider and stronger economic linkages.

The perceptible upsurge in investment flows between our two countries compliments the burgeoning trade ties. While Brazil has the presence of Indian companies such as Tata Consultancy Services, Satyam Computers, Ranbaxy and Cellofarm which are providing employment to several thousand Brazilians, India houses Brazilian companies such as Marcopolo and Stefanini. ONGC Videsh Limited and Petrobras have an active bilateral partnership. Happily, the interest of India in sectors such as sugar, ethanol, iron ore and railways in Brazil is mirrored by Brazil's interest in the avionics, food processing and infrastructure sectors of India.

Ladies & Gentlemen,

The multifaceted strategic partnership between India and Brazil is built upon a strong institutional architecture whose bricks are the 37 agreements signed over the last four years. These agreements cover a wide range of areas including defence, space, science & technology, trade, industry, agriculture, tourism and culture. These would be further deepened and diversified when we sign additional agreements tomorrow. Our Governments can derive satisfaction from the fact that they have created an enabling environment for our bilateral ties to flourish and prosper.

I am convinced that the new dynamics of India-Brazil relationship augur well for the prosperity and well-being of our peoples. However, it is important for us to make concerted efforts to bring our peoples together. The geographical distance needs to be transcended by providing improved air connectivity for which the major players in the Civil Aviation sector, both public and private, in India and Brazil need to take the necessary initiative. Tourism flows between the two countries should be encouraged as also exchanges between students, academic communities and intellectuals. We also need to build cultural bridges between our people so that the existing information deficit between our two countries can be overcome. The two Governments have already decided to organize cultural festivals on a reciprocal basis later this year. Our bilateral partnership should move from a partnership between the governments to the next higher level of a partnership between our peoples.

I believe that our strategic partnership is founded on convergence of world

views and shared vision of a new multi-polar world order. We have closely coordinated our positions in the multilateral fora and are working together within the framework of G-4 to pursue our rightful and long overdue permanent membership of the UN Security Council. Our mutual interests provide a sound basis for a growing partnership which would serve the global quest to realize a peaceful, secure, prosperous, stable and equitable world order¹.

Mahatma Gandhi said and I quote, "Democracy must in essence mean the common good of all". The essence thus of Gandhiji's political philosophy was the empowerment of every individual. Both India and Brazil are engaged in a historical struggle to empower all their citizens irrespective of class, creed or community. Our democracy is about protecting the dignity and self-respect of our citizens and assuring them a peaceful and prosperous life. Both our countries are determined to succeed in this vital task in which our Parliaments have a crucial role to play.

1 The consensus that emerged between the two countries after the delegation level talks was that India and Brazil would move away from seeking a consensus to begin negotiations with countries opposing their permanent membership in the United Nations Security Council. "It has been over a decade. We should move away from hiding behind consensus," Secretary (West), External Affairs, Nalin Surie told journalists accompanying the President on a two-week-long state visit to Latin American countries. Agreeing with Mr. Surie, Under-Secretary-General of Political Affairs at Brazil's Foreign Ministry, Roberto Jaguaribe, said "the negotiations will include finalisation through vote. [If need be] vote will decide." Mr. Jaguaribe said, "When the process started Japan and Germany, members of the G-4 group, were clear about what they wanted. India became the obvious candidate and Brazil is almost there." G-4 is an alliance between India, Germany, Japan and Brazil for supporting one another's claim for a permanent seat in the UNSC. According to him, the process, as part of the United Nations reforms, was taking too long. "The process has been dragging too long. Even without the structured changes, we need to move forward. The world is changing very fast but the multi-lateral agencies not so fast." Both officials pointed to the success of their efforts in that they both participated in the finalisation process of the World Trade Organisation, "which is basically a New York-based process." "There were indications about the negotiation process starting after the [presidential] elections in the United States. We have to see what position the U.S. will take. What will be the stand of the African group. Both India and Brazil have a stake," they said. The importance of the UNSC issue came forth in Ms. Patil's address to the Brazilian Parliament on the 15th April. Brazilian Senate President Garibaldi Alves Filho said the reforms of the United Nations would not be complete until the Security Council became more democratic, legitimate and representative by incorporating countries from all regions, including the developing world, as permanent members.

588. Speech of President Shrimati Pratibha Devisingh Patil at the luncheon meeting in her honour on the occasion of the State visit to Brazil.

Brasilia, April 16, 2008.

Your Excellency President Luiz Inacio Lula da Silva and

Madam Marisa Let ' a Lula da Silva,

Ladies and Gentlemen,

Good Morning,

I am overwhelmed by the warm hospitality with which we have been received by the Government and the people of Brazil. We are delighted and honoured to be in your beautiful country.

My visit to Brazil is the first overseas visit undertaken by me as President of India. This is a natural corollary to the growing strategic partnership between our two countries.

India and Brazil which have always cooperated closely in different multilateral fora are now engaged in the process of adding content and substance to our multifaceted relationship at the bilateral level. My talks today with President Lula have reinforced my conviction that our two nations have converging long-term political, economic, social and strategic interests. We have a common commitment to plural democratic governance and to the rule of law. We have a commitment to improve the lives of our people, to eradicate hunger, ignorance and disease. The Zero Hunger programme launched by President Lula is a remarkable step and reminds me of Gandhiji's call to wipe every tear from every eye. Our cultures are characterized by a tradition of tolerance and ethnic diversity. Our shared values provide a strong foundation to our growing ties. We are, thus, natural partners who share great similarities of views on many of the important global issues.

A significant result of the high trajectory being enjoyed by our bilateral relationship are the 37 agreements signed by us since the landmark visit to India by President Lula in January 2004 and the equally important visits by Prime Minister Dr. Manmohan Singh in September 2006 and again by President Lula to India in June 2007. Today, we have signed additional agreements to further broad-base our ties and strengthen our partnership.

It is gratifying that the dynamism of the bilateral political and official exchanges has been captured by the business communities of both countries, imbued as they are with abundant entrepreneurial spirit. Our economic complementarities and synergies need to be purposefully developed to mutual benefit.

Our bilateral trade turnover in 2007 was US\$ 3.12 billion. Our target is to achieve the level of US\$ 10 billion by 2010. The high-level CEOs Forum co-chaired by Mr. Rata Tata on the Indian side and by Mr. Jose Sergio Gabrielli on the Brazilian side is engaged in drawing up a blueprint for enhancing trade and investment flows. Intense activity in the market place has led to the forging of close cooperation between ONGC Videsh Limited and Petrobras, expanding operations of Indian IT and pharmaceutical majors in Brazil and the establishment of the world's largest bus body plant by Marcopolo in the Karnataka State of India. An early ratification of the India-Mercosur Preferential Trade Agreement would undeniably facilitate the strengthening of our economic and commercial linkages.

Opportunities beckon in other areas of endeavour including agriculture, food processing, defence, energy, space, science & technology, agricultural research, education and culture. We must strive to transcend the geographical distance by improving air connectivity which would not only help us bridge the existing information gap but also serve to bring our peoples together. We should encourage our air carriers, both in the public and private sectors, to tap into the growing and lucrative civil aviation market. The cultural festivals to be organized by India and Brazil during 2008 would contribute in a major way to enhancing the mutual awareness of our respective cultures and ways of life.

India and Brazil stand for greater inclusiveness in global multilateral institutions. We believe that international relations must be democratized. Reform of the UN, particularly the UN Security Council, needs to be expedited in order to make the Council more democratic and reflective of contemporary reality. India and Brazil which are already working in close cooperation within the framework of IBSA have the potential to act as a bridge between the developed and developing countries and to act as catalysts for taking South-South Cooperation to greater heights.

Although realists claim that there are no permanent friendships but only permanent interests in the world order, India and Brazil have managed to defy the dictum by remaining permanent friends at various multilateral fora

in the international arena. Our two countries are now assiduously engaged in the process of broadbasing our relationship and giving substance to our strategic partnership.

Excellencies,

Ladies and Gentlemen,

It gives me great pleasure to invite you to join me in raising a toast to the:

- health and happiness of His Excellency President Luiz Inacio Lula da Silva of the Federative Republic of Brazil and Madam Marisa Let?a Lula da Silva,
- prosperity and progress of our two peoples, and
- to the continued growth of our strategic partnership.
- to friendship between India and Brazil

CHILE

589. Statement to the Press by President Shrimati Pratibha Devisingh Patil on arrival in Santiago.

Santiago, April 21, 2008.

I am delighted to be in this beautiful country on my very first State Visit abroad after assuming the office of the President of the Republic of India. My visit here has been a rewarding experience.

On behalf of my delegation, I would like to thank President Bachelet, the Government and people of Chile for the warmth of their hospitality. During my talks with her, we reviewed the full gamut of our relations. We are in agreement that there is excellent scope for intensifying the level of our engagement.

The four agreements signed earlier today on civil aviation, Science and Technology, sports and research in the Antarctica will help further diversify the institutional structure of our cooperation and give further impetus to developing our ties.

India and Chile share many complementarities. Our common commitment to inclusive economic development through pluralistic democratic governance makes us natural partners.

Our bilateral trade is growing well and there are many more opportunities to diversify our trade and investment basket.

Given the strong credentials of both our economies and the growing outreach of our business houses, the time is now opportune for a substantial intensification of our economic engagement.

As you know, my delegation is accompanied by a separate business delegation which is looking for concrete partnerships in Chile.

My discussions with President Bachelet, covering the ongoing processes of socio-economic development in our respective countries as well as the entire gamut of our bilateral relations and our cooperation on multilateral issues were meaningful and constructive, and were held in a very warm and friendly atmosphere.

We exchanged views on the special programmes that we have in our countries for the poor and the marginalized sections of society and for the empowerment of women and the girl child. These are causes that have a fundamental bearing on the future development of our societies.

I availed of the opportunity to compliment President Bachelet on the distinction of being the first executive woman President of this great country. Her commitment to democracy and social justice stands out. I have conveyed an invitation for her to visit India and I am very pleased that she has accepted.

I am confident that my visit to Chile will contribute meaningfully to the further enhancement of our bilateral relations and our cooperation on international issues. I would like to take this opportunity to convey to the friendly people of Chile, greetings and good wishes from the people of India.

590. Acceptance Speech of President Shrimati Pratibha Devisingh Patil at the ceremony conferring the Doctorate *Honoris Causa* on her by the University of Chile.

Santiago, Chile, 22nd April 2008

Rector of the University of Chile,

Members of the Diplomatic Corps,

Ladies and Gentlemen.

I deem it a privilege to have the opportunity to visit the University of Chile which was founded as far back as 1843 and is acknowledged for its excellence not only in Latin America but all over the world. To all the present and past scholars of this institution, I convey my greetings.

In my country, we attach great importance to knowledge and wisdom and have deep respect for teachers. We, in India, celebrate 5th September as Teachers' Day throughout India, to mark the birth anniversary of Dr. Radhakrishnan, the second President of India and a great intellectual and an educationalist of exceptional stature.

I am, therefore, deeply honoured by your decision to confer on me the distinction of a Doctorate *honoris causa*.

Pandit Jawaharlal Nehru, the first Prime Minister of India used to say, and I quote "Universities are temples of learning and if universities are doing well the nation is doing well". How true this is. A university is home for scholars, intellectuals, academicians, and scientists - who through their scholarly pursuits and imparting of knowledge, have contributed to the progress of societies and nations. A University is also home for students who define the future. It is here that the minds of the youth are moulded, ideas are born and the contours of the future, shaped. The role of Universities in the socio-economic development of a country in today's knowledge-based and technology-driven world has increased immensely. The biggest challenge for Universities is how to prepare the youth for the opportunities and challenges of a globalised world that is constantly changing and ever evolving. Education must give to the students the ability to analyse, the capacity to think, to act with humility and be individuals willing to contribute to nation building as well as to preserving the planet for the future generations and working for the welfare of humankind.

I am glad to learn that the University of Chile carries about 40% of all scientific and technological research at the national level. This is, indeed, a remarkable contribution. Science and Technology profoundly influences the course of human civilization. Inventions and innovations help make our economies modern, more productive and competitive. Cutting-edge technology plays a critical role in agriculture, communications, biotechnology, pharmaceuticals, automobile and other manufacturing industries. I believe that Universities have a critical role to play in updating the knowledge base of our societies and economies.

Ladies and Gentlemen,

Another aspect I would like to highlight is the need to provide emphasis on the education of women. From an early stage, mothers can deeply influence their children to develop respect for knowledge and learning. The University of Chile has been a pioneer in this respect. It was the first to open its doors to women students in this country when in 1877 the first woman entered the hallowed portals of this University. Today, about 130 years later as the first woman President of India, I am honoured to accept a Doctorate honoris causa from this University - a pioneer in women's education, whose patron is Her Excellency President Michelle Bachelet, the first woman President of Chile and herself an alumni of this prestigious institution.

There has been some progress on gender equality issues worldwide but our objectives and targets are still very distant. The talent of women, nearly half of the world's population, remains largely untapped. Provision of education and medical care facilities along with economic opportunities is fundamental for the empowerment and progress of women. Unleashing their dynamism is fundamental for the development not only of any democracy but also for inclusive and equitable socio-economic development of any nation state. These are challenges that are not limited to India but are shared by Chilean society. We watch with admiration efforts in this country to promote greater social equity and harmony side by side with rapid economic progress.

My visit to Chile commenced yesterday with salutations at the Plaza de la India to Mahatma Gandhi - the Father of Nation of India, to Pandit Jawahar Lal Nehru - the first Prime Minister of India, and to Rabindra Nath Tagore - the great poet laureate of India. The values and principles these great leaders of India expounded - truth, non-violence, democracy, humaneness, and compassion have been guiding the destiny of independent India. India is a country of diverse languages, culture, customs and faiths. Yet we live in harmony and seek progress, within a democratic framework.

With its 670 million electorate, India is the largest democracy of the world. Its adherence to a democratic way of life has been consistent since its independence. Moreover, the endeavour has been to take democracy right down to the grassroots. Today, we have a network of about 2.3 million elected representatives in institutions of local self government, out of this 1.2 million are women. This is by far the largest number of elected representatives in history or anywhere in the contemporary world. India is proud of its democratic heritage and believes that the democratic ideal is a common heritage of mankind.

We are also proud of the manner in which the Indian economy has grown. Our objective is to sustain a high growth rate over the next two to three decades to ensure that our determination to eradicate poverty is guaranteed success. As we strive for growth, we seek inclusive growth and social justice.

On the global platform also, India seeks an equitable world order, with a greater voice for the developing countries. It is in our common interest to work together on critical issues on the international agenda such as development, climate change, the fight against terrorism, multilateral trade negotiations and reform of the United Nations, in particular its Security Council.

Developing countries have their unique problems and challenges. These have to be understood from their perspective. Co-operation among them constitutes an important principle of global co-operation. Promoting interaction between the academic institutions of the developing world is an aspect of South-South cooperation, which should be especially encouraged.

Ladies and Gentlemen,

Educational cooperation between India and Chile holds tremendous potential and would benefit the people of both our countries. I invite Chilean universities, think tanks and major academic centers to consider collaborations with their Indian counterparts. We need greater academic interaction in S&T, in humanities, in engineering, in medicine, in ayurveda and the knowledge sectors such as nano-technology, bio-technology and information technology.

My visit to Chile, I hope, will serve to bring awareness and amplify the foundation of our mutual interest in each other's countries and release the latent potential for cooperation between India and Chile including in the fields of science and technology, culture and education.

I would be remiss if I did not take this opportunity to convey a special word

of thanks and appreciation to Rector Victor Paz Vera. He has shown great leadership in making this University into one of Chile's most innovative, secular and leading edge institution while maintaining its reputation for academic excellence. You have inherited a proud tradition and are carrying it forward with aplomb and distinction.

Before I conclude, I would once again wish to thank the patron of this University Dr. Michelle Bachelet, the University and the Chilean people who have bestowed this special honour on me.

Con mis mejores deseos para la Universidad.

Muchas Gracias!

**591. Speech by President Shrimati Pratibha Devisingh Patil
at the Banquet in honour of the President of Chile
Ms. Michelle Bachelet.**

Santiago, April 22, 2008.

Your Excellency

President Michelle Bachelet,

Distinguished Guests,

Ladies and Gentlemen,

As we prepare to leave for India tomorrow morning, we carry back fond memories of the wonderful moments shared with you all during the last three days. I would like to express my deep appreciation for the warm hospitality and the kind courtesies extended to my delegation. These have far exceeded the norms of diplomatic nicety.

The recognition given to me by Congress, the University of Chile and the City of Santiago are, indeed an honour for my country. I express my gratitude for the same.

During my stay in this dynamic, outward looking and progressive country, I have met distinguished Parliamentarians, members of the judiciary academics, students, political leaders and representatives of industry.

The tributes paid by them to India's great leaders such as Mahatma Gandhi, Rabindranath Tagore, Jawaharlal Nehru and Smt. Indira Gandhi, are an honour for us in India. The philosophy of non-violence, peace and welfare of the entire humanity expounded by them finds deep resonance here. Based on this, I am confident that our two countries will strengthen their partnership to build a better world and an equitable global order. Following my interactions, I am also further assured that the prospects of deepening our cooperation are indeed very promising.

Our dialogue on bilateral, regional and international issues has been most fruitful. We share the perception that we should strengthen our interaction to include the entire spectrum of opportunities and challenges that encompass our relations.

During my visit, we have agreed to diversify our cooperation in civil aviation, science and technology, sports and research in the Antarctica. We must work towards early implementation of these and other existing agreements between us.

In recent years, both our economies have registered strong growth. We must use this momentum and build on our synergies. Our bilateral trade has grown well and our efforts must be to diversify it.

The investment partnership needs to be given special emphasis. Some Indian companies are actively looking at opportunities in Chile. We hope that in coming years, we will see more Chilean investment in India, especially in the infrastructure sector.

India and Chile are in the process of discovering each other's cultural heritage and traditions. It will be our effort to strengthen our cultural ties and encourage exchanges in education and tourism, as well as promote contacts between our youth.

Our cooperation on critical international issues will also continue to strengthen. We are determined to work together on issues such as UN reform, the fight against terrorism, on Climate Change and on the Doha Development Round.

Excellency, I am deeply touched by the affection and warmth with which my delegation and I have been received in this beautiful country. As two women Presidents, I believe we have established a close personal rapport and an empathy that is based on shared experiences, concerns and values.

I am deeply struck by your personal commitment to work for the betterment and empowerment of the people of Chile especially the under-privileged and the women. Your lovely and lively personality is impressive. I keenly look forward to receiving you in India next year on mutually convenient dates.

Muchas Gracias por todos su hospitalidad (Thank you for your hospitality)

COLOMBIA

592. Press Release issued by the Ministry of Petroleum and Natural Gas on the meetings of Minister of Petroleum and Natural Gas Murli Deora with his Iranian and Colombian counterparts in Madrid.

New Delhi, July 1, 2008.

Please see Document No.436.

593. Press Release of the Ministry of Petroleum and Natural Gas on the signing of Memorandum of Understanding with Colombia for Cooperation in Hydrocarbon Sector.

New Delhi, September 5, 2008.

India and Colombia have signed a Memorandum of Understanding (MoU), here today, for cooperation in hydrocarbon sector. Shri Murli Deora, Minister for Petroleum & Natural Gas, Government of India and Mr. Hernan Martinez Torres, the visiting Minister of Energy & Mines, Government of Colombia inked the MoU. Shri Deora informed that the MoU provides an umbrella framework to facilitate and enhance bilateral cooperation in this sector. The two sides have agreed to cooperate in the entire spectrum of hydrocarbon sector particularly in the areas of exploration and production of oil and gas, exchange of training and human resource development, and exchange of visits of professionals and technicians. He also said, "we will be setting up a Joint Working Group in the hydrocarbon sector for enhancing cooperation between our two friendly countries."

Shri Deora, further, underlined that despite geographical distance, India and Colombia are partners in pursuance of energy security. ONGC Videsh Limited has a producing asset in Colombia as a joint venture with a Chinese company Sinopec. This asset has current crude oil production of 25,000 barrels per day. ONGC Videsh Limited also has three offshore exploration blocks in Colombia. OVL is the operator in two of these blocks. He added, "we are exploring opportunities for participation in implementing enhanced oil recovery (EOR) and improved oil recovery (IOR) projects in the existing fields of Colombia."

Mr. Hernan Martinez Torres stated that the MoU between Colombia and India is significant, pointing out to tremendous potential for Colombia's association with India in energy sector. This is first of a series of MoUs with Indian authorities which could be concluded between the two countries, he said, adding that similar MoU was considered in mining sector in a meeting yesterday. Mr. Martinez stressed that the today's MoU signing was initiation of an excellent process of cooperation between India and Colombia.

Earlier, the two Minister led respective delegations during bilateral discussions. They reviewed the existing cooperation and discussed new areas of cooperation like greater participation of Indian entities in the exploration and production in Colombia, projects for improved/enhanced

oil recovery from existing fields, training oil & gas sector technologists of Colombia in the excellent state-of-art facilities with Indian oil sector PSUs, production and blending of bio-fuels, etc.

Colombia, the fifth-largest hydrocarbon rich country in South America had 1.54 billion barrels of proven crude oil reserves (Oil and Gas Journal 2005). The country produces nearly 525 thousand barrels per day of oil. Colombia produced 830,000 bbl/d in 1999, and it is believed that with extensive exploration and new discoveries the production of oil in Colombia can be enhanced. ONGC Videsh Ltd. of India, recognizing the hydrocarbon potential of Colombia set up its first operation in 2006, through Joint acquisition of oil producing assets along with Sinopec of China. In addition, ONGC Videsh Ltd. has also acquired three deep water offshore exploration blocks RC 8, 9 & 10 on the Caribbean side of Colombia. ONGC Videsh Ltd. currently has operation in 17 countries and its oil and gas production was nearly 8.8 MMTOE from its international projects.

Besides the two Ministers, Petroleum Secretary Shri R.S. Pandey, CMD ONGC Shri R.S. Sharma, CMD GAIL Mr. U.D. Choubey, CMD OIL Shri M.R. Pasricha and CMD EIL Shri Mukesh Rohatagi from Indian side and Dr. Jose Armando Zamora, Director General, National Hydrocarbon Agency of Colombia and Colombian Ambassador to India from Colombian side were present on the occasion.

CUBA

594. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Rajeev Shukla on Agenda Item 51- Necessity of Ending the Economic, Commercial and Financial Embargo imposed by the United States of America against Cuba at the UN General Assembly.

New York, October 29, 2008.

Please See Document No.739.

ECUADOR

595. Joint Press Communique on the occasion of the visit of Ecuadorian Minister of Foreign Affairs, Trade and Integration Ms. Maria Isabel Salvador Crespo.

New Delhi, November 17, 2008.

1. The Minister of Foreign Affairs, Trade and Integration, of the Republic of Ecuador, H.E. Ms. Maria Isabel Salvador Crespo, paid an official visit to India on 16-17 November, 2008, at the invitation of the H.E. Mr. Pranab Mukherjee, Minister of External Affairs, Government of India.
2. Discussions between the Ministers were held in an atmosphere of warmth, reflective of the traditional friendship between the two countries.
3. The Minister of External Affairs of India noted that the visit of the Foreign Minister of Ecuador, which built on the bilateral visits and exchanges held between the Foreign Ministries of the two countries in 2006, 2007 and 2008, provided a useful opportunity for continuing dialogue between them on various issues of mutual interest and to strengthen bilateral cooperation.
4. The Ministers expressed satisfaction at the healthy growth of bilateral trade in the recent past. They agreed, however, that the opportunities are plentiful and that there was need to be more ambitious in the further development of bilateral trade. They also agreed that bilateral economic cooperation and mutual investment need to be pursued further. In this context, it was agreed that it would be desirable that the two sides negotiate an Agreement on Bilateral Investment Protection and Promotion followed by an Agreement on Avoidance of Double Taxation. The Indian side appreciated the decision of the Ecuador government to open a Commercial Section in their Embassy in Delhi.
5. The Indian side expressed appreciation at the decision of the Ecuador government to allow visa-free entry into Ecuador for Indian and other foreign nationals for a stay upto 90 days for business and tourism purposes. Both sides expressed satisfaction at the formal implementation of visa exemption arrangements for holders of

diplomatic and official passports of both countries as notified through exchange of documents at the Foreign Office Consultations held in New Delhi in July 2008.

6. The Ecuadorian side appreciated the assistance being provided by India for short term training of Ecuadorian students in different disciplines under the Indian Technical Economic Programme. It also thanked India for its offer to set up an Information Technology Centre in Ecuador. It was agreed that the necessary agreement to implement this project would be finalized at an early date.
7. Both sides expressed satisfaction at the signing of an MoU on Agricultural Research and Education and of the Cultural Exchange Programme for 2009-11 during the visit. While the former agreement would facilitate interaction between agricultural scientists and research institutions in key agricultural sectors, the latter would strengthen cultural and people to people linkages between the two countries.
8. India expressed appreciation for the decision of Ecuador to purchase seven Advanced Light Helicopters from HAL India. It also welcomed the decision of Ecuador to appoint a Defence Attache in New Delhi. Both sides agreed to actively pursue finalization of the MoU on Defence Cooperation which is currently under consideration by both sides. In this context, they welcomed the proposed visit of the Defence Minister of Ecuador to India in February 2009 in response to the invitation received from the Indian side.
9. Both sides agreed that there is immense potential for strengthening cooperation in the Hydrocarbons and Energy sector including Non-Conventional Energy. Both sides agreed to promote and develop cooperation through exchange of experts and finalization of necessary agreements in hydrocarbons and mining for expediting operations by public and private sector entities in both countries.
10. The two sides noted that the Summit of G-20 countries was held in Washington on 15 November, 2008 against the backdrop of the financial crisis that emanated in the United States and Europe. Both sides agreed that in any new international financial architecture that is drawn up, there is need to ensure greater inclusivity, that growth prospects of developing countries do not suffer and protectionist tendencies are avoided.

11. The two sides agreed that the scourge of international terrorism needs coordinated action by all countries. There can be no justification for terrorism for which both countries have zero tolerance. There should be greater coordination on counter terrorism within the UN system. Both sides agreed to work together for the early conclusion of the Comprehensive Convention against International Terrorism (CCIT) which would provide a legal basis for the fight against terrorism.
12. Both sides reviewed developments on the food security front in the wake of discussions held at the Food and Agricultural Organization (FAO) in Rome in June, 2008. Greater international efforts are required to address this challenge. UN system entities need to give greater attention to an optimum mix of policies that support agriculture, promote balanced and sustainable use of renewable energy, including through a balanced use of biofuels that do not focus solely on foodgrains as a fuel source, as well as by ensuring the transfer of technologies to developing countries.
13. Both sides discussed the state of negotiations in WTO on the Doha Development Round. India and Ecuador are already cooperating on this issue within the framework of G-20. Both sides believe strongly in a rule-based, transparent and fair multilateral trade regime. Developed countries will need to address the market distortions created by their provision of substantial subsidies to agriculture. The final outcome of the negotiations must be faithful to the developmental mandate of this Round and must reflect a clear balance between market opening and the developmental needs of the majority of its membership.
14. Both sides expressed satisfaction that the UN is currently focusing on the issue of Climate Change. However, Climate Change should not become an excuse to add a greater burden or impose conditionalities on developing countries. Negotiations on Climate Change issues must be based on the principle of common but differentiated responsibilities and respective capabilities.
15. India thanked Ecuador for the support reiterated by it for India's claim for permanent membership on an expanded Security Council. Indian side also expressed appreciation for Ecuador's support for the India Specific Safeguards Agreement in the IAEA Board of Governors meeting in August 2008.

16. The Indian side welcomed the desire of the President of the Republic of Ecuador to undertake a State visit to India in 2009. It was agreed that dates would be settled through diplomatic channels.
17. The two sides reiterated their commitment to South-South Cooperation and to strengthen the Non-Aligned Movement. The leadership role played by India in NAM was appreciated.
18. The Minister of Foreign Affairs, Trade & Integration, Government of Ecuador thanked the Minister of External Affairs, Government of India for the hospitality extended to her delegation and invited him to visit Ecuador. The invitation was accepted with pleasure.

GUYANA

596. Press Release issued by the Ministry of External Affairs on the visit of Minister of State Anand Sharma to Guyana.

New Delhi, May 16, 2008.

Shri Anand Sharma, Minister of State for External Affairs paid an official visit to Guyana on 13-15 May, 2008. He held extensive discussions on bilateral, regional and international issues of mutual concern with the topmost leadership of the Government of Guyana, including the President, the Prime Minister and the Foreign Minister of Guyana. He also co-chaired the 4th India-Guyana Joint Commission Meeting.

2. The talks with President Jagdeo as well as with Prime Minister Hinds were marked by a high degree of convergence on international issues like comprehensive systemic reforms of UN agencies, redesigning international financial institutions, climate change and WTO Doha Development Round. President Jagdeo reiterated Guyana's strong and principled support to India's candidature for permanent membership of UNSC.
3. The President underlined the great importance that Guyana attached to the visit and sought India's active cooperation in transforming Guyana's agriculture and information technology sectors with strong

participation from India's private sector. India has extended a fresh Line of Credit of US \$ 50 million to facilitate greater economic interaction between Guyana and India. India has also agreed to cooperate with Guyana in crop diversification and agricultural research as well as in mining, renewable energy and pharmaceuticals.

MEXICO

597. Statement to the press by President Shrimati Pratibha Devisingh Patil after her meeting with President Calderon of Mexico.

Mexico City, April 17, 2008.

Good Morning. It is an honour to be here in Mexico

Our two countries are ancient civilizations that have had very useful and productive contact in the past. We remember with great appreciation the important role that Mexican wheat played in India's 'Green Revolution' in the 1960s.

My visit to this beautiful country is in response to an invitation conveyed to me by President Calderon when he paid a State Visit to India in September last year. The importance that our two countries attach to our bilateral relations was underlined during his visit by our decision to enter into a 'Privileged Partnership'. My current visit is in pursuance of this new partnership and I am confident that our cooperation in coming months and years will significantly develop and diversify.

I have had extended discussions with President Calderon, on the state of our bilateral relations and our cooperation in international fora. As two vibrant democracies that are multi-ethnic, multi-lingual and multi-cultural, we face similar situations and challenges. It is, therefore, no surprise that our points of view, objectives and approaches are similar on most issues.

The trade and economic aspect of our partnership provides a critical underpinning to the overall edifice of our relations. We have agreed that

bilateral trade and investment needs to grow. This is a challenge that we have placed before our businessmen and industrialists. The opportunities are enormous and we will, no doubt, achieve further success in this endeavour.

A number of useful agreements have been signed earlier today. These will help develop our cooperation in practical terms.

Regular interaction at the highest political level is an important component of our evolving Privileged Partnership. I have invited President Calderon and Madam Margarita Zavala de Calderon to pay an official visit to India.

Before I conclude, I must thank President Calderon, the Government and people of Mexico for the friendship and very warm hospitality that my delegation has received since our arrival. We feel completely at home in Mexico. I would also like to take this opportunity to convey, greetings and best wishes from the people of India to the people of Mexico, *y deseo paz, prosperidad y exito para Mexico.* (and I wish peace, prosperity and success to Mexico)

598. Speech by President Shrimati Pratibha Devisingh Patil at the Banquet hosted by President of the United Mexico States Felipe de Jesus Calderon.

Mexico City, April 17, 2008.

Your Excellency President Felipe de Jesus Calderon,

Madam Margarita Zavala de Calderon,

Ladies & Gentlemen,

I am delighted to be here in Mexico, a country that India has historically considered a friend. Our freedom fighters took refuge in your land. Indians gratefully remember the contribution of Mexico's 'Sonara' variety of wheat to our Green Revolution decades ago. The first Ambassador of Mexico to India and Nobel Laureate Octavio Paz is a respected figure in my country. The first Indian Ambassador to Mexico was Mrs. Vijaya Lakshmi Pandit, sister of the first Prime Minister of India. Mexico's cultural richness, the struggle for freedom and the sacrifices of its leaders like Father Miguel

Hidalgo and Father Jose Morelos find deep resonance in India. Mexico, like India, is a cradle of ancient civilizations, including those of the Mayan and the Aztec.

Excellency, during your landmark visit to India last September, we rightly elevated the relationship between our two countries to the status of a 'Privileged Partnership'. It is a partnership that is based not just on our commonalities in the past, but on the vision that we share for the future for our bilateral relations and also for the world.

During your visit last year, we had the first meeting of the High Level Group on Trade, Investment and Economic Cooperation and I am glad to note that the Group will meet again in June this year. It is important that they draw up a roadmap for the rapid development of our trade and economic relationship.

I am glad to note that Indian investments into Mexico have been growing steadily. We encourage this trend and look forward to similar enthusiasm on the part of Mexican investors to enter the Indian market. There are tremendous opportunities in the areas of infrastructure and tourism, just to mention two of the potential areas that can be exploited by Mexican entrepreneurs. We welcome investments being made by Mexican companies in India.

Last year, when you chose India to be the first country to be visited in Asia, we were delighted. As the largest democracy in the world, we have great admiration for the vibrancy of Mexico's democracy. The democratic yearnings of our two countries, our faith in non-violence and dialogue; the pluralistic and secular credentials of our polities make us natural allies in facing the global challenges of today. We have had cooperation in the past in international fora, be it the UN or the WTO, and on issues like Climate Change, the Doha trade negotiations and the fight against terrorism. It is critical that our two countries continue to display even greater harmony in the coming days. Mexico is the largest Spanish speaking country in the world with enviable democratic credentials, and India is the largest democracy in the world. Our voices will no doubt be heard with respect when we speak in harmony.

Excellency, tomorrow I will visit the Pyramids in Teotihuacan. They stand as sentinels of your ancient civilization and rich heritage. I will also have the opportunity of visiting the sacred Basilica of Guadalupe, a symbol of the confluence of tradition and faith with modernity. Ours are both ancient

civilizations. We must, therefore, encourage greater cultural interaction and exchange between us to learn from each others' past.

Tomorrow, I will also be paying tribute to the memory of India's Father of the Nation, and the apostle of non-violence, Mahatma Gandhi, at his statue near the Anthropology Museum. This is a signal of the esteem in Mexico for Mahatma Gandhi and his values. We convey our appreciation for this.

Excellency, let me take this opportunity to thank you and your Government for the warm hospitality that my delegation and I have received since our arrival.

May I now request all present to join me in a toast to:

- the good health and well-being of the President of the United Mexican States and Madam Margarita Zavala de Calderon,
- the prosperity and well-being of the people of Mexico, and
- *Por la amistad entre India y Mexico.* (to the friendship between India and Mexico)

**599. Speech of President Shrimati Pratibha Devisingh Patil
at the function at the Mahatma Gandhi Statue.**

Mexico City, April 18, 2008.

Children and Students,

Organizers of this event

Ladies and Gentlemen,

I am deeply honoured to be here this morning to offer tribute to the memory of Father of our Nation, Mahatma Gandhi, whose philosophy of non-violence resonates all over the world.

The Mahatma Gandhi was born in India, he belonged to the whole world. More than 70 statues of Gandhiji have been installed in every nook and corner of the world. The philosophy of Mahatma Gandhi is a source of inspiration for those who think they are weak and powerless.

By installing his statue at such a prominent location in this huge metropolis, the people of Mexico have specially honoured his memory and the values he stood for. This is a gesture that will be deeply appreciated by all those are committed to peace in the world.

I am glad to see young children in the ceremony. The future belongs to them, and it is our responsibility to inculcate in them values of tolerance and compassion.

The principles of truth and non-violence to which Gandhiji was committed transcend time and regional boundaries. They are as appropriate in India as they are in Mexico. They are as appropriate today as they were during the lifetime of Gandhiji. The decision of the United Nations last year to declare 2nd October, the Birth anniversary of Gandhiji, as the International Day of Non-Violence is an acknowledgement of the universality and need for adherence to the noble path of peace, truth and tolerance shown by Mahatma Gandhiji.

I would also like to convey my appreciation to those of you, who, observed the first International Non-Violence Day at this venue on 2nd October last year with great dignity and serenity. Thank you.

600. Statement of President Shrimati Pratibha Devisingh Patil at the business meeting hosted by Mexican Business Council for Foreign Trade, Investment and Technology (COMCE) and India - Mexico Business Council (IMBC).

Mexico City, April 18, 2008.

Senor Valentin D. Morodo, President of the Mexican Business Council for Foreign Trade, Investment and Technology,

Senor Jose Luis Uriegas, President of the India-Mexico Business Chamber,

Ladies and Gentlemen,

I am delighted to be in your midst today. Economic and commercial relations between India and Mexico provide an important underpinning to our bilateral relations. I am happy that in recent years bilateral trade has grown steadily. It crossed US\$2 billion last year. But this is just the beginning. We need to do much more.

Businesspersons and entrepreneurs of the two countries need to explore ways to fully exploit the real potential. There is general agreement on both sides that there are extensive synergies in our economies. Both of us enjoy near and offshore advantages to the larger markets of North America and Asia. While Mexico has an extended market into NAFTA and Latin America, India is a huge market in itself, not to speak of the extension to South and South East Asia and Africa. There are areas where Indian technology has proved its competence, such as IT, pharmaceuticals and non-conventional Energy. Mexican competence is visible in fields like food processing, energy, high yield crops and housing. It is for businesses on both sides to identify and exploit new complementarities to mutual benefit. I am glad that an MoU has been signed between COMSE and CII.

I am happy to note that Indian companies such as Mittal Steel, Tata Consultancy Services, Infosys, Ranbaxy, Reddy Labs and Solara have invested in Mexico. Other companies are looking for opportunities and possibilities of investment. Being a developing country, India recognizes the importance of the social dimension of foreign investment. I am happy to have learnt that Indian investments are being welcomed from this

perspective in Mexico. For economic interaction between the two countries to be sustainable, it is important that its benefits percolate to the people and transform their lives for the better. I am confident that Indian and Mexican businesses will meet these expectations.

Likewise, I encourage Mexican investors to explore the Indian market. It offers an attractive combination of demand, availability of high quality management and technical manpower as well as cheap unskilled labour, transparent legal system, a huge capacity to profitably and productively absorb capital.

We have a long journey ahead of us. Governments can only play a coordinating role and help create a conducive political and economic environment. But you are the actual players on the field. The Governments have already declared their intention by elevating the bilateral ties to a 'Privileged Partnership'. They have also set the target for trade at US \$ 5 billion by the year 2010. A Bilateral Investment & Protection Agreement and the Double Taxation Avoidance Agreement are already in place. An Air Services Agreement has been signed providing the framework for connectivity through air services, both in passenger and cargo segments. The institutional infrastructure is thus in place.

Similarly, the Governments have liberalized visa regimes considerably, especially for business travel.

The Business Council can also exchange views on any remaining irritants in economic cooperation and bring those to the knowledge of the Governments. The India-Mexico High Level Group on Trade, Investment and Economic Cooperation is scheduled to meet again in June this year. Your suggestions and recommendations will be valuable inputs into that Group's efforts to define the course of future economic engagement between our two countries.

I thank the Mexican Business Council for Foreign Trade, Investment and Technology and India-Mexico Business Chamber for organizing this event and for extending an invitation to me. It is always rewarding to interact with key business players.

I congratulate all the participants, both from India and Mexico, and wish them success in their every endeavours.

The MoU signed between COMCE and CII for enhancing trade and business relationship and investment will help in providing regular mechanisms for business interactions.

I am confident that the MoU will lead to a significant growth in commercial activities between the two countries.

Muchas Gracias. (Thank You.)

SURINAME

601. Press Release of the Ministry of External Affairs on the visit of Minister of State Anand Sharma to Suriname.

New Delhi, May 17, 2008.

Shri Anand Sharma, Minister of State for External Affairs, visited Suriname from 15-17 May, 2008. He was accompanied by a business delegation comprising of senior representatives of public and private sector companies and financial institutions from India.

On 15th May, 2008, Shri Anand Sharma held extensive discussions with the President of Suriname Mr. Runaldo Ronald Venetiaan and Foreign Minister Mrs. Lygia Kraag-Keteldijk. Shri Sharma also called on the Speaker of Surinamese Parliament Mr. Paul S. Somohardjo. During Shri Sharma's meeting with President Venetiaan, both leaders recalled the close and cordial ties shared between the two countries historically. India and Suriname have been co-operating closely on various multilateral issues of mutual concern and Suriname has always supported India's position on U.N. Security Council reforms including India's claim to permanent membership of the expanded UNSC. President Venetiaan conveyed Suriname's appreciation for the assistance provided by India in Suriname's developmental efforts especially in energy, infrastructure, agriculture, capacity building and human resource development.

Later, in the evening, Shri Anand Sharma addressed India-Suriname Business Seminar attended by over 200 leading businessmen of Suriname and two cabinet ministers, in which he not only highlighted India's economic and technological achievements but also emphasised that India was willing

to share its experience and capabilities with other developing countries in the true spirit of South-South Cooperation.

On 16th May, 2008, Shri Anand Sharma, Minister of State for External Affairs, co-chaired the 4th Session of the India-Suriname Joint Commission with Surinamese Foreign Minister Mrs. Kraag- Keteldijk. After the Joint Commission Meeting attended by 13 Ministers of Suriname's Cabinet, Shri Anand Sharma announced Government of India Credit Lines worth US \$ 55 million out of which projects worth over US \$ 25 million have already been identified. A fresh amount of US \$ 30 million has been earmarked for the new projects to be submitted by the Government of Suriname. As a special gesture, Shri Anand Sharma announced that India would fund and set up an IT Centre in Suriname as a gift.

On this occasion, an MOU was signed between an Indian company-Foods Fats and Fertilizers Ltd. and Ministry of Agriculture of Suriname for allotment of 40,000 hectares of land in Suriname for cultivation of oil-palm. Another Agreement was signed between the Ministry of Finance of the Government of Suriname and EXIM Bank of India for a Line of Credit of US \$ 10.6 million as a part of the above assistance package for the purchase of Chetak Helicopters, Coastal Communications Network and other high technology equipment, which underlines appreciation for quality and competitiveness of Indian technology in South American region.

Government of Suriname sought India's help in health, pharmaceuticals, ICT, E-governance, education, professional training, rural development, environment, energy, technological development, communications, port development, public sector reforms, internal security, agriculture, animal-husbandry, dairy, aqua-culture, agro-forestry and many other high technology areas which is a reflection of India's growing profile in the region as a technological super-power.

As a result of the visit, India and Suriname also agreed to cooperate in mining, banking, financial services, renewable energy and infrastructure development. Suriname is rich in natural resources like bauxite, gold, manganese, iron ore, kaolin and diamonds apart from forestry and agriculture.

VENEZUELA

602. Press Release of the Ministry of Petroleum and Natural Gas on the signing of a landmark Agreement between ONGC Videsh Limited (OVL) and Petroleos De Venezuela S. A. (PDVSA) for oil sector cooperation.

New Delhi, April 9, 2008.

ONGC Videsh Limited (OVL) and Petroleos De Venezuela S.A. (PDVSA) signed in Caracas, Venezuela on April 8, 2008 (India time late night yesterday) a Joint Venture agreement for the San Cristobal Field in Junin, Orinoco Region of Venezuela. This JV agreement was concluded at an impressive ceremony in the presence of Mr. Murli Deora, Minister of Petroleum & Natural Gas of India and Mr. Rafael Ramirez Carreno, Minister of Energy and Petroleum of Venezuela. OVL is a 100% subsidiary of India's leading national oil company ONGC. Under this joint venture, OVL will have a participating interest of 40%, while PDVSA retains the remaining 60% in the San Cristobal Field in Junin, Orinoco Region of Venezuela. They will jointly develop the field from its current production level of 20,000 bbl per day to 40,000 bbl per day. Government of India has recently approved OVL's participation in the project with an investment of US\$ 356 million.

Speaking on the occasion Mr. Deora described the event as a historic milestone in growing cooperation between India and Venezuela in the hydrocarbon sector. He expressed hope that this JV will pave way for more such mutually beneficial projects between the two countries. Today's signing fructifies the consistent efforts on part of India's Ministry of Petroleum & Natural Gas to take forward relations between India and Venezuela. It may be mentioned that during the visit of President Hugo Chavez to New Delhi in March 5, 2005, an Agreement for Cooperation in the hydrocarbon sector was signed between India and Venezuela. Further, to strengthen the cooperation between OVL and PDVSA, a Memorandum of Understanding (MOU) was also signed the same day to jointly develop oil & gas exploration and production projects.

San Cristobal project is located in the Zuata Subdivision of prolific Orinoco Heavy Oil belt, in the Junin Norte Block in eastern Venezuela. The Orinoco heavy oil belt holds one of the largest known accumulations of heavy oil in the world, covering an area of about 54,000 square km, 600 km in length in E-W and about 90 km width in N-S. Oficina formation (Middle Miocene) is the main reservoir, which occurs between a depth of 600 and 1,100 m.

This Joint Venture will also explore the potential of discovering more hydrocarbons in the unexplored area of the project. In addition, the JV will

also explore employing Enhanced Oil Recovery (EOR) techniques to improve oil recovery rate in the field. The EOR techniques have been successfully commercialized by ONGC in its western heavy field in India.

Venezuela is one of the largest oil producing countries in the world, with about 87 billion barrels of proven conventional oil reserves (OPEC 2006). In addition, it has a huge non-conventional oil deposits (heavy oil). Most of these deposits are located in the Orinoco oil belt.

The participation of OVL in the San Cristobal project is expected to open more avenues for bilateral cooperation. OVL has also entered into a Technological Cooperation Agreement with PDVSA CVP for joint research and training activities. Under this Agreement ONGC has trained a batch of drilling engineers from PDVSA through a customized 25-week long course. This, for the first time, covered the deep sea operations of ONGC. The training was imparted at ONGC's premier training institute at Dehradun.

Earlier Shri Deora had an important bilateral meeting with his counterpart from Venezuela. The meeting lasted for more than an hour, in which the two Ministers discussed possibilities of further cooperation in upstream activities, refinery projects, gas transportation and distribution, technical services including providing training to more oil & gas personnel of Venezuela, etc. Petroleum Secretary Shri M S Srinivasan, Ambassador of India to Venezuela Shri Y. K. Sinha, CMD ONGC Shri R S Sharma and MD OVL Shri R S Butola also attended from Indian side.

603. Press Release of the Ministry of External Affairs on the visit of Minister of State Anand Sharma to Venezuela.

New Delhi, May 21, 2008.

Minister of State for External Affairs, Shri Anand Sharma paid a bilateral visit to Venezuela from 18-20 May, 2008. President Chavez had undertaken a state visit to India in March 2005. In April 2008, Minister of Petroleum and Natural Gas visited Venezuela for signing a Joint Venture agreement on the San Cristobal oil field.

2. During the visit, MOS(AS) had detailed one to one discussions with President Chavez who expressed high regard for our Prime Minister, President and Smt. Sonia Gandhi. He also enthusiastically conveyed Venezuela's desire to diversify ongoing bilateral relations with India.

A road map for enhancing strategic and enduring cooperation between both countries in a variety of sectors such as agriculture, energy and renewable energy, infrastructure and transfer of technology was discussed. Venezuelan Ministers of Foreign Affairs, Energy and Petroleum, Light Industries and Commerce and Science & Technology were also present during the meeting. After discussions, both sides agreed to convene the next India-Venezuela Joint Commission meeting in New Delhi later this year.

4. Earlier, MOS(AS) had detailed discussions with Foreign Minister, Nicolas Maduro. During their talks, both Ministers reviewed various regional and global issues of mutual concern such as setting up of alternative financial and monetary architecture mechanism through institutions such as the Bank of South, regional development initiatives such as UNASUR and other such matters. Maduro greatly appreciated India's varied achievements in science and technology, evolving economic and political status in the world and eminent credentials for working with like minded developing countries in building a world without hegemony and distortions.
5. Gamut of bilateral relations was reviewed in a luncheon meeting where Venezuelan Ministers of Culture, S & T, Education and Higher Education and Vice-Ministers of Light Industries and Commerce and Tourism also participated in the discussion. Venezuelan side thanked India for its offer to set-up an IT Centre of Excellence in Venezuela. They expressed keenness in stepping up cooperation in agriculture and agricultural research, S&T, ICT, pharmaceuticals and generic medicines, infrastructure and transfer of technology.
6. Besides meetings with local dignitaries MOS(AS) also interacted with a cross section of the non-resident and community of Indian origin in Venezuela.

INDIA'S FOREIGN RELATIONS - 2008
SECTION -VIII
EUROPE

ALBANIA

604. Press Release of the Ministry of External Affairs on the visit of the Albanian Foreign Minister Lulzim Basha.

New Delhi, December 20, 2008.

At the invitation of the External Affairs Minister of India, Mr. Pranab Mukherjee, the Foreign Minister of the Republic of Albania, H.E. Mr. Lulzim Basha, accompanied by Mrs. Basha, visited India from 17-20 December 2008. This was the first ever visit by a Foreign Minister from either side. Mr. Basha was also accompanied by senior officials, a business delegation and media persons.

During the delegation level talks on 19 December 2008, the two Ministers discussed enhancement of bilateral relations in diverse fields and exchanged views on regional and international issues of mutual interest. Foreign Minister Basha conveyed that Albania fully shared India's sense of outrage at the Mumbai attacks and considered terrorism as a common challenge for the international community.

Mr. Basha held an interactive session at the Institute of Defence Studies and Analyses in New Delhi on 18 December 2008. Before coming to New Delhi, he also visited Kolkata where he had a meeting with the Chief Minister of West Bengal and visited Mother Teresa Memorial House. It would be recalled that President Rexhep Meidani visited Kolkata to attend her funeral service in September 1997.

The Albanian Foreign Minister and the business delegation also had a meeting with the Indian businessmen, organized by the Confederation of Indian Industry in Kolkata.

Democratic and multi - ethnic Albania is home to one of the fastest growing economies in Europe and keen on developing multifaceted ties with India including in the spheres of IT and HRD, which is fully reciprocated by India. Albania had also wholeheartedly supported India's Civil Nuclear cooperation initiative at the IAEA meeting earlier this year.

Foreign Minister Basha extended an invitation to EAM to visit Albania which was accepted with great pleasure. The visiting dignitary also inaugurated the Albanian Embassy in New Delhi.

BELGIUM

605. Speech by President Smt. Pratibha Devisingh Patil at the Banquet in honour of the King of Belgium Albert II.

New Delhi, November 4, 2008.

Your Majesty, Her Majesty Queen Paola,

Ladies and Gentlemen,

On behalf of the Government and people of India, it gives me great pleasure to warmly welcome Your Majesty, Her Majesty Queen Paola, and your delegation to India. We appreciate the special affinity of the Belgian Royal Family towards India. We recall Your Majesty's visit to India twenty-five years ago in 1983 as Crown Prince of Belgium leading a trade delegation; and, of Crown Prince Philippe's visits in 1995, 1998 and 2005. These visits have brought our two countries closer.

India, of course, is no stranger to Belgium. The ties between India and Belgium go back to the year 1723 when traders from Belgium under the flag of the Ostend Company established settlements in East and South India. More than 36,000 Indian soldiers laid down their lives for the freedom and independence of Belgium during World War I in the Fields of Flanders in 1914 and 1915; their memory is honoured by Indian participation in ceremonies organized alongside the Armistice Day celebrations in November every year. Our first Prime Minister, Pandit Jawaharlal Nehru, visited Belgium in 1926 where he attended the Congress of Oppressed Nationalities in Brussels, as an official delegate of the Indian National Congress. Mahatma Gandhi is honoured by a statue installed in Brussels and a road is named after him in Antwerp.

In the contemporary world, there is much that India and Belgium share in common. Democracy, rule of law, freedom of speech, independent judiciary, free press and protection of human rights are fundamental values to which our two societies are wedded. Indeed, these are the values that also bind the countries of the European Union. In addition, India and Belgium are federal states, which respect and promote the rights and freedom of the various communities, peoples and regions that comprise them. These shared values provide a strong foundation to our ties.

I am happy that our two countries have been expanding and deepening their partnership. Belgium is the third largest trading partner for India within

the EU. Our bilateral trade crossed 8 billion Euros in 2007. It is gratifying to know that the Indian community in Belgium is contributing to the Belgian economy through its skills in the diamond industry. It is noteworthy that Indian investment in Belgium has exceeded Belgium investment in India in the recent past. I hope that the Belgian companies will also actively consider taking advantage of the growing Indian economy, and its attraction as a destination for investments.

The visit of Prime Minister Guy Verhofstadt to India in November 2006 played a significant role in further deepening and diversifying our relationship. The landmark agreement on Social Security was signed during that visit. Our links in the civil aviation sector have been strengthened and three cities in India are directly linked to Brussels which has now become an international hub for one of our major airlines.

Your Majesty's visit to India comes at a time when India is at the cross roads of history. I hope that what you see and experience this time will give you a glimpse of a new and dynamic India, the boundless energy and creativity of our people, their friendly disposition and their march towards prosperity.

Your Majesty, we are confident that your visit will rejuvenate our relations by opening new vistas of opportunities, particularly in the economic and educational sectors.

Excellencies, Ladies and Gentlemen, may I request you to join me in a toast:

- to the health of His Majesty King Albert II, the King of the Belgians;
- to the health of Her Majesty Queen Paola, the Queen of the Belgians;
- to the progress and prosperity of the friendly people of Belgium; and
- to friendship and cooperation between India and Belgium.

BULGARIA

606. Press Release of the Ministry of Home Affairs on India - Bulgaria bilateral consultations on security related issues.

New Delhi, June 11, 2008.

India and Bulgaria held wide ranging discussions on various security related bilateral issues, here today. The Indian delegation was headed by the Union Home Secretary, Shri Madhukar Gupta, while the Bulgarian side was led by their Deputy Minister of Interior, Shri Goran Yonov.

The talks were aimed at reviewing the initiatives and progress outlined under the Agreement on Cooperation in Combating Organized Crime, International Terrorism and Illegal Trafficking in Narcotic Drugs and Psychotropic Substances, the two countries had signed in 1994, as also for developing newer areas of cooperation on issues of mutual concern.

During the talks, both sides expressed satisfaction at the evolving ties in matters of mutual concern pertaining to security, organized crime, international terrorism and illicit drug trafficking. It was appreciated that the framework provided by the 1994 Agreement between India and Bulgaria was acquiring substantive content and detailed agency-to-agency contact has been identified/worked out with Indian agencies concerned. Both sides also agreed to move ahead with detailed proposals for mutually beneficial capacity building programmes.

Yesterday, the Bulgarian delegation had separate subject-specific interactions with officials of the Intelligence Bureau, Central Bureau of Investigation and the Narcotics Control Bureau.

Shri Goran Yonov is also scheduled to call on Union Minister of Home Affairs, Shri Shivraj V Patil and the Minister of State for Law and Justice Mr. K. Venkatapathy. The Bulgarian delegation is on a visit to India from June 10-13, 2008.

CZECH REPUBLIC

607. Press Release issued by the Ministry of External Affairs on the visit of Minister of State Anand Sharma to Czech Republic.

New Delhi, September 9, 2008.

Minister of State for External Affairs H.E. Mr. Anand Sharma visited Czech Republic from September 7-9, 2008. He held substantive discussions with Foreign Minister H.E. Mr. Karel Schwarzenberg as well as Deputy Minister H.E. Ms. Helena Bambošová. He also called on Senate President H.E. Mr. Přemysl Sobotka and Deputy Prime Minister H.E. Mr. Alexandr Vondra.

2. During the visit, the two sides reviewed growing bilateral relations in diverse fields, including political, economic and culture. The Indian side expressed their hope that under Czech Presidency of EU, India-EU relations will strengthen further.
3. The two sides also discussed UN reforms, and stressed the need to bring the discussions to speedy conclusions. The Czech side reiterated their support for Indian candidature for permanent membership of UNSC. They also discussed the problem of international terrorism. In this context they agreed on the need for urgent conclusion and implementation of Comprehensive Convention on International Terrorism. They discussed the evolving situation in Afghanistan, where India as well as Czech Republic are engaged in development efforts.
4. They expressed satisfaction at fast growth of bilateral trade and investment. The two way trade between the two countries has expanded more than four times in four years. This is expected to cross US\$ 1 billion mark this year. During the same period, India EU trade has more than doubled to reach Euro 57 billion last year. They also mentioned the growing investment relationship between India and the Czech Republic.
5. The two sides agreed to continue discussions on matters of mutual interest during Czech Presidency.

DENMARK

608. Arrangement Between The Government of the Republic of India and The Government of the Kingdom of Denmark on Gainful Employment for Family Members of a Diplomatic Mission or Consular Post.

New Delhi, February 6, 2008.

The Government of the **Republic of India** and the Government of the **Kingdom of Denmark**: ("hereinafter referred to as Parties");

Noting the difficulties encountered by members of the family forming part of the household of a member of a diplomatic mission or consular post who wish to engage in a gainful occupation;

Realising that many members of such households, in particular spouses, may wish to work in the State where the member of a diplomatic mission or consular post is assigned to duty;

Desirous of facilitating the engagement of such family members in a gainful occupation in the receiving State;

Have agreed as follows:

1. Authorization to engage in gainful occupation

- a) The members of the family forming part of the household of a member of a diplomatic mission or consular post of the sending State shall be authorized, on a reciprocal basis, to engage in gainful occupation in the receiving State in accordance with the provisions of the laws and regulations of the receiving State.
- b) The receiving State shall retain the right to withhold authorization for employment in areas where national security interests are concerned **or if an authorization would be in contradiction to national law.**
- c) Any authorization to engage in gainful occupation in the receiving State shall, in principle, be valid only during the tenure of the member of a diplomatic mission or consular post in the receiving State.

2. Definitions

For the purposes of this Arrangement.

- a) "A member of a diplomatic mission or consular post" means any officer or employee of the sending State who is not a national of or a permanent resident in the receiving State and who is assigned to official duty in the receiving State in a diplomatic mission, consular post or mission to an international organization;
- b) "A member of the family" means the spouse (including common law partners) of a member of a diplomatic mission or consular post and any minor child or step child, or unmarried dependent child or step child up to the age of 21, or under 25 years of age if he/she is in full-time attendance at a post secondary educational institution, or any unmarried children who is physically or mentally disabled.

3. Procedures

- a) A request for authorization to engage in gainful occupation shall be sent on behalf of the member of the family by the diplomatic mission of the sending State to the Ministry of Foreign Affairs of the receiving State.
- b) The procedures followed shall be applied in a way which enables the member of the family to engage in gainful occupation as soon as possible and any requirements relating to work permits and similar formalities shall be favourably applied.

4. Civil and administrative privileges and immunities

In the case of members of the family who enjoy immunity from the civil and administrative jurisdiction of the receiving State in accordance with the Vienna Convention on Diplomatic Relations or under any other applicable international instrument, such immunity shall not apply in respect of any act or omission arising from the gainful occupation and falling within the civil or administrative jurisdiction of the receiving State.

5. Criminal immunity

In the case of members of family who enjoy immunity from the criminal jurisdiction of the receiving State in accordance with the Vienna Convention on Diplomatic Relations, 1961 or under any other applicable international instrument:

- a) The provisions concerning immunity from the criminal jurisdiction of the receiving State shall continue to apply in respect of any act carried out in the course of the gainful occupation.

- b) However, in the case of serious offences, upon the request of the receiving State the sending State shall give serious consideration to waiving the immunity of the member of the family concerned from the criminal jurisdiction of the receiving State.
- c) The sending State shall also give due considerations to waiving the immunity of the member of the family from the execution of a sentence.

6. Fiscal, social security and currency exchange regimes

In accordance with the Vienna Convention on Diplomatic Relations or under any other applicable international instrument, members of the family will be subject to the fiscal, social security and currency regimes of the receiving State for all matters connected with their gainful occupation in that State.

6. Settlement of disputes

Any differences or disputes regarding the interpretation or application of this Arrangement shall be settled through mutual consultations.

8. Amendment. This arrangement can be modified at any time by mutual consent between the Parties.

9. Entry into force, duration, and termination

This arrangement shall enter into operation on signature and shall continue in operation until terminated by either party by providing six months notice in writing.

In witness whereof the undersigned, being duly authorised by their respective Governments, have signed this Arrangement.

Done at New Delhi on the 6th day of February, 2008 in three originals in the Hindi English and Danish languages, all texts being equally authentic. In the event of any dispute or divergence of interpretation in relation to this Arrangement the English text shall prevail.

For the Government
of the Kingdom of Denmark

609. Agreement between the Government of the Republic of India and the Government of the Kingdom of Denmark regarding the Establishment of a Joint Commission for Cooperation.

New Delhi, February 6, 2008.

The Government of the **Republic of India** and the **Government of the Kingdom of Denmark** (referred to as the Parties").

Recognizing the strong cooperation that already exists between India and Denmark and the shared wish to further expand and diversify this cooperation.

Desiring to strengthen the ties between our two nations and the friendly relations between the Indian and the Danish peoples.

Determined to facilitate mutually beneficial cooperation between India - and Denmark in areas of common interest.

Working on the basis of shared democratic values and a commitment to furtherance of human rights, fundamental freedoms and the rule of law and a shared vision of peace and security.

Hereby agree on the following:

Article - 1
Establishment of a Joint Commission

An Indo-Danish Joint Commission will be established to provide impetus to and develop the deepening and strengthening of ties between India and Denmark in all fields of mutual interest. They include the political, economic commercial, scientific, research and technological, energy, environmental, consular, educational and cultural fields, as well as any other fields the Parties may consider appropriate. Within its areas of competence, the Commission may submit mutually agreed recommendations or proposals to the respective Governments.

Article - 2
Composition of the Joint Commission

The Minister for (of) External Affairs of India and the Minister for Foreign Affairs of Denmark, or their nominees, will be co-chairs for the Joint

Commission, with the assistance of experts from the public or private sector as appropriate.

Article - 3 Objectives

The tasks of the Joint Commission may include more specifically:

- a) **Political field:** Exchanges of views and where deemed appropriate concrete Cooperation on bilateral and international issues of mutual interest, such as the fight against terrorism, regional and multilateral issues, democracy and human rights, security policy, development policy and the fight against illegal migration, including human trafficking and readmission issues. Consultations between the Ministry of External Affairs of India and the Ministry of Foreign Affairs of Denmark will take place as previously.
- b) **Economic and Commercial field:** Enhanced cooperation with the aim of stimulating trade and investments between India and Denmark, while taking into consideration the international obligations of both Parties. Such cooperation may include: Initiatives to enhance bilateral trade and investment, including in knowledge-based industries; encourage close cooperation between the private sectors in the two countries, for instance by promoting links between business organizations and joint ventures; cooperation on maritime transport; increased dialogue on international trade and investments issues; increased dialogue on bilateral and global economic and financial issues and strengthening of cooperation in this field.
- c) **Science and Technology:** Strengthening the scientific and technological cooperation to increase capabilities on both sides and take advantage of commercial opportunities between the Parties, as also foreseen in the Memorandum of Understanding for Cooperation in the field of Biotechnology. Specific cooperation may include: Forming of partnerships, exchange of scientific information; encourage links and networks between scientists and between research institutions; cooperation on R&D activities, for instance joint execution of scientific research and development projects; exchange visits by scientists, training programmes; joint seminars and workshops. Priority areas for bilateral cooperation are: biotechnology, information technology, telecommunications and nanotechnology as well as the commercial applications of high technology like bio-and nanotechnology, agriculture and agro-industry and health research.

- d) **Environment:** Promoting cooperation on environment, for instance through: Launching of common research projects; knowledge sharing through technology transfer and capacity building. Specific cooperation areas may include: Sustainable management of natural resources; environmental science, environment management and protection, natural resources management, biological diversity etc.
- e) **Energy:** Promoting cooperation on energy and climate change, for instance through: Launching of common research projects; knowledge sharing through technology transfer and capacity building including for energy planning and energy efficiency. Specific cooperation areas may include: Sustainable management of natural resources; alternative and clean energy technologies, energy efficiency, natural resources management, mitigation of and adaptation to climate change, the Clean Development Mechanism, sustainable development and sustainable security energy etc.
- f) **Education and Culture:** Recommend priorities and programmes to facilitate interchange in the education, information and cultural fields. Initiatives may include: Forming of networks and long term partnerships between leading Indian and Danish academic and research centers; increased exchange of scientists in higher education; more scholarships; distance/virtual learning projects and networks; cooperation on preservation of cultural heritage; strengthening of cultural linkages across the cultural spectrum, covering for instance museums/libraries, fine arts and performing arts as well as sports.

Article - 4 Functions

- a) The Joint Commission may appoint sub-committees or ad hoc working groups within specific cooperation areas. The Joint Commission will determine the tasks and terms of reference of the working groups.
- b) The Joint Commission will meet regularly, at a time to be decided through diplomatic channels. The location will be alternating between India and Denmark.

Article - 5 Decisions and Procedures

- a) An agenda is to be agreed upon prior to each meeting
- b) The Joint Commission will determine its working procedures, with due regard to the provisions of this Agreement

- c) All procedural and administrative matters that are not provided for herein will be determined by the Joint Commission upon consent of the Parties.

Article - 6
Expenses

- a) Any administrative expenses related to meetings of the Joint Commission and/ or its ad-hoc working groups will be borne by the country in which the meeting is held. Each Party will bear the expenses of its own participation in meetings of the Joint Commission and its ad-hoc working groups.

Article - 7
Final Clauses

- a) The Agreement shall enter into force upon signature. It shall continue to be in force, unless either Party terminates the Agreement by giving six months prior notice in writing. The termination of the Agreement shall not affect the completion of any project undertaken in terms of this Agreement prior to its termination, unless the parties agree otherwise.
- b) The Agreement may be amended by mutual consent.
- c) Any difference between the Parties shall be settled through mutual consultation and negotiation.
- d) When the Agreement enters into force, the "Protocol on Consultations between the Ministry of External Affairs of India and the Ministry of Foreign Affairs of Denmark", signed in New Delhi on 6 September 1995, is no longer valid.

For the Government of
the Republic of India

For the Government of the
Kingdom of Denmark

610. Memorandum of Understanding between India and Denmark for Cooperation in the field of Renewable Energy.

New Delhi, February 6, 2008.

Having identified new and renewable energy as a common area of interest.

Desiring to establish New and Renewable Energy Cooperation between Danish and India entities with the aim of developing new and renewable energy technologies.

Have reached the following understanding:

Working Group

In order to coordinate the above-mentioned activities and decide upon project proposal related to design and development of various new and renewable energy technologies, the Parties intend to establish a "Joint Committee" with the objectives of:

- Identifying areas of mutual interest and cooperation for development of new and renewable energy technologies, systems, sub-systems, devices, components, etc.
- Monitoring and evaluating cooperation activities

The parties will designate one main representative each to the Joint Committee. For the aforesaid activities, the Joint Committee shall to the extent possible conduct its work through electronic communication, but meet alternately in India and Denmark, when that is deemed necessary.

The Joint Committee can co-opt other members from scientific institutions, research centres, universities or any other entity, as and when considered essential.

The present Memorandum of Understanding can be amended by the Parties through mutual consultation. The amendments shall be enclosed with the present Memorandum of Understanding and shall form an integral part of it thereof.

Entry Into Force, Duration and Termination

The Memorandum of Understanding will enter into force on the date of signing and shall remain in force unless revoked by the consent of the parties.

Either of the Parties may terminate the present Memorandum of Understanding by giving the other party a written notice, ninety days in advance of its decision to terminate the Memorandum of Understanding. Termination will not affect activities covered by collaborative contract between the executive agencies and already underway at the time of termination.

The undersigned being duly authorized thereto have signed this Memorandum of Understanding.

Signed at New Delhi on 6th of February, 2008 in two originals each in English and Hindi language, both texts being equally authentic. In case of any divergence in interpretation, the English text shall prevail.

FRANCE

611. Press Release of the Ministry of External Affairs on the State Visit of the French President Nicolas Sarkozy.

New Delhi, January 24, 2008.

The President of the French Republic H.E. Mr. Nicolas Sarkozy is paying a State Visit to India on 25 & 26 January 2008 at the invitation of the President H.E. Smt. Pratibha Devisingh Patil. This will be his first visit to India after assuming office in May, 2007. He will be the Guest of Honour at the Republic Day Parade. President Sarkozy is accompanied by a high level Ministerial and business delegation.

India and France have traditionally enjoyed warm and friendly relations with regular exchange of visits at the highest level. The two countries have Strategic Partnership and made substantial progress in expanding and deepening cooperation in diverse areas including political, defence, trade, economic, science & technology, culture and education.

Bilateral trade more than doubled in the last three years and stood at US\$ 6.23 billion in 2006-2007. France is the eighth largest investor in India with total investment commitments of US\$ 1.76 billion during the period 1991-2007. Major sectors attracting French investment and technology transfer have been fuels, chemicals, cement and gypsum products, glass, food processing, electric equipment, industrial machinery and transportation industry. French investments are expected to expand in coming years. India's IT, pharmaceuticals and other industries have been enhancing their presence in France.

There is an active exchange of experts taking place in key high-technology areas of research, under the aegis of Agreement for Cooperation in Science and Technology and specific agreements between specialized Indian Ministries or organizations and their French counterparts. Scientific and Technological Cooperation includes important areas like water technology including ground water research, pharmacology, nano-technology, neurosciences etc. Cooperation in medical research is also an important element of the scientific and technical collaboration, and is undertaken through collaborated arrangements of ICMR for India and INSERM-the French medical research body.

Indian culture enjoys a wide and discerning audience among the French population. In 2007, a number of important events were held in France during the 60th Anniversary of India's independence. These events spanned the entire diversity of the Indian art, music, dance and literature. Popular Indian cinema is finding new appreciation in France. The Paris Book Fair Salon du Livre held in March, 2007, had India as the Country of Honour. For the first time outside India, an exhibition of art and artifacts from the Gupta period was held at the prestigious Grand Palais from April-July, 2007. Similarly, important events to highlight French culture have also been organised in India, such as the first ever Picasso exhibition.

India provides the services of an Indian professor of Sanskrit at the Sorbonne University of Paris, and offers, on average, 16 one-year scholarships to French students wanting to specialize in India studies, including two scholarships for the study of Hindi. France actively promotes educational exchanges and offers scholarships for studying French language, hotel management, public administration, fine arts, mass communication etc. The French Government has been taking an active interest to attract a greater number of Indian students for higher studies in France, and organized "Higher Education in France" fairs in India in 1998, 1999 and 2003 and 2007.

The French President's visit is expected to provide fresh impetus to bilateral relations. After the conclusion of the bilateral talks, a Joint Statement will be issued which would provide a strategic roadmap not only for our future cooperation but also for our strategic partnership in the promotion of shared and cherished values in the global arena. Several agreements/MoUs in the fields of defence, railways, science and technology including neurosciences and education are likely to be signed during the visit.

612. Briefing by Official Spokesperson on the State visit of French President Nicolas Sarkozy.

New Delhi, January 24, 2008.

Official Spokesperson (Shri Navtej Sarna) : Good afternoon. The state visit of President of France His Excellency Mr. Nicolas Sarkozy on 25th and 26th of January, as you know, begins tomorrow morning. He comes at the invitation of President Shrimati Pratibha Patil. This will be his first visit to India after assuming office in May 2007. He will be the Guest of Honour at the Republic Day Parade. President Sarkozy is accompanied by a high level Ministerial and business delegation.

I will give you some background on the relationship. India and France have traditionally enjoyed warm and friendly relations with regular exchange of visits at the highest level. The two countries have strategic partnership and have made substantial progress in expanding and deepening cooperation in diverse areas including political, defence, trade, economic areas, science and technology, culture and education.

Bilateral trade has more than doubled in the last three years. It currently stands at US \$ 6.23 billion. That is 2006-07 figures. France is the eighth largest investor in India with total investment commitments of US \$ 1.76 billion during the period 1991 to 2007. Major sectors for French investment and technology transfer have been fuels, chemicals, cement, gypsum products, glass, food-processing industries, electric equipment, industrial machinery and the transportation industry. The French investments are

expected to enhance in the coming years. As far as Indian industries are concerned, Indian IT industry, pharmaceuticals and other related industries have been enhancing their presence in France.

An active exchange of experts has been taking place in key high technology areas of research. This happens under the aegis of the Cooperation in Science and Technology Agreement as well as specific agreements between Indian and French organizations. Particular areas in science and technology which both countries are working on include water technology - that includes ground water research - pharmacology, nanotechnology, neurosciences and so on. Cooperation in medical research is also an important aspect of the bilateral relationship. This is taking place through collaborated arrangements of ICMR in India and INSERM, which is the French medical research body.

Indian culture enjoys a wide popular appeal among the French population. A number of events took place in 2007 during the 60th Anniversary of India's Independence in France. They spanned the entire diversity of Indian art, music, dance and literature. Popular Indian cinema is finding new appreciation in France. The Paris Book Fair, Salon du Louvre, held in March 2007 had India as the country of honour. For the first time outside India, exhibition of arts and artifacts from the Gupta period was held at the prestigious Grand Palais from April to July 2007.

Similarly, important events of French culture have been organized in India such as the first ever Picasso exhibition. In other cultural matters, India provides an Indian Professor of Sanskrit at the Sorbonne, University of Paris, and offers on an average sixteen one-year scholarships to French students wanting to specialize in Indian studies, including two scholarships for the study of Hindi. France similarly promotes exchanges and offers scholarships for studying the French language, hotel management, public administration, fine arts, mass communications, etc. The French Government has taken an active interest in promoting higher studies by Indian students in France.

The visit of the French President is expected to provide a fresh impetus to bilateral relations. We would expect that a joint statement is issued after the bilateral talks which will provide a strategic roadmap for our future cooperation and also for strategic partnership in several areas of shared

interest. We would also expect that a number of agreements and MoUs¹ will be signed after the talks. While you will get the specific names, etc., later, these are expected to be in the areas of defence, railways, science and technology including neurosciences, and education.

We will keep you briefed after the visit. A joint press conference is expected to be there for which you have already got the advisory.

Question: Do we know for sure whether Ms. Carla Bruni is coming or not?

Official Spokesperson: As far as the delegation list that we have received, her name is not there.

Question: But you are not ruling it out....

Official Spokesperson: I can only tell you on what we have received. I do not want to get into anything else.

Question: Will the French President visit Agra?

Official Spokesperson: So I understand.

Question: Will the issue of ban on wearing turbans in Government schools in France be taken up?

Official Spokesperson: There are going to be bilateral talks between the Prime Minister and President Sarkozy; there are going to be delegation level talks; and there are going to be calls by other Ministers, etc. I cannot tell you today which of the issues is going to be taken up by whom, when, for how long, etc. So, give us a chance. We will tell you when it is over.

1 On the eve of the visit media quoting informed sources speculated that while India and France had successfully negotiated an agreement on civil nuclear cooperation, it was unlikely to be signed during the visit. The media reports said France had agreed with India's explanation that it would wait for a safeguards agreement with the International Atomic Energy Agency (IAEA) and a special exemption by the Nuclear Suppliers Group (NSG). The Chennai based daily *the Hindu* quoting informed sources referred to the joint India-France statement in 2005, which noted the possibility of civil nuclear cooperation, said on January 22: "The ambition of Mr. Sarkozy is to go one step further and make everything possible for the day when an India-specific safeguards agreement is finalised by the IAEA and special status given by the NSG.....India is a non-proliferating State and needs additional sources of energy because it has a high growth rate. Since India is not going to change its stance [of not signing the Nuclear Non-Proliferation Treaty], special status for it is necessary so that it is in compliance with the IAEA rules and recognised by the NSG." The same report said 'Mr. Sarkozy will discuss with Dr. Singh regional issues such as the West Asia peace process, Iran, Pakistan and, possibly, cooperation between the two countries in Africa where India's presence has increased. France will also reiterate its support for India's inclusion in the United Nations Security Council and the G-8.....In the area of strategic partnership, France is ready to share with India, "in accordance with international agreements," technology and know-how in sensitive areas such as space, civil nuclear energy and military.'

Question: Have we made any statement in the past on this issue?

Official Spokesperson: I think if you look back you will see that we have made statements and this is a matter which has been discussed earlier.

Question: Can you confirm if the Indian Government at any level has told the French Government not to give Taslima Nasreen the award of Simone de Beauvoir during President Sarkozy's visit to India?

Official Spokesperson: I cannot say anything to you on that. This is not an issue which I think I should be speaking on.

Question: But at least we have indicated it to them diplomatically....

Official Spokesperson: I have no information.

Question: Does the defence agreement relate to upgradation of ... (inaudible)...

Official Spokesperson: I know that there is expected to be an agreement/MoU in the area of defence. What it is I can tell you once we know. Guesswork does not help.

Question: There are reports that a nuclear agreement will either be signed or talked about. What is the position?

Official Spokesperson: I have not even seen the reports.

Question: Is any fresh investment going to be announced by the French Government in India? Will that be discussed in the meeting so that it could be enhanced later?

Official Spokesperson: I do not think these are Government investments. Whether they are interested in enhancing investments in India or the other way round is a possible issue that may be discussed.

Question: Is Lakshmi Mittal going to be a part of the business delegation?

Official Spokesperson: We do not have a list of the business delegation yet. When we get that we will certainly share it with you. It is not a problem. Normally the business events are done by FICCI and CII together. So, it is possible that they may already have information on who all are coming.

Thank you.

613. Prime Minister's Statement at the Joint Press interaction with French President Nicolas Sarkozy.

New Delhi, January 25, 2008.

Your Excellency Mr. Nicolas Sarkozy,

Ladies and Gentlemen of the press,

We are deeply honoured to have President Sarkozy as the Chief Guest for our Republic Day celebrations.

President Sarkozy and I have just concluded very productive and wide-ranging discussions. We have reaffirmed our strong mutual desire to further strengthen our strategic partnership. This partnership is of long-standing, and rests on shared values, and similar approaches to regional and global issues.

We have agreed to consolidate our multi-faceted cooperation in the areas of trade and investment, technology transfer, space, defence, civil nuclear energy, culture and education. The initiatives that we have taken reflect our mutual strengths and the growing potential of our countries to contribute to each others development and national priorities.

We have agreed to intensify business to business contacts, and establish an Indian Cultural Centre in Paris. President Sarkozy indicated to me his intention to facilitate the travel of a larger number of Indian students to France for higher studies.

In the area of defence cooperation, we have agreed to go beyond a buyer - seller relationship. We will increasingly focus on joint R&D projects, transfer of technology, and greater military exchanges.

We have concluded negotiations for arriving at a bilateral agreement for cooperation in the field of civil nuclear energy. I conveyed our appreciation for France's steadfast support for the lifting of international restrictions on nuclear cooperation with India that are still in place.

President Sarkozy and I agreed that there was need to reform international institutions to bring them in conformity with existing realities. President Sarkozy reiterated France's full support for India's permanent membership of expanded UN Security Council. We have agreed that there is immense scope for India and France to work towards creating a more equitable and inclusive international order.

We have agreed to strengthen our cooperation in counter terrorism. A global fight against terrorism is essential to protect open, democratic and multi-cultural societies like ours.

President Sarkozy showed deep understanding of India's perspectives on the issues of energy security, sustainable development and climate change. The Joint Declaration that we have issued on Global Warming reflects our desire to strengthen our cooperation in this area within the framework of the Bali process and the provisions and principles of the UN Framework Convention on Climate Change.

I have accepted with pleasure President Sarkozy's invitation to me to visit France for the next India - European Union Summit, and look forward to continuing my dialogue with him.

614. Joint Statement issued on the occasion of the Visit of French President Nicolas Sarkozy.

New Delhi, January 25, 2008.

President Nicolas Sarkozy's State visit to India and his presence as the Chief Guest at the Republic Day commemorations reflects the shared commitment of both India and France to provide fresh impetus to their strategic partnership.

India and France are democracies which share common values of freedom, human rights, secularism, rule of law, tolerance and believe in multilateralism in the international political and financial architecture as the means to tackle global challenges effectively. These human values are at the core of their enhanced cooperation and strategic partnership.

I. Strategic Partnership:

India and France hold convergent views on major regional and international issues. Both countries are committed to international peace & security, nuclear non-proliferation and counter terrorism.

France supports India's inclusion as a permanent member of Security Council, thus making the UN more relevant to the needs of the 21st century

and enabling India to play its role in world affairs. France also believes the G-8 needs to be expanded over time to G-13 including India.

Both countries are acutely aware of the serious dangers posed by extremism and terrorism worldwide. In order to face this common threat, both countries agreed to strengthen their cooperation against international terrorism through, inter-alia, increased operational contacts.

The two countries agree on the importance of an early, balanced and comprehensive outcome of the Doha Round of multilateral trade negotiations with focus on the development dimension.

India and France are committed to environmental protection and in this context have issued a separate joint declaration.

To enhance their strategic dialogue, both countries will hold regular consultations between high ranking officials of their respective Foreign Ministries on issues of mutual interest.

II Bilateral Relations

In line with the excellent bilateral relations that already exist between the two countries, it was agreed to intensify the exchange of high-level visits in various areas of interaction.

Both countries will consolidate their relationship in the field of defence by increasing by increasing the range, level and frequency of their military joint-operations and cooperation. In this regard, it was agreed to deepen further their joint programmes and prospects in defence industry, conduct joint research and facilitate transfer of technology in this vital area. Both Sides welcomed the signing of the Agreement for the Protection of Classified Information and Security. Both Sides decided to initiate detailed discussion on Status of Forces Agreement.

Both countries agreed to maintain the momentum of cooperation in the Space Sector.

Convinced that strong economic ties can be further built in a spirit of social and environmental responsibility, India and France are eager to maintain the fast rising trend of their trade and the smart pace of their business to business relations. Both countries aimed to work towards achieving an ambitious target of reaching 12 billion euro bilateral trade by 2012 and significantly stepping up investments.

Acknowledging the considerable potential for bilateral trade, investment and services, the two Sides noted the importance of improving market access. The two Sides agreed to continue encouraging cooperation between their companies, especially the Small, Medium and Micro enterprises. They also agreed to enhance their engagement in consular matters including facilitation of visas for businessmen, professionals and interns. They would also endeavour to foster bilateral consultations regarding respective social security systems so that mutually beneficial arrangements for the citizens of both countries operating in France and India could be developed.

The two Sides welcomed the Agreement¹ concluded concerning the establishment of the Agence Française de Développement (AFD - French

2.	Agreement between India and France on Transfer of sentenced Prisoners	H.E. MS. RACHIDA DATI Justice Minister, Republic of France	SHRI. SHIVRAJ PATIL Hon'ble Home Minister
3.	Agreement between Commissariat a L' Energie Atomique (CEA), France and DAE, India for construction and operation of Jules Horowitz (JH) Reactor	MR. ALAIN BUGAT Chairman & Chief Executive Officer, CEA	DR. ANIL KAKODKAR Chairman AEC & Secretary DAE
4.	Agreement between the two Governments on India-French Development Cooperation Through AFD	H.E. MR. JEROME BONNAFONT Ambassador of France to India	DR. D. SUBHA RAO Finance Secretary
5.	MOU on an International Associated Laboratory in the field of Neuro Science	PROF. ANDRE SYROTA General Director of IN SERM & MR. GUY COUSINEAU President of the University of Paris VII	PROF. VIJAYALAKSHMI RAVINDRANATH Director, NBRC (National Brain Research Centre)

Development Agency) in India. It was noted that France plans to support projects to address, inter alia, global challenges, in particular, climate change adaptation and mitigation.

India and France have signed an agreement for the transfer of sentenced persons.

The Sides paid tribute to the contribution of the Indo-French Forum to further bilateral links. They welcomed the idea of creation of an Indo-French Foundation to foster relations between economic partners and support projects in the fields of science, education and culture.

III. Development of Civil Nuclear Cooperation

France and India have decided to give a new impetus to their cooperation for the development of nuclear energy for peaceful purposes as an expression of their strategic partnership. Both Sides recognize that as a reliable source of sustainable and non-polluting energy, it could make a significant contribution to meeting the global challenge of achieving energy security, sustainable development, economic growth and limiting climate change. As responsible states with advanced nuclear technologies, including in the nuclear fuel cycle, France and India are interested to promote nuclear energy with the highest standards of safety and security and in accordance with their respective nuclear policies and international obligations. France and India share common concerns and objectives in the field of non-proliferation of weapons of mass destruction and their means of delivery including in view of possible linkages to terrorism. In this regard, France appreciates India's long standing and continuing contributions to international non-proliferation.

Building on their on-going decades-old cooperation in the fields of fundamental and applied research, and nuclear safety, it was agreed to broaden and boost this partnership. To this end, France and India have finalized negotiation in regard to reaching a bilateral agreement for civil nuclear cooperation. This agreement will form the basis of wide ranging bilateral cooperation from basic and applied research to full civil nuclear cooperation including reactors, fuel supply and management. To this end, both Sides look forward to the finalization of India specific safeguards agreement with the IAEA and the adjustment of international civil nuclear cooperation framework. France expressed its support for the same.

Another agreement has been signed today in the field of nuclear research, which is a key for preparing for the future. It relates to the participation of the Indian Department of Atomic Energy in the research project, the Jules Horowitz Reactor, which will be built by the Commissariat à l'énergie atomique (French Atomic Energy Commission) at Cadarache, France. An MOU that establishes cooperation between the Bhabha Atomic Research Centre and the Tata Institute of Fundamental Research on the one hand, and the Grand Accélérateur National d'Ions Lourds (GANIL), on the other hand, on the use of Spiral 2 high intensity beam production system at Caen, France will be signed in Mumbai. India and France also agreed to intensify exchanges between the scientists of both countries in the nuclear field; establish structures for training and undertake nuclear safety research. In addition, the existing dialogue between respective nuclear safety authorities will also be reinforced especially the context of future industrial cooperation. At the industrial and commercial levels, France and India agreed to work towards raising the level of bilateral cooperation guided by their deep mutual trust and the high technological capabilities of the two countries.

IV. People to People Contacts

India and France agreed to intensify cooperation in the fields of education, culture, tourism & scientific research. It was agreed that efforts will be made for early establishment of an Indian Cultural Centre in Paris and that France will facilitate this task. The two Sides decided to promote cooperation in the field of education, enhance linkages between their respective educational systems as also foster exchange of students. This, along with creation of joint international laboratories, cooperation on technologies for water management and the establishment of an Indo-French University Consortium, is expected to result in all round intensification of ties. To promote such wide ranging people-to-people contacts, both countries agreed to the reciprocal opening of Consulates in each other's territory and, in this context, welcomed the opening by France of two new Consulates in India, in Kolkata and Bangalore, in 2008.

V. EU-India

Both countries reiterated the importance of the strategic partnership between India and the European Union. France is due to take over the Presidency of the EU beginning July 2008. During the French Presidency, efforts will be undertaken to enhance ties through the mechanism of the Joint India-EU Action Plan. Both Sides expressed their commitment for an

early and mutually beneficial conclusion of the negotiations for India-EU Broad-based Trade and Investment Agreement. President Sarkozy extended an invitation to the Prime Minister of India to pay an official visit to France in 2008 on the occasion of EU-India summit. Prime Minister of India accepted the invitation in principle.

615. Joint Declaration of France and India on the fight against global warming.

New Delhi, January 25, 2008.

- I- France and India, aware of the impact of climate change on the survival and development of humanity, the importance and urgency of the fight against climate change and the implementation of sustainable development, desirous of acting closely and concertedly to fight global warming and to avert its potential consequences for the survival and development of humanity, have decided to unite their efforts to rise adequately to this major challenge. They recall the recent report published by the Intergovernmental Panel on Climate Change (IPCC) which provides the scientific evidence of the urgency to address climate change. Their efforts form part of the agenda outlined in the Bali Action Plan adopted on 15th December 2007 during the 13th Session of the Conference of the Parties to the United Nations Framework Convention on Climate Change (UNFCCC) and the 3rd session of Parties to the Kyoto Protocol, in keeping with the principle of common but differentiated responsibilities and respective capabilities that they have accepted. They recall their commitments to the provisions and principles of the United Nations Framework Convention on Climate Change and its Kyoto Protocol. They are pleased to note the progress made in Bali with regard to operationalisation of the "Adaptation Fund" and trust that the secretariat services provided in the interim period of three years by the Global Environment Facility (GEF) would be efficient, cost-effective, and timely.
- II- France and India reinforce their exchanges in the field of climate change policies, with timely cooperation and exchange of views on

international negotiations on climate change. In this regard, they are committed to work towards the swift achievement of a consensus by 2009 on long term cooperative action in the fight against climate change now, up-to and beyond 2012. They reaffirm that the goal of the international community in the face of climate change must be the stabilization of atmospheric concentrations of greenhouse gases to a level that would prevent dangerous anthropogenic interference with the climate system as per the objective of the UNFCCC. They also agreed that long-term convergence of per capita emissions of developing countries and developed countries is an important principle that should be seriously considered in context of the international climate change negotiations. They shall jointly endeavour to achieve this, particularly by working actively and constructively within the framework of the UNFCCC and the Kyoto Protocol.

- III- France and India commit themselves to strengthening cooperation on climate change and other environmental problems (biodiversity, water resources, desertification, natural calamities, forests, waste management, fight against pollutions), as well as to the promotion of technology R&D, including collaborative R&D, innovation, dissemination, application and transfer to developing countries. They further strengthen their cooperation in this area in order to increase their adaptation capacities by acting in the following fields:

- 1- Modelling climate change;
- 2- Study of vulnerability arising from climate change and its effects;
- 3- Improvement of facilities for the projection of climate change and its consequences;
- 4- Research and development of technologies and means for adapting to climate change;

They have decided to explore the possibilities of cooperation with third countries for the benefit of LDCs.

- IV- France and India emphasize on the importance of the effort aiming at moderating carbon intensity while maintaining economic growth, and devote themselves to a pragmatic promotion of cooperation in the area of technology research & development, application and

transfer to developing countries to fight against climate change, especially regarding energy-saving, improving energy efficiency and long-lasting energy infrastructure, civilian nuclear energy, renewable energy, and other low-carbon technologies, and build an environment-friendly economy.

- V- They encourage the creation of joint initiatives in order to disseminate innovative technologies for fighting climate change. They also encourage their respective industries and financial institutions to be further involved in joint projects for sustainable development and fighting climate change.
- VI- They underline the importance of market mechanisms for financing the fight against climate change, along with public financing. They encourage the pursuit and intensification of projects undertaken in the framework of "Clean Development Mechanisms" (CDM) of the Kyoto Protocol, enabling the reduction of greenhouse gas emissions.
- VII- They recognize the importance of reducing emissions from deforestation by working towards conservation and sustainable management of forests, afforestation, and reforestation.
- VIII- Further, with a view to reinforcing their cooperation, France and India have decided to build a specific partnership, in the framework of their global strategic partnership, for fighting against climate change in order to reconcile, in their bilateral exchanges, the legitimate quest for a mutually beneficial economic growth, with environment-friendly measures, especially the fight against climate change.

In this spirit, they have agreed to the following measures and orientations:

- France and India have decided to create a Franco-Indian working group on the environment dealing namely with clean technology transfers and their financing. This working group, which will be composed of representatives of the two States but also those from civil society (companies, NGOs), to identify cooperative action for swift implementation, particularly in the following areas:
 - energy efficiency and energy-saving;
 - renewable energies;
 - hydrogen and fuel cells;

- clean coal;
- civilian nuclear energy, in conformity with the terms of the Joint Statement adopted this day;
- conservation and sustainable management of forests, afforestation and reforestation, and soil management;
- biodiversity;
- health and environment.
- To this end, France and India encourage the participation of public and private players, and local authorities for innovative technological cooperation projects for the fight against climate change, including those involving its financing, bringing concrete responses in the aforementioned areas.
- France and India commit themselves to the exploration of cooperative projects in different areas such as the iron and steel industry, long-lasting energy infrastructure (essentially hydroelectric dams, thermal power stations and networks) but also urban development, energy-efficient transports (high-speed trains, Metro, trams). The vast distribution of individual lighting through solar bulbs could also be considered.
- France and India recognise the ongoing fruitful cooperation between the Agence de l'Environnement et de la Maîtrise de l'Energie (ADEME-Environment and Energy Control Agency) and the Bureau of Energy Efficiency, India. This cooperation will promote energy efficiency measures in India.
- The two Parties will strengthen their partnership particularly in areas like education, and promote exchange and training of personnel. The Parties would take steps to encourage cooperation between their major research establishments and laboratories as well as exchanges between their researchers and experts.

Further, they recall the utmost importance that they attach to their civilian nuclear cooperation, which will enable both countries to reconcile their desire for economic development with respect for the environment.

616. Speech of President Shrimati Pratibha Devisingh Patil at a Banquet in honour of the French President Nicolas Sarkozy.

New Delhi, January 25, 2008.

Your Excellency President Sarkozy,

Distinguished Members of your Delegation,

Ladies and Gentlemen,

It is with the greatest of pleasure that I extend to you, Mr. President and to your distinguished delegation, a very warm welcome from the Government and the people of India. Your State visit is a testament to our mutual desire to renew and to strengthen the friendly ties and partnership between our two countries. We value your presence here today and are honoured to have you as the Chief Guest of our Republic Day celebrations. We look at your visit as an important milestone in the effort of our two countries to further strengthen our Strategic Partnership.

Our two nations share a profound commitment to the values of freedom and human dignity. 'Liberty, equality and fraternity' the slogan of revolutionaries everywhere from the time of the French Revolution, also influenced the leaders of India's freedom struggle and democratic construction. It is now for us to revitalize this common heritage in the search for a more just and equitable world order.

As a vibrant democracy of more than one billion people, India takes pride in its multi-cultural, multi-ethnic and multi-religious milieu. Indeed for us - a democratic ethos infuses the life of the Indian nation and gives inspiration and opportunity to our people, just as it does to yours. It is through respect for plurality and democracy that India celebrates its unity in diversity. It is the commitment to human values that enable us to live with both continuity and change.

Mr. President,

We share your belief that the institutions and structures that marked life in the 20th century are outdated. France and India have very similar visions of how they would like to see the world of the 21st century take shape. A vision that is in keeping with the deep pride and confidence that both our countries feel on account of their rich cultural heritage and independent decision making. It also reflects a shared belief in a rule based, multi-polar and a just world.

We appreciate your call for greater inclusiveness in global institutions. We deeply appreciate France's constant support for the permanent membership of India in the UN Security Council. France is an important partner in the context of India's interaction with the G-8 and the European Union. We look forward to working closely with France during its Presidency of the European Union in the latter half of 2008.

India is well placed to be a bridge between the developed and developing countries and to contribute to dealing with global challenges as well as global opportunities of our era.

We seek, what Nobel Laureate Prof. Amartya Sen - who you know well - describes as, a "humane globalization" that will make knowledge available to all and enable millions of men and women to achieve economic development. I am confident that we can work together on the technologies, institutions and human resources, to develop synergies necessary to shape a better future for all humankind.

Cultural and intellectual ties bind us closely and are vital. The magnificent exhibition of Gupta era sculptures in Paris last year received a warm response. The vibrant exchanges between our Universities, institutes of higher learning, scholars, artists and intellectuals are of great importance. We hope that an Indian Cultural Centre will be established in Paris before long.

Excellency, your belief in opening and in adapting to change is most significant not only for your own nation and for Europe but as a template for a world in transition. Pandit Jawaharlal Nehru, our first Prime Minister, said "I am proud of India not only because of her ancient, magnificent heritage but also because of her remarkable capacity to add to it by keeping the doors and windows of her mind and spirit open to fresh and invigorating winds from distant lands." In the common endeavour of fostering a more open and cooperative world you can count on India as a partner.

In conclusion, may I propose a toast:

- to the health and prosperity of His Excellency President Nicolas Sarkozy;
- to the progress and prosperity of the friendly people of France; and
- to the growing friendship and cooperation between India and France.

617. Agreement between The Government of the Republic of India and The Government of the French Republic concerning the Protection of Classified Information and Material in the field of Defence.

New Delhi, January 25, 2008.

The Government of the Republic of India and The Government of French Republic, Hereinafter referred to as "the Parties".

Desiring to protect classified information and material exchanged between the Parties in the field of defence within the framework of co-operation Agreements concluded or to be concluded and within the framework of invitations for tenders, contracts or orders from public or private organisations from the Parties.

Hereby agree as follows:

ARTICLE 1

DEFINITIONS

For the purpose of this Agreement:

"Classified information and material" refers to information and material to which a specific level of security classification has been accorded, regardless of its nature and mode of transmission, which requires protection against compromise, destruction, removal, disclosure, loss or access to any unclassified and unauthorized person, in the interest of national security in accordance with national laws and regulations of the respective Parties.

"Host Party" means the Party to whose territory a visit is made.

"Providing Party" means the Party that provides classified information or material to the other Party.

"Competent security authorities" means designated security authority or competent authorities authorized by national laws and regulations of the Parties which are responsible for the implementation of this Agreement.

"Receiving Party" means the Party with whom classified information or material is shared by the Providing Party.

"User" means any legal entity or individual cleared by the Parties to deal with the classified information and material.

"Need to know" means the need to have access to classified information in the scope of a given official position and for the performance of a specific task.

ARTICLE 2

PURPOSE

This Agreement constitutes the common security regulations applicable to any exchange of classified information for all agreements, contracts or subcontracts concluded during the period of validity of this Agreement between or by the Parties or by their duly authorized agencies.

ARTICLE 3

COMPETENT AUTHORITIES

The security authorities competent for the execution of this Agreement are the following:

For the French Republic:

**Ministry of Defence
14 rue Saint-Dominique
00455 Armees**

For the Indian Republic:

**Ministry of Defence,
South Block,
New Delhi**

The parties shall inform each other about any change in their competent security authorities.

ARTICLE 4

SECURITY PRINCIPLES

The Parties shall, in accordance with their national laws and regulations, take all measures necessary for the protection of classified information and material provided to them under this Agreement or in accordance with agreements, contracts or sub-contracts concluded between or by the Parties or by their duly authorized agencies for that purpose.

The protection and exchange of classified information and material between the Parties shall be governed by the following principles:

1. The Receiving Party shall grant the classified information and material received a level of protection equivalent to the level duly granted to them by the Providing Party.
2. Access to classified information and material shall be limited only to persons who have been cleared from the security angle at the required level by the competent security authority of the Party and whose functions require access to such classified information and material based on "need-to-know" principle.
3. The Receiving Party shall not disclose classified information and material to a third Party, State, individual or legal entity with a third State's nationality, or to an international organization without the previous written consent of the providing Party.
4. Classified information and material exchanged between the parties shall not be used for purposes other than those for which they have been officially provided.
5. The Receiving Party shall neither downgrade nor declassify any classified information and material without the previous written consent of the Providing Party.
6. Information or material generated as a result of activities carried out in accordance with this Agreement shall be classified through mutual consultations between the Parties or by their duly authorized agencies.

ARTICLE 5

SECURITY CLASSIFICATION AND EQUIVALENT CLASSIFICATIONS

1. Having taken cognizance of the security measures prescribed by their respective national laws and regulations, the Parties shall undertake to protect the exchanged classified information and material and adopt the equivalence of security classification levels as defined in the table below:

France	India
SECRET DEFENSE	SECRET
CONFIDENTIEL DEFENSE	CONFIDENTIAL
DIFFUSION RESTREINTE Nota	RESTRICTED

NOTA : Information marked 'RESTRICTED' are the information handled and protected in France in accordance with its national laws and regulations applied for the protected but not classified information "DIFFUSION RESTREINTE".

Information not classified but with the "'DIFFUSION RESTREINTE" protective marking transmitted by the French Party will be handled and protected by Indian Party in accordance with its national laws and regulations applied for "RESTRICTED" information.

2. At the request of the other Party, each Party shall, in order to maintain comparable security standards, provide information about its security regulations, procedures and practices for safeguarding classified information and material. Each Party shall facilitate contacts of the security authorities of both Parties.
3. The Parties shall keep each other informed of any amendment regarding their national security laws and regulations related to classified information and material.

ARTICLE 6

SECURITY CLEARANCE

1. In order to get access to classified information and material with a CONFIDENTIEL DEFENSE/CONFIDENTIAL or higher classification, each Party shall follow a prescribed national security clearance procedure.
2. With regard to security clearance of a national of one Party who is required to stay on the other Party's territory in pursuance of the agreements or contracts under this Agreement, the competent security authorities of the concerned Party shall, on request of the other Party, facilitate such clearance in accordance with their national laws and regulations.

ARTICLE 7

CLASSIFICATION, RECEPTION AND AMENDMENTS

1. On receiving classified information and material from the other Party, the Receiving Party shall undertake to stamp its own national security classification in accordance with the equivalence established in article 5.

2. The Parties shall inform each other of any amendment to the classification of information and or material forwarded to the other Party.

ARTICLE 8

DOWNGRADING, DECLASSIFICATION AND TRANSMISSION TO THIRD PARTIES

Classified information and material exchanged, transmitted, developed or under development in co-operation by both Parties according to agreements, contracts or any other common activity shall not be downgraded, declassified or sent to a third party, State, individual or legal entity with a third State's nationality, or an international organization, without the previous written consent of the other Party.

ARTICLE 9

TRANSMISSION OF CLASSIFIED INFORMATION BETWEEN THE PARTIES

1. Classified information and material shall be transmitted from one Party to the other via diplomatic channels.
2. The competent security authorities may, by mutual consent, agree that classified information may be transferred by a means other than through diplomatic channels insofar as said method of transfer proves to be unsuitable or difficult.
3. The Receiving Party shall confirm the receipt of classified information and material as quickly as possible, and shall forward such information and material to the user.

ARTICLE 10

DISCLOSURE, EXECUTION AND DIRECTIVES

Each party shall inform the relevant users of the applicability of this Agreement in respect of classified information and material shared and exchanged between the two Parties.

ARTICLE 11

SECURITY MEASURES

1. For the purpose of the transmission of classified information and material from one Party to users from the other Party, the Receiving Party shall:

- a) Ensure that their facilities have the capabilities to protect the Classified information and material adequately;
 - b) Grant these facilities a security clearance at the appropriate level;
 - c) Grant a security clearance at the appropriate level for individuals whose functions require them to have access to the classified information and material;
 - d) Ensure that - all individuals, who have access to such Classified information and material, are aware of their responsibilities to protect classified information and material in accordance with applicable laws and regulations; and
 - e) Carry out regular security inspections of their facilities.
2. For pre-contractual negotiations involving a classified contract or sub-' contract between a user located in the territory of one of the Parties, and the other in the territory of the other Party, the competent security authority of the Providing Party shall inform his counterpart about the security classification of the information or material linked to these precontractual negotiations.
3. For any contract or sub-contracting contract that includes classified information and material, a security annex shall be drawn up. In this annex, the competent security authority from the Party forwarding the information or the material, shall specify what has to be protected by the Receiving Party, as well as the corresponding classification level, applicable to it. Only the originating authority of the Providing Party may amend the classification level of an information or material listed in a security annex. The competent national security authority of the Providing party shall forward a copy of the security annex to the competent security authority of the other Party.

ARTICLE 12

VISITS

1. Visits by nationals from one Party to a location of the other Party, where classified information and material are stored, shall be authorized provided that a prior written authorization for such visits has been granted by the competent security authority of the Host Party. Visits carried out by nationals of a third State involving access

to classified information and material exchanged between the Parties, or areas where such information and material are stored, may be authorized with the mutual consent of the Parties.

2. Visit requirements shall be forwarded through diplomatic channels to the competent security authority of the Host Party. These requirements shall arrive at least three weeks before the required visit. Visit requirements shall include data listed in Annex to this Agreement.
3. A Party may require for a visit authorization for a maximum period of 12 months. If it is felt that a specific project will not be completed within this period or that the authorized period for regular visits should be extended, the Party that requires the visit may apply for a new visit requirement within a period not less than three weeks before the expiry of the authorization for the ongoing visit.
4. All visitors of either Party shall comply with the security regulations and directives of the Host Party.

ARTICLE 13

MULTIPLE VISITS

1. For any project, program or contract, the Parties may agree to draw up lists of individuals authorised to carry out multiple visits, according to the modes and conditions mutually agreed upon by the competent security authorities of both Parties. These lists would be valid for an initial period of twelve months, which can be extended by the mutual consent of both Parties for not more than twelve months at a time.
2. The above mentioned lists shall be drawn up and approved in accordance with regulations in force of the Host Party. Once these lists are approved by the Parties, the specific visit conditions may be settled directly with the concerned authorities of the facilities to be visited by individuals mentioned in these lists according to the agreed terms and conditions.

ARTICLE 14

IMPLEMENTATION VISITS

1. In order to check that security measures are correctly enforced, each Party shall, in accordance to its own national laws and regulations,

carry out security inspections in facilities where classified information and material shared or exchanged under this Agreement are stored.

2. In accordance with the procedures set out in Articles 12 and 13, when requested, representatives of either Party may visit establishments and facilities in the territory of the other Party to discuss with the competent authorities the procedures and practices for the protection of classified information transmitted by the concerned country, and satisfy themselves that the security arrangements in relation to specific projects are in place.

ARTICLE 15

SECURITY BREACHES

In the event of a security breach, for example, destruction, diversion, removal, unauthorised copy, disclosure, or real or presumed loss of classified information and material shared and exchanged, the Receiving Party shall carry out an inquiry and take all appropriate measures in accordance with its national laws and regulations, in order to limit the consequences and to prevent any further breach of security. The Receiving Party shall inform the Providing Party of the results of such an inquiry as well as of the measures taken to prevent recurrence of such breaches.

ARTICLE 16

EXPENSES

- 1) In principle, the performance of this Agreement shall not generate any special costs.
- 2) All expenses in connection with the execution of this Agreement shall be borne by the concerned Parties within their available budgets.

ARTICLE 17

DISPUTE RESOLUTION

1. Any dispute regarding the interpretation or the implementation of this Agreement shall be settled only through consultation between the Parties.
2. During the period of the dispute, both Parties shall continue to fulfil all of their obligations under this Agreement.

ARTICLE 18

IMPLEMENTATION, AMENDMENT AND TERMINATION

1. Each Party shall notify the other Party of the fulfillment of the required internal procedures, to the extent relevant, for the entry in to force of this Agreement. This Agreement shall enter into force on the day of receipt of the second notification. The provisions of this Agreement shall also apply to classified information and material exchanged prior to its entry into force.
2. This Agreement can be amended at any time by a mutual consent.
3. This Agreement shall remain in force for a period of 10 years. It shall be renewed by tacit consent for new 5-year period unless one of the Parties notifies the other Party of its intention not to renew it in writing 6 months prior to the end of its current period of validity.
4. This Agreement may be terminated by either of the Parties at any time with a 6 months notice. Such termination shall not, however, alter the rights and obligations of the Parties regarding the protection of classified information and material exchanged under this Agreement.
5. Should this Agreement be terminated and as long as the Providing Party has not notified their declassification to the Receiving Party, classified information and material exchanged under and during the period of this Agreement, as well as those resulting from Agreements, contracts or sub-contracts covered by it which are still valid or in force, shall continue to be protected 21S provided for by these provisions, even if such information is transferred after its termination.

In witness whereof, the representatives of both the Parties duly authorized for this purpose, have signed this Agreement and have affixed their seals.

Done at New Delhi on 25th January, 2008 in two copies, each in the French, Hindi and English languages, all texts being equally authentic.

618. Agreement Between the Government of the Republic of India and the Government of the Republic of France on the Transfer of Sentenced Persons.

New Delhi, January 25, 2008.

The Government of the Republic of India and the Government of the Republic of France hereinafter referred to as the Contracting States;

Desiring to facilitate the social rehabilitation of sentenced persons into their own countries; and

Considering that this objective should be fulfilled by giving foreigners, who have been convicted and sentenced as a result of their commission of a criminal offence, the opportunity to serve their sentences within their own society;

Have agreed as follows:

ARTICLE 1

DEFINITIONS

For the purpose of this Agreement:

- (a) "judgment" means a judicial decision or order imposing a sentence.
- (b) "sentence" means any punishment or measure involving deprivation of liberty ordered by a court or tribunal for a limited or unlimited period of time in the exercise of its criminal jurisdiction. For the implementation of the present Agreement, the expression "sentence" shall also cover final judicial decisions or orders of a

court or a tribunal imposing capital punishment which have become subsequently commuted in the transferring State by amnesty or pardon into a sentence involving deprivation of liberty for a limited or unlimited period of time;

- (c) "sentenced person" means a person undergoing a sentence of imprisonment under a decision or order passed by a criminal court or tribunal;
- (d) "receiving State" means the State to which the sentenced person may be, or has been, transferred in order to serve his sentence;
- (e) "transferring State" means the State in which the sentence was imposed on the person who may be, or has been transferred.

ARTICLE 2

GENERAL PRINCIPLES

1. A person sentenced in the territory of one Contracting State may be transferred to the territory of the other Contracting State in accordance with the provisions of this Agreement in order to serve the sentence imposed on him or her. To that end, the sentenced person may express to the transferring State or the receiving State his or her willingness to be transferred under this Agreement.
2. Transfer may be requested either by the transferring State or the receiving State. The official request for transfer is sent to the requested State by the requesting State. If the sentenced person expresses his or her willingness to be transferred to the transferring State and if that State has a prescribed procedure, the application will be made according to the said procedure. The said application may also be made by any other person who is entitled to act on his behalf in accordance with the law of the transferring State.

ARTICLE 3

CONDITIONS FOR TRANSFER

1. A sentenced person may be transferred under this Agreement only on the following conditions:
 - (a) the person is a national of the receiving State;

- (b) the judgment is final and no inquiry, trial or other criminal proceedings are pending against the sentenced person in the transferring State;
 - (c) at the time of receipt of the request for transfer, the remainder of the sentence to be served is at least six months.
 - (d) the enforceable sentence involves deprivation of liberty and not death penalty.
 - (e) that the acts or omissions for which that person was sentenced are those which are punishable as a criminal offence in the receiving State, or would constitute a criminal offence if committed on its territory.
 - (f) transfer of custody of the sentenced person to the receiving State shall not be prejudicial to the sovereignty, security or any other interest of the transferring State;
 - (g) consent to the transfer is given by the sentenced person or, where in view of his or her age or physical or mental condition either Contracting State considers it necessary, by any other person entitled to act on his or her behalf in accordance with the law of the Transferring State; and
 - (h) the transferring and receiving States agree to the transfer.
2. In exceptional cases, the transferring and receiving States may agree to a transfer even if the remaining period to be served by the sentenced person is less than six months.

ARTICLE 4

OBLIGATION TO FURNISH INFORMATION

1. Any sentenced person to whom this Agreement may apply shall be informed by the transferring State of the substance of this Agreement.
2. For the purpose of enabling a decision to be made on a request under this Agreement, the transferring State shall send the following information and documents to the receiving State:
 - (a) the name and nationality, date and place of birth of the sentenced person;

- (b) his or her address, if any, in the receiving State;
 - (c) a statement of the facts upon which the sentence was based;
 - (d) the nature, duration and date of commencement of the sentence;
 - (e) a certified copy of the judgment and a copy of the relevant provisions of the law under which the sentence has been passed against the sentenced person;
 - (f) whenever appropriate, any medical or social report of the sentenced person, information about his or her treatment in the transferring State, and any recommendation for his or her further treatment in the receiving State;
 - (g) any other information which the receiving state may specify as being necessary in a given case to enable it to consider the possibility of transfer and to enable it to inform the sentenced person of the full consequences of transfer for him or her under its law.
 - (h) the request of the sentenced person to be transferred or a declaration from him or her or, where in view of his or her age or physical or mental condition either Contracting State considers it necessary, any other person entitled to act on his or her behalf in accordance with the law of the transferring State, attesting his or her consent, and
 - (i) a statement indicating how much of the sentence has already been served, including information on any pre-trial detention, remission, or any other factor relevant to the enforcement of the sentence.
3. For the purposes of enabling a decision to be made on a request under this Agreement, the receiving State shall send the following information and documents to the transferring State unless either the receiving or the transferring State has already decided that it will not agree to the transfer:
- (a) a statement or document indicating that the sentenced person is a national of the receiving State;
 - (b) a copy of the relevant law of the receiving state establishing that the acts or omissions for which the sentenced person

was sentenced in the transferring state are punishable as a criminal offence in the receiving state, or would constitute a criminal offence if committed on its territory.

- (c) a statement of the effect of any law or regulation relating to the duration and enforcement of the sentence in the receiving State after the sentenced person's transfer including, if applicable, a statement of the effect of paragraph 2 of Article 8 of this Agreement on his or her transfer;
- (d) the statement of the willingness of the receiving State to accept the transfer of the sentenced person and to administer the remaining part of the sentence of the sentenced person under the provisions of this Agreement;
- (e) any other information or document which the transferring State may consider necessary.

ARTICLE 5

REQUESTS AND REPLIES

1. Requests for transfer shall be made in writing and addressed through the central authority of the requesting State through diplomatic channels to the central authority of the requested State. Replies shall be communicated through the same channels.
2. For the purpose of paragraph 1 of this Article, the central authority shall be, in relation to India, the Ministry of Home Affairs; and in relation to the France, the Ministry of Justice.
3. The requested State shall promptly inform the requesting State of its decision whether or not to agree to the requested transfer.

ARTICLE 6

CONSENT AND ITS VERIFICATION

1. The transferring State shall ensure that the person required to give consent to the transfer in accordance with paragraph 1 (g) of Article 3 of this Agreement, does so voluntarily and with full knowledge of the legal consequences thereof. The procedure for giving such consent shall be governed by the law of the transferring State.

2. The transferring State shall afford an opportunity to the receiving State to verify that the consent is given in accordance with the conditions set out in paragraph 1 of this Article.

ARTICLE 7

EFFECT OF TRANSFER FOR THE RECEIVING STATE

1. The competent authorities of the receiving State shall continue the enforcement of the sentence through a court or administrative order, as may be required under its national law, under the conditions set out in Article 8 of this Agreement.
2. Subject to the provisions of Article 10 and 11 of this Agreement, the enforcement of the sentence shall be governed by the law of the receiving State and that State alone shall be competent to take all appropriate decisions.

ARTICLE 8

CONTINUED ENFORCEMENT OF SENTENCE

1. The receiving State shall be bound by the legal nature and duration of the sentence as determined in the transferring State.
2. If, however, the sentence is by its nature or duration incompatible with the law of the receiving State, or its law so requires, that State may, by court or administrative order, adapt the sentence to a punishment or measure prescribed by its own law. As to its nature and duration the punishment or measure shall as far as possible, correspond with that imposed by the judgment of the transferring State. It shall however not aggravate, by its nature or duration, the sentence imposed in the transferring State.

ARTICLE 9

EFFECT OF COMPLETION OF SENTENCE FOR THE TRANSFERRING STATE

When the receiving State notifies the transferring State under paragraph 1(a) of Article 13 of this Agreement that the sentence has been completed, the sentence shall cease to be enforceable in the transferring State.

ARTICLE 10**REVIEW OF JUDGMENT**

The transferring State alone shall decide on any application for review of the judgment.

ARTICLE 11**PARDON, AMNESTY OR COMMUTATION**

Either of the contracting States may grant pardon, amnesty or commutation of the sentence in accordance with its Constitution or other laws.

ARTICLE 12**TERMINATION OF ENFORCEMENT OF SENTENCE**

The receiving State shall terminate enforcement of the sentence as soon as it is informed by the transferring State of any decision or measure as a result of which the sentence ceases to be enforceable.

ARTICLE 13**INFORMATION ON ENFORCEMENT OF SENTENCE**

1. The receiving State shall notify the transferring State:
 - (a) when the enforcement of the sentence has been completed; or
 - (b) If the sentenced person escapes from custody before enforcement of the sentence has been completed. In such cases the receiving State shall make every effort to have the sentenced person arrested so that he or she serves the remainder of his or her sentence, in addition to the criminal offence committed under the relevant law of the receiving State on escape from prison.
2. The receiving State shall furnish a special report concerning the enforcement of the sentence, if so required by the transferring State.

ARTICLE 14**TRANSIT**

1. If either Contracting State enters into arrangements for the transfer of sentenced persons with any third State, the other Contracting

State shall cooperate in facilitating the transit through its territory of the sentenced persons being transferred pursuant to such an arrangement.

2. The State intending to make such a transfer shall give advance notice to the other State. This notification shall convey any necessary information, including information allowing the application of the following paragraph.
3. The State over whose territory the transfer is to be made may refuse to grant transit if the sentenced person is one of its nationals or if the offence for which the sentence was imposed is not an offence under its own law;
4. The State requested to grant transit may hold the sentenced person in custody for the period of time that is strictly necessary for the transit on its territory;
5. No request for transit is required where air transportation is being utilized over the territory of a State and if no landing is scheduled. However, the State which makes the transit shall inform the State over whose territory the flight is to be made.

ARTICLE 15

COSTS

Any costs incurred in the application of this Agreement shall be borne by the receiving State, except costs incurred exclusively in the territory of the transferring State. The receiving State may, however, seek to recover all or part of the costs of transfer from the sentenced person or from some other source.

ARTICLE 16

LANGUAGE

Requests and supporting documents shall be accompanied by a translation into the language or one of the official languages of the requested State.

ARTICLE 17

TEMPORAL APPLICATION

This Agreement shall be applicable to the enforcement of sentences imposed either before or after the entry into force of this Agreement.

ARTICLE 18**FINAL PROVISION**

1. This Agreement shall be subject to ratification. Each Contracting State shall notify the other as soon as possible, in writing, through diplomatic channels, upon the completion of its constitutional procedures required to allow this Agreement to come into force.

This Agreement shall come into force on the first day of the second month following the date of the second notification.

2. The Agreement shall continue to remain in force until six months from the date upon which either Contracting State gives written notice to the other Contracting State of its intention to terminate it.
3. Notwithstanding any termination, this Agreement shall continue to apply to the enforcement of sentences of sentenced persons who have been transferred under this Agreement before the date on which such termination takes effect.

In witness whereof, the undersigned, being duly authorized thereto by their respective Governments, have signed this Agreement.

Done in duplicate at New Delhi on the 25th day of January 2008, in Hindi, English and French language, the three texts being equally authentic..

619. Press Release of the Ministry of Defence on the Indo - French Joint Naval Exercise - "Varuna - 08"

New Delhi May 8, 2008.

The tenth INDO-FRENCH bilateral exercise "VARUNA 08" is scheduled off our east coast from 08 to 16 May 08. The Indian Naval group consists of the newly inducted Landing Platform Dock (LPD) Jalashwa, Guided-Missile Destroyer Ranjit, Guided Missile Corvette Kirch and the submarine Vagli. The French task force would comprise of their Landing Platform Dock Mistral and the Guided Missile Destroyer Dupleix and an embedded Royal Navy Frigate Westminster. The 'Joint Task Force' for the exercise would be commanded by Rear Admiral Alain Hinden of the French Navy.

The 'VARUNA' series of bilateral exercise is a significant facet of the growing co-operation between India and France. This series of exercises between the navies of the two nations commenced in 2001 and has grown in scope and complexity over the years. Nine exercises conducted thus far have met the underlying aims of facilitating mutual learning and cross-pollination of best practices.

The Indian Navy lays great stress on enhancing bilateral ties and improving understanding and operability with developed navies through professional interaction. This particular edition of the exercise will, in addition, provide an opportunity to build on the Indian Navy's cooperative capability for humanitarian assistance and disaster relief through the participation of newly inducted platform Jalashwa along with the French Navy's Mistral.

In addition to the above, intermediate and advanced level anti-submarine exercise, Maritime Interdiction Operations (MIO), Visit Board Search & Seizure (VBSS) operations and tactical exercises would also be conducted during the sea exercise phase.

The exercise culminates with a harbour phase at Vishakapatnam from 14-16 May 08. During this period, apart from reaffirming our friendship, harbour based professional, social and sports interaction between the two navies is planned.

620. Media Briefing by Foreign Secretary Shivshankar Menon on the visit of Prime Minister Dr. Manmohan Singh to the USA and France and by Secretary (West) on the India-EU Summit.

New Delhi, September 19, 2008.

622. Statement by Prime Minister to the Press on India-France Summit.

Paris, September 30, 2008.

His Excellency President Sarkozy,

Ladies and Gentlemen of the Press.

It is a great honour for me to visit France at the invitation of President Sarkozy. I am most grateful to the Government and people of France for the warm hospitality that has been extended to me and to my delegation.

President Sarkozy is a great friend of India and an international statesman. Under his dynamic leadership, we seek to further deepen and expand our strategic partnership with France.

This was my second Summit meeting with President Sarkozy within one year. We reviewed the progress that has been made in our cooperation in the areas of trade and investment, science and technology, space, defence, culture and education since President Sarkozy's visit to India in January this year, and discussed ways and means to further strengthen our relations.

I also had the opportunity to meet Prime Minister Francois Fillon, to whom I extended an invitation to visit India.

Today we have added a new dimension to our strategic partnership by signing an inter-governmental agreement on civil nuclear cooperation. France is the first country with whom we have entered into such an agreement after the lifting of international restrictions on civil nuclear cooperation with India by the Nuclear Suppliers Group. I conveyed to President Sarkozy our gratitude for France's consistent support to our civil nuclear initiative.

We have also signed important agreements in the field of peaceful uses of outer space and social security. We agreed that defence cooperation between India and France should move away from a buyer-seller relationship to joint production and transfer of technology.

We agreed that India and France are on course to achieve the target of raising our bilateral trade to 12 billion Euro by 2012. We agreed to work towards promoting and facilitating investments in each other's countries.

We will continue to encourage initiatives aimed at promoting exchanges of students, researchers and academics and at deepening institutional linkages between our universities.

We discussed the impact of the international financial crisis on the global economy, energy security, food security and climate change. We both agreed on the need to reform international institutions, including the United Nations, to more effectively deal with these issues. We agreed to enhance cooperation in the area of counter-terrorism.

I believe my visit has opened new vistas in our relations with France which are based on the solid foundation of our shared commitment to democracy, pluralism and the rule of law. There is much that India and France can do bilaterally as well as globally.

Thank you.

623. Joint Statement issued at the end of the visit of Prime Minister Dr. Manmohan Singh to France.

Paris, September 30, 2008.

1. The Prime Minister of India Dr. Manmohan Singh and President Nicolas Sarkozy held a bilateral summit in Paris today, at which they reaffirmed the importance attached by both countries to their strategic partnership and their commitment to further strengthening bilateral cooperation in a wide range of areas. Both sides reiterated their intention to keep up the momentum of regular high level exchanges.
2. India and France agree on the need for greater international cooperation to deal with challenges facing mankind. Both countries are committed to international peace and security, nuclear non-proliferation, the fight against terrorism and the need to ensure food security and energy for all countries.
3. Both countries recognise the need to promote the development of stable sustainable, efficient and affordable energy sources, including nuclear energy. In this context, they welcomed the agreements adjusting the international civil nuclear cooperation framework to enable collaborations with India. India and France welcome the signature of a bilateral agreement for civil nuclear cooperation, which will form the basis of wide-ranging bilateral collaborations in energy and research.
4. India appreciates French support for permanent membership of India in the UN Security Council. Along with other developing countries India is committed to continue dialogue and collaboration with the G8. France also believes the G-8 needs to be expanded over time to G-13 including India. India and France agree on the need for improved global economic governance to ensure that globalization and interdependence work for the benefit of all.
5. Both countries are fully committed to consolidating their relationship in the field of defence by increasing the range, level and frequency of their military exchanges, joint exercises, joint programmes and prospects in the fields of defence industry, research and technology.

This commitment is well evidenced between the two countries by the possibility of joint development, as early as feasible, of Short

Range Surface-to-Air Missiles (SRSAM) and of the Kaveri engine for Light Combat Aircraft. Discussions concerning the upgradation of Mirage-2000 aircraft are also well under way and are expected to be finalised by next year.

6. Indo-French space cooperation has been exemplary, enjoying a long, fruitful and successful history. We welcome the signature of a bilateral framework agreement on cooperation in the peaceful uses of outer space. France has been an important partner in this field for four decades and continues to be of importance for ISRO for the supply of high-technology items. The commercial agreement for use of India's PSLV for launch of European satellites marks a new milestone in the relationship between India and France in the area of space. ISRO and CNES are also working as equal partners in Megha Tropiques Joint Satellite Mission which is progressing well along with SARAL (Satellite for Argos and Altika), slated to be launched in 2009-2010 and which will contribute to better scientific understanding of weather and climate related issues. Institutional linkages in the space sector are being envisaged through exchanges between the Indian Institute of Space Technology (IIST) and Ecole Polytechnique. In this respect, we welcome the signature of an agreement on training between concerned institutions.
7. In accordance with the commitment agreed upon by the two countries during President Nicolas Sarkozy's State visit to India in January 2008, to double bilateral trade to reach 12 billion Euros by 2012, both sides will make sustained efforts in this vital area of bilateral cooperation. Small, medium and micro enterprises of both countries need to be further encouraged to increase their cooperation. The two sides also agreed to further liberalise their visa regime to facilitate issuance of visas for business purposes, particularly concerning students and young people working as trainee or as volunteer in French companies and for people-to-people contacts. An agreement on Social Security for the benefit of business enterprises and professionals of the two countries has been concluded. This constitutes an important step forward in facilitating two way investments.

8. The two sides welcome the creation of the High Level CEOs Forum which would have its first meeting by the end of the year.
9. The two countries have agreed to hold dialogue on environmental issues and have set up a joint working group on climate change and technology transfers and their financing. The group should hold its first meeting by the end of the year.
10. Following the agreement of 25 January 2008 establishing the Agence Française de Développement (AFD - French Development Agency) in India, both sides welcome the signature of the MoU between the AFD and the Department for Economic Affairs of the Indian Ministry of Finance which will allow the AFD to start its operations in India.
11. India and France also underlined the vitality of Indo-French scientific, technical and educational cooperation. Bearing in mind the Joint Statement issued on 25 January¹, we welcome the arrangements taken on one side to encourage more Indian students to study in France and, on the other side, to allow more French students study in India.

The Indo-French Consortium of Universities will facilitate the organization of courses of mutual interest at Master's degree and Ph.D levels by Indian and French universities, increase the number of academic institutional tie-ups, scholarships, joint projects, seminars and novel collaborative schemes including substantive contribution of French higher educational institutions to the creation of one of the eight new Indian Institutes of Technology. This Indo-French Consortium will also facilitate the mutual recognition of degrees, encourage student/faculty mobility and intellectual exchanges.

12. Both sides reiterated their commitment to intensify cooperation in the field of culture, tourism and to foster people-to-people contacts. In this context, both sides reiterated the political commitment to establish an Indian Cultural Centre in Paris at the earliest.
13. It was agreed to work towards concluding a visa free agreement for diplomatic and official passport holders.

1 Please see Document No.614.

14. The Agreements² and MoUs signed today reflect the wide range of bilateral interaction between India and France and will provide significant impetus to realising the full potential of the comprehensive strategic partnership between the two countries.

2 Among the agreements signed was the one for cooperation in civil nuclear energy. Formally called the "Co-operation Agreement Between the Government of the Republic of India and the Government of the French Republic on the Development of Peaceful Uses of Nuclear Energy," the agreement was signed by Atomic Energy Commission Chairman Anil Kakodkar and French Foreign Minister Bernard Kouchner in the presence of Prime Minister Manmohan Singh and President Nicolas Sarkozy at the Elysee Palace. A French presidential spokesperson described the document as a "broad agreement, one that will allow for a wide range of cooperation in the civilian nuclear field including the transfer of technology." This could range from supply of fuel and reprocessing to supply of reactors. The agreement paves the way for India to do business with France in reactors, nuclear fuel supply, nuclear safety, radiation and environment protection and nuclear fuel cycle management. The Prime Minister said the agreement added "a new dimension to our strategic partnership." A background note assured the global community that as "responsible states with advanced nuclear technologies, including in the nuclear fuel cycle," both India and France are committed to "the highest standards of safety and security and in accordance with their respective nuclear policies and international obligations." The two sides also reaffirm their "common concerns and objectives in the field of non-proliferation of weapons of mass destruction and their means of delivery including a view of possible linkages to terrorism." The resumption of nuclear trade with India was welcomed by the European Union. "How can we talk of the problem of climate change and yet deny India access to nuclear energy, the cleanest form of energy. We trust India, and we trust the Prime Minister," argued President Nicolas Sarkozy at a joint press conference along with Prime Minister Manmohan Singh and Jose Manuel Barroso, President of the European Commission, at the end of the ninth India-European Union summit. Interacting with the media, Dr. Kakodkar expressed the hope that "sooner rather than later" India and France would hammer out commercial agreements to operationalise the nuclear agreement, though he thought there were "no serious impediments" in India's Atomic Energy Act.

**624. Interview of Prime Minister with French daily *Le Figaro*:
"India must participate in the solution of the financial
crisis".**

Marseilles (France), September 30, 2008.

[The Indian Prime Minister, Manmohan Singh, is being received at the Elysee today (30-9-08). The prominent French daily publishes in its international edition an interview of the Prime Minister Dr. Manmohan Singh. The interview was conducted by Pierre Rousselin.]

Q. : Will India participate in the Summit proposed by Nicolas Sarkozy to examine the consequences of the financial crisis?

Ans. : Even though the crisis is affecting only the developed countries at the moment, it can spread to the rest of the world. We live in an interdependent world and the fate of all countries is related to the international financial system. Our value markets are open to the world and, if they are affected, this will impact on our capacity to finance our development. If the financial crisis sparks off a recession in the main economies, this will compromise our exports. Therefore President Sarkozy's proposal is important. The only thing is to well prepare the meeting which he is planning, and he acknowledges this himself.

Q. : Can India help the global economy in these difficult times ?

Ans.: We are, after China, the second largest economy in terms of growth and we are therefore potentially a significant actor, but this does not mean that we are a decisive one. The main responsibility is that of the developed countries, but India and China must take part in the solution.

Q. : Does the negotiation of a free trade agreement with the European Union indicate that you prefer bilateral agreements rather than multilateral negotiations within the framework of WTO ?

Ans.: I hope that negotiations with WTO can be saved. With other countries we are working towards the success of the Doha round. The free trade agreement with the EU is not a substitute for Doha. It is complementary. I would call this "Doha plus".

Q. : To what extent can the French nuclear industry support India in the development of its own nuclear capacity?

Ans.: France and President Nicolas Sarkozy helped us a great deal in obtaining the approval of the nuclear suppliers group (NSG) in order to enable us to develop our civilian nuclear industry. We will now implement full cooperation in this field within the framework of a long-term global agreement.

Q. : What do you expect from French companies in India ?

Ans.: Bilateral trade has increased but it remains at 6,14% billion euros, much below potential. During the visit to India of President Sarkozy, in January 2008, we decided to double trade by 2012. In order to maintain a 9% growth per year, India has to undertake major investments to improve its infrastructures which will provide considerable opportunities to French companies especially in the fields of energy, telecommunications, road networks and food processing.

Q. : Can contracts be envisaged in the field of armaments?

Ans.: Cooperation between India and France in the defense sector has started long ago. French firms actively participate in our defense program but we would like to build a real partnership with collaboration in research and development, transfer of technologies and joint productions going far beyond a simple buyer-seller relationship.

Q. : What do you think of the growing commitment of France in Afghanistan? Do you think we should change our strategy and negotiate with the Taliban?

Ans.: We welcome favorably the growing commitment of France in Afghanistan because we think that Afghanistan needs lasting international assistance. While negotiating with the Taliban, we think that it is not possible to make a distinction between "good" and "bad" Taliban. We are not opposed to efforts for reconciliation and dialogue with various political factions, but we cannot extend it to those who aspire to destroy the idea of a pluralistic and democratic Afghanistan or who are fundamentally opposed to it.

Q. : After your meetings in New York, are you reassured as far as the determination of the new Pakistani leaders' to fight terrorism goes ?

Ans.: I had a very good meeting with President Zardari. He had all the right words to say. Only time will say whether Pakistan is in a position to go in the right direction. We have our concerns, particularly, as regards the origin of the attack against our embassy in Kabul in July. There is an upsurge in infiltrations from Pakistan and an increase in cease-fire violations. I informed President Zardari about these concerns of ours. He answered that he has been President only for the last two weeks.

Q. : What do you have to say to those who are worried about the persecution of Christians in Eastern India?

Ans.: There had been sporadic incidents. Our Constitution guarantees religious freedom. India is a secular country where all the citizens have the same rights, whatever be their religion. I have myself condemned what has happened and personally intervened with concerned States. The Central Government sent special forces to the concerned regions to help restore normalcy. I deeply regret these incidents but one should not generalize and draw a conclusion on the fate of minorities in India.

GREECE

625. Joint Press Conference by Prime Minister Dr. Manmohan Singh with Greek Prime Minister Dr. Kostas Karamanlis.

New Delhi, January 11, 2008.

Prime Minister Dr. Manmohan Singh: Your Excellency Prime Minister Kostas Karamanlis, ladies and gentlemen:

Prime Minister and I have just concluded a very useful and very productive round of discussions. As I underlined during our talks, India attaches high importance to relations with Greece both bilaterally and in the context of our strategic partnership with the European Union.¹

India and Greece are ancient civilizations with historical linkages. In the course of our long standing interaction we had learnt a great deal from each other. We are happy that this high-level visit comes within one year

¹ The visit of the Greek Prime Minister, who had arrived in New Delhi on January 10, was a reflection of an increasing desire on the Greek side to engage more deeply with India. The visits last year of the Greek Finance Minister and the Deputy Foreign Minister (who looks after Foreign Trade), both accompanied by large business delegations, was also an indicator of this realisation, said Ministry of External Affairs spokesperson Navtej Sarna. It may be recalled that former President, A.P.J. Abdul Kalam had visited Greece in April last year. "Today there is a desire on both sides to engage more deeply with each other. Both countries have rapidly growing economies and are playing an increasing role in regional and global affairs. India is keen to develop relations with Greece in a cross-sectoral manner," said the spokesperson. Bilateral trade is small but on a growth path - Indian exports last fiscal stood at \$ 672.51 million while imports were at \$209.66 million. During the visit of Dr. Kalam to Greece, a target of \$1 billion by 2010 was set.

of the State visit of our President to Greece last year. This is a reflection of our shared desire to further intensify our bilateral engagement and cooperation. We would like to strengthen our contacts both at political, official, people-to-people and business levels.

Our multidimensional cooperation with Greece has been steadily developing. Today Prime Minister Karamanlis and I have agreed to raise our collaboration to even higher levels. Prospects of greater trade and economic cooperation are particularly promising. Our bilateral trade now stands at about six million Euros. We have agreed that the target set last year of one billion Euros by 2010 could be attained earlier through concerted efforts by our business communities.

I conveyed India's readiness to purposefully engage with the European Union to conclude an India-EU broad based trade and investment agreement at the earliest. We have also agreed to revitalize our bilateral Joint Economic Committee in order to make it more result-oriented. Our enhanced economic engagement must move beyond our traditional trend to include areas such as infrastructure, shipping, power, agro-industries, automobiles and components, pharmaceuticals, renewable energy and information technology. We have identified tourism and culture as thrust areas which merit greater focus by both sides.

Prime Minister Karamanlis and I also exchanged views on several international issues. We agreed on the need for reform of the UN system to adapt it to contemporary global realities. I conveyed India's gratitude to Greece's consistent support to our candidature for a permanent seat in an expanded UN Security Council. We have agreed that the scourge of terrorism must be dealt with collectively and comprehensively. With a view to strengthening the international legal basis for global counter-terrorism effort, we share the view that the international community must accelerate work towards the early conclusions of the Comprehensive Convention on International Terrorism at the UN. We have also agreed to explore ways to address the issue of energy security including through cooperation in renewable energy.

I wish Prime Minister Karamanlis and members of his delegation a very pleasant and fruitful stay in India.

Prime Minister Dr. Kostas Karamanlis: It is a particular pleasure for me to visit India, a country of great history and great civilization which has

immensely contributed to the world's heritage and culture. I would like to warmly thank the Prime Minister of India, Manmohan Singh, for his invitation and for the warm welcome and hospitality he extended to me and the Greek delegation.

The relations between our two countries have always been friendly and cordial. Greece attaches particular importance to its cooperation with India, a country with a very significant impact on regional and world affairs and an emerging economic power with a very impressive record. We are very content that our common efforts are now leading to a steady progress in our relations. Last April, the State visit to Greece of the former President of India Abdul Kalam, greatly contributed among other things to the enhancement of our economic cooperation. My visit here today testifies to our will to further promote our bilateral relations.

We discussed with the Prime Minister the enhancement of our political cooperation and the framework of our commercial and economic cooperation. Bilateral economic relations between Greece and India have been developing at a rapid pace during the last years. The successful visits to India of the Greek Ministers; the Fifth Session of the Joint Economic Committee in New Delhi last November; the establishment of the India-Greece Business Council; are only a few of the key steps we have recently taken. We have a great potential in many sectors such as business ventures, trade, shipping and tourism. In this context we stressed the role of Greece as an economic hub in Southeastern Europe. We also examined our cultural and educational cooperation to which we attach great importance.

On the multilateral level, Greece and India have an excellent cooperation in the international organizations. Concerning the reform of the United Nations Security Council in particular, Greece strongly supports its enlargement in the context of the G4 initiative. Within the European Union, we work in order to determine ways and means to further upgrade the overall framework of the European Union-India relations. We also reviewed regional issues such as the current situation in Afghanistan and the recent developments in Pakistan.

Finally, I had the opportunity to inform the Prime Minister about the Cyprus problem and to thank him for the firm position India has maintained over the past years. We also discussed the issue of former Yugoslav Republic of Macedonia, the situation in Kosovo and its implications on security and stability in the Balkans.

Once more I would like to warmly thank the Prime Minister for his warm welcome and hospitality.

Question (Greek Media): Sir, strengthening of the economic and trade bonds between India and Greece is a mutual goal. In which ways can this goal be achieved?

Prime Minister Dr. Manmohan Singh: When President Abdul Kalam visited Greece, it was agreed between the two Governments that we should agree to raise the target for bilateral trade to one billion Euros by 2010. We have agreed that we should work together to accelerate the tempo of bilateral trade to exceed that level by the year 2010. There is enormous scope for expanding two-way flow of trade between our two countries. Tourism and services, information technology and biotechnology offer enormous opportunities for expanding two-way flow of trade and investment between our two countries.

Prime Minister Dr. Kostas Karamanlis: Let me just give you a few glimpses on the ways to achieve that. Through closer cooperation of our Chambers of Commerce and Industry, our Trade Promotion Organizations, our investment development organizations, through the organization of joint conferences, seminars, meetings to exchange information, to explore new and innovative cooperation opportunities, and, if I may also stress, through the completion of our relevant institutional framework of our economic cooperation, we are signing of the revised agreement on the avoidance of double taxation, and an agreement on air transport services.

Question (Indian Media): My question is addressed to both the Prime Ministers. Have NSG talks figured during your talks? If so, would Greece be supporting you? Prime Minister Karamanlis, Sir, what are your views on it? Would you support Indo-US Civil Nuclear Deal?

Prime Minister Dr. Manmohan Singh: I had a very useful exchange of views with the Prime Minister on this subject. I explained to him the imperative necessity for India to move in the area of civilian nuclear energy and the need for international cooperation. I found the Prime Minister understood the imperative for India to have larger recourse to nuclear energy as a source of meeting our energy requirements.

Prime Minister Dr. Kostas Karamanlis: As already said, I was very well briefed and we can consider the position of the Indian Government. What I may say at this point as a matter of principle is we have nothing against

peaceful use of nuclear power for energy questions. We do not use it and we do not have any prospects to do it. But other countries do it in the European Union and all over the world. As long of course as India does it there is a clear stance as far as nonproliferation is concerned and of course in close cooperation with the International Atomic Energy Agency. So, overall I do not see why there should be a problem in close contact with your Government over this issue as well.

Question (Greek Media): Your Excellencies, I understand you have been discussing about several international and regional issues. Would you be so kind to comment a little bit further upon three specific topics - Afghanistan, Kosovo and Cyprus?

Prime Minister Dr. Kostas Karamanlis: Since two of the issues are in our part of the world, I will start. Let me start by expressing our appreciation first of all for India's staunch position on the Cyprus issue. As you know, this is a problem of invasion and occupation. We strive for a settlement that will be based on the United Nations Resolutions and will be conforming to the International Law and the European Union values and principles. We fully support the 8th of July 2006 agreement and its immediate implementation. Unfortunately, the other side has not been as cooperative in implementing the agreed process. We hope that we will soon overcome the stalemate and that we will at the end of that all reach a solution that will enable the reunification of the island as a bi-zonal, bi-communal republic.

On Kosovo, unfortunately the negotiating efforts as (we) all know did not yield the desired result. The major challenge we are faced with now is safeguarding security, safeguarding stability in the broader region of Southeastern Europe. However, the situation in Kosovo will certainly have a great destabilizing impact on the region. Unilateral actions which could undermine a final settlement should be avoided and certainly we do support strongly the idea that the European Union should reaffirm the European perspective of the region. Finally in Afghanistan, as you know Greece is strongly committed to the improvement of the security situation and the overall reconstruction of the country. We attach great importance to the efforts to promote a sustainable economic development. Greece contributes substantially to the achievement of these goals through military and financial means.

Prime Minister Dr. Manmohan Singh: You have raised issues concerning Afghanistan, Cyprus and Kosovo. As far as Afghanistan is concerned, our position has been that every effort should be made to enable the

Government and people of Afghanistan to get out of the trauma that visited them when the Taliban were in power. The reconstruction and development of Afghanistan has been a priority concern for our Government. We have over the years committed about 750 million dollars in support of the reconstruction and development programme in Afghanistan. Our assistance programme covers key areas such as roads, building, power systems, human resource development, education, health, parliament building. We are committed to do all that we can within our resources to help the Government and people of Afghanistan to improve the living standards of their people. We are fully in support of the efforts being made by President Karzai to bring stability and peace to Afghanistan.

As far as Cyprus is concerned, our position is well-known. We respect the unity and integrity of Cyprus and the Prime Minister knows our position is very close to the position that Greece has also adopted. We hope that peaceful reunification of Cyprus will proceed further. As far as Kosovo is concerned, I agree with the Prime Minister that unilateral action can be counter-productive. There are Security Council and United Nations Resolutions. We sincerely hope that a solution can be found by operationalising some of these concerns reflected in the United Nations Resolutions.

Question (Indian Media): My question is addressed to the Prime Minister of India. Sir, has your Government decided to confer the Bharat Ratna this year? Is the name of your predecessor also in your consideration?

Prime Minister Dr. Manmohan Singh: It is too early, there is still time to discuss and decide these issues.

HUNGARY

626. Press Release of the Ministry of External Affairs on the visit of Hungarian Prime Minister Ferenc Gyurcsány.

New Delhi, January 15, 2008.

* * * *

India's relations with Hungary are close, friendly and multifaceted. Ordinary Hungarians express deep warmth towards India and Indian culture and traditions. The visit of the Hungarian Prime Minister takes place at a time when there is an increasing desire on both sides to engage more deeply with each other. The Hungarian PM will address the CII Partnership Summit in Gurgaon on 16 January 2008. There have been frequent exchanges of visits at the Ministerial level, including that of the Foreign Minister of Hungary in November 2006, Hungarian Finance Minister in January 2007, Hungarian Culture and Education Minister in November 2007 and our Minister of Tourism and Culture in October 2006.

There is close identity of views between our two sides on issues facing the world. Hungary supports India's candidature for a permanent seat on an expanded UN Security Council. Hungary is an important member of the European Union, with which India has a strategic partnership. Hungary is also a member of the NSG. Both countries have rapidly growing economies and are playing an increasing role in regional and global affairs. India is keen to develop relations with Hungary in a cross-sectoral manner. Bilateral trade is on a growth path. Indian exports to Hungary in 2006-2007 amounted to USD 142.5 million, while imports from Hungary were USD 128.3 million. However, there is still considerable potential for two-way trade to grow. Several Indian companies have a presence in Hungary in sectors such as pharmaceuticals, IT, power, and auto-components. There are opportunities for growth in information technology, manufacturing, pharmaceuticals, biotechnology, and automobile components. Promoting two-way tourism is an opportunity for both countries.

* * * *

627. Joint Statement issued on the occasion of the State Visit of Hungarian Prime Minister Dr. Ferenc Gyurcsany.

New Delhi, January 18, 2008.

1. At the invitation of the Prime Minister of the Republic of India Dr. Manmohan Singh, the Prime Minister of the Republic of Hungary, H.E. Dr. Ferenc Gyurcsany paid a state visit to India from 16-19 January 2008. The Prime Minister was accompanied by his spouse, Dr. Klára Dobrev. Both sides noted with pleasure that the visit was taking place in the 60th year of the establishment of diplomatic relations between India and Hungary.
2. The Prime Ministers of India and Hungary held official talks on bilateral, regional and global issues of mutual concern. Prime Minister Dr. Manmohan Singh hosted a banquet in honour of the visiting dignitary. Prime Minister Dr. Ferenc Gyurcsany called on President Smt. Pratibha Devisingh Patil, and met with External Affairs Minister Shri Pranab Mukherjee, Chairperson of United Progressive Alliance Smt. Sonia Gandhi, and Leader of Opposition Shri L.K. Advani. Minister of Commerce and Industry Shri Kamal Nath and Minister for Petroleum and Natural Gas Shri Murli Deora also called on the visiting dignitary.
3. The talks were held in an atmosphere of friendship, warmth and mutual understanding. The two sides expressed satisfaction with the mutually beneficial cooperation and partnership between India and Hungary encompassing political dialogue, economic, defence, scientific and technological cooperation, and cultural & educational exchanges. They agreed to work together for the further enhancement of their multifaceted relationship based on shared democratic values, respect for human rights, mutual understanding and cooperation and similarity of views on major international issues.
4. During the visit the following Agreements were signed:
 - (i) Memorandum of Understanding on Cooperation in the field of Health and Medicine.
 - (ii) Agreement for Cooperation in Agriculture, Plant Quarantine and Protection and Animal Husbandry.
 - (iii) Letter of Intent on the Establishment of an India-Hungary Strategic Research Fund

- (iv) Memorandum of Understanding on Cooperation between ONGC Videsh and MOL
 - (v) MOU between Bharat Electronics Ltd and M/s Bonn Hungary for Joint Development of Low Noise Amplifiers and Integrated Receivers for 3D Tactical Control Radar
 - (vi) MOU between Bharat Electronics Ltd and M/s CARINEX for Joint Development of TDM Analyser/De-Multiplexer
 - (vii) MOU between Bharat Electronics Ltd and M/s ERIDEIL for TOT for Universal Systems for VSAT Signal Monitoring
5. The Prime Ministers highlighted the importance of further enhancing the exchange of high-level bilateral visits, including at the level of Head of State and Head of Government. They also reiterated their will to continue the bilateral dialogue and cooperation within multilateral frameworks and at various international fora.
6. Both sides noted the importance of Parliamentary exchanges and expressed satisfaction at the regular exchange of parliamentary delegations and cooperation within the IPU. They expressed the view that the enhanced exchanges between the India-Hungary Parliamentary Friendship Group in the Parliament of India and the National Assembly of Hungary will contribute to further promoting the bilateral relationship. The Hungarian side renewed their invitation to the Hon'ble Speaker of the Lok Sabha to visit Hungary. The invitation was accepted with thanks.
7. Both sides noted that bilateral trade between the two countries, though below potential, had virtually doubled between 2005 and 2006. Both sides agreed to work to substantially raise the level of mutual trade to sustain this level of growth. They also welcomed the growing investment partnerships between Indian and Hungarian companies in several sectors, including pharmaceuticals, IT, auto-components, power and food processing. They expressed satisfaction at the holding of the first session of the Joint Economic Committee (formed pursuant to the Bilateral Economic Cooperation Agreement signed following Hungary's membership of the EU) in January 2007 led by the Finance Minister of Hungary and Minister of Commerce and Industry of India as well as the meeting of the Joint Business Council.

8. Both sides stressed the need for greater awareness of opportunities for mutual benefit in the two countries, including through periodic exchange of business delegations and participation in trade fairs. In this context, India announced its decision to organise a 'Made in India' exhibition in Budapest during 2008/2009.
9. Both sides emphasised the importance of energy security for their economic growth and development. They noted the discussions between MOL and ONGC Videsh to cooperate in the exploration of oil/gas projects both in India and third countries and welcomed the MOU concluded between the two companies in this regard.
10. The two leaders shared the view that civil nuclear energy can play an important role as a safe, sustainable and non-polluting source of energy in meeting rising global demands for energy. Hungary acknowledges India's engagement in the areas of peaceful use of nuclear energy and is ready to approach with an open mind efforts for civil nuclear cooperation with India.
11. The two sides welcomed the organisation of the first session of the India Hungary Joint Working Group on Defence during 26-27 April 2007 at Budapest. The meeting provided an opportunity to renew cooperation between Indian and Hungarian defence industry as well as between the two armed forces. Both sides agreed that the forthcoming visit of the Defence Minister of Hungary to India and of the Chief of Army Staff of India to Hungary would help further deepen the cooperation in this important sector.
12. The two sides agreed that cooperation in Science and Technology, both at the bilateral level and within the EU framework, was a key priority. They noted that the 7th session of the India-Hungary S&T Committee Meeting in New Delhi on 4 December 2006 has identified 22 bilateral projects in areas including, life sciences, biotechnology, material science, nanotechnology, ICT, health and agriculture. They welcomed the establishment of the India-Hungary Bilateral Strategic Research Fund of Euro 2 million, which would provide a strong impetus to joint S&T projects. Both sides also agreed to identify successful bilateral projects that could be supported under the Seventh Framework Programme (2007-13) of the EU.
13. The two sides welcomed the Agreement between The Ministry of Agriculture of the Republic of India and the Ministry of Agriculture

and Rural Development of the Republic of Hungary on Cooperation in the Field of Agriculture and Allied Sectors and agreed to strengthen cooperation particularly in R&D in agriculture and agro-processing through closer collaboration between agricultural universities and research institutions in the two countries.

14. The two sides welcomed the signing of the MOU on Cooperation in the field of Health and Medicine. They agreed that considerable opportunities for mutually beneficial cooperation existed in the area of generic drugs, clinical trials, R&D and alternative medicine. They welcomed the organisation of the first International Conference on Ayurveda at Budapest on 29 September 2007 and agreed to explore ways and means of further promoting this ancient system of holistic Indian medicine.
15. Stressing the need for greater people-to-people interaction, particularly through academic and cultural exchanges, the two sides welcomed the renewal of the Cultural Exchange Programme for 2007-2010. They noted that visits of the Indian Culture and Tourism Minister to Hungary in October 2006 and of the Hungarian Education and Culture Minister to India in October 2007, had prepared the ground for deeper and more varied cultural and educational exchanges. They welcomed the proposal of the Central European University to organise an International Conference on the contemporary relevance of Mahatma Gandhi's teachings in 2008 at Budapest. Both sides agreed to organise Exhibitions/Festivals in the field of art and culture in each other's countries as per mutual convenience in 2008-09.
16. While encouraging greater exchanges, including of students, businessmen, tourists and others, the two sides noted that they would use all appropriate facilitations within the framework of their own rules and legislations.
17. The two sides recognised the role of educational cooperation in strengthening bonds of friendship between India and Hungary and expressed interest in deepening the partnership between institutions of higher education in both countries. In this context, they welcomed the establishment of a Tagore Research Fellowship at Eötvös Loránd University (ELTE) and the organisation of an International Hindi Conference during 24-26 October in Budapest. They requested the Joint Working Group established under the Educational Exchange

Programme to establish a concrete plan to strengthen such cooperation.

18. India and Hungary noted with satisfaction the growing strategic partnership between India and the European Union. India looks on Hungary as one more friend in the councils of the EU. They welcomed the negotiations that have begun between India and the EU to arrive at a broad-based Trade and Investment Agreement in accordance with the decision reached at the India-EU Summit in Helsinki in October 2006. They welcomed the successful conclusion of the 8th India-EU Summit in India in November 2007.
19. Both sides reaffirmed their commitment to the United Nations and stressed the need for the democratisation of international decision-making structures to reflect global realities. They underlined the importance of early reform of the United Nations Security Council, including its expansion in both permanent and non-permanent categories, with a view to enhancing its transparency and effectiveness. In this context, Hungary reiterated its support for India's candidature for Permanent Membership on an expanded UN Security Council.
20. The two sides stressed that terrorism constitutes one of the most serious threats to international peace and security. They strongly condemned terrorism in all its forms and manifestations, committed by whomever, wherever and for whatever purpose and stressed that there can be no justification, whatsoever, for any acts of terrorism. They emphasised the need for concerted and coordinated action by the international community, in accordance with international law, to realise the objectives of eradicating terrorism in all its forms and manifestations.
21. Both sides stressed the importance of finalising early the Comprehensive Convention on International Terrorism through early resolution of the outstanding issues with the objective of an expeditious conclusion of negotiations and adoption of this Convention. They agreed to further expand the bilateral dialogue and cooperation in combating terrorism, organised crime and trafficking.
22. The two delegations underlined that climate change is a global challenge with strong economic, environmental and social

dimensions, which impacts adversely all countries especially the poorer and most vulnerable countries, and requires a concerted international response based on the principle of common but differentiated responsibilities and respective capabilities. The two leaders agreed that stronger international cooperation within the UN framework is needed to fight climate change especially in the areas of adaptation, mitigation, capacity building, technology transfer, adequate financing facilities and the development of the carbon market. Both leaders shared the view that a future strategy designed to combat climate change should at the same time support sustainable development, economic growth and poverty reduction which are vital for developing countries.

23. Prime Minister Gyurcsany invited the Prime Minister of India to pay an official visit to Hungary. The invitation was accepted with pleasure. Dates for the visit would be settled through diplomatic channels.
24. Prime Minister Gyurcsany expressed his gratitude to the Government and people of India for the hospitality and warmth of the welcome received by him and his delegation.

KOSOVO

628. Reaction of Official Spokesperson to questions on developments regarding Kosovo.

New Delhi, February 18, 2008.

In response to questions on developments regarding Kosovo¹, Official Spokesperson said:

"India has a long standing and consistent policy on the issue of recognition. Recognition is normally accorded on the basis of a country having a defined territory, a duly constituted Government in charge which is accepted by the people and which has effective control over an area of governance.

It has been India's consistent position that the sovereignty and territorial integrity of all countries should be fully respected by all states. We have believed that the Kosovo issue should have been resolved through peaceful means and through consultation and dialogue between the concerned parties.

We have taken note of the Unilateral Declaration of Independence by Kosovo. There are several legal issues involved in this Declaration. We are studying the evolving situation".

¹ The Spokesman was referring to the unilateral declaration of independence by Kosovo after its parliament on February 17 unanimously voted for independence from Serbia. The Serbian Government however denounced the decision.

POLAND

629. Press Release issued by the Ministry of Defence on the visit of the Polish Defence Minister Bogdan Klich.

New Delhi, November 4, 2008.

Defence Minister-level talks were held between India and Poland in a cordial atmosphere in New Delhi today. The Polish side was led by their Defence Minister Mr. Bogdan Klich and the Indian side by his counterpart Shri A K Antony.

Earlier Mr. Klich laid wreath at Gandhiji's Samadhi at Rajghat. Later he was given ceremonial Guard of Honour on his arrival at Defence Headquarters in South Block.

Mr Klich is slated to hold talks with the Chairmen of some prominent Defence Public Sector Undertakings including HAL, BEL, BEML and Ordnance Factories Board (OFB).

Polish Defence Minister's visit follows the fourth meeting of the Joint Working Group (JWG) held here last month. During the JWG Meeting held between 15-17th October, the two sides agreed to consolidate cooperation in Defence Industry and specialized training of their Armed Forces. The India-Poland JWG on Defence Cooperation was set up with the signing of an agreement on Defence Cooperation in February 2003 during the visit of Polish Prime Minister to India. The first meeting of the JWG was held in April 2006.

India shares with Poland a long tradition of friendship and cooperation in various fields including Defence Production and Supplies. The Polish Defence Minister arrived on a three-day state visit to India today. He will visit a Para Brigade of the Indian Army at Agra tomorrow before leaving for Vietnam early Thursday morning.

RUSSIAN FEDERATION

630. Prime Minister's Statement at the Joint Press Interaction with Russian Prime Minister Victor Zubkov.

New Delhi, February 12, 2008.

**Your Excellency Mr. Victor Zubkov,
Ladies and Gentlemen of the media,**

I am very pleased to welcome Prime Minister Zubkov and his distinguished delegation to India.

Prime Minister Zubkov's visit to India comes within three months of my own visit to Russia in November, 2007. Such high level exchanges between India and Russia reflect the time tested nature of the close and special ties that exist between our two countries.

Prime Minister Zubkov and I have had an extremely productive and comprehensive discussion on all aspects of our relationship.

I conveyed to the Prime Minister the importance we attach to his participation in the meeting of the Indo-Russia Forum on Trade and Investment¹ and the "Year of Russia" in India. Later today, I will be accompanying the Prime Minister to formally inaugurate the "Year of Russia" in India.

1 "We have finalised negotiations in regard to reaching an agreement on cooperation in the construction of additional nuclear power plants in India. We [also] affirmed our commitment to build on our defence relations, which is an important pillar of our strategic partnership," Prime Minister Manmohan Singh said after an interaction with the visiting Russian Prime Minister Victor Zubkov on February 12. The two leaders made it clear that the pact on nuclear reactors would be inked and operationalised after the Nuclear Suppliers Group cleared India's entry into the global civilian nuclear mainstream. A large business delegation is accompanying Mr. Zubkov. On the trade front, the two prime ministers stressed the need to boost the sagging bilateral trade to \$10 billion by 2010 through a Comprehensive Economic Cooperation Agreement. "If we grow by 30 per cent per year, we might achieve the figure of \$10 billion by 2010," Mr. Zubkov said at a meeting of the India-Russia Forum on Trade and Investment (IRFTI), organised jointly by the FICCI and CII. Mr. Zubkov discussed with Dr. Singh the potential to double bilateral trade within the next three years by enhancing cooperation in oil, gas, mining, technology, transport and energy. He told the captains of Indian industry that Russian rupee debt funds were being utilised for the newly launched titanium project in Orissa. "We are investing Russian rupee debt in the Indian economy," he said. Commerce and Industry Minister Kamal Nath acknowledged that Russian firms were interested in several Indian sectors, including engineering, metallurgy, automobile, aircraft building and infrastructure development. "We are taking steps to build cooperation in titanium oxide production," he said

In our discussions, we agreed to re-double our efforts to tap the full potential of our two economies. We agreed on the need to diversify our trade basket, and expand cooperation in sectors such as minerals, diamonds, transport and infrastructure, investment and services, and high technology.

For this we will operationalise the Joint Task Force to implement recommendations to increase bilateral trade to US\$ 10 billion by 2010 and consider a Comprehensive Economic Cooperation Agreement.

We agreed that there was vast potential for mutually beneficial cooperation in the area of hydrocarbons². I expressed my hope that ongoing discussions between our oil and gas companies would result in finalization of joint projects in India, Russia and third countries.

We expressed our satisfaction at the status of our ongoing collaboration in the fields of science and technology, space and civil nuclear cooperation. We have finalised negotiations in regard to reaching an agreement on cooperation in the construction of additional nuclear power plants in India. We reaffirmed our commitment to build upon our defence³ relations which is an important pillar of our Strategic Partnership.

2 The Minister for Petroleum and Natural Gas Murli Deora during his call on the visiting Russian Prime Minister, Victor Zubkov made a plea for a major stake in the Sakhalin - III and other major oil and gas projects in Far Eastern region of Russia and according to media reports his attitude was "sympathetic and positive". India is a partner in Sakhalin - I and gets oil supplies from there. Mr. Deora also urged Mr. Zubkov to impress upon the Russian companies to invest in the Indian oil and gas sector, particularly in the field of Liquefied Natural Gas (LNG). He offered opportunities to the Russian companies for investment in the Mangalore Refineries and Petrochemicals Limited's (MRPL) proposed LNG terminal. Mr. Deora after his meeting said: "We are old friends having common interest in many areas, including oil and gas. We would like to strengthen and expand further these interests." The chairman of the Russian conglomerate Sistema, Vladimir Yevtushenkov said his company was open to joint ventures and investments in oil and gas sector. "We could also look for joint investments in the Caspian region countries for offshore projects in a big way," he said.

3 Later in the year, in August the 8th meeting of the Indo-Russian Working Group on Shipbuilding, Aviation and Land Systems was held in New Delhi within the framework of the Indo-Russian Inter-Governmental Commission on Military Technical Cooperation. The discussions on the Russian side were led by the Director of the Department for Defence Industry Complex Development of the Russian Ministry of Industry and Trade Karavaev Igor Evgeniyevich and on the Indian side by the Additional Secretary of Defence Production Ajoy Acharya. At this meeting it was resolved to continue with defence cooperation in a number of sensitive areas. According to media reports the two sides exchanged views on implementation of current projects like T-90 tanks, missile systems and shipbuilding activities and aviation sector projects like the fifth generation fighter aircraft and multirole transport aircraft. They also agreed to take steps for ensuring their successful implementation.

Our talks today have reaffirmed our joint commitment to further strengthen Indo-Russian relations for the mutual benefit and prosperity of our two peoples, and for our region and the world.

Thank you.

631. Press Release of the Ministry of External Affairs on the letter of felicitation from Prime Minister to the President of the Russian Federation.

New Delhi, May 7, 2008.

Prime Minister Dr. Manmohan Singh has sent a letter of felicitations to Mr. Dmitri Medvedev, President of the Russian Federation on his inauguration today, wishing him every success in his high responsibilities.

The Prime Minister has stated that India draws immense satisfaction from its Strategic Partnership with Russia. This partnership is based on deep mutual trust, warm people-to-people bonds and longstanding multi-faceted cooperation. Relations with Russia occupy a special priority in India's foreign policy. In accordance with the successful practice of bilateral Summits between India and Russia, the Prime Minister has also extended an invitation to President Medvedev to visit India.

**632. Extract from the Interview of External Affairs Minister
Pranab Mukherjee with the Chennai based daily the *Hindu*.
September 22, 2008.**

* * * *

What about Russia and Central Asia, there is the perception that there is certain cooling off by India. There is also the perception that we are lukewarm to the Shanghai Cooperation Organisation (SCO)?

We have an excellent friendship with Russia, a friendship that is old and tested. What was a warm relationship with India and USSR, the Russian Federation as the successor state has maintained that relationship after the initial years of uncertainty. During the visit of President [Boris] Yeltsin, it was reaffirmed in the mid-90s. It was further strengthened during the tenure of President [Vladimir] Putin. We are expecting to receive the Russian President [Dmitry] Medvedev sometime before the end of this year. Prior to that I will have the privilege of receiving the Russian Foreign Minister [Sergei] Lavrov here. Other type of regional cooperation arrangements - RIC and BRIC - we are regularly having the meeting of Foreign Ministers. Our relationship with Russia is on upswing. Strategic partnership exists, in many areas like science and technology. The defence relationship exists very deeply. As far as SCO is concerned, India enjoys observer status. As observers, we do not participate in summit meetings. Since we joined SCO, we have been participating in every summit as an observer since 2005. Our Petroleum Minister Murli Deora represents India in this organisation. Keeping in view our status in SCO, we are for maintaining our relationship. Individual, and bilateral between India and countries of Central Asia are also expanding.

What is India's position on Kosovo and South Ossetia?

As far as Kosovo is concerned, I met the Serbian Foreign Minister today. We have not recognised Kosovo's "independence." We have a standard practice of recognising a country carved out of existing geographical entity. Keeping that standard we determine our position. We are watching the development with respect to Georgia and the other two small countries [South Ossetia and Abkhazia] which have been recognised by Russia. We have not yet taken any final view in respect of these two countries.

* * * *

633. Press Release issued by the Ministry of Defence on the meeting of the India - Russia Inter Governmental Commission on Military and Technical Cooperation.

New Delhi, September 29, 2008.

India and Russia today took a significant step in cementing their strategic ties as they agreed to extend the tenure of the Indo-Russian Inter-Governmental Commission on Military Technical Cooperation (IRIGC-MTC)¹ by another ten years on the expiry of its present term in 2010. After signing the protocol on IRIGC-MTC here today with his Russian counterpart, the Defence Minister Shri AK Antony, at a joint press conference, said that an apex committee will be formed to iron out problems on a fast-track basis on different issues related to ongoing and proposed projects for acquisition, joint development and production, joint defence R&D and interaction between the defence forces of both countries including joint exercises. He further said that the apex committee, jointly headed by Defence Secretaries of both countries, would meet atleast once in six months and its first meeting will be held in Moscow before the visit of the Russian President in December 2008.

Describing Russia as a 'trusted partner' Shri Antony said Indo-Russian relations have stood the test of time. Replying to a question on the existing bilateral defence cooperation, he said that it has been decided to procure 347 T-90 tanks from Russia. Another 1,000 tanks would be manufactured in India under transfer of technology. On the delay in acquisition of Gorshkov aircraft carrier, Shri Antony said the Indian side has considered the Russian demand for an escalation in price. "The same has been considered and would be placed before the cabinet for consideration," he added.

1. A press release issued by the Ministry of Defence a day earlier had given an idea of the likely direction of the discussions. It said the meeting "will cover a broad spectrum of issues including supply of defence systems, equipment upgrade, product and life cycle support for defence equipment of Russian origin. The Meeting will also discuss licensed and joint production, joint development and production of systems and platforms, interaction between the two armed forces and military technical cooperation." IRIGC-MTC was established in 2000 with a view to strengthen our bilateral defence cooperation. India and Russia share long standing friendly relations. Since the establishment of a strategic partnership between the two countries in 2000, the two governments have steadily developed and strengthened bilateral cooperation covering a range of areas of which defence forms a significant component.

The Russian Defence Minister Mr. Anatoly Serdyukov said the defence ties between the two countries are transforming from a vendor-seller relationship to joint development and production partnership.

Earlier, in his opening remarks to the IRIGC-MTC, Shri Antony stressed on the need to promote joint exercises, training and frequent exchange of delegations. "The early conclusion of the Status of Forces Agreement would provide the framework to hold mutually beneficial joint exercises regularly," he added. Shri Antony pointed out that defence cooperation remains the cornerstone of Indo-Russian bilateral relations. "A major part of our defence inventory is of Russian origin, and continues to remain so even now," he said.

634. Press Release issued by the Ministry of Defence on the outcome of the 8th India - Russia Inter Governmental Commission -Military and Technical Cooperation meeting.

New Delhi, September 30, 2008.

The Defence Minister Shri AK Antony has described the outcome of the 8th Meeting of IRIGC-MTC in New Delhi on Monday as 'a landmark event in the close and strategic bilateral relations between India and Russia'. Speaking at a banquet hosted by him in honour of the visiting Russian Defence Minister Mr Anatoly Serdyukov here last night, Shri Antony said the Meeting, as in previous years, discussed issues relating to regional and global peace and security.

"This is an important event not only between the Defence Ministries of the two countries but also a landmark event in our close and strategic bilateral relations and an important step in maintaining regional and global peace and security", he said.

Shri Antony expressed confidence that the defence relations between India and Russia are bound to grow manifold and called for evolving a holistic defence partnership.

"Given the warmth of the cordiality and complete understanding between the leadership of both our countries, I have no

doubt that our defence relations are bound to grow manifold. We need to work towards developing a mutually beneficial defence relationship which is holistic in content and scope."

Speaking on the occasion, Mr Serdyukov echoed the sentiments expressed by Shri Antony. He expressed satisfaction at the grounds covered at the Meeting of the IRIGC-MTC though his visit to New Delhi was a short one.

The Russian Defence Minister has since returned to Moscow.

635. Remarks by the External Affairs Minister Pranab Mukherjee at the Joint Media Interaction with the Russian Foreign Minister.

New Delhi, October 20, 2008.

I am pleased to welcome and meet dear friend foreign Minister Sergey Lavrov yet again. It is part of our regular, useful interactions. Recently we had met in Yekaterinburg(Russia) on the 15th May and in New York on 29th September. Today, we had very useful discussions on bilateral, regional and international issues.

We reviewed the entire gamut of bilateral relations and progress made by us in specific areas since the last Summit meeting in November 2007 in Moscow. We are satisfied with the overall development of our strategic partnership and agreed on the need to intensify joint cooperative efforts in areas such as trade & investment, science & technology, energy and defence. I conveyed our gratitude and appreciation for Russia's support for NSG's decision on civil nuclear cooperation with India and discussed prospects for future bilateral cooperation in the field.

One of the important subjects of our meeting today was the preparations for the State visit of President Dmitry Medvedev to India later this year. We are eagerly looking forward to the first visit of President Medvedev to India and preparing to make it successful and a landmark visit in our bilateral relations.

We have signed a Protocol on Consultations between the two Foreign Offices in various areas, including regional and international issues of mutual

interest. These exchanges are useful for sharing views about developments worldwide and promoting mutual understanding and trust between our two countries. We believe that India-Russia strategic partnership is an important factor for peace and stability not just in this region but the whole world. We discussed the situation in India's neighbourhood, Russia's near abroad and other parts of the world.

This year has been as special one for India-Russia relations with the holding of wide-ranging programmes under the 'Year of Russia' in India, the first such large scale bilateral series of programmes in almost 20 years. Next year, we would be celebrating the 'Year of India' in Russia and both sides are preparing actively for it.

Thank you.

636. Press Release of the Ministry of Petroleum and Natural Gas on the visit of Petroleum Minister Murli Deora to Russia and his call on Russian Prime Minister Vladimir Putin.

New Delhi, November 5, 2008.

The Minister of Petroleum & Natural Gas Shri Murli Deora met Mr. Vladimir Putin, Prime Minister of Russia, today at Moscow and emphasized that India seeks to enhance growing synergy between India and Russia in the oil and gas sector on a long term basis. The minister pointed out India's interest in participating in Sakalin-3 project. He also referred to India's desire for formation of joint venture between ONGC Videsh Limited (OVL) and Rosneft for taking up exploration and development projects in east Siberia. Shri Deora reiterated that India welcomes participation of Russian companies in the green field refineries and petrochemical projects in India besides in the exploration & production area. The Minister has been supportive of Russian and Indian companies joining hands to take up oil and gas projects not only in India and Russia but also in other countries.

At a meeting with his Russian counterpart Mr. Sergy Shemato, Minister of Energy last night at Moscow Shri Deora underlined that it would be in the

mutual interest of both countries to closely engage as Russia is energy rich and India is an energy deficit country. He pointed out that Russian companies could participate in India's growing oil sector including downstream market.

Shri Deora invited Russian participation in the India-CIS Roundtable on Hydrocarbons being organized by India in New Delhi during 25-26 November, 2008. He pointed out that the event aims to further strengthen ties between India and CIS countries particularly Russia.

Secretary (PNG) Shri R.S. Pandey, CMD (ONGC) Shri R.S. Sharma and MD (OVL) Shri R.S. Butola are accompanying the Minister¹.

¹ On return to New Delhi on November 7, Minister Murli Deora reiterated that he had sought big time participation of Indian companies in the Russian oil and gas fields, particularly in East Siberia, and had expressed interest in importing liquefied natural gas (LNG) from Moscow to meet its ever growing energy needs. He said he had sought two million tonnes a year of LNG from Russia's Sakhalin LNG project during his meeting with Russian Prime Minister Vladimir Putin. Mr. Deora said Mr. Putin was very positive in his response and said that Russian gas monopoly Gazprom would decide on selling LNG to India and was of the view that Indian companies could hold talks with them. Besides LNG, Mr. Deora said he had taken up with Mr. Putin ONGC Videsh's stake in big-ticket Sakhalin-3 oil and gas field. The issue of OVL joining hands with Russian firm Rosneft for exploration and development of Vankor oilfield in East Siberia also formed part of the talks between the two leaders. Joint bidding for Trebs and Titov oilfields in the Timan Pechora region of North Russia also came up for discussion. However, Mr. Deora said the Russian Prime Minister informed him that the fields were available but Indian companies would have to take part in the bidding process.

637. Press Release issued by the Ministry of Defence on cooperation between India and Russia in the field of Defence.

New Delhi, December 3, 2008.

India and Russia have taken a significant step to boost Defence Cooperation at their first meeting of the India-Russia High Level Monitoring Committee (HLMC). The two-day meeting, co-chaired by the Defence Secretary Shri Vijay Singh and Mr. Mikhail Dmitriev, Director, FSMTC from the Russian side, ended here today.

Both sides discussed issues related to ongoing projects such as Fifth Generation Fighter Aircraft, Multi-role Transport Aircraft, T-90 tanks, AWACS, SU-30MKI upgrade, aircraft carrier Admiral Gorshkov and Medium Lift Helicopters. Cooperation between the defence forces of the two countries was also discussed.

This new forum was established during the last meeting of the India Russia Inter-Governmental Commission on Military Technical Cooperation (IRIGC-MTC) held in New Delhi on 29th September, 2008 under the joint Chairmanship of the Defence Ministers of both countries. This forum was established to not only monitor implementation of ongoing Military Technical Cooperation (MTC) activities but also identify new activities for enhancing defence cooperation by way of joint Research, Development and production of military hardware, including Transfer of Technology and cooperation between the armed forces of the two countries.

638. Joint Declaration between the Republic of India and the Russian Federation during the visit of the President of the Russian Federation.

New Delhi, December 5, 2008.

The Republic of India and the Russian Federation, hereinafter referred to as the "Sides",

Reaffirming their time-tested friendship, long-standing relations and enduring bilateral ties, which have become stronger over time;

Guided by the Treaty of Friendship and Cooperation between the Republic of India and the Russian Federation of 28 January 1993 and the Declaration on Strategic Partnership between the Republic of India and the Russian Federation of 3 October 2000;

Reiterating their adherence to the ideals and principles enshrined in the UN Charter;

Determined to contribute jointly to strengthening global peace, security and stability and to building a just and democratic world order;

Hereby declare:

1. Annual Summit-level exchanges make a vital contribution to the strengthening of the strategic partnership and have become a mutually-valued tradition. The large number of agreements signed between the two countries in diverse spheres since the year 2000 and the broadening of cooperation achieved in key areas is reflective of the success of India-Russia annual summits. Besides reviewing progress in bilateral relations, these Summits have provided opportunity for outlining a long-term perspective for India-Russia relations.
2. Both Sides express satisfaction at the progress in the implementation of decisions taken during the India-Russia Summit in November 2007. Both Sides underline the high priority attached to each other in their foreign relations and reaffirm their commitment and keenness to deepen their strategic partnership and enhance mutually beneficial cooperation in all spheres.
3. Both Sides agree that inter-Parliamentary cooperation, cooperation between various Government Departments/ Agencies, Foreign

Offices and the National Security Councils of India and the Russian Federation are an integral feature of the strategic partnership between the two countries. Both Sides reiterate their resolve to further encourage cooperation between the legislative, executive and judiciary organs of the two countries. They also agree to expand bilateral interaction and exchange of visits to sustain the momentum of cooperation, understanding and goodwill between India and the Russian Federation.

4. Both Sides underline the high priority attached by the two countries to efforts towards increasing bilateral trade, investment and economic cooperation and express satisfaction at the progress towards achieving the target of bilateral trade volume of US \$ 10 bn by 2010. They note the significant role played by the Indo-Russian Inter-Governmental Commission on Trade, Economic, Scientific, Technological and Cultural Cooperation in this regard. They also note the holding of the first meeting of the Joint Task Force to monitor the implementation of recommendations of the Joint Study Group to increase trade and consider concluding a Comprehensive Economic Cooperation Agreement between the two countries.
5. Both Sides note the considerable expanse of complementarities between the growing economies of India and the Russian Federation. The increasing competitiveness of Indian and the Russian companies in the world market and opening up of the two economies have enabled them to launch themselves successfully in each other's markets. There has been a substantial growth in the opening up of representative offices and branches of Indian enterprises in the Russian Federation and of Russian enterprises in India which is a healthy indicator of enhanced bilateral economic cooperation. Both Sides agree to intensify ongoing efforts and take further measures to facilitate trade and commerce between the two countries including simplification and streamlining of procedures, and removal of technical barriers.
6. Both Sides appreciate the work of the Indo-Russian Forum for Trade and Investment, and express hope that the Forum will further contribute towards bridging the gap and facilitating exchanges between the business communities of the two countries. Both Sides emphasize the important role of the private sector in developing bilateral trade and investment between India and the Russian

Federation. Both Sides take special note of the creation of the India-Russia CEOs Council and express hope that the Council would not only provide valuable recommendations to further enhance bilateral commerce but also come up with private initiatives in terms of business tie-ups. Both Sides agree to encourage trade and business chambers of the two countries as well as other business organizations to enhance mutual arrangements and events for trade, investment and business-to-business contacts.

7. Bearing in mind the growing weight of India and the Russian Federation in the world economy and the negative impact of the current global financial crisis, the two Sides emphasize the importance of comprehensive reform of the international financial and economic architecture in order to adapt it to the new realities in global economy and agree to cooperate in various formats to promote a more just world economic order based on the principles of multipolarity, rule of law, equality, mutual respect and common responsibility.
8. India and the Russian Federation agree on the increasing importance of energy security for them as two fast-growing economies and major producer and consumer of energy and consequently the need to expand their bilateral cooperation in this field. In this regard, both Sides agree to promote, support and facilitate full utilization of considerable opportunities for bilateral cooperation in the oil and gas sector in India, Russia and other countries. They acknowledge regular contacts and ongoing discussions between Indian and Russian hydrocarbon companies on specific upstream and downstream projects and encourage them to conclude mutually-agreeable arrangements.
9. Both Sides underline the importance of nuclear energy as a clean and safe source of energy to meet growing energy requirements and welcome the recent decision taken by the Nuclear Suppliers Group on civil nuclear cooperation with India. They note with satisfaction the ongoing cooperation in the implementation of the Kudankulam Nuclear Power Project. The two Sides agree to collaborate in setting-up of additional units of the project on the basis of the Agreement between the Government of the Republic of India and the Government of the Russian Federation on cooperation in the construction of additional nuclear power plant units at

Kudankulam and new sites in India signed on 5 December 2008 and to expand and pursue further areas for bilateral cooperation in the field of peaceful uses of nuclear energy¹.

10. Referring to the respective strengths of India and the Russian Federation in various spheres of peaceful uses of outer space, both Sides note ongoing cooperation in the Russian Global Navigation Satellite System GLONASS, joint lunar exploration, joint development and launch of a Youth satellite for educational purposes and other projects. They agree to direct their respective agencies to intensify ongoing cooperation and identify new areas for further collaboration between them.
11. Both Sides agree that military-technical cooperation is a key area of cooperation between India and the Russian Federation and note that the Russian Federation continues to be a leading source of defence products to India. They support bilateral efforts to diversify and strengthen cooperation in this area and encourage initiatives by respective organizations on both Sides to adapt to constantly evolving needs and requirements of each other. They express satisfaction at the effective role played by the Indo-Russian Inter-Governmental Commission on military technical cooperation and direct it to review constantly and take forward the progress on steps taken in the areas of joint research, development, production and marketing, regular service-to-service interaction and joint military exercises. They agree that the Long Term Programme of military and technical cooperation has provided a sound collaborative framework and it should be renewed for ten years after it is completed in 2010. Both Sides note with satisfaction the 10th anniversary of the Indian-Russian joint venture to produce state-of-the-art Brahmos hypersonic cruise missiles and the launching of the implementation of the projects on joint development and production of Multi-Role

1. To seal the nuclear cooperation the two countries on December 5 signed agreements that would eliminate the supply-demand mismatch in uranium and enable the setting up of more state-of-the art nuclear power plants in India. Final touches were given to a mega agreement to supply nearly 2,000 tonnes of uranium. This would catapult the capacity utilisation of the existing plants to 90 per cent from an unhealthy 40 to 60 per cent due to shortage of the raw material. The two sides also agreed to set up four more power plants at Kudankulam, where Russia was already assisting in installing two plants. They also agreed to explore the possibility of setting up more nuclear plants, possibly two.

Transport Aircraft and Fifth-Generation Fighter Aircraft and agree to further expedite these projects¹.

12. Both Sides express satisfaction with cooperation in the field of science and technology under the framework of the Integrated Long Term Programme (ILTP) and agree that it should be extended for another period of ten years after its completion in 2010. Appreciative of various joint projects and research in various fields of science and technology and setting up of a number of joint Scientific Centres, both Sides agree to further broaden and deepen the scope of cooperation in this area. The two Sides emphasize that joint collaborative ventures should focus on emerging areas of technology such as nano-technology and bio-technology and encourage direct interaction between research institutions of India and the Russian Federation. They also underline the importance of bringing relevant technologies to their respective markets and in this context, they direct their agencies to finalize early the joint working document for the setting up of India-Russia Centre for Technology Transfer.
13. Both Sides agree that there is considerable potential for further cooperation in the area of information and communication technologies. They welcome efforts both in the government and in the private sector towards increasing cooperation in this field. Noting practical opportunities of development of cooperation in the prospective sphere of information and communication technologies, the Sides note the existing and potential problems in the field of information security globally and consider it feasible to collaborate more actively in its solution in the framework of the United Nations and other international organizations and fora.
14. Both Sides underscore the importance of longstanding and traditionally warm and friendly cultural bonds between the peoples of the two countries. They agree to actively support and promote cultural exchanges, greater contacts at various levels and closer

1. During the visit India and Russia also signed a contract for the import of 80 military helicopters for the Indian Air Force. The space agencies of both nations agreed on plans for cooperation in manned space flights. This is in addition to their resolve to cooperate in Chandrayaan II, a key part of India's lunar space mission. In all, the two sides signed 10 agreements, with the ones on nuclear cooperation, defence and space exploration being of substantial nature. Other pacts were signed on cooperation between stock exchange regulators, customs institutes and anti-money laundering agencies. It was also agreed to step up ties in tourism.

understanding and appreciation of each other's arts, languages, society and traditions. They express satisfaction at the successful conduct of the 'Year of Russia' in India in 2008 and agree to work together for smooth holding of 'Year of India' in Russia in 2009.

15. Both Sides express satisfaction at the growing and more focused interaction in the trilateral format among India, Russia and China which provides basis for developing further cooperation among the three large Asian States. It acquires importance in the framework of multilateral dialogue mechanisms, substantially contributes to strengthening newly emerging multipolarity and promotes collective leadership of world's leading States. Both Sides note that fruitful interaction in the trilateral framework is not confined to the Ministries of Foreign Affairs but involves relevant Ministries in areas such as agriculture, health care, disaster mitigation and relief as well as academic and business communities.
16. Both Sides welcome growing interaction in the BRIC (Brazil, Russia, India, China) format. They express satisfaction at the first stand-alone meeting of Foreign Ministers of BRIC countries held in Yekaterinburg, Russia in May 2008 and the Foreign Ministerial meeting in New York in September 2008 on the sidelines of 63rd UNGA, the first meeting of Finance Ministers of BRIC countries held in Sao Paulo, Brazil in November 2008, as well as the coordinated steps by the four countries in the context of the financial summit of the Group of 20 in Washington in November 2008, and express their confidence that the next stand-alone meeting of BRIC Foreign Ministers to be held in India and the first stand-alone BRIC summit to be held in the Russian Federation in 2009 will be new important milestones in the making of this promising cooperation mechanism of the four most dynamically developing large economies of the world. Both Sides welcome the growing cooperation between the G-8 and major emerging economies and stress the necessity to develop this cooperation further in order to establish an advanced mechanism of collective leadership in world affairs.
17. The Sides will work towards the establishment of a multipolar world order based on the principles of the rule of law, sovereign equality, territorial integrity and non-interference in internal affairs of States. Activities aimed at strengthening a central coordinating role of the United Nations in maintaining peace and security, and at increasing

the efficiency and authority of the UN, form important elements of India-Russia cooperation at the international level. India and Russia stress the need to implement the process of UN reform, so as to reflect contemporary realities. In this context, the Russian Federation reiterates once again that it regards India as an influential and major member of the international community. The Russian Federation reaffirms its support to India as a deserving and strong candidate for the permanent membership in an expanded UN Security Council.

18. India and the Russian Federation strongly condemn terrorism in all its forms and manifestations and reiterate that there can be no justification for any act of terror, wherever, for whatever reason and by whosoever committed. They jointly affirm that bilateral cooperation in combating terrorism is an important dimension of their strategic partnership. The two Sides reiterate their commitment to strengthen international cooperation to combat terrorism, including financing for terrorism, while acting in conformity with the purposes and principles of the UN Charter, relevant UN Resolutions and International Conventions, and the Global Counter-Terrorism Strategy adopted by the UN General Assembly. In this regard, they urged the international community to urgently adopt the draft Comprehensive Convention against International Terrorism which is before the UN General Assembly. They affirm the role of the UN as a major inter-governmental organization to coordinate efforts to counter international terrorism. Both Sides express concern that narco-business is becoming more fused with terrorist and extremist activities, which makes it urgent to intensify joint efforts to address global threat in the framework of the Agreement between the Government of the Republic of India and the Government of the Russian Federation on cooperation to combat illicit trafficking in narcotics, psychotropic substances and their precursors signed in Moscow on 12 November 2007.
19. The Russian Federation expresses solidarity and support to the Government and people of India in connection with terrorist attacks in Mumbai from 26-29 November 2008. Both Sides call upon all states to cooperate actively with and provide support and assistance to the Indian authorities in their efforts to find and bring the perpetrators, organizers, sponsors, patrons or those in any way connected to these barbaric acts to justice in India in accordance with the obligations under international law and relevant UN Security Council resolutions on fighting terrorism.

20. Noting the recent conflict in South Ossetia, India and the Russian Federation welcome the principles outlined by the Presidents of the Russian Federation and France for addressing the situation in the Caucasus region and hope that these steps would lead to lasting peace and stability in the region. India supports the important role of the Russian Federation in promoting peace & cooperation in the Caucasian region.
21. In the Asia-Pacific Region, the Sides favour security system based on mutual trust, equally beneficial cooperation and respect for cultural diversity of the regional countries. They declare their intention to enhance their interaction within the framework of the international fora of the Asia-Pacific Region, including the ASEAN Regional Forum on Security (ARF) and the Asia Cooperation Dialogue (ACD). Given their historically friendly ties, the Indian side fully appreciates the desire of the Russian Federation to join the Asia-Europe meeting and East Asia summit mechanisms.
22. India and the Russian Federation underline their strong support for peace, stability, prosperity and development of countries in Central Asia. Underlining the role of the Shanghai Cooperation Organisation in the region, the Russian Federation expresses its support for a more active role for India as an Observer state in the Organization. The Indian side conveys its appreciation for the Russian support and looks forward to a more constructive participation in and contribution to the Organization.
23. India and the Russian Federation strongly support a democratic and pluralistic Afghanistan. Both Sides welcome Afghanistan joining SAARC as its eighth member in the 14th Summit held in Delhi in April 2007 and believe that Afghanistan will immensely benefit from greater regional cooperation and connectivity. Although much has been achieved in Afghanistan in recent years, formidable challenges still lie ahead. India and the Russian Federation express their concern over the deteriorating security situation in Afghanistan due to a determined and coordinated resurgence of the Taliban, Al Qaeda and other extremist groups, the growth in cross-border terrorism, its links with international terrorism and international drug trafficking, and the consequential danger these developments pose to the gains made in the recent past. They strongly condemn the terrorist attack

on Indian Embassy in Kabul on 7th July 2008 as well as killing of civilians in terrorist acts and combat operations. Both Sides call for a coherent and a united international commitment, both to Afghanistan's development and security aspects, to deal with these threats. Both sides welcome Russia's initiative to organize an international conference on Afghanistan in the framework of Shanghai Cooperation Organization, involving its Member states and Observers.

24. India and the Russian Federation believe that all possible efforts should be made to address the Iranian nuclear issue by peaceful means through dialogue and negotiation. They emphasize that all Sides must show flexibility and restraint. They agree that Iran has the right to develop research, production and use of nuclear energy for peaceful purposes in conformity with its NPT and other international obligations. The adoption of the UN Security Council Resolutions 1737, 1747, 1803 and 1835 underscore the need for Iran to restore the trust of the international community in the exclusively peaceful nature of its nuclear programme.
25. The Sides reaffirm their commitment to securing a comprehensive, lasting and just settlement of the Arab-Israeli conflict through a negotiated solution on the generally recognized international legal base - the UN Security Council Resolutions 242, 338, 1397 and 1515, leading to creation of a sovereign, independent, viable and united state of Palestine living within secure and recognized borders, side by side at peace with Israel. While reiterating their support to the Quartet's initiatives and the Arab Peace Plan, they express hope that the momentum created by the Annapolis conference would not be lost. The Sides also call for an end to the expansion of Israeli settlements in Occupied Palestinian Territories and for an early and significant easing of restrictions on the free movement of persons and goods within Palestine. Both Sides welcome the encouraging developments in Lebanon and reaffirm their support for National reconciliation including convening of the National Reconciliation Talks on 16 September 2008. The Sides also welcome ongoing effort to address the Syrian track of the peace process.

26. The two Sides agree to elevate their strategic partnership to a qualitatively higher level and to promote and further their ties of friendship, cooperation, mutual understanding, trust and confidence in each other. The President of the Russian Federation invites the President of the Republic of India and the Prime Minister of India to visit Russia at a mutually convenient time in 2009. The Indian side expresses gratitude to the Russian side for the invitations.

Signed in New Delhi on 5 December 2008.

President of the
Russian Federation

(Dmitry Medvedev)

639. Protocol for the Fourteenth Session of the Indo-Russian Inter-Governmental Commission on Trade, Economic, Scientific, Technological and Cultural Cooperation

New Delhi, December 5, 2008.

The Fourteenth Session of the Indo-Russian Inter-Governmental Commission (IRIGC) (hereafter referred to as Commission) on Trade, Economic, Scientific, Technological and Cultural Cooperation was held on 3 December 2008 in New-Delhi. The Indian Side was led by the Minister of External Affairs and the Chairman of the Indian side of the Commission, H.E. Mr. Pranab Mukherjee. The Russian Side was led by the Deputy Chairman of the Government of the Russian Federation and the Chairman of the Russian side of the Commission H.E. Mr. Alexander Zhukov.

The composition of the Indian and the Russian delegations (hereafter referred to as "the Sides") is at Annexure I.

The discussions were held in the spirit of traditional friendship and mutual understanding and the Sides decided the following:

The Sides expressed satisfaction on the steps that are being taken to increase bilateral trade, investment and economic cooperation between India and Russia and their expectation is that the two countries would reach a level of interaction that would be commensurate with the existing potential.

The Sides shall implement proactively the decisions taken during highest level visits, including the visit of the Prime Minister of India H.E. Dr. Manmohan Singh to Russia on 11-12 November 2007 and the visit of the President of the Russian Federation H.E. Mr. D.A. Medvedev to India on 4-6 December 2008.

The Sides noted successful holding of numerous events in the context of the Year of Russia in India including Russian national exhibition and the Russian side agreed to provide all the necessary assistance in organizing the Year of India in Russia in 2009. The Sides agreed to direct relevant organizations to take steps to implement agreements reached in this regard.

The Sides noted positive trends in the bilateral trade. In the first nine months of 2008, it grew by 55% to US\$ 4.7 billion. The Sides stressed the importance of maintaining the dynamics to achieve the target of US\$ 10 billion bilateral trade turnover by 2010.

The Sides noted progress in cooperation in the areas of power, nuclear energy, oil and gas, space, telecommunications, metallurgy, machinery and automobile industry, banking and financial services, construction of highways and pipelines, air transport service, science and technology, tourism and underlined that there is considerable scope for cooperation in sectors such as minerals development, railway and water transport, aircraft and shipbuilding, information technologies, biotechnology, nano-technology, construction, fertilizers and chemicals, pharmaceuticals, agricultural and processed food products, ready made garments and textiles, gems and jewelry.

The Sides noted the holding of the first meeting of the Joint Task Force (JTF) on 6-7 November 2008 in New-Delhi coordinated by the Ministry of Commerce and Industry, Government of India and the Ministry of Economic Development of the Russian Federation to monitor the implementation of the Joint Study Group (JSG) recommendations to promote the bilateral trade, investment and economic cooperation between India and Russia. The Sides recommended that the organizations concerned should implement the JTF decisions.

The Sides noted with satisfaction the establishment of Indian-Russian Chief Executive Officers Forum and expressed their expectation that it would become an effective instrument of cooperation between business circles of both countries and would promote faster growth of the bilateral trade and investment.

The Sides recommended that the organizations concerned of both countries should hasten the consideration of bilateral documents which regulate mutual recognition of certificates issued by certification agencies.

The Russian side noted that successful cooperation in the realization of industrial projects in India with participation of Russian companies may make a substantial contribution to increase bilateral trade turnover up to US\$ 10 billion by 2010.

The Russian side pointed out that the Russian company V/O "Tyazhpromexport" emerged as the lowest bidder twice in the tender for modernization of blast furnace at Bhilai Steel Plant (SAIL) and requested the Indian side to facilitate further negotiations to pursue the matter. The Indian side informed that the initial tender was cancelled by SAIL because the price quoted by TPE was much higher than SAIL's estimated cost of the project. The second bid is under consideration of SAIL.

The Russian side mentioned the cancellation of tender for construction of a seamless tube mill at RINL/VSP, where the Russian company JSC "The Electrostal Heavy Engineering Works" (EZTM) had bid. The Indian side clarified that the project for which EZTM had bid was dropped after due consideration by RINL on account of concerns regarding economic viability.

The two Sides agree on facilitating transparent and fair conditions for participation of their companies in tenders in each other's country.

Taking note of the adjudication between JSC TPE & NTPC with regard to their contract for 'Barh' STPP, the Sides urged TPE and NTPC to hold negotiations for the purpose of formulating and concluding further arrangements as early as possible to resolve their issue.

The Russian side expressed concern over the beginning of anti-dumping investigations in India on import of Hot Rolled Plates Steel Products originating in or exported from Russia.

The Indian side expressed concern over the imposition of restrictions on the export of plant products from India to Russia by Russia and pointed out that it is acting as a major deterrent to the growth of bilateral trade. The Indian side suggested to the Russian side that appropriate consultation measures need to be evolved to address any concerns before undertaking such steps. The Russian side agreed to consider the possibility of removing pending restrictions on import of plant products from India taking into account the significance of a Protocol on sanitary & phyto-sanitary measures signed between the two sides in May 2008, and also Memorandum on phyto-sanitary regulation of mutual supplies of plant products, which is under consideration of the sides.

The Sides noted with satisfaction the considerable interest of the business circles of both countries in the Second Indo-Russian Forum on Trade and Investments which was held in New Delhi on February 2008. The Sides called upon the relevant organizations of both countries, especially the representatives of the regions of India and Russia, to take part in the Third Indo-Russian Forum on Trade and Investment which is to be held in Moscow in September 2009.

The Sides agreed that the further development of cooperation between the regions of two countries would contribute to further expansion of bilateral cooperation in diverse spheres.

The Sides noted that the signing of the General Letter of Exchange for utilizing rupee debt funds on November 12, 2007 gives additional opportunities for investment in new projects in India. The Sides noted the beginning of realization of the first commercial project utilizing debt funds 'Titanium Minerals Private Limited' in Orissa.

The Commission noted that effective realization in time of the pilot project of construction of titanium products plant in the state of Orissa with debt Rupees fund financing is of great importance for the further development of bilateral investment cooperation in general and hoped for satisfactory realization of the project based on the mutual arrangements.

The Sides recommended that the interested organizations should establish informational exchange on investment possibilities of special economic zones in India and Russia.

The Russian side informed about the progress made by AFK Sistema in participation in the telecommunication sector of India with considerable Russian investments.

The Sides called upon the banking and financial institutions of the two countries to increase their activities and presence on the territories of India and Russia for enhancing bilateral trade and economic cooperation. The Sides welcomed opening of the branch of the JSC VTB, the state-owned Russian bank, at New-Delhi.

The Sides noted the considerable potential in cooperation in the field of nuclear energy in India and highly appreciated the signing the Agreement on cooperation in the construction of additional nuclear power plant units at "Kudankulam" as well as in the construction of Russian designed nuclear power plants at new sites in India.

The Sides agreed to continue the discussion on the possibility of Russian companies' participation in realization of projects in Indian fuel and energy complex and of Indian companies' development of Eastern Siberia's and other Russia's regions fuel and energy resources.

The Sides noted the interest of Indian and Russian companies in expanding cooperation in coal sector and agreed to support perspective projects in this field.

The Sides recommended that the interested organizations should examine the abilities of widening cooperation between Indian and Russian companies in the energy machinery and ore mining equipment sectors.

The Sides agreed to encourage cooperation in the sphere of tourism, and in the development of tourism infrastructure.

The Sides agreed to promote cooperation of electronic and printing business media of Russia and India to ensure regular exchange of materials on economies of the two countries.

Both Sides expressed satisfaction at the activities undertaken within the framework of the Integrated Long Term Programme (ILTP). They noted that over 100 projects in 17 thematic areas are currently underway under ILTP and eight Indo-Russian research centers have been operating successfully in the fields of powder metallurgy, vaccines, computer researches, biotechnologies, seismology, gas-hydrates, ayurveda, and biomedical technologies. Both Sides agreed to speed up work for early setting up of the Indo-Russian Centre on Technology Transfer in Moscow and the Indo-Russian Centre for Non-ferrous Extractive Metallurgy and Indo-Russian Centre for Accelerator and Laser in India.

The Sides noted active contacts in the sphere of science, education and culture in the context of Year of Russia in India and recommended that interested organizations should continue its efforts in further consolidation of bilateral cooperation in this field.

The Protocols of the meetings of the five Working Groups under the Commission are at Annexure II.

The Commission directed the Working Group on Communications and Information Technology to hold the meeting of the Group at earliest.

The Commission directed the Working Groups to implement the Protocols.

The Fifteenth Session of the Commission shall take place in Moscow in 2009. The dates and agenda of the Session would be agreed upon through diplomatic channels.

This Protocol was signed in New Delhi on 5 December 2008 in English and Russian languages.

640. Joint Press Interaction by Prime Minister of India and President of the Russian Federation.

New Delhi, December 5, 2008.

Official Spokesperson (Shri Vishnu Prakash): Good afternoon and welcome to the Joint Press Interaction. Honourable Prime Minister of India would be making an opening statement. Next, His Excellency the President of Russia would be making a statement. Mr. Prime Minister, the floor is yours, Sir.

Prime Minister of India (Dr. Manmohan Singh): Your Excellency President Medvedev, Representatives of the media

We are honoured to have President Medvedev and his delegation in our midst today. This is a particularly historic occasion as it is President Medvedev's first visit to India.

The President and I have held detailed talks covering all areas of our relationship such as civil nuclear cooperation, hydrocarbons, trade and economy, defence, space, science and technology, culture and terrorism.

Our strategic partnership with Russia is a vital anchor of our foreign policy. It is a relationship that has withstood the test of time. It is a relationship that is based on strong mutual trust, confidence and convergence of interests.

We are grateful for the consistent support that the leadership and people of Russia have extended to India in diverse areas.

A large number of agreements have been signed today. The signing of the agreement on civil nuclear cooperation with Russia marks a new milestone in the history of our cooperation with Russia in the field of nuclear energy.

We have taken yet another step forward in the area of space cooperation and have agreed to initiate joint activities in our human spaceflight programme.

We have given directions to our officials to expedite all measures that are required to achieve our bilateral trade target of 10 billion US dollars by 2010. This includes the activation of existing and new mechanisms such as Inter-Governmental Commission, the Joint Task Force, the India-Russia Trade and Investment Forum, and the India- Russia CEOs Council.

We discussed the possibilities of greater cooperation between Indian and Russian companies in both upstream and downstream sectors in the

hydrocarbon sector. Our dialogue in this area has intensified considerably.

We have agreed to further strengthen our defence cooperation by increasingly focussing on joint production and research and development.

I conveyed to President Medvedev the sense of anger and outrage in India over the terrorist attacks in Mumbai. We deeply appreciate Russia's expression of solidarity with India at this moment. We both agreed that these attacks represent a threat to all open and pluralistic societies, and require a major intensification of efforts against supporters and perpetrators of terrorism anywhere in the world.

Our discussions on regional and international issues were marked by strong convergence of views. There is much that India and Russia can do to enhance global peace, stability and prosperity, and bring about an international order that reflects contemporary realities.

The "Year of Russia" in India which will conclude today has been a celebration of our relations. I thank President Medvedev for joining us on this occasion.

The people of India have great goodwill for Russia. We are confident that under President Medvedev's dynamic leadership, Russia's leading role in global affairs will be strengthened. Thank you.

Official Spokesperson: Mr. President, the floor is yours.

President of Russia (Mr. Dmitry Medvedev): *Ladies and gentlemen, first of all I would like to cordially thank the President of India Madam Patil and Prime Minister Dr. Manmohan Singh for the warm comradely welcome accorded to our delegation. Indeed this is my first visit to India in my capacity as President of Russia, and we hope that this visit will become a major element in the development of our bilateral relations, and will open a new page, important page, in our bilateral relations, our bilateral contacts.*

Let me point out that for myself I have deemed it of utmost importance to ensure the continuity of good traditions of Russia-India friendship, trust and cooperation. These relations of trust have been built during the course of many centuries, and today they help us to strengthen and develop our strategic partnership. This is of particular importance during the time of test such as the terrorist attack in Mumbai. We would like once again to express our sincere condolences on behalf of our delegation to all the families of the victims, and express our solidarity in combating terrorism. We stand ready to work with our Indian colleagues in this area along all

the avenues, all the areas, possible areas for cooperation. And we stand ready to provide assistance in all these areas.

Today we have had a very productive dialogue with the Prime Minister of India. Our talks have been very useful. And the main result is the demonstration of our aspiration to the development of political dialogue, cooperation in the fields of business and culture. They are reflected in the Joint Declaration that has just been signed.

One of the central topics that is usually discussed during Summits like this is the prospects for trade and economic cooperation. Since 2005, our bilateral trade turnover has increased. It has been increasing by a high rate, on average by one-third annually. Last year it exceeded the level of 5.3 billion US dollars and this year we expect it to reach about seven billion US dollars. And there is every reason to believe that we will be able to achieve the level of ten billion US dollars by the year 2010.

What are the main areas of this cooperation? One of the indisputable priorities is our cooperation in the energy sector. Mr. Prime Minister has referred to this. A major practical result of our meeting today has been the signing of the agreement on the construction of additional power units at the Kudankulam Power Plant, and on the construction of new Russian-designed nuclear power plants in India.

Furthermore, companies from Russia together with their Indian counterparts plan to develop exploration for and extraction of mineral resources. It is our intention to further our cooperation in metallurgy, machine engineering sector, pharmaceuticals, bio and information technologies, in the exploration of space, and development of tourism. All the documents on these subjects have just been signed.

A major contribution by the way to the elaboration of these documents has been made by our Bilateral Cooperation Commission; Inter-Governmental Commission. I would like to thank the Co-Chairs of this Commission, all those who took part in its work, and the CEOs Council, and the Forum on Trade and Investment.

A part and parcel of our partnership in our cooperation continues to be military technical cooperation. Here our priority task is to switch over, to proceed from usual purchases and selling of equipment to the joint development and production. We have already some opportunities in this area and we will pursue this line. I am referring here first and foremost to our achievements in rocket engineering and aircraft engineering, and I

hope that our cooperation programme will be extended for another ten years.

Of particular importance to our two countries is the expansion of our humanitarian ties. The holding of Year of Russia in India has been a large-scale and impressive project. More than a 150 concerts, exhibitions, meetings with the artistes have taken place and have presented to the Indian audiences the rich palette of the Russian art. I am quite confident that the Year of India in Russia in 2009 will be equally successful, the year that will start early next year.

Our countries pursue a proactive and multilateral foreign policy. During our talks today we paid significant attention to the discussion of global and regional issues. Our approaches in addressing these problems in many respects go along the same line or are similar. And this makes it possible to tap various capabilities in the international arena in our cooperation there.

It is in our common interest to maintain peace and stability in the Asia Pacific region and in other regions. These objectives are served by the Shanghai Cooperation Organisation where a very productive role is being played not just by member countries but also by the observer countries. Their position is always appreciated and taken into account when final decisions are taken, and this is the way we evaluate the participation of India in the activities of SCO. We will continue to develop our trilateral cooperation, Russia-India-China cooperation, in various areas such as agriculture, public health, prevention of natural disasters. I think this work is of utmost importance to our countries.

There are prospects for cooperation also in the BRIC format. And what is more, the global economic crisis that is going on now creates additional incentives to continue along this path. The decisions that would be worked out in this format, on this platform, will have a direct impact given the influence of the states I have mentioned, will have direct impact on the development of global economy.

Let me also inform you that we have also discussed other topics. I have invited both the President and Prime Minister of India to visit Russia next year on official visits. This is traditional, normal practice. We meet annually, discuss versatile agenda of the whole range of our bilateral relations. I would like to once again thank the Prime Minister for the constructive and comradely dialogue that we have had. The Russian-Indian strategic partnership is indeed in full conformity with the interests of the development

of our two countries, and is based on profound mutual affinity and feelings of empathy that bonds our two peoples together.

Thank you.

Official Spokesperson: Two questions would be taken from each side. You are requested to please introduce yourself and your organization, and indicate whom the question is being addressed to. I would request you to please restrict yourself to one question to one leader, either the President or the Prime Minister. As a courtesy to our guests, the first question goes to the Russian side.

Question (Mr. Alexandre, Arguments & Facts Newspaper): *As I understand, the nuclear contract has become the first after the Nuclear Suppliers Group sanctions have been lifted. What are the prospects for cooperation in the nuclear sector, nuclear energy production? Can Russia maintain its status as India's key partner in this area? Thank you.*

President of Russia: *Is this question addressed to me?*

Question: *Yes. But, of course, we will be interested in listening to the opinion of the Indian side as well.*

President of Russia: *I have just said that our cooperation in the energy sector continues to be our undisputed priority. In this context, of course, our cooperation in the nuclear energy sector is of utmost interest to us and it is very productive. We are working to construct power units at the Kudankulam site. We are fully cooperating with our Indian friends, and the results that we have already achieved are quite positive. These results have provided us with the foundation for signing a special agreement on cooperation in the construction of additional power units for the Kudankulam Power Plant and on the possible construction of new nuclear power plants in India. I think that in the present day situation, in an age when various types of energy sectors are developed in addition to traditional ones based on the fossil fuel, other sectors are also developing such as nuclear energy. I think our cooperation cannot be overestimated because it is future-oriented, it creates new opportunities for the growth of the Indian economy and any growing economy, particularly the Indian economy which is growing quite rapidly. Any growing economy very often faces shortage of energy. And to resolve this issue, with this purpose we hope to develop our cooperation in the nuclear energy sector. That is why we are quite optimistic. We believe that we could work together and through our cooperation we could set a foundation for the development of the Indian economy at large,*

and we could tap the opportunities that exist today using nuclear power plants. I think that this is one of the first steps we have taken in that direction but we hope that our preparation in this area will continue to be reinforced and will advance further. We believe this cooperation to be mutually advantageous and very positive.

Question (Mr. Ranjeet Kumar, Navbharat Times): Mr. President, Sir, Indo-Russian defence relations have been passing through a rough phase in recent years. Mr. President, has your visit been able to give any forward movement to resolve the contentious issues like aircraft carrier Gorshkov and Akula class nuclear submarine, and other issues of transfer of technology for T-90 tanks. Thank you, Sir.

President of Russia: *Thank you. In our military technical cooperation we have discussed it with Mr. Prime Minister. It is one of the major factors in our cooperation, one of the major elements in our business-like interaction. No doubt during our talks we paid substantial amount of time to the discussion of our military technical cooperation. This cooperation has been longstanding, it is a systemic cooperation, and it is well established by its nature. As any cooperation it has both some problematic issues and prospects. As regards prospects, I have already mentioned something about them in my introductory speech, and Mr. Prime Minister also has referred to this issue. There are certain outstanding issues but they are of working nature. There is nothing special about them. Let me just confirm specially that during our discussion today with Mr. Prime Minister we talked very specifically, and in great detail, the issues related to technologies, related to the T-90 tanks, as well as issues related to the development and leasing for India nuclear powered submarines, and we have identified ways to resolve the outstanding problems in this area. There are very few of them but still some adjustments need to be made. We have agreed to keep these issues under our permanent consideration and we will coordinate our efforts. I believe that the discussion of these topics is very helpful.*

Question (Russian journalist): *My question is addressed to Prime Minister Singh. It is well known that Russia cooperates with India both bilaterally and internationally, in international organizations. Recently much has been said about preparation in the BRIC framework. How do you assess the prospects for cooperation within that organization, BRIC organization?*

Prime Minister of India: India and Russia are partners in a multifaceted development, bilaterally, regionally and internationally. As far as the BRIC countries are concerned, these four countries constitute a major part of

the humanity. They are also the economies which are fast-growing economies and, therefore, their development at an accelerated pace offers immense opportunities for expanding trade and investment, creating new opportunities for cooperation in energy. New areas of cooperation can be found in environment-related and climate-related issues, in disaster management, in health care and related activities.

Question (Mr. Royden d'Souza, News X): My question is addressed to Prime Manmohan Singh. Has India asked Secretary Rice to make a specific request to Islamabad to hand over Hafiz Saeed, Dawood, Masood Azhar and others? And what will be your Government's line of action now against Pakistan? Will it be military, economic or political? More essentially, how long can your Government afford to be seen as being soft on terror, especially with the elections round the corner, Sir? Will it just be that two or three resignations will suffice as far as fixing accountability goes? Thank you.

Prime Minister of India: We have impressed upon all world leaders who have called me that the people of India feel a sense of hurt and anger as never seen before. Therefore, it is the obligation of all concerned to ensure that the perpetrators of this horrible crime are brought to book. That is our message to anybody and everybody who has come here or has telephoned me. We expect the world community to recognize that in this case not only we but other relevant countries have also come to the same conclusions that the territory of a neighbouring country has been used for perpetrating this crime and, therefore, the perpetrators of this crime should be brought to book. We will wait for the outcome. This was our message to Secretary Rice as this has been our message to other world leaders. We expect the international community to wake up and recognize that terror anywhere and everywhere constitutes a threat to world peace and prosperity.

Official Spokesperson: Thank you, Sir.

This brings the event to a close. Thank you very much for coming.

641. Press Release of the Ministry of Commerce on the address by Commerce Minister Kamal Nath at the India—Russia CEO's Council Meeting.

New Delhi, December 5, 2008.

Shri Kamal Nath, Union Minister of Commerce & Industry, has stated that there is immense possibility for joint investments in the areas like banking, power, pharmaceuticals and textiles. Addressing the India-Russia CEOs Council Meeting here today, Shri Kamal Nath said that India and Russia have managed to sustain strong business vibes in recent years and added that the India-Russia Forum on Trade & Investment has underscored the need for investment cooperation in a large number of sectors. "Indian companies are quickly establishing themselves in Russia and the cumulative Indian investments in the Russian economy amounted to US \$744.1 million as of March 31, 2006", he said. The meeting was also attended by Shri G.K. Pillai, Commerce Secretary; Shri Ajai Shankar, Secretary (IPP) apart from CEOs from both the countries. During the occasion, the Minister also launched the IBEF Website in Russian language for the benefit of Russian business community.

Speaking on the occasion, Shri Nath informed that there is a strong case for Russian companies to invest in India, especially in power sector, as Russia is energy rich and India's energy requirements are going to increase manifold over the next 10-15 years.

The Minister emphasised that critical sectors of the economy, like agriculture, have started a process of revival by growing at a rate of close to 4%. This growth rate is a significant contribution to inclusiveness, which is vital for India as it helps sustain domestic consumption, which will sustain our growth story in the short, medium and long term, he added.

As regards the global meltdown, Shri Nath expressed hope that "both our economies will bounce back, because of their sound fundamentals and large domestic demand. We too are taking measures to inject growth dynamism back into our economy: we are cutting bank rates and easing statutory reserve requirements to inject liquidity into the system, we are also looking at creating demand impetus in a number of sectors, especially consumer driven industries and exported-oriented ones".

Bilateral trade between India and Russia during 2008-09 (April-July) was to the tune of US \$1613.56 million. Major items of export are drugs, pharmaceuticals & fine chemicals, RMG cotton including accessories, tea, coffee, tobacco un-manufactured, processed minerals, plastic & linoleum products, machinery & instruments, transport equipments, electronic goods etc. Major items of import are iron & steel, non-ferrous metals, coal, coke, newsprint, silver, synthetic & reclaimed rubber etc.

Cumulative FDI inflows from Russia till August 2008 were US \$ 144 million. The top sectors that attracted FDI inflows were medical & surgical appliances, hotel & tourism, food processing industries¹ etc.

1. According to media reports the Russian delegation told the Minister that their country was taking many steps to increase its economic engagements with India, the main being setting up of the Noerssel Port in the Black Sea that would directly link St. Petersburg with Mumbai via Iran. Russian firms are also engaging in the telecommunications sector. Its services conglomerate Sistema has already tied up with new telecom operator Shyam Telelink and linked multi-million dollar deal, while Russia's aluminium major Rusal and other metallurgy firms are scouting for opportunities in India. Bilateral trade between India and Russia that is growing annually at 30 per cent and is expected to touch \$7 billion by the end of the current fiscal.

**642. Speech by President Shrimati Pratibha Devisingh Patil
at the Banquet in honour of the President of the Russian
Federation Dmitry Medvedev.**

New Delhi, December 5, 2008.

Excellency, President Dmitry A. Medvedev,

Distinguished Guests,

Ladies and Gentlemen,

Excellency, I have the privilege to welcome you on your first visit to India. A guest from Russia, our longstanding and unique friend, is very special to us.

Your visit highlights to the people of India and Russia, and to the world, the special nature of our ties, and the importance that we both attach to our Strategic Partnership. Your visit is also part of the valuable tradition between our two countries of having annual Summits. In the last eight years, since the beginning of this tradition, much has been achieved that testifies to the importance of our relations based on trust, friendship, and continuity. We remain confident that under your leadership, this partnership between our two countries and peoples will blossom further, and progress with greater dynamism.

Excellency,

A rising India and a resurgent Russia have made impressive economic gains. This, while giving us our rightful place in the international arena, also provides us greater scope for expanding our cooperation.

A series of measures have been undertaken in recent times to increase our bilateral trade and investment. The Joint Study Group report is being implemented to achieve the target of 10 billion US dollar bilateral trade by 2010 and to work towards a Comprehensive Economic Cooperation Agreement. A CEOs Council has been set up to facilitate greater interaction between our respective private business sectors. We are glad to note that trade between our two countries over the past 8 months of 2008 has risen by over 40 per cent compared to the same period last year.

Our bilateral socio-economic cooperation is not only limited to trade in goods but also covers the services sector, high technology, tourism, culture, education and infrastructure-building.

Excellency,

Our cooperation in the defence sector is an important aspect of our Strategic Partnership. At the last session of our Commission on Military Technical Cooperation, the Defence Ministers of India and Russia agreed to carry forward our cooperation in defence for another 10 years beyond 2010. Many hi-tech projects are being implemented, and we welcome this new phase in our defence cooperation.

A significant untapped potential in our relationship is in the energy sector. Energy security is an increasingly important component of bilateral relations between India and Russia. We should expand this cooperation through joint efforts. The Agreement signed today for Russia's construction of four additional reactors in Kudankulam, will enable Russia to play an even greater role in India's civilian nuclear energy programme. We thank Your Excellency for the pro-active role that Russia played in enabling the NSG exemption for India.

In the sphere of Science and Technology, under our Integrated Long Term Programme we have had more than 20 years of bilateral cooperation. Eight Joint Centres of Excellence on themes as varied as Ayurvedic research to bio-technology and advanced computing have been created. Since there is potential to tap the economic benefit from our joint scientific accomplishments, an Indo-Russian Technology Centre is being set up in Russia and India.

Excellency,

Our countries hold identical or similar views on many international issues. We deeply appreciate Russia's support for India's candidature to a permanent seat in the UN Security Council.

The recent attacks in Mumbai have brought to the fore the dangers posed by terrorism. Russia, too, has suffered from this scourge. India and Russia both understand the importance of enhanced cooperation to combat this global menace, and believe that the international community must work jointly to defeat terrorism. This is essential for the peace and development of the world.

Excellency,

We have witnessed today a spectacular evening to mark the Closing Ceremony of the 'Year of Russia' in India. The festivities associated with it

have provided the opportunity to my fellow countrymen to see the enormity of Russia of today, in all aspects of life. We are confident that the 'Year of India' in Russia in 2009 will present contemporary India to the people of Russia and thus promote understanding, especially between youth in both the countries.

Excellencies, Ladies and Gentlemen, may I now invite you to join me in a toast to:-

- the success, good health and prosperity of His Excellency President Medvedev;
- the further strengthening of our friendship and the Strategic Partnership between India and Russia; and
- the peace, progress and well-being of the peoples of India and Russia.

643. List of Agreements concluded at the signing ceremony following talks between the Prime Minister of India and the President of the Russian Federation(5.12.08)

S. No.	Name of Document	Signatories

644. Joint Press Statement on the Fifth Meeting of the India-Russia Joint Working Group (JWG) on Combating International Terrorism.

New Delhi, December 17, 2008.

1. The Fifth Meeting of the India-Russia Joint Working Group on Combating International Terrorism was held in New Delhi on 16-17 December, 2008. The Indian delegation was led by Mr. Vivek Katju, Special Secretary (IO&PoL) in the Ministry of External Affairs, Government of India. The Russian Delegation was led by Mr. Anatoly Safonov, Special Representative of the President of the Russian Federation for International Cooperation in the Fight against Terrorism and Transnational Crime. Both delegations included representatives of relevant Ministries and agencies.
2. The negotiations were held in an atmosphere of mutual understanding and trust. Both sides noted that their cooperation in combating terrorism constitutes an important part of the strategic partnership between the two countries and referred to the deliberations between their leaders at the recent Summit Meeting in New Delhi on 5th December, 2008 which underlined cooperation between the two countries in combating terrorism.
3. Both sides unequivocally condemned terrorism in all its forms and manifestations and stressed that there can be no justification for any act of terrorism, irrespective of motivations, wherever and by whosoever committed. The Russian side strongly condemned recent terrorist attacks in Mumbai and reiterated their solidarity and support to the government and the people of India. In this context, both sides underlined their shared concerns on the growing threat of cross-border terrorism and reaffirmed their commitment for strengthening bilateral cooperation against terrorism.
4. They stressed the importance of international efforts to prevent and fight terrorism including the UN's Global Counter Terrorism Strategy and relevant UNSC Resolutions. The two sides underlined the need for expeditious conclusion of negotiations leading to finalization of India sponsored Comprehensive Convention on International Terrorism (CCIT) at the UN General Assembly.

5. The two sides noted that curbing financing of terrorism is a key component of the counter terrorism strategy and agreed to strengthen bilateral interaction in this field. Both sides welcomed the recent signing of an Agreement on cooperation between the Financial Intelligence Unit of India and the Federal Financial Monitoring Service of the Russian Federation. The Russian side reiterated its support to India's membership of the Paris based Financial Action Task Force (FATF). It was noted that India's membership to the Eurasia Group could further enhance regional Anti-Money Laundering and Countering Terrorist Finance regime.
6. The two sides expressed their concern at the spread of narcotics in the region and agreed that this directly threatens the security of both countries. They noted the signing of inter-governmental agreement on cooperation in combating illicit trafficking in narcotics, psychotropic substances and their precursors in November 2007. They agreed on the need to further consolidate bilateral efforts for sharing information and expanding cooperation against drug-trafficking.
7. The two sides noted the growing threat of use of cyber-space by terrorists in their activities and the need to cooperate in this field.
8. In the context of realizing practical cooperation among all relevant government authorities, they agreed to expand the exchange of information, experience, and cooperation in the means of countering terrorism.
9. Both side agreed to hold the next session of the India-Russia Joint Working Group on Counter-Terrorism in 2009.

SLOVAKIA

645. Press Release of the Ministry of External Affairs on the visit of Slovak Foreign Minister.

New Delhi, May 1, 2008.

At the invitation of Shri Pranab Mukherjee, Minister of External Affairs, the Slovak Foreign Minister, His Excellency Mr. Jan Kubis, visited India on 29-30 April 2008. He had delegation level talks with his counterpart, the External Affairs Minister of India on 30 April 2008. The talks covered a range of bilateral, regional and multilateral issues of mutual interest.

2. During his stay in New Delhi, Foreign Minister Kubis called on the Hon'ble Speaker, Lok Sabha, on 30 April 2008.
3. Foreign Minister Kubis was accompanied by senior officials from the Slovak Ministry of Foreign Affairs.

SLOVENIA

646. Press Release of the Ministry of External Affairs on the visit of Minister of State Anand Sharma to Slovenia.

New Delhi, March 31, 2008.

The Minister of State for External Affairs, Shri Anand Sharma inaugurated the premises of the newly-established Indian resident diplomatic Mission in Ljubljana, Slovenia on 31st March, 2008. Among the several guests who graced the occasion were the Foreign Minister of the Republic of Slovenia, Dr. Dimitrij Rupel and Mrs. Rupel. Many prominent local personalities, including from the Government, the media and academic and cultural circles were also present on the occasion.

Earlier in the day, MOS, Shri Anand Sharma also held wide ranging discussions with Dr. Rupel, which were characterized by mutual goodwill and warmth. The talks covered various aspects of bilateral relations. The two sides recognized the need for greater exchange of high level visits

and further expansion of trade and economic ties. They welcomed that the Joint Economic Committee and the Joint Business Council will meet in June, 2008. This would also be an opportunity for Indian businesses to explore the viability of using the port of Koper as gateway for India's trade with the region. Mr. Sharma invited a delegation from the port of Koper to visit the major ports of India. Revitalization of ICPE was discussed. It was urged that the Headquarters Agreement for ICPE be finalized soon. Both sides also called for enhanced cooperation in science and technology and an early finalization of the bilateral cultural exchange programme. Dr. Rupel responded positively to the proposal for Slovenia to upgrade its representation in New Delhi to Ambassador level soon.

Exchanges also covered the regional situation in South-Asia, and South-Eastern Europe, and multilateral matters of mutual interest. Dr. Rupel, who is also currently the Chairman of the EU General Affairs and External Relations Council gave a briefing on the outcome of the recent informal meeting of the EU Foreign Ministers held in Slovenia where various international issues including recent developments in the Western Balkans were discussed.

MOS, Shri Sharma also called on the President of the Slovene National Assembly, Dr. France Cukjati. He extended an invitation for a Parliamentary delegation from Slovenia to visit India some time soon, which Dr. Cukjati accepted.

SPAIN

647. Press Release of the Ministry of Commerce on the meeting of the India – Spain Investment and Business Cooperation Forum.

New Delhi, December 11, 2008.

Shri Kamal Nath, Union Minister of Commerce and Industry, has stated that there are huge investment potential in India in the next few years in modernisation of highways; railways; power sector; telecommunication and urban infrastructure. Addressing the India-Spain Investment and Business Cooperation Forum here today, Shri Kamal Nath observed that Spain could probably take advantage of these opportunities as Spain is a big investor globally. The meeting was attended by Mr. Miguel Sebastian, Minister of Industry, tourism and Trade of Spain; Shri G.K. Pillai, Commerce Secretary and business representatives from the Indian and Spanish side.

Speaking on the occasion, Shri Nath highlighted that major sectors that have attracted FDI investment in India include: ceramics, telecommunications, metallurgical industries, cement & gypsum products, construction activities, computer software & hardware, automobile industry etc. He further added that a few Indian companies have also established their presence in Spain

Shri Kamal Nath said that “it is our endeavour to continue to provide a stable and conducive investment climate, both for the domestic investor and the foreign investor, and to manage the economy in a manner that facilitates inclusive growth driven by enhanced investment and consumption. Our policy of encouraging both the public sector and the private sector and fostering competition has stood us well. It is only an open economy that will bring gains in efficiency and productivity, reward innovation and enterprise, and ensure inclusive growth”.

As regards the global financial crisis, Shri Nath stated that many developed countries are in recession many more are expected to slip into a recession shortly. “ I wish to emphasize that India is nowhere near a recession. The growth estimate for the first quarter of 2008-09 was 7.9 per cent and the second quarter saw 7.6% growth – construction, trade, hotels, transport

and communication leading the pack at double digit growth rates”, he added.

During the bilateral meeting with the visiting Spanish Minister, Shri Kamal Nath emphasised that there is plenty of scope for increasing the economic engagement and added that the bilateral trade between India and Spain is about US \$ 3 billion, though it is far less than the total trade of India at US \$ 280 billion and that of Spain at US \$ 636 billion. The Spanish Minister also underlined the importance of strengthening the economic cooperation and furthering the bilateral trade.

With regard to the multilateral trade front, Shri Kamal Nath informed that India continues to believe in strengthening the multilateral trade rules of the WTO and has reiterated the need for a serious discussion on the expectations of WTO Members regarding other issues. He said that it is important that the Doha Round negotiations are brought to a successful conclusion, and added that such a conclusion can only be possible if we are faithful to the mandate and the outcome reflects a clear balance between market opening and the development needs of the majority of the membership.

SWITZERLAND

648. Press Release issued by the Ministry of Commerce on the India - Swiss Joint Economic Commission meeting for enhancing bilateral trade.

New Delhi, October 20, 2008.

The 11th Meeting of the Indo-Swiss Joint Economic Commission (JEC) that took place here today has observed that steady and rapid economic growth in India presents an attractive opportunity to Swiss business for making investments in various sectors. The JEC reiterated their commitment to further enhance bilateral trade in view of the huge potential for expanding and diversifying the trade basket. The Indian delegation was led by Dr. Rahul Khullar, Special Secretary, Department of Commerce and the Swiss delegation was led by Ambassador Monika Ruhi Burzi, Head of Bilateral economic Relations, State Secretariat for Economic Affairs.

Both sides welcomed the commencement of the negotiations for the India-EFTA Broad Based Trade and Investment Agreement. The JEC identified information technology and tourism sectors as having potential for larger bilateral economic flows. The bilateral economic engagement will receive further boost the business-to-business contacts and enable exchange of high-level ministerial delegations. The next meeting of the JEC will be held in Berne in 2009.

Both sides exchanged views on regional and multilateral issues of mutual concern including the Doha Round of multilateral trade negotiations and expressed their strong continued commitment to the rules-based multilateral trading system.

649. Statement by Prime Minister Dr Manmohan Singh at the Joint Press Interaction with Prime Minister of Turkey.

New Delhi, November 21, 2008.

Your Excellency Prime Minister Erdogan,

Ladies and Gentlemen.

I wish to take this opportunity to once again extend a very hearty welcome to His Excellency Prime Minister Erdogan and members of his delegation to India.

We are delighted to have a visit by the Prime Minister of Turkey after eight years. Turkey is a major international power and its influence extends far beyond its region.

India and Turkey have close civilisational links. We share the common values of secularism, pluralism and tolerance. A strong and vibrant relationship with Turkey is in India's national interest. This has been our guiding principle ever since the visit of Pandit Jawaharlal Nehru to Turkey in 1960.

Prime Minister Erdogan and I have decided to translate our strong mutual desire for good relations and the vast goodwill that exists among our peoples into concrete action programme.

Keeping in view the steady growth in our trade and economic cooperation, we have set a trade target of 6 billion US dollars to be reached by year 2010. We agreed to establish a Joint Study Group to examine the feasibility of concluding a bilateral FTA. Turkey's strong strategic location offers vast opportunities for Indian companies. Equally, our own development plans and infrastructure requirements provide huge opportunities for Turkish investment into India.

We have agreed to collaborate further in the area of energy cooperation, particularly hydrocarbons, science & technology, culture, tourism and people-to-people contacts. We both expressed our satisfaction on our ongoing contacts in the field of defence, and felt there was further scope for cooperation in this area.

I conveyed to the H.E. Prime Minister our appreciation for Turkey's support in joining the consensus in the Nuclear Suppliers Group for an India specific waiver to enable civil nuclear cooperation with India.

There was full agreement that terrorism poses a threat to our common values, and therefore needs to be tackled firmly and decisively through collective action. We have agreed to deepen our cooperation in the area of counter-terrorism.

We also discussed regional issues of mutual interest and, in particular, the situation in Afghanistan.

We have agreed to closely consult each other on important global issues. As members of the G-20, we exchanged views on the current international economic and financial crisis. The crisis has highlighted the urgent need for reform of international institutions. It is also an opportunity for India and Turkey to leverage their mutual complementarities to infuse dynamism into the global economy.

My discussions with Prime Minister Erdogan were extremely warm, productive and forward looking. They will contribute to the upgrading of our relations to a new level that befits the 21st century. This is in the interest not only of our two countries but also in the interest of international peace, stability and prosperity.

Thank you

UNITED KINGDOM

650. Media Briefing by Official Spokesperson on the visit of British Prime Minister Dr. Gordon Brown.

New Delhi, January 18, 2008.

Official Spokesperson (Shri Navtej Sarna): Good evening.

..... this is the Fourth India-UK Summit and is the first visit of Dr. Gordon Brown to India after taking over as Prime Minister. He was here as Chancellor of the Exchequer in January last year, 2007. The Summits between the two countries started after the visit of Prime Minister Dr. Manmohan Singh in September, 2004 when it was decided to launch a Comprehensive Strategic Partnership between the two countries. This has developed in a multifaceted and substantive fashion over the last four years.

As you know, a strong bilateral relationship is of high priority for both countries for economic, commercial, historical and foreign policy reasons as well as the presence of a large and prosperous community of people of Indian origin in the UK.

To give you the areas which were identified for this Comprehensive Strategic Partnership through the joint declaration in September, 2004, the whole series of them on which cooperation has been taking place is: trade and investment, education, science and technology, and so on. The areas of interest ongoing, particularly also during this visit, are further expansion of economic linkages, R&D collaboration, cooperation in higher education and academic exchanges, as well as cooperation in counter-terrorism between the two countries.

Frequent high-level interactions have taken place between the two countries, and besides the high-level contacts there are also several bilateral dialogue mechanisms which are in place including the Joint Economic and Trade Committee for trade and investment and the Science and Innovation Council for S&T cooperation.

In terms of trade, the UK is our fourth largest global trading partner and accounts for 3.56 per cent of Indian trade, second largest in the EU. The annual two-way figure of trade stands at Euro 8.5 billion. UK continues to be the largest cumulative investor in India with a figure of 3.4 billion pound sterling; and the third largest investor post-1991 with 3.6 billion US dollars. India has emerged as the second largest investor in the UK in terms of

number of projects. Over a billion pounds have been invested in the UK and 50 Indian companies are actively trading on the London Stock Exchange.

Particularly important and interesting area of cooperation is higher education. There is the UK-India Education and Research Initiative launched in April 2006 which fosters these contacts. Currently, the figure of Indian students in the UK is about 25,000 including a strong presence of IT and management professionals. During the visit it is expected that the two sides will enter into a Memorandum of Understanding on India-UK Higher Education and Leadership Development Programme aimed to develop leadership skills in Indian Universities. The partner for the proposed MoU will be the University Grants Commission on the Indian side, and the Leadership Foundation for High Education on the UK, as well as the UK-India Education and Research Initiative. This programme is expected to give participants the first time experience of senior management and leadership roles, issues and processes, both in the Indian and the UK educational institutions and create leadership in this particular field.....

* * * *

Question: Britain has come out with a draft paper on immigration which is supposed to be very stringent, point-based system which may affect the flow of Indian professionals, especially doctors. It sparked a lot of anxieties here. Will the issue be discussed when the two Prime Ministers meet? What is our stand here?

Official Spokesperson: As I just told you, one of the points for discussion and follow-up is cooperation in higher education and particularly in leadership and management fields. As far as immigration issues are concerned, it is very difficult for me to say two days before the visit what the Prime Ministers are going to discuss. It is possible the issue may come up; it is possible it may not come up. But certainly we will keep you briefed on Monday evening. You can ask the same question on Monday.

Question: On climate change, our perception and Britain's vary. How do we see what Britain is proposing which is more or less what the Western world wants?

Official Spokesperson: Our position on climate change is quite clear. We have welcomed the Bali roadmap. We have made our position quite clear. India's emissions are far lower than most other countries and certainly much

lower than industrialized countries. We do view it as an issue of global concern. We do want progress to be made on it. But naturally we have to keep in mind our own development priorities. The whole issue of a differentiated responsibility is quite clear. You are quite familiar with that. It is quite possible that during the summit talks global issues will be discussed. If global issues are discussed, it is quite possible that climate change will be discussed. If there are any specific points made, we will tell you on Monday evening.

* * * *

Thank you.

651. Joint Statement issued on the visit of British Prime Minister Gordon Brown.

New Delhi, January 21, 2008.

1. The India-UK annual Summit was held in Delhi on January 21, 2008. The delegation from the United Kingdom was led by Prime Minister Rt. Hon. Gordon Brown MP and that from India was led by Prime Minister Dr Manmohan Singh.

India-UK Strategic Partnership

2. India and the UK share a Strategic Partnership. The two Sides underscored their commitment to the Strategic Partnership launched in 2004 and reaffirmed their shared conviction in the values of democracy, fundamental freedoms, pluralism, rule of law, respect for human rights and multilateralism in the international political and financial architecture as the means to tackle global challenges effectively. The close bilateral relationship has already led to growing cooperation in global affairs and substantial expansion in the bilateral engagement in multiple fields. Building on the achievements of the 'New Delhi Declaration' (2002) and 'India-UK Joint Declaration' (2004), the two Sides commit themselves to strengthening and deepening the comprehensive Strategic Partnership that exists between the two countries, which is underpinned by growing economic ties and the presence of a large Indian Diaspora in the UK.

Economic & Commercial

3. Bilateral economic linkages are strengthening through increased trade and investment flows. The UK is the third largest cumulative investor in India. India has emerged as one of the largest investors in the UK, including several major acquisitions, reflecting the maturing nature of the bilateral economic partnership. The UK is among India's important global trading partners. The two Sides acknowledged the potential for greater collaboration especially in hi-tech (ICT, life sciences, nano-technology etc.), research, advanced manufacturing, infrastructure, energy, healthcare, agricultural products and processed foods, higher education and other service sectors.
4. Both sides took note of the outcome of the 4th meeting of the India-UK Joint Economic and Trade Committee (JETCO) held in London on 13 December 2007. This meeting reviewed various aspects of bilateral trade and received valuable feedback from businesses on both sides on measures that could further enhance bilateral trade and investment flows. India and the United Kingdom agreed to cooperate in developing collaboration between Small and Medium Enterprises (SMEs), entrepreneurs and venture capitalists. The Prime Ministers welcomed the meeting of a CEOs' Round Table and Entrepreneurs' Summit of Indian and UK business leaders in Delhi. In the light of the rapidly growing trade and economic relations and the rapidly evolving pattern of international competitive advantage, both governments acknowledged the considerable potential for bilateral trade, investment and services. They noted the importance of improving market access through liberalization and facilitating movement of professionals across a broad range of sectors of interest to both sides.
5. Both sides took note of the large opportunities in the infrastructure sector, in the context of the massive infrastructure development programme being undertaken in India. Facilitating the flow of information on the infrastructure projects being undertaken would encourage business partnerships. Both sides agreed to take forward proposals for the establishment of a capacity building programme in India for public-private partnership in infrastructure with UK support.
6. India and the United Kingdom noted the role played by people of Indian origin in Britain. Through their hard work, dynamism and

entrepreneurial talents they have made an enormous contribution to the strengthening of bilateral ties.

Education

7. The two Sides noted the traditionally close ties between the two knowledge societies in the field of Higher Education. They recognised that the UK-India Education & Research Initiative (UKIERI), launched in April 2006, was playing an important role in fostering such contacts. They further noted the huge expansion planned in the Indian Higher Education sector which would increase the gross enrolment ratio by 5 percentage points and include the establishment of a range of central government institutions of excellence including 8 new Indian Institutes of Technology (IITs), 7 new Indian Institutes of Management (IIMs), 5 Indian Institutes of Science Education and Research and 30 new Central Universities. It was agreed that both sides would forge a closer partnership in the field of Higher Education, for further developing education and skills to the mutual advantage of the students and faculty of both countries. While exploring new avenues of collaboration to further deepen the cooperation, the two Sides agreed to initiate specific measures to collaborate in the field of higher education. In particular they agreed: to establish an Education Forum to work towards an early conclusion of an Education Partnership Agreement; to enter into a Memorandum of Understanding on an India-UK Higher Education Leadership Development Programme to develop leadership skills in Indian and UK universities; to establish a Programme, under UKIERI, to support faculty development in key Indian universities with participation of leading UK academics; to develop further student and faculty exchange programmes and partnerships with a commitment of further funding from the UK government; and to promote pro-actively links between British Universities and the premier educational institutions in India including collaborating for the establishment of at least one new Indian Institute of Technology, one new Indian Institute of Science Education and Research and one Central University proposed in the XI Five Year Plan. The latter would be taken forward through a meeting between a British delegation, including Vice Chancellors and their Indian counterparts later in the year. They further agreed to work towards mutual recognition of degrees, diplomas and other academic qualifications supported through greater co-operation between the relevant UK and Indian authorities. The two Sides agreed to the

further development of UK/India collaboration on English Language Training. The two Governments recognize the strong interest of higher educational institutions of both countries to work together to further their global educational objectives.

Research, Science & Technology

8. India and the UK see considerable potential for growth in Research, Science and Technology collaboration. They share the vision for further strengthening their partnership through new and existing initiatives and agree to widen discussion to all research funding bodies in both countries through the India-UK Science and Innovation Council mechanism. The UK's proposal to establish a Research Councils UK (RCUK) office in India is a welcome development that would lead to enhanced collaboration between the two countries. Underlining the importance for further developing Research and S&T cooperation, India and the UK shall establish a Science Bridges Initiative to build institution to institution relationships on equal partnership with joint funding under the principle of parity. RCUK will contribute £ 4 million with a matching grant from Department of Science and Technology (DST) India to promote this initiative. The UK and India also agree to support a further round of UKIERI awards designed to establish networking links between Indian and UK education and research institutions with the UK committing £ 2 million over 3 years and DST agreeing to match this funding on a parity basis. DST and the Engineering & Physical Sciences Research Council (EPSRC) UK also agreed to collaborate on the initial phase of development of major projects in select research areas.

Civil Nuclear Cooperation

9. The two Sides strongly emphasised the potential of civil nuclear energy to be a safe, sustainable and non-polluting source of energy, which could make a significant contribution to meeting the global challenge of achieving energy security, sustainable development, economic growth, and limiting climate change. The UK supports the India-US civil nuclear co-operation initiative with all its elements, including an appropriate India specific exemption to the Nuclear Suppliers Group Guidelines. As two countries with advanced nuclear technology, India and the UK agree to promote co-operation in civil nuclear energy and will work expeditiously towards a bilateral agreement for this purpose, in line with their strong commitment to

non-proliferation. The two Sides will also continue to encourage their scientists to develop closer links and to co-operate in research in this field. The two Sides also welcome the opportunity for their scientists to work together in the context of ITER.

Climate Change

10. India and the UK recognise the need to find effective and practical solutions to address concerns regarding climate change and its implications for human kind. These would include mitigation and adaptation strategies in a manner that supports further economic and social development in particular of developing countries. Long-term convergence of per capita emission rates is an important and equitable principle that should be seriously considered in the context of international climate change negotiations. They expressed satisfaction over the successful outcome at Bali that reaffirmed the relevance of the United Nations Framework Convention on Climate Change (UNFCCC), including its provision and principles, in particular the principle of common but differentiated responsibilities and respective capabilities. The process established under the Bali Road Map should aim for enhanced implementation of the UNFCCC and give due weight to issues of concern to developing countries, in particular those relating to addressing adaptation, technology, and financing arrangements. In the field of bilateral cooperation on climate change, the two Sides expressed satisfaction over the announcement of a UK-India Agreement on the second phase of UK-India Climate Change Impacts and Adaptation Study. The UK and India are convinced that development of the international carbon market is important for the future and wish to explore new approaches to market related investment that offer the potential to drive technology transfer. The two Sides shall work towards the success of the second Phase of a project aimed at identifying the barriers to low carbon technology transfer. They will also collaborate on a project piloting implementation of programmatic CDM in India this year to jointly explore the potential of this to facilitate up-scaling of carbon market investment in accordance with India's future development priorities. Both sides recognised the importance of Research and Development collaboration on low carbon energy technologies and welcomed the broadening dialogue between the two countries on clean coal technologies and other power generation technologies.

MDGs

11. The two Sides agreed that an urgent global effort is required to meet the MDGs. India and the UK agreed to enhance efforts to achieve the MDGs and reduce global poverty. The two parties launched a new Partnership to Achieve the MDGs Globally. The two countries committed to harness their combined knowledge, experience and resources towards this goal including through third country cooperation. India and the UK will start by scoping opportunities to collaborate in third countries where both parties have a development interest. India and the UK would jointly consider ways and means to reform the international institutions. While noting the establishment of the mechanism for this purpose under the Commonwealth at the Kampala CHOGM 2007, the two Prime Ministers agreed that India and the UK should exchange views bilaterally on this important agenda. They agreed the importance of continued exchange of experiences and future cooperation on international policies on major global public goods that impact on the global achievement of the MDGs.

WTO

12. India and the UK strongly support an early, fair and ambitious outcome of the Doha Round of multilateral trade negotiations. A successful conclusion of the Doha Agenda must focus on the development dimension. Existing differences amongst members have to be overcome for the benefit of all. Close cooperation between India and the UK will make a significant contribution to achieve a balanced and comprehensive agreement.

India-EU

13. India and the UK noted with satisfaction the growing partnership between India and the EU. They welcomed the progress made in the negotiations between India and the EU for a broad-based Trade and Investment Agreement and expressed their commitment for an early and mutually beneficial conclusion of the negotiations for such an agreement. They noted with satisfaction the success of the 8th India-EU Summit held in New Delhi on November 30, 2007.

International

14. The two Sides discussed a range of other international issues, and agreed on the importance of more representative and effective

international institutions to address global challenges. The two Sides agreed that a reformed UN Security Council that better reflected the realities of the 21st century would enhance global cooperation and security. The UK reaffirmed its firm support for India's candidature for a permanent membership in an expanded UNSC.

15. They reaffirmed their sustained commitment to supporting the Afghan government in the stabilisation and rebuilding of Afghanistan, and reiterated the importance of coherent international efforts to address the development needs of Afghanistan. They urged Iran to co-operate fully with the IAEA and fulfil the requirements of the relevant UN Security Council resolutions, to address international concerns about its nuclear programme. In this regard, they underlined the importance of continued dialogue with Iran. The leaders emphasised the urgent need for a comprehensive, just and durable peace in the Middle East/West Asia. They reaffirmed their support for a negotiated settlement of the Israeli-Palestinian conflict based on existing agreements, including relevant UNSC Resolutions, the Roadmap, and the Arab League Resolution (Beirut 2002), and urged the parties to work toward this end. The UK and India are committed to contributing to peace and prosperity in Africa. They reiterated their firm belief in the New Partnership for Africa's Development, a key framework for socio-economic development. Both sides recognised the importance of enhancing efforts to support peace and security in Africa, and the UK paid particular tribute to India's contribution to UN Peace Keeping Operations. India and the UK will work with international partners to support implementation of the Comprehensive Peace Agreement between North and South Sudan. They will support AU-UN efforts to reach a lasting political settlement for Darfur, underpinned by an effective peacekeeping force. They called on all parties to the conflict to immediately cease all hostilities and commit themselves to a sustained and permanent ceasefire.
16. The two Sides shared the hope that Pakistan would see an early return to stability and prosperity and recognised the importance of free and fair Parliamentary elections on 18 February. They agreed that the process of national reconciliation and political reform in Burma/Myanmar should be inclusive, broad-based and taken forward expeditiously, so as to bring about genuine reconciliation and progress towards democracy. They expressed their strong support for the ongoing good offices of the UN Secretary General's Special

Envoy, and their shared hope that he be able to visit Burma/Myanmar again as soon as possible. They welcomed the announcement of elections in Nepal on 10 April and urged all parties to cooperate and maintain the declared date to ensure a free and fair process, open to all without intimidation. It is for the people of Nepal to decide their own future. Both sides would like to see a peaceful, stable and democratic Bangladesh, where the people of Bangladesh will be able to exercise their will through free and fair elections. They agreed that there is no military solution to the conflict in Sri Lanka, and urged the Sri Lankan government to put forward a credible devolution package as a key contribution to finding a political settlement acceptable to all communities within the framework of a united Sri Lanka.

Counter Terrorism

17. Terrorism is a global threat requiring a global response. Both sides underline the importance of joint international efforts in countering terrorism which is not justified under any circumstances. They agree to intensify mutual exchange of views, experiences and practical cooperation in the fight against terrorism, both through bilateral channels and in multilateral forums. They shall strengthen cooperation through the Indo-UK Joint Working Group on Counter-Terrorism. Multilaterally, the two countries remain committed to pursuing as soon as possible agreement in the UN on the Comprehensive Convention against International Terrorism. Bilaterally, the UK and India agreed to build on existing co-operation including in the protection of critical national infrastructure, mass transit systems and the security of major sporting events/UK, and expand it further in the fields of Civil Aviation security and crisis management. In addition, it was agreed to establish a new bilateral dialogue on Terrorist Financing. The UK reiterated its support for India's full membership of the Financial Action Task Force.

Signed in New Delhi on 21 January 2008.

Dr. Manmohan Singh
Prime Minister of India

Rt. Hon. Gordon Brown MP
Prime Minister of the United Kingdom

652. Joint Press Interaction by Prime Minister Dr. Manmohan Singh and British Prime Minister Dr. Gordon Brown.

New Delhi, January 21, 2008.

Prime Minister Dr. Manmohan Singh: Your Excellency Prime Minister Gordon Brown, ladies and gentlemen of the press:

Prime Minister Gordon Brown and I have just concluded extremely productive and wide-ranging discussions. Our talks were held in a spirit of great friendship and warmth which is the hallmark of our relations today.

We reviewed the entire spectrum of our bilateral cooperation. We have identified cooperation in the fields of education, science and technology, and trade and investment as priority areas of our relations. Prime Minister Gordon Brown is accompanied by a high-level business delegation and vice-chancellors of major British universities. I look forward to meeting them later today. We agreed to jointly work in every possible way to facilitate greater people-to-people contacts. We recognize the contribution of the community of Indian origin in the United Kingdom in consolidating our relation.

Prime Minister Gordon Brown and I exchanged views on major regional and international issues. There are several areas in which India and the United Kingdom can work together as equal partners to contribute to global peace, stability and development. We highly value Prime Minister Gordon Brown's commitment to the achievement of the Millennium Development Goals, reform of the international institutions and climate change. He has emphasized the importance of inclusive globalization and an internationalist approach to addressing contemporary challenges.

I thank the Prime Minister for continued British support to India's candidature for permanent membership of the United Nations Security Council and his support to our efforts for securing international civil nuclear energy cooperation to meet our rapidly increasing energy requirements.

Our two countries are both victims of terrorism. We both reiterated our firm resolve to combat the forces of terrorism and extremism. We have agreed to take various concrete measures to build upon our existing cooperation in the field of counter-terrorism. This is an area of high priorities for both sides.

Prime Minister Gordon Brown's first visit to India as Prime Minister of United Kingdom has reinforced the special nature of our ties with the United Kingdom. I can say with confidence that his visit has imparted a fresh momentum to our strategic partnership.

I thank you.

Prime Minister Dr. Gordon Brown: Can I say first of all it has been a great pleasure to be here at the invitation of Prime Minister Singh; to have met his Cabinet members; to have brought with me a high quality business delegation that is meeting with their Indian counterparts. We have just finished an excellent Summit which has made significant progress and added fresh momentum to the strength of a deepening and broadening bilateral relationship.

Ours is a strategic partnership of equals - a confident, modern, 21st century India and a confident, modern, 21st century Britain - a relationship that has been united by common history, by shared values, and by the personal friendships that have been formed over the years. I am particularly grateful for the leadership of Prime Minister Singh in a whole range of areas where the world must work as one but his inspiration is making it possible.

Everywhere you looked the links and relationships between Britain and India are strong and strengthening - in our culture, our sports, in the many families with roots in Britain and India, in the common interest we have in reshaping the world economy and its institutions, and in the economy and trade itself¹. I am delighted that trade between Britain and India has increased by 100 per cent over the last five years, that it is now increasing by 20 per cent a year every year. I am delighted that we have been able to reach agreements in areas that will precipitate greater trade and greater cooperation between the businesses of our countries and the businesses of India. I look forward to more Indian companies working in Britain and more British companies making their expertise available to India.

We are particularly gratified by the increasing educational cooperation between our two countries. I can announce that there will be a long-term educational forum that will discuss issues that are common between our

1 On January 21 addressing Indian and British business leaders (at a breakfast meeting with Commerce and Industry Minister Kamal Nath), Mr. Brown said: "Just as the problems bedeviling the economy and security of the environment are trans-national, the solutions must also transcend borders. Only with international institutions that support cooperation out of shared interest and predictability and accountability, states could consistently work jointly for the benefit of all." Their revamped structure, Mr. Brown said, should

countries; that we have made arrangements to facilitate the transfer and exchange of staff and students between Indian and British universities; that we will be part of the massive expansion that is now taking place to the credit of India in building 30 new universities in science and institutes of technology; and we believe that we can cooperate in making this fast development of higher education possible; and to that extent there will be a forum involving the vice-chancellors of British universities and Indian universities to speed up the process of cooperation in the future.

We have agreed also that it is in the interest of both our countries and the world that international institutions should be reformed for the modern era. They need to be equipped to deal with the challenges of the 21st century and to ensure that they are more representative of the new global order. I am pleased to be able to say that we support the membership of India in the UN Security Council, an enhanced and reformed Security Council for the future. I am pleased that we have reached a common ground on the need to reform the World Bank to give it an environmental focus, to improve the workings of the International Monetary Fund, and to give the United Nations a greater role in making possible stability and reconstruction where there are broken down states.

We have deepened our partnership in development. Britain will spend 825 millions (pounds) over the next three years, 500 millions of it on education and health in India. We will help some 300,000 schools, help train 300,000 teachers and ensure that four million more children have a chance of going to school.

We have agreed to intensify our joint efforts to combat the global threats of terrorism and extremism. We want to work for an international convention that will tackle terrorism by greater international cooperation. In the meantime we will strengthen the cooperation between our security agencies; we will work hard to have common standards by which we can prevent terrorist explosives moving from ports and airports around the world; and we will work together to persuade the young people that the poison that is practiced by terrorist groups is neither in their interests nor in the interests of human rights in every country.

reflect India's rising prowess in the global economy. "I support changes to the World Bank, the IMF and G-8 that reflect the rise of India and rise of Asia ... We can and must do more to make our global institutions more representative," he said. India was making a powerful contribution to the world economy. "In the last 15 years, you have doubled your national income" and the country had "become the fourth largest producer of medicine and second largest developer of software in the world ... No company can be truly global unless it has operations based in India."

We have had a useful discussion on how we can move forward from Bali to Copenhagen to ensure a post-Kyoto climate change agreement and a global carbon market for the future. We have agreed how we can cooperate in technology and in other areas to ensure India and Britain both are high growth, low carbon economies and can adapt to climate change.

We have talked about the need for stability and free and fair elections in Pakistan and for the progress of reconciliation and political reform in Burma. At the same time, we have deepened our cultural links. A lot of theatre and film binds our two countries together. Sporting projects in advance of the 2010 Commonwealth Games and I have congratulated the Indian people on the success of the Indian cricket team in defeating Australia in the last two days.

In our global society we are all interdependent. Britain and India have the advantage of being driven forward by the same values and the same ethos, our support for democracy and human rights, our determination to support free markets and entrepreneurship, and a deepening of an already mature relationship which will strengthen after the decisions that have been made today. It is my hope that 10 billion pounds worth of commercial deals between our two countries now under negotiation and discussed over the last few days can be signed in the coming months to the benefits of both economies.

I thank Prime Minister Singh for his invitation to visit India. I am gratified by the momentum that has been given by this trip to new and deepening relationships. We will work together for the success of both our economies but also for stronger international institutions.

I applaud the leadership role that India is taking in so many areas around the world. I invite Indian leaders to visit our country in the next few months. I look forward to the deepening, strengthening and the broadening of cooperation in the strategic partnership of equals, find it on the shared values and personal friendships in the years to come.

Thank you very much.

Question (Mr Nick Robinson, BBC News): Prime Ministers both, can I ask you to explain why you think it is important for India and the world that India be a member of the world's top table, in other words a permanent member of the United Nations Security Council.

Prime Minister, can I ask you why the British taxpayer should subsidize to the tune of billions of pounds a private firm that takes over a bank that would be bankrupt, if it were not for the support of your Government?

Prime Minister Dr. Manmohan Singh: So, you want me to address the first question!

I think there is today a broad agreement that international institutions, if they have to be credible in terms of their ability to grapple with contemporary challenges, cannot ignore countries like India and China. I was in China a few days ago. In one of the statements that I made there I said the strong growth of China and India today constitutes an international public good because the growth in our two countries is giving a major stimulus to the expansion of the world economy and at a time when sentiment elsewhere is getting weaker, the strong fundamentals of economies like India are a source of strength to the world economy. In this increasingly interdependent world that we live in, I think you cannot deal with global problems and global concerns if countries like India are not on the high table.

Prime Minister Dr. Gordon Brown: India is the biggest democracy in the world. It is one of the world's fastest growing economies and making a huge contribution to the economic prosperity of the whole world. I believe that India should assume its rightful place in the deliberations of the world including membership of the UN Security Council. I believe that the contribution that India makes and can make not just to the prosperity of the world but to a better environment in the world, to action on security and against terrorism, and to building social justice throughout the world, is something that should be recognized in the reform of all our international institutions. I am pleased that our partnership, the partnership between Britain and India, is able to yield results not just for our two countries but make progress on climate change, on economic development, on security, on terrorism for the whole world. That is why I support India's rightful place in the international institutions of the world.

The only reason that we have intervened in Northern Rock is to ensure the stability of the British economy. When we were placed last August with the problems at Northern Rock and the danger that these would spread to the rest of the economy, it was right and I believe everybody agreed that the Government intervene to protect the depositors and their savings and at the same time to ensure the stability of the economy. For the last four months, because of our action that has been achieved. Today the loans that we have made to Northern Rock through the Bank of England are secured against its assets. Most people agree that Northern Rock has acquired a high quality loan book. I can assure you that our aim in all of this - and the Chancellor will be making a statement in the House of Commons - is to secure the best deal for the British taxpayer and ensure

the stability of the British economy amidst the existing global financial turbulence.

Question (Mr Srinjoy Chaudhuri, Times Now): Question for the Prime Minister of India. Sir, the Sensex did very badly today. Thousands of investors are hurt. Is there any kind of reassurance you have for them. Also, can you tell us something if the Pakistan Government has said anything about Jairam Ramesh crossing the border at Wagah?

Question for the British Prime Minister. Has anything, any report, come to you from Scotland Yard about the Bhutto assassination?

Prime Minister Dr. Manmohan Singh: As regards the question that you have addressed to me, let me say that orderly growth of our capital markets is a priority concern for our Government. Considering the fundamentals of our economy which are eminently sound, I am confident that the markets that we seek to grow will grow in an orderly fashion. Time to time fluctuations are part of the market processes and I would not like to comment on these. But I would like to assure the Indian public that sustained and orderly growth of capital markets is a priority concern for our Government.

Prime Minister Dr. Gordon Brown: To President Musharraf I offered and he accepted the presence of men and women from the Metropolitan Police to assist with the investigation into the assassination and death of Benazir Bhutto. Our policemen and women are there in Pakistan at the invitation of the Pakistan Government. They are assisting the investigation which is being done by the Pakistan authorities and it will be for the Pakistan authorities to announce any conclusions of their investigation. I may just add that we are both agreed that free and fair elections are important for the Pakistan people and also to be seen by the international community as Pakistan taking the right steps after the state of emergency that has existed.

The global financial turbulence that we are seeing is affecting every continent. I think it is important to say that countries like India and Britain are determined to do everything in our power to maintain the stability of our economies. We believe we have put in place the right measures keeping inflation and interest rates as low as possible so that we can withstand something that is affected all global financial markets in every continent of the world.

Question (Mr Adam Bolton, Sky News): Question to you both on the United Nations Security Council. First of all, do you both feel that Britain

and France, the eminent guests here in New Delhi, should have their seats on the Security Council, permanent seats, in perpetuity?

Secondly, do you think that there is any chance of reform of the Security Council making the world a safer place, if there is not a permanent seat for a major Islamic nation? Thirdly, isn't this all fantasy politics any way given what happened to Kofi Annan's attempted reforms?

Prime Minister Dr. Manmohan Singh: I do not underestimate the difficulties that lie in reforming the global institutions. But all of us have to make an effort, and as of now it is an attempt which I would describe as an essay in persuasion. My own feeling is, it is in the interest of the world economy and world polity, the increasingly interdependent world that we really live in, that the international institutions including the Security Council of the United Nations should be representative of contemporary realities. That certainly in our view is not the case. I hope more and more people around the globe will be convinced that a Security Council which does not have India on the high table cannot claim to be fully representative of contemporary realities.

Prime Minister Dr. Gordon Brown: You know I think there is a general acceptance around the world of the need for reform both in the United Nations and in the other international institutions. The challenge as you say is getting agreement on what specific reforms can be made. But I am not pessimistic about that because in the last few years we have achieved debt relief for the poorest countries of the world. We have set Millennium Development Goals and countries have changed their policies to meet them. I was party to a UN Group that has looked at how the UN can reform its development work. We have created a new humanitarian agency at the UN which is better funded than ever before. We have been reforming the peacekeeping and peace-building work of the UN. So, reforms have been possible. I agree with you that that programme of reform must involve a number of countries. I agree also that it is going to be a matter for debate about how the structure of reform happens, whether in one stage or two stages. But I am in absolutely no doubt that a country of a billion people - that is the largest democracy in the world, that is one of the fastest growing economies, that is ready to assume its rightful place in the world economy and in the world society - should have a place on the UN Security Council as it is enhanced and reformed.

Question (Ms Smita Sharma, IBN7): The question is first to the British Prime Minister. Sir, could you just tell us if there is any proposal of sorts to confer an honorary knighthood on Sachin Tendulkar?

Mr. Prime Minister, there are meetings taking place to increase fuel price. Is it due to Left pressure that the prices are not being enhanced? How long it is sustainable not to increase the price?

Prime Minister Dr. Manmohan Singh: You do not expect me to reveal what goes on in the Cabinet fora. So, I would not answer that question.

Prime Minister Dr. Gordon Brown: I applauded the Indian cricket team for their great success against Australia. I think Australia had won 16 matches in a row before the Indian victory in the last few days. Sachin Tendulkar is one of the great cricketers of the world. It is not for me to decided honours in our country. It is a matter for an independent Honours Committee. For honorary honours, that is also a matter not for me but for other people. But I am sure people recognize that just as Sir Donald Bradman and others were awarded honours as honorary knighthoods for the work that they did for cricket, for sports and for extending the cultural links and sporting links between countries and across the world. There is, of course, a strong case always for rewarding those who make a huge contribution as is happening to sport and culture around the world.

(text in italics is translated from Hindi)

653. Press Release of the High Commission of India in London on the visit of External Affairs Minister to London.

London, March 27, 2008.

Honourable External Affairs Minister, Shri Pranab Mukherjee met the Rt. Hon David Miliband, Secretary of State for Foreign and Commonwealth Affairs of the United Kingdom, in London on Wednesday, 26 March 2008. The meeting was in continuation of the exchanges at the highest level between India and the United Kingdom, especially the recent visit of UK PM Gordon Brown to India in January 2008. The two leaders had an extensive exchange of views on bilateral relations, and on regional issues of mutual interest. The External Affairs Minister renewed his invitation to the U.K Secretary of State for Foreign and Commonwealth Affairs to pay an official visit to India, which was accepted. Dates for the visit in the second half of 2008 would be worked out through diplomatic channels.

654. Joint Statement issued by the Ministry of Finance on the UK-INDIA Economic and Financial Dialogue.

New Delhi, August 11, 2008.

We - Chancellor Darling and Minister Chidambaram - met today for the second Ministerial round of the UK-India Economic and Financial Dialogue. The challenges currently facing the global economy can only be overcome through a constructive dialogue between countries to help find a global solution. Today's meeting demonstrates the importance our countries place on our bilateral relationship and the ties that bind our economies.

While we remain positive about the longer-term prospects for the UK and Indian economies, we are also aware of the increased uncertainty and downside risks currently facing us with the worsening of the outlook for the world economy since the first EFD. A confluence of shocks: high food prices, high oil prices, and volatile financial markets, have adversely affected the global economy. In the year to July, world agricultural prices increased by 32 percent, oil prices by 62 percent and coal prices by 112 percent. On 17 January 2007, on the day of the first Ministerial EFD, a barrel of oil cost

\$53, last week it cost \$120. We have seen oil prices increase by \$10 in a single day this year. Together, these shocks have dampened growth prospects in all economies, including advanced economies, and pushed up inflation.

The sharp increase in commodity prices has heightened inflationary pressures world wide. In April 2008 the IMF forecasted 2.6% inflation in advanced economies this year. In July the IMF further raised projected inflation in advanced economies to 3.4%. For emerging markets the figure has gone up from 7.4% to 9.1%. This global shock requires a global solution. Today's meeting provided us with an excellent opportunity to explore such a solution. We discussed the policy options open to countries to help combat these pressures in the short run and to help reduce prices in the future.

We believe that open markets, operating through a free and fair trading regime, will be crucial for overcoming the challenges facing the global economy. Both India and the UK share a strong commitment to a multilateral, rules-based trading system and an open and transparent investment regime. We are deeply disappointed by the recent pause in the Doha Development Round talks. Today we discussed the way forward. We urge all parties to show greater flexibility to agree on free and fair trade rules that deliver a balanced result for the world's poor and the global economy. Bilateral initiatives will also be important, and we are pleased to announce that the UK and India will undertake a joint-study into non-tariff barriers, including domestic regulations in services, to trade between India and the UK and how they could be removed. We also acknowledge the promising beginning to our work on intellectual property as joint co-chairs of the Intellectual Property Rights and Innovation work stream within the G8 Heiligendamm Process.

The recent volatility of international capital markets has once again underscored the importance of open, efficient, and transparent financial markets for sustained high economic growth and development. Both countries agree on the need to reform the International Financial Institutions, and support an effective multilateral response to the global challenges and opportunities facing us. As part of this, we highlight the need for the IMF to work closely with the Financial Stability Forum to develop an early warning system of the threats from the international financial system to financial and economic stability. We welcome the establishment of the industry-led International Centre for Financial Regulation, to be launched in London at the end of 2008, to carry out cutting-edge regulatory training

and research. We look forward to the development of voluntary guidelines by private equity and hedge funds. We also discussed how our countries can benefit from investment by sovereign wealth funds, and reaffirmed our support for the IMF and OECD's work to develop best practice guidelines for these funds and recipient countries.

In recent years financial ties between India and the UK have been further strengthened, with a number of Indian banks operating in the UK, a number of British banks operating in India, and many Indian companies listed on the London Stock Exchange. We reaffirmed our support for liberalised financial markets that permit financial services and related businesses to operate in the UK and India on a level playing field. We agreed that the UK would collaborate closely to support India's efforts to maintain momentum on key areas of financial sector reform in the coming months.

Making the financial sector more inclusive, such that everyone, in particular the poor, has better access to financial services, is a key tool to reducing poverty, achieving sustainable growth and improving livelihoods in both countries. This is why we are pleased to announce that India and the UK will work together through exchanges between institutions concerned with financial inclusion, including through mutual study visits. The initial findings of the work will be unveiled at the UK Financial Inclusion Taskforce Conference at HM Treasury in October 2008.

India has embarked upon a very ambitious PPP programme for infrastructure development. In the next five years, it is expected that 500 billion US dollars will be invested in infrastructure development and augmentation, of which 150 billion US dollars will be private sector investment. We agreed that Public Private Partnerships could provide a value for money means of delivering this investment. Today, we signed a Memorandum of Understanding between HM Treasury and the Indian Ministry of Finance to encourage sharing of best practice in the development of Public Private Partnerships.

Climate Change is a global challenge facing the world economy and it is important that Finance Ministries work together to reduce GHG emissions without compromising growth and development. We agreed to work towards the creation of a larger and deeper carbon market, to facilitate emissions reductions as required under the UNFCCC through public and private finance, and to explore how to overcome the barriers to progress, including how best to provide the necessary financial flows and technology transfers

to developing countries. We will host a workshop looking at how the Kyoto Mechanisms can be enhanced to meet these objectives. We welcome the launch of the new Climate Investment Funds (CIFs), and will work together to develop a plan to support India's pursuit of a climate-resilient economy.

Addressing climate change also requires enhanced cooperation in technologies, including for improving energy efficiency. Today, Professor Julia King set out her findings from her recent review of Low Carbon Cars and ways in which the industry in the UK and India can collaborate to take forward this agenda. The UK and India will jointly host a workshop that will bring together business and academia from our two countries to consider how best we can collaborate to address this issue.

Today, we reaffirm the commitment made by both Prime Ministers Singh and Brown to the MDG Call to Action. We agreed that an urgent global effort is required to meet the MDGs and reduce global poverty. We reconfirmed our commitment to working together to reduce poverty in India. The UK plans to provide £825 million in grant assistance to India between 2008-11 in line with the new DFID Country Plan for India 2008-15. We have agreed to promote exchange of information and approaches to the provision of aid. We welcome the new multi-donor strategic partnership for Bihar, an important innovation which may have valuable lessons for the administration of development programmes around the world.

Today's dialogue reaffirmed the continued strength of the modern UK-India economic and financial relationship, and the value placed on these by both governments. We agreed to meet again for the next round of the dialogue in India in 2009, and emphasised that our ongoing cooperation in the economic and financial spheres is, and will be, a truly collaborative relationship.

INDIA'S FOREIGN RELATIONS - 2008
SECTION - IX
INDIA AND THE UNITED NATIONS

655. Press Release of the Permanent Mission of India at the United Nations on the election of Dilip Lahiri to the Committee for Elimination of Racial Discrimination.

New York, January 17, 2008.

India, in the person of Shri Dilip Lahiri, was today elected to the Committee for Elimination of Racial Discrimination (CERD) by the 22nd Meeting of the States Parties to the International Convention on the Elimination of all Forms of Racial Discrimination, in New York.

In the elections 11 candidates were in the fray for the 9 available seats on the Committee. Out of 173 States Parties to the Convention, 165 Member States cast valid ballots, with 83 votes needed to win, India obtained 152 votes followed by Guatemala (144); Russian Federation (143); Burkina Faso (143); United States (143); China (139); Romania (133); Tanzania (131); Colombia (130).

Shri Lahiri, a retired officer of the Indian Foreign Service, has served as India's Ambassador to Andorra, Bolivia, France, Peru and Spain.

656. Press Release of the Ministry of External Affairs on the visit of Assistant Secretary General/Officer-in-Charge of the Department of Field Support, UN Ms. Jane Holl Lute and accompanying delegation.

New Delhi, January 30, 2008.

Ms. Jane Holl Lute, Assistant Secretary General/Officer-in-Charge of Department of Field Support (DFS) at the United Nations led a 9-member delegation to India from 27-29 January, 2008 for an exchange of views on a wide range of issues related to UN peacekeeping and to brief the Indian authorities on the functioning of the recently established DFS. The delegation included the famous Hollywood actor Mr. George Clooney, who was designated by the UN Secretary General earlier this month as a 'UN Messenger of Peace', with special focus on UN peacekeeping.

Besides discussions with Additional Secretary (International Organizations) in Ministry of External Affairs, the delegation called on Defence Secretary

and interacted with Vice Chief of Army Staff and other senior officials dealing with India's long-standing, consistent and significant contribution to UN peacekeeping missions which currently stands at over 9300 personnel in 11 out of the 17 ongoing operations. Before arriving in India, the delegation had interacted with Indian troops in the UN peacekeeping mission in Congo. The presentations and field visits organized during their visit to India gave them an opportunity for further familiarization with the highest professional standards and best practices of Indian peacekeepers. While reiterating India's steadfast commitment to assist the UN in the maintenance of international peace and security, the Indian side emphasized that the safety and security of UN peacekeepers was of paramount importance.

ASG Jane Lute, Mr. George Clooney and other members of the delegation witnessed the Beating of the Retreat Ceremony¹ at Vijay Chowk before their departure.

657. Speech of Minister of State Anand Sharma at the High Level Segment of the Seventh Session of the Human Rights Council.

Geneva, March 3, 2008.

Mr. President,

High Commissioner for Human Rights,

Excellencies,

Ladies and Gentlemen.

It is a privilege and honour for me to once again address this august body, the main UN human rights forum. On behalf of the Government of India, I would like to reiterate our firm commitment to work towards making the Human Rights Council a strong, effective and efficient body capable of promoting and protecting all human rights for all.

2. Mr. President, the establishment of the Human Rights Council in 2006 had evoked mixed reactions; of high expectations along with a

1. Closing ceremony marking end of Republic Day celebrations.

degree of scepticism. We note with satisfaction that in its initial years of work, the Council has been able to meet these high expectations, to use the eloquent words of our first Prime Minister Pandit Jawaharlal Nehru (spoken in a different context), "not wholly or in full measure, but very substantially". The consensual adoption of the institution-building package last year constituted a perfect launch for the Council and augurs well for its future. We pay tribute to the collective efforts of all those involved.

3. Mr. President, while we have had a successful beginning, it is imperative for us to build upon this initial success and not lose momentum. The immediate challenge is to successfully operationalize the Universal Periodic Review Mechanism. This mechanism has been designed to enable the Council to review country situations in a positive manner and we attach great importance to it. We are happy that India would be among the first countries to be reviewed under this mechanism. True to the spirit of this mechanism, our national report has been prepared through a process of wide consultations with all stakeholders.

Mr. President,

4. In its pursuit of realization of all human rights for all, the Human Rights Council must take into account the inter-linkage and mutually reinforcing nature of human rights, development and peace and security. These together have been recognized by world leaders as constituting the three pillars of the United Nations system. This is of particular relevance for Asia and Africa, where the after effects of colonialism continue to manifest even as efforts continue to combat acute poverty and lack of development. The Human Rights Council needs to reinvigorate the efforts of the international community for transforming into reality their commitment to the Right to Development, the progress towards which, thus far, has been tardy. The Council also needs to play a central role in combating terrorism which has emerged as the biggest challenge to peace and security in our times. The Human Rights Council must recognize, in most unequivocal terms, that terrorism is a direct violation of human rights, in particular the most basic rights, the right to life and liberty.

Mr. President,

5. India has actively participated in the process of evolution and

development of the human rights machinery of the UN, dating back to the drafting and adoption of the Universal Declaration on Human Rights. India played a leading role in the historical struggle for decolonization and abolition of apartheid. We were among the very few select countries who were members of the former Commission of Human Rights throughout the 60 years of its existence. Our engagement has been based on the principles of dialogue and cooperation and is rooted in our long tradition of commitment to the promotion and protection of human rights. A pluralistic society like India can only be structured on the foundation of respect for human rights of each of its citizens. India's democratic polity with an independent and impartial judiciary, free and independent press, a vibrant civil society and powerful and independent National Human Rights Commission provides the requisite framework for the promotion and protection of human rights. India's re-election to the Human Rights Council, with the highest number of votes, last year was reflective of the trust and confidence of the international community in our commitment to the cause of Human Rights.

6. The UNGA resolution establishing the Human Rights Council requires the Council Members to uphold the highest standards in the promotion and projection of human rights. Mr. President, we take this responsibility seriously and have made a sincere effort to follow-up on the pledges and voluntary commitments that we had made while seeking election. India was among the first countries to ratify the International Convention on the Rights of Persons with Disabilities. We have signed the International Convention for the Protection of All Persons from Enforced Disappearance and supported the adoption of the Declaration on the Rights of Indigenous peoples. India constructively engaged in the evolution of modalities and mechanisms of the Human Rights Council. We have also enhanced our cooperation with the international human rights mechanisms including with the treaty bodies and the special procedures. India continues to support the Office of the UN High Commissioner for Human Rights, including through regular financial contributions.
7. At the national level, consistent with our commitments, we abide by our national mechanisms and procedures to promote and protect the human rights und fundamental freedoms for all citizens in all

situations and have maintained their independence, autonomy as well as genuine powers of investigation. The empowerment of women is being pursued by reserving one-third of all seats for women in urban and local self government, which has brought over one million women at the grassroots level into political decision making. A new National Commission for the Protection of Child Rights has been set up for proper enforcement of children's rights and effective implementation of laws and programmes relating to children.

8. Our development plan recognizes the need for not only 'faster' but also 'more inclusive' growth, addressing all aspects of human life. Ensuring income security, food security and social justice are the underlying principles of our development strategy. To give a new impetus to the realization of these objectives, the Government of India has launched several new, ambitious initiatives in the areas of health, education, and employment. Further, in order to ensure that benefits of these schemes reach the people, a major step for empowerment of people has been taken through the enactment of the Right to Information Act, which is a very potent tool available to the people to ensure accountability of the Government.
9. Mr. President, may I draw the attention of the Human Rights Council to the continuing violence in Occupied Palestine, which is a matter of grave concern. Recent events, including the disproportionate use of retaliatory force by Israel, have led to avoidable civilian casualties, including the death of innocent children. This is unacceptable. We strongly urge an immediate end to the cycle of violence by all parties concerned so that the focus is not lost on the process of dialogue-driven conflict resolution.
10. Mr. President, this year we commemorate the 60th Anniversary of the Universal Declaration on Human Rights. This follows another milestone event last year when we commemorated the centenary of the Satyagraha Movement launched by our great leader Mahatma Gandhi in South Africa. In commemoration of this event, the General Assembly decided to annually observe the International Day of Non-Violence on October 2, the birth anniversary of Mahatma Gandhi. We note the strong resonance in the messages contained in the Universal Declaration of Human Rights and the

ideas and values espoused by Gandhiji. The essence of Gandhiji's political philosophy was the empowerment of every individual and protecting the dignity and self-respect of every human being which is also the central message of the Universal Declaration. It is the pursuit of this noble objective that should guide the work of the Human Rights Council.

Thank you.

658. Announcement by Official Spokesperson of the election of Indira Jaisingh to the U. N. Committee on Elimination of Discrimination against Women.

New Delhi, July 31, 2008.

.....India in the person of Ms. Indira Jaisingh was elected yesterday to the Committee of Elimination of Discrimination Against Women (CEDAW) on the 15th meeting of the States Parties to the UN Convention on the Elimination of All Forms of Discrimination Against Women in New York. This was the first time that India had presented a candidature to this prestigious body. The election was keenly contested and India's candidate Ms. Indira Jaisingh obtained the highest number of votes - 149 out of 181 - along with the Cuban candidate. There were 18 candidates for the 11 CEDAW seats. This is a four-year term starting on the 1st of January, 2009.

659. Statement by Minister of State Anand Sharma at the High Level meeting on Africa's Development Needs: State of Implementation of various commitments, challenges and the way forward at the 63rd session of the UNGA.

New York, September 22, 2008.

Excellency President Abdoulaye Wade of Senegal,

Excellency Prime Minister Ralph Gonsalves of Saint Vincent and the Grenadines,

Excellencies, Ladies and Gentlemen.

India and Africa have a unique and special bond based on shared experiences and civilisational links. Over centuries, vibrant cultural and economic exchanges have marked the relations between India and Africa which were interrupted by colonization. Decolonization and emergence of free countries in Asia and Africa restored this engagement, bringing India and Africa together to address the challenges of social and economic development and poverty eradication.

We have a long-standing, close and multi-layered relationship with Africa based on our abiding commitment to work with the continent to fulfill its aspirations. Our partnership encompasses priority sectors integral to the developmental goals of Africa in the 21st century. A vibrant India and a resurgent Africa are witnessing an intensification of relations and growing convergence of interests in their common quest for sustainable economic growth and development.

India has always been committed to elevate its special engagement with Africa into an enduring partnership by developing an institutional mechanism for India-Africa dialogue. The first-ever India Africa Partnership Forum Summit held in New Delhi in April 2008 was convened in partnership with the African Union. It is the African Union which worked with us in choosing the participants and in defining the roadmap of Africa-India cooperation in accordance with Africa's priorities. The Delhi Declaration and the Africa-India Framework for Cooperation adopted at the Summit highlight our shared political vision and world view and provide a solid foundation for a systematic and stepped-up engagement in the years to come.

The vision of the Delhi Declaration is based on equality and mutual respect. The Framework of Cooperation, adopted at the Summit, outlines the priority areas of our future engagement. These are in line with the priorities of the continent and include capacity-building, agriculture, infrastructure development, health and food security and technology cooperation. Our Prime Minister also announced the enhancement of the available concessional Lines of Credit for Africa to US\$ 5 billion. India sincerely aspires for a long-term partnership with Africa and is therefore investing in building economic infrastructure including railways, IT, telecom and power.

India has made a unilateral announcement of duty free and quota free market access to goods from 34 Least Developed Countries in Africa. This will spur economic activity in manufacturing, particularly for African SMEs, by allowing them enhanced market access to one of the fastest-growing economies in the world.

At the India Africa Partnership Forum Summit, India and Africa also decided to work together on pressing global issues of shared interests and concerns. These include climate change, WTO issues, reform and democratization of international institutions, the fight against terrorism, combating diseases, eradication of hunger and poverty and promotion of pluralism and democracy.

For many decades, capacity building in human resource development in Africa has been an area of priority. In 1964, India launched the Indian Technical and Economic Cooperation (ITEC) Programme. It was at a time when we ourselves were faced with acute scarcity of resources and colossal economic challenges. The ITEC programme has benefited thousands of students from Africa who came to study in professional institutions under Indian scholarship schemes. This programme is in the true spirit of South-South cooperation. Over 15000 African students are currently studying in Indian universities and colleges. India will over the next five to six years, undertake, on a grant basis, projects in critical areas focusing on education, science, IT, agriculture and renewable energy. India has offered a substantially higher number of training slots and has also doubled long-term scholarships. We have allocated half a billion dollars for this purpose.

The pan-African e-network project is a shining example of India-Africa partnership. India has gifted a dedicated satellite for e-connectivity in sub Saharan Africa to help bridge the digital divide. This project is fully financed by the Government of India and was launched from Addis Ababa with a satellite hub in Dakar. It is linking major universities in different regions of

Africa with major Indian universities and centers of excellence in India and major hospitals in Africa with super-specialty hospitals in India. Thirty countries have already joined this Project to provide quality tele-education and tele-medicine.

Distinguished co-chairs,

We feel that the time has come when our age old political ties will mature into a vibrant economic partnership. India's FOCUS AFRICA policy, launched in 2002, which targeted seven countries, has yielded visible results. Our bilateral trade with Africa has grown manifold and reached a level of USD 31 billion in 2006-07 up from USD 3 billion in 2000-01 and is expected to reach a level of USD 35 billion in the current year. The Indian private sector's initiative and investments in Africa in core sectors, in particular in agriculture, pharmaceuticals, IT and health, complement India's commitment. Through this, it is enabling and empowering young local men and women in Africa.

I would like to conclude, Distinguished co-chairs, by reiterating India's commitment to continue to work closely with the countries in Africa to meet the diverse challenges that they face, to achieve the developmental targets and fulfill the aspirations of the people of Africa.

Thank You

660. Press release on the high level meeting of the Millennium Development Goals at UN

New York, September 25, 2008.

Prime Minister attended the inaugural plenary of the High-level Meeting on the Millennium Development Goals (MDGs) at UN Headquarters in New York. The meeting was specially convened by the Secretary-General of the United Nations, Ban ki-moon, at the mid-point of the identified target date of the year 2015, by which all stakeholders are expected to meet the MDGs. Prime Minister's presence at the inaugural plenary of the MDGs was a sign of India's commitment to the achievement of MDGs. This was also in keeping with the high-level presence of a number of other Heads of State and Government.

The plenary event was inaugurated by the President of the UN General Assembly. Other speakers included UN Secretary -General Ban, president Kikwete of Tanzania the Amir of Qatar; Prime Minister Brown of the United Kingdom; Premier Wen Jiabao of China; and President Barrosa of the European Community. Special invitees of the UN Secretary- General included Bill Gates of the Bill and Melinda Gates Foundation, and Elabehn Bhatt of India, who is the founder of the Self-Employed Women's Association(SEWA).

The MDGs are a set of eight targeted objectives, established by Heads of State/ Government in the year 2000 at the Millennium Summit of the United Nations. These include the achievement of universal education; gender equality; improved child and maternal health; combating HIV/AIDS, environment sustainability; an end to poverty and hunger; and the creation of a global partnership.

Following the inaugural plenary, discussions in the High Level Event continue in three separate thematic roundtables, the themes of which collectively include the eight MDGs. Finance Minister P. Chidambaram is representing India at the round- table on "Poverty an Hunger". Separately, the Chief Minister of Delhi Smt. Sheila Dixit, is also participating in the MDG event as a special invitee. She will be making a presentation on the theme of environmental sustainability.

At the end of the inaugural plenary session, Prime Minister Singh had brief "pull-aside" meetings with Prime Minister Jan-Pieter Balkenende of the Netherlands, and Prime Minister Bruce Golding of Jamaica.

661. Intervention by Finance Minister P. Chidambaram at the Round Table on "Poverty and Hunger" during the high-level event on the Millennium Development Goals convened by the Secretary-General and the President of the General Assembly at the United Nations.

New York, September 25, 2008.

Mr. President,

In 1990, more than 1.2 billion people, 28% of the population of developing countries, lived in extreme poverty. By 2004 this had been reduced to barely 980 million.

We are particularly concerned that in sub-Saharan Africa 41.1 per cent of people were still living in extreme poverty in 2004 and the poverty gap ratio was the highest in the world.

In India, a growth rate of around 8.9 percent for the past four years has allowed us to make considerable progress in the eradication of extreme poverty.

But, we still have more than a quarter of our population surviving on less than a US\$ 1 a day.

Mr. President,

In India, we recognize that economic growth must be socially inclusive and regionally balanced. We have taken major initiatives in agriculture and rural development, in industry and urban development, in infrastructure and services, and in education and healthcare, aimed at promoting inclusive growth.

A unique social safety net has been created through the National Rural Employment Guarantee Act, which guarantees 100 days of employment to every rural family in India. Through Bharat Nirman, a massive rural development scheme, we are investing huge sums in rural infrastructure.

We have recently adopted our Eleventh Five Year Plan for the years 2007-2012. Its monitorable targets include generation of 58 million new work opportunities, reduction in the head-count ratio of consumption poverty by 10 percentage points and reduction in infant mortality rate (IMR) to 28 and maternal mortality ratio (MMR) to 1 per 1000 live births, and by 2011-12

increasing the literacy rate of children of age 7 years or more to 85%, reducing the dropout rates of children at the elementary level to 20%, and the gender gap in literacy to 10 percentage points.

Mr. President,

The last year has seen major changes in the global economy with the very high food and oil prices and the disproportionate impact of climate change seriously jeopardizing the gains against hunger, poverty and disease in many developing countries.

An argument is made that large developing countries are "over-consuming" leading to increased food costs. Nothing could be further from the truth. Developing countries continue to have high child malnutrition levels and still need to battle chronic hunger. In India, in-fact, this is a major issue and our Eleventh Five Year Plan aims at reduction in malnutrition among children of age group 0-3 to half from its present levels.

Mr. President,

To prevent food shortages and continuing hunger in the developing world in particular, there is a need for a quantum leap in agricultural productivity, food grain output and farm incomes in the developing countries.

We are confident that the world has enough resources and ability to cope with this crisis.

Mr. President,

All studies on attainment of MDG goals have identified lack of finances as the main impediment and have called for vast increases in Official Development Assistance (ODA).

Despite many developed countries having increased their ODA, the imperative to reach the goal of 0.7% of Gross National Income on an urgent basis cannot be overstated.

This urgency is underscored by the very limited time that we have to reach the MDG targets.

Mr. President,

MDGs comprise the core human development agenda. They embody our collective vision of human dignity and solidarity.

When we adopted the Millennium Declaration we wanted to mount a frontal attack on poverty, hunger, ignorance and disease, and that its benefits would percolate across the globe.

But eight years later, and more than half-way to our target date of 2015, we are discussing implementation of the MDGs with a realization that most developing countries will not be able to achieve these goals. This situation must change.

We welcome the initiative of the UN and others, and urge that we act urgently and collectively in a global partnership to translate commitment into concrete action in the interest of our future generations.

Thank You.

662. Statement by Prime Minister Dr. Manmohan Singh at the General Debate of the 63rd UN General Assembly.

New York, September 26, 2008.

Your Excellency, Mr. President,

Excellencies,

Ladies and Gentlemen,

May I first congratulate you on your election as the President of the 63rd UN General Assembly. I am sure that your wisdom and experience will guide us as we deliberate the many challenges that the world faces today.

Mr. President,

The United Nations is the embodiment of our faith in the benefits of collective action and of multilateral approaches in resolving global issues.

At the 2005 World Summit, we pledged ourselves to an agenda for early and meaningful reform of the United Nations. However, we must acknowledge frankly that there has been little progress on the core elements of the reform agenda.

We need to make more determined efforts to revitalize the General Assembly to enable it to fulfill its rightful role as the principal deliberative organ of the United Nations.

The composition of the Security Council needs to change to reflect contemporary realities of the twenty-first century.

It is only a truly representative and revitalized United Nations that can become the effective focal point for the cooperative efforts of the world community. We need to expeditiously hold negotiations towards this end.

Mr. President,

Globalisation has contributed to ever widening circles of prosperity and we in India have benefited from it. But its benefits have not been equitably distributed. Ensuring inclusive growth within nations, and inclusive globalization across nations, is a central challenge that faces us.

The development gains that many countries have made are today threatened by a possible food crisis, a global energy crisis and most recently, unprecedented upheavals in international financial markets.

The net impact of these problems is that both the industrialised economies and the developing economies face inflation and a slow down in growth after several years of robust expansion. Industrialised countries can afford periods of slow growth. Developing countries certainly cannot.

There is therefore urgent need for coordinated action by the global community on several fronts.

The explosion of financial innovation unaccompanied by credible systemic regulation has made the financial system vulnerable. The resulting crisis of confidence threatens global prosperity in the increasingly interdependent world in which we live. There is, therefore, a need for a new international initiative to bring structural reform in the world's financial system with more effective regulation and stronger systems of multilateral consultations and surveillance. This must be designed in as inclusive a manner as possible.

The world food crisis is the cumulative consequence of the neglect of agriculture in the developing world, exacerbated by distortionary agricultural subsidies in the developed world. Diversion of cultivable land for producing bio-fuels is compounding the problem.

The world needs a Second Green Revolution to address the problem of food security. We need new technologies, new institutional responses and above all a global compact to ensure food and livelihood security. This will require transfer of technology and innovation from developed to developing countries. India is very keen to expand cooperation with Africa in Africa's quest for food and livelihood security for its people.

Trade liberalization in agriculture can help provided it adequately takes into account the livelihood concerns of poor and vulnerable farmers in the developing and least developed countries.

It is feared that many of the conflicts of the 21st century will be over water. We must reflect on how to use this scarce resource efficiently. We need to invest in new technologies and new production regimes for rainfed and dryland agriculture and explore cost effective desalination technologies.

Mr. President,

Poverty, ignorance and disease still afflict millions of people. The commitment to achieve the ambitious targets set as part of the Millennium Development Goals was an acknowledgement by the international community that global prosperity and welfare are indivisible and affluence cannot coexist with pervasive poverty.

Unfortunately, solemn commitments made for transfer of financial resources from the developed to the developing world have remained largely unfulfilled. The commitment of developed countries to move to the long-set target of 0.7% of Gross National Income as ODA needs to be honoured as a matter of priority. In this context, special efforts have to be made to address the concerns of Africa for adequate resource flows to support its development.

Poverty alleviation and livelihood security are closely linked to energy security. We need a much greater measure of predictability and stability in the oil and gas markets. We need to think of ways and means, such as early warning mechanisms, to help countries cope with oil shocks.

We must put in place a global cooperative network of institutions of developed and developing countries engaged in R&D in energy efficiency, clean energy technologies, and renewable sources of energy.

India is registering rapid economic growth and has combined it with declining energy intensity. However, our total demand will keep increasing and we are actively looking for all possible sources of clean energy.

The opening of international civil nuclear cooperation with India will have a positive impact on global energy security and on efforts to combat climate change.

This is a vindication of India's impeccable record on non-proliferation and to our long-standing commitment to nuclear disarmament that is global,

universal and non-discriminatory in nature. The blueprint for this was spelt out by Prime Minister Rajiv Gandhi in this very august assembly twenty years ago.

I reiterate India's proposal for a Nuclear Weapons Convention prohibiting the development, production, stockpiling and use of nuclear weapons and providing for their complete elimination within a specified time frame.

Mr. President,

Climate change can be overcome successfully only through a collaborative and cooperative global effort.

We support the multilateral negotiations taking place under the UN Framework Convention on Climate Change. The outcome must be fair and equitable and recognize the principle that each citizen of the world has equal entitlement to the global atmospheric space.

I believe that the pursuit of ecologically sustainable development need not be in contradiction to achieving our growth objectives. As Mahatma Gandhi said, "The Earth has enough resources to meet people's needs, but will never have enough to satisfy people's greed".

India has unveiled an ambitious National Action Plan on Climate Change. Even as we pursue economic growth, we are committed to our per-capita emissions of greenhouse gases not exceeding those of the developed countries.

Mr. President,

The growing assertion of separate identities and ethnic, cultural and religious intolerance threatens our developmental efforts and our peace and stability. It is vital that we strengthen international cooperation to combat terrorism and to bring the perpetrators, organisers, financiers and sponsors of terrorism to justice. We should conclude expeditiously the Comprehensive Convention on International Terrorism.

In this context, the situation in Afghanistan is a matter of deep concern. The international community must pool all its resources to ensure the success of Afghanistan's reconstruction efforts and its emergence as a moderate, pluralistic and democratic society.

We welcome the return of democracy in Pakistan. We are committed to resolving all outstanding issues between India and Pakistan, including the

issue of Jammu and Kashmir, through peaceful dialogue. We also welcome the coming to power of democratically elected governments in Nepal and Bhutan. We seek to expand areas of cooperation with all these countries to deal with the challenges of sustainable development and poverty eradication.

Mr. President,

The United Nations is a living symbol of pluralism. It has weathered many storms. It is the vehicle through which our combined will and efforts to address global challenges must be articulated and implemented. Unless we rise to the task, we would bequeath to succeeding generations a world of diminishing prospects.

Thank you.

663. Press Release of the Ministry of External Affairs on the visit of External Affairs Minister Pranab Mukherjee to New York : 28 September - 2 October 2008.

New Delhi, September 29, 2008.

External Affairs Minister of India, Shri Pranab Mukherjee, reached New York on Sunday, September 28, 2008. He is visiting New York from September 28 to October 2, in context of the ongoing 63rd session of the UN General Assembly. During his stay, the Minister will participate in an informal plenary meeting of the UN General Assembly to commemorate the second International Day of Non-Violence on October 2, 2008.

On Monday, September 29, the External Affairs Minister held bilateral meetings with H.E Mr. Sergey Lavrov, Foreign Minister of the Russian Federation. He also met H.E Ms. Paula G. Scoon, Foreign Minister of Trinidad and Tobago; H.E Mr. Ojo Maduekwe, Foreign Minister of Nigeria; H.E Dr. N Dlamini Zuma of South Africa and H.E Mr. Salaheddin Al-Bashir of Jordan. He also participated in three Ministerial meetings, including the India-Brazil-South Africa (IBSA) initiative, the India-Gulf Cooperation Council, and of the South Asian Association for Regional Cooperation (SAARC).

During EAM's meeting with his Russian counterpart, the two Ministers took stock of the strategic partnership between the two countries, and the state of preparations for the annual Summit-level meeting between the two countries. Foreign Minister Lavrov will soon be visiting India in context of the detailed and substantive agenda that is planned for the visit, which will seek to provide a fresh impetus to the wide-ranging bilateral relationship.

During the meeting between EAM and his counterpart from Trinidad and Tobago, the two sides discussed the close bilateral relationship based on shared cultural and historical links. These ties were set in the context of growing cooperation between India and the countries of the CARICOM, and the efforts on both sides to further expand these ties.

Recalling the visit of Prime Minister Manmohan Singh to Nigeria in October 2007, the two Ministers discussed ongoing efforts to expand bilateral ties, in particular, the economic and commercial relationship, and the possibility of intensifying our bilateral cooperation in the hydrocarbons sector, beyond the buyer-seller relationship.

In his meeting with his Jordanian counterpart, EAM discussed the situation in West Asia, as well as the state of the cordial and cooperative bilateral relationship that the two countries enjoy. The Jordanian dignitary expressed his appreciation of India's close involvement and interest in his region.

Finally, during EAM's meeting with the Foreign Minister of South Africa, the two Ministers exchanged views on the historically close bilateral relationship, and the close cooperative ties between the two countries in the multilateral fora.

The meeting between India and the GCC took place in the format of the IV India-GCC Political Dialogue. The meeting was Chaired by H.E Sheikh Hamad bin Jassim bin Jabar Al-Thani, Foreign Minister of the State of Qatar. During this Dialogue, the two sides reviewed the state of India-GCC relations, before proceeding to discuss the situation in West Asia, in the particular context of the Middle East Peace Process and the Situation in Iraq.

An informal meeting of the SAARC Council of Ministers was convened by H.E Mr. Rohitha Bogollogama, Foreign Minister of Sri Lanka. Apart from EAM, Bhutan, Bangladesh, Pakistan and Nepal attended the meeting at Ministerial level. Afghanistan and Maldives were represented at the senior official level. The Secretary General of SAARC was also present. The

Ministers reviewed progress in implementing the decisions and recommendations of the 14th and 15th SAARC Summits, held in New Delhi (April 2007) and Colombo (August 2008) respectively.

Finally, EAM participated in a Ministerial meeting of the India-Brazil-South Africa group, at which H.E Mr. Celso Amorim, Foreign Minister of Brazil, and H.E Dr N Dlamini Zuma were also present. At the end of the meeting, the Ministers issued a press statement, as attached.

**664. Statement by External Affairs Minister Pranab Mukherjee
on the Second International Day Of Non-Violence at the
63rd session of the UN General Assembly.**

New York, October 2, 2008.

Your Excellency Rev. Brockmann, President of the General Assembly,

Your Excellency Mr. Ban, Secretary General of the United Nations,

Your Excellency Dr. Zuma, Minister of Foreign Affairs of South Africa

Excellencies, distinguished delegates,

It is a great honour for me to address the United Nations General Assembly on the Second Anniversary of the International Day of Non-violence and the 139th birth anniversary of Mahatma Gandhi. Last year, on this very day, Mrs. Sonia Gandhi, the Chairperson of the United Progressive Alliance in India, while speaking from this podium, conveyed the gratitude of the people of India to the General Assembly. May I today add my own voice to hers, and express my deep appreciation to all member states that supported this initiative to pay tribute to the life and legacy of Mahatma Gandhi, truly one of the greatest men the world has seen.

Excellencies,

Sixty years ago an assassin's bullet silenced forever the voice of the Mahatma. His mortal body was consigned to the flames. But the message, for which he lived and died, could not be extinguished. That almost sixty years after the death of Mahatma Gandhi, the General Assembly decided last year to commemorate his legacy, is eloquent testimony to this.

Today, on the second International Day of Non-Violence, we pay tribute again to this great apostle of peace. But even as we do so, we must ask ourselves, what is his relevance? Why should the message of a man, who preached peace and non-violence, be relevant in a world stockpiled with weapons that can destroy our planet a hundred times over? Why should the deeds of a man, who sought to counter hate with love, be relevant in a world where terrorism has become a global menace? Why should the legacy of a man, who wore the livery of the poor as a badge of honour, be relevant in a world where even today millions are deprived of food and safe water to drink? Why should the voice of a man, who opposed insensitive materialism, be relevant in a world bent on destroying its own sustaining climate and environment?

I submit that it is precisely because the world continues to be plagued by these problems, that the message of Mahatma Gandhi is even more relevant today.

Excellencies,

Non-violence or 'Ahimsa' is not a mantra. It is not simply the opposite of violence, although it is fundamentally opposed to violence. Non-violence is about the absence of hate, and the victory of love and compassion. It stands for principle in the face of expediency. It is about changing people's hearts and minds.

Central to the idea of ahimsa, which literally translates into "non-injury", is the notion of justice and equity. If our current economic and political order is based on unjust methods and stark inequalities, that too is a form of violence, which requires urgent resolution. In this globalized age of instant communications, we cannot continue to indefinitely maintain islands of prosperity in a larger sea of poverty. The Mahatma's message reminds us of the need for a moral compass that would guide all our actions, to enable us to evaluate the impact of our deeds upon the poorest person in our memory. He called this his "talisman", and as history affirms, it never failed him.

Excellencies,

If non-violence was the message of Mahatma Gandhi, satyagraha or peaceful non-cooperation and civil disobedience was his tool. Satyagraha, he proclaimed, is for the strong in spirit, not the doubter or the timid. Its aim is to convert the repressor, but never through coercion. For those who practice it, there is no enemy. 'I can combine the greatest love with the

greatest opposition to wrong', Gandhiji said. It was a policy that brought to an end the British colonial rule in India but, in tribute to this policy, the British left India as friends, not enemies.

In the practice of satyagraha, the means were as important as the ends. For Mahatma Gandhi, principles could not be flexible. Truth was not a convenience. Conviction could not be bartered on the altar of expediency. This moral argument continues to be relevant, including in two vital areas affecting us. These are terrorism and non-proliferation. If we accept the premise that a worthy objective can be achieved only through the most carefully considered measures, we should never be able to condone our failure to act unitedly, determinedly and decisively to stop international terror once and for all. No matter what the objective is, no cause and no religion either justifies or sanctifies recourse to acts of terror. There is no right way to do a wrong thing. In the area of non-proliferation, the dichotomy between means and ends explains why we have moved so far away from our objective of universal nuclear disarmament. The core difficulty is the notion that some may retain nuclear weapons while others may not. Unless we begin to move towards a genuine, comprehensive disarmament programme, we will not be able to achieve our objective.

Excellencies,

We have set ourselves the Millennium Development Goals (MDGs) which above all aim at the eradication of poverty and hunger. Each of our nations has reaffirmed its political commitment to achieving the MDGs by 2015. However, we need to display greater collective urgency if we are to achieve these goals. Recognizing the mismatch between our capacities and our actions, the Mahatma said that "the difference between what we do and what we are capable of doing would suffice to solve most of the world's problems". The chasm between our enormous collective capacity and our modest action on the ground, should stimulate us into greater efforts in the seven years that remain to achieve the MDGs.

Excellencies,

Some may argue that this degree of idealism is not practical. It is unrealistic. Undoubtedly, such a path is not easy. But, I would like to ask a counter question: Has violence succeeded in bringing an end to our problems? Has bloodshed been a more effective way to resolve disputes? Has over exploitation of nature's bounty led to a better life? Has inequity in global institutions helped promote international understanding?

Mahatma Gandhi will always remain an inspiration in the troubled world we live in. That is why Martin Luther King believed, and I quote: 'Gandhi was inevitable. If humanity is to progress, Gandhi is inescapable. He lived, thought and acted, inspired by the vision of humanity evolving toward a world of peace and harmony. We may ignore Gandhi at our own risk'.

Excellencies,

It is my hope and conviction that the message of Mahatma Gandhi will not remain a call in the wilderness. He held no office. He commanded no army. But millions in India, and, indeed, across the world, revere him because he had the courage to dream of a saner and more civilized world, and was prepared to walk alone to achieve it. A song written by Gurudev Rabindranath Tagore in Bengali was his enduring favourite:

***Jodi tor dak shune keu na ashe tobe ekla cholo re
Ekla cholo, ekla cholo, ekla cholo, ekla cholo re***

If they answer not to thy call, walk alone
If they are afraid and cower mutely facing the wall
Open thy mind and speak out alone

I thank you.

665. Statement by Minister of State E. Ahamed on Agenda Item 45 – Interfaith Dialogue, “Culture of Peace” at the UN General Assembly.

New York, November 12, 2008.

Mr. President, Excellencies, Distinguished delegates

I am deeply honoured to represent India at this important meeting. India welcomes the initiative of Custodian of the Two Holy Mosques His Majesty the King of Saudi Arabia to promote a high level Inter-faith Dialogue. In the context of today's challenges, His Majesty's effort to spread understanding and goodwill amongst the peoples of the world is both very timely and highly commendable. It will enable us to better work together in a genuine partnership for a peaceful and equitable global order.

Mr. President,

Just as a genuine partnership is based upon better understanding, the foundations of such better understanding are built on goodwill, tolerance and receptivity to differing viewpoints. A true partnership derives from a willingness to engage with each other in a dialogue based upon equality and mutual respect. In India, we strive in our daily lives in a million different ways to practice such a dialogue of equals. This is an indispensable part of the process of building our nation as a shared endeavour. Such a dialogue is more than merely a conversation over issues of importance: it lies at the very core of our national existence.

Mr. President,

For millennia, the Indian subcontinent has provided shelter to countless strands of religious and philosophical thought and it is very much part of our historical tradition to accept all religions and spiritual experiences as true and valid. India is the birthplace of Hinduism, Buddhism, the Sikh and Jain faiths, while the great teachings of Islam, Judaism, Christianity and Zoroastrianism, quickly found fertile ground on our shores. Today, every one of the world's major religions has a home in India, making it a nation of unparalleled diversity. Thus, Islam has flourished in our subcontinent for over thirteen hundred years and modern day India has 150 million members of the *ummah*. Put another way, today approximately one in ten Muslims worldwide is an Indian. Christianity too came to our shores shortly after its birth in the holy lands. Indeed, the Christian tradition reached India well

before it reached most other parts of the world. Similarly, the Jewish and Zoroastrian people have an ancient history of having freely and peacefully practiced their faith in India.

Mr. President,

Inter-religious and inter-cultural dialogue is not new to India. The first philosophical dialogue between India and the West goes back to the time of ancient Greece. As Islam found a home in India, it too became part of the dialogue of our civilization. From this dialogue came new philosophic ideas, as well as an entire structure of Indo-Islamic culture. This culture is not only represented in the historical record of the art and architecture of our subcontinent, it also flourishes today in numerous spheres. The quest for a dialogue was also to find an echo in the life and works of the father of our nation, Mahatma Gandhi, who viewed receptivity to other cultures and traditions as a source of strength and cohesion for any society. To quote the Mahatma, "I do not want my house to be walled in on all sides and my windows to be stuffed. I want the cultures of all the lands to be blown about my house as freely as possible".

Mr. President,

The historical tradition of dialogue in India has drawn upon respect for knowledge, a willingness to question, as well as a desire to learn. Thus, for instance, the Buddha urged his followers not to accept his beliefs without questioning them. This philosophic tradition of questioning ideas is based on our recognition of the consequences of allowing belief to become blind faith. It finds expression even in the Indian Constitution, which declares our nation to be a secular republic and simultaneously underlines both the freedom of religion and faith, as well as the duty of the State to inculcate a scientific temper among the people. While faith and belief sustain us in our search for answers to existential questions, in our daily lives, we also recognize the importance of science and a scientific temper, rational and liberal social practices and economic growth and productivity, to help us improve the lives of our people. It is for this reason that newly-independent India valued factories and universities as much as it did its places of worship, seeing them as the temples of modern India.

Mr. President,

The State that I hail from in India, Kerala, is an outstanding example of the tradition of promoting dialogue and understanding that is to be found in my

country. Through the ages, Kerala has witnessed the peaceful co-mingling of different cultures and religions. Kerala was the state where Arab Muslim traders first arrived as messengers of the Islamic faith. The village of Methala, near the city of Cranganore in Kerala, hosts the first mosque to be built in the Indian subcontinent, the Cheraman Juma Masjid. It was constructed around AD 629, during the lifetime of the Holy Prophet [Peace Be Upon Him]. Our history also records that in AD 52, St Thomas, one of the thirteen apostles of Christ, brought Christianity to Kerala, landing on its shores in a ship owned by a Jewish merchant. The ship docked at a port which was home to a large trading settlement of Jewish and other people, including from Rome, Syria, and elsewhere. Indeed, it is in Kerala too that the Jewish people built what is now one of the oldest synagogues in the world. Today, the population of Kerala is almost equally divided amongst Hindus, Muslims and Christians.

Mr. President,

Dialogue amongst different cultures and religions is also important because it is precisely in the absence of such dialogue and understanding, that intolerance, bigotry and violence flourish. This is one reason why extremist ideologies, violence and terrorism, have grown in a world in which we seem to be moving away from dialogue and understanding. There can be no disputing that terrorism, which is a manifestation of extremism, intolerance and violence, is the antithesis of all religions. All acts of extremism and intolerance run counter to the central teachings of any religion, as all faiths are based on the universal values of peace, goodness and humanity. No religion condones violence or the killing of human beings.

In India, we are disturbed by the rise of intolerance worldwide. We are troubled by the increase in resources, financial and otherwise, that are being made available to violent and intolerant groups that misuse religion to justify and propagate their extremist agendas. The effort to counter such tendencies diverts attention and much-needed resources from development efforts in a country like ours. Moreover, the destructive activities of such groups can have potentially serious consequences to social stability, peace and tranquility. It is therefore increasingly urgent that the nations of the world come together to tackle such evils. Modern societies cannot and should not tolerate extremism and violence. Those who consciously or unconsciously abet extremism and terrorism would be well served to remember that these are monsters that may not easily go away.

Mr. President,

We need to send out a clear message emphasizing the importance of tolerance for the faiths and beliefs of others. The UN Charter states that the peoples of the United Nations are determined to practice tolerance and live together in peace. We need to emphasize the responsibility of member states to do all in their power to promote tolerance and respect. Eventually, however, we will need to build a larger platform based upon tolerance, which stresses the fundamental equality of all cultural traditions, religions and faiths, and the essential truth that all human beings are equal before their creator. The world is home to such a diversity of faith and culture that proactive dialogue-based initiatives are essential to ensure better understanding between peoples. Such dialogues should expand mutual comprehension and reduce misunderstandings and misgivings; indeed, they should aim to celebrate the infinite diversity that makes up our world.

Mr President,

I would like to conclude with a quotation from the revered saint and social reformer of Kerala, Sri Narayana Guru. In a message to an All Religions Conference held in 1924, he stated that: "This great Parliament of religions makes it abundantly clear that the ultimate goal of all religions is the same, so there is no need for followers of different religions to indulge in mutual conflict."

Thank you, Mr. President.

666. Statement by Minister of State E. Ahamed at the High-level Conference on the Central Emergency Response Fund at the UN General Assembly.

New York, December 4, 2008.

Mr. President,

India is happy to participate in this High-level Conference on the Central Emergency Response Fund.

The involvement of the UN in the coordination of the response of the international community to emergencies is one of the more important roles that it plays. While Member States have the primary responsibility for provision of humanitarian assistance in response to all emergencies, the UN has a critical role in supporting and supplementing such efforts. The UN is also an important forum for fostering international cooperation to deal with disasters and to coordinate effective utilization of disaster management capabilities. Greater cooperation is required not only in the emergency phase of reacting to disasters but also in relief and rehabilitation, in disaster preparedness, and in setting up and maintaining early warning systems. These all are, and should be, parts of effective disaster management strategies.

Mr. President,

The Central Emergency Response Fund is a key component of these efforts. The Fund has completed two years of existence. It has become, in a short time, a valuable and impartial tool for humanitarian action. We would like the Fund to acquire a greater profile and role in both rapid response to humanitarian emergencies as well as to under-funded emergencies.

The Fund is not only an effective coordination tool but also a symbol of international solidarity. India notes with satisfaction that 79 countries have pledged or made contributions to the fund. The importance that India assigns to CERF is evident from our decision to contribute US\$ 2 million to the fund at its inception. CERF has raised about US\$ 1 billion since then and today accounts for about 5% of annual global humanitarian assistance flows. As a developing country with strong faith in the universality, impartiality and multilateral nature of UN assistance, India would like to see this share increase.

Mr. President,

India has adopted a forward-looking approach to disaster management and mitigation. We have constituted a National Disaster Management Authority, headed by the Hon'ble Prime Minister of India, as well as State Level Disaster Management Authorities. The National Authority has come forward with a new approach to disaster management, moving away from a relief-centric, post event approach, to a holistic, integrated and preventive approach. The focus will be on disaster prevention, preparedness and mitigation, based on state-of-the-art technology and environmental sustainability.

India is also committed to mainstreaming disaster management into the development planning process and to creating an institutional and legal framework and an enabling regulatory environment and a compliance regime. It believes that an efficient humanitarian response must give special attention to those who are vulnerable and weak.

Mr. President,

India has taken a lead in promoting regional cooperation in disaster risk reduction in South Asia. We host the SAARC Disaster Management Institute located in New Delhi at the National Institute of Disaster Management. We organized the 2nd Asian Ministerial Conference on Disaster Risk Reduction in November 2007, which adopted the Delhi Declaration, paving the way for establishing a Regional Platform for disaster risk reduction in the Asia-Pacific region.

Mr. President,

India is deeply concerned by the increasing incidence of attacks on humanitarian personnel and UN premises. India condemns such attacks in the strongest possible terms.

India has also been always forthcoming in extending assistance to countries affected by disasters. We did this after the tsunami and the earthquakes that hit our region in the recent past, even though we were ourselves affected by those disasters.

Mr. President,

In conclusion, I would like to state that India stands ready to share its

resources and experiences with the international community and to exchange best practices and lessons learnt in the field of humanitarian assistance and disaster management. As a sign of our commitment to strengthening the UN's role in coordinating responses to natural disasters as well as to CERF, I am happy to pledge that India will contribute US\$ 1.5 million to CERF, in three tranches of \$500,000 each, over the next three years.

Thank you, Mr. President.

667. Statement by Minister of State E. Ahamed on Agenda Item 70[A] & [B] – Oceans and Law of Sea at the UN General Assembly.

New York, December 4, 2008.

Mr. President,

At the outset I would like to thank the Secretary General for his useful reports on issues relating to the oceans and law of the sea. The 1982 UN Convention on the Law of the Sea [UNCLOS] lays down a comprehensive regime for the world's oceans and seas, establishing rules governing all uses of the oceans and their resources. The use of ocean resources is fundamental to human well being and development. The long term sustainability of oceans is critical as any change that alters the state of oceans can have immense socio-economic consequences. Therefore, there is an urgent need to address the conservation and sustainable use of marine biodiversity in areas beyond national jurisdiction.

The threats to biodiversity in areas beyond national jurisdiction range from open access to fisheries, destructive fishing practices like bottom trawling, pollution from ships and other land based activities, and new threats deriving from bio-prospecting and geo-engineering activities. A combination of measures, including monitoring, scientific investigation, and improved governance, are required to prevent or reduce harmful impacts of such activities on biological diversity. The management and governance of high seas areas presents a formidable challenge for the international community as development of an effective regime for the

protection of biodiversity in areas beyond national jurisdiction is seen to be circumscribing some of the traditional high seas freedoms. The challenges of protecting, conserving and ensuring sustainable management of marine biodiversity beyond national jurisdiction are thus enormous. Marine Protected Areas (MPAs) can be a useful marine ecosystem management tool for securing protection from threats to marine biological diversity.

The developing literature on MPAs reveals the potential benefits that they could offer not only to the resilience of vulnerable marine systems, but also to the productivity of fisheries. However, in respect of MPAs in areas beyond national jurisdiction, information on governance aspects and costs and benefits is still very sparse. This is an area where more information on both scientific and economic aspects would be useful. It is essential to continue to develop and facilitate the use of other approaches and tools for conserving and managing vulnerable marine biodiversity in areas beyond national jurisdiction.

The time bound measures proposed in UNGA Resolution 61/105 to protect vulnerable marine ecosystems from destructive bottom fishing practices is an important first step in addressing that problem. The Regulations on Prospecting and Exploration for Polymetallic Nodules adopted by the International Seabed Authority also constitute an important input. Over fishing, destructive fishing practices and illegal, unreported and unregulated [IUU] fishing continue to be great threats to the conservation, management and sustainable use of biodiversity on the high seas. To combat IUU fishing it is essential to give priority to compliance and enforcement measures, including effective port State measures, listing of vessels, and developing and implementing integrated monitoring, control and surveillance packages. It is important to sustainably manage fish stocks and protect vulnerable marine ecosystems and thus balance sustainable use and conservation.

We would also like to emphasize the importance of the principle of freedom of navigation including the right of innocent passage as well as transit passage through straits used for international navigation. States bordering straits may adopt laws or regulations relating to transit passage through straits, but such laws should be enforced in a manner that is non-discriminatory and fully consistent with Article 42 of UNCLOS.

Mr. President,

In the area of maritime navigation, it is a matter of serious concern that the number of incidents of piracy and armed robbery is once again on the rise, particularly off the coast of Somalia. These attacks threaten maritime security by endangering the lives of seafarers and security of navigation and commerce. Therefore we fully support and are involved in the recent efforts to address this problem. Nevertheless, action by the Security Council through Resolutions 1816, 1838 and 1846 became necessary due to the particular situation in Somalia and is not considered as establishing customary international law. Most armed robberies occur in the internal and archipelagic waters. Law enforcement against armed robbers thus primarily falls within the domain of the coastal States concerned. Therefore, enhancement of coastal States' capacity to combat such crimes is very important. In addition, a need for increased bilateral, multilateral and regional cooperation to combat piracy and armed robbery by coastal states cannot be overemphasized. Such co-operation must be based on respecting the coastal States territorial integrity, sovereignty, sovereign rights and jurisdiction in accordance with international law.

Developing States require assistance and resources to participate in maritime security arrangements. The Secretary General's report rightly places emphasis on the continuous need to assist developing States to take measures relating to maritime security. Lack of expertise and specialized knowledge can also be addressed through capacity building programs including transfer of equipment or technology. There has been a decrease in the number of attacks by pirates and armed robbers in the Asian region through increased national action and regional cooperation.

There are several commendable regional initiatives in this regard that serve to enhance the safety of navigation, environmental protection and security in the Straits of Malacca and Singapore, while respecting the sovereignty and sovereign rights of littoral states. In February this year, India too launched an important regional maritime security initiative, namely, the "Indian Ocean Naval Symposium" with focus on 'Constructive Engagement' amongst all littoral states of the Indian Ocean Region. Its primary aim is to sustain a regionally relevant, consultative forum to promote a shared understanding of issues and concerns relevant to the Indian Ocean region, which bear upon maritime security.

In conclusion, I would like to note that there is an urgent need to promote additional research and information sharing on new and emerging activities that impact the oceans. Deep seabed research is still largely the domain of select developed countries. It is imperative that there be an increased flow of scientific data and information and transfer of knowledge to developing countries so as to improve their understanding and knowledge of oceans and deep seas. International cooperation remains a critical component not only for enhancing maritime security and safety but also the sustainable use of marine resources and rational utilization of the oceans and seas.

Thank you Mr. President.

668. Statement by Minister of State for External Affairs E. Ahamed on Threats to International Peace and Security caused by Terrorist Acts at the UN Security Council.

New York, December 9, 2008.

Your Excellency, **Mr. President,**

Excellencies, Ladies and Gentlemen,

At the outset, let me express my deep gratitude for the strong condemnation and condolences expressed by the Members of this august body over the heinous attacks in Mumbai.

The terror attack in Mumbai from November 26 to 29 marked a qualitatively new and dangerous escalation of the terrorism that India has faced for over two decades. Through this period, as in the Mumbai attack, major terrorist acts in India have been sponsored and organized by groups and forces from across our borders. The Mumbai attack also made it clear that terrorism is a direct threat to international peace and security.

Mr. President

Let me briefly recall what our investigations have revealed so far about the attack.

A group of ten terrorists from the global terrorist organization Lashkar-e-Toiba reached Mumbai in the evening of 26th November 2008. The group

divided themselves into four smaller groups and proceeded to pre-selected targets which included a café, popular with Indian and foreign tourists and two major hotels. Each terrorist was armed and equipped with AK rifles, pistols, grenades, explosives and communications. The terrorist attack was conducted like a commando operation indicating that the perpetrators had received professional training both generally as well as specifically regarding this attack itself. They were indoctrinated with ruthlessness and barbarity - innocent passengers including women and children were indiscriminately sprayed with bullets at the railway station and public places; hostages were taken in the hotels who were subsequently massacred. It is significant that this was the first terrorist attack in India where foreigners were specifically segregated and targeted.

Nine terrorists were killed in the action taken by our security forces while one of them was apprehended. His interrogation has revealed that they were trained in Pakistan and were launched from a ship from Karachi. They traveled into Indian waters, took control of an Indian boat, killing the crew. Thereafter, they came to Mumbai to cause mayhem and murder.

179 persons, including 26 foreigners lost their lives while 296 persons including 22 foreigners suffered injuries in the attack, which was designed to kill and maim as many people as possible.

Other Indian cities, including Jaipur, Delhi and Ahmedabad, have also been the victims of terrorist attacks.

We have requested the Security Council to proscribe Pakistani group Jammāt-ud-Dawā since it is a terrorist outfit and should be proscribed under Security Council Resolution 1267. All those who were in any way responsible for the Mumbai terrorist attacks, wherever they may be, should be brought to justice.

Mr. President,

The fight against terrorism demands effective international cooperation so that those who are responsible, wherever they may be, are brought to book. The organizers, financiers and logistical providers of these terrorist attacks have to be punished. Those who give ideological and moral support to this evil phenomenon must also be brought to justice.

Terrorism does not happen by chance or at random. Terrorism is planned; terrorism is financed; it requires meticulous organization; it needs arms;

and requires safe havens. When it occurs, the world is shocked. What is not easily visible is the back-stream of terrorist acts. Mumbai's case is clear. The back-trail is marked and definite, but in cases where terrorists' acts are aided and abetted to cover their tracks, all of us separately and together must ensure that they are discovered and the terrorists are brought to justice.

Nothing, no religious grievance, dispute, or ideology, can be used as a *raison d'être*, by anyone, to justify terrorism. This is totally unacceptable. Raising dust to confuse the trail so that the merchants of terror can hide is not acceptable; not to us, not to any civilized society.

Mr. President,

Terrorists are the enemy of the people. When actions of terrorist groups are used to serve the political interests of States, a deadly combination emerges. A terror machine is created. India has had experience of such machines which need to be eliminated. The nexus between State--or elements within the State--and terror outfits must be broken and groups or individuals that indoctrinate, organize, plan and finance terror have to be uprooted along with other measures.

Therefore, in the context of this discussion, we call for the following actions by the Security Council, the General Assembly, and the international community:

- The Jamaat-ud-Dawa and other such organizations need to be proscribed internationally and effective sanctions imposed against them. Their country of origin needs to take urgent steps to stop their functioning. A message must also go out that perpetrators of terrorist acts must be brought to book and not given sanctuaries in some states.
- Practical measures at the global and national level need to be immediately put in place to see that the menace of terror is uprooted.
- The Comprehensive Convention on International Terrorism that India tabled in 1996 needs to be adopted immediately to provide a framework of international law against terrorism. This cannot be held hostage to definitions while terrorists continue to take innocent lives.

Mr. President,

Our people ask the international community to determinedly pursue and eliminate terrorist organizations. The world needs to act decisively and in a coordinated manner to prevent further attacks. India will act to safeguard and protect its people from such heinous attacks; however long and difficult that task may be. We have acted with restraint in the face of terrorist attacks. We must do our duty by our people and take all actions as we deem fit to defend and protect them. The Charter of the United Nations and provisions of international law, including the right of self-defense, gives us the framework to fulfill these responsibilities.

This is the message to the Security Council that I bring from my Government and my people.

Thank you, Mr. President.

DISARMAMENT

669. Statement By Permanent Representative of India to the Conference on Disarmament Hamid Ali Rao at th Meeting of Group of Governmental Experts on Cluster Munitions.

Geneva, 14 January 2008.

1. Mr. Chairperson, my delegation is pleased with your assumption of the Chair of the Group of Governmental Experts to look at the issue of cluster munitions and we pledge our fullest support in ensuring the success of your endeavours.
2. India fully appreciates the humanitarian concerns arising from the employment of cluster munitions and is committed to addressing these concerns through the CCW process. We were, therefore, pleased that the meeting of the High Contracting Parties to the CCW held in Geneva 7-13 November, 2007 agreed on a mandate for the GGE on cluster munitions to hold a number of meetings in this year.
3. We believe that the CCW process has proved its worth with regard to addressing various humanitarian concerns arising from the indiscriminate use of conventional weapons as it brings together all the main actors from diverse political and geographical standpoints. The work of the GGE must, therefore, aim to build on this strength of the CCW process. At the same time nothing we do must impact on the integrity of the CCW process or in any way dilute the commitments of States Parties to the five Protocols that have been elaborated. It is a sign of commitment to the CCW process that India has ratified all the five protocols.
4. Mr. Chairperson, India is aware of the distinct military advantages of cluster munitions. The use of cluster munitions is lawful and legitimate, if such use takes into account existing International Humanitarian Law. Our stance on the military use of such munitions is guided by:-
 - (a) Civilians and those not in combat must be protected against the effect of these munitions. Superfluous injury and unnecessary suffering results from the distinction between civilians and combatants not being maintained.

- (b) Cluster weapons offer distinct military advantages over other munitions in terms of economy of effort and wider area coverage in combat zone.
 - (c) Incorporation of “alternatives” with advanced technical features for greater accuracy and reliability geometrically could increase the cost of these weapon systems, thereby negating the advantages that the other features have to offer. Moreover, the proposed standards of accuracy and reliability need to be weighed against the level of our present technological threshold and the cost and time required to replace them. The indiscriminate adverse consequences of cluster munitions may result primarily from indiscriminate use of these munitions.
 - (d) Moreover, States, especially developing ones, will have an incentive to move towards improved cluster munitions only if the higher costs are offset by access to the new technologies or by the development of other economically viable alternatives.
5. Mr. Chairperson, as we commence the work of the GGE under your leadership we must recognize and give due importance to the fact that there are divergent views on addressing cluster munitions. This became amply clear in drawing up a mandate for the GGE in November last year. We were, however, pleased that the meeting of the High Contracting Parties was able to take a decision on a mandate that could be adopted by consensus thus bringing on board all the main actors.
6. The work programme that we develop must take into account the need to find common ground amongst the various divergent approaches. This would necessarily be a step by step process. The work of the Group of the Governmental experts involving technical expertise from the armed forces is essential to provide clarity on the way forward.
7. India supports the proposal that the Group should give itself the full opportunity to discuss all issues without imposing any preconceived solutions. We can proceed along two tracks. We must give due consideration for the implementation of the existing principles of international humanitarian law and possible measures, in particular,

with regard to cluster munitions aimed at minimizing the humanitarian risks of these munitions becoming explosive remnants of war. The work of the GGE must in no way dilute the advances that the CCW process has made through the adoption of the Protocol V. On the second track, we must endeavour to strike a balance between military and humanitarian considerations in addressing cluster munitions. Clarity on definitions would be essential to determine the scope of a possible future instrument on cluster munitions. India is prepared to work constructively with other delegations on these two tracks so that the outcome of our meetings can result in meaningful proposals to ameliorate the humanitarian consequences of cluster munitions. We are open to these proposals taking the form of suggested action on part of States Parties, or elaboration of 'Best Practices' or even negotiation of binding principles.

8. Mr. Chairperson, in conclusion, let me assure you that once again of our support in your discharge of your onerous responsibilities that you have assumed.

Thank you.

670. Presentation by Special Envoy of the Prime Minister Shyam Saran on “India and the Nuclear Domain” at the India International Centre.

New Delhi, February 18, 2008.

Ever since India and the United States declared their intention to resume bilateral cooperation in civilian uses of nuclear energy on July 18, 2005, there has been a national debate on India's place in the nuclear domain, both civilian and strategic. This debate is welcome. It enables public opinion to be educated on what has hitherto remained a relatively esoteric field. In this connection, may I commend the IIC for sustaining this initiative in the public domain. Attention has been focused on the significance of nuclear energy to our achieving energy security. There has also been a scrutiny of our strategic weapons programme and how that relates to our national security. These are important issues and need sober and objective reflection based on reliable information.

In the course of this debate, we have also drifted away from what has been, for decades, independent India's conviction that it must lead the way towards a non-violent, equitable and peaceful world, a world free from the shadow of mass annihilation.

My objective today will be, as someone associated with the negotiations on the Indo-US civil nuclear agreement, to endeavour to explain the original motivation behind the initiative and its implications for our strategic programme. I will also touch upon the issue of nuclear disarmament and explain why, in the current international context, it is a goal that India should advocate with renewed vigour.

Let me share with you the mandate which Prime Minister gave to us as negotiators when we took up this initiative with the United States. Since 1974, India had been the target of an increasingly selective, rigorous and continually expanding regime of technology-denial, not only in the nuclear field but encompassing other dual use technologies as well. It was our aim to seek the dismantlement of these inequitable regimes, which would become progressively more detrimental and significantly impact upon India's maturing economy, as its key sectors, required constant technological upgradation.

In pursuing this objective, we were acutely aware of the following:

(i) The multilateral technology-denial regimes whose targeting of India we sought to end such as the Nuclear Suppliers' Group (NSG) and the Missile

Technology Control Regime (MTCR) would require the United States to take the initiative as the principal initiator and leader of these regimes, and also because it remains the world's pre-eminent source of new and innovative technologies.

(ii) Since our PNE in 1974, technology denial was first limited to nuclear-related technologies and then progressively expanded to cover a growing range of dual-use technologies. For this historical reason, it was clear to us that unless we tackled the nuclear issue, we would not be able to obtain access to other useful technologies. It is only by turning the nuclear key that we would be able to open the door to enter global trade in dual use and sophisticated technologies.

There was another important consideration behind the initiative we took in July 2005. We were becoming increasingly aware that we would face a progressively more depleted market for conventional energy resources. Concerns over climate change would act as a further constraint on us. We had to adopt a strategy of diversifying our energy mix, with a graduated shift from fossil fuels to non-fossil fuels, from non-renewable to renewable sources of energy and from conventional to non-conventional sources of energy. Nuclear energy occupies a key place in this strategy and for good reasons. Despite the technology denial regimes which we had to contend with, our scientists had succeeded in putting in place a comprehensive, sophisticated and innovative nuclear industry, with a highly trained manpower able to sustain a major expansion in nuclear power. Our constraints in this regard were availability of domestic uranium and a technological capability still limited to smaller capacity reactors of about 700 MW, when the world was moving to 1600 MW reactors. If we were to envisage a major expansion in nuclear power in the medium term, to say 60,000 MW plus by the year 2030, then import of higher capacity reactors and uranium fuel, would be necessary.

This in no way detracts from the continued pursuit of Dr. Bhabha's visionary 3-stage nuclear energy development programme, which may yield significant results in the longer term. But in the short and medium-term, a significant expansion of nuclear power is only possible if the constraints we face on import of uranium and of large-capacity reactors, are removed.

Furthermore, it is not really correct to put indigenous development and international collaboration as antithetical to one another. In fact they are integrally linked. Each cycle of international collaboration prepares the ground for higher level of indigenous development. A higher level of

technological sophistication then enables a much more discriminatory and productive new cycle of technological collaboration and eventually partnerships. Let us not forget that Dr. Bhabha himself vigorously promoted international cooperation in nuclear energy which enabled India to lay the foundation of our current nuclear programme. He was, in his time, one of the most highly respected scientists among the international nuclear community.

Let me repeat, the mandate to the negotiators was:

- (i) to seek the dismantlement of the multilateral technology denial regimes targeting India;
- (ii) to seek an accelerated development of our nuclear power generation capability to enable a significant contribution to India's energy security in an environmentally sustainable manner.

The negotiators were also given a firm guideline: in seeking to achieve the above objectives, we should not accept any limitation whatsoever on our strategic weapons programme, which must remain inviolate and fully autonomous. In practical terms, this implied that

- (i) our strategic weapons programme would be outside the purview of any international safeguards regime or any form of external scrutiny;
- (ii) our ability to further develop and produce such weapons would not be constrained in any manner; and
- (iii) we would retain our legal right to conduct a nuclear test should that, at any time in the future, be deemed necessary in our over-riding national interest.

The negotiating team was further instructed to ensure that India's indigenous R&D programme i.e. the 3-stage long-term nuclear development strategy envisioned by Bhabha, would also proceed uninhibited and not be subject to external scrutiny. It was felt that this being a programme which had major potential for commercial exploitation of thorium-based nuclear energy in the future, we ought to safeguard its integrity for the present.

The July 18 Joint Statement incorporated a series of reciprocal commitments. On India's side, there was reaffirmation of some existing commitments, such as continuing a moratorium on nuclear testing and participating in multilateral negotiations on a Fissile Material Cut Off Treaty.

There was acknowledgement of steps already taken by India as part of its responsibilities under UNSC resolution 1540 and under the already concluded Next Steps in Strategic Partnership. These relate to strengthening controls on the export of sensitive technologies including reprocessing and enrichment technologies. These controls provided assurance to our partners that whatever we received under international cooperation would not be diverted to third countries. The new element was our commitment to separate our civilian from military nuclear facilities and offer the former voluntarily for IAEA safeguards. This was necessary in order for us to give our international partners the assurance that whatever we would receive as technology or equipment for our civilian facilities would not be diverted to benefit our strategic programme. This was, to our mind, a legitimate expectation on part of the international community. Nevertheless, we reserved to ourselves the right to determine which facilities would be designated as civilian; further the separation process would be carried out in graduated steps upto 2014 so as to avoid any dislocation in our nuclear industry.

What India obtained, reciprocally, in return, was a U.S. commitment to adjust its own laws so as to permit full civil nuclear energy cooperation with India, which is bilateral; and also a commitment to work with friends and allies to bring about a change in international, multilateral regimes, such as the NSG, to enable the international community to also engage India in full civil nuclear energy cooperation, which is multilateral. With the U.S. delivering on these commitments, India would become fully integrated into the global nuclear energy market after a gap of over 40 years. And this, it would be able to achieve without accepting any limitation or constraint on its strategic weapons programme. In this regard, the negotiators fulfilled the mandate given to them by the Prime Minister.

The July 18 Joint Statement was then translated into more elaborate and specific arrangements in a Separation Plan, presented to Parliament in March 2006 and in the text of a bilateral cooperation agreement, or the so-called 123 Agreement, between India and the U.S., concluded in July 2007.

In working out these arrangements, the mandate given to the negotiators was to stay within the parameters of the July 18 Joint Statement and to ensure that there would be no repeat of the Tarapur experience. In practical terms this meant ensuring that there would never again be a threat of reactor operations being disrupted due to a suspension of fuel supplies. We would also need to ensure that India has the right to reprocess foreign

origin spent fuel. In both these respects, the U.S. aided Tarapur nuclear facility had suffered and this hung over the negotiations as a negative legacy. There had been U.S. unilateral suspension of fuel supplies, just as there had been a refusal to allow India to reprocess spent fuel, which kept accumulating as hazardous waste, which the U.S. was also not willing to take back.

This is the background to the multi-layered fuel supply assurances which were spelt out in the Separation Plan, and incorporated in toto in the 123 Agreement. This is also the reason why India was prepared to engage in difficult and sometimes frustrating negotiations to ensure its upfront entitlement to reprocess foreign origin spent fuel. Eventually, the U.S. side agreed to India's demand.

The negotiators have been criticized by some for having agreed to permanent IAEA safeguards on its civilian facilities. Our position right from the outset had been that we have no problem with permanent safeguards provided there are permanent supplies of fuel. The multi-layered fuel supply assurances are unique in international nuclear negotiations and include India's right to take "corrective measures", should any disruption still occur despite these assurances. India's entitlement to build strategic reserves of fuel for its civilian reactors, to last the lifetime of such reactors, is also unique. Frankly, I do not think that we could have secured any better safeguards for our interests.

Criticism has been leveled at various provisions of the Hyde Act and it is argued that irrespective of what the 123 Agreement may say, we would be subject to the several onerous provisions of the Act.

Let me clarify that the operative heart of the Hyde Act, incorporates three permanent and unconditional waivers from relevant provisions of the U.S. Atomic Energy Act of 1954. In layman terms, the Hyde Act allows the U.S. Administration to engage in civil nuclear cooperation with India, waiving the following requirements:

- (i) that the partner country should not have exploded a nuclear explosive device in the past; this waiver is necessary because India exploded a series of nuclear explosive devices in May 1998;
- (ii) that the partner country must have all its nuclear facilities and activities under full-scope safeguards; this waiver is necessary because India has a strategic programme which would not be subject

to international safeguards; nor would its indigenous R&D programme; and

- (iii) that the partner country is not currently engaged in the development and production of nuclear explosive devices; this waiver is required precisely because there is no freeze or capping of India's strategic weapons programme. It is an acknowledgement that we will continue to develop and produce additional strategic weapons.

Irrespective of what else the Hyde Act may contain, these 3 permanent and unconditional waivers are extremely significant because they acknowledge that India has an ongoing strategic programme. No restraint on this programme is envisaged as a condition for engaging India in civil nuclear energy cooperation. This is a significant gain for India and should not be lost sight of. Just juxtapose this with the UNSC Resolution 1172 of June 6, 1998, which called upon India to stop, roll-back and eliminate its strategic programme and join the NPT as a non-nuclear weapon state.

There are, of course, several extraneous and prescriptive provisions in the Hyde Act which we do not agree with and in negotiating the 123 Agreement we have been more than careful to exclude such provisions. If the U.S. Congress considers the 123 Agreement, as currently drafted, as being in contravention with their own understanding of the Hyde Act, the agreement would be voted down. That would be the end of the matter. If, however, the U.S. Congress does approve the 123 Agreement, then this would confirm that the provisions of the Agreement are what would govern the commitments of the two sides.

While there has been intense focus on the Indo-US bilateral agreement, much of the commentary on the subject has lost sight of the multilateral regime whose adjustment in favour of India is what we are aiming at. Our objective is not merely to seek the U.S. as a partner. Our objective is to enable India to have a wide choice of partners in pursuing nuclear commerce, and high technology trade. But we cannot attain this objective without the U.S. taking the lead on our behalf. Yes, Russia and France are countries which are friendly to India and extremely keen to engage in nuclear commerce with us. However, there should be no doubt that neither they nor others will make an exception for India unilaterally unless the Nuclear Suppliers' Group adjusts its guidelines in the same manner as the U.S. is prepared to do. Whatever be the reservations that have been expressed about our relations with the U.S., no other friendly country, member of the NSG has the necessary standing to lead the process of opening up the

existing multilateral regime to accommodate India. The U.S. is in a unique position precisely because it initiated these restrictive regimes in the first place and also because it remains the pre-eminent source of new sensitive technologies.

The process we are engaged in will face several challenges ahead even if the controversies at home were somehow resolved. We still await the finalisation of the India-specific safeguards agreement with the IAEA. Thereafter, the NSG will meet to consider exempting India from its current guidelines. These guidelines, like pre-Hyde Act U.S. legislation, require that its members engage in civil nuclear energy cooperation only with countries that have all their nuclear facilities and activities under full scope safeguards. It is our expectation that there would be a fairly simple and clean exemption from these guidelines, without any conditionalities or even expectations regarding India's conduct in future. Finally, the U.S. Congress has to vote to approve the 123 Agreement. Only when these separate landmarks have been achieved, can we really have the practical possibility of resuming civil nuclear energy cooperation with the international community.

I am certain that you will agree that this initiative of the Prime Minister represents a significant and unprecedented effort to expand India's choices, create a more conducive and supportive international environment to advance India's developmental goals and mark the emergence of India as a major global player, in a rapidly transforming international landscape.

What enabled India to even attempt such a major and pathbreaking initiative? Would it not have been wiser and more prudent to engage in an incremental pursuit of more limited gains which would, cumulatively, and hopefully add up to something significant eventually? Let me try and address these very relevant questions.

In pursuing this initiative in 2005, India took advantage of a significant change in international, including U.S. and Western perceptions of India. This change can be traced to the following developments

- (i) Fifteen years of accelerated and sustained economic growth, coupled with the steady globalisation of the Indian economy, marked the emergence of India as an economic power-house, even as its democratic structures gave it a reputation for political stability. The prospects for continued and steady growth of India's economy made it an indispensable partner for countries across the globe.

- (ii) A globalising world found itself confronted with a number of transnational, cross-cutting issues such as international terrorism, drug trafficking, global pandemics and the twin challenges of energy and climate change. In seeking solutions to such global challenges, the active involvement of India as a large, populous and continental sized economy, has become indispensable. This is another reason why India's global profile has increased.
- (iii) India had emerged as a country with significant defence capabilities and has an enviable record of activism in UN peacekeeping. In December 2005, its swift response to the Tsunami disaster and its ability to extend significant assistance to affected countries also demonstrated its capabilities to contribute to maritime security and help deal with natural disasters and;
- (iv) Despite a 4-decade effort to put India in a technological corral and constrain its nuclear and space capabilities, Western countries led by the U.S., had failed to achieve their objective. Technology denial may have slowed down India's development in some respects, but on the other hand, India was now a country with a wide-range of sophisticated and sensitive technologies, isolating which made no sense, particularly at a time when engaging India promised much more by way of political and economic gains, not the least by partnering its outstanding scientists in the collaborative development of cutting edge technologies such as the International Thermo Nuclear Energy Reactor (ITER) project. India was able to get a clear message across to the world – you cannot continue to treat India as a target, even as you seek to engage it as a partner.

India was able to move with a sense of confidence to leverage the above favourable developments not merely to seek an upgradation in its relations with key regional and global players but to mobilize them collectively to reflect India's emergence in multilateral regimes. These had so far excluded India such as the UN Security Council or worse, targeted it as an adversary like the Nuclear Suppliers' Group.

In pursuing this objective, India was able to also take advantage of the fact that post-Cold War, as a result of the increasing globalisation of the world economy and the emergence of transnational, cross-cutting issues, the international landscape was characterized by the presence of a cluster of major powers, who were compelled to collaborate as much as to compete with one another. The potential for military competition and conflict between

them was constrained by the increasing interdependence of their economies. India could, therefore, upgrade its relations with all major powers, without this becoming a competitive zero-sum game which was the hall-mark of the bipolar Cold war. One may characterize this as a strategy of global de-hyphenation. It was our assessment that this favourable international constellation could change and therefore, we needed to take advantage of this window of opportunity so as to fix our diplomatic gains for the long-term. There are already some changes such as renewed tensions between the U.S. and Russia, and there may be further changes down the road. The international environment for India may not be as propitious as it has been during the past few years.

It is legitimate to expect that Government would not do anything to compromise the autonomy of its strategic programme. However, the strategic programme that we are talking about is one based on our own nuclear doctrine. This incorporates the concept of a deterrent which is credible at a minimum level of nuclear and delivery assets. There is also a non-first use pledge, which implies that those assets must survive a first strike and retain retaliatory capability. The need for a triad of forces, including a submarine based deterrent, derives from this. This also imposes requirements for secure and survivable command, control and communication systems. While we strive to retain strategic autonomy for the future, it is equally important that we ensure as expeditiously as possible, that all the elements of our credible minimum deterrent are in place.

We should also examine what is the likely role of nuclear weapons in terms of ensuring India's security. The traditional concept of nuclear deterrence is with reference to States and that is how we have defined our deterrent as well. However, even in this respect, our nuclear doctrine affirms India's conviction that its security would be enhanced, not diminished, if we were able to achieve a world free of nuclear weapons. It is this conviction which underlines our continued advocacy of nuclear disarmament. While asserting our right to a nuclear deterrent, we should not forget this other dimension of our security posture.

In fact, recent developments have made nuclear disarmament, compelling and urgent and India is well-placed to lead a global effort in pursuit of this objective. The nature of the dangers which nuclear weapons pose has dramatically intensified with the growing risk that such weapons may be acquired by terrorists or Jihadi groups who could threaten to use, or worse, even utilize such weapons to carry out attacks against targets which may

be located anywhere in the world. No country, including India, is safe from such attack. The mounting concern over the likelihood that, in a situation of chaos, Pakistan's nuclear assets may fall into the hands of Jihadi elements, fired by the ideology of extremism and mindless violence, underscores how real this danger has become. While States may be deterred by nuclear weapons, terrorist or Jihadi groups cannot. How do you threaten nuclear retaliation against such non-State actors?

The danger posed by proliferation of nuclear weapons to non-State actors is of a different and more threatening dimension than that from proliferation to additional States. A different approach is required, based on a new global consensus, but which in fact would be more effective in dealing with proliferation in all its aspects.

India has all along argued that as long as the world is divided between those who possess nuclear weapons and those who do not, there will always be a strong incentive for countries outside the club to seek to enter it. Recent experience indicates that the NPT and technology denial regimes may delay the emergence of new nuclear weapon states. They are unlikely to prevent it. As long as there exists such motivation among states, there will inevitably be a clandestine market for nuclear technology and material, as demonstrated by A.Q. Khan's nuclear super-market. If such a clandestine market continues to flourish, as it does even today, the danger of nuclear explosives or fissile material and technical know-how enabling the manufacture of nuclear weapons, falling into the hands of non-state actors, such as Jihadi groups, will continue to haunt our world. India has to be deeply concerned about the danger it faces, as do other states, from this new and growing threat.

The elimination of a clandestine, world-wide market in nuclear know-how, material and possibly, even nuclear explosives, can only be achieved by returning to what India had proposed as a grand-bargain, when it sponsored negotiations on a Non-Proliferation Treaty in 1965. India had proposed that non-nuclear weapon states should commit themselves to never developing or acquiring nuclear weapons, in return for a legal and time-bound commitment by nuclear weapon states to eliminate their arsenals. Today, as a nuclear weapon state, India is in a unique position, to take the lead in resurrecting the original grand bargain, because the danger of nuclear terrorism today threatens to engulf all states, including nuclear weapon states.

On January 4, 2007, Messrs George Schultz, William J. Perry, Henry A. Kissinger and Sam Nunn, put nuclear disarmament back on the international agenda, in an article they jointly wrote in *The Wall Street Journal*. They have now followed up their original initiative with a second article in the same newspaper, which appeared on January 15, 2008. What has led these Cold War veterans, to espouse the cause of nuclear disarmament? Why have they now seen it fit to quote approvingly from Rajiv Gandhi's Action Plan for Nuclear Disarmament of 1988, when at that time most Western governments dismissed it as fantasy?

The disturbing new element in dealing with nuclear weapons is precisely the danger that they could fall into the hands of non-state actors, against whom no deterrence could work. However, for Messrs Shultz and his compatriots, nuclear disarmament is still a distant goal, while in the meantime, they suggest graduated steps to reduce nuclear arsenals and reliance on them, more rigorous controls over the spread of sensitive technologies and a further strengthening of the current non-proliferation regime. They continue to rely on an asymmetrical approach, in which states with nuclear weapons and with advanced nuclear technology, would be treated differently than those who did not possess them. India is today in a position to take the initiative of Shultz and Co. forward, towards framing a new global consensus, which brings the goal of nuclear disarmament from a distant destination, "the top of a very tall mountain", as they call it, to being accepted as an urgent and compelling mission. India understands the danger from nuclear weapons and has suffered from the clandestine proliferation of nuclear weapons in its neighbourhood. It has also been a victim of terrorism for several decades. It is perhaps the best placed to fashion a global consensus on achieving nuclear disarmament as an urgent objective, not only because of the mass-destruction character of these weapons, but also because their link with international terrorism, poses a global threat. A multilaterally negotiated treaty which prohibits the development, production and use of nuclear weapons, on the model of the Chemical Weapons Convention, is within our grasp. Elaborate verification and intrusive monitoring methods that would be required to ensure compliance, would only be accepted if they are universally applicable.

India was justified in exercising its nuclear weapons option at a time when nuclear disarmament seemed all but abandoned by the existing nuclear weapon states. Its security was also being threatened by clandestine

proliferation in its own neighbourhood, without any remedial action being taken at the international level. In a world, populated by states producing and deploying nuclear weapons, India's strategic autonomy must be safeguarded. However, we must not forget that despite being a nuclear weapon state, India remains convinced that its security would be enhanced, not diminished, if a world free of nuclear weapons were to be achieved. Today, the country's security is further threatened by the risk of proliferation to non-state actors and terrorist groups. So also is the security of all other states, nuclear weapon and non-nuclear weapon states alike. It is only through the urgent and complete elimination of nuclear weapons that it may be possible to minimize, if not entirely dispel the threat of nuclear terrorism by non-state actors. Therefore, even as we work to strengthen our credible minimum deterrent, we ought to take a fresh initiative to realize Rajiv Gandhi's vision of a non-violent world, free from the scourge of nuclear weapons.

671. Statement by Permanent Representative at the Conference on Disarmament Hamid Ali Rao on Nuclear Disarmament.

Geneva, February 28, 2008.

Mr. President,

It gives me great pleasure to extend our warm congratulations to you on your assumption of the Presidency. I would also like to extend our thanks to your predecessor, Ambassador Labidi of Tunisia for the able manner in which he conducted the business of the Conference. We also associate ourselves with the statements made on behalf of the G-21.

Mr. President,

It is an honour and privilege for me to make my first statement in the Conference representing my country. The magnificent frescoes of Jose Maria Sert have a time-less quality and evoke in me, the same sense of awe, as when I first entered this Chamber, as a member of my delegation more than a decade ago. These frescoes underline the message that to move the wheel of disarmament on and forward, we require to exert no less than the men and women that adorn these walls.

This Chamber has also been compared to a hall of trick mirrors, in which, nothing is what it seems to be. It is my fervent hope that in the weeks and months ahead we are able to replace these, with mirrors that truly reflect each others interests and concerns, so that the reality of our collective interests becomes the basis of our work here. Our success will be measured by our ability to negotiate forward-looking agreements that are global and non-discriminatory, thus enhancing global security .

It is in this spirit that India attaches high importance to the CD as the single multilateral negotiating forum, whose mandate is drawn from the consensus of SSOD 1. Since its decisions impact on national security of member-states, it is logical that the CD should conduct its work and adopt its decisions by consensus. In doing so, we should abide by the well-established rules of procedure, which have served the Conference well.

Mr. President,

We are deeply conscious of the fact that the Conference has been unable to commence substantive work for nearly a decade. During this period,

India has joined other delegations to explore 'various proposals to advance the CD's work. Despite commendable efforts, the momentum that was created last year to move the CD out of its longstanding stalemate did not advance far enough so as to command consensus.

We remain committed to participating constructively in ongoing discussions so that the Conference can commence substantive work by reaching consensus on a programme of work that takes into account the interests of all its stake-holders. We believe that any decision on a programme of work must be consistent with the rules of procedures, preferably on the basis of a clear and integrated text. We also believe in the significance of common understandings on fundamentals and clarity on mandates to ensure the smooth and successful conduct of negotiations.

Mr. President,

India has consistently maintained its principled position- it attaches the highest priority to the goal of nuclear disarmament, both as a national position which has enjoyed strong and consistent domestic support as well as a member of the Non-Aligned Movement, and here in the CD as member of the G-21. A holistic framework seeking negotiations for a time bound commitment for the complete elimination of the nuclear weapons to usher in a world free of nuclear weapons and rooted in non-violence was presented by India's Prime Minister Rajiv Gandhi to the United Nations in 1988.

India has made several proposals in the CD on nuclear disarmament and has joined G-Q 1 positions on the subject including in CD /1570 and 1571. The General Assembly approved, as in previous years, a resolution sponsored by India on a Convention on the Prohibition of Use or threat of Use of nuclear weapons, which calls upon the CD to commence negotiations on an international convention prohibiting to use or threat of use of nuclear weapons under any circumstances.

India has also sponsored a resolution on 'Reducing Nuclear Danger' to highlight the risks posed by hair-trigger posture of nuclear weapons and the related unintentional, unauthorized or accidental use of nuclear weapons leading to a nuclear war with catastrophic consequences. Last year, India submitted a working paper on Nuclear Disarmament in CD/ 1816.

Over the years, several international groups and NGOs have lent their voice in favor of nuclear disarmament. The goal of a world free of nuclear

weapons has now received the support of eminent personalities like Henry Kissinger, George Shultz, William Perry and Sam Nunn- all knowledgeable and experienced in this field. This Conference cannot be oblivious to the shifting currents of informed opinion, which are now moving ever stronger in favor of nuclear disarmament.

As the sole multilateral negotiating forum on disarmament, there is a heavy responsibility on the Conference on Disarmament to make progress on nuclear disarmament. The first priority is binding commitments, accompanied by negotiation of specific steps that would reduce and finally eliminate the nuclear threat globally, in a verifiable and irreversible manner, where no state- would claim exclusive security based on its possession of nuclear weapons.

India would suggest enunciation of concrete steps towards achieving the goal of nuclear disarmament based on the following elements:

- Reaffirmation of the **unequivocal commitment** of all nuclear weapon States to the goal of complete elimination of nuclear weapons;
- **Reduction of the salience** of nuclear weapons in the security doctrines;
- Taking into account the global reach and menace of nuclear weapons, adoption of **measures by nuclear-weapon States** to reduce nuclear danger, including the risks of accidental nuclear war, de-alerting of nuclear-weapons to prevent unintentional and accidental use of nuclear weapons.
- Negotiation of a global agreement among nuclear weapon States on '**no-First-use**' of nuclear-weapons;
- Negotiation of a universal and legally-binding agreement on **non-use of nuclear weapons** against non-nuclear weapon States.
- Negotiation of a Convention on the complete prohibition of the use or threat of use of nuclear weapons;
- Negotiation of a **Nuclear Weapons Convention** prohibiting the development, production, stockpiling and use of nuclear weapons and on their destruction, leading to the global, non-discriminatory and verifiable elimination of nuclear weapons with a specified timeframe.

We recognize that these are complex issues on which divergences of approach persist amongst member states. We propose that the Conference consider the appointment of a Special Coordinator to assist in carrying out consultations on specific measures or a set of measures that have the potential of commanding consensus which can form the basis of a mandate for a possible Ad Hoc Committee on Nuclear Disarmament. We further recognize that consensus will not be easy, but that should not deter us from taking the first steps towards meaningfully addressing the priority of nuclear disarmament.

India supports the establishment of an Ad Hoc Committee on FMCT as part of the CD's Programme of Work. In 1993, India joined as one of the original co-sponsors of UNGA resolution 48/75L, which envisaged FMCT as a significant contribution to nuclear non-proliferation in all its aspects. That remains India's position. The international consensus on FMCT in 1993 reflected with clarity the common understanding of the basic objective of the Treaty and enabled India to join that consensus and on that basis, support the negotiation in the Conference on Disarmament of a non-discriminatory, multilateral and internationally and effectively verifiable Treaty banning the production of fissile material for nuclear weapons or other nuclear explosive devices. It is obvious that the Treaty would have to meet India's national security interests.

India supports the establishment of an Ad hoc Committee on NSAs to negotiate with a view to reaching an agreement on effective international arrangements to assure non-nuclear weapon states against the use, or threat of use, of nuclear weapons. We believe, that the negotiation of such an instrument will compliment other measures to reduce the saliency of nuclear weapons in security doctrines and improve the international climate for promoting nuclear disarmament and non-proliferation in all its aspects. As part of its credible minimum nuclear deterrent, India has espoused a policy of no-first use and non-use against non-nuclear weapon states and is prepared to convert these undertakings into multilateral legal arrangements.

Over the last four decades, India has consistently underlined the developmental dimensions of the use of outer space for the benefit of its people. Today, India is ranked among the advanced space-faring nations in the world. Space-based connectivity and navigation are now critical to our economic development and a factor of national security importance. We are deeply conscious of the need to strengthen the present international legal framework to ensure the safety and security of space assets and to prevent the placement of weapons in outer space.

In this regard, we welcome the tabling of the draft Treaty by the Foreign Minister of the Russian Federation on Prevention of Placement of Weapons in Outer Space, along with China, as a further contribution of filling the existing gaps in the international legal regime. We agree with Russia that the CD is the appropriate forum to take forward discussions on this issue.

There is no legal regime governing the possession and use of Missiles. The complexity of this issue arises mainly due to the untenable claims made by some states for the exclusive rights for the possession of advanced weapon systems and their continued modernization. Any initiative, to address these concerns in a sustainable and comprehensive manner, should be through an inclusive process based on the principle of equal and legitimate security. Discussions are underway at the UNGA on the issue of missiles in all their aspects. We hope that they lead to the adoption of a multilateral, universal and non-discriminatory approach to missiles as a contribution to international peace and security.

Mr. President,

While we share the disappointment of delegations with regard to delay in getting down to substantive work, we should not be overly pessimistic about the future of the Conference. Here I would like to quote from the farewell statement of Ambassador Arundhati Ghose who said the following in September 1997.

"Many apprehensions have been voiced of late about the future of this forum; there has been much doom and gloom about CD's apparent imminent collapse. I do not agree with this assessment. The CD is not an organization with programmes and projects. It is a forum ready to be used when there is need for it and when we, the members, wish to do so. It was set up by us to negotiate multilateral treaties which, while responding to the needs of international security, safeguarded vital national security interests as well. Agreement to negotiate such treaties is reached, I believe, when views coincide on the bases and the objectives of a treaty."

In conclusion, let me reiterate the commitment of my delegation to contribute to all efforts for making this Conference productive "and worthy of the immense trust and hope that the international community has placed on it.

**672. Statement by Permanent Representative at the UN
Nirupam Sen at the Substantive Session of the UN
Disarmament Commission.**

New York, April 8, 2008.

Mr. Chairman,

Please accept our congratulations on your election as the Chair of the UNDC. We will extend all possible support to you and the members of the Bureau. We would also like to place on record, our appreciation for the efforts of the Chairpersons of the 2 Working Groups. We value the statement made by the UN Secretary General at the UNDC yesterday. We thank the High Representative of the Secretary General for Disarmament, Mr. Sergio Duarte for his contribution to our common endeavors.

Mr. Chairman,

India attaches high importance to the UNDC, which is the deliberative leg of the triad of the disarmament machinery put in place by consensus by the 10th Special Session of the General Assembly on Disarmament. As the universal deliberative forum, it provides for in-depth consideration of specific disarmament issues for submission of recommendations to the General Assembly. We cannot over emphasize the role of this body at a time when the international disarmament agenda is under severe strain. The UNDC offers a unique opportunity for Member-States to bridge differences and arrive at common approaches of a universal character. We feel that this body can play a central role in bringing back coherence and consensus to address the security challenges of our time. Member-states should resist the temptation to transplant in the UNDC, frameworks and parameters that may be relevant elsewhere. The deliberations of the UNDC will yield positive and substantive results, if Member-States are willing to use this body to draw-up guidelines and recommendations of a universal character conveying a forward looking vision for a more secure world. Mr Chairman, India joins the statement made by Indonesia on behalf of the Non-Aligned Movement.

Mr. Chairman,

With regard to Working Group No. 1 "Recommendations for achieving the objective of nuclear disarmament and non-proliferation of nuclear weapons" India has made detailed and substantive interventions in previous sessions of the UNDC, including a Working Paper that was submitted on 9th April last year. India joins NAM in reaffirming that achieving nuclear disarmament

continues to be the highest priority of the international community, as underlined by the Final Document of the 10th Special Session of the General Assembly devoted to Disarmament.

The International Court of Justice, in its land-mark advisory opinion of 1996, pointed out that there exists an obligation to pursue in good-faith and bring to a conclusion, negotiations leading to nuclear disarmament under strict and effective international control. The UN Millennium Declaration underlined need to strive for the elimination of weapons of mass destruction, in particular, nuclear weapons. Successive NAM Summits have underlined the importance of nuclear disarmament.

Mr. Chairman,

This year we mark the 20th Anniversary of the Rajiv Gandhi Action Plan, which provided a holistic framework for seeking negotiations for a time-bound commitment for the complete elimination of nuclear weapons to usher in a world free of nuclear weapons and rooted in non-violence. This Action Plan remains by far the most comprehensive initiative on nuclear disarmament. India has co-sponsored Resolutions, which have been adopted by significant majorities in General Assembly, on a Convention Prohibiting the Use of Nuclear Weapons and on Reducing Nuclear Danger. We have also co-sponsored a Resolution, adopted by consensus by the General Assembly, on Measures to prevent terrorists gaining access to Weapons of Mass Destruction.

Mr. Chairman,

The UNDC must send a strong signal of the international community's resolve to initiate concrete steps towards achieving objective of nuclear disarmament and nonproliferation of nuclear weapons. Member-States should use this forum to intensify dialogue so as to build consensus that strengthens the ability of the international community to initiate concrete steps towards achieving goal of nuclear disarmament based on the following elements:

- Reaffirmation of the unequivocal commitment of all nuclear-weapon States to the goal of complete elimination of nuclear weapons.
- Reduction of the salience of nuclear weapons in security doctrines
- Taking into account the global reach and menace of nuclear weapons, adoption of measures by nuclear-weapon States to reduce nuclear danger, including the risks of accidental nuclear war, de-alerting of nuclear weapons to prevent unintentional and accidental use of nuclear weapons.

- Negotiation of a global agreement among nuclear-weapon States on "no-first-use" of nuclear-weapons.
- Negotiations of a convention on the complete prohibition of the use or threat of use of nuclear weapons.
- Negotiation of a nuclear weapons convention prohibiting the development, production, stockpiling and use of nuclear weapons and on their destruction, leading to the global, non-discriminatory and verifiable elimination of nuclear weapons with a specified time frame.

Mr. Chairman,

We draw satisfaction from the fact that a large measure of common-ground already exists with regard to issues discussed in Working Group II on Practical Confidence-building Measures in the field of conventional weapons. UNDC deliberations between 2001 and 2003, though inconclusive, were also useful. India supports practical CBM initiatives - unilateral, bilateral, regional or global. We believe that such measures can promote a stable environment of peace and security amongst states by building trust and confidence and enhancing transparency to minimize misunderstandings. Guided by this principle, India has initiated several confidence building measures with countries in our neighbourhood, including with China and Pakistan.

The implementation of appropriate types of confidence building measures in specific regions should take into account the specific political, military and other conditions prevailing in that region. Such arrangements have to be freely agreed upon by the States of the region concerned while taking into account specific conditions and characteristics of the region. A step-by-step approach should be adopted. A prescriptive approach that negates the sovereign right of States to choose CBMs best suited to their interests should be avoided. We believe that focus on extraneous political issues will only erode the large measure of agreement that already exists in this Working Group and also dilute and weaken the practical confidence building measures that we hope to adopt during this session.

Thank you,

673. Statement by Permanent Representative to Conference on Disarmament Hamid Ali Rao at the Third Meeting of The GGE on cluster munitions.

Geneva, July 7 , 2008.

We would like to join other delegations in conveying to you our deep appreciation for your efforts as Chair of the GGE on Cluster Munitions, and for undertaking informal consultations in the intercessional period. We pledge to you our full support. We also thank you for your Paper on Cluster Munitions In which, inter alia, you have emphasized that the list of topics contained therein should not be regarded as exhaustive or exclusive. While it is a good basis for discussion, there is still need for in depth consideration of certain fundamental conceptual issues. We hope that the programme of meetings for the third session of the GGE will provide the platform for such in-depth discussions.

Mr. Chairman,

India's commitment to the CCW Process is demonstrated by the fact that we have ratified all the five Protocols. We believe the CCW Process brings together diverse countries and includes the main producers, possessors or users of conventional weapons. It is, therefore, indispensable to international efforts for regulating use of specific types of weapons in order to mitigate the humanitarian risks associated with such use. The international instruments of a binding nature that we in the CCW Process negotiate, can have the greatest impact in regulating weapons that have indiscriminate effects or cause excessive harm. It is this potential that we must harness with regard to addressing Cluster Munitions.

We share the international community's concerns about the humanitarian impact of the irresponsible use of Cluster Munitions. The use of Cluster Munitions is lawful and legitimate if such use takes into account existing International Humanitarian Law. India is prepared to negotiate an instrument in the CCW consistent with the mandate of the GGE that strikes a balance between military and humanitarian concerns. We should focus on effective regulation rather than the prohibition of use of CMs. We believe that such an instrument will have a realistic prospect of achieving universality.

It is clear that a comprehensive, universal ban on Cluster Munitions is not within the reach of the international community, either in the CCW or outside. Cluster Munitions offer distinct military advantage and until these can be

replaced by other alternatives which are cost effective and perform the required military tasks, CMs will continue to find a place in military armories as both point target as well as Area target weapons.

A definitional approach, however expeditious, that excludes one class of CMS only to allow technologically more advanced types is unlikely to yield the results that we all aspire. We therefore support a generic definition of CMS. The emphasis on using technologically advanced munitions with advanced technical features to achieve greater accuracy and reliability will increase costs thereby negating other advantages such munitions offer. The proposed standards of accuracy and reliability need to be weighed against the level of our present technical threshold and the cost and time to replace or phase them out. States will have an incentive to move towards improved Cluster Munitions only if the higher costs are offset by access to new technology or by the development of other economically viable alternatives. Therefore consideration should be given to provision of transfer of technology for increasing the reliability and accuracy of Cluster Munitions.

As states parties to the CCW we stress that existing IHL rules of distinction, proportionality and prohibition of indiscriminate attacks must be duly implemented and enforced. We believe that the proposed Protocol should contain provisions that clarify the principles of IHL that are of specific relevance to the use of Cluster Munitions. Based on discussions in the previous sessions, the Chair's paper provides a useful basis for further discussions to find acceptable text. We are also keen to discuss Best Practices to further strengthen the current IHL framework in so far as they are relevant to our mandate. States parties of the CCW have varying security concerns and concepts such as reliability and accuracy are at best relative concepts and can be addressed through 'Best Practices' and cannot constitute legally binding provisions.

Efforts must be undertaken to minimize humanitarian risk so that these munitions do not become explosive remnants of war. Nothing in the future Protocol should negate the positive outcome of Protocol V which contains clear obligations and 'Best Practices' for all state parties with regard to Explosive Remnants of War. It is, therefore, essential that we maintain the integrity of Protocol V and the proposed Protocol on CMs as that would negatively impact on achieving universality of both Protocols.

In negotiating the proposed protocol, countries such as India, which are not part of any military alliance, will have to assess its implication on its national security. India is also a major contributor to UN Peace-keeping

operations which is a relevant factor in approaching this issue. We believe that it is important to keep in mind that the proposed protocol should not lead to escalation of costs or induce conditions for an unintended arms race due to an externally imposed imperative for countries to replace existing stocks with technologically advanced varieties in advance of their 'Shelf Life'. Therefore, it is essential to look at Life-Cycle Management issues and discuss Best Practices along the lines of the Technical Annex of Protocol V.

We support the proposal for banning the Transfer of all CMs to non-state actors. We are also willing to discuss issues related to victim assistance, protection of humanitarian missions and international cooperation and assistance. We would like detailed discussions on aspects relating to recording and transmission of information of use of Cluster Munitions, given the fact that there are limitations to generation for accurate data. Consideration should also be given to supporting international cooperation including through voluntary funding for developing detection equipment for clearance of CMs.

Mr. Chairman,

As you are aware, there are still fundamental differences in the approaches favoured by various delegations. Given these deep differences, it may be appropriate to continue purposeful discussions that could lead, at a later stage, to consideration of text. However, that does not mean that we should set aside valuable inputs contained in your Paper which should continue to be available to delegations to take forward discussions on some of the less contentious issues.

In taking forward these discussion, Mr. Chairman, please be assured of the fullest cooperation of our delegation.

Thank you.

674. Statement of Permanent Representative at the Conference on Disarmament Hamid Ali Rao at the Plenary Session of the Conference.

Geneva, July 7 , 2008.

Madam President,

Since this is the first time that we have requested the floor under your Presidency, allow me to convey to you our warm congratulations and say how pleased we are with the most efficient manner in which you have been discharging your important responsibilities. We would like to assure you of the full cooperation and support of our delegation.

I would also like to take this opportunity to extend a warm welcome to colleagues who have joined us recently in the Conference on Disarmament: Ambassador Christian Strohal of Austria, Ambassador German Mundarain Hernandez of Venezuela and Ambassador Luiz Filipe de Macedo Soares of Brazil. We also look forward to participating actively in the informal discussions on all agenda items that are planned for the 3rd Session.

Madam President,

As we begin the Third Session of the CD, we would like to recall and appreciate the efforts that have been undertaken by you and your predecessors with the aim of finding common ground to enable the CD to commence substantive work. We would also like to recall our statement of 28th February this year detailing our overall approach on this subject. In this context, we appreciate the efforts that seek to build on the commendable efforts and the momentum that was generated last year to move the CD out of its long-standing stalemate. India will work with other delegations to make progress towards our common goal, which is reaching consensus on a Programme of Work to enable the CD to move forward. We are confident that under your Presidency, no efforts will be spared to find solutions taking into account the interests of all stake-holders.

Thank you, Madam President.

675. Statement of Permanent Representative at the Conference on Disarmament Hamid Ali Rao at the Meeting of Experts.

Geneva, August 18, 2008.

Mr. Chairman,

We would like to join other delegations in conveying to you our warm congratulations on your assumption of the Chairmanship of the BWC's deliberations this year. We would also like to convey our appreciation to you and to the Implementation Support Unit for facilitating consultations and laying the ground work for this meeting. I would like to assure you of my delegation's full support and cooperation for the success of our common endeavours. India fully associates itself with the Statement made by Cuba on behalf of the Non-Aligned Movement.

Mr. Chairman,

India attaches the highest priority towards the further strengthening of the Biological Weapons Convention and its full implementation. Along with the CWC, the Biological Weapons Convention eliminated an entire category of weapons of mass destruction. As mandated by the 6th Review Conference, we are now undertaking inter-sessional work with the participation of experts to facilitate our deliberations. While these deliberations are useful, only a multilaterally agreed mechanism for verification of compliance can provide the assurance of observance of the legal obligations by the States Parties and can act as deterrence against non-compliance. We also believe that decisions regarding strengthening the Biological Weapons Convention should be taken by the Review Conferences based on the principle of consensus.

Mr. Chairman,

Recent advances in biotechnology, genetic engineering and life sciences, and their dual use nature pose particular dangers of proliferation and the hostile use of biological agents. The possibility that non-state actors, including terrorists could acquire and resort to the use of biological warfare agents and toxins has added a new dimension to this danger. India, therefore, supports international cooperative efforts to address these challenges. We have undertaken initiatives at the United Nations General Assembly, including sponsoring a resolution on 'Measures to prevent terrorists from Acquiring Weapons of Mass Destruction.'

In May 2005, India adopted a legislation called the 'Weapons of Mass Destruction and their delivery Systems Act' which builds upon existing regulatory framework relating to prohibiting unlawful WMD activities and strengthen national exports controls. This Act covers all the prohibitions that are required under the Biological Weapons Convention. India continues to take further measures to update and strengthen controls on biological agent and toxins. It is against the above background that we welcome a discussion on bio-security, bio-safety as well as oversight education, awareness, raising and adoption and/or development of Codes of Conduct with the aim of preventing misuse in the context of advances in bio-science, technology research with the potential of use for purposes prohibited by the Convention.

Mr. Chairman,

Though the concepts of bio-safety and bio-security are not defined per se by the Convention, there is merit in a discussion amongst the States Parties to see how we can meet the aims and objectives of the Convention. We are also aware that these two concepts, which are mutually related and reinforcing, have also been addressed in other international fora. We believe that we should focus our deliberations on exchange of ideas and experiences to see whether best practices can be evolved, which can be implemented by national authorities which should continue to bear the main responsibility for implementation of the Biological Weapons Convention, in accordance with relevant national laws, regulations and policies. We also believe that while evolving Codes of Conduct cannot be a substitute for legally binding measures to ensure the strict implementation and compliance with the provisions of the Convention, an exchange of views to draw up best practices so as to increase awareness, especially with regard to the multi-faceted nature of dual use of material and technologies can be of benefit to all. Our discussions should be aimed at helping States Parties improve their national standards in the fields of bio-safety and bio-security and should be implemented on a national and voluntary basis. We believe that achieving such standards can be facilitated by international cooperation and strengthening the implementation of Article X of the Convention, to which India attaches the highest priority.

Mr. Chairman,

In recent years, India has made considerable strides in the advancement of biological sciences, life sciences and biotechnology which are critical to meeting the developmental aspirations of our people. Indian industry is today

in the forefront of global advances in bio-technology, genetic engineering and life sciences. At the same time, we are fully conscious of the heavy responsibility that rests on our shoulders as possessors of advanced technology to guard against their misuse. The Indian Government along with industry as well as the research and academic communities have undertaken measures to improve oversight education and awareness. There is a productive and expanding partnership between Government and industry to work towards this common objective. We will be happy to share our perspectives during the relevant sessions in the coming days. Our delegation consists of experts from Capital, including from private industry. Our experts look forward to actively participate in the deliberations and to interacting with other delegations, including those from the NGO community.

Thank you

Mr. Chairman.

**676. Statement by Permanent Representative to the
Conference on Disarmament Hamid Ali Rao – CCW :
Fourth GGE On Cluster Munitions.**

Geneva, September 1, 2008.

Mr. Chairman,

Let me begin by conveying our deep appreciation for all your efforts throughout the year as the Chair of the GGE on cluster Munitions. Your draft paper on cluster munitions suggesting various options for the possible draft instrument is an important urgently the humanitarian impact of cluster munitions, while striking a balance between military and humanitarian considerations.

Mr. Chairman, I would now like to briefly state, India's position.

We believe that cluster Munitions are legitimate weapons if used responsibly and in accordance with the existing humanitarian law and are not inherently indiscriminate. Cluster Munitions offer distinct military advantage and will continue to form part of armories either as point target or area target

weapons. A complete ban on cluster munitions either within the CCW or outside is not possible in near future. Our effort therefore should be consistent with our mandate to negotiate a proposal that strikes a balance between military and humanitarian considerations.

Emphasis on using technologically more accurate and reliable weapons will increase costs and will negate the other advantages that these weapons have to offer, cost implications of technological improvements. Therefore, India has suggested that the proposed protocol must look into provision of transfer of technology for increasing Shelf-Life as determined by the States Parties themselves.

We support inclusion of provisions relating to IHL in the proposed protocol. We reiterate our position that nothing in the proposed Protocol should negate the provisions of Protocol V or expand the scope of application beyond the scope of the welcome discussions on victim assistance, protection of humanitarian missions and international cooperation and assistance. We support the proposal for banning the transfer of cluster munitions to non-State actors.

Mr. Chairman,

India will work actively with other delegations to ensure that we are able to make substantial progress during this session of the GGE so as to fulfill our mandate in time

I thank You, Mr. Chairman.

677. Statement by Permanent Representative to the Conference on Disarmament, Hamid Ali Rao at the General Debate of the First Committee of the 63rd UNGA.

New York, October 10, 2008.

Mr. Chairman,

The Indian Delegation congratulates you on your election to the Chairmanship of the First Committee. We would like to assure you of our full cooperation in the discharge of your responsibilities. India associates itself with the statement made by Indonesia on behalf of the Non-Aligned Movement. The reference in that statement to universality of the NPT pertains to views of NAM states parties to the NPT and does not reflect India's position.

Mr. Chairman,

The United Nations is the embodiment of our faith in the benefits of collective action and of multilateral approaches in resolving global issues concerning global peace, stability and development. India's approach to addressing issues relating to disarmament and international security - the mandate of the First Committee, is underlined by our conviction that global contemporary challenges are best addressed through collective efforts imbued by a spirit of genuine multilateralism. We must work together, in cooperation and partnership to address threats to international security, both old and new, and to show a new spirit of unity of purpose and vision to advance global disarmament and non-proliferation goals and objectives.

Mr. Chairman,

India attaches the highest priority to the goal of nuclear disarmament, as enshrined in the Final Document of SSOD I. This year we mark the 20th Anniversary of the "Action Plan for Ushering in a Nuclear-weapon free and Non-Violent World Order" proposed by Prime Minister, Rajiv Gandhi, to the Third Special Session on Disarmament of the General Assembly. India's commitment to universal, non-discriminatory nuclear disarmament leading to the total elimination of nuclear weapons was reiterated by our Prime Minister on June 9, 2008 as well as by our External Affairs Minister on September 5, 2008. Speaking at the 63rd session of the General Assembly on 26th September, Prime Minister Dr. Manmohan Singh reiterated India's proposal for a Nuclear Weapons Convention prohibiting the development,

production, stockpiling and use of nuclear weapons and providing for their complete elimination within a specified time frame.

While the end of the Cold War created new space for action on global disarmament, with notable results such as the conclusion of the Chemical Weapons Convention eliminating, on a universal and non-discriminatory basis, an entire category of weapons of mass destruction, the goal of nuclear disarmament has remained a distant one. We call upon the First Committee to reinforce the message, now being echoed even by prominent statesmen and experts in the field, in favor of generating a new momentum to achieve the goal of a world free of nuclear weapons. No effort must be spared in building consensus to this end.

India has put forward both at the General Assembly and in the Conference on Disarmament a set of practical measures to stimulate debate and promote consensus on the way forward. The measures we suggest include:

- Reaffirmation of the unequivocal commitment of all nuclear-weapon States to the goal of complete elimination of nuclear weapons.
- Reduction of the salience of nuclear weapons in security doctrines.
- Taking into account the global reach and menace of nuclear weapons, adoption of measures by nuclear-weapon States to reduce nuclear danger, including the risks of accidental nuclear war, de-alerting of nuclear weapons to prevent unintentional and accidental use of nuclear weapons.
- Negotiation of a global agreement among nuclear-weapon States on 'no-first-use' of nuclear-weapons.
- Negotiation of a universal and legally-binding agreement on non-use of nuclear weapons against non-nuclear weapon States.
- Negotiations of a convention on the complete prohibition of the use or threat of use of nuclear weapons.
- Negotiation of a nuclear weapons convention prohibiting the development, production, stockpiling and use of nuclear weapons and on their destruction, leading to the global, non-discriminatory and verifiable elimination of nuclear weapons with a specified time frame.

Mr. Chairman,

It is clear that nuclear disarmament and nuclear non-proliferation are mutually reinforcing processes and require concerted and cooperative international efforts. India supports such efforts aimed at realizing global non-proliferation objectives. Expansion of international cooperation in the peaceful uses of nuclear energy by increasing the share of nuclear energy as a non-polluting energy source, in a manner that is safe, secure and consistent with non-proliferation objectives, will have a positive impact on global energy security and international efforts to combat climate change. We attach importance to carrying forward this process through dialogue and mutually beneficial cooperation with our international partners. India supports the negotiation in the CD of an FMCT that is universal, non-discriminatory and verifiable. India joined the consensus, as reflected in the UNGA Resolution 48/75 L which envisaged FMCT as a significant contribution to nuclear non-proliferation in all its aspects. We support efforts towards building the necessary international consensus so as to enable the CD to move forward on this important issue. India has continued to observe a moratorium on nuclear explosive tests.

India supports negotiation with a view to reaching agreement on effective international arrangements to assure non-nuclear weapon states against the use or threat of use of nuclear weapons. As part of its credible minimum nuclear deterrent, India has espoused a policy of "no first use" and non-use against non-nuclear weapon states and is prepared to convert these undertakings into multilateral legal arrangements.

We support international efforts to strengthen the present international legal framework to ensure the safety and security of space assets and to prevent the placement of weapons in the outer-space. While noting that there is no legal regime governing the possession and use of missiles, we believe that any initiative to address these concerns in a sustainable and comprehensive manner should be through an inclusive process based on the principle of equal and legitimate security.

India has contributed actively to UN efforts to strengthen regulation of small arms and light weapons as we believe that it is necessary to break the nexus between small arms proliferation and terrorism and organized crime. We remain strongly committed to the CCW process which offers the only forum of a universal character that brings to together all the main producers

and users of major conventional weapons, thus ensuring that the instruments that emerge have a greater prospect of making a meaningful impact on the ground.

Mr. Chairman,

As in the previous year, India seeks the support of the First Committee for the following three resolutions:

- (i) Convention on the Prohibition of use of nuclear weapons.
- (ii) Reducing nuclear danger.
- (iii) Measures to prevent terrorists from acquiring weapons of mass destruction.

Mr. Chairman,

In order to save time during the plenary debate we will make our detailed presentation on these resolutions during the time allocated for that purpose.

In conclusion, let me assure you of India's strong commitment of working together to ensure a successful outcome to this Committee's deliberations.

Thank you.

678. Statement by Former Member of Parliament and Member of the Indian Delegation to the UN Vishvjit P. Singh at the Thematic Debate on Nuclear Weapons in the First Committee of the UNGA.

New York, October 16, 2008.

Mr. Chairman,

It is a pleasure to see you chairing the thematic debate on Nuclear Weapons. India associates itself with the statement made by Indonesia on behalf of the Nonaligned Movement.

India has consistently attached the highest priority to the goal of nuclear disarmament, both as a national position as well as a member of the Non-Aligned Movement. Speaking at the 63rd session of the General Assembly on 26th September this year, Prime Minister Dr. Manmohan Singh reiterated India's proposal for a Nuclear Weapons Convention prohibiting the development, production, stockpiling and use of nuclear weapons and providing for their complete elimination within a specified time frame.

We recall that the only document on Nuclear Disarmament adopted by consensus by the international community - the Final Document of SSOD I accorded the highest priority to the goal of nuclear disarmament. This year we mark the 30th anniversary of the holding of SSOD I. We would like to convey our appreciation to the High Representative for Disarmament Affairs for highlighting some of the important points of the Final Document of SSOD I.

This year we mark the 20th Anniversary of the "Action Plan for Ushering in a Nuclear-weapon free and Non-Violent World Order" - presented by India's Prime Minister Rajiv Gandhi to the United Nations in 1988. This statement was a milestone in the global quest for nuclear disarmament. The Action Plan begins with the following words which remain valid to this day:

"Humanity stands at a cross roads of history. The world has lived too long under the sentence of extinction. Nuclear weapons threaten to annihilate human civilization and all that humankind has built through millennia of labor and toil. Nuclear weapon states and non-nuclear weapon states alike are threatened by such a holocaust. It is imperative that nuclear weapons be eliminated."

This Action plan proved a holistic framework for seeking negotiations for a time bound commitment for the complete elimination of the nuclear weapons to usher in a world free of nuclear weapons and rooted in non-violence. This Action Plan remains by far the most comprehensive initiative on nuclear disarmament. Its central premises listed below remain valid:

- First, a binding commitment by all nations to eliminating nuclear weapons in stages;
- Second, participation of all nuclear weapon states in the process of nuclear disarmament. All other states must also be part of this process;
- Third, demonstration of good faith and building of confidence through tangible progress towards the common goal;
- Fourth, changes in doctrines, policies and institutions to sustain a world free of nuclear weapons.

An international Conference was held in New Delhi 9-10 June this year to mark the twentieth anniversary of the Rajiv Gandhi Action Plan. The keynote address was delivered by Mr. Sergio Duarte, High Representative for Disarmament Affairs. About 200 experts participated in this Conference. Inaugurating the Conference, Prime Minister Dr Manmohan Singh said "The Rajiv Gandhi Action Plan was a comprehensive exposition of India's approach towards global disarmament and continuity in our thinking." He expressed the hope that other states will agree to a dialogue on these proposals, and will join us in committing to nuclear disarmament.

Over the years several international groups and bodies have lent their voice in favour of nuclear disarmament, including the United Nations General Assembly, the International Court of Justice, and national Parliaments of several countries. The goal of a world free of nuclear weapons has received the support, of eminent people like Henry Kissinger, George Shultz, William Perry and Sam Nunn- all knowledgeable and experienced in this field. The Government of Norway took the initiative to host a major international conference in Oslo in February this year. Another initiative has been launched by the Governments of Australia and Japan focusing on nuclear disarmament and non-proliferation. High level pronouncements in favour of nuclear disarmament have been made by such countries as France and the United Kingdom.

While individual merits or otherwise of the various proposals need to be discussed, we must recognize that shifting currents of informed opinion are now moving ever stronger in favor of nuclear disarmament. This provides the UNGA an opportunity to create a new political momentum and for the UN disarmament machinery to bring about coherence, integration and universal consensus on the way forward. In this regard we would like to reiterate the significance of convening SSOD IV- a position supported by all NAM countries.

As the sole multilateral negotiating forum on disarmament, there is a heavy burden on the Conference on Disarmament to make progress on nuclear disarmament. The first priority is binding commitments, accompanied by negotiation of specific steps that would reduce and finally eliminate the nuclear threat globally, in a verifiable and irreversible manner, where no state would claim exclusive security based on its possession of nuclear weapons. In fact a nuclear weapon free world would enhance the security of all.

As in previous years, India will be introducing the following resolutions;

First, on behalf of the co-sponsors I would like to introduce the draft resolution entitled "Convention on the Prohibition of the Use of Nuclear Weapons." This resolution reflects the belief of the co-sponsors that a multilateral, universal and legally binding instrument prohibiting the use or threat of use of nuclear weapons will contribute to the mitigation of the nuclear threat and create a climate for negotiations for an agreement on the prohibition of nuclear weapons. It will, thus, serve as an important interim measure until we reach agreement on a step-by-step process for the complete elimination of nuclear weapons. The operative part of the resolution reiterates the call to the Conference on Disarmament to commence negotiations to reach agreement on an international convention on prohibiting the use or threat of use of nuclear weapons under any circumstances.

I also have the honor to introduce on behalf of the co-sponsors the draft resolution on "Reducing Nuclear Danger." This resolution highlights that the hair-trigger posture of nuclear forces carries the unacceptable risk of unintentional or accidental use of nuclear weapons, which could have catastrophic consequences. The operative part of the resolution calls for a review of nuclear doctrines, as also immediate steps to reduce the risk of unintentional or

accidental use of nuclear weapons, including through the de-alerting and de-targeting of nuclear weapons and requests the Nuclear Weapon States to take the necessary measures to reduce nuclear dangers.

On the behalf of co-sponsors, India is tabling, as in previous years a draft resolution on "Measures to prevent terrorists from acquiring weapons of mass destruction." This resolution highlights the concerns of the international community and calls upon all Member states to take measures aimed at preventing terrorists from acquiring weapons of mass destruction. It underlines that the international response to this threat needs to be at national, multilateral and global level. This year the resolution has been updated to take into account the "Global Initiative to Combat Nuclear Terrorism" launched jointly by the Russian Federation and the United States. It also incorporates some suggestions for improvement in Op3 and OP5 to provide clarity on the issue of national measures.

We hope that these resolutions will receive the broadest possible support. Like in previous years we hope that the resolution on "Measures to prevent terrorists from acquiring weapons of mass destruction" will be adopted by consensus.

Thank you.

679. Statement by Member of Parliament and Member of the Indian Delegation to the UN Arjun Charan Sethi on the thematic debate on conventional Weapons in the First Committee 63rd Session of the UN General Assembly.

New York, October 21, 2008.

Mr. Chairman,

While weapons of mass destruction are rightly accorded priority in the area of disarmament and arms control, conventional weapons and small arms and light weapons constitute an important concern.

We associate ourselves with the statement of the Non Aligned Movement on this subject.

India is deeply concerned that conventional weapons, including small arms and light weapons, continue to pose grave danger to the security of States. Their indiscriminate and irresponsible use, including by non-State actors, has caused enormous humanitarian concern. Such weapons disrupt political stability and social harmony, derail pluralism and democracy and hamper growth and development. They also fuel international terrorism and internal conflicts.

Mr Chairman,

The United Nations has had a measure of success in dealing with the threat posed by illicit trade in small arms and light weapons. The Programme of Action adopted in July 2001 outlines a realistic, achievable and comprehensive approach to address the problem at national, regional and global levels. The integrity of the POA and its consensus nature must be preserved and strengthened. India will contribute constructively to the follow up meetings being envisaged as part of the Fourth Biennial Meeting of States.

India will also continue to pursue the objective of a nondiscriminatory, universal and global ban on anti-personnel mines in manner that addresses the legitimate defence requirements of States. Landmines continue to play an important role in the defence of States that have long land borders with difficult and inhospitable terrains. The process of complete elimination of anti-personnel mines will be facilitated by the availability of militarily effective, non-lethal and cost-effective alternative technologies.

This we mark the 25th anniversary of the EIF of the CCW Convention, which remains the only forum of a universal character that brings together all the main users and producers of major conventional weapons, thus ensuring that the instruments that emerge have a greater prospect of making a meaningful impact: on the ground. India is privileged to be part of the small group of countries that has ratified all the instruments of the CCW package. India has proposed a broad based dialogue to consider a new and strengthened format of the CCW Convention that would by common agreement, reaffirm and strengthen of application of international law in regulating the victims of warfare and protecting the victims of warfare.

Mr Chairman,

We share the international community's concerns about the humanitarian impact of the irresponsible use of cluster munitions. India has contributed actively to ongoing discussions to negotiate an instrument in the CCW consistent with the mandate of the GGE adopted in November 2007 that strikes a balance between military and humanitarian concerns. We look forward to productive discussions in the GGE meeting in Geneva in early November.

INDIA'S FOREIGN RELATIONS - 2008
SECTION - X
INDIA AT THE UNITED NATIONS

680. Statement by Minister at the Permanent Mission of India at the UN Mrs. Ruchi Ghanashyam on Informal meeting of the General Assembly on UN System-Wide Coherence and the Report of the Secretary-General on its Recommendations.

New York, February 7, 2008.

Mr. Co-Chairs,

India welcomes you in your role as Co-Chairs for continuing the consultations of the Report of the High Level Panel on UN System-wide Coherence. We look forward to working with you in a constructive and positive manner in an open and transparent process. We would like to thank the two Co-Chairs who guided the process during the 61st UNGA. We recognize the diligent effort that went into the preparation of their report. We associate ourselves with the views expressed by the distinguished Ambassador of Cuba on behalf of the Joint Coordinating Committee of the Group of 77 and the Non-Aligned Movement. India's approach on process issues is guided by the decision of the JCC of G-77 and NAM. The Chair of NAM has already expressed the JCC position in this regard. As stated by him, an evolution in this position would depend on our consultations. Mr. Co-Chairs, India has stated on numerous occasions, including in our statement with Sweden in the Joint Board of UNDP/UNFPA, UNICEF and WFP held recently, that the objective of the reform process cannot just be the improvement of coordination or the achievement of coherence. Better coordination or coherence is only the means to an end.

Our destination is a better performing UN development system that is able to respond to the needs of developing countries in their endeavours to achieve their development goals, with the UN incurring lower transaction costs and reporting burdens. It is presumed that improved coherence or coordination should lead to a better delivery of development assistance. This presumption needs to be constantly measured against reality so that the results of improved coordination and coherence are measured against better performance while taking into account the costs incurred for achieving the improved coordination and coherence.

This reality check, Mr. Co-Chairs, cannot be done without an independent evaluation of ongoing reforms. New ways of improving the delivery of UN development assistance at the country level are being tried out in the eight

pilot countries. We have periodically been briefed about the results of the pilots. It appears from the feedback provided so far that the results have been positive and that the process has been rather smooth. We welcome this. However, an independent evaluation can go into the various aspects and implications of the reforms being tried out. We look forward to the results of such an evaluation promised by the Secretary General. At this stage, while we are still awaiting the evaluation, we are not very clear about the expectations for furthering the reform proposals at the country level. The logical way forward would be for us to receive the evaluation report, study the lessons learned and take those lessons on board before implementation of the reforms further, while leaving the choice to each member state to choose their preferred model. We need to discuss this question and need some clarity on this issue. The Chair of NAM, in his statement on behalf of the JCC, has identified funding as one of the issues important for the NAM and G-77. Indeed, without adequate funding, the UN development system cannot be expected to play a meaningful role in development.

The reports that we have been receiving over the last few years have identified the problems being caused by inadequate core funding. The imbalance between core and non-core funding has been growing to the disadvantage of core resources. Even as we recognize the contribution of non-core resources, we must also recognize the implications of a smaller base of core resources having to bear the additional burden of the growing contributions to non-core resources. One of the solutions being cited is the need for new modalities of funding, even as existing analysis has shown that a multiplicity of funding modalities adds to the transaction costs. Predictably of funding has been cited as a challenge in our discussion today by one of the pilot countries. This issue needs to be faced squarely and while discussing the way forward. The functioning of the UN development system at the country level is not the only area of reform that the Report of the High Level Panel touched upon. One of the questions that we need to address is that in the absence of an evaluation of the pilots what kind of governance reforms should be implemented at this stage.

The report recommends the setting up of a Development Policy and Operations Group chaired by the UNDP Administrator. We would need a briefing from UNDP on how they see this particular proposal while the evaluation of the pilots is awaited. We also need to look at the other proposals on governance issues in the light of the ECOSOC reforms already agreed to by the General Assembly. The implications of the recently adopted TCPR resolution also need to be taken into account.

Mr. Co-Chairs,

We recognize that you have before you the complex task of analysing the High Level Panel Report in the context of the developments that have taken place separately in the UN system. We note your view that, perhaps, at this stage it would be necessary to look at the report and identify specific areas on which movement is feasible. We look forward to the analysis that would suggest the best way for us to deal with the recommendations of the High Level Panel Report. In this analysis the issues of interest to developing countries have already been identified in our statements today, especially the statement made on behalf of the JCC of G77 and NAM. Once again, Mr. Co-Chairs, we would like to assure of our intention of working with you in a constructive and positive manner.

Thank you, Mr. Co-Chairs.

**681. Statement by Permanent Representative at the UN
Nirupam Sen on "Addressing Climate Change: The
United Nations and the World at Work" during the
Thematic Debate convened by the President of the UNGA
at the 62 session of the UNGA.**

New York, February 13, 2008.

Mr. President,

At the outset, permit me to express our appreciation of your initiative and leadership on this important issue. We associate ourselves with the statement made yesterday by Antigua and Barbuda on behalf of the Group of 77. The UN Framework Convention on Climate Change (UNFCCC) remains the only comprehensive framework to deal with climate change issues, a fact reaffirmed during the recent Bali meeting. Efforts to address climate change, including this thematic debate, must support and feed into the ongoing processes under the UNFCCC rather than create parallel processes. Such efforts should also be based on the provisions and principles of UNFCCC, particularly the principle of common but differentiated responsibilities and respective capabilities.

Other UN system entities can assist, as per their mandates, in the effective implementation of the provisions, commitments and action plans of the

UNFCCC. Bertolt Brecht once said that it is sometimes "a crime to talk about a tree because it implies a silence about injustice". For developing countries, the imperative therefore is poverty eradication and development. The UN is best placed to ensure that addressing climate change does not impede this objective. I may also add that despite the comprehensive nature of the UNFCCC, background documents for this thematic debate have erroneously referred to 'framework' / 'comprehensive global agreement' while referring to the agreed outcome of the Bali Action Plan. Other mechanisms of the UNFCCC, like the negotiations under the Kyoto Protocol for GHG reduction commitments for Annex I Parties post-2012 have also been ignored.

Mr. President,

For developing countries, the issue of adaptation is of crucial importance. They have not contributed to causing climate change, yet will be most adversely affected by it. Further, they also lack adequate means and sufficient capacities for effective adaptation actions. The UN can play a role in this area by assisting national adaptation strategies through the UN's operational activities, particularly in capacity building, financial and technical support, as well as knowledge sharing. Ultimately, the UN's most effective role in adaptation is to accelerate development, which is the best form of adaptation.

The issues of technology and financing are vital for effectively addressing climate change. We would have liked to see a detailed coverage of these issues in the background documents provided for this debate. Current mechanisms to promote cost-effective and affordable access to advanced clean technologies for developing countries have not been very successful. The UN must play a leading role in this area by promoting joint research; country-driven approaches incorporating existing capacities; adoption and diffusion of technology; greater focus on adaptation technologies; and most important of all, a facilitative IPR regime that balances rewards for innovators with the common good of humankind. The issue may be difficult: the UN must grasp the nettle and not bypass it in background documents.

Similarly, there is an urgent need to provide new and additional financial resources to developing countries for addressing climate change, without diverting resources meant for development. The role of the UN cannot merely be limited to assisting developing countries in formulating policies to enhance climate change related investment flows. It would be myopic to believe that such national efforts would be sufficient to raise the large resource flows required. Instead, the UN must assist in the development of financial mechanisms and funds for effective resource flows into developing countries.

On mitigation, rather than identifying mitigation strategies by developing countries, the UN should focus on how developed countries can sharply reduce their GHG emissions. In this regard, the UN should play an active role in advocacy by urging developed countries to meet their commitments, and to take further ambitious GHG reduction commitments. The UN should also identify various ways and means by which developed countries can take action in mitigation. The developed countries must reduce their emissions so that the developing countries can breathe and grow. In the gospel of Saint Thomas, discovered and authenticated not so long ago, it is stated that blessed are the poor for theirs is the kingdom of heaven. In terms of climate change, one can add that blessed are the poor for they have saved the earth. Perhaps it would now be time for the rich to do something in the same direction.

Mr. President,

Climate Change must be addressed in the context of sustainable development, rather than attempting to integrate it with trade, social, economic, security, migration or humanitarian issues. We would also caution against using discussions on climate change to influence other ongoing UN processes like the System-wide coherence or the International Environment Governance. While the UN Chief Executives Board for Coordination can play a role in coordinating UN system efforts, we would like to see much greater member state oversight.

Mr. President,

Partnerships will play an important role in efforts to address climate change through adaptation, mitigation, financing, technology transfer and sustainable forest management and conservation. The UN should foster and promote creative models of partnership, which can assist national efforts. We should not equate this with the commitments of developed countries to provide financing and technology. Also partnerships alone will not be able to combat climate change. Greater emphasis on South-South cooperation in areas like adaptation would be useful. India would be happy to share with our friends in the developing world, the S&T expertise and capacities that India has built over the years.

Mr. President,

India is very conscious of the challenge of climate change and the serious impact it will have on all of us. Yet, like other developing countries, we have to ensure accelerated and sustained development so that millions of

poor people can secure a better life. This will inevitably require increased energy consumption. Nevertheless, we have stated that even as we pursue development, our per capita GHG emissions would at no stage exceed the per capita GHG emissions of developed countries. Our per capita emissions of 1 ton per annum are only a fourth of the world average, and our cumulative historical emissions of 23 tons is a fraction compared to the 1100 tons emitted by many developed countries. At the inauguration on 11 February 2008, Mayor Bloomberg asked China and India to accept world energy efficiency standards and said that in future New York taxis would be flexi fuel. All polluting factories around Delhi have been closed down and all Delhi buses and taxis have switched to using Compressed Natural Gas. Thus, we have done what New York still has to do. As for energy efficiency, a recently released World Bank study shows that India's fossil fuel related carbon dioxide emission per dollar of GDP is the same as that of Japan and Germany and newer Indian plants in steel, cement, aluminium and paper have energy efficiencies at the global frontier. Recently India's Ministry of Science and Technology has introduced a technology based on ocean thermal energy conversion that provides clean drinking water from seawater at affordable prices.

India is also entirely sensitive to the concerns of Small Island Developing States that arise out of climate change and will join vigorously in efforts to assist them. Actions by developed countries to sharply reduce their emissions, and assist developing countries with financial and technical resources, holds the key to successfully combating climate change. We look forward to the United Nations and the world working meaningfully towards this goal.

Thank you, Mr. President

682. Statement of Minister at the Permanent Mission of India at the UN Mrs. Ruchi Ghanashyam on Agenda Item 121: First Meeting of the Ad Hoc Working on the Revitalization of the General Assembly.

New York, February 21, 2008.

Mr. Co-Chairs,

We congratulate the two Co-Chairs for their appointment and express our readiness to work constructively in this process. We would also like to express our appreciation for the two previous Co-Chairs, the Ambassadors of San Marino and Senegal, who undertook a thorough examination of all aspects of this issue. We associate ourselves with the statement made by the Ambassador of Algeria on behalf of the Non-Aligned Movement.

Mr. Co-Chairs,

Through its resolution 61/292, the GA mandated the setting up of an adhoc working group to evaluate the implementation of previous resolutions on GA revitalization, including resolutions 58/126, 58/316, 59/313 and 60/286, as well as to identify ways to further enhance the role, authority and effectiveness of the GA, inter alia by building on previous resolutions. So far through the revitalization process that has been undertaken over the last several years, progress has been made especially in the area of improving the working methods of the GA. The revitalization process needs to continue the focus on substantive measures to restore and enhance the role and authority of the GA, including in the maintenance of international peace and security; the role of the GA as the chief oversight organ; through the GA deciding on management and procurement for peacekeeping operations, among others, as provided for in the Charter.

The statement by NAM has raised the issue of implementation of previous resolutions which is also the mandate given by resolution 61/292. The process that we are beginning today needs to focus on why some of the provisions of previous resolutions on GA revitalization have remained unimplemented. The synopsis of resolutions that you propose to bring out will be useful in this regard. In particular, one area where progress had been made through resolutions 51/241 and 60/286, but which remains largely unimplemented is the selection process of the Secretary-General. We look forward to discussing this issue during our future consultations. The President of the GA can play an important role in the process of

strengthening and revitalizing the GA. Recent resolutions have, therefore, focused on strengthening the role and leadership of the PGA.

We are satisfied that progress has taken place in implementing the provisions of recent resolutions for the strengthening of the office of the PGA through measures such as provision of additional staff, and thematic debates among others. We believe that there is need to assess the usefulness and adequacy of the several measures adopted and implemented thus far. Perhaps the Office of the PGA can be consulted on the adequacy of staff and other reinforcements necessary for effective functioning of the Office so that these needs can receive our due consideration.

But at the stage of the process of the revitalization of the GA, we must think creatively of steps that would lead to substantive revitalization of the Assembly so that it can more effectively perform the various functions mandated to it by the Charter. We must look at the issue of selection of the SG, the balance between the various principal organs and the encroachment by one principal organ over the mandate of the other and how this can be addressed in the future.

Mr. Co-Chairs,

In conclusion, we emphasize the need to discuss substantive steps and creative thinking for substantively moving forward on this important issue of further strengthen the role of the chief deliberative policy-making and representative body, the General Assembly. You can expect our constructive support and participation in your efforts.

Thank you, Mr. Co-Chairs.

**683. Statement by Permanent Representative at the UN
Nirupam Sen on Financing for Gender Equality and the
Employment of Women at the 52nd session of the
Commission on the Status of Women.**

New York, March 3, 2008.

Mr. Chairman,

I would like to convey our warmest felicitations to you and other members of the Bureau on your election, and to assure you of our full cooperation in the work of this Commission. We thank the Secretary-General for his report related to the priority theme viz. "Financing for gender equality and the empowerment of women". My delegation associates itself with the statement made by the distinguished representative of Antigua and Barbuda, on behalf of the G 77.

The achievement of Millennium Development Goal (MDG) 3 viz. Gender equality and empowerment of women, would largely depend on our collective efforts in timely allocation of necessary financial resources. This session of the Commission would be important not only for sharing best practices on mechanisms and processes involved in financing for gender equality, but also in giving meaningful direction in mobilizing and effective utilization of financial resources at national, regional and international levels. The UN Secretary-General in his report notes that the global commitments on gender equality have not yet been implemented, and also adequate resources have not yet been allocated.

The UN Member States have individually as well as collectively made commitments on financing for gender equality and women's empowerment at the Fourth World Conferences on Women in Beijing in 1995, and also at the International Conference on Financing for Development in 2002. While primary responsibility for allocation of finances rests with the country concerned, it has been recognized that the international community should match up to its commitment by provision of new and additional financial resources, transfer of technology, sharing of experiences, expertise, information and data, technical cooperation and capacity-building. The Expert Group meeting held in September 2007 pointed to the shortages in ODA flows, and the concomitant negative impact on financing gender by developing countries, particularly the Least Developed countries. The twin challenges of decreasing ODA levels to developing countries as well as

devising mechanisms to bridge the gap between policy and practice at the national level on financing gender, should be addressed at this Commission. This year provides yet another opportunity to integrate gender perspectives in the Follow-up to the International Conference on Financing for Development to review implementation of the Monterrey Consensus.

Mr. Chairman,

Gender equity and equality has been a key guiding principle of the Common Minimum Programme of the Government of India. India's planning process is fully committed to enabling women to be equal partners in development. A separate Department for Women and Child Development, created in 1985, was upgraded to a Central Ministry in 2005. The Joint Parliamentary Committee of the Indian Parliament on Empowerment of Women plays a crucial role in monitoring the application of gender equality principles in all legislation and also to ensure that legislation in India is gender responsive. The reservation in India twelve years ago of one-third of urban and local self-government seats for women marked a turning point in our effort to empower women. As a result, over one million Indian women at the grassroots level have been brought into political decision-making, which effectively gives them a significant say in utilization of financial resources allocated to the local-self governing bodies in rural and urban areas. A similar reservation of seats for women in the Indian Parliament remains under consideration.

We are guided by the knowledge that economic growth does not automatically reduce gender inequality on which separate public action is also needed including for ensuring more rapid social change; women's empowerment impacts positively on the lives of men and of children (female education reduces child mortality rates); women are agents of social justice and social change and without their full emancipation there is no social progress.

Mr. Chairman,

India undertook a gradual shift in policies particularly since the Seventh Five Year Plan (1985-90) to provide explicit attention to allocation of programmes as well as schemes that directly benefited women. Starting in 1980s with the concept of beneficiary-oriented schemes for women, India in 1990s moved towards policies that highlighted gender perspective and the need to ensure a definite flow of funds from the general developmental

sectors to women. This was followed by the Women's Component Plan as one of the major strategies envisaging that at least 30 per cent of the funds/benefits were earmarked in all women's related sectors. The National Policy for Empowerment of Women in 2001 further envisaged introduction of a gender perspective in the budgeting process as an operational strategy. India adopted in 2004 'Budgeting for gender equity' as a goal. As a result, gender budgets have become an integral part of the budget exercise in India. In the Union Budget for 2008-09 presented a few days back, the Indian Finance Minister has acknowledged that gender budgeting has gained wider acceptance and credibility, and noted that 4 more gender budgeting cells have been set up in Indian Ministries/Departments increasing the total to 54.

The total magnitude of gender budget has increased from 3.8% to 5% of the total Union Government expenditure during the last four years, covering demands for grants from 27 Ministries/Departments. We are now going beyond the Women's Component Plan towards gendering all facets and aspects of the 11th Five Year Plan (2007-12), apart from continued strict adherence to gender budgeting across the board. To improve the financial independence of women, particularly in rural areas, a number of schemes have been launched with women as the primary beneficiaries. A National Rural Employment Guarantee programme launched in 2006, providing 100 days assured wage employment annually to every rural household, includes at least one-third women beneficiaries. The Government actively encourages and supports group initiatives in formation of women's self-help groups. At present, there are more than 2 million women self-help groups in the country supporting more than 10 million rural families. The Unorganised Sector Workers Social Security Bill 2007 has been introduced in the Upper House of the Indian Parliament to provide legislative backing to all social security schemes, particularly those for women workers. Recent measures taken to improve social protection include launch of the National Health Insurance Scheme for all families below the poverty line, which would benefit 300 million persons.

To enhance women's employability in high-end vocations, strong emphasis is being laid on skill building through exclusive institutes of vocational training. New schemes are being implemented to widen the base of women entrepreneurs, including special schemes promoted by financial institutions/banks. As a result, the number of women

entrepreneurs in India has risen very considerably. The number of women entrepreneurs in India is growing - from a meager 2% in 1971 to around 10% now. The proportion of women in the IT industry constitutes about 20% of the total IT work force. To widen the base of women entrepreneurs, incentive schemes have been formulated like constitution of a standing committee on women entrepreneurs, setting up of Women Development Corporations, etc. Financial institutions and banks have also evolved special schemes for extending assistance to women entrepreneurs. The National Commission on Farmers has looked into the requirements and status of rural women, as a majority of them derive their livelihood from agriculture. A number of new initiatives have been considered by this body to increase women's access to land, strengthen their land security by improving land records and to provide them with technical, financial and management support.

Mr. Chairman,

India stands ready to work with the international community for the early realization of the Millennium Developmental Goals through effective implementation of gender empowerment and gender mainstreaming both within and outside the UN.

684. Statement by Minister at the Permanent Mission at the UN Taranjit Singh at the General Debate of the Special Committee on Peacekeeping Operations.

New York, March 11, 2008.

Mr. Chairman,

Let me begin by congratulating you and the Bureau on your election. We are confident that you will guide the Committee to a positive outcome and assure our full co-operation in doing so.

We thank Under-Secretary General Guehenno and OIC Jane Lute for their annual comprehensive briefings and highlighting the priorities in peacekeeping for the coming year. We would, in particular, like to place on record, the outstanding leadership provided by Mr Guehenno for the last eight years. We also compliment the DPKO/DFS teams for their dedication and hard work.

Mr. Chairman,

The Report of the Secretary-General (Doc. A/62/627) outlines the progress made on the three broad identified challenges facing United Nations Peacekeeping. We look forward to discussing the activities mentioned in the report as well as the issues it sets out for peacekeeping in the next 12 months. We associate ourselves with the statement made by the distinguished representative of Morocco, on behalf of the Non Aligned Movement. We note with happiness that the total number of Troop Contributing Countries have reached 119 and would like to welcome Burundi, Columbia, Cyprus, Democratic Republic of Congo, Qatar and The Former Yugoslav Republic of Macedonia to the family.

Mr. Chairman,

We are all aware of the escalating demands on the United Nations for peacekeeping operations. This unprecedented surge has given rise to enormous challenges in peacekeeping - not only because new missions are being established or old ones expanded, but also due to the volatile and insecure environments in which UN forces have to function, the growing complexity of the difficult tasks assigned to them, and the tools that they are provided with. We had welcomed the efforts by the Secretary-General to respond to peacekeeping challenges by strengthening and rationalizing

structures in the UN via building military planning, management, and operational capacities. The realignment of DPKO by creating two Departments - Department of Peacekeeping Operations (DPKO) and Department of Field Support (DFS) - has been undertaken. However, we are yet to be convinced that there exist clear command structures, coherence in policy and strategy, effective coordination and integration, as well as preservation of unity of command from Headquarters to the field. While these principles do find mention in the Secretary-General's report, you have also heard several Troop Contributing Countries highlight the difficulties they are facing at present, in the restructured set up. We do hope that Secretary-General will make appropriate corrections from lessons learnt so far in order to make UN peacekeeping well integrated, effective and professional. In that context, we are willing to take a constructive look at the new proposals for strengthening the Office of Military Affairs(OMA) distributed to the Member States last week.

We also heard with attention USG describe Integrated Operational Teams (IOTs) as a central feature of the restructuring package aimed at ensuring unity of command and integration of peacekeeping efforts. In order to encourage new ideas and involvement of Member States, effort should be made to recruit officers on secondment basis on these teams.

The safety and security of UN peacekeepers is of vital concern to troop contributors who place their soldiers at risk in pursuance of the UN ideal. The 116 deaths and several injuries to peacekeepers, are a reminder of the importance of fully addressing safety and security concerns. In this context, the UN needs to focus on enhancing its capacity for information gathering and assessment on the field level. Secondly, cooperation and coordination between the Department of Safety and Security and DPKO needs to be improved with clear accountability. Thirdly, the missions must be properly planned and mandated as well as equipped with appropriate weapons and technologies. Fourthly, DPKO needs to ensure that its peacekeepers are not stretched to cover geographic areas that exceed their capacities. They should be deployed in accordance with agreed concept of operations. Last but not the least, the UN should seriously consider having seconded security personnel to enhance the safety and security of the UN peacekeeping operations.

Mr. Chairman,

India has consistently called for energizing the mechanism of triangular consultations between Troop Contributing Countries, the Security Council

and the UN Secretariat. Private Meetings under the Resolution 1353 format continue to be held on the eve of renewal of Mission mandates, leaving little scope for serious or meaningful discussions.

In this context, it is with regret that we have to point out that despite the emergency situation in UNMEE, the Security Council has not found the time to hold consultations with the Troop Contributing Countries so far, not to mention its inability to withstand a serious challenge and defiance to its authority. It is again reiterated that for ensuring the success of peacekeeping operations, TCCs must be involved early and fully in all aspects and stages of mission planning and that their views need to find way into mission mandates.

Mr. Chairman,

We appreciate the effort put in by DPKO in developing its internal document entitled "United Nations Peacekeeping: Principles and Guidelines". It has been described as a "living document that will be reviewed and updated regularly". We, therefore, look forward to continuing our constructive dialogue with the Secretariat to further clear some of the ambiguity and inconsistency in terminology in this document.

Mr. Chairman,

We note the United Nations effort to enhance its partnership with regional actors. In this context, India supports the efforts to enhance peacekeeping capacity in African countries. We share close and historic ties with Africa and are one of the oldest, largest and most consistent contributor to UN Peacekeeping missions in Africa, having participated in almost every major operation since the inception of peacekeeping. We are currently involved in bilateral capacity building in many African countries. At the same time, the UN cannot absolve itself of "its responsibility under the Charter for the maintenance of international peace and security". The real challenge before the UN is to strengthen peacekeeping without regionalizing it.

As regards conduct and discipline of troops, we are convinced that sexual exploitation and abuse are totally unacceptable forms of behaviour. We fully support the implementation of a policy of zero tolerance and encourage raising the awareness of those with managerial and command responsibilities and the establishing of standards of conduct, training and investigation. Careful preparatory training in terms of a multi-cultural, pluralistic and tolerant outlook is as important as subsequent swift punitive

action, once culpability is established. We welcome the General Assembly approved resolution on draft MOU and call upon the DPKO to implement it at the earliest. We would also like the DFS to take lead in ensuring that the spirit of GA Resolution is respected by investigative bodies of the UN.

We also note the creation of a Division of Policy, Evaluation and Training and establishment of an Integrated Training Service (ITS) within it. We would encourage the ITS to utilise and benefit from the considerable field expertise of the Troop Contributing Countries as well as develop a collaborative relationship with institutions of training within the TCCs.

Mr Chairman,

We recognize that security sector reform is an important element in the transition from United Nations Peacekeeping to sustainable peace and development. Early planning of security sector reform by national authorities with relevant partners is needed. In this context, we look forward to a meaningful and substantial consultations with Member States and Secretariat in the forthcoming session of C-34 with respect to the recently released Secretary-General's Report on SSR.

Mr. Chairman,

We have noted the establishment of Office of Rule of Law and Security Institutions that was strongly piloted by the Under Secretary-General last year. We would seek a more detailed presentation of the role it is playing in the areas of justice, corrections, mine action, disarmament, demobilization and reintegration.

The role of Civilian Police in peacekeeping has grown substantially. We take note that the authorized strength of police component in the peacekeeping operations has increased by over sixty five per cent and has gone upto 16,000 police officers in 18 peacekeeping operations. The assurance that Police Adviser continues to be a member of the senior management team with direct access to the Under Secretary-General is welcome. We look forward to engaging in constructive discussions in the C-34 regarding the future requirements of the Police Division. At the same time, we would like to emphasise the need for adequate transparency in ensuring representation of qualified candidates from Troop Contributing Countries of developing countries in senior leadership positions in the Police Division.

Mr. Chairman,

India stands solidly committed to assist the UN in the maintenance of international peace and security. We have a proud history of UN peacekeeping dating back to its inception in the 1950s. We have contributed nearly 100,000 troops, and participated in more than 40 missions. India has also provided and continues to provide eminent Force Commanders for UN Missions. We salute the 116 Indian peacekeepers, as well as those from other countries, who have made the supreme sacrifice by laying down their lives while serving in UN Missions.

The emphasis by Secretary-General on his commitment in ensuring increased participation of women in operational peacekeeping is welcome. India has traditionally been contributing lady military and police officers to a number of UN Missions. We are particularly honoured to have provided the first full Female Formed Police Unit for peacekeeping work. This unit completed its first year in January in assisting the UN Mission in Liberia and has been highly appreciated for its outreach to the most vulnerable sections of society, i.e. women and children, in a post-conflict environment, besides performing its normal duties. In conclusion, Mr Chairman, we are fully committed to the purposes and principles of the UN and look forward to making UN peacekeeping an ever more effective and efficient tool in the maintenance of international peace and security.

Thank you, Mr. Chairman.

**685. Statement by Permanent Representative at the UN
Nirupam Sen on Threats to International Peace and
Security Caused by Terrorist Acts at the Security
Council.**

New York, March 19, 2008.

Mr. President,

At the outset, I thank you for scheduling this open debate on an issue that has unfortunately become a defining element of our world. Terrorism has grown steadily through the twentieth century to become one of the leading strategic, political and developmental challenges of the twenty-first century.

Mr. President,

India's advocacy of international cooperation in order to fight the threat of terrorism predates most measures taken by the Security Council or the General Assembly; indeed, it predates serious consideration of the issue of terrorism within the UN. This is because India has been, and unfortunately remains a victim of international terrorism. In less than 25 years, over 60,000 have been killed in various parts of India as a direct result of terrorism, quite apart from the concomitant impact upon our economy. India therefore has an overriding interest in greater and more meaningful international cooperation to counter terrorism. It also underscores the rationale behind our conviction that no political cause, no argument, no belief can or should be used to justify acts of terrorism. That Mahatma Gandhi preferred to call off his mass movement and postpone the independence of India rather than compromise with violence at Chauri Chaura gives us the right to say this. We continue to call upon the world to act as one in denying terrorists, their ideologues and financiers access to arms, funds, means of transportation of their deadly goods, as well as safe havens.

However, as an unfortunate but inevitable result of our tragic history of dealing with terrorism, India has accumulated the expertise and experience for doing so. Our own efforts utilize all available tools within the arsenal of a democratic nation, governed by the rule of law. They run the gamut of efforts from surveillance methods governed by law, monitoring of financial flows and effective legislation regarding dual use items, to old fashioned police investigation work. Yet we recognize that no matter how comprehensive the effort, there is always the chance of one catastrophic

failure. It is in recognition of this that we seek a comprehensive international effort to counter terrorism.

In that context, despite counter-terrorism being taken up more seriously by the UN in general and the Security Council in particular, there is limited evidence of a genuinely common effort to create a more unified international response to terrorism. We have argued for over a decade, and we continue to believe that agreement on a Comprehensive Convention on International Terrorism (CCIT) should have been a first step in any consolidated counter-terrorism efforts within the United Nations. Such a Convention would provide the legal framework for an effective counter-terrorism strategy. We remain convinced that a CCIT must be agreed upon if we are to have a strong interlocking network of member states, international organizations and specialized agencies functioning together in unison to counter terrorism. We do not need a philosophical definition of terrorism. Paragraph 1 of draft article 2 enunciates clearly the criminal law definition of terrorist acts. Current proposals address effectively the question of offences governed by International Humanitarian Law and those governed by the Convention.

What is now needed, therefore, is the political will to conclude the Convention. The Security Council's efforts can be enduring on the basis of such a law made by the General Assembly.

Over and above our commitment to the early conclusion of a Comprehensive Convention, which we initiated in the 51st UN General Assembly, we see merit in a pragmatic approach to the various counter-terrorism mechanisms and elements that already exist. We have adopted such an approach in working with and supporting efforts of the Counter Terrorism Committee, the 1267 Committee and the 1540 Committee (we articulated our views at that time on Resolution 1540), as well as their expert panels. Not the least of these measures was welcoming a joint visit of experts coordinated by the CTED, which included experts from the Monitoring Team of the 1267 Committee and UNODC, to India in November 2006 and sharing our mutual experiences. Our approach is guided by the conviction that the sum of our collective efforts can indeed be greater than the total of each individual nation's part in the battle against terrorism.

Therefore, Mr. President, I should like to state for the record the following:

- India welcomes the revised Organizational Plan of the CTED, as contained in document S/2008/80. We hope that it will bring about greater flexibility of approach and effectiveness of operation.

- We also look forward to greater efforts to bring together inter-related aspects of the operational mechanisms of the 1267 Committee, the 1540 Committee and the CTC, and dovetailing these with the Counter Terrorism Implementation Task Force. India hopes that all these efforts within the UN body will be integrated more closely with the core tasks being taken forward by specialized bodies such as UNODC, Interpol, ICAO, the World Maritime Authority etc.
- Therefore, India strongly affirms the importance of a collective effort to focus upon technical assistance in the larger struggle against terrorism; in helping states implement the mandate of the CTC as well as other related instruments.
- India is willing to provide all assistance in the larger effort to counter the threat of terrorism. Our commitment to do so is already on record, in India's Fifth Report submitted to the CTC in March 2007; and we are willing to share information with other relevant UN mechanisms that work on these fields. We are willing to render such assistance bilaterally or multilaterally, especially in the instance of countries that are themselves not directly threatened by terrorism, but whose participation is vital to the success of the larger international effort.
- We would however urge that there be greater efforts to follow up on information obtained from member states as part of the effort against terrorism. Pooling our collective knowledge and expertise is desirable, but can only succeed when there is adequate evidence that it is both welcome and necessary.

Mr. President,

The political and socio-economic programme of fundamentalists is always deeply reactionary and exploitative. History teaches that to prevent fundamentalist terrorist forces from occupying space for dissent, democratic and secular forces must be strengthened, not weakened. The larger effort to foster international cooperation requires greater cooperation between the members of the Security Council and the larger UN membership. We hope that today's exercise is the first of more efforts to build closer cooperation within the international system.

In conclusion, let me also thank Executive Director Mike Smith, both for his presentation today, and for the impressive vigour and commitment he has brought to his post. We wish him every success in making the CTED a responsive and flexible tool in the larger fight against terror.

[In Russian]: Mr. President, as countries that have long experience in dealing with the threat of terrorism, international cooperation remains essential.

I thank you Mr. President.

686. Remarks by Permanent Representative at the UN Nirupam Sen at the Informal Thematic Debate on Recognising the Achievements, Addressing the Challenges and getting back on Track to Achieve the Millennium Development Goals by 2015 at the 62nd session of the UNGA.

New York, April 2, 2008.

Mr. President,

I thank you for organizing this debate, for the comprehensive background papers and, while recognizing the achievements, for correctly focusing on addressing challenges in order to get back on track to achieve the Millennium Development Goals (MDGs) by 2015.

A heroic figure from Latin America, Jose Marti, summed up the MDGs in a single phrase: "All the world's glory fits in a kernel of corn". Indeed the MDGs are both a quantifiable vision of human dignity and an instrument for mobilizing international action. Here MDG 8 is pivotal, though the event's focus on poverty and hunger, education and health is right in itself and reinforces MDG inter-linkages. Global partnership cannot be implemented through discussions alone but in action and implementation has to be monitored. Efforts to redefine the MDG framework by selectively including commitments from the World Summit Outcome and to dilute MDG 8 by transferring targets from MDG 8 to MDG 1 are a matter of concern. I hope the Secretariat would bear this in mind because changing goalposts can only undermine the legitimacy of the MDG framework. This is ultimately also not in the interest of the developed countries because, in Ruskin's phrase, the coloured 'tide that eddies by their doorstep is full of floating corpses' and a way to save rather than just bury these is through a meticulous implementation of MDG 8, the path to 'an unencumbered shore'.

The Human Development Report of 2003 on MDGs had already suggested solutions. The problem is that these have not been adequately implemented. The Report states that we "cannot halve hunger and poverty without restructuring trade and agriculture; the fight against HIV and malaria will be lost without affordable medicines to the poor; fiscal planning is impossible without debt relief" and technology for poverty reduction, public health (and now for addressing climate change) will not be available without addressing the Intellectual Property Rights (IPR) regime. The UN will become progressively less relevant unless it moves from words to action, unless the word is made flesh and the UN's formidable convening power is harnessed to difficult action: a periodic audit of the IMF; establishing a debt relief mechanism, such as an International Debt Commission; agreeing on some vital exceptions to the IPR regime.

Several economists have estimated that the protectionism of the developed costs developing countries \$ 700 billion a year in export income, fourteen times what they receive as ODA. Subsidies have been increasing in some sectors. As our Commerce Minister said, "We can deal with a flood of imports but not with a flood of subsidies". The problem is not lack of resources. The problem is that there seems to be little stomach for structural change. We need what Nietzsche called "the capital of spirit and will".

MDGs are a mitigation of present deprivation but can create a more just world only if combined with removing the institutional and economic causes of poverty. Bretton Woods Institutions need fundamental reform. MDGs are now virtually international customary law. The Office of the High Commissioner for Human Rights has criticized World Bank PRSPs for advocating prioritization alone rather than participation. The participation of the poor in poverty reduction and decisions affecting their lives is as important as the end result and indeed necessary for achieving the end result.

Many of the poorest developing countries remain caught in the trap of an agricultural and raw materials economy with minimal industry. That is why, as several economists have noted, they are offered debt cancellation instead of economic development enabling debt servicing; mosquito nets instead of eradication of malaria.

Unless therefore the UN and its institutions go beyond MDGs, poverty and hunger cannot be eliminated in an enduring way. MDGs would then

run the danger of becoming a kind of permanent disaster relief and even what one economist has called "welfare colonialism". India is conscious of these considerations in its economic interaction with Africa. Hence the emphasis on the dedicated satellite and fiber optics connectivity mission, IT centres, Indian companies in Africa procuring supplies locally, setting up manufacturing plants and exporting capital goods that enable Africa to process and add value for its exports to the EU and US markets. The destiny of debt relief shows what happens in the absence of an industrial policy. In 2003, eight out of eighteen HIPC countries graduated and half of these again relapsed: their debt service became 150 percent of GDP, unsustainable in terms of the HIPC initiative definition. It is worth noting that between 1980 and 2006, \$ 675 billion in debt service flowed out of Africa, more than the debt of the whole developing world in 1979. Half the annual average of \$ 25 billion, according to the UN Food and Agriculture Organization, would be enough to eradicate hunger. Incidentally, India quite sometime ago cancelled the debts owed to it by eighteen HIPC countries.

India practices at home what it practices abroad: it has waived all outstanding loans to all small and marginal farmers in India. MDGs cannot be achieved under the grim shadow of rural debt overhang. Similarly, India's National Rural Employment Guarantee Act, guaranteeing hundred days paid employment to every rural household is unprecedented and makes the right to work legally enforceable. It is neither a dole nor a digging of Keynesian holes in the ground but public investment in durable rural assets. Since Panchayats or elected local councils implement this, the scheme represents the achievement of MDGs through a movement in favour of the rural poor. Madame Sonia Gandhi, Chairperson of India's United Progressive Alliance, who called it a revolutionary measure, emphasized the need for popular mobilization. The answer therefore to questions posed in the background papers is that economic growth by itself is not sufficient and that separate action is required on poverty and hunger, education, employment and health, science and technology, free from external conditionalities or prescriptive advice. For interested delegations, we are circulating a one page statistical annex on India's fiscal and programme support to MDG related activities. Above all, popular participation is essential. Then only would MDGs be achieved in a society, rich, as the great Caribbean poet Aime Cesaire says, with the productive power of modern times, warm with the fraternity of olden days.

I thank you Mr. President.

ANNEX

Government of India's fiscal and programme support to MDG related Activities (all financial figures in Indian Rupees unless otherwise specified)

FASTER AND MORE INCLUSIVE GROWTH - ACCELERATED HUMAN DEVELOPMENT

- Agricultural credit poised to reach 2,400,000 million by March 2008
- The National Rural Employment Guarantee Scheme will cover all 596 rural districts in India with spending rising to 160,000 million in 2008-09
- Complete waiver of all outstanding loans as of February 2008-2009 for all small and marginal farmers. Between 25-75 per cent relief to all other farmers depending on income status and vulnerability. Total expenditure estimated at 600,000 million in FY 2008-09
- Rural Infrastructure Development Fund to have a corpus of 140,000 million in 2008-09 with a separate window for rural roads
- Over 250,000 million to be spent on creating additional irrigation
- US \$378 million to be spent on renovating and restoring water bodies in southern India in 2008-09. A similar amount is expected to be sanctioned for Eastern and Northern areas during the course of the year
- North East India will secure 165,000 million of targeted development spending in FY 2008-09 to overcome geographical and locational impediments
- 340,000 million will be spent on schemes directly targeted at women
- Bharat Nirman provides progress that can be measured in days not months: 290 households provided with safe drinking water, 42 villages electrified, 52 villages connected by telephone and 4113 rural houses completed -each day!

- 114 million children covered in the midday meal scheme, the largest school lunch in the world. In 2008-09 the total coverage will increase to 139 million children in primary school.
- Health sector allocations to be increased by 11 per cent in FY 2008-09. Key highlights include enhanced spending on the National AIDS Control programme, upgradation of district hospitals and village sanitation projects. In the urban areas Health cover of Rs.30,000 to be provided to every worker in the unorganized sector. The scheme will commence in Delhi, Haryana and Rajasthan from April 1, 2008 and will be rolled out to all States as intergovernmental fiscal responsibilities are agreed
- 100,000 higher education scholarships to be provided in FY 2008-09, with additional allocations for Scheduled Castes, Scheduled Tribes, and Minorities.

**687. Statement by Permanent Representative at the UN
Nirupam Sen on Thematic Debate "Towards a Common
Understanding on Management Reform" in the UNGA.**

New York, April 8, 2008.

Mr. President,

I thank you for organizing this thematic debate "Towards a Common Understanding on Management Reform". I also thank the Secretary-General for his comments on the subject. I take this opportunity to convey our appreciation to the Members States of the Four Nations Initiative for their fruitful commitment to this important issue. My delegation aligns itself with the statement made by the Distinguished Permanent Representative of Antigua & Barbuda on behalf of the Group of 77.

Mr. President,

Attempts to impose preconceived notions which are alien to the unique nature of the Organization are not only doomed to fail but are likely to undermine the very cause that we collectively seek to promote. Some of the reforms already implemented have been enumerated by the Chair of the G-77. Much more needs to be done. At best these are a work in progress. Strobe Talbott in his latest book "The Great Experiment" says that the mega threats of today "can be held at bay only through multilateralism on a scale far beyond any thing the world has achieved to date". To back this up we require a stronger and more efficient Secretariat machinery.

Mr. President,

We cannot just reform the Secretariat and think that we have reformed the UN. To do this would be to confuse the machinery of implementation with the conceptual business of decision-making, a change in apparatus with a change in structure. My friends in the G-77 quite rightly want a Secretariat responsive to the concerns of the developing countries. This cannot be accomplished by tackling personnel; only by tackling power. The reform package has to be looked at in a comprehensive manner: there is no place for cherry-picking. This is not just conceptually but operationally the case. Management reform cannot be looked at in isolation from other pending reforms in the UN, particularly the reform of the Security Council and the revitalization of the General Assembly, as mandates emerging from these principal organs have a direct impact on the effective functioning of the

Secretariat. For example, in peacekeeping operations, Security Council mandates often do not take into account capacity and resources available in the Secretariat for implementing these. These increasingly complex mandates with difficult timelines are given by the Security Council but it is the General Assembly that is left with the difficult task of raising the required resources, so essential to the Secretariat for its task. We cannot hold the Security Council accountable; it is much easier to blame the Secretariat.

Similarly, the proposal to make the budgetary period of peacekeeping missions a uniform one year and independent of the period for which the Security Council approves a mandate is excellent but would the permanent members accept it? So is the consolidation of peacekeeping accounts but would the biggest contributors go along? However, it is the Secretariat's responsibility to ensure a balanced allocation of resources for the three pillars of the Organization, by giving the Member States resource proposals based on strategic planning and in-depth analysis, which takes into account risks and eventualities inherent in the activities of the Organization. It is this that distinguishes a dynamic management from an ordinary one. The fragmented or piecemeal nature of the regular budget proposals for the 2008-2009 biennium and its consequences are still fresh in our minds. It blighted even the first resumed session of the Fifth Committee in March 2008, when decisions on important agenda items like reform of the Department of Political Affairs, HRM, Procurement, Investigations etc. were deferred, creating a sense of paralysis in our decision-making. The responsibility for this unhappy situation rests partly with the Secretariat because of its inability to present, in a timely manner, a holistic picture of its budgetary requirements to enable Member States to take well-informed decisions. On the other hand, one cannot have reform on the cheap. Either we have to live in an unreformed condition or pay for reform. The EU emphasized the optimal use of resources but not the provision of the resources. I agree with the Nordic countries who called the provision of resources 'essential' in order to ensure 'legitimacy' and efficiency. I attribute this to their being reasonable rather than merely rich.

Mr. President,

Clear accountability across the Secretariat and at all levels, particularly at the senior management level, is of paramount importance for ensuring full implementation of mandates and efficient utilization of resources. It also impacts directly on the issue of budgetary discipline, human resources, programme delivery etc. The Secretary-General's report on the

accountability framework (A/62/701), which has still not been introduced in the General Assembly, mentions that transparency in the selection of senior management builds trust in management and management-level decisions among staff and other stakeholders. The absence of this transparency, or the perception of its absence, has a demoralizing effect on staff, who, in a survey conducted during the preparation of this report, have expressed a lack of confidence in the appraisal of their performance by senior management. They have pointed to the absence of a result-oriented culture in the Organization. An environment in which performance is not rewarded and under or non performance is not penalized can never shape an efficient and effective Organization. Most important of all, holding the senior management accountable would have to be the bedrock of the future accountability framework. In that context, we find the senior management compact system inadequate. Institution of a performance-linked penalty and reward system and a transparent selection process would be some important steps in the right direction. The Four Nations Initiative proposes hearings by expert panels. We would add confirmation hearings in the General Assembly on the pattern of US constitutional practice.

Mr. President,

My delegation supports the review of mandates not as a euphemism for cost cutting based on indiscriminate elimination of mandates but as a process of consolidation and rationalization of mandates to ensure effective implementation, besides monitoring and evaluating partial or non-implementation. Rapid growth in mandates is a reality given the emergence of new and complex global challenges. Inadequacy of commensurate resources could be a major reason for our dissatisfaction with the Organization's inability to deliver what we expect of it, in terms of quality and quantity of outputs. This is particularly evident in the development-related mandates. The General Assembly in its Resolution 62/236 (paragraph 73) on the Programme Budget for 2008-2009 biennium recognized the need for strengthening the Secretariat's development pillar and asked for a comprehensive proposal with a view to improving the effective and efficient delivery of the mandates of the development-related activities of the Secretariat. The GA rightly judged that the development pillar had been sidelined in terms of budgetary allocations in the last 10 years. More so, when we are in the implementation phase of MDGs, which require provision of normative/analytical advice to Member States, an integral part of the mandate of DESA, the Regional Commissions and

UNCTAD. Authoritative statistics available clearly indicate that the total budgetary allocation for development pillar has gone down from 22.2% in 1997-98 to 17.8% in 2008-2009 [DESA-4.6% to 3.8%; Regional Commissions-12.8%to 10.2%; UNCTAD- 4.7% to 3.0%]. In terms of posts this translates into a decrease from 3,278 in 1996-97 to 3021 in 2008-2009. This decrease is all the more striking when we compare it to the challenges before the developing countries. The Secretary General has made reasonable proposals and we hope to arrive at a common understanding on adopting these. In the first 30 years of the UN, its golden period in economic terms, economic ideas emanating from it challenged orthodoxy and helped. The economic crisis of today shows that this is all the more needed today.

On the staffing of the Secretariat, the Chair of G-77 has already given a detailed statistical justification for correcting the imbalance in terms of equitable representation. I would only like to add that we sometimes hear the argument of competence when what is meant is patronage. We have been trading equity for efficiency. Has it given us efficiency? Let us, therefore, give equity a chance.

Mr. President,

I look forward to commenting on specific issues during the interactive session. However, before concluding, I cannot help feeling that the very fact that four countries took upon themselves the task of launching the Four Nations Initiative is another manifestation of Member States being forced to undertake (in fields like the budgetary process and human resource management) what should normally be the ongoing responsibility of the Secretariat, as a part of its regular management function.

Thank you Mr. Chairman

688. Summary of Extempore remarks by Permanent Representative at the UN Nirupam Sen on Security Council Reforms at the meeting of the Open-ended Working Group.

New York, April 10, 2008.

Mr. President,

I thank you for organizing this meeting of the OEWG. The United Nations Millennium Declaration of September 8, 2000 adopted by Heads of State had emphasized a comprehensive reform of the Security Council. The World Summit of Heads of State in September 2005 had emphasized early reform. We are continuing consultations on what has already been exhaustively discussed over almost three decades since 1979. Though it is so late in the day, the reform offered is partial, which does not address any of the real issues. You have circulated four documents. The paper sent by the distinguished Permanent Representative of Cyprus on behalf of the six member drafting group mentions the option of permanent membership. The letter sent by the Chair of the African Group advocates negotiations on the basis of Ezulwini consensus.

This clearly includes expansion of permanent membership. We cannot torture texts: a group that stands on dignity, is totally opposed to discrimination to the point of asking for the veto, cannot logically settle for anything less than permanent membership. Interestingly, the Organization of Islamic Conference (OIC) Resolution circulated by you together with the OIC final communiqué emphasizes changing the present paradigm: one cannot do this without new permanent members; clearly non permanent members have failed to change the current paradigm and more of these, even semi permanent ones, can only repeat the failure. This becomes clear from para 73 of the final communiqué which clearly states that the OIC member countries will "promote the comprehensive reform of the Security Council" and "ensure the equitable representation of the OIC countries in all categories of the enlarged Security Council".

All categories obviously include the permanent category. Incidentally, the reference to "consensus" is clarified in the Resolution as "the broadest possible agreement". Those members of the OIC who are leading lights in the Coffee Club or Uniting for Consensus [UFC] (which opposes permanent membership) may wish to explain the contradiction in their position. I am

reminded of the conflict between Catholics and Protestants on the doctrine of transubstantiation in the reign of Elizabeth I: the first paragraph of Article 27 of the Church of England says that the doctrine is true; the second paragraph calls it an idle superstition. This kind of consistency may have been appropriate for the sixteenth century but is certainly not so for the twenty first. Therefore, the paper of the UFC is in a minority of one among these four documents. Moreover their insistence on negotiations being in the OEWG is an attempt to redefine the unanimous mandate of the 61st Session where paragraph (d) on negotiations says no such thing. Similarly, and even more seriously, they are trying to revise this unanimous mandate by insisting on only the interim model which ignores the mandate's "proposals and positions of all the member states". The distinguished Permanent Representative of Liechtenstein said that the G-4 and earlier proposals were not successful and therefore we should negotiate on an interim model.

It is clear that the interim model did not succeed either. Otherwise paragraph (d) would only have mentioned the facilitators' reports and not "the proposals and positions of all the member states". He also said that working methods will be neglected if they are lumped together with enlargement. History proves that the opposite is the case. Working methods have been neglected because they have not been lumped together with enlargement. Resolution 267 (III) of 14 April 1949 was radical on working methods and adopted unanimously; it was never implemented. The S-5 Resolution could not even be moved for action. It is self evident that unless there are new permanent members committed to new working methods and held accountable for doing so, working methods can never change.

Without expansion of permanent membership the real problems cannot even begin to be addressed: P-5 decisions being binding on 6.5 billion people who have no voice or representation; non implementation of Articles 31 and 32 of the Charter; access of small states and SIDS to the subsidiary bodies; a gradual change in political culture including on the use of veto. An interim model will simply add to numbers without addressing the issues. It would be reform for the sake of reform, like art for art's sake. The interim model claims to be for greater representation but there would be no representation among permanent members; it argues for checks and balances but there would be nothing to check or balance these; by merely adding to numbers it would make the Security Council unwieldy without making it more effective; it would be the worst of both worlds. Above all the interim model does not empower Africa and the developing countries

generally. Of course we understand that existing permanent members are comfortably seated at the horse shoe table and it is always a little uncomfortable to move closer together to make room for new arrivals.

Therefore the interim solution is not a solution but a problem, not a structure but gerrymandering; talking of overarching groups, it is not an arch but throwing bricks in the air and hoping that they will hold like a rainbow. It is an attempt to deny developing countries permanent membership. The structure of the Security Council is given. A comprehensive reform means that one has to expand each category and reform the working methods. Negotiations should be on detail only not on the structure which is already given.

In this sense, the position of the African Union is logical. One may then ask where does flexibility and compromise come in? Firstly, as stated, on details - expand by how many members, whether with veto etc. ; secondly, on integrating the minority into the majority view to the extent possible - by expanding permanent members through an initial election and subsequently making continued permanent membership subject to a review or even challenges, properly formulated. Let me briefly comment on the paper submitted by the Permanent Representative of Cyprus. There is only a single reference to expansion in permanent and non permanent categories and these are subject to being interpreted as alternatives because of unclear wording. At present two thirds of the UN membership are developing countries. Within the increase to 22 that is proposed, the ratio would change from 8 out of 15 to 12 out of 22: in short the proportion will remain almost constant. Just as the model does not give greater representation to developing countries, there is no reference to small states or to the concerns of Small Island Developing States such as greater access. Delinking working methods from expansion in the permanent category would reduce the new working methods proposed to a dead letter. Only two additional seats are proposed for Africa which would mean that Africa would continue to be discriminated against in the revised Council. The formulation on challenges is also neither equitable nor balanced. Permit me Mr. President to summarise our position.

Mandate for expansion of the UNSC cannot be misinterpreted to mean partial expansion, modification of the Council's structure, introduction of a new membership category or other such ideas. Genuine expansion of the UNSC must have expansion in both membership categories.

We respect the 7 principles (pillars) outlined by the PGA. We must also remember that the basic mandate for our efforts stems from the unanimous UNGA decision 61/561. This clearly mandates building on the progress achieved so far, as well as the positions of and proposals made by Member

States. Interim options seek to negate this mandate by arbitrarily excluding some options from being negotiated. The draft text sent by the PR of Cyprus appears to be focussing mainly on reaching an intermediate / interim option and this perspective resonates throughout the text. The possibility of expansion in permanent membership appears to be an afterthought and an aside. The assertion in the text about 'apparent willingness to negotiate on the basis of achieving intermediate reform' remains untested. Proposed reform of the working methods is also limited.

Attempts by a minority group to limit intergovernmental negotiations to only the intermediate option are unacceptable. This goes against the view of the overwhelming majority that genuine expansion and reform of the UNSC requires expansion in both permanent and non-permanent membership categories.

Consultations and discussions have gone on for long enough and all the views, positions and proposals are well known. There is a palpable desire among member states to move to the next step of intergovernmental negotiations. The PGA needs to lead this process by convening an informal GA plenary at the earliest, where all proposals and ideas for expansion of the UNSC can be negotiated. The convening of the informal GA plenary does not require any further discussions or debates in the OEWG. Instead, the Task Force should be requested to quickly integrate the various options conveyed to the PGA through the different letters, keeping in mind the overriding mandate of UNGA decision 61/561 to include the positions of and proposals made by Member States. This should then be presented to the informal GA plenary.

We reiterate our support to an objective and transparent method [such as a questionnaire or a straw poll] to determine the elements that command the widest support amongst UN member states. We also reiterate the following concrete elements on negotiables that could form the basis for inter-governmental negotiations at the informal GA plenary:

Expansion in both permanent and non-permanent categories
Greater representation to the developing countries
Representation to the developed countries, reflective of contemporary world
Realities
Comprehensive improvement in the working methods of the Security Council, including ensuring greater access to island and small states
Provision for a review.

I thank you, Sir.

**689. Statement by Permanent Representative at the UN
Nirupam Sen at the Informal Open Consultations on
Aspects of System-wide Coherence dealing with
Governance.**

New York, April 17, 2008.

Distinguished Co-Chairs,

We would like to thank you for organising the series of open consultations on the report of the High Level Panel on UN's System-wide Coherence as a component of the intergovernmental process to consider its recommendations. My delegation associates itself with the statement of the Joint Coordination Committee of G-77 and NAM.

The overarching objective of all development cooperation is the elimination of poverty. This is not a new battle. It has been on for some time and although much remains to be done, we often forget that much has been achieved in the developing world. It is in the light of this considerable experience that has accrued in these battles that we make our remarks.

A primary concern of developing countries remains that the current discussion is highly selective. It has the effect, whether intended or unintended, of exacerbating distortions in the global development agenda. Successful large-scale poverty eradication efforts have been complex and multidimensional exercises. It is difficult to pinpoint all the reasons for their success but an obsession with management techniques has not been one of them. We believe that the current discussions on efforts to enhance the efficiency and effectiveness of the UN system run the danger of missing this point. We run the risk of making our agenda hostage to structural objectives that remain nebulous. The means cannot become more important than the end.

At the level of the Secretariat and Funds and Programmes, the panel has recommended the creation of a Chief Executives Board and creation of a Development Policy and Operations Group to improve coordination. The CEB is already functioning and, in other debates, member states have said that it should not try to usurp the prerogatives of member states. In short, it has been a mixed blessing. We should avoid any next step that would simply be a mixture without the blessing.

Distinguished Co-chairs,

I suspect that the difficulty in agreeing on systemwide coherence is because we do not agree on the problem and cannot reconcile conflicting interests. Articles 57, 58, 63 and 64 of the Charter are unambiguous on the UN's leadership role vis-à-vis all specialised agencies including IMF and World Bank. The UN did exercise such a role from 1950s to the 1970s. Issues like GSP, SDRs, Compensatory Financing, Supplementary Financing were all first debated in the UN and then followed up in the BWIs. All vital functions have been progressively hived off and taken over by the BWIs. Incidentally, the experience of many African and Latin American countries, the Asian Economic Crisis and now the current financial crisis shows the failure of BWIs. We have seen the cult of debt finance and seen financial speculations crowding out investment while the governance of the BWIs merely watched. Are we agreed on restoring the economic centrality of the UN and ECOSOC?

The American Nobel Prize winning economist Stiglitz, a member of a former US President's Economic Advisory Council has suggested a periodic audit of BWIs by ECOSOC, hardly a radical suggestion. Nevertheless we could not agree on this or on stronger and clearer language in A/61/16 on strengthening ECOSOC. We cannot even agree on a broader interpretation of the language adopted. First let us agree on this and see if the UN or ECOSOC, can really exercise a supervisory role. After all we already have the Development Cooperation Forum and the Annual Ministerial Review. Only after that can we really discuss the issue of a Global Leaders' Forum.

The Report speaks of updating mandates and relationships with BWIs. Let us look at the Association Agreement of 16th August 1947 with the World Bank, squarely based on Article 57 and 63 of the Charter (the Agreement specifically refers to these). Article IV (para3) of the Agreement says that the UN should refrain from making recommendations only on particular loans and their terms and conditions. But, and I quote, "the Bank recognises that the United Nations and its organs may appropriately make recommendations with respect to the technical aspects of reconstruction or development plans, programmes or projects". Has the UN or ECOSOC exercised this right? We are unable to do what we are mandated to do and we are trying to do something that is of doubtful provenance.

Distinguished Co-chairs,

For the UN to fulfil its role it requires core funding. One of the reasons for the emasculation of the UN is the voluntarisation of funding. That is one

example why we have to take a decision on the entire package as a whole and not on parts. This is clearly a conceptual and operational necessity and not just a G-77 negotiating tactic. Similarly, there are other outward linkages. An ECOSOC that can exercise a meaningful and effective role requires a strengthened DESA and hence the proposal on the development pillar to be decided on by the Fifth Committee.

Distinguished Co-chairs,

Instead of going on discussing the Sustainable Development Board, we should modify the proposal radically because in its present form it leads to serious difficulties. Incremental progress on a joint mechanism which keeps the individual Boards fully functional seems optimal at present. We feel that plain speaking here is constructive since it can save a lot of time. Here let me say we share the EU's emphasis on a participatory approach, accountability and decentralisation (and one may add pluralism to this list), all essential for democratic governance. The HLP's recommendation on collapsing separate boards into the Sustainable Development Board would only lead to inefficiency, bureaucratism and an erosion of accountability. Each Executive Board has an important role to play in supervising the respective individual mandates of the Funds and Programmes. We would not like to compromise this supervisory and oversight role that member states have. We are doubtful also about the recommendation that the Board will have the discretion to reward well performing funds, programmes and specialised agencies and to fund programmatic gaps in the system. Given the Board's limited membership and the limited time it has to supervise the performance of each agency, it would be difficult to avoid donor driven preferences and subjectivity in such rewards. What is puzzling about the Sustainable Development Board is that a decentralised model of governance is recommended to developing countries but a centralised one to the UN. Obviously, what is sauce for the goose, is not sauce for the gander. Geese had saved the Roman Empire. It would take more than geese to save the Sustainable Development Board.

In conclusion, I would like to reiterate the willingness of my delegation to constructively engage in this process of intergovernmental consideration.

Thank you.

**690. Statement by the Permanent Representative at the UN
Nirupam Sen during the open debate on the
Implementation of the Measures setout in the Notes [S/
2006/507] by the President of the Security Council in the
UNSC.**

New York, August 27, 2008.

Mr. President,

Thank you for scheduling today's debate on an issue which is of significant importance to all Member States, both within and outside the Council. Let me also take this opportunity to congratulate you on your presidency of the Council.

While the Charter confers upon the Security Council primary responsibility for the maintenance of international peace and security, Article 24.1 also stipulates that it acts on behalf of all Member States in discharging this responsibility. Accordingly, the Council's working methods have always been of direct, abiding and immediate interest to all Member States. This is not only underscored by the interest of many States in today's topic, but also by the fact that issues relating to the Council's working method were identified almost sixty years ago. It was in April 1949 that the General Assembly unanimously adopted Resolution 267 (III) on this issue-which regrettably remains unimplemented. However, its adoption underlines that such criticism has substantial precedent. An equally illustrious pedigree is shared by the Council's rules of procedure, which have adamantly remained "provisional" over the decades.

While we are happy to discuss the Council's working methods in an Open Debate in this Council, I must emphasize that this is an issue that transcends the limited membership of this body. The extent of interest among non-Council Members and the fact that the Council acts on behalf of the larger membership reinforce the point that the General Assembly has a legitimate role in deliberating upon the working methods of this Council.

Nonetheless, Mr. President, the very fact that we are debating this issue here reflects recognition of the existence of a problem. Indeed, the Note of July 19, 2006 [S/2006/507] of the President of the Council voiced some of these concerns by listing some 63 action points. While the concept note for this meeting assessed the implementation of these measures, we do

not fully share its somewhat optimistic conclusions. Troop Contributing Countries have also long sought to be involved in decision-making in peacekeeping operations, rather than being consulted in a proforma manner. Concerns persist over access to information and documentation, the absence of access to the Council on particular issues as a matter of routine for both the country concerned and important stakeholders, as well as the lack of systematic access, including by island and small states, to subordinate bodies of the Council.

All of these are recognized to be amongst the problems besetting the Council. While I shall not dwell on problems in the Council's working methods through a recitation of various examples-the statement of the Distinguished Chair of NAM adequately covers the salient points-there can be no ignoring the growing chorus of voices that recognize flaws in the Council's working methods. Yet, the many flaws in the Council's working methods are only symptoms of a deeper malaise that lies in its structure and composition. The problem of the Council is not only a problem of working methods but of additional requirement of logistical, defence and financial capabilities and of reinforced legitimacy leading to wider acceptance and more effective implementation of optimal decisions. Thus, the lacunae in the working methods of the Council cannot be rectified fundamentally without an equally comprehensive reform and expansion of the membership of the Council in both permanent and non-permanent categories. And in this sense we endorse the point made by South Africa and other countries. It is sometimes argued we could consider reform of the working methods of the Council as an end in and of itself.

However, in the real world, achieving a genuine, lasting and necessary improvement in the working methods of the Council cannot be divorced from an expansion of the number of permanent members. It is necessary to underline this point since we have witnessed an expansion in the number of non-permanent members earlier, with little improvement in the working methods of the Council. To acknowledge this is not to denigrate the conscientious and strenuous efforts of many non-permanent members in the past. However, their efforts were always doomed to fail because the structure of the Council had not changed. Not the least of the limitations was the fact that, by their very nature, non permanent members are transient and lack the necessary institutional memory to follow through and implement far reaching changes. The challenge of being new members on the Council also adds to this problem. The very fact that today the arguments that

have been made to improve the working methods are the same as in the past sixty years only reinforces the point.

In conclusion, Mr. President, let me reiterate our firm conviction that genuine and lasting improvement of the working methods of the Council can only be possible as part of a comprehensive process of Security Council reform, based on both reform and expansion of its composition in permanent and non-permanent categories. It is only when there are new permanent members, who are held accountable to the wider membership through an appropriate review mechanism, that there will be a genuine response to the longstanding demand for meaningful and durable changes in the working methods of the Council. In the absence of such a comprehensive reform, a fundamental improvement in the working methods would either escape us as it has for more than sixty years or, even if miraculously achieved, would not last without the institutional memory, continuing commitment and peer example of new permanent members held accountable to the general membership.

I thank you, Mr. President.

691. Statement by Deputy Permanent Representative at the UN Ajai Malhotra, on the issues relating to the Conservation and Sustainable use of Marine Biological Diversity beyond areas of National Jurisdiction at the United Nations Ad hoc Open-ended Working Group, New York, April 28, 2008.

Mr. Chairman,

At the outset, I would like to congratulate you and your co-chair upon being appointed as the Co-Chairmen of this Working Group, and assure you of the full cooperation of my delegation at this second meeting. Our appreciation also goes to the Secretary General for his useful reports on issues relating to the conservation and sustainable use of marine biodiversity beyond areas of national jurisdiction. We align ourselves with the statement made by the Chairman of the G-77.

Mr. Chairman,

Over the past few years, the international community has focused on issues relating to management of living marine resources, and conservation and management of biological diversity of the sea-bed in areas beyond national jurisdiction. Discoveries of highly complex and diverse ecosystems in areas beyond national jurisdiction, coupled with advances in biotechnology, have led to increased interest and activities in relation to genetic resources found beyond national jurisdiction. As a corollary to these developments the general debate over the legal status of genetic resources in areas beyond national jurisdiction is also becoming increasingly intense.

The management and governance of high seas areas constitutes a formidable task for the international community, since development of an effective regime for the protection of biodiversity in areas beyond national jurisdiction is seen to be circumscribing some of the traditional high seas freedoms. The challenges of conserving and ensuring sustainable management of marine biodiversity beyond national jurisdiction are thus enormous.

Mr. Chairman,

The myriad threats to biodiversity in areas beyond national jurisdiction range from open access to fisheries, destructive fishing practices like bottom

trawling, pollution from ships and other land based activities, and new threats deriving from bio-prospecting and open ocean iron fertilisation. A combination of measures, including monitoring, scientific investigation, and improved governance are required to prevent or reduce harmful impacts of such activities on biological diversity.

Marine scientific research, which aims at exploration of biodiversity for commercially valuable genetic and biochemical resources, so-called bio-prospecting, is currently evoking great interest. Studies indicate that there is little information on the extracted quantities for initial sampling and there is no monitoring of these activities nor principles or criteria for measuring their sustainability. During the ICP 8, a detailed examination helped States to better understand the nature and purpose of this activity. Issues raised in this regard included: the relationship between marine scientific research and bioprospecting, legal aspects related to access and benefit-sharing, international cooperation in marine scientific research through the exchange, sharing and dissemination of information, the role of intellectual property rights, cooperation in technology transfer, and the protection of the marine environment.

Mr. Chairman,

The general principles of marine scientific research contained in Articles 140(1) and 241 of UNCLOS, should also apply to bioprospecting. The symbiotic relationship between the biodiversity of the deep seabed and its ecosystem makes the entire resources of the sea-bed in areas beyond national jurisdiction, living and nonliving, to be a common heritage of mankind. The task before us today is to identify the risks to this common heritage of mankind and agree on a substantive legal basis for the conservation and management of biodiversity and the use of biological and biogenetic resources of the deep-sea bed and subsoil.

We are open to looking at new approaches within the confines of UNCLOS to promote international co-operation aimed at conservation and sustainable use of living resources of the high seas and benefit sharing of seabed resources located in areas beyond national jurisdiction. However, the participation of developing countries in devising these new approaches greatly depends on the scientific information available to them.

Deep seabed research is still largely the domain of select developed countries. It is imperative that there be increased flow of scientific data and information and transfer of knowledge to developing countries so as to

improve their understanding and knowledge of oceans and deep seas, in particular the extent and vulnerability of deep sea biodiversity and ecosystems. We welcome in this regard the setting up of an Endowment Fund by the International Seabed Authority to promote the conduct of marine scientific research in the international seabed Area for the benefit of all mankind by supporting the participation of qualified personnel from developing countries in marine scientific research programmes.

Mr. Chairman,

Marine Protected Areas (MPAs) can be an important marine ecosystem management tool for securing protection from threats to marine biological diversity. The developing literature on MPAs reveals the potential benefits that they could offer not only to the resilience of vulnerable marine systems, but also to the productivity of fisheries. However, in respect of MPAs in areas beyond national jurisdiction, information on governance aspects and costs and benefits is still very sparse. This is an area where more information on both scientific and economic aspects would be useful.

We must also continue to develop and facilitate the use of other approaches and tools for conserving and managing vulnerable marine biodiversity in areas beyond national jurisdiction. The time bound measures proposed in UNGA Resolution 61/105 to protect vulnerable marine ecosystems from destructive high seas bottom trawling practices are an important first step in addressing that problem. We await the Report of the Group of Experts on Assessment of Assessments with the anticipation that it may provide guidance on the way forward towards a more sustainable management of marine biological diversity beyond areas of national jurisdiction.

Thank You, Mr. Chairman

692. Statement by Deputy Permanent Representative at the UN Ajai Malhotra at the 30th session of the Committee on Information.

New York, April 30, 2008.

Mr. Chairman,

At the outset, kindly accept my congratulations on your election as our Chair. I would also like to convey our appreciation to Under-Secretary-General Kiyotaka Akasaka for his comprehensive and insightful statement and for the two Reports of the Secretary-General on the activities of the Department of Public Information [DPI] in areas identified by the General Assembly in its Resolution 62/111. Our welcome also goes to Antigua and Barbuda as well as Zambia, who have joined as new members of this Committee. We align ourselves with the statement made by the Chair of the G-77.

Mr. Chairman,

The defining feature of the work of this Committee lies in its relationship with the DPI. The resultant cooperative effort must constantly seek to improve upon the delivery of relevant information inputs to millions of users worldwide.

The DPI's role is pivotal as it has to strategically communicate the message of the United Nations with the greatest public impact in a situation where the UN confronts a variety of complex challenges and opportunities. This debate provides an opportunity to reflect core concerns of Member States over the process of dissemination of information.

Our focus has to be on how to make the work of the Department of Information as pertinent and accessible as possible to the largest number of users, making it an effective channel for the flow of information between the UN and the peoples of the world. To achieve this, the widest possible range of technologies need to be harnessed. As many countries simultaneously span several centuries in technological terms, it is essential that the end product offered by DPI is dispensed through a wide spectrum of media channels. Thus, while the selection employed should incorporate the latest technologies, such as webcasts and broadcasts, a strong emphasis must also be retained on using traditional and very cost-effective means of communication, such as radio and print. These remain of tremendous

importance in reaching out to ordinary people in many parts of the developing world and must constantly be kept in sight.

We also fully support the effort to enable the emergence of a more linguistically equal world, in which information is disseminated not merely in the official languages of the UN, but also in other languages. We congratulate the DPI for now producing information in roughly 80 local languages and note with satisfaction that UN radio programmes are being made in Bengali, Hindi and Urdu, among other languages. This promotion of multilingualism by the DPI in its activities needs to be further widened and intensified. There is also much value in raising the level of local content and local involvement in the production of DPI programme material. Doing so will also encourage local talent and creativity to involve itself in the work of the UN.

A related issue is the question of UN Information Centres, which are crucial in enhancing the public image of the UN and in disseminating its message, particularly in the developing world. We agree with the views expressed by many that our goal should be to strengthen, rather than weaken, these information outposts of the United Nations. Hub and spoke models may appeal in certain managerial contexts, but make little sense in a people-intensive sector such as the media. We would encourage the Department to work closely with host countries in these efforts. We would also support adequate budgetary resources being made available to strengthen the public outreach and ensure the effective functioning of Information Centres in developing countries. We would like to commend the useful and creative work being undertaken by UNIC in New Delhi, including in the promotion of the Millennium Development Goals.

Mr. Chairman,

The information being disseminated has to be relevant and meaningful and, to the extent pertinent, it has to be spread in a manner that makes it not only interesting but also enjoyable for the target audience. This is not easy to achieve and those working on content management must be driven by a constant yearning for further improvement. Moreover, DPI's programmes must seek to further deepen and strengthen their coverage and projection of the most noteworthy activities of the UN, in particular, those that directly impact upon the lives of ordinary people. These include humanitarian activities as also the work performed, often under extremely demanding circumstances, by UN peacekeepers in strife-torn lands.

As regards the latter, we would like to see DPI, DPKO and DFS working closely in highlighting UN peacekeeping success stories and providing accurate, impartial and timely information on the regular activities of UN peacekeepers, as also on the exceptional work that they often do that goes beyond the routine keeping of the peace and the call of duty. To provide just one example with which I am somewhat familiar, Indian soldiers serving as UN peacekeepers have consistently carved a very special place for themselves in the hearts and minds of the local population in their area of operations as a result of their healing touch via enthusiastic involvement in providing medical and veterinary support, promoting local community development projects aimed at soil conservation and water harvesting, provision of free vocational training, etc. It is such stories of goodwill and down to earth cooperation that the world needs to hear more of! In conclusion, Mr Chairman, I would like to assure you of India's full backing as you guide the work of this Committee, as well as to the DPI as it projects the UN story and builds support for the Organization and its noble aims.

Thank you, Mr. Chairman.

**693. Statement by Permanent Representative at the UN
Nirupam Sen on Threats to International Peace and
Security caused by Terrorist Acts at the Security Council.**

New York, May 6, 2008.

Mr. President,

At the outset, please accept my felicitations on your assumption of the Presidency of the Security Council for this month. We are happy to participate in today's joint debate on three Security Council agenda items, whose implementation not only requires the fullest collective effort by the entire membership, but also their fullest participation in processes that affect the collective security of all nations equally. I will limit my remarks to a few comments, proceeding from my last statement on this subject in March this year, before this august body.

Mr. President,

To begin with, let me reiterate India's abiding determination to work towards concluding the long-pending effort to finalize a Comprehensive Convention on International Terrorism (CCIT), moving beyond debates that essentially miss the larger point. A CCIT must be agreed upon to create a strong interlocking network of member states, international organizations and specialized agencies working in unison to counter terrorism. The adoption of a CCIT, through exercising the law-making powers of the General Assembly, is in the interests of all member States and would reinvigorate the multi-lateral and collective dimensions of counter-terrorism efforts. India continues to call upon the world to act as one in denying terrorists, their ideologues and financiers access to arms, funds, means of transportation of their deadly goods, as well as safe havens.

For these overarching goals to be achieved there is also need for a more genuinely inclusive approach to be adopted by the Security Council taking along the larger membership of the General Assembly. While India remains committed to fully cooperating with all existing counter-terrorism mechanisms, as a State with a long experience of dealing with terrorism, we are of the view that better cooperation between the Council and the General Assembly will provide our collective efforts greater legitimacy and ownership. There are also operational benefits to be achieved from greater collective pragmatism in tackling terrorism through multilateral mechanisms.

Not the least of these potential benefits are better implementation of resolutions relating to counter-terrorism, namely UNSCRs 1267, 1373 and 1540, and their successor resolutions.

However, to reach that stage of pragmatic, goal-based cooperation, we need to do much more than we have done thus far. It is also unclear whether better implementation of these resolutions can be secured by "upgrading" their existing mandates, as in the recent case of the UNSCR 1810, or by working to identify genuine barriers to better implementation, and promoting a more collaborative system of extending assistance, utilizing available regional expertise and appropriate technologies.

Implementation of UNSCR 1540, including reporting, remains a national responsibility on the basis of national legislation, arrangements and regulations. There may also be merit in an approach that 'incentivizes' cooperation rather than the current effort to continually raise the bar for implementation, by adding newer and more intrusive reporting obligations, irrespective of whether these are currently described as voluntary tasks. That apart, however, I also wish to reiterate at this juncture, India's continuing emphasis on the need for closer and more comprehensive international cooperation to root out the phenomenon of illicit activities, such as clandestine proliferation of sensitive technologies which could contribute to the manufacture of WMDs.

The Security Council should also consider whether its existing procedures need some overhauling, in particular, with regard to the sanctions regime imposed upon Al- Qaeda and Taliban operatives, entities and their supporters. While at one level the effort to improve review and delisting modalities are to be welcomed, there is also a need for the Council to examine its own practice of selectively evaluating the provision of information that it seeks from Member States, which is sometimes not utilized for unrelated and procedural reasons. With regard to the Counter Terrorism Committee (CTC) and the CTED, we are encouraged by the positive efforts of the dynamic new Executive Director. Greater dialogue and consultation with all member States, and better operational coordination with the CTITF is the correct way forward for a mechanism that eventually has a larger responsibility to the entire membership of the UN. Ultimately, we will collectively benefit from the furtherance of the ongoing process of making the CTED a completely professional, apolitical body that goes beyond analysis of reports. However, the CTED can only transcend the minutiae of examining reports and PIAs once it is no longer perceived as a

largely political body, but as an apolitical, professional organization. In conclusion, Mr. President, I would venture the following suggestions:

- Better coordination between the various arms of the Council's counter-terrorism mechanism must begin at home; in other words, inter-related aspects of the work of the 1267 Committee, the 1540 Committee and the CTC should be dovetailed with those of the CTITF. These tasks should also be more closely linked with the core tasks of UNODC, Interpol, ICAO, IMO and others.
- While supporting the greater emphasis on the extension of technical assistance bilaterally, regionally and internationally, we should keep in mind the primary task of ensuring the fullest implementation of the relevant UNSCRs, before we take the process forward to more technical and potentially intrusive areas of implementation that may add to the sense of report fatigue among many member states.
- India remains willing to provide all assistance in the larger effort to counter the threat of terrorism. Our commitment to do so is already on record, in India's Fifth Report submitted to the CTC in March 2007; and we are willing to share information with other relevant UN mechanisms that work in these fields. Such assistance can be provided by India bilaterally or multilaterally, especially to countries that are themselves not directly threatened by terrorism, but whose participation is vital to the success of the larger international effort.

Mr. President,

Our comments here today are in the spirit of pressing for further forward movement in bringing existing mechanisms to deal with terrorism closer together in operational terms. We welcome more efforts to use such open dialogues as a mechanism to build closer cooperation within the international system. Therefore we look forward to working in a pragmatic manner to alter the regrettable perception outside these walls that the UN's role in combating terrorism is limited to statements and speeches, but not to concrete measures. For this, we must not only work to foster better institutional cooperation and "jointed-ness" within the international system, we must also focus on implementing goals that can be achieved before mandating new and potentially challenging new commitments.

I thank you Mr. President.

**694. Statement by Permanent Representative at the UN
Nirupam Sen during the thematic discussion on Africa
at the 16th session of the Commission on Sustainable
Development.**

New York, May 8, 2008.

Mr. Chairman,

At the outset, we associate ourselves with the statement made by the Chair of G-77. The special needs of Africa have long been recognized by the international community and I am happy that Africa is among the cluster of issues identified for separate consideration at CSD-16.

Our focus must be on concrete measures that support the development efforts of African countries. We recognize the initiatives that African countries have been making towards achieving sustainable development. The thematic cluster of agriculture, rural development, land, drought and desertification is critical to these efforts. The international community must effectively support these efforts through provision of greater financial resources, technology transfer and capacity building.

On its part, India has been honoured to be able to contribute, within the limits of its capacity and capability as a developing country, to the development efforts of African countries. Our interaction has been at bilateral, regional and pan-African levels in the true spirit of South - South cooperation. India's trade and investment with Africa has risen sharply over the last few years. Indian companies have made investments worth several billion dollars in diverse sectors. These include capital goods industries that add value to Africa's exports, particularly to the EU and the US. A pan-African e-connectivity project to connect 53 African countries is a flagship project. Current two-way trade between India and Africa stands at over US\$ 30 billion. Yet, the true potential for trade and investment is much greater.

I am particularly happy to share that the 1st India - Africa Forum Summit held in New Delhi recently marked a new chapter in the long history of civilizational contact, friendship and cooperation between India and Africa. Our Prime Minister emphasized that "it is our intention to become a close partner in Africa's resurgence".

Allow me to highlight some of the new initiatives announced at the Summit:

- India has undertaken numerous projects in African countries, supported by concessional lines of credit offered by the EXIM Bank of India. Over the last 5 years, these credit lines have amounted to US\$ 2.15 billion. India has now pledged to more than double this amount by offering credit lines worth US\$ 5.4 billion dollars over the next five years. This will be used to promote projects prioritized by Africa for its development needs and objectives, particularly all dimensions of physical infrastructure. We would also encourage participation of small, medium and micro enterprises, as well as involve the private sector, particularly through public-private partnerships.
- India has been implementing grant-based projects in critical areas focussing on human resources development and capacity building in many African countries. We have pledged to enhance these efforts by providing grants in excess of US\$ 500 million during the next five years. These efforts will also focus on creating regional and pan-African institutions of higher education, particularly in science, IT and vocational education, as well as invest in R&D in renewable energy and agricultural development.
- India believes that cooperation to enhance capacity building and develop human resources must be a key focus of international assistance. India has provided a large number of long-term scholarships to African students to pursue undergraduate, post-graduate and higher courses in India. The number of such scholarships will now be doubled.
- Technical capacity development is a key component of developing human potential and enhancing governance capabilities. Towards this end, India's ITEC programme annually supports the short-term training of over 1100 Africans in India in various technical fields. This will now be enhanced to 1600 trainees per year.
- India has always recognized the crucial importance of market access in ensuring the development dimension of international trade. Towards this end, India announced a Duty Free Tariff Preference Scheme for LDCs, which would also be applicable to the 34 African LDCs. The scheme will provide preferential market access on tariff lines that comprise 92.5% of global exports of LDCs and cover 94%

of India's total tariff lines. In conclusion, Mr. Chairman, I would like to reaffirm India's long-standing commitment to close cooperation with Africa.

Thank you.

**695. Statement by Permanent Representative at the UN
Nirupam Sen on Post-Conflict Peacekeeping at the
Security Council.**

New York, May 20, 2008.

Madame President,

Let me begin by adding India's heart-felt condolences at the loss of life sustained in two of our close neighbours - the People's Republic of China and Myanmar - as a result of natural calamities. Let me also record our appreciation for the leadership of the Security Council by the United Kingdom Presidency for the month of May.

It was in recognition of the international community's less-than-stellar record of securing lasting peace, after more successfully stopping conflict, that we established the Peace-building Commission as the centerpiece of an international effort to promote post-conflict peace consolidation. In that context, Madame President, our delegation aligns itself with the statement by the Permanent Representative of Jamaica on behalf of NAM.

Madame President,

I shall try to address the questions posed in the concept paper. The roots of Peace-building go deep into the Security Council mandate on peacekeeping. It is therefore important to implement Article 44 of the UN Charter and involve Troop Contributing Countries in shaping the mandate. For instance, our armed forces have effective "winning minds and hearts" programmes.

National ownership is essential in peace-building. This is not just a question of sovereignty but a functional matter. For instance, schools and clinics have on occasion been constructed by multiple agencies and NGOs in post-conflict situations, which later were found unsustainable, leading to

duplication and wastage. National ownership mitigates this. While the paper correctly points out the need for better operational coordination among international agencies on the ground, empowerment of SRSGs is not necessarily the solution, especially if such concentration of authority is achieved at the expense of nascent national leadership-which is often an inevitable if unintended consequence. It is national ownership that has to assess critical requirements and gaps, and share this assessment institutionally with those who have the ability to deliver on these gaps. This will also help us answer the problem posed by the inadequacy of international resources to help stabilize post-conflict countries "when everything is urgent".

As for the "planning and running of operations", including the International Financial Institutions, the Peace-building Commission has the mandate to bring together and mobilize all actors, especially in marshalling resources. Above all it signals the commitment of the international community to the State concerned, unique as a hedge against political risk to private capital. Bretton Woods Institutions need to be brought into an optimal agenda. They advised Cambodia to reduce its civil service by 20% after Pol Pot had already decimated it (the downsizing was apparently not enough for the BWIs). Four countries in Africa that collapsed into civil war were in the preceding ten years 62 to 83% under an IMF programme. Mining companies sometimes leave next to nothing to government for expenditure on social infrastructure. IMF pressure to privatize makes such imbalanced contracting more likely. It would be useful for World Bank or another expert body to develop model auction procedures and model contracts.

The concept paper touches upon factors that hamper efforts of the UN and the international community in country. The UN contractual system needs to be streamlined and conditions of service of the Secretariat staff in the field harmonized with those of funds and programmes to get better quality personnel and retain them.

The concept paper outlines the need to establish a rapidly-deployable civilian capacity. This idea must be elaborated through open, inclusive and transparent negotiations, to give the end result greater legitimacy. India hopes to participate fully in discussing this concept, which potentially holds the promise of a new paradigm of cooperation between developed and developing states. Once the concept is fully elaborated, recruitment of those who can deploy the appropriate talents, skills and technologies would greatly help in peacebuilding.

Madame President,

In conclusion, I would like to underline our support for the notion that post-conflict peace consolidation remains one of the most serious challenges that the UN faces collectively. We cannot however produce more creative and flexible approaches to address this challenge unless we are willing to move beyond fixed positions. Outside these walls, the world sees only one United Nations, not its constituent organs or member States. Our effort must therefore be based on a more collective and inclusive approach, one that justifies the first word of the title, the United Nations.

I thank you.

696. Statement Freely adapted from extempore remarks by Permanent Representative at the UN Nirupam Sen on the Global Food Crisis at the Special Meeting of the UN Economic and Social Council.

New York, May 21, 2008.

Mr. President,

I appreciate your timely initiative in organizing this special meeting today on a topic that is of concern to all, but of vital importance to developing countries.

In terms of consumption, the problem is not low per capita levels in developing countries but excessive and unsustainable consumption levels in developed countries. But the projection is the opposite: as Oscar Wilde predicted, 'nothing succeeds like excess'. The 'road of excess', here at any rate, does not lead to the 'palace of wisdom'. The Issues Note for this meeting surprisingly mentions this argument, especially the rising consumption levels of the middle class in developing countries without mentioning that this trend has existed for a decade and therefore cannot explain rising prices over the last one year.

Over the last two years, oil demand has increased by one percent annually but the prices in dollar terms by ninety percent. The response of the international community to this has been dismal. It is not just a question of

the direct contribution of these prices via agricultural and irrigation equipment, fertilizers and pesticides to high food prices. The initial conjunction of lower food prices and high oil prices led to sale of grain to energy producers for conversion into energy bolstered by a climate change argument that was overdone. In several developed countries, land for food crops shrank as it was lost to biofuels. While Dr. Joachim von Braun yesterday called only for a moratorium, it is heartening that Prof. Jeffrey Sachs called for a rollback and elimination. For the first time, there is a direct link between oil prices and food prices, oil markets and food markets, as our Prime Minister has said. It is this structural consequence that is disturbing and complicates policy. The financial crisis has also had an impact. A consequence is that speculators, encouraged by the dollar's relative decline, 'invest' in food futures to profit from the 'commodities super cycle'. While not a primary cause of the crisis, it makes it worse; hopefully this bubble would also burst with at least a marginal beneficial effect on food prices.

Therefore, apropos the Issues Note we would caution the WFP against using such a mechanism. The speaker before me referred to the right to food. The UN Special Rapporteur on the right to food, Jean Ziegler in his recent report points to systemwide incoherence with FAO, WFP, UNDP working for this right and the Bretton Woods Institutions advising countries not just to export surplus food (which is right) but to shift from food crops for the domestic population to cash crops for export (which is harmful). The BWIs also seem to feel that subsidies are good for the rich but bad for the poor, with a predictable negative impact on food production. Last year, when one African country reintroduced fertilizers and seeds subsidies, it became self sufficient and even a net exporter. It is therefore appropriate that the Hon'ble President of this country, Malawi, addressed us via videolink. I must therefore take issue with Dr. Joachim von Braun's prescription of eliminating restrictions on food exports in the interest of market purism. This continues the tradition of BWI's advice, partly responsible for the crisis in the first place. It is sometimes forgotten that during the Green Revolution, there were improved seeds and IPRs were in the public domain. Now, thanks to TRIPS, they are in the private domain, with monopolistic pricing of agricultural inputs. Dr. von Braun had nothing to say on this profoundly anti-market source of food price inflation.

The international community collectively can do much. IFAD could engage more intensively on solutions to problems of small and marginal farmers. For various international bodies, key areas are land development, water

management and seed technology. Addressing TRIPS is as important as eliminating the agricultural subsidies of the developed. We are heartened by Prime Minister Gordon Brown's support for this in his message yesterday. Crucial to the entire exercise is a global response to the Third Energy Crisis (totally missing so far) at least as adequate as the response to the first two energy crises and addressing the link between oil and food prices via bio-fuels. In short, as Prime Minister Dr. Manmohan Singh has said, "we need a new global compact between the developed and the developing countries, between the land surplus and labour surplus economies, between food exporters and food importers".

I thank you, Sir.

Annexure

Some measures taken by India some of which may be replicable in other developing countries.

India feeds seventeen percent of the world's population on less than five percent of the world's water and three percent of its arable land. Over a period of time, India has taken several measures to increase agricultural output and food security such as revitalizing agricultural research and extension; National Agricultural Development Plan; a national food security mission; the National Rural Employment Guarantee Scheme; waiver of bank loans to small and marginal farmers; easier rural credit; strengthening the public procurement and public distribution system; banning futures trading in a range of food items. Many of these measures owe much to the leadership of Mrs. Sonia Gandhi, Chairperson of India's ruling United Progressive Alliance. The latest estimates show that India will have a record harvest in 2007-08, thereby continuing its four decades old self sufficiency in food-grains.

697. Statement by Counsellor at the Permanent Mission of India at the UN Anupam Ray at the 2nd closed meeting of the Ad Hoc Working on the Revitalization of the General Assembly.

New York, May 30, 2008.

Distinguished co-chairs,

I would like to begin by thanking the co-chairs for organizing today's meeting of the ad hoc working group on the revitalization of the General Assembly in accordance with UNGA resolution 61/292 and the wishes of the member states expressed during the first meeting of the working group. My delegation would like to align itself with the statement made by the distinguished representative of Cuba on behalf of the Non-Aligned movement.

I would like to particularly commend the efforts of the co-chairs in painstakingly cataloguing all the relevant provisions on revitalization and in dividing the relevant provisions into three main clusters. The clusters, that deal with firstly, working methods, documentation, agenda, etc; secondly, with Selection of the Secretary General; and finally, with the role and authority of the General Assembly have been further conveniently subdivided into thematic areas. This is an admirable effort and helps us obtain an overview about where the revitalization process stands.

My delegation acknowledges the importance of progress on these issues, particularly progress in those areas where practical results can be obtained. However, there is a limit to which discussions relating to time limits on speeches and provisions relating to modern technologies will serve the essential purpose of revitalizing the General Assembly.

Distinguished co-chairs,

Hobbes said in the Leviathan that "Covenants, without the sword, are but words." This is the crux of the issue when it comes to revitalization of the General Assembly. We all accept that the disparity of authority between the Security Council and the chief deliberative, policy-making and representative organ of the United Nations, its General Assembly needs to be addressed.

My delegation believes that Member States will be unsuccessful in addressing this disparity unless, like the Leviathan, the General Assembly

is given its sword. Leviathan requires the sword to lift man out of the state of nature and to uphold justice. The General Assembly needs to be given its sword which will take its role to something beyond just deliberation, representation and policy-making. It needs the tools and the mechanisms that will enable it to have a role in the creation and implementation of international law and in the creation and maintenance of a just and equitable world order.

Distinguished co-chairs,

The General Assembly requires to be empowered in order for it to be revitalized. My delegation believes that debates on procedures and working methods by themselves are sterile. When an advisor warned him against conflict with the Catholic Church, Josef Stalin apparently asked , "How many divisions does the pope have?" This was of course a rhetorical question. However it brings home the point that there is a limit to the usefulness of discussing procedural issues.

The General Assembly will not be empowered by strengthening procedures. It will only be strengthened if the Member States, like the Commonwealth in the Leviathan, decide to give it a sword. Without agreeing with David Lloyd George's statement that diplomats were invented to simply waste time, my delegation would like to submit that it is only the presence of political will that will revitalize and empower the General Assembly.

Distinguished co-chairs,

What form will this sword take? My delegation has a number of suggestions. Control over legislations, over materials and over men, confers power. Within the United Nations system, it is the Security Council, with its limited representation and its opaque working methods, that controls the legislation and the manpower. The General Assembly has a role in the control of materials through the Fifth Committee and the Budgetary process.

My delegation has in the past made a number of proposals to empower the General Assembly. These have been in the areas of making the Security Council more responsive to the General Assembly, in the General Assembly taking a greater role in the maintenance of international peace and security, through the process of mandate review, in the process of selection the Secretary General and in the strengthening of ECOSOC. We believe that this require serious consideration if any useful discussion on revitalization is to be followed through.

Further to these proposals, my delegation also believes that the General Assembly should have a greater role in the appointments of senior personnel in the United Nations system. My delegation would like to suggest that senior personnel of the rank of Under Secretary General and those vested with substantial executive authority obtain the approval of the General Assembly.

Distinguished co-chairs

I would like to conclude by quoting George Barnard Shaw who once said that if all economists in the world were laid side to side they would not reach a conclusion. I hope that this is not the case with our current discussion. The revitalization of the General Assembly is too serious a task to be left to a sterile death in the very committees that it is meant to empower.

Thank You

**698. Statement by Permanent Representative at the UN
Nirupam Sen at the High Level Meeting on Comprehensive
Review of the Progress Achieved in Realizing the
Declaration of Commitment on HIV/AIDS and the Political
Declaration on HIV/AIDS.**

New York, June 12, 2008.

Mr. President,

I would like to thank you for convening this High Level meeting on HIV/AIDS. India recognizes that political commitment is essential to combat HIV/AIDS. Our National Council on AIDS is chaired by the Prime Minister and the State Councils by the Chief Ministers. This political commitment at the highest levels has been critical in containing the epidemic. India has a low adult HIV prevalence of 0.36% and it is estimated that the HIV positive population is between 2 to 3.1 million. Enormous efforts are being made to contain and roll-back this epidemic.

Mr. President,

The National Aids Control Programme in India works on the basis that prevention is better than cure. It is committed to ensuring universal access

to HIV AIDS prevention. 75% of the National AIDS control programme's budget is allocated to execution of preventive services, particularly among groups with high risk behaviour such as commercial sex workers, injecting drug users, truckers and migrant labour. Voluntary blood collections have increased and the capacity of blood banks to screen out infected blood is continuously being strengthened. Treatment of sexually transmitted infections is accorded high priority and a target of treating 10 million cases has been set. Our data collection capabilities have increased manifold. In a country of India's size and diversity this has been essential in mapping the geographical spread of the epidemic and in identifying demographic parameters of the epidemic.

Counselling and testing services, which started in a few centres in 2000, are now provided in nearly 5000 facilities. Testing increased more than six fold in two years with 7 million persons tested last year. An additional 3 million women in the antenatal period were tested under the prevention of parent to child transmission programme.

This scaling up of testing facilities has resulted in the detection of 1 million HIV infections. It is planned to further increase the number of tests by 300% in the next five years and bring it to 22 million annually by 2012. These counseling and testing services are provided free to all Indians, a practical example of our commitment to universal access.

Mr. President,

The Government of India recognizes that the stigma and discrimination associated with the disease can be as bad as the physical suffering. A comprehensive communication strategy on HIV/AIDS developed by the Government addresses this issue along with the classical prevention aspects. Special attention is being given to youth and women, who are often the worst sufferers. An adolescent education programme covers more than 100,000 schools. A Red Ribbon express was launched in December 2007 and will cover 180 stations and over 50,000 villages over a year. The efforts to promote an enabling environment and reduce societal discrimination of persons infected with HIV and their families are being made involving civil society, political leadership, grass root level workers, self help groups and others. A government policy document on gender equality and a draft law on AIDS are being finalized that will, among other things, address these issues.

Mr. President,

Mahatma Gandhi said that "It is health that is real wealth and not pieces of gold and silver." In accordance with this philosophy, the Government of India is committed, in the face of resource constraints and competing priorities, to ensuring that no Indian dies of AIDS because of lack of treatment. 140,000 of our citizens are currently being provided anti retroviral therapy and treatment for opportunistic infections. Blood monitoring services to determine when HIV positive persons might require treatment also provided free. We are also trying, again in the face of resource and capacity constraints, to make available second line drugs. AIDS treatment is as much about the treatment of opportunistic infections and related diseases such as tuberculosis (TB). Strong linkages have been developed in India between the National AIDS Control Programme and the National TB Programme for early detection of HIV TB co-infections and appropriate treatment.

Mr. President,

I would like to compliment you on your active efforts to involve civil society in the proceedings of this event. The informal civil society hearing was remarkable in the diversity and the personal commitment of the participants to the battle against HIV/AIDS. In India the Government has actively involved civil society in the war against HIV/AIDS. 764 NGOs have been enlisted by the National AIDS Control Programme to deliver targeted interventions.

Mr. President,

Although HIV/AIDS is yet to find its Edward Jenner or Jonas E Salk, anti-retroviral medications ensure that AIDS patients can live. My delegation is perturbed by para 38 of the UN Secretary General's report (A/62/780) that only 30% of those who needed anti-retrovirals were receiving these drugs. We are even more perturbed by para 41 of the report which states that these shortfalls are expected to continue.

Mr. President,

I would like to draw your attention to the Indian experience in producing anti- retrovirals. For the same amount of money that would provide 20,000 rich patients in developing countries with branded and patented medicines, Indian pharma companies can provide generic retrovirals for 2 million patients in these countries. Not only are Indian generic retrovirals a hundred times cheaper, they are also more suited to the special needs of the

developing world, besides being often far more effective than those produced in the developed world. Our companies and research have produced a unique triple anti-retroviral as well as paediatric formulations that make life far easier for patients.

Mr. President,

I would like to endorse your view that addressing the interconnected problems of AIDS, Climate Change, extreme poverty, hunger and sustainable development and rising food prices are a moral and political imperative of our time.

Thanks to TRIPS, IPRs are in the private domain and the monopolistic pricing of seeds and other inputs exacerbates the problem of food insecurity and high food prices. This increases malnutrition and the population of the malnourished. To fight climate change, adaptation and mitigation technologies need to be available at affordable rates and again TRIPS is a barrier. Global warming would increase and make more widespread disease vectors. Finally, many of those who survive these two would perish because they cannot afford medicines, thanks to TRIPS. They would not even be left with affordable traditional herbs, thanks to bio piracy and patenting and a refusal to act on CBD. Professor Stiglitz, Nobel Prize winner, in his "Making Globalisation Work", accurately states that TRIPS was "the death warrant for thousands of people in the poorest countries of the world". High prices also reduce the welfare of consumers in developed countries.

Mr. President,

The General Assembly, given its universality and convening power, can discuss and give directions on this vital issue. It is not necessary to be so radical as to try to reopen the whole of TRIPS. But it is necessary to make the public health exception simple and effective and to have similar exceptions for seeds and climate change. Paragraph 6 of TRIPS on compulsory licensing was a problem because para 31 (f) which restricted to domestic market and there was a problem for countries which do not have domestic generic manufacturing capacity. Document WT/L/540 waives 31 (f) but takes away with the right hand what it gives with the left. There has to be a notification of exact quantities; establishing lack of or insufficient manufacturing capacity; specific measures against trade diversion; another developing country with capacity has to establish that the amount is only for export to the particular country importing; it has to be specially labeled; and each batch requires a fresh procedure. The current procedure is far

too cumbersome since no country has been able to make use of this so called public health exception. It is important for those countries who have domestic generic manufacturing capability to use flexibilities. Indian law has done this. It was challenged in the Indian High Court but failed. Hopefully, affordable drugs for the benefit of all will continue to be produced by Indian manufacturers.

In this connection we take note of para 42 of the Secretary General's Report which states that "owing to advocacy by activists, UNAIDS and other partners, the emergence of competition from generic manufacturers and significant price cuts by pharmaceutical companies, prices for many first line anti-retroviral drugs have fallen sharply over the last decade."

Mr. President,

Like the vaccines that terminated the threat of polio and small pox, HIV/ AIDS needs a vaccine. India is at the forefront of global efforts to develop such a vaccine. Indian research institutes such as the National AIDS Research Institute, Tuberculosis Research Centre and the All India Institute for Medical Sciences (AIIMS) are engaged in clinical evaluations and trials. A prototype of candidate vaccine based on DNA and MVA has also been developed for HIV-I subtype 'C' at the AIIMS. It is our hope that these combined efforts will lead to the relegation of AIDS, like the Black Death to the realm of history and nursery rhymes.

I thank you.

**699. Statement by Permanent Representative at the UN
Nirupam Sen at the meeting of the Open-ended Working
Group on the Question of Equitable Representation on
and Increase in the membership of the Security Council.**

New York, June 17, 2008.

Mr. President,

Let me join my colleagues in thanking you for organizing these discussions and for your leadership of this process. Permit me also to express our appreciation of the consultations that preceded and the intense labour that has gone into Report of the Vice Chairpersons, Their Excellencies, the Permanent Representatives of Bangladesh, Chile, Djibouti and Portugal. Our remarks should not be construed as criticism but as a forthright expression and exchange of views so that we can together identify the practical measures needed to begin intergovernmental negotiations. Before I comment on the Report, permit me to respond to some remarks by a leading representative of the Uniting for Consensus who spoke of unilateralism. It seems that they do not trouble themselves with the Rules of Procedure even if there was the slightest reason to suppose that they are acquainted with these. There is nothing in the Rules or in consensus decision 61/561 against a resolution. That is why the phrase "including through" is added to the phrase "intergovernmental negotiations" in this consensus decision. Moreover it has not even been moved or tabled and is only being discussed. If a decision taken by consensus on starting intergovernmental negotiations cannot be implemented by consensus over ten months, then clearly it would have to be implemented by alternative means.

He focused on non permanent seats. The OIC communiqué clearly speaks of representation in all categories which logically includes the permanent category. He has to decide whether he belongs to the UFC or OIC. We know what we mean. It seems that they do not know what they mean and so do not know what we mean. He referred to a so called NAM fallback position which was not a part of any NAM declaration and was in practice abandon since it does not find any mention in any document for the last twelve years. The logic of his position was that the UFC are the champions of sincerity. Whether or not the champions of sincerity examine themselves, they should at least examine their arguments. It is remarkable to use such an argument and remain silent on such a sequel. An eddy may for a time

run against the stream but its time soon runs out, especially if this eddy is only the sophistries of interest. Decision 61/561 was a consensus decision. We talk of consensus but in nine months, we have not been able to implement even a consensus decision. We remain part of the consensus to hold intergovernmental negotiations. We remain part of the consensus to implement a consensus decision. What we cannot do is to become part of a minority aspiration to divert or delay this implementation or to render it devoid of meaning. The sub text of the report under consideration is still pursuing a transitional or an intermediate solution - whether through citing examples in support or through talking of timelines and what is achievable in the short term or through stating the impossibility of the Big Bang. None of this is in the consensus decision. In it there is no limitation in terms of time or a negotiating basis that would exclude some elements. Incidentally, the Big Bang is not even universally accepted in modern cosmic physics. We can pride ourselves on partially achieving the Big Bang because there has been lots of noise though no results. So we have already achieved the Big Bang. Now for the results. The pursuit of the intermediate or transitional approach is truly extraordinary. In para 2 of Section V on 'Shifting the Paradigm', the Report admits that "many member states have argued that such option could be the eventual outcome of an intergovernmental negotiations". Yet the Report contradicts itself by its sub text of a transitional approach from the beginning. One remembers some verses of Shelley: "To hope and bear, to hope till hope creates/From its own wreck the thing it contemplates"! Every hope may begin as a forlorn hope but this one is unique in continuing as a forlorn hope. The consensus decision 61/561 is clear - we have to negotiate on the basis of progress achieved and the proposals and positions of the member states. In addition such a transitional model has been rejected by the African group, by many small states, by us and by many countries supporting us. In spite of all this, in a subjective and antidemocratic fashion, the attempt seems to continue. The transitional model amounts to art for art's sake, reform for the sake of reform because it does not address any of the real problems that the Security Council faces. It does not add elected permanent members held accountable for reforming working methods, for ensuring implementation of Article 31 and 32 of the Charter, for sharply increasing access of non members and small states, for gradually changing the political culture on the use of veto, to name a few. Where permanent members adhere forcefully to the status quo or narrow national interest, consensus and action become difficult; where their interests are not involved, consensus is easily achieved but there is no incentive for them to take meaningful action; thus the Council

falls into double jeopardy and becomes doubly dysfunctional. The circle of permanent membership has to be opened through the principles of election and subsequent accountability while ensuring permanent institutional memory, with new points of view and fresh resources to ensure optimal decision making and its translation into action. It is illogical to suggest that we should leave out whatever cannot be achieved in a short time line even though it clearly means not addressing any of these problems, in short ignoring all real problems. The Permanent Representative of USA also rightly said that the time line concept is not the best way to proceed since it would lead to the lowest common denominator. The Permanent Representative of Singapore also spoke broadly in this vein. The report sees rebalancing only in terms of representation. Rebalancing has to be directed towards increasing the effectiveness in terms of optimal decisions and their implementation. To take a middle point between different positions without looking at the weight of support, the political context and above all, addressing real problems is even worse: it is not just reform for the sake of reform but a mechanical reform for the sake of reform. Therefore, it is not the model being pursued that is transitional but the illusion that it is acceptable or will work. To adapt Aime Cesaire, an organization that shuts its eyes to its most crucial problems is stricken. Let me now turn to the Seven Pillars. These cannot in the last resort supersede decision 61/561 since this decision was formally adopted by consensus by the General Assembly. These pillars are nevertheless useful and have been broadly accepted. Theoretically, we did not challenge these pillars and in a theoretical sense we still do not. But as Goethe told Eckermann, "theory my friend is grey but eternally green is the tree of life". We have to modify theory and hypothesis in the light of life's experience.

The OEWG by consensus has not been able so far to identify negotiables, modalities or framework. The Report in para 2 of Section II on "Framework and Modalities" implicitly recognizes this when it speaks of the "GA deciding to shift consideration of the reform process (even the process) to the GA plenary". The unanimous decision 61/561 is clear: the OEWG can continue its discussions aimed at promoting understanding and general agreement but paragraph (d) is categorical in mentioning the General Assembly and intergovernmental negotiations that build on the progress achieved so far as well as the positions and proposals of the member states. It is extraordinary that so much time has elapsed and yet this has not been done: a text that encapsulates all major positions can be easily drafted provided there is political will. Drafting such a text and embarking on

intergovernmental negotiations have to be recognized as two phases that move in opposite directions: the text has to initially include even contradictory positions because it has to be expansive and inclusive, to include everybody in these negotiations; the initial part of the actual negotiations will move in the opposite direction of narrowing this text and elements that do not command majority support would have to be discarded. Incidentally, it is unfortunate that when speaking of new inputs and reaffirmed views, the Report, in the part on the African group, only mentions the Ezulwini consensus without spelling out the elements which go against the transitional model and may not be widely known.

Again Resolution L69 cosponsored by about thirty developing countries of Africa, Asia and GRULAC was tabled like the other resolutions but is selectively omitted from the Report. Let me now turn to P5 perspectives presented in the Report. The position outlined in the joint declaration of UK and France is quite different from the way it is interpreted by some. The second para quoted in the Report has clear support for the expansion of permanent membership. Even the next para which considers renewable longer term seats clearly speaks of "deciding to turn these new types of seats into permanent ones". In short, it does not leave entirely to the future this issue but adopts a teleological approach where the transition is to something predetermined. Again the Report quotes the DPR of USA for whom we have all respect on not alienating a significant section of the membership by the result of Security Council reform, but is silent on his President's specific support for an expansion of permanent membership to include Japan and some others.

Fortunately, the Permanent Representative of USA redressed the balance in his remarks today. The Report also ignores an even more specific paragraph on expansion, namely Secretary of State Condoleezza Rice's article "The New American Realism" in the latest July-August 2008 issue of Foreign Affairs where developing countries from Asia, Africa and Latin America are specifically mentioned. The PR of China's remark that what is not acceptable to Africa would not be acceptable, which we had also supported, is curiously and selectively omitted. Is empowerment of Africa not important? We are happy that the Permanent Representative of China reiterated this today. The Report's section IV on "No Reform Option" states in para 2 the possibility on the basis of differing positions that we could eventually conclude that there is no common ground for intergovernmental negotiations. This can only be possible if one remains caught in the trap of looking for a uniform middle text and thereby going against the consensus

decision 61/561 which is clear that all positions have to be included even if they are not common. It is for the process of negotiations to create a greater measure of commonality. Again the Report goes against consensus decision 61/561 by implying that compromise is needed even before beginning negotiations. This is the case in both para 3 of this Section IV on 'No Reform Option' and para I of Section VI "Towards intergovernmental negotiations".

Compromise is a product of negotiations and not its precondition. Apropos of the last section "Towards intergovernmental negotiations", we must confess that we found the section misleading, in some ways deeply so. There is no agreement as seems to be implied on additional non permanent seats separately, only as part of a whole in which there is expansion of both permanent and non permanent members. Non permanent members were expanded in 1965 but the problems of the Council listed earlier have continued to mount. There would be little point in making the Council unwieldy without making it more effective. Non permanent members have not been able to resolve these problems, stop encroachment or improve working methods in any significant way. Often as in the case of resolutions on Iran or even Western Sahara, non members get the resolution before non permanent members. The delegation of Costa Rica opposed the practice where four of the five permanent members and Spain, a non member, negotiated and finalized the draft without reference to other Council members and yet, paradoxically, it is part of the UFC which feels that expansion of non permanent members is an adequate reform. New permanent members who are elected and then held accountable would be able to address these problems, making for a stronger Council in itself and above all in its accountability to the General Assembly, thereby strengthening the General Assembly also. To give an analogy, the strength of Lincoln's presidency anticipated Justice Jackson's dictum that the Executive becomes powerful by acting in conjunction with the Legislature.

The Section's words on Big Bang and time line are equally problematic: if no agreement can be achieved now, why should it suddenly and miraculously become possible after ten years? Would essential vital national interests change so completely? Why therefore stop and revisit? Would this not simply be art for art's sake, reform for the sake of reform? Isn't it better to have protracted negotiations but address the real problems? Is this momentum or the drift and downward eddy of the evasion and postponement of reform, a kind of homeopathic treatment of reform?

We were trying to examine points in the Report with which we can wholeheartedly agree. We found only two points: the summaries of different positions and the clear statement. "All (I repeat all) have expressed their disposition to enter intergovernmental negotiations". But the Report does not clearly translate this disposition into practice.

The Annex in its present form is unacceptable because it continues the old logical redundancy of permanent seats. All existing seats are permanent, five held by specific countries and ten held by specific regions. The terminology is also against the Charter because Article 23 speaks of permanent and non permanent members, not seats. It is also a move backward from the Cyprus Paper which had at least mentioned the expansion of permanent membership. It is significant that in the summary of the Cyprus Paper, this has been selectively omitted. The Annex also goes against not just the Charter but consensus decision 61/561 on including the positions and proposals of all the member states by mentioning the extended seat option and the expansion of permanent membership as alternatives instead of separately and by omitting any mention of the application of Article 27 (3), the question of working methods and the question of access of small and island developing states. Only if the Annex is amended by adding these elements can it serve as an acceptable basis for negotiations. Thus searching for points to agree with, I was reminded of Somerset Maugham's remark on old age: "There are many virtues in growing old", he began before pausing for a very long time. He then continued by saying that "I am just trying to think what they are"

I thank you, Sir

700. Statement by Advisor to the Ministry of Earth Sciences and Member of the Indian Delegation to the UN S. K. Das at the 18th meeting of the State Parties to the 1982 United Nations Convention on the Laws of the Sea.

New York, June 18, 2008.

Thank You Mr. President,

At the outset my delegation wishes to thank the Secretary-General for his comprehensive Report on Oceans and the Law of the Sea.

India attaches high importance to the effective functioning of the institutions established under the United Nations Convention on the Law of the Sea and therefore follows closely the work of all subsidiary institutions under the Convention, namely the International Sea-bed Authority, the International Tribunal for the Law of the Sea and the Commission on the Limits of the Continental Shelf.

We congratulate the Chairman of the Commission on the Limits of Continental Shelf for the efforts by the Commission under his leadership in undertaking the considerations of the submissions. We also thank him as well as the Secretariat for providing detailed information on various issues and constraints arising from the increasing workload of the Commission and the anticipated increase in the number of submissions in the coming years. We hope that the issue relating to deadline of submissions will be resolved amicably.

Over the past few years, the international community has focused on issues relating to management of living marine resources, and conservation and management of biological diversity of the sea-bed in areas beyond national jurisdiction. The Ad Hoc Working Group to study issues relating to the conservation and sustainable use of marine biological diversity beyond areas of national jurisdiction had met in May this year. The important issues that were debated related to the setting up of Marine protected Areas in the High Seas and the legal regime governing Marine Genetic Resources in areas beyond national jurisdiction and related issues of access and benefit sharing.

The management and governance of high seas areas presents a formidable challenge for the international community as development of an effective regime for the protection of biodiversity in areas beyond national jurisdiction

is seen to be circumscribing some of the traditional high seas freedoms. The challenges of protecting, conserving and ensuring sustainable management of marine biodiversity beyond national jurisdiction are thus enormous.

Mr. President,

The myriad threats to biodiversity in areas beyond national jurisdiction range from open access to fisheries, destructive fishing practices like bottom trawling, pollution from ships and other land based activities, and new threats deriving from bio-prospecting and open ocean iron fertilisation. A combination of measures, including monitoring, scientific investigation, and improved governance are required to prevent or reduce harmful impacts of such activities on biological diversity.

Deep seabed research is still largely the domain of select developed countries. It is imperative that there be increased flow of scientific data and information and transfer of knowledge to developing countries so as to improve their understanding and knowledge of oceans and deep seas, in particular the extent and vulnerability of deep sea biodiversity and ecosystems. We welcome in this regard the setting up of an Endowment Fund by the International Seabed Authority to promote the conduct of marine scientific research in the international seabed Area for the benefit of all mankind by supporting the participation of qualified scientists and technical personnel from developing countries in marine scientific research programmes.

The international seabed authority is now involved in drafting the regulation of polymetallic sulfides. We hope that the issues regarding configuration of blocks and geographic proximity of blocks in the allocated areas for exploration will be successfully resolved. The Secretary General of the International Sea bed Authority reported that an interest in exploring the ocean resources has been expressed by the private sector. This is an encouraging development.

Mr. President,

Over fishing, destructive fishing practices and IUU fishing continue to be great threats to the conservation, management and sustainable use of biodiversity on the high seas. To combat IUU fishing it is essential to give priority to compliance and enforcement measures, including effective Port State measures, listing of vessels, and developing and implementing

integrated monitoring, control and surveillance packages. It is important to sustainably manage fish stocks and protect vulnerable marine ecosystems and thus to find a balance between sustainable use and conservation.

India is implementing a dedicated programme on coastal and marine area management. Under this programme, GIS based information system has been developed for 11 identified critical habitats. Other major programs include:

Determination of Waste Load Allocation and Waste assimilation capacity at selected estuaries along coastal areas of India, Development of model Integrated Coastal and Marine Area Management (ICMAM) plans for selected sites along the coastline of India, and Development of Guidelines for Environmental Impact Assessment (EIA) studies for marine and coastal developmental activities and processes. India also has a dedicated coastal ocean and marine pollution monitoring system which regularly monitors the level of pollutants in coastal sea including the hotspots.

Mr. President,

India is pleased to report the establishment of tsunami Early Warning System for Indian Ocean with a dedicated Tsunami Warning Centre at Hyderabad. This system was set up and operationalised on 15th October, 2007. The Indian Tsunami Early Warning System comprises a real-time network of seismic stations, Bottom Pressure Recorders (BPR) and tide gauges to detect tsunamigenic earthquakes and to monitor tsunamis. The system detects all earthquake events of more than 6 Magnitude occurring in the Indian Ocean in the less than 20 minutes of occurrence. A host of communication methods are employed for timely reception of data from the sensors as well as for dissemination of alerts. A high level of redundancy is being built into the communication system to avoid single point failures with all the necessary computational and communication infrastructure that enables reception of real-time data from all the sensors, analysis of the data, generation and dissemination of tsunami advisories following a standard operating procedure. India is willing to offer Tsunami advisories to all affected countries in the Indian ocean.

Thank You

**701. Statement by Permanent Representative at the UN
Nirupam Sen on the Situation in Afghanistan at Security
Council.**

New Delhi, July 9, 2008.

Mr. President,

Let me begin by expressing my delegation's pleasure at seeing your delegation assume the Presidency of the Security Council for this month. I also express India's appreciation to you, Mr. President, for scheduling today's debate on this important topic. Let me also welcome the presence of His Excellency Dr Rangin Spanta, Foreign Minister of Afghanistan and H.E Mr. Makhdoom Shah Mohammed Qureshi, Foreign Minister of Pakistan, and thank them for their statements, as well as their expressions of concern and sympathy over the terrorist attack at our Embassy in Kabul, their clear condemnation of which has been echoed by Members of this Council today. Last but not least, I also thank Special Representative Kai Eide, and USG John Holmes for their briefings today.

Mr. President,

I am distressed to have to begin my statement by acknowledging the condolences of this Council over the barbaric attack upon our Embassy in Kabul two days ago. Not only were scores of innocent Afghan lives lost, we also lost four Indian colleagues working with a fraternal people in their hour of need. Those who perpetrated this act, and those who train and protect terrorists and enable them to commit horrific acts of violence, are no better than the basest criminals. It is for this reason that security within Afghanistan, and coordinated efforts to stop terrorists from operating with impunity beyond Afghanistan's borders must be the paramount priority of our collective efforts in Afghanistan. For those who commit these acts, and for those responsible for the greater villainy of sheltering and enabling terrorists, our response remains firm and unyielding, as our Prime Minister said: "We have lost Indians who were helping their Afghan brothers rebuild their lives and country. That endeavour must continue with renewed commitment". While mourning their loss, we believe we can best honour our fallen colleagues by redoubling our commitment to working with Afghanistan to secure stability and development in that country and consequently, in the region.

Mr. President,

Our discussion today takes place in the context of the recently-convened Paris Conference in Support of Afghanistan. Having participated in this Conference at the political level, India welcomes its outcome, and the proposed Presidential Statement of this Council in support of that outcome. We share the sense in this room of the need for the international community to provide not just the resources-important as they are-but also the much-needed political space to UNAMA to enable it to exercise its mandate to assist the national Government coordinate international assistance for Afghanistan.

In this context, I should also underline that as a regional partner and a country with strong historic and cultural links with Afghanistan, India sees merit in the approach adopted by SRSG Eide, as reflected in the report before us. The mandate provided to UNAMA by this Council through resolution 1806 provides ample scope for the UN to play a central role in the international community. Streamlining our collective efforts through UNAMA, in support of the newly adopted Afghan National Development Strategy, and through the national Budget, will underscore that international assistance is in line with priorities set by Afghanistan. What is however crucial is that such coordination must be effected in a manner that is coherent and focused. We need to avoid the temptation of trying to resolve all of Afghanistan's problems at once, just as we need to avoid the pitfalls of setting unrealistic benchmarks and objectives that are desirable for us, but less so for the very people we seek to help. While the international community collectively repeats commitments underscoring the importance of such a demand-driven approach, greater efforts are required on the ground to realize such commitments. Without an Afghan-led process of discussing and finalizing the prioritization of tasks, our collective efforts run the very real risk of losing legitimacy.

Events on the ground make it clear that any listing of challenges before the Afghan people must begin with security. We cannot afford to slacken our resolve or our efforts in combating the forces of terrorism, extremism and crime, wherever and in whatever forms these groups may take. Most importantly, this must be a collective effort: we cannot succeed if we send mixed signals through bargains for temporary and local peace, while the rest of us contend with the consequences of such deals. The rising trend of attacks, abductions and suicide bombings is also a sign that terrorist groups are emboldened by displays of wavering confidence

that such bargains imply, and therefore hope to weaken our collective resolve. We cannot have partial compromises with such forces and yet nurture hopes of prevailing in Afghanistan. We remain convinced that there needs to be a much closer alignment between the consistent application of force wherever terrorist groups are present, and the political objectives of our efforts in Afghanistan, in which UNAMA must play an important role.

Results cannot be achieved "on the ground" without adequate attention to both security and developmental components. However, to achieve sustainable success over the long-term on both fronts, the common denominator is capacity building.

Thus far, our collective effort in this vital aspect has been episodic and inadequate. We need to do better expeditiously. The report identifies some of the key areas in which such capacity building efforts are vital, and we concur in particular with the notion that strengthening of the national police and public administration have to be taken up as a priority. Limited results in this regard will be reflected by an equally paltry list for us to show for our efforts in any of the benchmarks for progress that we may have set ourselves, be they in the field of counter-narcotics or efficient utilization of budgetary resources. It is for this reason that India has made capacity-building a priority element in all our efforts in Afghanistan, even in the infrastructure projects we are executing in Afghanistan, all of which include strong capacity-building components in them. To achieve these and other core objectives in Afghanistan, we have collectively agreed to empower the UN, through its Assistance Mission in Afghanistan, to facilitate greater coherence amongst us, and between us and our hosts. However, we cannot achieve results unless we enable UNAMA to do its job, by providing it the material and human resources to execute its mandate in Afghanistan. Not only does the UN need these resources on an exceptional basis for Afghanistan, it needs these exceptionally soon. The time for us to empower UNAMA is now.

Mr. President,

India will remain fully committed to implementing the inter-related security, political and developmental challenges facing Afghanistan. We remain unflinching in our commitment to reconstruction, development and capacity-building in Afghanistan. As one of Afghanistan's largest development partners, India remains willing to support UNAMA in improving donor cohesion, in support of Afghan-defined priorities. In conclusion, Mr

President, let me also reiterate our abiding belief and commitment to our shared objective: assisting Afghanistan complete its reemergence as a modern democratic country, confident in its unique culture and pluralistic identities, at peace with itself and secure in its neighbourhood, firmly on the path to sustainable economic development and liberated from the burdens of the recent history of strife and privation. It is for this reason that we fully endorse the effort to empower the UN to bring us together in a more coherent partnership, to enable Afghanistan to secure the better future that lies within its reach.

I thank you, Mr. President.

**702. Statement by Permanent Representative at the UN
Nirupam Sen on the Global Food and Energy Crisis at
the 62nd session of the UNGA.**

New York, July 18, 2008.

Mr. President,

I thank you for convening this plenary meeting on a topic that continues to present unprecedented challenges to all, particularly to developing countries. At the outset, let me emphasize the appropriateness for dealing with the food and energy crises together, in an integrated manner. The sharp escalation in global oil prices have played a significant role in increasing input costs as well as in promoting bio-fuels, and both the energy and food crises have contributed significantly to inflation. I may add that it would have been even more useful to consider today the third crisis also - i.e. the global financial crisis, which is posing its interrelated challenges to our development efforts. Any meaningful response must address all these three issues. I thank the Secretary-General for providing the revised version of the Comprehensive Framework for Action [CFA], produced by his High-Level Task Force, and for his briefing here today. We are in the process of studying this voluminous document in detail, which has been made available only a couple of days ago. At this stage, I will only make a few preliminary comments on the document.

The CFA represents the consensus view of the UN System on how to respond to the global food crisis. Some actions suggested in the CFA are

important and need to be implemented. However, the CFA includes minimal, if any, contribution by Member States, who bear the primary burden in addressing the crisis, and as acknowledged by the CFA itself, are at the centre of the response. Let me reiterate that the contents of the CFA would have been enriched, and made easier to implement, if ideas and suggestions of Member States had been taken on board. I do note that the CFA proposes regular consultations with, inter alia, Member States. I am also encouraged that the CFA does not seek to prescribe specific policies and activities, but rather provides a range of options from which choices can be made. Nevertheless, the overall thrust of the document appears to list options that Member States and others should implement, without being part of the process of their elaboration.

The CFA also presents the food crisis as a threat and an opportunity. While every crisis can be considered an opportunity to rebuild anew, and enhanced food prices may result in improved returns to farmers, it would be unfortunate to present the desperation of millions of vulnerable people in their struggle to feed themselves as an opportunity. Mr. President, Even on substance of the recommendations, some key lacunae must be pointed out. It is clear that agricultural productive capacity of developing countries has been systematically undermined over time through astronomical agricultural subsidies in developed countries (combined with pressure on developing countries to lower their tariffs) and the harmful prescriptive advice from the Bretton Woods Institutions to indiscriminately shift away from food crops for the domestic population to cash crops for export, devastating for food security. It is good that the right to food has been recognized in the CFA - we would have hoped for better recommendations to ensure its realization. We would also have hoped that high food prices would have given the necessary impetus to developed countries for eliminating agricultural subsidies.

In 2005, the OECD countries agricultural subsidies amounted to US\$ 385.2 billion, while, in the WTO, these very countries induced developing countries to eliminate duties and barriers and expose their agriculture to this flood of subsidies. The developing countries' argument of food security was downplayed then. The very same argument is being used by the developed countries now. Earlier low food prices justified the subsidies of the rich. Today high food prices are used to justify these. Heads I win, tails you lose. This is how one squares the circle, has one's cake and eats it too.

The issue of bio-fuels has also been addressed incorrectly or hidden in the generalities of "recent supply and demand dynamics". The key difference

between foodgrain based bio-fuels and non-foodgrain based ones has been glossed over. Even if we decided to convert all of the world's grain into bio-fuel, fossil fuels would still be required and we would not be left with anything to eat. In such a scenario, diversion of land that grows cereal for human consumption into bio-fuel production is self-defeating. This morning you mentioned Sir "increasing demand from emerging economies" as one of the causes of supply-demand tension. The CFA does not mention this. Nor does FAO.

The recent World Bank Report by its senior economist Don Mitchell, who has done a detailed month by month analysis of food price inflation, has concluded that: "Rapid income growth in developing countries has not led to large increases in global grain consumption and was not a major factor responsible for the large price increases". He has even discounted successive droughts in Australia. He concludes that "without the increase in bio-fuels, global wheat and maize stocks would not have declined appreciably and price increases due to other factors would have been moderate" and that higher energy and fertiliser prices accounted for an increase of 15% while bio-fuels have been responsible for a 75% increase between 2002 and February 2008. The Report finds that biofuels production has distorted food markets by diverting grain away from food to fuel (a third of US corn and half of EU vegetable oils); taking away land for bio-fuel production; sparking financial speculation in foodgrains.

The CFA here inverts the facts when it calls speculation a consequence of food export restrictions when these restrictions are clearly a consequence of the inflation fuelled partly by speculation. Incidentally the Report finds that Brazilian biofuels (derived from sugarcane) have not had such an impact. Also missing from the CFA is any meaningful reference to technology. Agricultural research and development and transferring new technology to farmers is crucial to enhance global food production as well as to address possible climate change impact on agriculture. In this regard, addressing TRIPS is essential to avoid monopolistic pricing of agricultural inputs, and institutions like the CGIAR must be supported. At the time of the Green Revolution, IPR for seeds were in the public domain. Today, thanks to TRIPS, they are in the private domain.

The CFA appears to treat short-term response measures by various countries from a uni-dimensional perspective. Yet, such measures have ensured food security for millions and there has been commodity price stabilization, as acknowledged by the CFA. Logically, the matter is straight

forward. The CFA's analysis of causes is not optimal - in terms of their relative importance and balance. Therefore its recommendations cannot be optimal in terms of relative priorities. However, I would like to support some specific recommendations in the CFA, on nutrition intervention, school feeding programmes, enhanced safety nets, boost to small holder farmer production, investments in rural and agricultural infrastructure as well as reduction in post-harvest crop losses. These are among the measures India has been advocating and implementing itself. Mr. President, Despite its shortcomings, the CFA at least represents an effort to address a pressing global issue.

However, no such global effort is visible when it comes to addressing the energy crisis. Over the last two years, oil demand has increased by one percent annually but prices in dollar terms have increased by ninety percent. It is time to take concerted global action now to address this crisis if we are to ensure that limited development gains are not lost. Let me conclude, Mr. President, on a positive note. India has been feeding seventeen per cent of the world's population on less than five per cent of the world's water and three per cent of its arable land. Over a period of time, we have taken several measures to further increase agricultural output and food security. Latest estimates indicate that India will have a record harvest for the year 2007-08, thereby continuing our self-sufficiency in foodgrains since the late 1960s thanks to the "Green Revolution". This experience gives us confidence that current global challenges can be met. But it requires genuine cooperation and concerted action at the global level.

I thank you, Mr. President.

**703. Statement by Permanent Representative at the UN
Nirupam Sen on the Letter dated 22nd November 2006
from the Secretary General Addressed to the President
of the Security Council at the Security Council.**

New York, July 18, 2008.

Mr. President,

At the outset, I thank you for scheduling this discussion on the UN Mission in Nepal, and for enabling our delegation to express its views on this matter.

The extent and depth of the India-Nepal bilateral relationship cannot be overemphasized. It is based on ties of history, culture, language, ethnicity, kinship and geography. We enjoy the closest political ties, with close relationships between our political parties, and equally close economic and commercial relations. India is also partnering Nepal's development, in sectors ranging from energy to agriculture.

Since our two countries share an open border, with open access to each other's markets and privileged access for the citizens of the other country, no country has more to gain from peace, stability and development in Nepal than India. It is for this reason that we have remained closely involved, not only in Nepal, but also in India and at all multilateral fora, through a decade of difficulties as an armed conflict raged, and subsequently as Nepalese leaders and people brought the conflict to a halt and began a peace process to bring closure to that conflict. Just as the conflict was indigenous, so too is the peace process. All credit should go to the people of Nepal and to the wise and statesmanlike efforts of Nepalese political parties and leaders for bringing about a peace process.

India has strongly supported the peace process in Nepal, the ownership of which is entirely indigenous. We have warmly welcomed every positive step taken by Nepalese stakeholders in a complex and sensitive process, without outside assistance or advice. Against all odds, and despite cynicism, the Nepalese people not only maintained the cohesion of the Seven Party Alliance, but also proceeded to implement their Comprehensive Peace Agreement. Despite delays, Nepalese authorities conducted an extremely successful Constituent Assembly election this April, which was truly a historic moment. Despite facing complex challenges in its peace process, Nepal and its leaders have indigenously addressed each of these.

As a close and friendly neighbour, India stands ready to assist in any manner that the leaders and people of Nepal may ask of us. Mr President, India has fully supported the UN's efforts to assist Nepal, at the request of the host Government. We have been in close contact with UNMIN at all levels, including in New Delhi. Our support was never limited to words: we also provided material support at the crucial phase when UNMIN was being established. Taking into account the current situation on the ground, we fully support Nepal's request, made formally on July 8, to extend the mandate of UNMIN for a further six months. The letter makes it abundantly clear that some of the mandates relating to the Mission, as laid down in UNSCR 1740, have already been accomplished. The request for an extension of six months therefore pertains to the remainder of the original mandate: a clear statement with nothing implied and nothing to be interpreted or clarified. We also note that this request is on the basis of a consensus between key Nepalese political parties, including the CPN (Maoist), who have a plurality in the Constituent Assembly. This consensus is also reflected in the June 25 Seven Party Agreement, and is therefore fundamental to the continuation of political processes in Nepal. I have carefully listened to the excellent statement of the PR of Nepal just now, and I noted that the idea of support for the peace process as whole does not find mention. From that standpoint, it is difficult to accept parts of the Secretary-General's latest report. Bearing in mind that it is at Nepal's request for assistance on specific aspects of its peace process that UNMIN exists, it seems inappropriate for the UNSG to advise this Council to extend the mandate for one month unless Nepal's request is "clarified".

In other words, unless Nepal's request is in line with what UNMIN wants it to say, the request is not good enough! This could imply that UNMIN would be asking the new government-whose constituents have expressed their views in the July 8 letter-to reinterpret the June 25 Agreement. In doing so, UNMIN could find itself in the unfortunate position of having its role become a matter of contention, rather than being seen as a positive contributor to the peace process. It may also be seen to imply that the report is suggesting that political formations that are to form the Government are liable to changing their minds. Not only does this run counter to the trend of Nepali political parties abiding by previous commitments, it is also an extraordinary claim to make, even by implication. Furthermore, the report also suggests, in para 64, that UNMIN has "been made aware" of a broad consensus within Nepal that continuation of a UN political presence is important for the completion of the peace process. While we would welcome being made similarly aware, what should have weight is not a subjective impression

that the UN may have gained through verbal interactions, but what the people's elected representatives convey in writing.

To our knowledge, UNMIN's support has not been sought in taking decisions on issues relating to the peace process. Indeed, the greatest strength of the peace process is that it has consistently been nationally-owned, directed and implemented. The Nepalese request for UN support was with regard to the implementation of aspects of their peace process which required an internationally-accepted monitor. These included advising the national election commission in the conduct of elections and monitoring the management of arms and the forces of the two contending armies. And yet, in para 68, it is asserted that the "key requirement now is not the continuation of monitoring arrangements so much as the transition to a durable and permanent solution". While this may or may not be so, it certainly cannot be automatically assumed that the durability and permanence of arrangements to address the problem of two armed forces depends on the active involvement of the UN. Mr. President, I am constrained to point out that we have noted a consistent effort to expand the definition of what Nepal seeks in terms of support to include a role in the Nepali peace process, irrespective of the desire of Nepalese interlocutors. To insist on a role that the host nation is reluctant to provide is to risk jeopardizing the work of UNMIN thus far. This should be avoided at all costs, as it is this that risks undermining the UN's investment in Nepal; not the other way around. In this context, this Council must also seriously consider whether to permit a liberal interpretation of the principle of the sanctity of a State's requests for specific assistance. We often hear the counter-argument that it is for the Council to decide on what action is appropriate in each case, but not when parallels are drawn between Nepal and other issues on the Agenda of this Council. Let us not forget that Nepal approached the UN for assistance of its own free will; not because the situation in that country was a threat to international peace and security. Mr. President, We therefore urge the Council to accept the Nepalese request, as contained in its letter of July 8, 2008, in letter and spirit. To put it directly, the continuation of UNMIN on a smaller scale, to engage in the remainder of the mandate for a period of six months, is what Nepal has sought. It is precisely what they should get; no more, no less.

Thank you Mr. President.

704. Statement by Permanent Representative at the UN Nirupam Sen at the meeting of the Open-ended Working Group on the Question of Equitable Representation and Increase in the Membership of the Security Council and other Matters related to the Security Council at the 62nd session of the UNGA.

New York, September 2, 2008.

Mr. President,

Thank you for finally convening this meeting of the Open-Ended Working Group to discuss its draft report for the 62nd GA.

GA Decision 61/561 gave a clear and unanimous mandate to the President of the General Assembly to commence intergovernmental negotiations at the 62nd GA on the basis of progress achieved and the proposals of all the member states. Yet, with less than 2 weeks to go for the conclusion of the 62nd session, this mandate so far remains unimplemented. The report may do its best to give the impression of movement without real movement and give regress the mask of progress but nothing can conceal this failure. It was amply clear in the 61st session that we cannot have a unified internally consistent initial basis for negotiations. Hence the unanimous mandate 61/561 at the end of the 61st session. The 62nd session has tried the same experiment and failed with the same failure, only more ingloriously - instead of implementing a clear unanimous mandate which envisaged an initial internally inconsistent basis for negotiations which was envisaged to become more coherent and consistent through the process of negotiations. In place of such an implementation, all this elaborate machinery - overarching groups, seven pillars, task forces - has only meant so many diversions, false trails, red herrings, obstacles and impediments rather than concrete implementation of a unanimous mandate. Instead of going down the main road, all this rushing down blind alleys has inevitably meant coming to dead ends.

The draft OEWG report ignores the factual observation of even the Task Force Report that all delegations are in favour of commencing inter-governmental negotiations. It ignores the views of the small and island states grouped around Resolution L69 who have repeatedly called for the commencement of inter-governmental negotiations. In short it ignores the views of the majority and is simply an attempt of a tiny and unrepresentative

minority to again delay inter-governmental negotiations and to redefine and dilute the unanimous mandate of the 61st session. As in previous sessions since 1994 the draft text seeks to push this issue to the next session: as a radical thinker once wrote, history repeats itself, the first time as tragedy, the second as farce.

The same thinker in the same text said that when we do real things then the content goes beyond the phrase. When we do not do anything real, then the phrase is more than the content, in fact the phrase is everything and the content nothing. The draft that is before us today has been selectively discussed with a few chosen delegations. How can we build in an open, inclusive and transparent manner on something whose basis is non-open, non-inclusive, non-transparent, crafted by a narrow group of four who cannot be considered representative? This is not democratic but anti-democratic, not transparent but opaque, not inclusive but exclusive, not open ended but closed to the overwhelming majority. Further, the views and amendments of a minority have been incorporated, while ignoring those of the overwhelming majority. Their aspirations are clear - commence intergovernmental negotiations now, in an informal GA plenary, without preconditions, so that the long delayed comprehensive reform of the Security Council can begin. This majority does not understand why intergovernmental negotiations have not yet started; it questions why the mandate of the OEWG must be renewed year after year, when it is clear that its deliberations are not moving the process forward; it rejects attempts by a few to block commencement of negotiations through obfuscation.

As mentioned in the "Alice in Wonderland"/"Alice Through the Looking-glass" books, we have been running very fast in order to stay where we are, in fact to regress. We have been wandering not even in wonderland but in a wilderness. The draft OEWG report is but the stamp and seal of approval on this bare-faced mummery, the finishing touches on this make-believe, looking-glass world. We cannot be a party to this. There is a clear unanimous mandate given by the 61st session. We should implement it. There is still time to commence intergovernmental negotiations during this session. It is with this hope that I will outline some of our concerns with the draft report presented by you. Let me also reiterate that we cannot accept a report that does not address these concerns.

Mr. President,

Despite the serious misgivings that many colleagues articulated at the last OEWG meeting about the "seven principles", the draft report and the draft

decision repeatedly refer to these principles as having been supported and their relevance being reaffirmed. This is far from accurate. The "seven principles" may have been generally accepted as useful in the context of OEWG only but they most emphatically do not apply to inter-governmental negotiations. Out of deference to you, Mr. President, we, like the silent majority, had not theoretically challenged these principles on earlier occasions when you had referred to them though we had clearly said that life had moved on and that these principles in any case cannot supersede Decision 61/561. Most important of all these have never been inter-governmentally agreed on and therefore cannot form part of the basis for inter-governmental negotiations. Many of the principles are irrelevant at this stage, and some principles appear to be there only for misuse by some Member States. They certainly cannot be a basis for intergovernmental negotiations.

There is little point in using language about "general agreement" from the Resolution setting up the OEWG. At that time it was expected to promote such agreement and facilitate reform. Over the last fifteen years has it done so? It has become a prolonged excuse for doing nothing, a mere talking shop, an ersatz for reform, a justification of inaction. Did we follow this path for the PBC or HRC? No. That is why we have these bodies rather than mere talk about how to set up these bodies. Attempts to straitjacket the negotiations under the term "general agreement" cannot hide the true intent of its proponents, i.e., the desire of a small minority to block the yearning for change of the overwhelming majority. The reference to this term has been extracted out of context from some previous resolutions. Let us not forget that Decision 61/561, adopted not only by general agreement but unanimously, has not yet been implemented. If we need to specify the degree of support required in this process towards reform, let us use a term that has been accepted, i.e. "the affirmative vote of at least two thirds of the Members of the General Assembly" from GA Resolution 53/30. We would insist that the term "general agreement" be deleted in the chapeau of the draft decision as well as in para (c), and it be replaced with the above agreed formulation.

Let me now refer to what many will argue is the "progress" achieved in this draft decision over previous OEWG reports, i.e., para (e) that purportedly "decides" to commence intergovernmental negotiations. Yet, this para does not talk of when such negotiations are to begin or even where they are to begin. Moreover, the draft decision also includes various erroneous and

irrelevant references, which will only serve to put pre-conditions on any negotiations rather than move them forward. Actual commencement of negotiations remains a chimera.

If we genuinely want to commence negotiations, we need to be more specific, and eliminate all pre-conditions. We still have a little less than 2 weeks in this session - we would propose that we mandate negotiations to commence within one week of the adoption of the draft Decision, in an informal plenary of the GA, which is the only place for such negotiations to be conducted if they have to be open, transparent and inclusive. Further, intergovernmental negotiations, as the name suggests, should be on the basis of proposals of member states, clustered around key issues. These changes would permit us to salvage something from this session by actually commencing negotiations during this session.

That takes me to para (d), which attempts to define the basis for negotiations. It is not clear why we have to indulge in a selective identification of issues and documents, which are irrelevant to the commencement of negotiations. Once we have decided that the negotiations are to be based on the proposals of member states i.e. para (d) (1), there is absolutely no need for sub-paras (d)(2) and (d)(3). On the contrary, these can only serve to put road-blocks to the commencement of negotiations. We seek deletion of these two sub-paras. The draft decision on the draft OEWG report was first made public at a lunch in the appropriately named Racquet Club hosted by the distinguished Permanent Representative of San Marino. At the lunch, many Permanent Representatives, including those of South Africa and Singapore (the Chair of the Federation of Small States) called for the deletion of these paragraphs. Their advice has been ignored. The advice of many African states and small and island states who cosponsored the L69 Resolution has also been ignored. In short, the principle followed is to set aside the views of the majority and go by the views of a tiny minority. At lunch, there were about forty members present but this was considered unrepresentative and therefore the number was reduced to four (to make it more representative) in order to consider and craft the draft decision. The game therefore shifted from the Racquet Club to playing tennis without rackets and without nets, in fact without rules, especially the democratic rule of majority. As a Roman writer said of fifth century Gaul "Ibi totum licet" (There, anything goes).

We also presume that the reference to "a basis" rather than "the basis" at the end of para (d) is but a typographical error, which must be rectified.

A final point, Mr. President. Originally, you had correctly placed para (f), dealing with the report of the 63rd session OEWG, after current para (c). Yet, apparently at the instance of one country, its location has been changed. A similar construction in Decision 61/561 allowed some countries, quite disingenuously, to argue that since the paras before and after para (d) in that Decision referred to the OEWG, para (d) also implicitly referred to the OEWG. This was despite the clear understanding at that time that para (d) referred to negotiations in the GA plenary. We do not wish to see history repeat itself - let me be clear on our request that para (f) must be repositioned after para (c), while paras (d) and (e), which do not refer to the work of the OEWG, must be placed thereafter.

I have circulated, along with the written version of my statement, a summary of the textual changes that we are seeking. We request you to take these into account and make the necessary amendments. We remain hopeful that intergovernmental negotiations will be commenced during this session, so that a reform of the Security Council, including an expansion in permanent and non-permanent members, reform of its working methods and access for small and island states, sees the light of day. On an earlier occasion, I had referred to the great seventeenth century scientist Pierre Fermat who discovered the principle of least action. We should not go better and discover the principle of no action. It is also worth remembering that the General Assembly cannot be revitalized except through action. The debate therefore is not over phrases but over action: the choice is between language that leads to action and language that merely leads to further talk and inaction.

Thank you, Mr. President.

Amendments sought in the draft OEWG report

- Para 8: Delete the phrase "that were accepted" after the phrase "... seven principles" in line 9.
- Para 13: Delete the phrase "and reaffirmed their support for the seven principles" after the phrase "Member States exchanged views" in line 2.
- Para 15: Delete the phrase "the relevance of the seven principles and" after the word "reaffirmed" in line 3.

- Chapeau of the draft decision should be amended to read as "Mindful of the importance of the affirmative vote of at least two thirds of the Members of the General Assembly on the Question of Equitable Representation on...."
- Para (c) of the draft decision should be amended to read as "...the General Assembly aimed at achieving the affirmative vote of at least two thirds of the Members of the General Assembly in the consideration of all issues ..."
- Sub-paras (d)(2) and (d)(3) : Delete these sub-paras.
- The last line of para (d) should be amended to read as "form the basis for intergovernmental negotiations".
- Para (e) should be amended to read as "Decides also, building on the progress achieved so far, particularly during the sixty-first and sixty-second sessions, as well as the positions of and proposals made by Member States, to commence, within one week of the adoption of this Decision, intergovernmental negotiations on the basis of the positions of and proposals made by Member States clustered under key issues, in an informal plenary of the General Assembly, in good faith, with mutual respect and in an open, inclusive and transparent manner, on the question of equitable representation on and increase in the membership of the Security Council and other matters related to the Security Council, with the objective to seek a solution that can garner the affirmative vote of at least two thirds of the members of the General Assembly".
- Para (f) to be repositioned between current paras (c) and (d).

Extempore remarks by Permanent Representative Ambassador Nirupam Sen, in exercise of Right of Reply at the OEWG meeting on September 2, 2008.

I regret that the distinguished Permanent Representative of Italy is not in the Chamber. First of all, let me welcome him to New York, to this family of Permanent Representatives with all my heart and in all sincerity. I am glad that he is continuing the debating tradition of Marcello at whose departure I was worried that I was losing a debating partner. I am afraid that the distinguished Permanent Representative of Italy misinterpreted my statement. At no stage did I say that I do not want minority views reflected in the document. My demand was much more modest - that majority views

should also be reflected in the document, that minority views should not displace majority views. Incidentally, by identifying with the minority, the distinguished Permanent Representative of Italy admitted to the fact that the UFC is in a minority.

There were also a couple of factual inaccuracies when he spoke on the earlier reform process. Contrary to what he said both PBC and HRC were set up by a vote. The UNSC voted on the PBC and the GA voted on the HRC.

We have no difficulty in discussing regional seats. The point is not whether to discuss or not discuss regional seats. The point is whether to simply go on discussing regional seats or put this to the test of negotiations. Of course it is safer to just talk about regional seats. One could talk about them forever.

Apropos of the remarks of one of his UFC colleagues, I admit to being part of "the forces from multidimensional sources". The meaning of this may be obscure the rhyme is indisputable. I suppose when one is going away, one tends to be a little poetic.

As for divergences, Decision 61/561 is clear. It mandates negotiations on the basis of these divergences and implicitly envisages these being watered down and a more coherent and more cohesive text emerging through the process of negotiations. But this cannot happen if we do not even begin to negotiate.

I agree that to reform UNSC comprehensively is ambitious. I suppose those seeking to prevent this are guided entirely by lack of ambition and altruism. I suppose they do not have ambition because, as Shakespeare said, ambition is made of sterner stuff.

**705. Statement by Permanent Representative at the UN
Nirupam Sen on Agenda Item 118 - The United Nations
Global Counter Terrorism Strategy at the 62nd session
of the UNGA.**

New York, September 5, 2008.

Terrorism continues to be a pervasive and insidious threat to global security and to the core values of the United Nations. The recent attack on the Indian Embassy in Kabul and the serial blasts in Bangalore and Ahmedabad are gruesome reminders of the violence that we continue to face. Investigations are continuing and important arrests have been made. India therefore has an overriding interest in greater and more meaningful international cooperation to counter terrorism. It also underscores the rationale behind our conviction that no political cause, no argument, no belief can or should be used to justify acts of terrorism.

The future of the international campaign against terrorism hinges on success to root out terrorist networks and deter regimes from encouraging or harboring armed extremists. The General Assembly's inability to reach an agreement on concluding the Comprehensive Convention against International Terrorism (CCIT) limits the impact of its counterterrorism efforts. We urge Member States to seriously consider the package presented by the Coordinator that bridges the divergent views and facilitate the successful closure of the protracted negotiating process of concluding the CCIT. The adoption of a CCIT, through exercising the law-making powers of the General Assembly, is in the interests of all member States and would reinvigorate the multi-lateral and collective dimensions of counter-terrorism efforts. We continue to call upon the world to act as one in denying terrorists, their ideologues and financiers access to arms, funds, means of transportation of their deadly goods, as well as safe havens.

The significance of the UN Global counter terrorism strategy adopted two years ago, lies in the fact that it established a global counter-terrorism framework and presented a template that would be pivotal in guiding counter terrorism efforts of Member States as well the United Nations system.

We thank the Secretary General for his Report on activities of the United Nations system in implementing the Strategy, highlighting the efforts of the United Nations system to support implementation of the Strategy, both through its individual departments, specialized agencies, funds and

programs and through the Counter-Terrorism Implementation Task Force. We hope that the institutionalization of the Task Force would significantly strengthen its efforts to enable the different United Nations entities to effectively cooperate, coordinate and streamline the work of the United Nations system in the field of counter terrorism. In this regard we welcome the proposed "integrated implementation initiative" that will help the United Nations to deliver as "one" and avoid duplication.

Mr. President,

The primary responsibility of implementing the Strategy rests with the Member States; therefore we foresee the practical engagement of the Task Force with the Member States essentially to be at the bilateral level that would be guided by individual needs of each Member State. Nevertheless, we also encourage Member States' interaction with the Task Force that will provide them an opportunity to receive briefings from the Task Force on its work.

At the national level, as an unfortunate but inevitable result of our tragic history of dealing with terrorism, India has accumulated the expertise and experience for doing so. Our own efforts utilize all available tools within the arsenal of a democratic nation, governed by the rule of law. They run the gamut of efforts from surveillance methods governed by law, monitoring of financial flows and effective legislation regarding dual use items, to old fashioned police investigation work. Some of these measures are listed below:

I. Measures Conducive to the Spread of Terrorism

We are convinced that terrorism, in all its forms and manifestations, irrespective of its motivations, is a criminal and unjustifiable act and therefore reiterate that "no cause, no matter how just, can excuse terrorism".

The 13 major UN instruments relating to specific terrorist activities remain fundamental tools in the fight against terrorism. India is a Party to all the 13 major legal instruments. We also attach utmost importance to the fulfillment of obligations under the relevant counter terrorism resolutions of the United Nations. We have filed five National Reports to the Counter Terrorism Committee, giving a comprehensive picture of steps taken by India to counter terrorism. A 14 member composite delegation of UN counter-terrorism experts had visited India in 2006. A detailed presentation of India's counter-terrorism strategy was made to the Committee.

India is a nation inhabited by diverse cultural, religious and linguistic groups and has a long history of peaceful and harmonious existence in a multi-ethnic, multi-religious, multi-lingual and multi-cultural milieu. This has been possible only through a long heritage of dialogue and assimilation among people and myriad influences through the centuries. India believes that the process of encouraging the dialogue should also involve formulation of common approaches towards targeting eradication of poverty and fostering national and international co-operation to reduce economic and social inequalities. The Government of India through its National Common Minimum Programme addresses issues such as elimination of disparities in access, empowerment of women and securing a rightful place for the disadvantaged and the minorities. Several measures have been taken including positive discrimination to bring up their socio-economic and educational levels.

We have been following a growth process that is much more inclusive, endeavouring to raise incomes of the poor to bring about a much faster reduction in poverty, generate expansion in good quality employment, and ensure access to essential services such as health and education for all sections of the population. [Employment growth in India accelerated to 2.6% during 1999-2005 outpacing population growth. Employment generation, on a sustainable basis, has been one of the important objectives of India's planned economic development]. A notable initiative namely, National Rural Employment Guarantee programme was launched in 2006 which extends to the entire country and is one of the largest social security measures in history. It makes the right to work a fundamental right by providing 100 days of assured wage employment annually to one adult member in every rural household.

II. Measures to Prevent and Combat Terrorism

India's avowed policy is to deny safe havens and any support to terrorists. We have in place an extensive legal framework for tackling terrorism. The Unlawful Activities (Prevention) Act incorporates provisions that deal with all aspects of terrorism including incitement. The Act also criminalizes raising of funds for terrorist activities, holding of proceeds of terrorism, harboring of terrorists, unauthorized possession of any bomb, dynamite or hazardous explosive substance or other lethal weapon or substance capable of mass destruction or biological or chemical substance of warfare.

The necessary legal, regulatory and administrative framework for combating money laundering and financing of terrorism is also in place. The specific

legislations to prevent financing of terrorism include: (a) Foreign Exchange Management Act, 1999, (b) Narcotic Drugs and Psychotropic

Substances Act, 2003; and (c) Prevention of Money Laundering Act, 2003 of 1967 as amended in 2004,

A Financial Intelligence Unit-India is already in operation and is the nodal agency responsible for receiving, processing, analyzing and disseminating information relating to suspect financial transactions to intelligence and enforcement agencies.

The linkages between organized crime and terrorism also need to be more effectively addressed. The threat from nuclear, chemical and biological weapons proliferation and their use by non state actors has been always been a matter of great concern for India. To address these concerns we introduce annual Resolutions in the UNGA entitled "Reducing Nuclear Danger" and "Measures to prevent terrorists from acquiring weapons of mass destruction." India has not only adhered to the existing regulatory framework governing controls over weapons of mass destruction and their means of delivery but has proceeded to strengthen these obligations by enacting an overarching and integrated legislation prohibiting unlawful activities in relation to weapons of mass destruction and their delivery systems (The Weapons of Mass Destruction and their Delivery System (Prohibition of Unlawful Activities) Act, in 2005).

The indiscriminate and irresponsible use, including by non-State actors, of conventional weapons is also an issue which is of great concern to us as it continues to pose a grave danger to the security of States. Through appropriate legislative, procedural and administrative measures, an effective and comprehensive system has been instituted to regulate strategic exports from India to ensure that these weapons do not fall into wrong hands - whether state or non-state actors. Laws such as The Explosive Substances Act, 1908; The Narcotic Drugs and Psychotropic Substances Act, 1985; The Environment Protection Act, 1986; The Atomic Energy Act, 1962; The Foreign Trade (Development and Regulation) Act, 1992; The Customs Act, 1962 form the legal basis of India's system of export Controls. Various agencies of the Government are empowered to enforce the provisions of these laws.

The enforcement of effective customs, immigration and border controls are also necessary to prevent the movement of terrorists and the establishment of safe havens. We have appropriate controls in place. India is Party to the International Convention on Mutual Administrative Assistance in Customs

Matters (Johannesburg Convention), aimed at enhancing cooperation among Customs Administration of various countries to ensure supply chain security; and the International Convention on the Simplification and Harmonization of Customs Procedures (the Kyoto Convention) and has in place legislation and procedures to cover these Standards.

International Cooperation

The intricate linkages and networks that unite terror groups can only be challenged through concerted international cooperation and efforts by way of extradition, prosecution and information flows. India is engaged in these efforts at the regional as well as bilateral level.

India is a Party to the SAARC Regional Convention on Suppression of Terrorism. It provides for extradition of persons accused of terrorist activities within the SAARC member countries. To facilitate extradition in the absence of a bilateral agreement, the Indian Extradition Act, 1962 has provisions for treating an international convention as an extradition treaty to which India and a foreign State concerned are parties in respect of the offences dealt under that convention. In addition India has entered into bilateral extradition agreements with several countries.

India has a well developed law on mutual assistance in criminal matters which enables it to seek from and extend cooperation to foreign States in respect of mutual legal assistance in criminal matters. India has concluded Mutual Legal Assistance Treaties with 26 countries and 5 more Treaties are under negotiation. To ensure a greater sense of security within the South Asian region, recently at the Fifteenth Summit of the SAARC, a Convention on Mutual Legal Assistance in Criminal Matters was adopted which allows Member States to provide each other the greatest measure of mutual assistance in criminal matters.

India has been working with its international partners and regional organizations to prevent and combat international terrorism. We have constituted Joint Working Groups with 25 States, and regional organizations like the EU and BIMSTEC, for coordinating and cooperating in counter-terrorism efforts. These Groups meet regularly, and have proved useful in providing a forum for exchange of information and experiences.

III. Developing State Capacity to counter terrorism

We believe that capacity-building is one of the essential elements in combating terrorism. The Strategy in its entirety recommends an expanded role for the

existing counter-terrorist legal and institutional framework within the U.N, to enhance capabilities of Member States to combat terrorism. The various UN and other specialized agencies therefore have not only to coordinate their efforts but have to ensure that counter terrorism approaches and measures, cater to regional, national as well as contextual and functional specificities to facilitate multidimensional technical assistance needs. In this regard we appreciate the efforts of the Task Force which is engaged in ensuring coordinated and coherent efforts across the UN system to counter terrorism.

India remains willing to provide all assistance in the larger effort to counter the threat of terrorism. We are willing to share information with relevant UN entities and provide assistance bilaterally or multilaterally, especially to countries that are themselves not directly threatened by terrorism, but whose participation is vital to the success of the larger international effort.

IV. Measures to ensure respect for human rights and the rule of law as the fundamental basis of the fight against terrorism

Terrorism is an attack on the values that define the international community and seriously impairs the enjoyment of human rights. It intimidates the population and undermines the stability and prosperity of our societies. Nevertheless, States must ensure that all measures to combat terrorism comply with obligations under international law, in particular international human rights, refugee, and humanitarian law.

India has strong democratic institutions, an active civil society, free media and a legal community, firmly committed to the rule of law and the preservation of human rights. The security forces have strict directions to adhere to human rights standards while combating terrorism. We are committed to upholding human rights and ensuring that there is no impunity.

We appreciate the convening of the symposium on victims of terrorism that will help to put a human face on the scourge of terrorism and provide a forum for victims' voices. The best tribute we can pay to the victims of terrorism is to ensure no one else in the world suffers their fate.

It will be remiss of me not to thank Ambassador Rosenthal, the Permanent Representative of Guatemala, who has very ably facilitated the informal consultations to finalize the draft resolution to be adopted by the General Assembly.

706. Statement by Counsellor at the Permanent Mission of India at the UN Dr. Anupam Ray on Second Regular Session 2008 of the Executive Board of UNDP/UNFPA.

New York, September 8, 2008.

Mr. President,

We congratulate you and other members of the Bureau on your election. We look forward to working constructively with you and the other members of the Board during the course of this meeting and for the rest of the year. We also thank the Executive Director for her introductory remarks and for the statement.

At the outset, India would like to express its appreciation of the work of UNFPA and its consistent support, to the National Programmes, particularly those aimed at realization of the MDGs. The contribution of UNFPA as reflected in its country programmes has grown from US \$ 46.40 Million under the country Plan - 1 (1974-79) to US \$ 65 Million under country Plan - 7 (2008-2012). The country Plan - 7 as approved by Government of India, includes US \$ 60 Million from regular resources and another US \$ 5 Million from Other Resources. While this is but a small part of the total funds proposed to be invested by India in its Reproductive and Child Health Programme Phase - II, the strength of UNFPA lies in its partnership, technical support and the access to global best practices that it brings to our national efforts.

The Government of India is also appreciative, of the decision of UNFPA, to join pool financing along with the World Bank and the United Kingdom. The resultant sector-wide approach will, we hope, assist Government of India to expedite attainment of the MDGs and at the same time enhance the scope of participation of the UNFPA in the related programs of the country.

India has been making a steady progress towards attainment of the MDGs. A National Rural Health Mission has been launched in 2005. Health sector funding is expected to increase from the 2005 level of 0.9% of the GDP to 2-3% of the GDP by 2012. The total budgetary support to the health and family welfare programmes for the year 2008-09 is approximately 3 Billion USD. This is the larger framework at the national level of which the Country Programme - 7 will be a part. In particular India welcomes the focus of the programme on reproductive Health, Gender and Population and Development.

Health policy is gender sensitive. Gender analysis is used in health sector policy and planning and gender disaggregated data is being collected under all major programme interventions. Gender budgeting has been introduced across all sectors by the Government of India. A strengthened Preconception and Prenatal Diagnostic Techniques Act has, as its main objective checking female foeticide. UNFPA's partnership in this area has been particularly valuable. This has included important advocacy initiatives of working with Parliamentarians, partnering the medical fraternity, reaching out to religious leaders, working with the media & the entertainment industry etc.

In concluding, my delegation would like to state that the Government of India also values UNFPAs contribution in Government initiatives to operationalise the adolescent reproductive and sexual health strategy. This has included assistance in training and outreach and involvement of civil society.

Thank you, Mr. President.

707. Statement by Counsellor at the Permanent Mission of India at the UN Dr. Anupam Ray on Informal Plenary Consultations on System-wide Coherence.

New York, September 8, 2008.

Distinguished co-chairs,

Let me begin by thanking you for organizing today's informal plenary consultations on the issue of Systemwide Coherence. I would also like to place on record the appreciation of my delegation for the exhaustive report of the co-Chairs on System-wide Coherence as well as the options paper from the Secretary General concerning Gender Equality and the Empowerment of Women in its institutional dimension. They are both important additions to the ongoing intergovernmental process of consideration of the recommendations of the High Level Panel. My delegation at this point would like to align itself with the statement on this issue made by the Joint Coordination Committee of NAM and G77.

Distinguished co-chairs,

The report, its conclusions and recommendations, and the paper that we have before us today bring us to an important point in this inter-governmental exercise. Before we continue further, we need to remind ourselves of the objective of this exercise. It is to bring about improvements in the functioning of the development operations of the United Nations. When we talk of improvements, my delegation means genuine, verifiable improvement in the quality of development services, further enhancements in responsiveness to national requirements and a greater share for and a greater control by the United Nations of the global flows of voluntary funding in terms of budgetary discipline and Fifth Committee oversight.

Developing countries greatly value the universal, multilateral and impartial nature of UN Development Operations and would like the present process to strengthen it. Distinguished co-chairs, Keeping this overarching objective in mind, my delegation would like to express its support for the decision to restrict further inter-governmental deliberations on the issue of System-wide Coherence to Delivering as One, the Harmonization of Business Practices, Funding, Governance and Gender Equality and Empowerment of Women.

Restricting the agenda would improve the relevance of our deliberations and make them more focussed. We would, however, like to make it clear

that our endorsement of a restricted agenda does not in any way constitute a pre-judgement of its outcome or our stated positions on the items that remain on the table.

Distinguished co-chairs,

We have noted the conclusions and recommendations in respect of "Delivering as One". We have been told that this is essentially a management exercise, an exercise in rationalization that will improve delivery of services. We have apprehensions that we are pre-judging the impact of the exercise of "Delivering as One" and "One Leader". Our reservations on this topic have been reiterated on numerous occasions. We would also like to take this opportunity to stress that there is not enough data from the Pilots to analyse the impact of this structural change. We would therefore be ill-advised if we presume at this stage this change will actually make it easier for the UN system to work.

Distinguished co-chairs,

We would like to commend the Secretariat on its excellent presentation on the institutional options relating to the gender entity. The Government of India is fully supportive of the objectives of gender empowerment, gender parity and gender mainstreaming that this entity is meant to support. These are laudable objectives and the United Nations is mandated to pursue them both within and without. To those who believe that the Gender Entity will significantly improve the capabilities of the United Nations in this regard, we would like to sound a note of caution in the absence of clear proposals on funding, as we had stated to the co-Chairs. Gender mainstreaming is difficult to measure. Gender parity is easy. The United Nations was mandated in 1994, in 2000 and 2003 to bring about Gender parity amongst its employees. It is instructive to note that there has been hardly any improvement in female representation amongst UN employees in the last five years.

Distinguished co-chairs,

We believe that an invigorated gender entity must be genuinely accountable to Member States and must be adequately resourced. Genuine accountability can only be ensured if the General Assembly is involved in the process of selection of the entity through a system of confirmation hearings or through a system of vetting a short-list of qualified candidates. It would also require that the entity be subject to the financial and administrative authority of the General Assembly.

Distinguished co-chairs,

We need to ensure that the exercise of creating entities does not become an endeavour to rob Peter to pay Paul. We are distressed to note that there is no commitment to increase the availability of funds. My delegation believes that funding - core, predictable funding, funding without conditionalities, remains the key to the objective of making the United Nations deliver better and more. The Secretary General has repeatedly reported, most recently in A/63/201 that trends in financing the United Nations system, in particular the decline in core resources are of great concern. In the absence of a sound financial footing and an expanded funding base, the ability of the UN system to deliver coherently, relevantly and effectively is impaired.

Distinguished co-Chairs,

My delegation believes that the co-Chairs have correctly captured the mood of the General Assembly when they state in respect of Governance that there is no palpable appetite for establishing new inter-governmental processes. The co-Chairs subsequent remarks that the Executive Boards and ECOSOC need to be more actively involved are of particular relevance given the skewed balance in core and non-core funding.

In concluding, my delegation fears that in the absence of increased funding and accountability, the current debate on management changes and creation of entities may become an exercise in the creation of a system that is low on delivery and high on advice. Advice of a kind that the entities themselves do not or cannot follow and which developing countries do not want.

Thank you, Distinguished co-Chairs.

**708. Statement by Permanent Representative at the UN
Nirupam Sen on Symposium on "Supporting Victims of
Terrorism".**

New York, September 9, 2008.

The multiple ways in which terrorism challenges the core principles of humanity and the mandates of the United Nations are all the more evident as we convene today for this very important symposium on "Supporting Victims of Terrorism". We thank the Secretary General for this initiative.

In recent years India has been subject to horrific terrorist attacks. The recent attack on the Indian Embassy in Kabul and the serial blasts in Bangalore and Ahmedabad are gruesome reminders of the violence that we continue to face. These acts of terrorism are clearly designed to spread terror among common people, harm the economy and trigger communal clashes. It is a measure of good sense and resilience of ordinary people that these attempts fail. Investigations have been relatively quick, important arrests have been made which would give us an insight into terrorist networks and their external ramifications. This senseless killing of innocent civilians in my country and elsewhere reinforces the continuing importance of strong international resolve and a coordinated global approach to confront the threat posed by terrorism.

I salute the victims of terrorism present here. The panelist from Spain made the important point that terrorists should be de-legitimized. Here the old Christian distinction between the martyr and the suicide is helpful and relevant to our time: the blood of the martyr was the seed of the church while the suicide could not be buried in a cemetery but had to be buried at the crossroad with a stake driven through his heart. A martyr dies that others may live. A suicide bomber dies so that others may die. One cannot even accurately describe him as a fundamentalist since he does not know the fundamentals of any faith. One cannot even accurately call him a fanatic since he does not have the dignity of any religious conviction. He is just a low criminal and necrophiliac mountebank. His victims are the real martyrs asserting the right to life, the living courage of society and the right to resist terrorists.

The international conventions on terrorism focus on promotion and protection of human rights and fundamental freedoms while countering terrorism. However, for the first time the United Nations Global Counter

terrorism also recognizes the need to express solidarity with innocent victims of this scourge and specifically addresses victims of terrorism under two of its pillars: the section on measures to ensure human rights for all and the rule of law as the fundamental basis for the fight against terrorism, and in the section that addresses conditions conducive to the spread of terrorism strengthening secular nationalist forces rather than weakening them would reduce the political space open to fundamentalists. In any case, this was necessary to accord adequate recognition and support to victims of terrorism.

The support to victims of terrorism has to take into account the immediate medical needs after a terrorist attack (as so eloquently described by the panelist from Kenya) and thereafter the long term rehabilitation and support requirements. The Government of India endeavours to take all these needs into account. It has introduced a compensation scheme to assist victims of terrorist violence. Under this scheme, financial assistance is admissible to the family member(s) in the event of death or permanent incapacitation of the victim, who was the bread-winner/householder of the family, by terrorist violence. Families of the victims are eligible to get assistance under this scheme even if they have received any other assistance, by way of payment of ex-gratia or any other type of relief from the Government or any other source.

In addition, those permanently incapacitated, and the members of the family of the victims killed/permanently incapacitated by the terrorist violence are given a health card by the District Health Society, functioning under the National Rural Health Mission. This card entitles them to free medical treatment in respect of injuries due to violence and all other major illnesses.

The Central Government has also earmarked a special quota for dependents of civilian victims in medical education and entitled beneficiaries are given admission on fulfillment of minimum eligibility requirements for the course. Apart from the above, the State Governments have also been compensating victims in accordance with their policies.

As regards victims belonging to security forces, every state has laid out its own compensatory policy for security forces killed under its jurisdiction. The central paramilitary forces, besides compensation, are also entitled to liberalized pension awards.

The above-mentioned Government of India schemes are complemented by numerous other victim assistance programs that are managed by state

governments and civil society. Terrorism is an attack on the values that define the international community and seriously impairs the enjoyment of human rights including the right to life. The provision of assistance to victims and solidarity with them helps facilitate normalization of their lives whilst uniting public opinion against the terrorists. India remains fully committed to do its utmost to look after victims of terrorism and protect their dignity.

**709. Statement by Permanent Representative at the UN
Nirupam Sen at the meeting of the Open-ended Working
Group on the Question of Equitable Representation and
Increase in the Membership of the Security Council and
Other Matters related to the Security Council at the 62nd
session of the UNGA.**

New York, September 10, 2008.

Mr. President,

Thank you for convening this meeting of the Open-Ended Working Group to further discuss its draft report for the 62nd GA.

We have stressed on various occasions, the need for an open, inclusive and transparent approach in a matter as important as that of reform of the Security Council. You have yourself voiced support for such an objective. Yet, in practice, these goals remain on paper. We are dismayed that, except for one open-ended meeting on September 8, 2008, the entire process of consultations on the draft report before us has been shrouded in secrecy and selective participation. To convey our disapproval of the closed-group format you have favoured, we did not attend the selective meeting that you organized yesterday. Any claim, therefore, that this text has been widely consulted, is not factually correct.

As regards the text in front of us we dispute the "progress" made in this session because going round in circles is certainly movement, but equally certainly not progress but we can live with this world. We can go along with para 8 as reformulated. However, we continue to have serious concerns over PP 3 of the draft decision regarding the 7 principles. We reiterate that the reference to the 7 principles must be deleted from the draft decision.

All Member States have accepted the need to commence inter-governmental negotiations. The demand of the majority is clear-commence intergovernmental negotiations within a defined timeframe, in an informal GA plenary, without preconditions. Unfortunately, sub-para (c) does not meet this simple requirement, though it disingenuously attempts to portray itself as commencing negotiations. Sub-para (c) does mention a timeline for commencement of negotiations in the GA. But it talks of a majority "well above the required majority". This is ultra vires the Rules of Procedure of the GA, the UN Charter (Article 18) and even GA Resolution 53/30 adopted by consensus. It amounts to an imprecise, illegal, informal and back door amendment of the rules. So much for respect for law shown here. At the time when the Facilitators' Reports were being discussed, I recall making this point. I also recall saying that one cannot conflate the view of the P-5 PRs with what their legislatures will do at the time of ratification which is what Article 108 is all about. In any case, it is amusing that in the same breadth the draft decision cites Article 108 and violates Article 18 of the Charter and we are expected to adopt this absurdity by consensus.

In particular, there is no rationale for selectively quoting from various facilitators' reports to define a new provision for decision-making. The language in sub-para (c) has not been intergovernmentally agreed to, and incorporating it in a GA Decision would be tantamount to giving it a legal status that it does not possess. Such political language has no place in a GA decision. I am reminded of George Orwell's "Politics and the English Language" which correctly defines political language as "the defence of the indefensible", designed to make non-facts facts and "give an appearance of solidity to pure wind". Let me be clear - we cannot accept this formulation.

Sub-para (c) also mentions that the negotiations will "at the outset" address the framework and modalities of negotiations. To our mind, this stipulation is irrelevant. Once we have agreed that the negotiations will be in the informal GA plenary, the framework has been defined. The modalities are also clear - negotiations will be based on proposals of Member States. Putting this last sentence is mischievous - it only strengthens the hand of the minority that seeks to block commencement of negotiations by arguing that framework and modalities have not been agreed upon.

We note that you have further weakened the basis for negotiations by using the term "basic elements" in sub-para (d), at the behest of one country. In the same vein, we cannot accept the negotiables as defined in the Annex

II A/61/47, which is not an intergovernmentally negotiated Annex. We have earlier conveyed our objection to the selective listing of items as negotiables, and we certainly do not accept those identified in A/61/47. We would therefore request deletion of sub-para (d)(ii). We can accept sub-para (d)(iii) as these are intergovernmentally accepted documents.

We have repeatedly conveyed our concerns on the placement of sub-paras (e) and (f), which implicitly attempt to define the OEWG as the venue for negotiations. These concerns remain valid. The distinguished Permanent Representative of Mauritius correctly called for clarity. We should clarify that negotiations would be in the informal plenary of the General Assembly.

Mr. President,

We have tried to show maximum flexibility. If, however, the amendments I have outlined (we shall circulate these) are not taken on board, we would not be able to accept this draft report.

I thank you, Mr. President.

**710. Statement by Permanent Representative at the UN
Nirupam Sen at the meeting of the Open-ended Working
Group on the Question of Equitable Representation on
and Increase in the Membership of the Security Council
and Other Matters.**

New York, September 12, 2008.

Mr. President,

I thank you for this meeting. You said that some members have been inspired by your words to inscribe for the debate today. I have been similarly inspired but since I have already inscribed, I would be perfectly happy to inscribe again and speak a second time. You also quoted a passage on the nature of the English language concluding that it is made the wrong way when it says that "one's nose runs and one's feet smell". However, logically, a second conclusion could be that the person is made the wrong way. This is applicable to the language of the OEWG report: it is not the language but the report that is made the wrong way. You had also referred

to Resolution 48/26 which set up the OEWG saying "consider all issues". Actually the Resolution says "consider all aspects" which makes clear that the OEWG is to discuss the theoretical and conceptual dimensions of reform and not anything relating to the substance of reform. To us, therefore, there is clarity, not ambiguity. You spoke of constructive ambiguity. Even if there is ambiguity here (we do not think so), it is destructive ambiguity. The Resolution is not written in stone and with the experience of fifteen years, we should be able to introduce clarity.

I shall try to be as brief as possible and focus only on the Recommendations of the Draft Report. Burning problems in the real world are increasing and the UN's irrelevance to addressing these is in step with this. For the last fifteen years the OEWG has been fiddling. We are resolved that this state of affairs should end. We are disappointed that your advisors, Mr. President, have underestimated the seriousness of our purpose and the firmness of our resolve and misunderstood completely the problem as this text demonstrates. As we have repeatedly said, the problem is not one of drafting or finessing differing positions but of a fundamental conceptual gap. The resolution setting up the OEWG spoke only of considering aspects relating to Security Council reform. The reason why no progress has been made especially in this session is because the consultative role of the GA was deliberately confounded with its negotiating role. The consultative role can continue to be exercised through the OEWG but the negotiating role has to be through the informal plenary of the General Assembly. While the one can benefit from the other in a general sense, there can be no formal or specific linkage between the two roles. Such a linkage remains in this text. Had there been no such linkage, we could even accept stronger formulations on general agreement and seven principles since these would be applicable only to the OEWG. Unfortunately, such a specific linkage is established twice, in paragraphs (c) and (f) respectively.

You spoke of symbiosis rather than dichotomy between para (c) and (d). Actually there is dichotomy and (c) as it now stands, would certainly delay and potentially destroy (d). Sub-para (c) appears to indicate that framework, modalities and negotiables of negotiations have to be determined by the OEWG. This goes beyond decision 61/561 and gives a new and additional mandate to the OEWG that is unacceptable. Once negotiations start in the informal plenary of the GA, there is no further need to define framework/modalities in any case. If there are any procedural issues to be defined, this can be done as part of the negotiating process, as is the case for all other intergovernmental negotiations. as regards negotiables, these will

be determined based on Member States proposals during the negotiating process. Further, once we have para (f) on the future work of the OEWG, why should there be another similar para (c).

This makes this report unacceptable unless the following changes are carried out:

We cannot accept a partial reference extracted from Resolution 53/30 mentioning only "importance of reaching general agreement" while omitting to refer to the operative para of that resolution which states that no resolution or decision would be adopted without the affirmative votes of at least two-thirds of the members. Moreover, we cannot take note of the seven principles which were not negotiated. We hence call for a deletion of preambular paragraphs 2 and 3.

Through "framework, modalities and negotiables of intergovernmental negotiations" a specific linkage as mentioned earlier is established and therefore we call for a deletion of paragraph (c).

Paragraph (d) is acceptable but we can neither privilege the 61st and 62nd session nor postpone the negotiations to beyond the main part of the 63rd session and therefore we call for replacing "in particular" by "including", replacing "but not later than March 2009" by "before the close of the main part of the 63rd UNGA session (third week of December 2008)" and deleting the entire concluding lines beginning with the phrase "seeking a solution".

We think that there are other key issues such as increasing the representation of developing countries, and ensuring the access of landlocked, island and small states which deserve specific mention and therefore we call for a deletion of e (ii). Similarly there are other documents that are of importance and therefore we also call for a deletion of e(iii). In para (f), there is a second attempt at a linkage and therefore we call for a deletion of the phrase "to this end" and the words "the progress achieved from the", since the only progress achieved in the last session represented by unanimous decision 61/561 which has not been implemented.

Our definition of general agreement in practice is certainly strange. At the last meeting of the OEWG, well above two thirds of those who spoke supported our positions. General agreement means: ignore and set aside the views of two thirds of those who speak and concentrate and reflect the views of the one third. Incidentally this applies also to the implicit and explicit

mentions of the report of the Task Force which when it was discussed was rejected both by representatives of L69, G-4 and UFC (the then PR of Pakistan at the end specifically stated that it has been "rejected by both sides"). General agreement presumably signifies interpreting this to mean that everybody accepts the report.

Let me finally turn to consensus. Two of our distinguished colleagues at the last two meetings claimed that PBC and HRC were set up by consensus and general agreement. This is factually incorrect. The point is that they were set up by vote. The authoritative treatise on the rules of procedure at the UN and at intergovernmental conferences by Robbie Sabel (Cambridge University Press, 2006 edition) clearly says that the UN model rules propose that consensus or general agreement or otherwise without a vote are synonymous terms.

A resolution of the ECOSOC in 1974 cited by him define consensus as "general agreement without vote". Feltham another authority writes that "consensus is based on an assumption by the presiding officer of what is sufficiently self evident"..... "to which a minority of representatives object but would rather not be seen to object through the publicity of a vote". Another authority Szasz who is cited defines consensus as "taking a decision only when no participant opposes it so strongly as to insist on blocking it". Clearly therefore PBC and HRC were not set up by a consensus. In the same sense there is no consensus on the report today in any of the meanings of the terms because we and many of our colleagues formally object to the report, we oppose strongly enough to block it and we are prepared even for the publicity of a vote. We are determined that this charade of fifteen years, of movement without purpose, of the fruitless and the trivial, masquerading pathetically under the name of progress should come to an end. I am circulating a copy of our amendments.

I thank you, Sir.

711. Statement by Prime Minister Dr. Manmohan Singh at the General Debate of the 63rd session of the UN General Assembly.

New York, September 26, 2008.

Your Excellency, Mr. President,

Excellencies,

Ladies and Gentlemen,

May I first congratulate you on your election as the President of the 63rd UN General Assembly. I am sure that your wisdom and experience will guide us as we deliberate the many challenges that the world faces today.

Mr. President,

The United Nations is the embodiment of our faith in the benefits of collective action and of multilateral approaches in resolving global issues.

At the 2005 World Summit, we pledged ourselves to an agenda for early and meaningful reform of the United Nations. However, we must acknowledge frankly that there has been little progress on the core elements of the reform agenda.

We need to make more determined efforts to revitalize the General Assembly to enable it to fulfill its rightful role as the principal deliberative organ of the United Nations.

The composition of the Security Council needs to change to reflect contemporary realities of the twenty-first century.

It is only a truly representative and revitalized United Nations that can become the effective focal point for the cooperative efforts of the world community. We need to expeditiously hold negotiations towards this end.

Mr. President,

Globalisation has contributed to ever widening circles of prosperity and we in India have benefited from it. But its benefits have not been equitably distributed. Ensuring inclusive growth within nations, and inclusive globalization across nations, is a central challenge that faces us.

The development gains that many countries have made are today threatened by a possible food crisis, a global energy crisis and most recently, unprecedented upheavals in international financial markets.

The net impact of these problems is that both the industrialised economies and the developing economies face inflation and a slow down in growth after several years of robust expansion. Industrialised countries can afford periods of slow growth. Developing countries certainly cannot.

There is therefore urgent need for coordinated action by the global community on several fronts.

The explosion of financial innovation unaccompanied by credible systemic regulation has made the financial system vulnerable. The resulting crisis of confidence threatens global prosperity in the increasingly interdependent world in which we live. There is, therefore, a need for a new international initiative to bring structural reform in the world's financial system with more effective regulation and stronger systems of multilateral consultations and surveillance. This must be designed in as inclusive a manner as possible.

The world food crisis is the cumulative consequence of the neglect of agriculture in the developing world, exacerbated by distortionary agricultural subsidies in the developed world. Diversion of cultivable land for producing bio-fuels is compounding the problem.

The world needs a Second Green Revolution to address the problem of food security. We need new technologies, new institutional responses and above all a global compact to ensure food and livelihood security. This will require transfer of technology and innovation from developed to developing countries. India is very keen to expand cooperation with Africa in Africa's quest for food and livelihood security for its people.

Trade liberalization in agriculture can help provided it adequately takes into account the livelihood concerns of poor and vulnerable farmers in the developing and least developed countries.

It is feared that many of the conflicts of the 21st century will be over water. We must reflect on how to use this scarce resource efficiently. We need to invest in new technologies and new production regimes for rainfed and dryland agriculture and explore cost effective desalination technologies.

Mr. President,

Poverty, ignorance and disease still afflict millions of people. The commitment to achieve the ambitious targets set as part of the Millennium

Development Goals was an acknowledgement by the international community that global prosperity and welfare are indivisible and affluence cannot coexist with pervasive poverty.

Unfortunately, solemn commitments made for transfer of financial resources from the developed to the developing world have remained largely unfulfilled. The commitment of developed countries to move to the long-set target of 0.7% of Gross National Income as ODA needs to be honoured as a matter of priority. In this context, special efforts have to be made to address the concerns of Africa for adequate resource flows to support its development.

Poverty alleviation and livelihood security are closely linked to energy security. We need a much greater measure of predictability and stability in the oil and gas markets. We need to think of ways and means, such as early warning mechanisms, to help countries cope with oil shocks.

We must put in place a global cooperative network of institutions of developed and developing countries engaged in R&D in energy efficiency, clean energy technologies, and renewable sources of energy.

India is registering rapid economic growth and has combined it with declining energy intensity. However, our total demand will keep increasing and we are actively looking for all possible sources of clean energy.

The opening of international civil nuclear cooperation with India will have a positive impact on global energy security and on efforts to combat climate change.

This is a vindication of India's impeccable record on non-proliferation and to our long-standing commitment to nuclear disarmament that is global, universal and non-discriminatory in nature. The blueprint for this was spelt out by Prime Minister Rajiv Gandhi in this very august assembly twenty years ago.

I reiterate India's proposal for a Nuclear Weapons Convention prohibiting the development, production, stockpiling and use of nuclear weapons and providing for their complete elimination within a specified time frame.

Mr. President,

Climate change can be overcome successfully only through a collaborative and cooperative global effort.

We support the multilateral negotiations taking place under the UN Framework Convention on Climate Change. The outcome must be fair

and equitable and recognize the principle that each citizen of the world has equal entitlement to the global atmospheric space.

I believe that the pursuit of ecologically sustainable development need not be in contradiction to achieving our growth objectives. As Mahatma Gandhi said, "The Earth has enough resources to meet people's needs, but will never have enough to satisfy people's greed".

India has unveiled an ambitious National Action Plan on Climate Change. Even as we pursue economic growth, we are committed to our per-capita emissions of greenhouse gases not exceeding those of the developed countries.

Mr. President,

The growing assertion of separate identities and ethnic, cultural and religious intolerance threatens our developmental efforts and our peace and stability. It is vital that we strengthen international cooperation to combat terrorism and to bring the perpetrators, organisers, financiers and sponsors of terrorism to justice. We should conclude expeditiously the Comprehensive Convention on International Terrorism.

In this context, the situation in Afghanistan is a matter of deep concern. The international community must pool all its resources to ensure the success of Afghanistan's reconstruction efforts and its emergence as a moderate, pluralistic and democratic society.

We welcome the return of democracy in Pakistan. We are committed to resolving all outstanding issues between India and Pakistan, including the issue of Jammu and Kashmir, through peaceful dialogue. We also welcome the coming to power of democratically elected governments in Nepal and Bhutan. We seek to expand areas of cooperation with all these countries to deal with the challenges of sustainable development and poverty eradication.

Mr. President,

The United Nations is a living symbol of pluralism. It has weathered many storms. It is the vehicle through which our combined will and efforts to address global challenges must be articulated and implemented. Unless we rise to the task, we would bequeath to succeeding generations a world of diminishing prospects.

Thank you.

712. Extempore Remarks by Permanent Representative at the UN Nirupam Sen in the Debate on the Report of the Secretary General on the Work of the Organization [A/63/1] [100] in the UNGA.

New York, October 6, 2008.

Mr. President,

The Secretary General's Report is public-spirited in intention and dignified in language. We share and support his aim of delivering results, securing global goods, creating a stronger UN, seizing the opportunity - phrases used in the report. However, there is no sense that we are entering the gravest financial crisis since the Great Depression. Above all, there is not a word on what the UN with its universality and formidable convening power is able to do to overcome the crisis and rebuild institutions. This makes the report inadequate, if not irrelevant.

The Head of the Graduate Center at City University New York, the respected academic, Prof. David Harvey, as early as 2005, described the financial sector thus: "Deregulation allowed the financial system to become one of the main centers of redistributive activity through speculation, predation, fraud and thievery. Stock promotion, ponzi schemes, structured asset destruction through inflation, asset stripping through mergers and acquisitions, promotion of levels of debt incumbency that reduced whole populations even in the advanced countries to debt peonage.... all these became central features of the financial system." The end of Wall Street is not the end of the world though it may be the end of their world. The Masters of the Universe on Wall Street have bit the dust. They have found that they have 'the same dust in their mouths' as the rest of us. It seems that a totally free market, like free love, ends badly. The financial system claimed to have increased world liquidity and reduced investment risk. It has demonstrated its Mephistophelean quality of achieving the opposite - it has destroyed liquidity and raised risk to the level of certain bankruptcy. Keynes criticized a "casino economy" and looked forward to the "euthanasia of the rentier". Now we have the euthanasia. This is the time to clear the decks and build a new international monetary and trading system.

The Statistical Annex actually masks the crisis and is based on business as usual. The share of the poorest quintile in national consumption is given only for 2005. Thus one cannot compare with earlier years and this conceals

the steadily falling share of the poorest quintile. Again statistics are said to be not available for extreme poverty and hungry that is for those living on less than \$ 1 a day. However, calculations are now based on \$ 1.25 a day; the World Bank Development Research Group paper was released at about the same time as SG's report and the World Bank, if approached, could have provided the relevant statistics. The World Bank report is based on a detailed examination of household surveys, census data, national accounts and both national and international price data.

The World Bank report shows that though there is significant improvement in relative terms, the problem remains formidable in absolute terms: over 25 years the number of those living on less than \$ 1.25 a day has declined from 1.9 billion to 1.4 billion. The impact of this crisis is not a North-South issue. It cuts across both. Both, at least the poor in both, are suffering. Unless we realize this solidarity of suffering and act on it, we cannot overcome it. This is the meaning of the brotherhood that the President of the General Assembly talks about - the economic has become the ecumenical. Ruskin long ago summed up the impact on the real economy: "such and such strong hands have been paralyzed as if they had been numbed by nightshade, so many strong men's courage broken, so many productive operations hindered".

The impact on the poor in developing countries is serious. Several major projects in developing countries are grinding to a halt because of lack of equity and debt capital. Their stock markets are crumbling. Falling commodity prices and falling exports will increasingly sharply hit developing countries. International financial and trading institutions advised us to completely liberalise our capital markets. Now we see what light we were supposed to follow and what model we were supposed to adopt. Fortunately we did not. Otherwise the crisis would have become a world catastrophe. We have to pick up the pieces and rebuild the world's economic and political governance. The SG's report is silent on this.

The Bretton Woods Institutions have admitted that they were wrong about deregulation and capital market liberalization. Though they have not admitted this so clearly, they were wrong about structural adjustment policies, including advice to developing countries to end their essential domestic subsidies. In relation to the current financial crisis they have been helpless and irrelevant. Unless the problem of veto, transparency, accountability, the appointments process and, above all, quotas, is addressed, they cannot exercise a proper role in surveillance, regulation

and technical advice. Without such a reform, the developing countries cannot contribute the energy and dynamism required to rebuild international monetary institutions and the global financial system. It is the United Nations, with its universality and its convening power, that has to work for such a reform. The SG's report speaks of global public goods, public health and climate change. We support him on these issues.

However, the report is silent on the IPR regime. Knowledge is a public good and we need an IPR regime that would 'balance the interests of the users of knowledge and the producers of knowledge'. The public health exception is so burdened by conditionalities that nobody on earth who has no domestic production capabilities has been able to use it. The US legislation (28 USC Sec 1498) should be a model for the developing world. Without transforming the IPR regime, there would neither be cheap medicines necessary for public health nor adaptation and mitigation technologies at affordable prices necessary for combating climate change. In fact, the UN also needs to bring its influence to bear on the deadlocked Doha Developmental Round which has not been able to address the concerns of the bulk of its membership i.e. Sensitive Products, Special Safeguard Mechanism (SSM), Duty Free Quota Free access and Cotton subsidies. On the one hand, one has the trade distorting subsidies of the developed world. To guard themselves against a surge of subsidized products, the developing world is not even being allowed a viable SSM. We cannot have business as usual where we continue to safeguard commercial interest rather than the livelihood security of millions of marginal farmers and workers.

The report speaks of the Millennium Development Goals (MDGs) in detail which we fully support but is silent on the fact that MDGs cannot be achieved without restructuring international trade and the fight against HIV/AIDS and malaria will be lost without affordable medicines. It correctly emphasizes ODA and the Gleneagles pledge. However, we cannot accept the change made in targets since last year - especially Target 1B transferred from MDG 8 to MDG 1. This undermines the legitimacy of the MDG framework and is unhelpful in measuring progress achieved, besides diluting the global partnership for development. We would request the SG to revert to the older set of targets from next year - particularly for Target 1B.

We also need better indicators to monitor MDG 8. The report mentions the problems of peace and security and the Responsibility to Protect but fails

to mention that without a comprehensive reform of the UN Security Council, problems of peace and security cannot be effectively addressed and the political basis of the Council is too narrow to have the necessary impartiality needed for implementing a humanitarian principle. The Statistical Annex shows that LLDCs and SIDS are getting more marginalized and their ODA is declining but the report has nothing to say on increasing their access to the UN Security Council through a comprehensive reform.

Thus the report is silent on the crucial issue of the institutional rebuilding of international political and economic governance. Similarly, the report speaks of the Global Counter Terrorism Strategy (which has our complete support) but is silent on the key stone of this arch - the Comprehensive Convention on International Terrorism. We should use the present moment when we are closer than ever before to mutual understanding on issues and problems around Article 18. On System-wide Coherence, the report is silent on the central question of predictable core funding and the question of greater control by the UN of the global flows of voluntary funding in terms of budgetary discipline and Fifth Committee oversight. On the reorganization of the DPKO, the jury is still out and DPKO/DFS representatives in the field when they appeared before the ACABQ could not show any gain in efficiency or unity of command. On preventive diplomacy, prevention is certainly better than cure but it is difficult to believe that a few D1 officials can heal complex and widespread civil conflicts. Moreover we should not duplicate capacities or create permanent bureaucratic structures that may not be permanently required.

We are also concerned that, in the ACABQ's opinion, SG's report on the Accountability Framework, Enterprise Risk Management, Internal Control Framework and Result Based Management "does not explain in a concrete manner how the objectives will be realized. Nor are specific timelines and benchmarks consistently provided". The only way to hold senior management accountable is to have confirmation hearings in the General Assembly on the pattern of US Constitutional practice. As for the SG's call for member states to be accountable to the organization, either it means that the member states are the organization and in themselves accountable, and is therefore redundant, or it means that the member states should be accountable to the Secretariat which is topsy-turvy, and is therefore unacceptable.

Finally a word on Disarmament. This year marks the 20th Anniversary of the "Action Plan for ushering in a Nuclear Weapons-Free and Non-violent World Order" proposed by India's former Prime Minister, Shri Rajiv Gandhi, to the Third Special Session on Disarmament. At the 63rd Session, Prime Minister

Dr. Manmohan Singh reiterated India's proposal for a Nuclear Weapons Convention prohibiting the development, production, stockpiling and use of nuclear weapons and providing for their complete elimination within a specified time frame.

I thank you, Sir.

713. Statement by Counsellor at the Permanent Mission Neeru Chadha on Agenda Item 129: Administration of Justice at the Sixth Committee.

New York, October 6, 2008.

Thank You Mr. Chairman,

I take this opportunity to congratulate you on your election as Chairman of the Sixth Committee and also the bureau members on their election. My delegation assures you of its full cooperation and support.

To begin with, we wish to thank the Secretary General for his Report on updates on the activities of the Secretariat to prepare for the new internal justice system. We would also like to thank the Chairman of the Ad hoc Committee on Administration of Justice and coordinator of the intersessional informal consultations for all their efforts.

Mr. Chairman,

The staff members of any organisation are its most important resource and are entitled to expect an independent, impartial and efficient internal redressal mechanism.

Given the inadequacies of the present internal justice system, the General Assembly vide its Resolution 61/261 recommended the setting up of a new two tier independent, transparent, professionalized, adequately resourced and decentralized system of administration of justice as well as strengthening of the informal dispute resolution mechanisms; and vide its Resolution 62/228, it approved the framework of the new system which will be introduced on January 1, 2009.

We are pleased to note that a number of steps have been taken to prepare for the new system. The establishment of the Internal Justice Council, which

we understand is presently engaged in reviewing applications of judges for the future Dispute and Appeals Tribunals, would ensure independence, professionalism and accountability in the system of administration of justice.

We welcome the creation of the single integrated and decentralized Office of the United Nations Ombudsman for the United Nations Secretariat and funds and programmes that would ensure that the same standards and operating guidelines are applied in all UN Ombudsman Offices. The setting up of a Mediation Division within the office of the Ombudsman would further strengthen the informal system by providing an alternative avenue for dispute prevention and resolution. The Mediation Division will handle cases referred to it by the Ombudsman or pursuant to an order by the United Nations Dispute Tribunal. The settlement of disputes in internal, non-litigious proceedings would help promote mutual trust between the management and staff and preserve harmony in the Organisation.

To ensure optimal utilization, it is important that the availability of these alternative avenues for dispute settlement be widely publicized among UN personnel at all duty stations.

Mr. Chairman,

The Ad Hoc Committee on the Administration of Justice was convened during the last GA session for the purpose of examining the Statutes of the future Dispute and Appeals Tribunals. While the Committee made considerable progress, there has also been no agreement on several crucial issues.

The issues relating to transitional measures and scope are extremely relevant. The United Nations, has a duty to ensure that all members of its workforce, irrespective of their designation, have access to justice and no one is left without a remedy. The G77 has indicated its flexibility in this regard and is willing to look at various options and proposals. Similarly, we believe that legal assistance for staff should continue to be provided. Accordingly, we support the strengthening of the Office of Staff Legal Assistance.

Mr. Chairman,

It is essential that an agreement is reached on all the pending issues at the earliest, so that an efficient and effective new internal justice system is in place by January 1 2009.

Thank You

714. Statement by Minister of Power Shushil Kumar Shinde during the General Debate of the Second Committee at the Second Committee.

New York, October 6, 2008.

Madam Chair,

Permit me to begin by congratulating you and other members of the Bureau on your election. Please be assured of my delegation's support and cooperation in the work of the Second Committee.

We associate ourselves with the statement made by Antigua and Barbuda on behalf of the Group of 77.

Madam Chair,

The principal matters that this Committee considers are development, economic and environmental issues. Yet, it is precisely these that are under the glare of international attention, be it the achievement of the Millennium Development Goals, the ongoing financial crisis, the food crisis, as well as the impact of climate change. Our deliberations must be able to provide concrete suggestions and guidance to face such challenges.

The recent High-level Event on MDGs brought out in stark detail the challenges we confront in our development efforts. I will not repeat them in detail, nor reiterate the much-needed assistance from the international community to overcome them. Suffice to say that falling Official Development Assistance flows, net outflows of funds to developed countries, volatile capital flows, continued debt problems, trade-distorting agricultural subsidies by developed countries, non-tariff barriers, trade talks that threaten the livelihood of millions of poor farmers, non-inclusive international norm-setting frameworks, loss of policy space, etc. only serve to exacerbate the development challenges of developing countries. Urgent action is required on all these issues.

Madam Chair,

These problems have been compounded by the ongoing financial crisis. While a more detailed examination needs to be undertaken, preferably by the UN, of possible impact of the financial crisis on development efforts, particularly in respect of availability of capital, overall slowdown in global growth, shrinking export markets, etc., the impact of the financial crisis on

development efforts is inescapable. We hope the Monterrey Review Conference would look at these issues in detail.

The financial crisis has sent a message for change in financial regulatory systems. In crafting new approaches to financial regulation we must take into account its international dimension. New regulatory regimes should encourage the highest standards of business conduct and compliance and go hand-in-hand with closer official scrutiny.

Meanwhile, higher and more volatile prices of food, energy and other commodities have compounded the problem. Against this background, we need to encourage growth, particularly in countries with large populations, as they have the potential to drive much-needed global economic growth.

The financial crisis has also clearly demonstrated the importance of policy space. Regulators and lawmakers in developed countries have the luxury of trying out a variety of tools at their disposal to address financial problems. Developing countries, when faced with similar financial difficulties in their own economies, should also have the choice to select from such policy tools, as may be useful given their specific circumstances.

On earlier occasions, international financial institutions, particularly the Bretton Woods Institutions, have unfortunately limited the choice available. Recent developments make it even more important that sufficient policy space be available to developing countries. This policy space is not being sought in order to renege on international commitments, but to ensure that, when faced with crises, all possible intervention mechanisms are available to developing countries as they make a choice as to the one most relevant to their particular situation.

Clearly, a mindset change in international institutions and in the international financial architecture at large can only be facilitated through their comprehensive review. Such a review must ensure greater voice and participation of developing countries, particularly in the Bretton Woods Institutions. The UN, which has the requisite legitimacy, must regain its traditional role in guiding international economic policy. We must reverse the trend of hollowing out the UN by first creating specialised entities, and then arguing that these cannot be overseen by the UN. The UN must be the overall umbrella that gives the political guidance to each of these entities.

Madam Chair,

Let me now turn to climate change. We all agree that climate change requires an extraordinary effort and collaboration. Yet, when it comes to

the negotiations, we do not see a reflection of this from our partners. Instead, the usual approach continues. Efforts to review the Intellectual Property Rights regime, so that critical climate technologies can be considered as benefiting humankind, rather than merely benefiting a few innovators, are blocked. Attempts are made to ignore historical responsibility. Development imperatives are sought to be brushed aside. Such approaches must change.

The UN Framework Convention on Climate Change negotiations must be guided by the principle of common but differentiated responsibilities and respective capabilities, as well as historical responsibility of developed countries. Its outcome must be fair and equitable, and recognize the principle that each citizen of the world has equal entitlement to the global atmospheric space. India has already unveiled an ambitious National Action Plan on Climate Change. We are committed that even as we pursue economic growth, our per-capita GHG emissions will not exceed those of the developed countries. Further, as Prime Minister Dr. Manmohan Singh stated at this General Assembly, "the recent opening of international civil nuclear cooperation with India will have a positive impact on global energy security and on efforts to combat climate change".

The Human Development Report has consistently shown that a reasonable measure of human development and quality of life is achieved only after the national average electricity consumption is more than about 3,000 kilowatt-hours per person per year.

In India, the average electricity consumption is well below this, being only about 650 kilowatt-hours per person per year. Consumption across developing countries is not much better at about 1,200 kilowatt hours per person annually.

Madam Chair,

The energy challenge before us in India, and in other developing countries, is large, urgent and immediate. We need to ensure that each household has access to electricity and clean cooking and transportation fuels, and that these energy supplies are adequate and, most importantly affordable.

We are fully conscious of the need to employ strategies that ensure that energy is used wisely and cost effectively, and that the proportion of sustainable and renewable energy is constantly increased. These strategies bring with them, the benefits of economic competitiveness, enhanced access, and better environmental quality inside homes as well in cities, besides the very strong co-benefit of climate change mitigation.

In India, we have completely overhauled the institutional arrangements of our electricity sector so as to create independent regulators, as well as enable competition in electricity generation. This has brought down the price of electricity procured through competitive bidding. We have also made it mandatory that each electricity distribution company procure a minimum percentage of electricity from renewable sources, leading to the creation of about 11,000 MW of renewable electricity generation capacity. We have also put in place a National Hydro-Electricity Policy, which aims to develop about 50,000 MW of such electricity over the next 10 years.

Through an Act of Parliament, we are also further promoting energy efficiency. Today, India is one of the most energy efficient countries in the world with only about 0.15 kg of oil-equivalent energy being required to produce a dollar worth of GDP in purchasing power parity terms. In order to further enhance efficiency, we have introduced standards and labeling of appliances; an energy conservation building code for new, large commercial buildings; and a system of energy reporting and auditing for large, energy-intensive industry. We are also in the process of mandating energy efficiency norms for large, energy-intensive industries. Through these, and other Demand Side Management interventions, we are moving towards securing by 2012 energy savings of at least 5% of the 2007 energy consumption.

We look forward to moving together to promote sustainable development so that all human beings have access to adequate and affordable energy.

In conclusion, Madam Chair, let me reiterate our hope that the deliberations of the Second Committee will help us in identifying cooperative action in areas of interest and concern to developing countries and in moving forward the implementation of the development agenda.

Thank you, Madam Chair.

715. Statement by Permanent Representative at the UN Nirupam Sen on Agenda Item 55: Social Development [A] Implementation of the Outcome of the World Summit for Social Development and of the twenty-fourth Special Session of the General Assembly [B] Social Development, including Questions relating to the World Social Situation and to Youth, Ageing, Disabled Persons and the Family [C] Follow up to the International Year of Older Persons: Second World Assembly on Ageing [D] United Nations Literacy Decade: Education for All and [E] review of Appraisal of the World Programme of Action concerning Disabled Persons at the Third Committee.

New York, October 7, 2008.

Mr. Chairman,

First of all, let me congratulate you and other members of the Bureau on your election and assure you of our support. I am confident that you will successfully steer the Third Committee through controversies and into consensus.

The agenda of "promotion of full and productive employment and decent work for all" has been the priority theme of 2007-08 implementation cycle of the multi-year programme of work of the World Summit for Social Development of 1995 and the 24th Special Session of the General Assembly. As the Secretary General's Report on the implementation of the outcome of the two meetings states, mainstreaming social policies into macro-economic policies is necessary. In the engulfing crisis of the financial sector today, greater and more profound than any since the Great Depression, this is a categorical imperative.

Philip Augar, himself an investment banker, in his "The Greed Merchants" has revealed that young financial operatives took out US\$180 billion from the financial system in the last few years. The financial system was brought down by greed on the one hand and deregulation on the other.

On October 4, that is literally three days back, Europe's leaders criticized speculative capitalism and called for entrepreneurs, not speculators. One hundred years before that, at its Congress in Seville in 2007, the European Trade Union Confederation resolved to expose "casino capitalism" and fight it by taxation, regulation and worker involvement. Two decades later, Keynes warned against the casino economy and looked forward to the

euthanasia of the rentier. Today we are witnessing precisely this euthanasia. The impact on employment is not a North-South issue. It cuts across both. Soon it would be an issue not of decent work but of any work. Projects in the North and South are halting because of lack of equity and debt capital; stock markets are collapsing; we are witnessing falling commodity prices and falling exports. These will reduce growth rates as well as global employment levels but specially in the developing countries. Given the depth of the crisis, Keynesianism in one country will succeed no more than socialism in one country did at one time. The Bretton Woods Institutions, would have to recover the original Keynesian mandate of helping maintain high levels of employment, at any rate through technical assistance, surveillance and regulation.

The United Nations has to play a role in stimulating the reform of Bretton Woods Institutions. From a Keynesian perspective of strengthening world demand, the issue of cotton subsidies, of Duty Free Quota Free access for the export of LDCs, of Sensitive Products and Special Safeguards Mechanism, have to be resolved in a resumed Doha Development Round. It is about time we safeguarded the livelihood security of hundreds of millions of marginal farmers and workers rather than commercial interests. This is essential for global employment levels. If we continue with business as usual the dishonour will not be on Wall Street. As the poet T.S Eliot puts it, "After such knowledge, what forgiveness?" It has been said that "politics is the art of postponing decisions till they are no longer relevant." We cannot afford this kind of politics any more. For achieving the Millennium Development Goals, this changed international economic governance and environment is essential.

Of course, the target of 0.7% of GDP as ODA needs to be honoured. But resources will not be enough in today's world to even sustain the welfare levels of the MDGs. What is needed is an industrial policy in LDCs that would encourage them to use tariffs and domestic subsidies to develop industry and achieve economic development that would provide employment.

Chinua Achebe, the great Nigerian novelist, in his *Anthills of the Savannah*, had predicted that this "hand me down capitalism is ridiculous and doomed" and governments should "re-establish vital inner links with the poor and dispossessed, with the bruised heart that throbs so painfully at the core of the nation's being".

One positive fall out of the collapse of the deregulated financial system is the re-legitimization of the role of the State. Government and civil society can promote what Chinua Achebe envisions. India's National Rural

Employment Guarantee Act which has become also an empowerment guarantee act, guaranteeing hundred days paid unemployment to every rural household is unprecedented and makes the right to work legally enforceable. Since Panchayats or elected local councils implement this, the scheme represents the achievement of MDGs through a movement in favour of the rural poor. It is forever associated with the name of Madame Sonia Gandhi, Chairperson of India's United Progressive Alliance, who called it "a revolutionary measure" and emphasized the need for popular mobilization. In Aimee Cesaire's phrase, it would eventually and hopefully create a society rich with the productive power of modern times, warm with the fraternity of olden days. We have in India managed to reduce the proportion of people below the poverty line to 27.5% and our target for 2015 is 18.75%. Employment growth in India accelerated to 2.6% in 1999-2005.

Member States should be encouraged to follow the guiding principles of the Programme of Action of the World Social Summit and the United Nations should use its various Funds and Programmes to develop capacity in countries when called upon to do so. For this Committee it is important to note that the rights to health care and education become elements in the "social bases of self respect" which the great American social and political philosopher, John Rawls, defines as the most important of his "primary goods". In a landmark judgment in 1993, in the Unnikrishnan case, the Supreme Court of India made the right to education up to 14 years of age a fundamental right that is legally enforceable. As Amartya Sen puts it, "the creation of social opportunities makes a direct contribution to the expansion of human capabilities".

I thank you Mr. Chairman.

Annex

With an ever expanding private sector in manufacturing and service in India, government has made the social dimension and infrastructure development a priority. In fact, the major thrust of the 11th Five Year Plan is on access to education, which is one of the key pillars of social development. While India has made commendable progress in providing access to primary education with the completion of infrastructure for primary schools under the Sarva Siksha Abhiyan, the focus has also been extended to secondary and tertiary education. We have kept a target of 21 percent enrolment in higher education by 2017. This involves upgradation of upper primary schools to secondary schools, expansion of intake capacity in

existing secondary schools, and establishment of high quality model schools to serve as examples of excellence in secondary schooling. Investment will be made to massively expand the University system in India. This will also be concurrently implemented with the National Skill Development Mission to help in meeting the demands for skills in our growing economy as well as in generating high quality employment. Given the scarcity of resources, private sector initiatives in higher education, and various forms of public-private partnerships (PPPs) will also be encouraged. I would like to reiterate India's commitment to working towards achieving the targets and commitments set in this very critical sector of tackling global illiteracy.

- India has the "Persons with Disability (Equal Opportunities, Protection of Rights and Full Participation) Act 1995" and last year ratified the International Convention on the Rights of Persons with Disabilities. This has given us an opportunity to reiterate our commitment to the elimination of barriers that persons with disabilities face, especially at the work place. It is also an important step towards fulfilling the Constitutional mandate of developing an inclusive society. We have a national policy for persons with disability and have also launched an incentive programme for the private sector to encourage them to employ disabled persons. Additionally, an annual national award scheme has been institutionalised to encourage entrepreneurs. Moreover, special Employment Exchanges have been set up for disabled people in different parts of our country.
- With an estimated 76.6 million older persons, Government of India is strongly committed to implementing the Madrid International Plan of Action, which provides guidance on capacity-building on ageing at national, regional and international levels. At the domestic level, the National Council for Older People, the nodal body dealing with the issue of senior citizens, is also monitoring the implementation of recent national legislation, namely, Maintenance and Welfare of Parents and Senior Citizens Act 2007 and has also revised the existing schemes of integrated programmes for Older Persons.

**716. Statement by Permanent Representative at the UN
Nirupam Sen on Agenda Item 99: Measures to Eliminate
International Terrorism at the Sixth Committee.**

New York, October 8, 2008.

Mr. Chairman,

The Agenda item on Measures to Eliminate International Terrorism is of great importance to my country as terrorism is one of the major threats to international peace and security and undermines the very foundation of freedom and democracy, enjoyment of human rights and continued existence of open and democratic societies.

We thank the Secretary General for his annual report A/63/173 on the implementation of Para 10 of the "Declaration on Measures to Eliminate International Terrorism" that presents measures taken at the national and international levels for the prevention and suppression of international terrorism as well as information on incidents caused by international terrorism. We appreciate the growing role of UNODC in counter terrorism efforts, especially its technical assistance activities at the national, sub regional and regional levels, within the framework of its global project on strengthening the legal regime against terrorism and now as a part of the Counter-Terrorism Implementation Task Force. We thank the Secretary General for his Report A/63/89 on the subject. We would also like to thank Ambassador Rohan Perera for his report A/63/37 on the meeting of the Ad Hoc Committee established by General Assembly Resolution 51/210 and the Facilitator of the Working group for all her efforts.

Mr. Chairman,

The 13 major UN instruments relating to specific terrorist activities remain fundamental tools in the fight against terrorism. India is a Party to all the 13 major legal instruments. We also attach utmost importance to the fulfillment of obligations under the relevant counter terrorism resolutions of the United Nations. We have filed five National Reports with the Counter Terrorism Committee, giving a comprehensive picture of steps taken by India to counter terrorism. We utilize all available tools within the arsenal of a democratic nation, governed by the rule of law, to counter terrorism. They comprise laws criminalizing terrorism, including incitement, raising of funds for terrorist activities, holding of proceeds of terrorism, harboring of terrorists, unauthorized possession of any explosive substances or other lethal weapons; monitoring of financial flows, effective legislation regarding dual

use items; surveillance methods governed by law and old fashioned police investigation work. The intricate linkages and networks that unite terror groups can only be challenged through concerted international cooperation and efforts by way of extradition, prosecution and information flows. India is engaged in these efforts at the regional as well as bilateral level.

Mr. Chairman,

The UN Global Counter Terrorism Strategy, adopted two years ago, established a global counter-terrorism framework and presented a template that is pivotal to guiding counter terrorism efforts of Member States as well the United Nations system. The international conventions on terrorism focus on promotion and protection of human rights and fundamental freedoms while countering terrorism but, for the first time, the United Nations Global Counter Terrorism Strategy also recognizes the need to express solidarity with innocent victims of this scourge and specifically addresses victims of terrorism through two of its main pillars. This was necessary to accord adequate recognition and support to victims of terrorism. In this regard we appreciate the convening of the symposium on victims of terrorism last month that helped to put a human face on the effects of terrorism and provided a forum for victims' voices. Last month, the General Assembly also reviewed the implementation of the Strategy where Member States focused on their respective national, bilateral, regional and global initiatives to implement the Strategy. They described measures that have been taken to implement, at the national level, international conventions that govern controls over arms and banking systems; measures for enforcement of effective customs, immigration and border controls that are necessary to prevent the movement of terrorists and the establishment of safe havens; conclusion of anti-terrorism instruments at the regional level; and other activities and projects on capacity-building and technical assistance. The wide participation of Member States in the Review process demonstrated the importance they attach to effectively counter terrorism and that the Strategy was vital to their counter-terrorism efforts.

The Secretary General's Report on activities of the United Nations system in implementing the Strategy highlighted the efforts of the United Nations system to support implementation of the Strategy, both through its individual departments, specialized agencies, funds and programs and through the Counter-Terrorism Implementation Task Force. The institutionalization of the Task Force, supported by the General Assembly, we hope, would significantly strengthen its efforts to enable the different United Nations entities to effectively cooperate, coordinate and streamline the work of the United Nations system in the field of counter terrorism. In this regard the proposed "integrated implementation initiative" will help the United Nations to avoid duplication.

We believe that the primary responsibility for implementing the Strategy rests on Member States and hope that the Strategy would provide the impetus to unite them in the fight against terrorism via practical measures that facilitate cooperation by way of extradition, prosecution, information exchange, and capacity building. However, notwithstanding the importance of the Strategy, we strongly believe that the General Assembly's inability to reach an agreement on concluding the Comprehensive Convention against International Terrorism (CCIT) limits the impact of its counterterrorism efforts.

In the Working Group meeting in October last Session, the facilitator in her report had said that some Member States still had concerns regarding certain issues, namely the importance of the need not to affect the exercise of the right of peoples to self-determination; the need to capture concerns relating to "State terrorism"; resolution of matters concerning potential impunity of military forces; and the need to delineate activities to be covered by the scope of the convention and those covered by humanitarian instruments. The facilitator thereafter had provided a very reasoned analysis of the package that she had proposed and explained how each of the concern was taken care of in the proposed text. Thereafter no Member State has voiced any additional concerns or need for further clarifications. If there still are any concerns then it would be useful to have them clearly delineated so that the Committee can have a clear understanding of those so as to enable it to reach agreement on the Convention.

Mr. Chairman,

We believe that the package presented by the Facilitator presents a careful balance and bridges the divergent views. We therefore urge Member States to seriously consider and adopt the Package and facilitate the successful closure of the protracted negotiating process of concluding the CCIT.

The adoption of a CCIT, through exercising the law-making powers of the General Assembly, is in the interest of all member States and would reinvigorate the multi-lateral and collective dimensions of counter-terrorism efforts. We believe that when adopted, CCIT would provide a solid legal basis for the fight against terrorism. In this era of unrestrained violence, where innocent civilians are being targeted, UN personnel and premises are being attacked and assassinations are being carried out, we urge that there be expeditious action in this forum.

Thank you, Mr. Chairman

**717. Statement by Permanent Representative at the UN
Nirupam Sen on Agenda Item 97: Crime Prevention and
Criminal Justice and Agenda Item 98: International Drug
Control at the Third Committee.**

New York, October 9, 2008.

Mr. Chairman,

Let me take this opportunity to thank the Secretary-General for his reports on Agenda items 97 and 98 on "Crime Prevention and Criminal Justice" and "International Drug Control".

After coming here I saw the statement of Executive Director and Under Secretary-General of UNODC. Before I comment on what India is doing and our interests, let me briefly comment on the Under Secretary-General UNODC's statement. He spoke of the dark side of globalisation. In the context of the current financial crisis, globalisation seems to have only dark sides. He also described himself as the Under Secretary-General for Sinister Affairs. I thought he was supposed to be the Under Secretary-General for Countering Sinister Affairs. My basic point, Mr. Chairman, is that it is not necessary to go into philosophical causes. We have to examine the current situation and its immediate concrete causes in order to apply effective solution. The USG sees a correlation between weak economic performance and weak rule of law.

Dictatorships without rule of law in the sense we understand it have often been economically successful. Therefore, there is no real correlation. Similarly poverty may magnify a problem but is not the immediate cause. We would be better off therefore building effective law enforcement structures and fashioning a robust law enforcement response internally and externally rather than talking about economic development. I am not suggesting that economic development is not important. It is a separate and crucial imperative but it not the job of UNODC. It has to be left to UNDP, reformed Bretton Woods Institutions and the like. The USG draws another correlation with corruption. Some developed countries are very corrupt, without becoming hot beds of the drug trade. UNODC should, therefore, concentrate on immediate concrete causes and implement an effective strategy based on coordination. Here we certainly welcome his outline of UN wide cooperation in the last section of his speech.

Again the USG attributes illicit drugs in Afghanistan to areas not controlled by the Central Government. Any number of studies and reports by agencies on

the ground have shown that the real immediate reasons is the inability of ISAF and UNAMA to provide alternatives to poppy cultivation and the Taliban's using drugs to finance terrorism - a classical case of narco-terrorism. Therefore, I would suggest that USG and UNODC should concentrate on concrete and effective action rather than an examination of philosophical causes. The danger of philosophical approach is evident from one extraordinary contradiction. Mr. Costa states in his speech and I quote: "the countries of Central America and the Caribbean are caught in the cross-fire between the world's largest producers and biggest consumers of cocaine." Here we have a region which is an epicentre, caught in the cross-fire between the biggest drug producers and the consumers: Mr. Costa's response is to close down the UNODC regional office in Barbados which served 29 states and territories. These are the paradoxes of philosophy. The USG UNODC should let us know the reasons for this extraordinary action. If there are funding difficulties, he should let us have proposals which can then be examined in the ACABQ and Fifth Committee and we can find resources and/or encourage voluntary funding.

Mr. Chairman,

I notice from the last occasion that the colours on your bulbs change rather quickly. To save time, therefore, I shall read those parts of my statement that concentrate mainly on what India is doing but I am circulating the text of the entire statement with the request it may be made a part of the record. India's commitment to fight the menace of illicit drugs remains steadfast. India is a party to the 1961 Single Convention, the 1971 Convention on Psychotropic Substances and 1988 Convention on Illicit Traffic in Narcotics Drugs and Psychotropic Substances. India is also fully committed to abiding by the Political Declaration and the resolutions adopted at the June 1998 Special Session of the United Nations General Assembly. The Narcotics Drugs and Psychotropic Substances Act, 1985 constitutes the statutory framework for drug law enforcement in India. The Act also incorporates provisions for the control of precursor chemicals. Recognizing the need for financially throttling terrorist organizations and organized crime groups, India has also enacted a comprehensive Anti-Money Laundering Law. I would like to reaffirm that India is strongly committed to continuously working with all the member states in controlling production and trafficking of narcotic drugs.

Mr. Chairman,

The nexus between money laundering, terrorism, transnational organized crime, illicit drugs, and illegal arms transactions is grave, dangerous and destructive. There is a need to reinforce bilateral, regional and international cooperation to combat this nexus.

This is a matter of particular concern to India, which has faced terrorism for the past several decades. Recent incidents reinforce the importance of a strong international resolve and a coordinated global approach to confront the threat posed by terrorism. The adoption of the United Nations Global Counter-Terrorism Strategy in September 2006 was a noteworthy development; however, there is a need to expeditiously adopt the Comprehensive Convention on International Terrorism. We must ensure zero tolerance for all forms of terrorism.

Mr. Chairman,

We appreciate the efforts by UNODC in developing the capacity of various countries, especially in the field of developing a legislative framework for a national counter terrorism mechanism within the criminal justice system. This will go a long way towards promoting its global project on strengthening the legal regime against terrorism. However, UNODC is apparently not able to bridge the gap between requests for technical assistance and resources available to provide the same. We, therefore, support increased resource allocation for UNODC counter-terrorism activities from the UN regular budget as well as through voluntary contributions.

Mr. Chairman,

India is examining in detail the necessary amendments required in its Code of Criminal Procedure for further streamlining the criminal justice system for ensuring fair and speedy justice. We hope that the improvements brought about will reinforce our investigative and prosecution process and machinery. Additionally, as a signatory to the UN Convention against Transnational Organized Crime and its three Protocols, India is taking steps towards their ratification and concurrently entering into bilateral agreements for developing joint programmes to prevent money laundering as well as to counter terrorism and organized crime.

Mr. Chairman,

I would like to reaffirm our strong commitment to fight the menace of illicit drug trafficking, international terrorism and money laundering. This dangerous triad needs to be defeated convincingly. India will work closely with the international community to see that we succeed in our joint efforts.

Thank you, Mr. Chairman.

**718. Statement by Permanent Representative at the UN
Nirupam Sen on Agenda Item 10: --Report of the Peace-
building Commission, Report of the UN Secretary
General on the Peace-building Fund.**

New York, October 9, 2008.

Mr. President,

We appreciate the timely scheduling of today's joint debate on the Second Report of the Peace-building Commission and the Secretary-General's report on the Peace-building Fund. Let me begin by congratulating Japan for its work as Chair of PBC, in a tenure that has lasted somewhat longer than he might have expected at the outset! I also express our appreciation for the Chairs of the PBC's country-specific configurations and the Working Group on Lessons Learned. I must make special mention of the delegation of Norway, whose former PR chaired the configuration on Burundi with commitment. Let me also welcome the new Assistant Secretary-General for Peace-building, Ms. Jane Holl-Lute, and assure her of India's constructive support.

I also associate my delegation with the statement made by the distinguished PR of Jamaica, for the Non-aligned Movement. We appreciate Jamaica's work in coordinating the NAM within the PBC. I have only a few additional points to add, in the context of the reports of the PBC, and on the PBF. Our comments are based both on our abiding commitment to the objectives of the PBC, and our conviction that useful lessons may be drawn from our collective experience over the period that both bodies have been in existence.

Firstly, we need to guard ourselves against either excessive pessimism or premature celebrations regarding the relevance or efficacy of the PBC and the PBF thus far. On the positive side, the fact that we now have four countries on the Agenda of the PBC, all at their request, is undoubtedly a good sign. The finalization of integrated peace-building strategies for three of these, and the review of two of these strategies, are all signs of progress. It is no exaggeration that the PBC has indeed become an established player in the UN context.

However, while the steady consolidation of a role for the PBC within the lexicon of the international system is a good outcome, this is not a sufficient achievement, of itself, for all of us to take pride in. We need to continue to

make the PBC relevant to the countries that it seeks to assist, by moving decisively towards a pragmatic, circumstance-specific approach.

For too long have we in the Commission spent time in debates that veer from prescriptive solutions and a conditionality-based approach, to inflexible positions. As long as we have our positions predetermined before we objectively examine the situation in a country seeking assistance, we will not be able to provide truly dispassionate and situation-specific advice. This is also one reason why we appear collectively unable to genuinely listen to what post-conflict countries actually want when they seek the PBC's assistance. Second, to ensure that the advice that is provided by the PBC is relevant and useful, we must focus on two aspects.

The first is to continue to expand our access to focussed, specific and objective information from the ground. Here the PBSO must play an important role, for without a clear and unbiased channel for inputs from the ground, listing key challenges and mapping gaps in the availability of resources to meet such challenges, the PBC cannot provide effective advice. Moreover, since there will inevitably be a disparity in information flow between those members who have representation on the ground and those who do not, this disparity could well prejudice the discourse within the PBC, to no-one's benefit. The second aspect is the need for effective two-way dialogue between countries on the Agenda of the PBC and the commission itself. This will be most meaningful if we can make the transition to ensuring that the PBC's advice is based on a "light-touch" approach.

By this I mean that the PBC should not take on the task of advising States on post-conflict peace consolidation; instead it should help the State concerned identify and utilize genuine international expertise in addressing such sensitive issues. The lightness of the PBC's touch also relates to the question of national ownership, which all of us endorse as a core principle of the PBC's involvement. This relates to the need to strengthen a representative and effective Government in the country concerned. Eventually, it is the Government of the country that is answerable if it is unable to deliver on peace consolidation strategies; and that answer must be given to the people it represents. It is also the Government of that country that will need to manage processes beyond the country's engagement with the PBC.

It follows logically therefore that our primary focus must be upon enhancing the legitimacy, effectiveness and absorptive capacity of the administrative and governing system. Without this, we will never have the tools in place

for our own efforts to assist in post-conflict peace building. So also for the PBSO. While there has been a welcome effort to include the PBSO on the ground in the countries where the PBC has an involvement, much more needs to be done. To begin with, the capacity of the PBSO needs to be expanded, but this must also be matched within the UN system by a willingness to genuinely include the PBSO, rather than to zealously guard turf. Third, and this is a related point, we need to make greater efforts to energize the coordination aspect of the PBC's mandated role. Currently neither the PBC, nor the PBSO within the UN, have been able to leverage their unique and "cross-cutting" positions to perform this task. To those who argue that the PBC is not as yet ready for it, the counterpoint is that unless it is given that task, it can never be ready to coordinate international efforts. Furthermore, it also begs the question why major donor organizations sought to be part of the PBC if not to enhance its coordination role. Fourth, while we have certainly done better in this past year in focusing attention and assisting in the marshalling of resources, much more can and must be done. Advice alone will not consolidate peace; certainly not if it isn't matched with either material or policy assistance. Mobilization of resources is the key vehicle by which post-conflict societies can set course upon the road to peace consolidation and development.

Mr President,

As a contributor to the Peace-building Fund (PBF), and as a member of the PBC's organizational committee, we have welcomed the operationalization of the PBF, just as we welcome the idea of a renewed resource-mobilization drive towards the end of this year. We also welcome the improved synergy between the PBC and the PBF, although much more needs to be done to ensure that the objectives of the PBC's policy advice and the actual disbursement of funds to the State concerned are actually in consonance.

There remains a troubling lag between the two, which needs to be dealt with when we consider a new mandate for the PBF. Unless the disbursement of funds improves, and unless the strategic link between the PBC and the PBF is better, neither body will achieve its full potential. In this context, I must underline that we remain unconvinced that the three-window structure of drawing upon the PBF has been particularly useful to either the PBF or the PBC; in particular, Window II. Even the report on the PBF appears to suggest, in para 33, that the proactive strategy of identifying additional countries eligible for support for funds involved selection of countries

receiving high-level visits from the UN, or those that approached the UN Secretariat directly, and in one case, as we know, one country which did not approach the UN directly, but was given funds to prolong the UN's presence in that country.

This can hardly be called effective criteria for PBF funding. Indeed, since the entire process of Window-II consideration takes place without any inputs from either the member States or the PBC, it is hard to know what criteria actually apply. In fact, Window II does not rise to the level of even window-dressing! There is also a potential problem of blurring of monitoring lines, if a State begins to receive assistance under PBF Window-II, before eventually coming on to the PBC's Agenda. These and several other issues need to be resolved during the discussions on the PBF. I would also like to reiterate in the context of the better utilization of PBF allocations, the point I made earlier about enhancing the mandate and the capacity of the PBSO. Without this, we will always be in a less than satisfactory position regarding the utilization of money allocated under the PBF. It is not enough to ascribe this problem to the weak absorptive capacity in the country concerned. It is precisely because absorptive and administrative capacities are weak that assistance has been sought. Therefore we need to ensure that the PBC and PBF jointly work together here in New York with the PBSO, to provide clear instructions, and that on the ground, there is a dedicated unit dealing with PBF funded projects.

Mr. President,

In conclusion, let me reiterate that the mechanism of peace building is integrally-related to the larger question of a collective approach. If we continue to segregate ourselves within the PBC, but also between the PBC, the PBSO and the PBF, and between all three and the rest of the UN system, we will fail to provide a coherent and coordinated response to those who look to the UN to make a difference. That should not happen. I reiterate India's commitment to do whatever is in our power to ensure that this is never the case.

I thank you.

719. Statement by Deputy Permanent Representative at the UN Ajai Malhotra in the General Debate of the Special Political and Decolonization (Fourth) Committee on Decolonization.

New York, October 9, 2008.

Mr. Chairman,

It gives me great pleasure to congratulate you on your election as the Chairman of the Fourth Committee, as well as to congratulate the other members of the Bureau. I would like to assure you of India's full cooperation during this 63rd session of the UN General Assembly.

Mr. Chairman,

We continue to wrestle with the remnants of colonialism, a bygone system that runs contrary to the fundamental principles of the UN. Archaic and outmoded, colonialism contravenes the fundamental tenets of freedom, dignity of the individual, human rights and democracy. While there has been considerable progress in removing countries from the grip of colonialism, sixteen areas still remain on the list of Non-Self Governing Territories. This serves to remind that, although we have covered much ground, the process of decolonisation is as yet unfinished and more remains to be done.

We are now in the eighth year of the Second International Decade for the Eradication of Colonialism [2001- 2010] and unless we intensify our work to implement the various resolutions and recommendations to eradicate colonialism, the work of the Special Committee of 24 may well enter another decade before it is completed.

Our approach to the task ahead must blend urgency and activism with sensitivity and circumspection. In doing so it is of paramount importance that we take into account the needs of the people of these Territories and their special circumstances. An appropriate format and timing for the completion of decolonization in each territory needs to be focused upon. Ascertaining the political aspirations of the people of these Territories, and taking into account the stages of development of each Territory, are critical inputs for the making of decisions that would enable them to develop indigenous political and socio-economic institutions and structures of their

choice. The importance of steering clear of a "one size fits all" approach cannot be overstated; the focus should instead be on a case-by-case approach, with a view to making real progress in each Territory.

Dissemination of relevant information regarding options that may be available to the people in the Territories is crucial. On occasion, the local population may be unaware of the legitimate political options available to them. For real constitutional and political advancement to occur, the peoples of a Territory must have sustained access to unbiased information about the licit options of political equality before them, viz., independence, free association with an independent state, or integration with an independent state, as clearly defined under Resolution 1541 [XV] of the General Assembly.

Visits by UN Missions to Non Self-Governing Territories and the conduct of Regional Seminars by the Special Committee of 24 on Decolonisation, are important tools to bridge this information deficit in the process of decolonisation. The instrumentality of visiting Missions helps in the collection of adequate, first-hand information on conditions in the Territories and in ascertaining the wishes and aspirations of the peoples concerning their future status. Such missions are also important in the context of furthering modalities and action plans for decolonisation and observing acts of self-determination. We hope that the administering Powers would extend their full cooperation to the Special Committee in facilitating such visiting missions. Similarly, we favour the holding of regional seminars by the Special Committee, in an effort to mobilize world opinion to support and assist the peoples of the Territories in speedily ending colonialism. In this context, we look forward to the holding of the next seminar in the Caribbean region in 2009.

The actions of the administering Powers in recent years have been largely imbued with a spirit of cooperation and flexibility. We would urge them to build upon this positive spirit by, in particular, assisting the Special Committee of 24 in devising customized action plans for the decolonisation of certain Territories in their quest for self-determination. Tokelau is an example and we join in appreciating the cooperation shown by New Zealand, as the administering Power, with the work of the Special Committee relating to Tokelau. We hope that such instances of partnership will also guide other administering Powers that still resist the international dialogue established by the United Nations on the political and constitutional development of the territories under their administration. We agree that an

interactive dialogue on the objective reality in the Territories would be to the benefit of all concerned, in particular, the people of these territories.

Mr. Chairman,

We agree with the recommendation that the Special Committee develop a mechanism to annually, systematically review the implementation of the specific recommendations on decolonization, with a focus on implementing the mandate as set out in General Assembly resolutions and the plan of action of the Second International Decade for the Eradication of Colonialism. We would like to assure the Chairman of the Committee of 24 of our full support for his efforts to move the agenda ahead and successfully fulfill the mandate of the Special Committee.

Finally, Mr. Chairman, in a statement a little while ago the distinguished delegate of Pakistan made an unwarranted reference to the Indian State of Jammu and Kashmir, given the context of the work of this Committee. He would have been better served by avoiding commenting about an integral part of another member state. Such a comment also contradicts the agreed Conclusions and Recommendations of the Special Committee on Decolonisation that were presented on 16 May 2008, which specify that any such attempts are incompatible with the purposes and principles of the Charter of the United Nations. Nevertheless, Mr. Chairman, we certainly do look forward to the continuation and deepening of a constructive dialogue with Pakistan and to a profound transformation in our bilateral relationship with Pakistan, so that our two countries can work together on our shared objectives of peace, prosperity and security.

Mr. Chairman,

In conclusion, as a founding member of the UN and the Special Committee on the Implementation of the Declaration on Decolonisation, I would like to reaffirm India's unrelenting commitment to achieving the goal of complete decolonisation.

Thank you, Mr. Chairman.

**720. Statement by Permanent Representative at the UN
Nirupam Sen on Agenda Item 73: Criminal Accountability
of United Nations officials and Experts on Mission at
the Sixth Committee.**

New York, October 10, 2008.

Thank You Mr. Chairman,

We thank the Secretary General for his Report outlining the information received from Member States regarding the extent to which their national laws establish Jurisdiction, particularly over crimes of a serious nature committed by their citizens while serving as United Nations officials or experts on mission, as well as information on cooperation both between States and with the United Nations and the facilitation of investigations and prosecution of such individuals. We also thank the Chairperson of the Ad hoc Committee for her Report.

We note with great concern the instances of sexual abuse and exploitation and other criminal acts committed by United Nations officials and experts on mission in spite of clear codes of conduct and a policy of zero tolerance. My Government is totally committed to punishing those found guilty of any misconduct and concurs with the view that officials and experts on mission should be held accountable whenever they commit criminal acts not only because of the prejudice or harm caused to the victims but also because they undermine the work and image of the United Nations. It is important that all UN Officials and Experts on Mission perform their duties in a manner consistent with the Charter of the United Nations and in a manner that promotes the image, credibility, impartiality and integrity of the United Nations.

It is essential to ensure that in no circumstance are any United Nations personnel exempt from the consequences of criminal acts committed at their duty station. The legal gap in jurisdiction has been identified as the main barrier in this regard and to address the problem a number of measures were proposed in the General Assembly Resolution A/62/63 adopted last year.

The Resolution strongly urges all States to consider establishing jurisdiction over crimes of a serious nature committed by their citizens while serving as United Nations Officials or experts on mission, at least where the conduct as defined in the law of the State establishing jurisdiction also constitutes a crime under the laws of the host State.

We sincerely hope that the implementation of this Resolution would help fill the jurisdiction gap in respect of Member States that do not assert extraterritorial jurisdiction over crimes committed by their citizens abroad.

As regards India, the Indian Penal Code extends to extra-territorial offences committed by Indian citizens. Therefore offences committed by Indian officials or experts on missions while serving abroad are punishable under Indian law.

The Resolution also encourages all States to cooperate with each other in the conduct of investigations and prosecution of those who are charged.

In this area, India has a well developed law which enables it to seek from and extend cooperation to foreign States in respect of mutual legal assistance in criminal matters. This law is contained in the Code of Criminal Procedure, 1973. It includes provisions on execution of judicial processes; assistance in relation to orders of attachment or forfeiture of property identified as unlawfully acquired; management of property so seized or forfeited; procedure to be followed in case of letter of request; letter of request to competent authority for investigation in a country or place outside India; and the execution of a letter of request from a country or place outside India to a Court or authority for investigation in India.

India has also concluded several bilateral agreements on mutual assistance in criminal matters. These agreements are designed to provide mutual legal assistance in criminal matters that is necessary for the prosecution of offences, searching persons and property in question, location of fugitives and property involved, transfer of witnesses and exhibits and freezing and confiscation of proceeds.

The Indian Extradition Act, 1962 deals with extradition of fugitive criminals. It allows for extradition for extraditable offences i.e. an offence provided for in the extradition treaty with another State. This Act also allows treating of an international Convention as the legal basis for considering extradition in the absence of a bilateral agreement.

Mr. Chairman,

The issues of pre deployment and in-mission training are crucial. Careful preparatory training in terms of a democratic, multi-cultural, pluralistic and tolerant outlook is as important as subsequent swift punitive action, once culpability is established. We thank the Secretariat for providing the details

of measures taken to strengthen existing training on United Nations Standards of Conduct, which include not only pre deployment and in-mission training but also mission specific training that takes into account cultural aspects of the host population.

In conclusion, Mr. Chairman, we welcome the adoption of the "comprehensive strategy on assistance and support to victims of sexual exploitation and abuse by the United Nations staff and related personnel" and would hope that it is promptly implemented.

Thank you.

721. Statement by Member of Parliament and Member of the Indian Delegation to the UN D. Raja on Agenda Item 47: [A] Macroeconomic Policy Questions: [B] International Financial System and Development [C] External Debt and Development: Towards a Durable Solution to the Debt Problems of Developing Countries; and [D] Commodities at the Second Committee.

New York, October 13, 2008.

Madam Chair,

We would like to thank the Secretariat for the detailed and comprehensive reports on the macroeconomic policy questions being considered on the agenda today. We associate ourselves with the statement made by Antigua and Barbuda on behalf of the Group of 77.

Madam Chair,

Even as we speak, the international financial system is in the midst of a severe crisis, and its impact on the "real economy" is beginning to be felt. Moreover, while the crisis did not originate in developing countries, it appears likely that it will impact the development efforts of developing countries through overall slowdown in global growth, shrinking export markets, etc. Against this background, developed countries need to take effective measures to ensure that their commitments on development financing to developing countries are not diluted.

Many developing countries will also need additional international support to address the impacts of the financial crises, as well as the food and energy crises. The case for genuine multilateral governance could not have been made more forcefully put than by the financial crisis, whose cross-border ramifications have been rapid and significant. The crisis has also tested the effectiveness and role of international institutions, particularly the International Monetary Fund, which have a basic mandate of guaranteeing global financial stability. Clearly, in the global economic realities of today, traditional responses involving select developed countries cannot deliver results. We need to have multilateral mechanisms that have full and effective participation of developing countries, if genuine global coordination is to be achieved. In this context, a comprehensive reform and democratization of the Bretton Woods Institutions is indispensable.

We fully agree with the report of the Secretary-General that reform of the governance structures of international financial institutions is critical to the integrity of the international financial system. This reform must enhance the voice and participation of developing countries in these institutions. Such reform would also better respond to the needs and concerns of the majority of countries affected by the operations of these institutions. The steps taken so far have been inadequate, and must be intensified. Given its unique role and legitimacy, we would urge that the reform process be overseen by the United Nations. I would also take this opportunity to highlight that it is important that developing countries have the necessary policy space to implement policies suited to their unique circumstances, just as developed countries do, rather than face a restricted choice through conditionalities.

Madam Chair,

Even before the onset of the current financial crisis, developing countries did not enjoy an international environment conducive to development. For more than a decade now, there has been a net transfer of financial resources from developing to developed countries, instead of a flow of resources from developed to developing countries. Worse, this has been steadily increasing, and was nearly US\$ 0.8 trillion during 2007.

While there has been an increase in private capital flows into developing countries, as recent developments have underscored, not all such flows were stable, pro-development. Instead, these included speculative flows are not reverse themselves at the first sign of turbulence. Moreover, private flows are not attracted towards social sectors and other development related

sectors. Further, not all investment flows have fostered commensurate linkages with the domestic economy, thereby minimizing their positive impacts. In addition, the international community appears to be paralysed by a steadily declining trend in Official Development Assistance flows, which remains crucial for many countries.

It is of grave concern that most donors are not on track to meet their commitments. We believe that a thorough review of these issues, under the Development Cooperation Forum of the Economic and Social Council of the UN, is urgently required.

Madam Chair,

While there has been some improvement in the debt situation of developing countries in general, not all countries are in the same situation. As the report of the Secretary-General notes, several low income countries have current account deficits and, and their international reserves are well below the level of their short-term debt. Debt relief initiatives have run their course. Given the varying level of arrears in debt servicing, resources released for development by debt-relief were much smaller in actual practice. Thus, as confirmed by the 2008 report of the UN Conference on Trade and Development [UNCTAD], debt relief was not additional to other forms of aid. Instead, debt relief was erroneously counted as Official Development Assistance. Moreover, many countries did not benefit from debt relief. Debt sustainability analysis frameworks remain non-transparent and subjective. This must be rectified. We agree with the report of the Secretary-General that the ability to repay and the need for resources are separate issues, and cannot be interchanged. Further, such frameworks must also distinguish between solvency and liquidity problems. If the Millennium Development Goals are to be achieved, we must be able to find solutions that address the financing needs of developing countries, particularly low income countries. In this context, we need to consider new measures, like an international debt commission, to redress the problem of developing country debt. Any new mechanism must include effective participation of developing countries, instead of relying on donor-dominated bodies, or creditor-led frameworks of the International Monetary Fund. The United Nations is eminently placed to guide such a process.

Madam Chair,

The last few years have seen a commodity boom, which has benefited some developing countries that are dependent on commodity exports. Yet,

the report of the Secretary-General has correctly highlighted the continuing underlying challenges of price volatility, limited development gains, and difficulties in diversification on account of structural barriers in international markets. Moreover, agricultural distortions by developed countries continue, including in products like cotton, to undermine commodity-based development efforts of developing countries. We must also be cognizant that high food prices have adversely affected many food importing developing countries. Agricultural subsidies by developed countries and diversion of grain for bio-fuels, have been particularly responsible for this. Coupled with high energy prices, the overall impact threatens to undo the development gains achieved in the recent past. There are indications that some commodity prices are now poised for a decline. This only serves to underline the volatility of commodity exports. Greater international efforts are required to assist low-income commodity-dependent developing countries to launch their economies on a sustained growth path. We support UN Conference on Trade and Development's [UNCTAD] role in this context, and welcome the strengthening of the Commodities Branch of UNCTAD, as decided at UNCTAD XII in Accra.

In conclusion, Madam Chair, let me reiterate the importance of urgent collective action to create an international financial system that supports and fosters development.

Thank you, Madam Chair.

722. Statement by former Member of Parliament and Member of the Indian Delegation to the UN Vishvjit P. Singh on Agenda Item 79: The Role of Law at the National and International level at the Sixth Committee.

New York, October 13, 2008.

Thank You Mr. Chairman,

India strongly supports adherence to the rule of law both at the national and international level and aligns with the Statement made by Cuba on behalf of the Non Aligned Movement. We see promotion of the rule of law as an essential tool for ensuring sustainable development and peaceful coexistence and cooperation among States.

We thank the Secretary General for the comprehensive inventory contained in document A/63/64 on the current rule of law activities of the United Nations that will facilitate in assessing the current capacity of the United Nations System to respond to the demand of rule of law assistance from Member States. The Secretary General's other Report contained in document A/63/226 on this topic identifies ways and means of strengthening and coordinating the activities of the United Nations System devoted to the promotion of the rule of law. The Report contains several proposals designed to improve effectiveness of the assistance requested by States in building capacity for the promotion of the rule of law at the national and international levels.

Mr. Chairman,

We understand that the United Nations is currently conducting rule of law operations in more than 110 countries. A sizable number of these efforts are in conflict and post conflict situations where United Nations supports multiple aspects of the rule of law framework. In addition it is also engaged in traditional rule of law dissemination activities including publication of guidance materials and training of personnel.

Given the breadth of the United Nations' rule of law engagement, as reflected in the inventory, we hope that the - Rule of Law Coordination and Resource Group', would be able to fulfill its functions as a focal point for coordinating system-wide rule of law activities and help in coordinating the

activities of all specialized agencies and organizations of the United Nations and ensure that there is no replication in their work on the promotion of the rule of law.

However the Secretary General rightly points out that notwithstanding the United Nations experience and expertise in many normative areas, it still suffers from under funded mandates and shallow capacities. In a number of rule of law areas, the Organization, therefore, needs to enhance its expertise and capacity.

On the other hand, rule-of-law assistance has sometimes been piecemeal and, in some instances, donor-driven and not in line with national priorities of the recipient countries. There is an urgent need to move towards approaches that are nationally-driven and sustainable, and approaches that can garner the requisite political and popular support.

Mr. Chairman,

Several studies show that the conventional view favors a “top down” approach, in which building the rule of law is primarily about crafting the right laws and institutional arrangements, which can be informed by international best practices. However another alternative: a “bottom up” strategy involves providing technical assistance to different players in a transition country's legal and political community-such as training lawyers and judges that helps build both a culture of respect for the law and a constituency that will demand legal reforms from their government. Though these approaches are not mutually exclusive, it has been seen that merely providing generic expertise by model legislations or visits by foreign experts is often not as helpful as involvement and building of local expertise. The Secretary General's Report therefore correctly identifies partnerships with national rule of law stakeholders as a key that can provide insights on dynamics underlying key concepts and suggest innovations to improve the likelihood of success of a program.

Further, the United Nations is but one actor in the field. A lack of strategic planning and coordination among all rule-of-law entities, including donor Governments and non-governmental organizations, can produce duplication and can waste effort and money. Therefore, greater coordination

and coherence within the United Nations has to be matched by coherence with other rule-of-law actors.

We are happy to note that the United Nations approach to rule of law is also focusing on some of these issues and is developing a result oriented and targeted Strategic plan for 2009-2011 that is intended to identify a shared vision, objectives and joint activities that maximize areas of synergy and complementarity while minimizing overlap and duplication.

Mr. Chairman,

There is consensus among member States in support of the rule of law. A number of recommendations have been made by the Secretary General in his Report to move the rule of law agenda forward. These recommendations require serious consideration. We hope that the Sixth Committee will be able to consider these recommendations and choose a topic this year to enable a structured discussion on the subject that will help to promote and strengthen the rule of law at the national and international levels.

Thank You

723. Statement by Member of Parliament and member of the Indian Delegation to the UN Arjun Charan Sethi on Agenda Item 56 [A] Advancement of Women and [B] Implementation of the outcome of the Fourth World Conference on Women and the twenty-third Special session of the General Assembly at the Third Committee.

New York, October 14, 2008.

Mr. Chairman,

We thank the UN Secretary-General for his reports on the present Agenda Item on Advancement of Women. My delegation associates itself with the statement made by Antigua and Barbuda as the Chair of G-77.

Mr. Chairman,

Advancement, development and empowerment of women and eliminating all forms of discrimination against women have been much talked about issues at the international level, however, without appreciable progress in most of the countries. It remains as an important cross cutting issue in the international social, economic and development agenda. Several international Conferences on it have been held till date, the last significant one being the United Nations Fourth World Conference on Women in Beijing in 1995 and the Twenty third Special Session of the General Assembly in June 2000. The 2000 Millennium Summit also gave importance to the issue of equality and empowerment of women and identified attainable goals by 2015. In fact, gender is an overarching theme in all the 8 Millennium Development Goals and the main theme of MDG-3, i.e. promotion of gender equality and empowerment of women. The last review of the MDG, which was done this year, unfortunately revealed that despite progress, gender gaps remains considerable and the full potential of women is untapped. The resource crunch at the international level and lack of sincere efforts at domestic level are major hindrances in achieving this goal.

Mr. Chairman,

The UN Secretary General's report titled, "the improvement of the status of women in the United Nations system", which studied the status of women with the target of achieving 50/50 gender distribution in the UN system, especially at senior and policy-making levels in the UN has revealed a dismal state of affairs. It showed that the average increase of women in UN system

was around 0.3 % in the last 10 years, with the percentage of women increasing from 34.6 % to 38.2%. If one has difficulties in implementing a relatively simple objective of equal representation of women in a cosmopolitan setup like the United Nations, it is not surprising that states with their own cultural and societal compulsions, might take much longer to achieve this objective. However, we would like to acknowledge the efforts made by the Secretary General personally in ensuring that the percentage of women in the UN system improves, and would like to convey our support to the various recommendations in his report for achieving the same.

Mr. Chairman,

Since adoption of its Constitution, India has been taking all steps possible to achieve realization of equality of women in all walks of life. Empowering women politically, educationally, economically and legally has been a major objective of the Government of India. The Department dealing with women affairs since 1985 was made into a full-fledged Ministry in India in 2005. Convinced, that lack of funds should not be a reason for delays in implementing programmes specific for women empowerment, the 11th National Five Year Plan (2007-2012), for the first time in the history of Indian planning, focus has shifted from mere empowerment of women to recognizing women as agents of sustained socio-economic growth and change. Gender, therefore, has been made a cross-cutting theme; not confined to a single chapter on Women and Children. The Plan also endeavours to guarantee the rights and entitlements of all women, and has recognised that their requirements differ based on their locations within various castes, communities, religions, geographic and development zones.

Mr. Chairman,

Political empowerment is also an essential prerequisite for attainment of progress on women's issues. One of the landmark achievements for the empowerment of women at the political level in India has been the reservation of one-third of urban and local self-government seats for women, thereby giving more than one million women social and political empowerment at the grassroots level. A similar reservation at the Parliament level is being pursued by the government. India's Joint Parliamentary Committee on Empowerment of Women also independently monitors equality and empowerment of women and ensures that legislations in India are gender responsive.

Mr. Chairman,

In order to improve the socio-economic empowerment of women in India, several programmes have been implemented, namely, mobilization of women into Self Help Groups imparting vocational skills training and encouraging entrepreneurship by providing easy credit facilities. In order to facilitate the employment of women away from their homes, schemes providing support services for women such as Working Women Hostels with day-care and crèche centres have been implemented. India is also implementing the Act on Social Security for Workers, including women workers, in the unorganized sector. Here, I would add that the National Rural Employment Guarantee programme, launched in 2006 for providing 100 days assured wage employment annually to every rural household with at least one-third women beneficiaries, comfortably achieved its target. In fact, more than 49% of the beneficiaries happened to be women. India is progressively marching ahead towards the target of realising the goal of reducing the female poverty ratio by 15% by 2012.

Mr. Chairman,

We have also started Gender Budgeting and creation of a database of gender disaggregated information as major monitoring tools to examine whether women are able to benefit from the policies and programmes instituted for them. Gender budgeting is perceived as a powerful tool not only for tracking allocation of resources for women but also to monitor implementation of issues and outcomes by setting up of gender cells. All Ministries in the Government of India also submit an outcome budgets that ensures effective utilisation of the amount allocated for women in the budget. India has also initiated steps to compile and prepare Gender Development Index and Gender Empowerment Measure for India and States under the GOI- UNDP Project of 'Promoting Gender Equality'. Our approach to educating women has stemmed from our basic belief that if you educate an individual, you are enlightening an individual, but if you educate a woman, you are enlightening a family. In order to achieve equality in the field of literacy, special emphasis has been given for education of the girl child. Considerable progress has been made and recent data shows that the ratio of female to male students at primary school level has increased in the last 15 years from 0.7: 1 to 0.88:1 and in the secondary school level from 0.5:1 to 0.7:1. Similarly, overall, female literacy rate has increased at the rate of 14.4% in the last 15 years, whereas, male literacy grew only 11.1%. Mr. Chairman,

Another related issue is the exploitation of women as a result of trafficking of women for various unlawful purposes. Government of India recently amended appropriate provisions in the Immoral Traffic (Prevention) Act to enable more stringent punishment for the perpetrators of this heinous crime. Additionally, a new Central Scheme, called, "Ujjawala"- a Comprehensive Scheme for Prevention of Trafficking, Rescue, Rehabilitation, Re-Integration and Repatriation of Victims of Trafficking and Commercial Sexual Exploitation" was launched in December 2007. Furthermore, in order to stem the problem of cross border trafficking especially of young children and women into India, a Roadmap and Joint Plan of Action has been developed in consultation with other partners and with technical support from UNICEF. Also, in the 11th Five Year Plan, a new central scheme titled 'Relief and Rehabilitation of Victims of Rape', has been proposed for providing specific succor to rape victims. Here I would like to inform you that the Indian Parliament, in 2005 enacted 'The Protection of Women from Domestic Violence Act' to tackle this scourge in India. The Act provides for free legal service, protects the rights of women to secure housing and includes a provision to prevent the abuser from causing further violence. It also involves NGOs as service providers for giving assistance to abused women.

Mr. Chairman,

India will continue to contribute positively to United Nations efforts to reach out to vulnerable sections, particularly women and children, in conflict and post-conflict societies. The international community should also commit to this noble cause by providing new and additional financial resources, transfer of technology, sharing of experiences, expertise, information and data, technical cooperation and capacity-building, to countries that urgently need them. We reiterate our commitment to attaining the goal of equal rights of men and women everywhere.

Thank you, Mr. Chairman.

724. Statement by Member of Parliament and Member of the Indian Delegation to the UN Tariq Anwar on Agenda Item 28: International Cooperation in the Peaceful Uses of Outer Space in the General Debate of the Special Political and Decolonization [4th] Committee.

New York, October 14, 2008.

Mr. Chairman

We are pleased to see you chair our discussions on international cooperation in the Peaceful Uses of Outer Space. We are also happy that the UN Committee on Peaceful Uses Of Outer Space has been contributing a lot towards capacity building for sustainable development and strengthening international co-operation for a peaceful outer space. We are pleased that much progress was made during the 51st session, under the chairmanship of Colombia.

Mr. Chairman

Indian Remote Sensing imagery and support services were made available for post-disaster relief operations after the major cyclone and earthquake that recently struck Myanmar and China respectively. Moreover, as a Member of the "International Charter on Space and Major Disasters", the Indian Space Research Organisation [ISRO] took an active part in the activities of the Charter in providing remote sensing data and assessment support to the countries concerned.

Mr. Chairman

During January 2008, the Indian Polar Satellite Launch Vehicle successfully launched a commercial satellite for an international customer. In April 2008, ten satellites consisting of two national primary satellites CARTOSAT-2A and IMS-1 and eight nano satellites were carried on-board PSLV-C9. In coming years we plan to also provide such opportunities on Indian launchers for student and scientific communities from developing countries.

Mr. Chairman

In the area of Space Application, many programmes have been implemented. In an effort to provide support to quality education across India, more than 33,000 EDUSAT classrooms have been established. Tele-

education networks have benefited students from all over the country. The telemedicine network is being expanded with a view to making expert medical consultancy in cities available to patients in remote areas. Today it consists of 320 hospitals, of which 270 hospitals are at remote/rural/district levels, connected to 42 Super Specialty hospitals in major cities. More than 500,000 people have been benefited from it.

The Village Resource Centres undertaken by ISRO, for providing space-enabled services, has also proved to be an effective tool. It has acted as a single window delivery mechanism for space based products and services. These include tele-education, tele-medicine, information on natural resources for planning and development at local level, advisories on agriculture, fisheries, land and water resources management, livestock management, etc. Today, over 400 Village Resource Centres have been established across India, providing valuable inputs to the local community.

Mr. Chairman

India's first unmanned scientific mission to the moon, CHANDRAYAAN-1, is to be launched in the next few days. It is an example of how scientists from different countries can share their expertise for the benefit of humankind. CHANDRAYAAN-1 will also carry scientific instruments for USA, the European Space Agency, and Bulgaria, besides India. The data generated on the characteristics of the moon should benefit scientists across the world. On November 12, 2007, ISRO and its Russian counterpart signed an Agreement on joint lunar research and exploration. It will lead to CHANDRAYAAN-2, a joint lunar mission involving a lunar orbiting spacecraft and a lunar vehicle on the Moon's surface.

As part of Indo-French co-operation, ISRO is jointly building a satellite called MEGHA-TROPIQUES, primarily to carry out meteorological observations in the tropical region. It is to be launched in 2009. The data generated by it will play a significant role in establishing a global data bank for addressing issues related to weather and climate change.

Mr. Chairman

ISRO takes a special interest in capacity building and services for assisting developing countries in the application of space technology. The Center for Space Science and Technology Education for Asia and Pacific Region, operating from India, has so far conducted 26 postgraduate programmes

and 19 short-term courses and workshops. 726 scholars from 30 countries from the Asia-Pacific region and 26 scholars from 16 countries outside that region have benefited from it.

Mr. Chairman

In conclusion, I would reiterate India's commitment to the use of Outer Space for peaceful purposes in the common interest of humankind.

Thank you, Mr. Chairman.

**725. Statement by Permanent Representative at the UN
Nirupam Sen at the meeting of the Open-ended Working
Group on the Question of Equitable Representation on
and Increase in the Membership of the Security Council
and Other Matters.**

New York, September 15, 2008.

Mr. President,

Thank you for this meeting. For the first time after fifteen years, your text clearly mandates intergovernmental negotiations in the informal GA plenary with a fixed time line of January 31, 2009. It removes any substantial linkage between the OEWG and the informal GA plenary. The formal relationship left is the maximum extent to which we can go because it clarifies the consultative role of the GA exercised through the OEWG and its negotiating role exercised through the informal plenary. For the first time the text correctly contains the linguistic and political reflection of the arithmetical balance between more than two-thirds who have been for this position and the less than one-third who have not. We therefore congratulate you and the Task Force and strongly support your text. It is evident that in the legal UN meaning of consensus (supported by numerous commentaries on the Rules of Procedure which I cited on earlier occasions), there is a consensus because consensus means that those who oppose the text do not oppose it strongly enough to seek a vote.

The explorer Ernest Shackleton once said that superhuman effort isn't worth a damn unless it achieves results. Results have been achieved. The efforts

of the L69 and all our partners have achieved results. These could not be in full measure for anybody but are in substantial measure for everybody. We have results rather than a continuation of mere routine.

One of our distinguished colleagues extolled the virtues of continuity and clarity, meaning that we should continue to do nothing and be clear that we shall do nothing. Another colleague thought a slow pace positive. Having seen the positive results of such a pace for fifteen years, we should consider a change. One of the leading lights of the UFC wanted to substitute the phrase "informal GA plenary" with the phrase "OEWG". As a serious proposal, it is not worth serious consideration. If made in a lighter vein, it is in poor taste. His colleague from the UFC should understand that the overwhelming majority has never accepted that the OEWG should get a new mandate and become a Prepcorn for negotiations. I agree with my distinguished friend from Egypt that we should maintain the tradition of the OEWG: the tradition of the OEWG is to be a merely consultative body: we should clarify that it would not be anything else.

I am surprised by the previous speaker. He specially should realize that the organisation he represents needs added legitimacy and added resources. I am surprised that he sang the swan song of a declining organization, head buried in the sand till the sand chokes it.

726. Statement by Member of Parliament and Member of the Indian Delegation to the UN Arjun Charan Sethi on Agenda Item 54: Operational Activities for Development at the Second Committee.

New York, October 15, 2008.

Mr. President,

The Operational Activities for Development of the United Nations are in many countries of the world including India, the visible face of the United Nations. Article 55 of the Charter recognizes the link between development and international stability. It also charges the United Nations with the responsibility of promoting development. These operations are thus amongst the most important activities of the United Nations. The current global financial crisis, with its implications on global poverty levels and on the attainment of the Millennium Development Goals has exponentially increased the importance of discussing ways and means to strengthen these capabilities of the United Nations and the importance of ensuring that the crisis does not affect the MDG process. India would like to align itself broadly with the statement made by Group of 77 on this issue.

Mr. President,

Developing countries greatly value the universal, multilateral and impartial nature of UN Development Operations. The neutrality and legitimacy of these activities give them a character, credibility and effectiveness that set them apart from the development operations carried out by other development actors. Developing nations, including India, would therefore like to augment the capability of the United Nations as a development organization.

Keeping this in mind, we would like to thank the Secretariat for the extensive documentation prepared for discussions under this agenda item. The Secretary General's report on Trends in contributions to operational activities of the United Nations and measures to promote and adequate, predictable and expanding base of United Nations development assistance (A/63/201) as well as the Comprehensive statistical analysis of the financing of operational activities for development of the United Nations system for 2006 (A/63/71) are particularly relevant to today's deliberations.

They make for depressing reading. The share of the United Nations in global ODA flows remains more or less static at a little over 10% of global

ODA. Not only are 90% of global ODA funds disbursed through non United Nations channels, the availability of funds to the UN system in the past year actually declined in real terms.

The Secretary General has justifiably reported that the trends in financing the United Nations system, in particular the decline in core resources, are of great concern. In the absence of a sound financial footing and an expanded funding base, the ability of the UN system to deliver coherently, relevantly and effectively, is impaired.

India believes that funding - core, predictable funding, funding without conditionalities, remains the key to the objective of making the United Nations deliver better and more. India agrees with the Secretary General's assessment that greater political will is required to ensure that the United Nations is equipped to deal with the development challenges of the world.

Mr. President,

Our position on the reform of UN Development Operations has been guided by our desire to bring about improvements. When we talk of improvements, we mean genuine, verifiable improvement in the quality of development services, further enhancements in responsiveness to national requirements, and a greater share for and a greater control by the United Nations of the global flows of voluntary funding in terms of budgetary discipline and Fifth Committee oversight.

India would like to strike a note of caution in respect of the ongoing debate about Systemwide Coherence and proposed reforms. Execution and better delivery of development operations and outcomes should not become hostage to structural objectives that remain nebulous. The question of programme content is as important, if not more important than the pursuit of purely administrative measure. The means cannot become more important than the end.

Different countries have different development objectives. The objective of "delivering as one" must not negatively affect the choices available to recipient countries. The choice of agencies and programmes available to a recipient country must not be curtailed and must necessarily be determined on a national basis.

The demand-driven nature of UN development operations is highly valued by developing countries. This country-based approach, rooted in national priorities, was strongly emphasised in the Triennial Comprehensive Policy

Review of Development activities that was carried out last year and remains of the greatest importance to my delegation.

Mr. President

The Government of India is fully supportive of the objectives of gender empowerment, gender parity and gender mainstreaming. These are laudable objectives and the United Nations is mandated to pursue them both within and without. We support measures that will improve the operational capability of the United Nations in these areas, including the creation of a gender entity. We would however like to be sure that these are accountable to the General Assembly and adequately resourced. The absence of augmented funding for UN development operations has a direct bearing on this issue.

Mr. President,

The relevance of South-South Cooperation for developing countries has been increasing over the years. Market based economies in an era of globalization have not brought the economic benefits to a large number of developing countries. Cooperation among developing countries is necessary for mitigating the adverse effects of international economic policies, the most immediate manifestation of which is the crisis caused by developments in the international finance and capital markets.

Despite continuing challenges, capacities in the South have risen dramatically in the last two decades and now there are hardly any goods or services required in the South, which cannot be sourced from the South itself. It is no surprise that the developing countries' share of total world trade has risen in the last two decades and that intra-South trade is growing at a rapid pace. Developing countries also continue to emerge as international investors.

Mr. President,

I would like to conclude by requesting the United Nations developmental system to give greater recognition to harnessing the potential of South-South cooperation. It is our belief that this will be a positive influence in the work of the United Nations in the development arena.

Thank You

727. Statement by Member of Parliament and Member of the Indian Delegation to the UN D. Raja on Agenda Item 57 [A] & [B]: New Partnership for Africa's Development: Progress in Implementation and International Support and Agenda Item 43: 2001 - 2010: Decade to Roll-back Malaria in Developing Countries particularly in Africa at the 63rd session of the UNGA.

New York, October 15, 2008.

Mr. President,

India's first Prime Minister, Jawaharlal Nehru, speaking at the Afro-Asian Conference at Bandung in 1955, described Asia and Africa as "sister continents". This vision of India and Africa, with our shared historical experience of fighting colonialism and multi-dimensional backwardness, and our common journey with a common destination, remains at the centre of India's links with Africa.

India, which hosted the first-ever India Africa Partnership Forum Summit in New Delhi in April 2008, is therefore extremely pleased to participate in today's discussion on the New Partnership for Africa's Development.

Mr. President,

We would like at the outset to take note of the High Level Meeting on the theme "Africa's Development Needs: State of implementation of various commitments, challenges and the way forward" that was held in New York on September 22, 2008. We would like to take particular note of para 39 of the Political Declaration adopted by the Meeting which stated inter alia that "All commitments to and by Africa should be effectively implemented and given appropriate follow-up by the international community and by Africa itself. We underscore the urgency of finding solutions to Africa's major challenges."

India would also like to echo the call of the President of the African Union made at that meeting that Africa deserves special attention. The strides being made by Africa in areas such as infrastructure, agriculture, health, human resources development, science and technology and information and communication technology are evident. They are also portents that indicate the awakening of a giant which will immutably transform the international political and economic order.

Mr. President,

The Secretary General in his report New Partnership for Africa's Development : 6th Consolidated Progress Report Implementation and International Support (A/63/206) provides details of the progress made in the various priority areas of NEPAD and analyses the response of the international community in support of NEPAD. We are particularly concerned in the light of this declaration that he has called for urgent implementation of international commitments, including a reversal in the decline of development assistance. We endorse the call of the President of the African Union of the moral obligation of the international community to assist Africa to pull itself out of the "poverty trap".

Mr. President,

India has always been committed to elevating its special engagement with Africa into an enduring partnership. We have a long-standing, close and multi-layered relationship with Africa based on our abiding commitment to work with the continent to fulfill its aspirations. Our partnership encompasses priority sectors integral to the developmental goals of Africa in the 21st century. A vibrant India and a resurgent Africa are witnessing an intensification of relations and growing convergence of interests in their common quest for sustainable economic growth and development.

The Delhi Declaration and the Africa-India Framework for Cooperation adopted by India and Africa earlier this year highlight our shared vision and world view. The Delhi Declaration is based on equality and mutual respect. The Framework of Cooperation, adopted at the Summit, outlines the priority areas of our future engagement. Taken together, these provide a sound foundation for the intensification of our engagement in the years to come.

India is committed to work together with Africa in accordance with the priorities of the continent. Areas of cooperation include capacity-building, agriculture, infrastructure development, health and food security and technology cooperation. India also announced the enhancement of the available concessional Lines of Credit for Africa to US\$ 5.4 billion. India sincerely aspires for a long-term partnership with Africa and is therefore investing in building economic infrastructure including railways, IT, telecom and power.

For India capacity building in Africa has been an area of priority. Since 1964, India has, through the Indian Technical and Economic Cooperation

(ITEC) Programme, worked with Africa in placing thousands of students from Africa in professional institutions under India under scholarship schemes. Over 15000 African students are currently studying in Indian universities and colleges. India will over the next five to six years, undertake, on a grant basis, projects in critical areas focusing on education, science, IT, agriculture and renewable energy. India has offered a substantially higher number of training slots and has also doubled long-term scholarships. We have allocated half a billion dollars for this purpose.

The pan-African e-network project is a shining example of India-Africa partnership. India has gifted a dedicated satellite for e-connectivity in sub Saharan Africa to help bridge the digital divide. This project is fully financed by the Government of India and was launched from Addis Ababa with a satellite hub in Dakar. It is linking major universities in different regions of Africa with major Indian universities and centers of excellence in India and major hospitals in Africa with super-specialty hospitals in India. Thirty countries have already joined this Project to provide quality tele-education and tele-medicine.

Mr. President,

The Secretary General in his report on NEPAD has called for the long-overdue successful outcome of the Doha round of multilateral trade negotiations encompassing a development dimension. At the India Africa Partnership Forum Summit, India and Africa have decided to work together on pressing global issues of shared interests and concerns including the WTO such as the issue of cotton subsidies. India has made a unilateral announcement of duty free and quota free market access to goods from 34 Least Developed Countries in Africa. This will spur economic activity in manufacturing, particularly for African SMEs, by allowing them enhanced market access to one of the fastest-growing economies in the world.

India, like Africa, has been affected by the global economic slowdown, the international economic and financial system, and high food and oil prices. This is on our common agenda as are issues such as climate change, reform and democratization of international institutions, the fight against terrorism, combating diseases, eradication of hunger and poverty and promotion of pluralism and democracy.

Mr. President,

Africa's fight against Malaria that is dealt with in Secretary General's report transmitting the WHO's report on "2001-2010: Decade to Roll Back Malaria

in Developing Countries, Particularly in Africa", remains an uphill task. Although there are signs that some progress might be taking place, it is a fact that resources remains inadequate, access to treatment is inadequate and that there is no evidence of a decline of malaria in Africa. The appearance of resistant falciparum strains is a matter of particular concern.

While a number of preventive measures, such as distribution of treated mosquito nets is being undertaken, it also remains a fact that the developing world's ability to combat such public health crises of this nature require fundamental changes in the intellectual property regime. The Doha Declaration enshrines the principle that trade rules on patents are not as important as public health. Access to medicines is a fundamental part of the right to health. It remains a matter of regret that this remains more in the realm of theory than practice.

Mr. President,

In concluding, I would like to state that it is our firm conviction that success in achieving the objectives of NEPAD depends on an African-led and Africa-developed agenda. With the rich human and natural resources available to Africa, and the commitment of Africa's leaders to achieving the objectives of NEPAD, success can be achieved if NEPAD receives the dedicated support of the international community in realizing the African dream.

Thank You

728. Statement by Member of Parliament and Member of the Indian Delegation to the UN Arjun Charan Sethi on Agenda Item 74: Report of the UN Commission on International Trade Law on the work of its Forty-first session of the Sixth Committee.

New York, October 20, 2008.

Thank you Mr. Chairman,

India values the work of the United Nations Commission on International Trade Law (UNCITRAL) and its efforts to establish and promote modern private law standards on international trade. We are pleased that the 41st session of the UNCITRAL has been a very productive one. We thank the Chairman of the Commission for the detailed Report.

During its 41st session UNCITRAL approved the draft Convention on 'Contracts for the International Carriage of Goods Wholly or Partly by Sea'. This is an important development in the law relating to carriage of goods by sea which in most parts of the world dates back to 1920s.

This Convention establishes a comprehensive framework for the regulation of all aspects of international carriage of goods and helps fill in gaps in the existing transport regimes.

The new Convention will regulate the rights and responsibilities of the principal participants in international shipping transactions and incorporates several new features that would benefit parties to a contract of carriage. There are increased limits of liability and extended liability for carriers that are expected to benefit shippers, particularly those in developing and least-developed countries, that are consumers of transportation services. The new legal regime would generate greater commercial confidence when doing business internationally. India actively participated in the Working Group negotiating this Convention and supports its adoption.

Mr. Chairman,

On the issue of cross border insolvency, we look forward to the compilation on 'practical experience with negotiating and using cross-border insolvency agreements'. It is expected to be a useful source in searching for solutions in the international treatment of enterprise groups in insolvency. In the area of electronic commerce, the Commission approved a study on the

legal aspects involved in implementing a cross-border single window facility with a view to preparing a comprehensive international reference document. We support this study as it will promote the use of UNCITRAL standards in countries using the future reference document.

Mr. Chairman,

As regards the working methods of the Commission, we welcome the comprehensive review being done in this regard. Given the highly technical nature of the work, we would support inclusiveness and transparency.

The issue of commercial fraud is of growing concern to international trade. It is a serious threat to the world economy, particularly due to the spread of technology and use of the internet. We hope that indicators of commercial fraud being prepared by the Secretariat would help combat practices that harm the commercial world.

Mr. Chairman,

Finally, we appreciate the continuing work under the system of collecting case law on the UNCITRAL texts. We commend the Secretariat for its wide range of technical assistance activities.

Thank you, Mr. Chairman.

729. Statement by Member of Parliament and Member of the Indian Delegation to the UN Tariq Anwar on Agenda Item 64: Promotion and Protection of Human Rights: [A] Implementation of Human Rights Instruments at the Third Committee.

New York, October 21, 2008.

Mr. Chairman,

We thank the UN Secretary-General for his various reports under this agenda item. A few reports were made available only very recently and some are still not ready. This has denied us adequate time to study them. We would request that all reports are made available to member states well in advance.

Mr. Chairman,

Observance of human rights is at the core of any civilised society. The founding States of the United Nations gave this principle highest priority in the Charter. Through progressive negotiations, it is satisfying that most institutional mechanisms for the promotion and protection of human rights are in place. With the establishment of the Human Rights Council, the apex body to handle human rights related issues in the UN and also the Office of the High Commission of Human Rights; the formal international structural regime for human rights is also in position.

The adoption of the Universal Declaration of Human Rights (UDHR) in 1948, which had set this ball rolling, culminated recently with the coming into force of the UN Convention on the Rights of Persons with Disabilities. In this context, I would like to stress that human rights are indivisible and inter-related. The protection of civil and political rights of people is equally important as the promotion of their economic, social and cultural rights, including the right to development.

Mr. Chairman,

As prescribed in various Conventions related to human rights, with the system of periodic reporting by the States Parties to the respective Conventions, certain amount of uniformity has been established in the procedure of reporting. Additionally, this also allows the distinct and unique scope of each of the Conventions to exist. This has helped the respective

Committees of the Treaty Bodies to make valuable assessment and also suggest practical recommendations. We are grateful to the Committees for their recommendations which have helped State Parties to strengthen their domestic policies and to achieve fundamental freedom for all. However, the learned experts to these Treaty Bodies should handle development, democracy and human rights as a single compact which are strongly inter-related to each other and have direct impact on its progress.

Mr. Chairman,

We welcome the efforts to streamline reporting by revised harmonization of the guidelines including a common core document and treaty-specific documents. This reduces duplication of work at the national levels and also helps in some amount of standardization. Treaty bodies and the Office of the High Commissioner of Human Rights should also develop the capacity of various member states who find it difficult to submit their periodic reports due to lack of experience and capability. Moreover, strengthening of national reporting procedure also assists member states in identify gaps in their policies and means to reduce them.

Mr. Chairman,

India has consistently supported the efforts of the international community to evolve a normative framework for promotion and protection of human rights. India has also paid due attention to meeting its reporting obligations and has also sought to regularly submit its country reports to respective Treaty Bodies.

Mr. Chairman,

We are concerned over the delays by various Treaty Bodies in examining country reports that have been submitted to them. We agree, in principle, to holding of Committee meetings in parallel chambers so that the number of reports examined could be significantly increased. Moreover, since these reporting procedures are of importance for the promotion and protection of human rights, the Office of High Commission of the Human Rights could also explore submitting a suitable proposal to temporarily increase the number of days of sitting of the relevant Committee meetings, at least for the next few sessions till the backlog of examination of country reports is removed.

Mr. Chairman,

With its constitutional guarantees, impartial judiciary, a progressive Parliament, a free and vibrant media, and a well established NGO community, India has been able to successfully establish pluralism and unity in a multi-ethnic, multi-religious, multi-lingual and multi-cultural society. The treaty body system has assisted us in implementing our international legal obligations and also in ensuring that the human rights of all people are protected. We hope that all member states will be able to benefit from the services of the Treaty Bodies, thus securing increased respect for human rights worldwide.

I thank you, Mr. Chairman.

730. Statement by Member of Parliament and Member of the Indian Delegation to the UN Arjun Charan Sethi on Agenda Item 72 - Nationality of Natural Persons in relation to the Succession of States at the Sixth Committee.

New York, October 21, 2008.

Mr. Chairman,

We commend the International Law Commission for preparing the Draft articles on "Nationality of natural persons in relation to the succession of States" which were presented to the U.N.

General Assembly in 1999. This was done in response to the problems of nationality arising from State succession. The Draft Articles emphasize that the legitimate interests of States and individuals in nationality rights, as guaranteed by the Universal Declaration of Human Rights of 1948, are governed by national law within limits set by international law.

To recall briefly, Article 1 provides that every person has a right to a nationality. "Succession" is defined as the replacement of one state by another in the responsibility for the international relations of that territory.

Article 3 provides an important clarification on the scope of the Draft Articles limiting it to only those cases of succession of states that have occurred in

conformity with international law and the United Nations Charter. Accordingly, occupation of territory by use of force or separation of territories involving the rights of third States without their consent is outside the scope of these Draft Articles.

The presumption of nationality of the successor state in the territory of which persons have their habitual residence, noted in Article 5, plays an important role in the scheme of the Draft Articles. Article 11 provides the right of option to choose between the predecessor and the Successor State. However it is expected that the option should be exercised within a limited time prescribed by the State concerned. Article 10 states the obvious principle of loss of nationality on voluntary acquisition of the nationality of another State. In this regard the Draft Articles tread a delicate path and do not endorse or denounce the right of States to grant or recognize dual or multiple nationalities.

Part II of the Draft Articles addresses various scenarios involving different categories of succession of States, including transfer of territory. The provisions in this part are generally satisfactory in explaining the implications of the general principles and adapting them to each of the categories of succession mentioned therein.

Mr. Chairman,

The draft Articles proposed by the International Law Commission can play a useful role in guiding States in establishing suitable national legislation on nationality. While they indicate several important principles, their status is essentially one of guidelines. Accordingly they honor the primacy of domestic law as long as the principles of non-discrimination, right of nationality and right of option are duly recognized as required by international law.

We endorse the recommendation of the International Law Commission that these Draft Articles be adopted in the form of a Declaration by the General Assembly. This would allow the States the necessary flexibility in applying the principles contained therein.

Thank You

731. Statement by Member of Parliament and Member of the Indian Delegation to the UN Tariq Anwar in the Special Political and Decolonization Committee (Fourth Committee) on Agenda Item 32: Questions Relating to Information.

New York, October 22, 2008.

Mr. Chairman,

The Indian delegation welcomes this opportunity to comment on the topic of "Questions relating to Information". Through his comprehensive statement at this session, on the activities in the first half of 2008, Under-Secretary-General Akasaka has set the tone for a lively debate. I would like to complement him for his leadership in revitalizing the Department of Public Information (DPI) and assure him of our support in meeting the challenges ahead. I would also like to associate my delegation with the statements made on behalf of G-77 and NAM.

Mr. Chairman,

The DPI has a pivotal role to play as it is the conduit for the flow of information between the UN, member states, media, civil society and the public at large. We take note of DPI's strategic focus in the areas of peace and security, development and human rights. Its success will be measured by its ability to meet its goals within limited resources.

Mr. Chairman,

DPI needs to intensify its efforts to meet the concerns and special needs of the developing countries in the field of information. Populations in developing countries that continue to be deprived of the benefits of the information revolution need to benefit from all aspects of the information and knowledge economy. Traditional means of communication, including radio and print, retain great relevance for spreading the UN message in developing countries. We encourage the combination of traditional means, such as print and radio, with modern technologies, such as webcasts and podcasts.

We also support the effort to facilitate the emergence of a world in which information is disseminated not merely in UN official languages, but also in other languages. Increasing the level of local content and involvement in the production of programme material will make the information more

relevant locally. It will also encourage local talent and creativity to involve itself in the work of the UN.

Mr. Chairman,

The role of United Nations Information Centres [UNICs] in disseminating information about the activities of the United Nations, especially in developing countries, is critical. Adequate budgetary resources must be assigned to UNICs. We encourage the DPI to consult closely with host countries, other countries served by these Information Centres, as well as the concerned region, in its efforts at further improvisation and innovation. Development of websites in local languages must also remain a primary DPI concern. In this context we welcome efforts of DPI to expand its partnerships with international broadcasters as well as post programmes on the UN Radio website in Asian languages including Hindi, Bangla and Urdu.

Mr. Chairman,

Information needs to be spread in a manner that makes it interesting and enjoyable for the audience. This is not easy to achieve and those working on content management must be driven by a constant desire for improvement. Moreover, DPI's programmes should seek to focus their coverage on projection of the most noteworthy activities of the UN, in particular, those that directly impact upon the lives of ordinary people. These include humanitarian activities as also the work performed, often under extremely demanding circumstances, by UN peacekeepers.

We would particularly like to see DPI, DPKO and DFS work closely in highlighting UN Peacekeeping success stories by providing accurate, impartial and timely information on the activities of UN Peacekeepers, including the exceptional work undertaken by them beyond their routine tasks. The DPI, by projecting stories of goodwill and down to earth cooperation, could go a long way towards creating a positive image for the United Nations and its peacekeepers. The establishment of United Nations Radio Stations in five peacekeeping operations is a welcome move.

In conclusion, Mr. Chairman, I would like to assure you of India's full backing as you guide the work of this Committee, as well as to the DPI as it seeks to project the UN story.

Thank you, Mr. Chairman.

732. Statement by Former Member of Parliament and Member of the Indian Delegation Vishvjit P. Singh on the Agenda Item 53: Eradication of Poverty and other Development Issues [A] Implementation of the Second UN Decade for Eradication of Poverty [2008 - 2017] [B] Industrial Development Cooperation at the Second Committee.

New York, October 22, 2008.

Madam Chair,

Permit me to begin by expressing our satisfaction at the proclamation during the 62nd session of the UN General Assembly of the Second UN Decade for the Eradication of Poverty for the period 2008-2017.

We associate ourselves with the statement made by Antigua and Barbuda on behalf of the Group of 77. We would like to thank the Secretariat for the useful report on the agenda item under consideration today.

Madam Chair,

Proclamation of the Second UN Decade to eradicate poverty is not an academic exercise, nor can it be compared to other UN Decades. Instead, we hope that this unanimous action will convey the high priority that all of us attach to the central issue of poverty eradication. We are witness to some of the benefits of concerted action during the First UN Decade to eradicate poverty from 1997-2006.

In addition, as the report of the Secretary-General notes, the First Decade has led to poverty eradication being firmly anchored at the core of the UN development agenda. We would recommend the momentum generated be sustained through concrete action plans to implement the Second UN Decade to eradicate poverty. In this regard, the report of the Secretary General has proposed interesting suggestions. We look forward to further consultations on some of these suggestions. We believe that measures to implement the Second Decade must impart a sense of urgency towards poverty eradication, and must fully involve member states.

The development follow-up resolution of the 2005 World Summit Outcome can also provide useful inputs. Further, the forthcoming Doha Conference on financing for development is important in this regard, apart from being

the first major event of the Second Decade. Overall, it is important that poverty eradication, which is the greatest global challenge facing the world today, should continue to receive the highest attention of the UN and the international community.

Madam Chair,

We are not on track to achieving the Millennium Development Goals, far less achieving the eradication of poverty. We hope the support of our development partners in proclaiming the Second UN Decade to eradicate poverty is backed up by greater enthusiasm to fulfill their commitments on issues like Official Development Assistance, debt relief, market access, technology transfer, etc. The report of the Secretary General has correctly noted that spending on core development programmes has remained constant over the First UN Decade. This cannot continue. Despite the ongoing financial and other crises, our efforts must not falter.

The report has also noted the importance for the international community to contribute to national efforts by creating a global economic environment that promotes economic growth and employment creation in developing countries. We emphasize that this is a critical requirement. Moreover, such an international environment must respect the policy space that each country requires to formulate and implement its own pro-poor and inclusive development strategy, based on its unique challenges and conditions. Greater flexibilities are required in international regimes to ensure primacy of the development dimension. We look forward to the Development Cooperation Forum of the UN Economic and Social Council playing a central role in international development cooperation efforts. We also believe that there is an urgent need to reform the international financial architecture, overseen by the United Nations.

Madam Chair,

India considers industrial development to be a fundamental requirement for achieving high economic growth, without which the eradication of poverty and the achievement of the development objectives will not become possible. It is with some justification that developed countries are also referred to as "industrialised countries". Moreover, industrial development also has a significant impact on the socio-economic transformation of societies. Thus, industrial development has been at the core of India's development strategy.

However, as the UNIDO report has outlined, a large number of countries have not been able to put their economies on the path of industrial development. Greater international support is required to assist the efforts of developing countries towards industrialization. We urge greater focus in

industrial development cooperation on the crucial objectives of promoting the expansion, diversification and modernization of productive capacities in developing countries. Yet, a crucial question facing developing countries is how to integrate pro-poor growth strategies with appropriate industrial policies. We believe that industrialization must include support to small and medium enterprises, which lead to large employment generation.

We agree with the UNIDO report of the need for a dynamic private sector to lead industrialization. However, the report would have become comprehensive if it had also examined the importance of the public sector, as well as of industrial policy making. The UNIDO report correctly emphasizes the inequitable globalization and barriers to trade as key obstacles to industrial development. In this context, we are concerned that demands by developed countries, which undermine the principle of "less than full reciprocity", in the Doha trade negotiations on non-agricultural market access, threaten to undermine the limited industrial advances made by developing countries. Instead, we need to work towards a multilateral trade regime that incorporates flexibilities that promote the expansion of the industrial and manufacturing capacities of developing countries.

Madam Chair,

Technology is a key driver for industrial development. Without access to advanced technologies at affordable terms, efforts of developing countries will remain constrained. We would urge developed countries to take concrete steps for transfer of technology to developing countries as a key element of international development cooperation. We support the role of the United Nations Industrial Development Organisation to facilitate industrial development. UNIDO must continue to improve its capacity building, technical cooperation and technology diffusion activities, focusing on productivity growth, trade capacity-building, corporate social responsibility, and sustainable development. While South-South and triangular cooperation can play a role in industrial development cooperation, we must not forget that North-South cooperation remains the main cooperation modality. In this regard, we would like to highlight that the report of the Secretary-General states that much of the bilateral aid remains asymmetrical and earmarked towards sectors or programmes chosen by the donors themselves. This goes against the core principle of national ownership, and steps need to be urgently taken to reverse it.

Thank you, Madam Chair.

733. Statement by Member of Parliament and Member of the Indian Delegation to the UN Arjan Charan Sethi on Agenda Item 78 - Report of the Special Committee on the Charter of the United Nations on the Strengthening of the Role of the Organization at the Sixth Committee.

New York, October 22, 2008.

Mr. Chairman,

At the outset, we wish to thank the Chairman of the "Special Committee on the Charter of the United Nations and on the Strengthening of the Role of the Organization", for his skilful guidance of the last session in February and for his Report. We would also like to extend our appreciation to the other Members of the Bureau.

Maintenance of international peace and security is the primary responsibility of the Security Council, which acts on behalf of all members of the UN in the discharge of its duties. The Security Council, which mandates sanctions, has the nodal responsibility for finding solutions to the problems of third States affected by UN sanctions. Article 50 of the UN Charter confers the right on third States confronted with special economic problems, because of the Security Council sanctions, to consult the Security Council for solution to those problems. Article 50 of the Charter is not merely procedural. It obliges the Security Council to find definitive solutions to the problems of affected third States. The Security Council holds the primary responsibility towards the affected third States, as part of its sanctions-imposing decisions.

Mr. Chairman,

We thank the Secretary General for his report on "Implementation of the provisions of the Charter of the United Nations related to assistance to third States affected by the application of sanctions". We are pleased to note the various measures taken by the Security Council to mitigate the effects of sanctions, ranging from standardizing humanitarian exemptions to developing delisting procedures and establishing a focal point. These measures are aimed at ensuring that sanctions are targeted and have consequently led to significant reductions in unintended economic consequences for third States. We note that a revised sanctions assessment methodology is being put in place that will put more emphasis on effect of targeted sanctions on individuals, financial transactions and

commercial activities and any other activity that may be targeted. We are pleased to note that due to various steps taken so far no Member State has approached any sanctions committee concerning special economic problems arising from the implementation of sanctions. Nevertheless, the Russian proposal on "Basic conditions and standard criteria for the introduction and implementation of sanctions imposed by the United Nations" still remains relevant. The adoption of fair and clear procedures in the UN sanctions process will strengthen its effectiveness and credibility. In this regard a comprehensive framework would provide the requisite transparency and certainty in procedures. We hope that the Special Committee is able to conclude its deliberations on the Russian proposal at its next session and recommend it to the General Assembly for adoption.

Mr. Chairman,

We also support updating of the Repertoire of the practice of the Security Council and Repertory of Practice of the UN organs as they are a valuable source of information on the application of the Charter and an indispensable tool for the preservation of the institutional memory of the United Nations.

Mr. Chairman,

The role of the Organization, which this Committee is mandated to strengthen, raises sensitive questions; of which the question of the advancement of rule of law remains amongst the most critical. India attaches great importance to the reform of the United Nations, including the revitalization of the General Assembly and democratization and expansion of the Security Council in both permanent and non permanent categories. Therefore we would like to extend our support for the proposal which very seeks to allocate to this Committee the work of examining legal aspects of United Nations Reform as and when tasked by the General Assembly.

Thank you, Mr. Chairman.

734. Statement by Member of Parliament and Member of the Indian Delegation to the UN Tariq Anwar on Agenda Item 46: Information and Communication Technologies for Development at the Second Committee.

New York, October 23, 2008.

Mr. Chair,

We welcome the opportunity to participate in the discussion on "Information and Communication Technologies for Development". We associate ourselves with the statement made by Antigua and Barbuda on behalf of the Group of 77.

Mr. Chair,

We thank the Secretary-General for the report on the progress made in the implementation of and follow-up to the outcomes of the World Summit on the Information Society. We take this opportunity to reiterate our support to the Commission on Science and Technology for Development, and its enhanced mandate on follow-up process to the World Summit on Information Society. We note with satisfaction estimates that by the end of this year, half the world's population will have access to a mobile phone. This is truly remarkable, given the low fixed line telephone penetration in many developing countries, and the recent invention of the mobile phone.

This also vividly demonstrates the potential for leapfrogging technology development by developing countries, without having to follow the same sequence of technology development of developed countries. It is satisfying that India is among one of the success cases of mobile telephone penetration. However, we note with concern that in the area of internet access, issues of quality and affordability are widening the digital divide. It clearly demonstrates that greater efforts are required, particularly by the international community, to bridge the digital divide. Information and Communication Technologies are crucial to development efforts, not only because of their own growth potential, but also due to the positive influence on almost every field through their extension and application, thereby stimulating the development of other sectors of the domestic economy.

There exist enormous benefits of using Information and Communication Technologies in, inter alia, reducing transaction costs, expanding access

to remote and rural areas, improving marketing capabilities of rural poor, reducing intermediaries in delivery chains and enhancing government accountability and democratic participation. Thus, the Information Technology revolution presents a real and profound opportunity to fast-track development processes. However, the necessary infrastructure and human resources remain a crucial constraint. Further, Information and Communication Technologies must be made affordable and user-friendly. We call upon the international community to extend technical and financial support, particularly through the United Nations, so that developing countries can fully bring Information and Communication Technologies within reach of millions.

Mr. Chair,

India has been playing a leading role in promoting and taking advantage of the Information Technology revolution. This is among the fastest growing sector of Indian industry, both for domestic production and exports. In particular, India has made significant progress in the software development and Information Technology Enabled Services area, leading to inclusive growth accompanied by employment generation. Business Process Outsourcing [BPO] has been a key element in this rapid growth, and has led to the acceptance of an Information Technology based global delivery model. Numerous sectors worldwide have derived benefit of Indian BPOs, including banking, financial services and insurance, telecommunications, manufacturing, retail sector, media, healthcare, transportation and utilities. Though export driven, Indian Information Technology sector has led to significant benefits for the domestic economy. The phenomenal growth of this sector has had a perceptible multiplier effect on the Indian economy as a whole. In addition to the direct positive impact on income and employment, it has spawned the mushrooming of several ancillary industries, and has created a rising class of young consumers with high disposable incomes, triggered a rise in direct-tax collections and propelled an increase in consumer spending.

The Information Technology sector now provides direct employment to nearly 2 million and indirect employment to 8 million more. It contributes around 5.5% to the national economy, up from 1.2% at the turn of the century. Interestingly, India's success in this sector has not been on cost alone, but also on quality, security, and other parameters. Proactive government policies have been a key input in India's success. It is indeed

a success of public and private partnership - a sector led by private initiative and enterprise, but supported by public policies of human resource promotion, enabling legislation, and other inputs. We have now also moved to the next level of BPO i.e. Knowledge Process Outsourcing [KPO], which is a higher step in value-addition. These processes include valuation research, investment research, patent filing, legal and insurance claims processing, online teaching, media content supply, etc.

Mr. Chair,

India is also actively utilizing Information and Communication Technologies for development. An ambitious US\$ 5 billion 5-year National e-Governance Plan has been formulated. The areas include road transport, land records, taxes, agriculture, treasuries, land registration, education, passport, postal service and identification documents. To make technology more accessible, greater focus is being given to software development in multiple Indian languages. We are also working on reducing cost of access. Further, Information Technology is also being combined with satellite based communication technology to create wide area networks, the objective is to reach rural areas through initiatives like tele-education and tele-medicine.

Before concluding, Mr. Chair, let me also highlight India's commitment to share its knowledge and experience in this field with fellow developing countries. A shining example of this is the pan-African e-network project to support tele-education, tele-medicine, e-governance, infotainment, resource mapping and meteorological services across the continent using fibre optics and a dedicated satellite. The project links major universities in different regions of Africa with major Indian universities and centers of excellence in India and major hospitals in Africa with super-specialty hospitals in India. India has also been assisting in IT capacity building in several partner countries in Asia and Africa.

Thank You, Mr. Chair.

735. Statement of Member of Parliament and Member of the Indian Delegation to the United Nations Ms. Sangeeta Kumari Singhdeo on Agenda Item 64 – Promotion and Protection of Human Rights [B] Human Rights Questions, including Alternative Approaches for Improving the Effective Enjoyment of Human Rights and Fundamental Freedoms, [C] Human Rights Situations and Reports of Special Rapporteurs and Representatives, and [E] Convention of the Rights of Persons with Disabilities at the Third Committee of the UNGA.

New York, October 28, 2008.

Mr. Chairman,

I would like to thank the UN Secretary-General for his reports, the Special Rapporteurs of the special procedures and Representatives of the UNSG for their concise presentations under the sub-agenda items 64 (b), (c) and (e) relating to 'protection and promotion of human rights'.

I would also specially thank the UN High Commissioner for Human Rights for her statement last week before the Third Committee. With her vast experience in the field of human rights and her objective and practical outlook, I am sure she will be able to deliver effectively, her ever expanding mandate. We look forward to work with her.

Mr. Chairman,

The report of the Special Rapporteur on the Right to Food, informs that the number of victims of hunger and malnutrition around the world are increasing at a steady pace. This situation has been exacerbated by the ongoing international food, financial and energy crises. There is an urgent need for greater partnership, commitments on technology transfer, provision of additional financing, as well as cooperation between developed and developing countries to tackle these unprecedented crises so that a conducive environment is created for the realisation of all human rights including, the right to development.

We support the efforts of the Working Group on the Right to Development, and the endeavour to operationalize it and mainstream it in policies and operational activities of relevant actors at the national, regional and

international level, including multilateral financial, trade and development institutions. This will also promote social justice. After all, development without democracy, social justice and respect for human rights can be neither lasting nor sustainable.

Mr. Chairman,

As we celebrate the 60th anniversary of the Universal Declaration of Human Rights and the 15th Anniversary of the adoption of the Vienna Declaration and its Programme of Action, we have not yet attained a global culture of human rights, which can serve as a unifying force rather than a divisive force. A major challenge is the determination of the most effective approach for promotion and protection of human rights. Attempts have regularly been made to single out countries for intrusive monitoring and pointing out the failure of the state mechanism in the promotion and protection of human rights of its citizens. We need to reflect on whether such international action has forced member states to accelerate appropriate activities at the domestic level and has genuinely improved the human rights situation.

Instances of gross and systematic violations of human rights anywhere in the world must certainly be addressed by the international community, collectively, and in a holistic manner. However, dealing with human rights situations with a specific bias against a certain country, does not promote the cause of protection of human rights. Instead, an approach based on dialogue, consultation and cooperation, has a better chance of leading to a genuine improvement in the enjoyment of human rights by the people of a country.

Mr. Chairman,

The phenomena of racism, racial discrimination and xenophobia are the anti-thesis of all that humanity stands for. India abhors these phenomena and has been in the forefront in fighting racism in all its manifestations. In fact, this was an intrinsic part of our freedom struggle against colonial rule. Despite differing views on the implementation of programmes against these phenomena, everyone accepts their importance and the need to cooperate on them. In this context, the Durban Review Conference provides an opportunity to take comprehensive stock of the progress made in the implementation of various provisions in the Durban Declaration and Programme of Action, against racism, racial discrimination and xenophobia. India remains committed and will actively contribute to the preparation for the Durban Review Conference and work towards its successful outcome.

Mr. Chairman,

The adoption and entry into force of the Convention on the Rights of Persons with Disabilities is an important achievement at the international level. The Convention recognises disabled persons as rights holders and active members of society, rather than objects of charity. India, with more than 22 million disabled persons, was among the first countries to sign and ratify the Convention. India has in place the Persons with Disability (Equal Opportunities, Protection of Rights and Full Participation) Act of 1995 and the National Policy for Disabled People of 2006, for the rights of persons with disabilities. However, we recognize that much more needs to be done to secure full enjoyment of the rights enshrined in the Convention by the disabled people in India. We look forward to the first meeting of the State Parties to the Convention later this week and the election of the Committee members to this new treaty body.

Mr. Chairman,

With its democratic, pluralistic and secular polity, an autonomous and impartial judiciary, a vibrant civil society, a free media, and independent human rights institutions, India has been successful in ensuring effective guarantees for the protection and promotion of human rights. Our vibrant democratic polity also requires that we continuously pursue higher norms and standards, be it in the area of human rights or development. As the world's largest democracy, India considers it an honour to uphold and cherish the values of human rights and fundamental freedoms of each and every citizen. It will be our constant endeavour to continue to do so.

Thank you, Mr. Chairman.

736. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Dr. E. M. Sudarsana Natchiappan on Agenda Item 31: Comprehensive Review of the Whole Question of Peacekeeping Operations in all their aspects at the Fourth Committee of the UNGA.

New York, October 28, 2008.

Mr. Chairman,

We welcome the opportunity to participate in discussions under Agenda Item 31: Comprehensive Review of the Whole Question of Peacekeeping Operations in all their aspects. We associate ourselves with the statement made by the distinguished representative of Morocco, on behalf of the Non Aligned Movement. India attaches considerable importance to this session of the Fourth Committee.

We will also take this opportunity to extend a warm welcome to Under Secretary General DPKO Alan Le Roy, Under Secretary General DFS Susan Malcorra, and Military Adviser Lt General Obiakor to their first Fourth Committee participation and comprehensive briefing in the interactive session. We would like to compliment their teams for the dedication and hard work. As one of the oldest and regular Troop Contributing Countries, we look forward to participating in the Special Session of General Assembly to commemorate the 60th anniversary of United Nations Peacekeeping on 11 November 2008.

Mr. Chairman,

We note from the Under-Secretary General's statement that there are 140,000 men and women in the field from 119 member states in 18 peacekeeping operations. These numbers are set to increase further in the near future. This unprecedented surge has given rise to enormous challenges in peacekeeping - not only because new missions are being established or old ones expanded, but also due to the volatile and insecure environments in which UN forces have to function, the growing complexity of the difficult tasks assigned to them, and the tools that they are provided with. We had welcomed the efforts by the Secretary-General to respond to peacekeeping challenges by strengthening and rationalizing structures in the UN via building military planning, management, and operational capacities. The realignment of DPKO by creating two Departments - Department of Peacekeeping Operations (DPKO) and Department of Field

Support (DFS) – has been undertaken. However, there is still a need to establish clear command structures, coherence in policy and strategy, effective coordination and integration, as well as ensure preservation of unity of command from Headquarters to the field. We look forward to the midterm review of the restructuring in 2009 and hope that appropriate corrections would be made from lessons learnt, in order to make UN peacekeeping well integrated, effective and professional.

Mr. Chairman,

The safety and security of UN peacekeepers is of vital concern to troop contributors who place their soldiers at risk in pursuance of the UN ideal. The number of deaths of peacekeepers in 2008 is a reminder of the importance of fully addressing safety and security concerns. We would urge the UN Secretariat to give utmost priority to enhancing safety and security of UN Personnel in the field. In this context, the UN must enhance its capacity for information gathering, assessment and sharing it with field units along with concrete recommendations for preventive action.

Mr. Chairman,

India has consistently called for energizing the mechanism of triangular consultations between Troop Contributing Countries, the Security Council and the UN Secretariat. Consultations continue to be held on the eve of renewal of Mission mandates, leaving little scope for serious or meaningful discussions. It is important that TCCs be involved early and fully in all aspects and stages of mission planning and that their views find their way into mission mandates. It is imperative to implement in letter and spirit the provisions contained in Security Council Resolution 1353 and note of Security Council President of 14 January 2002. The experience and expertise of Troop Contributing Countries would help in developing effective mandates for Peacekeeping Missions.

Mr. Chairman,

India supports the efforts to enhance peacekeeping capacity in African countries. We share close and historic ties with Africa and are one of the oldest, largest and most consistent contributor to UN Peacekeeping missions in Africa, having participated in almost every major operation since the inception of peacekeeping. We are currently involved in bilateral capacity building in many African countries. Cooperation with regional organizations should be in accordance with Chapter VIII of the Charter. At the same

time, the UN cannot absolve itself of “its responsibility under the Charter for the maintenance of international peace and security”. The real challenge before the UN is to strengthen peacekeeping without regionalizing it. As regards conduct and discipline of troops, we regard sexual exploitation and abuse as totally unacceptable forms of behaviour. We fully support the implementation of a policy of zero tolerance and encourage raising the awareness of those with managerial and command responsibilities and the establishing of standards of conduct, training and investigation. Careful preparatory training in terms of a multi-cultural, pluralistic and tolerant outlook is as important as subsequent swift punitive action, once culpability is established. On its part, India is committed to prompt and thorough investigation of any act of misconduct and if, proven, strict and exemplary action would be taken as per the law. We have on all occasions offered full cooperation to the United Nations and would urge the implementation of the revised Model MOU adopted by the General Assembly, at the earliest.

Mr. Chairman,

There is an urgent need to give importance to evolving professional training programmes for peacekeepers in consultation with Member States. In this task the experience of major Troop Contributors with considerable background in peacekeeping operations needs to be utilized by Integrated Training Service (ITS). Institutions of excellence in this field, in these countries can be associated in this process by the ITS. India supports a holistic and coherent United Nations approach to Security Sector Reform and calls for improved coordination of efforts between all partners. There is need to avoid any duplication of effort and have clear field mechanisms in implementation of security sector reform. Such reform should be a nationally owned process.

The role of Civilian Police in peacekeeping has grown substantially in size, complexity and importance. The incorporation of Police Division in the Office of the Rule of Law and Security institutions and inclusion of Police Adviser as a Permanent Member of the Senior Management Team underscores this aspect. As the Division expands further, we would like to emphasise the need for adequate transparency in ensuring representation of qualified candidates from Troop Contributing Countries in senior leadership positions. A number of countries have expressed concern on the issue of outstanding reimbursements that the United Nations owes to Troop Contributing Countries. In this context, we would urge the Secretary-General to address the issue of consolidation of peacekeeping accounts while undertaking

administrative reorganization and streamlining. This would provide an opportunity to tackle the issue of selective financing of peacekeeping missions that is sometimes resorted to. Member States should be entitled to cash surpluses from missions only if they do not owe dues to other peacekeeping missions. This will also help address the concern of developing countries that contribute the overwhelming majority of peacekeeping troops, yet continue to be owed considerable sums of money.

Mr Chairman,

India stands solidly committed to assist the UN in the maintenance of international peace and security. We have a proud history of UN peacekeeping for last 60 years, dating back to its inception. We have contributed more than 100,000 troops, and participated in more than 40 missions. India has also provided eminent Force Commanders for UN Missions. We salute the 128 Indian peacekeepers, as well as those from other countries, who have made the supreme sacrifice by laying down their lives while serving in UN Missions.

India has also traditionally been contributing lady military and police officers to a number of UN Missions. In response to the Secretary-General's call for increased representation of female personnel in field missions, we were honoured to have provided the first full Female Formed Police Unit for peacekeeping work. This unit has been assisting the UN Mission in Liberia for the last two years and has been successful in reaching out to the most vulnerable sections of society, i.e. women and children, in a post-conflict environment, besides performing its normal duties. In conclusion, Mr Chairman, India is fully committed to the purposes and principles of the UN and we look forward to making UN peacekeeping an ever more effective and efficient tool in the maintenance of international peace and security.

Thank you, Mr. Chairman.

737. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Ms. Sangeeta Kumari Singhdeo on Agenda Item 50 – Implementation of the Outcome of the United Nations Conference on Human Settlements [Habitat II] and Strengthening of the United Nations Human Settlement Programme [UN-Habitat] at the Second Committee of the UNGA.

New York, October 28, 2008.

Madam Chair,

We thank the Secretariat for the report on the agenda item “Implementation of the Outcome of the Second United Nations Conference on Human Settlements (Habitat II) and strengthening of the United Nations Human Settlements Programme (UN-Habitat)”. We associate ourselves with the statement made by the distinguished representative of Antigua and Barbuda on behalf of the Group of 77.

Madam Chair, India is a founding member of UN-Habitat and has been an active member of the organization. We support its Medium-term Strategic and Institutional Plan of UN-Habitat for the period 2008-2013, particularly the focus on strengthening the catalytic and pre-investment role of UN-Habitat. In this context, we welcome the developments towards the early operationalization of the reimbursable seeding operations activities, which will permit UN-Habitat to assist national housing development programmes. India has been active, particularly through public housing finance institutions, in promoting institutional housing finance to the poor and economically weaker sections. We look forward to the experimental phase of reimbursable seeding operations, which will lead to larger follow-up investment.

We also support the guidelines on decentralization and strengthening of local authorities, adopted by the Governing Council of UN-Habitat. We were happy to host a meeting earlier this year of the Advisory Group of Experts on Decentralization. India has always advocated greater involvement of local authorities in decision making as well as in implementation of policies. Our efforts have involved greater representation of all sections of society in local authorities, expansion of their functional domain to focus on environment, local economic development, planning as well as innovative resource mobilization.

It is satisfying that the resource mobilization efforts of UN-Habitat have borne fruit. However, it is of concern that regular budget, which provides non-earmarked and predictable funding, remains low. We fully support the demand for enhanced budgetary resources for UN-Habitat.

Madam Chair,

We agree with the report of the Secretary-General that the urban poor are among the most exposed victims of the current food and energy crises. While it is perhaps simplistic to blame rapid urbanization for contributing to the rise in food and energy prices in 2008, as the report appears to do, the need for sustainable urbanization is inescapable, in both developed and developing countries. We agree with the report of the Secretary-General that rational land-use planning, green building codes and energy efficient transport options are key to reduce energy consumption and emissions. In this context, I am happy to highlight that India has been active in taking such steps, including the adoption of an Energy Conservation Act and an Energy Efficiency Code for new commercial buildings, as well as promoting use of compressed natural gas for public transport.

I would also like to emphasize India's efforts in promoting an integrated approach to urban development. A National Urban Housing and Habitat Policy was launched last year. The policy seeks to realize the goal of "Affordable Housing for All", through sustainable development of habitat, towards ensuring equitable supply of land, shelter and services at affordable prices to all sections of society. An important element of this policy is the "Jawaharlal Nehru National Urban Renewal Mission". This programme seeks to provide seven basic services to the poor, namely, land tenure, affordable shelter, water, sanitation, education, health and social security. The programme is a fast track, demand-driven, community partnering mechanism with emphasis on public-private-people participation in urban planning and implementation. This is complemented by programmes to promote urban employment generation, with emphasis on gender equality. In addition, there is enhanced focus on urban safety.

However, India remains a country with a large proportion of rural population. Accordingly, India has also been actively promoting affordable rural housing. These include programmes like the *Indira Awaas Yojna*, which provides direct support through grant-in-aid for construction of dwelling units and upgradation of temporary houses. Our integrated strategy also covers the issue of poverty eradication through targeted policies and interventions that aim to promote employment and enhance livelihood opportunities in

rural areas, particularly through creation of economic infrastructure, and community and social assets.

Madam Chair,

Enhanced efforts by the international community to provide financial and technical assistance, including transfer of technology, in the areas of poverty eradication and infrastructure support, remain crucial if the human settlements related Millennium Development Goals are to be achieved by the developing countries. The holistic focus should be on generation of productive employment, creation of durable economic and physical infrastructure and ensuring food security.

Before concluding, Madam Chair, I would like to highlight that India has been privileged to share appropriate housing technology, particularly in the field of cost-effective, environment friendly and disaster resistant construction, with fellow developing countries within the framework of South-South cooperation. The international community needs to support such South-South initiatives through triangular cooperation.

Thank You, Madam Chair.

738. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Rajeev Shukla on Agenda Item 49; Sustainable Development at the Second Committee of the UNGA.

New York, October 28, 2008.

Madam Chair,

We would like to thank the Secretariat for the detailed reports on the Agenda Item "Sustainable Development. We associate ourselves with the statement made by the distinguished representative of Antigua and Barbuda on behalf of the Group of 77.

Madam Chair,

The world is today facing multiple inter-linked challenges of food, energy and fuel crisis, in addition to the potential threats from climate change. This only serves to underscore the importance of an integrated approach to sustainable development, with emphasis on its three pillars of economic development, social development and environmental protection. Such an approach is key to ensuring the achievement of the development goals, particularly the eradication of poverty and hunger. In this regard, we emphasize the importance of the full implementation of the Agenda 21 and the Johannesburg Plan of Implementation, specifically the aspect of an international environment conducive to development.

We are cognizant of the special challenges faced by Small Island Developing States [SIDS] in their efforts to achieve sustainable development, which have been further exacerbated by climate change. We believe that the Barbados Programme of Action, and the Mauritius Strategy of Implementation, provide a comprehensive basis to address these challenges. We are privileged to have been able to contribute to the development efforts of SIDS in the spirit of South-South solidarity. Our engagement with SIDS has included areas like capacity building, natural disaster preparedness, adapting to climate change and enhancing resilience. However, what is urgently required is enhanced financial and technical support by developed countries. We also support calls by SIDS for further strengthening of the SIDS Unit in the Department of Economic and Social Affairs in the UN.

Madam Chair,

We are conscious of the importance of addressing the impact of climate change. For a developing country like India, rapid and sustained economic growth and the achievement of the development objectives is of paramount importance. Nevertheless, India has been taking a variety of measures to ensure ecologically sustainable development. We have recently unveiled a comprehensive and ambitious National Action Plan on Climate Change. We are inter alia actively promoting use of compressed natural gas for public transport, improvement in energy efficiency in the major energy intensive sectors, use of Compact Fluorescent Lamps at low cost, procurement of electricity from renewable sources of energy and afforestation programmes. We have adopted an Energy Conservation Act and an Energy Efficiency Code for new commercial buildings. I may emphasize that our energy efficiency is among the best in the world. Further, even as we pursue economic growth, we are committed to our per-capita emissions of greenhouse gases not exceeding those of the developed countries.

Climate change can be overcome successfully only through a collaborative and cooperative global effort. Developing countries, despite have contributed the least to climate change, have to bear the brunt of its negative impact. They are also the most vulnerable to the impacts of climate change, and lack the means to tackle them. Hence, our approach must be based on the principle of common but differentiated responsibilities and respective capabilities, as well as the historical responsibility of developed countries.

In this regard, we reiterate our support to the multilateral negotiations taking place under the UN Framework Convention on Climate Change. The outcome of these negotiations must be fair and equitable and recognize the principle that each citizen of the world has equal entitlement to the global atmospheric space. Developed countries must undertake deeper emission reduction commitments, and assist developing countries with financing, without diverting funds meant for development, and technology transfer. Greater international support is also needed to support the adaptation efforts of developing countries.

Let me particularly emphasize the importance of technology transfer. We need a change in mindset, a change that permits developing countries to

have critical climate related technologies at concessional and preferential rates. If we are serious about confronting climate change as an unprecedented global challenge, we must be willing to balance rewards for innovators with the common good of humankind and introduce necessary flexibilities in the Intellectual Property Rights regime.

Madam Chair,

The conservation, protection and sustainable use of genetic resources is an important aspect of achieving sustainable development. In this regard, we reaffirm our support to the CBD. We welcome the decision taken at the 10th meeting of the Conference of Parties of the CBD on the adoption of a clear road map on negotiations on an international regime on access to genetic resources and the equitable sharing of the benefits arising out of their use, including the nature, scope and means of implementation of the regime. Such a regime should include provisions for mandatory disclosure of country of origin of genetic resources, prior informed consents in Intellectual Property Rights applications, and the fair and equitable sharing of benefits, as required under the Convention.

Thank you, Madam Chair.

739. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Rajeev Shukla on Agenda Item 51 – Necessity of Ending the Economic, Commercial and Financial Embargo imposed by the United States of America against Cuba at the UN General Assembly.

New York, October 29, 2008.

Mr. President,

We associate ourselves with the statement made by the distinguished representative of Antigua and Barbuda on behalf as Chair of the Group of 77. We thank the Secretariat for the report on the agenda item under consideration today.

Mr. President,

This is the seventeenth year in succession that this Assembly is deliberating the forty-six year old economic, commercial and financial embargo imposed on Cuba. In its deliberations, this Assembly has repeatedly rejected the imposition of laws and regulations with extra-territorial impact and all other forms of coercive economic measures. The General Assembly has also called upon all States to respect their obligations under the United Nations Charter and international law, as well as repeal and invalidate laws and measures that have "extraterritorial effects" affecting the sovereignty of other States, the legitimate interests of entities or persons under their jurisdiction and the freedom of trade and navigation. Despite the repeated calls of the General Assembly, its resolutions remain unimplemented in contravention of world opinion. The embargo, particularly its extra-territorial aspects, continues to remain in force. In particular, domestic US laws like the Cuba Democracy Act of 1992 and the Helms-Burton Act of 1996 have enhanced the extra-territorial reach of the embargo, encompassing foreign companies as well as foreign subsidiaries of US companies doing business with Cuba or Cuban entities. We support the categorical rejection by the international community of domestic laws with extra-territorial impact.

Mr. President,

The embargo, particularly through its extraterritorial effects, is adversely affecting the Cuban people and the development efforts of the country. Health care is particularly affected, due to access controls on critical medical

equipment, medicines, technologies and diagnostic aids, apart from enhanced cost of supplies. In this regard, Cuba's efforts to provide assistance to fellow developing countries as part of South-South cooperation, has also borne the brunt of the embargo, making this another unexpected indirect negative extra-territorial impact of the embargo.

A variety of other areas of the Cuban economy have also been adversely impacted. These have been elaborated upon in the report of the Secretary-General by various United Nations entities. For example, the UN Resident Coordinator in Havana has noted the negative impact of the embargo is pervasive in the social, economic and environmental dimensions of human development in Cuba, severely affecting the most vulnerable socio-economic groups of the Cuban population. Further, the embargo seriously affects the implementation of the United Nations system's projects and programmes in Cuba, including on travel of UN staff. The Economic Commission for Latin America and the Caribbean has stated that the embargo considerably affects the standard of living of Cuban citizens. The UN Conference on Trade and Development states that the impact of the extraterritorial application is considerable owing to the significant United States interests in transnational corporations.

Mr. President,

Despite the embargo, the United States of America continues to be a major source of imports for Cuba, insofar as permitted by the US Trade Sanctions Reform and Export Enhancement Act of 2000. This only serves to confirm the potential for trade, commerce and investment between these countries. The embargo also has significant detrimental effect on United States trade and business opportunities. Various efforts in the United States to relax or lift the embargo indicate the substantial interest, particularly in the business sector, for unhindered access to the Cuban market or contact with Cuba. We, therefore, look forward to the lifting of sanctions and embargo against Cuba.

Before concluding, Mr. President, permit me to reiterate India's opposition to unilateral measures by countries, which impinge on the sovereignty of another country, including attempts to extend the application of a country's laws extraterritorially to other sovereign nations.

Thank you, Mr. President.

740. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Dr. E. M. Sudarsana Natchippan on Agenda Item 51 – Globalization and Interdependence at the Second Committee of the UNGA.

New York, October 29, 2008.

Madam Chair,

We thank the Secretariat for the reports on the agenda item “Globalization and Interdependence” under consideration today. We associate ourselves with the statement made by the distinguished representative of Antigua and Barbuda on behalf of the Group of 77.

Madam Chair,

World leaders had emphasized in the Millennium Declaration that the benefits of globalization are unevenly shared, while its costs are unevenly distributed. It is in this context that we had requested the Secretary-General last year for a report on the impact of globalization on the achievement of the development goals. The resultant, and timely, report has elaborated on the significant difficulties faced by developing countries in pursuing national development strategies in the context of globalization, particularly in the context of the current financial crisis. We welcome the recognition in the report that realization of the development goals is dependent on the concerted management of the globalization process by the international community, and the strengthening of the global partnership for development.

The principal difficulty in our management of globalization, and one which the report of the Secretary-General also highlights, is that while globalization, and its attendant benefits, has led to and has been encouraged by enhanced flows of capital, goods and services, technology and people, sufficient attention has not been paid to protection from the adverse influences that these flows bring. This is particularly true for developing countries, which may not have the requisite capabilities to deal with such adverse impacts. Instead, reliance has been placed on the self-regulation of the market. Unfortunately, as recent developments have served to demonstrate, such adverse impacts not only exist, but get exacerbated by the forces of globalization, and can severely harm development efforts.

Thus, the ongoing financial crisis, coupled with the food and energy crises, has produced an environment that is not supportive of development efforts of developing countries. Clearly, what is essential is enhanced policy space for developing countries, through flexibilities in international regimes, so that they may choose the right policy tools in the context of their specific development challenges. This is vital, given that globalization can lead to reduction in the degree of national autonomy in policymaking. However, as the Secretary-General's report also elaborates, globalization has been accompanied by "one-size-fits-all" policy prescriptions, that have had disastrous consequences on many occasions.

There have also been attempts to castigate prudence displayed by many developing countries in opening up of their economies, given that volatility in capital flows is detrimental to long-term development. In this context, developing countries must be allowed to pursue counter-cyclical macroeconomic policies, as well as develop strategies that promote inclusive growth and full employment, so that economic growth translates into opportunities and benefits for all.

Unfavourable international regimes, in which developing countries have a marginal say, have also prevented developing countries from taking full advantage of globalization in other areas. Agricultural production in developing countries has been severely undermined by massive subsidies in developed countries. Developing countries continue to face non-trade barriers in accessing markets of developed countries, while a steady reduction in their industrial tariffs has greatly enhanced the risks of de-industrialization of developing countries. Further, in the area of technology access, critical technologies in the area of public health and climate change remain inaccessible and unaffordable for developing countries due to the existing Intellectual Property Rights regime.

Madam Chair,

If globalization is to succeed, it must be fair, and benefit the whole of humanity. Developmental considerations must be at its core. We agree with the report of the Secretary-General that more international efforts are required to establish fair and equitable trade, investment, technology and knowledge regimes. The practical way to achieve this is through a comprehensive restructuring of the international decision making and norm-setting structures in a time bound manner, with greater voice and participation of developing countries. This process must be overseen by the United Nations, which has a unique legitimacy and universality.

Madam Chair,

It is inevitable that globalization, with its emphasis of enhanced flows of capital and goods, will lead to increased international migration, with its own challenges and opportunities. Further, it is clear that there is an interrelationship between international migration and development. There is need for greater international cooperation to maximize the benefits of migration, while reducing its negative effects. In this context, we welcome the setting up of the Global Forum of Migration and Development. We look forward to the outcome of the discussions at the Second meeting of the Forum, which has just concluded in Manila. We also urge greater receptivity by developed countries for requests for greater market access under Mode 4. This would permit mutually beneficial solutions, matching the demand for specialists in developed countries with the availability of such talent in developing countries. However, irregular migration is an issue with serious security implications, and requires coordinated and concerted global action to tackle it. Similar action is required against the attendant evil of trafficking of people.

In conclusion, Madam Chair, permit me to reiterate the importance of creating an international environment, with the full and effective participation of all, to ensure that the benefits of globalization are harnessed by all, while ensuring adequate protection from its negative impacts.

Thank you, Madam Chair.

741. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Rajeev Shukla on Agenda Item 29: United Nations Relief and Works Agency for Palestine Refugees in the Near East at the UN General Assembly.

New York, October 30, 2008.

Mr. Chairman,

At the outset, I express India's appreciation to the Commissioner General of the United Nations Relief and Works Agency (UNRWA), for the annual report on the Agency's extremely important work over the past year in Jordan, Lebanon, Syria and the Occupied Palestinian Territories. We also thank the UNRWA Advisory Committee and the members of the working group on the Financing of UNRWA, for their efforts in support of this Agency. India reiterates its appreciation for the difficult but essential service that UNRWA has rendered over the years, making assistance of the Palestinian refugees its highest priority.

Mr. Chairman,

The report, and other reports of the UN Secretary-General under this agenda item, clearly illustrates the severe challenges UNRWA continues to face. Several of these directly affect the well-being of Palestinian refugees and the Agency's ability to discharge its humanitarian responsibilities. Such failure has potential consequences for the security and stability of an already volatile region.

The financial crisis faced by UNRWA remains a pressing challenge. The Agency's budgetary shortfall continues to grow, upon an already negative trend elaborated in last year's report. This paucity of funds is paralleled by an increase in the demands upon the Agency for assistance and support, in particular in Gaza. Following the destruction of the Nahar el-Bared refugee camp in Lebanon in May last year, UNRWA's problems have increased. As this year's report of the Working Group on financing notes, the challenge of rebuilding this camp and caring for those displaced, in the interim, will be "one of the largest challenges ever undertaken by the UNRWA". These new challenges exacerbate existing pressures of caring for refugees in overcrowded camps that are in urgent need of upgradation. Such challenges cannot be addressed by a reduced capacity to help. There is an urgent need for greater international effort to ease UNRWA's fiscal burden.

The continuation of access controls is another challenge. Restrictions on movement and the blockade of Gaza have serious consequences in an already-precarious humanitarian context. Restrictions on supplies of fuel and electricity in Gaza only increase the humanitarian challenge. The continued intra-Palestinian conflict, especially since the events of June 2007, has intensified the problem of access. Consequently, last year we witnessed the tragic sight of several refugee communities being forced to seek assistance after decades of self-reliance.

Mr. Chairman,

The insecurity bred by extreme levels of poverty among the Palestinian people in the Occupied Territories is heightened by the lack of definitive progress in the peace process. The international community had expected to see much more progress over the past twelve months since the Annapolis conference last year. However, with the timeframe for a solution fast approaching, there are valid concerns that our hope of an early resolution of the Palestinian question may not be realized this year. The frustration that further delays in the peace process have caused on the ground is a dangerous sign. It increases the volatility of the situation, particularly in the context of continued expansion of Israeli settlements, in contravention of the Fourth Geneva Convention and the Road Map, as well as continued construction of the separation wall. It is essential for all parties to the dispute to make greater efforts to abide by their commitments under the Road Map, if we are to see some signs of progress in the peace process.

Mr. Chairman,

This leads us to the larger point: the only lasting solution to the problem of the Palestinian refugees is a just, lasting and comprehensive solution to the long-standing conflict in the Middle East. The ongoing cycle of violence and counter-violence only makes the prospects of an eventual peace more remote. It remains critical for the parties to the conflict and the international community—in particular the Quartet—to redouble their efforts to find a way to bring peace to the Middle East. Nevertheless, until that day when a mutually-acceptable peace is in position, it is incumbent upon all of us to fully support UNRWA, as the primary source of humanitarian assistance to the Palestinian refugees. For this reason, we endorse all efforts to support UNRWA by expanding its capacity to render assistance.

Thank you, Mr. Chairman.

742. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Ms. Sangeeta Kumari Singhdeo on Agenda Item 66 – “Report of the International Court of Justice” at the UN General Assembly.

New York, October 30, 2008.

Thank You, Mr. President,

We thank the President of the Court, Judge Rosalyn Higgins, for her introduction of the Report contained in document A/63/4 and welcome the opportunity to address the General Assembly on the Report of the International Court of Justice

We commend Judge Higgins for her dedicated stewardship of the Court and for the Court's impressive achievements over the period under review. This will no doubt further enhance the international community's confidence in this unique organ of international law that has made a distinctive contribution to the maintenance of international peace and security.

Over the last sixty years, the Court has dealt with a variety of legal issues. Its judgments have covered disputes concerning sovereignty over islands, navigational rights of States, nationality, asylum, expropriation, law of the sea, land and maritime boundaries, enunciation of the principle of good faith, equity and legitimacy of use of force. The issues presently before it are equally wide ranging, and its judgments have played an important role in the progressive development and codification of international law. Despite the caution it exhibited and the sensitivity it showed to the political realities and sentiments of States, the Court has asserted its judicial functions and consistently rejected arguments to deny it jurisdiction on the ground that grave political considerations were involved in a case in which it otherwise found proper jurisdiction for itself. Thereby the Court clearly emphasized the role of international law in regulating inter-state relations, which are necessarily political.

The advisory function of the Court contributes to clarifying law and removing ambiguities, thus assisting the United Nations and its organs in carrying out the objectives of the organization.

In recent years the docket of the ICJ has grown significantly and it continues to enjoy universal support and respect. Another significant development that needs to be welcomed is that unlike in the past when the jurisdiction

phases of cases occupied most of the Court's time, the Court is now being frequently called upon to deal directly with a diversity of complex substantive issues of international law from all regions of the world.

The year under review has been the most productive year in the court's history. It has handed down four substantive judgments and two orders on requests for the indication of provisional measures. Further, the Court has held hearings in four cases and has three judgments under deliberation. This has been possible due to streamlining the procedures and internal working methods, which has led to scheduling of cases without significant delay. We appreciate the efforts of the Court to eliminate the backlog.

We also note that the Court's request for nine law clerk posts was not fully agreed to. We hope that the General Assembly would be able to approve this request as such assistance is critical, given the increasing number of "fact-intensive" cases. Judges of all other Tribunals enjoy this facility. The Court's request for individualized legal assistance for all its members is reasonable and would enable it to more efficiently carry out its designated functions as the principal judicial organ of the United Nations.

Mr. President, The recent period has witnessed the creation of a number of specialised regional and international courts and bodies. Along with it have come concerns about the fragmentation of international law. There is apprehension that the similar legal issues or disputes may well be subjected to final and binding interpretations by two different bodies, with potentially differing views. There is also considerable apprehension that the expansion of the field has created problems not only of coherence but also of priority between different dispute settlement procedures.

The challenge is to find a balance between, on the one hand, the need for diversity and specialized regimes and solutions and, on the other hand, the importance of maintaining an overall framework or "system" of international law that offers a sufficient degree of security and coherence. We welcome the initiative taken by the ICJ President for a regular dialogue between the international courts and tribunals and exchange of information with a view to improving the unity of international law and addressing the problem of "overlapping of jurisdictions" or "fragmentation of international law".

The phenomenal docket explosion of the Court stands testimony to the Court's high standing not only in the UN system, but in the international community itself. It is also an affirmation of faith in the Court.

Mr. President ,

President Higgins will soon be completing her term in the Court. We thank her for her immense contribution to the work of the Court and wish her all the best in her future endeavours.

Thank you, Mr. President.

**743. Statement by Permanent Representative at the UN
Nirupam Sen on Agenda Item 40 – Report of the
Economic and Social Council at the UN General
Assembly.**

New York, November 3, 2008.

Mr. President,

Thank you for the opportunity to express our views on the report of the Economic and Social Council for 2008.

India attaches great importance to the work of the Economic and Social Council, and believes that its strengthened structure will assist it in better discharging its role as a principal body for coordination, policy review, policy dialogue and recommendations on issues of economic and social development. We underline the importance of the new mandate given to the Council in 2006 for undertaking a regular and periodic review and assessment of international economic and development policies and their impact on development. We support the Development Cooperation Forum as a key body in overseeing trends in international development cooperation.

Insofar as the ECOSOC report for 2008 is concerned, we would like to comment on the report of the Statistical Commission on its thirty-ninth session, which was considered by ECOSOC during its 2008 Substantive Session. While the Statistical Commission was asked to merely look at the indicators for the targets of the Millennium Development Goals, we would like to reiterate our position, and place on record, that we do not agree with the change in targets effected last year by the UN Secretariat, particularly the transfer of a target from Goal 8 to Goal 1. Such actions, without approval

of Member States, are arbitrary and misrepresent the decision taken at the World Summit Outcome. Further, these actions weaken the monitoring of the MDG 8, and are against the spirit of the global partnership for development. We would urge the Statistical Commission to particularly focus on this aspect during its fortieth session.

Thank you, Mr. President.

744. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Dr. E.M. Sudarsana Natchiappan on Agenda Item 114[B] – Cooperation between the United Nations and the Asian – African Legal Consultative Organisation at the UN General Assembly.

New York, November 3, 2008.

Thank You, Mr President,

India, as the President of the Asian African Legal Consultative Organisation [AALCO] for this year, is privileged to introduce Resolution No. A/63/L.7 on “Cooperation between the United Nations and Asian African Legal Consultative Organisation” on behalf of its 29 cosponsors.

The draft Resolution inter-alia notes the progress achieved towards enhancing cooperation between the United Nations, its agencies and other international organizations and AALCO. It expresses appreciation for the work of AALCO in respect of issues such as combating corruption, international terrorism and trafficking in women and children as well as human rights issues. It also recommends that consideration of this item be scheduled to coincide with the deliberations of the Sixth Committee on the work of the International Law Commission with a view to promoting close interaction between the AALCO and the Sixth Committee.

It may be recalled that the Asian African Legal Consultative Committee, as it was then known, was established to provide expertise in international law to the Asian and African States and specific assistance and advice, upon request, on any topic of international law. Such advice could be rendered in developing a suitable legal framework or legislation for implementation of international treaties; for providing a model agreement

to establish joint co-operative arrangements; or as an opinion on a given subject to one or more Member States.

Mr. President,

Over the last 50 years, AALCO has acquired a unique stature in promoting legal cooperation among Asian and African States in the field of international law. The annual conferences of the Asian-African Legal Consultative Organisation are major events in international law and the New Delhi session in April this year was well attended by Ministers and senior officers of member States, besides several observer delegations and representatives of international organizations. The exchange of views that took place on contemporary issues of international law, including subjects being studied by the International Law Commission and those arising in connection with the implementation of the world trade regime, proved highly beneficial to participants.

Reports of the AALCO and other declarations adopted at its annual Sessions have become an important source for the development of international law and are an expression of the views and interests of Asian and African States. AALCO had been dedicating its efforts to identifying the common interests of Africa and Asia on a variety of contemporary issues before the UN and other world bodies, thus helping the evolution of a fair, just, equitable, universal legal order. These views were duly communicated by the Secretary-General of AALCO to the United Nations, at which it has the distinction of being an observer, and to the International Law Commission, whose sessions its Secretary General regularly attends.

Mr. President

We would like to encourage AALCO to expand its activities by progressing its several forward looking plans for the benefit of its Member States. In this regard, mention could be made of special training programmes for promoting teaching and expertise in legal advising in international law; establishment of special chairs in international law teaching in universities of Member States; offer of fellowships to Asian and African students to pursue higher studies in international law; and encouragement of publication of books and periodicals devoted to the cause of international law that are of special interest to Asia and Africa.

Some of these activities can, however, be pursued only if more funds are available. The clearance of arrears in contributions and raising funds through voluntary contributions would help.

I am pleased to inform that the Secretariat of the AALCO has shifted to its new Headquarters building provided by the Government of India. The new building is fully equipped to meet the needs of an inter-governmental organization. We hope its modern conference facilities would motivate AALCO to organise more programmes for the benefit of its members. The shifting of the offices of AALCO and the residence of the Secretary General to their own new building would also partially ease the financial situation.

However, it is a matter of great satisfaction that, despite its financial limitations, the work of the Committee is efficiently organized by a small but dedicated band of international law experts working under the guidance of an international diplomatic staff, including its most competent Secretary-General. Its excellent library and facilities deserve to be further improved. In due course, AALCO could operate as an international law documentation center for the benefit of Asian and African States.

Mr. President,

We are optimistic that in the years to come AALCO will achieve greater success in clarifying and consolidating the common interests of Asian and African States. It will also surely enhance its activities in training and dissemination of international law expertise amongst them. We have no doubt that the co-operation between AALCO and the United Nations will continue to grow stronger. We wish AALCO and its Members every success in its future endeavours.

Thank You, Mr. President.

745. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Rajiv Shukla on Agenda Item 75 – Report of the International Law Commission on the Work of its 60th Session – Chapter VII – Responsibility of the International Organizations, Chapter VIII – Expulsion of Aliens, Chapter IX – Protection of persons in the event of Disaster, and Chapter X – Immunity of State Officials from Foreign Criminal Jurisdiction at the Sixth Committee of the UNGA.

New York, November 3, 2008.

Mr. Chairman,

I thank the Chairman of the International Law Commission, Mr. Edmundo Carreno, for his comprehensive introduction of the Report on the 60th Session of the International Law Commission on the final cluster of topics.

On the topic “Immunity of State officials from foreign criminal jurisdiction”, we congratulate the Special Rapporteur Mr. Roman Kolodkin, on his preliminary report, which defines the scope of the study the Commission should carry out on this complex and sensitive issue. I also thank the Secretariat for preparation of the detailed Memorandum on the subject.

We fully subscribe to the Special Rapporteur’s proposal that the topic should include all “State officials” in the scope of the study. As to immunity *ratione personae*, we note the broad agreement in the Commission that it was enjoyed by Heads of State, Heads of Government and Ministers of Foreign Affairs, and favour the identification of criteria to establish those other State officials to whom personal immunity would apply.

We agree with the Special Rapporteur that the Commission should examine only the immunity of State officials from foreign criminal jurisdiction: it should set aside questions relating to immunity with respect to international criminal tribunals and the domestic courts of the State of nationality of the official; the source of immunity of State officials from foreign criminal jurisdiction is not international comity but, first and foremost, international law and the topic should focus on immunity under international law. Further, the immunities of diplomatic agents, consular officials, members of special missions and representatives of States to international organizations have already been codified and need not be addressed in the context of this topic.

We also agree with the view of the Special Rapporteur that the 2002 Judgment of the International Court of Justice in the Arrest Warrant case was both a correct and a landmark decision. It had been adopted by a large majority and contained a clear and accurate depiction of the current state of international law in this field.

On the topic "Protection of Persons in the Event of Disasters" I commend the Special Rapporteur, Mr. Eduardo Ospina, for the presentation of his first report on a topic of great contemporary relevance, which identified the core and complex issues that would require to be addressed and raised a number of questions relevant to determining the approach, parameters and objectives, and the need to define the scope of the topic. I also thank the Secretariat for preparation of a thoroughly researched Memorandum on the subject.

On the question of the categories of disasters to be included within the topic, the Commission should focus on natural disasters, as there are already specific legal regimes for dealing with environmental damage from manmade disasters, such as oil spills and from nuclear accidents. Further, armed conflicts should also be excluded as international humanitarian law deals in great detail with this aspect.

Mr. Chairman, The concept of the "responsibility to protect" in the context of persons affected by a disaster is not appropriate for inclusion within the scope of the topic, as the primary responsibility for the protection of persons in its territory or within its jurisdiction lies on the State concerned. It may be recalled that the General Assembly, in several resolutions, reaffirming the sovereignty of States, has recognized the primary role of the affected States in initiation, organization, coordination and implementation of humanitarian assistance within their respective territories. The Secretariat Memorandum also details the strong views expressed by many States, including my own, on this issue.

The Special Rapporteur, in his Report, pertinently notes that the areas of law applicable to the protection of persons in the event of disasters underscores the "essential universality of humanitarian principles" and is also based on such principles as humanity, impartiality, neutrality, and non-discrimination, as well as principles of solidarity and non-intervention.

On the question whether, in addition to protection of persons, the topic should also extend to protection of property and the environment, in our view, the primary focus of the topic should remain that of protection of

persons. However, in some situations, protection of property may also be necessary for protecting persons affected by the disaster.

Addressing the scope of the topic, *ratione personae*, the Special Rapporteur recognizes the need to take account of the role of the multiplicity of actors, including international, non-governmental organizations and non-State actors in addition to State actors, and raises the question whether there exists a right of initiative in offering assistance. Here again, it is essential to emphasise the primary role of the affected State as international assistance to persons within its territory, as part of international solidarity and cooperation, takes place with its consent and under its supervision.

Finally, on the form of the work, while a final decision should await its completion, as acknowledged by the Special Rapporteur and by a number of members, it may be more realistic to prepare Guidelines rather than a Convention.

I now turn to the topic "Responsibility of International Organisations". The Commission considered the sixth report of the Special Rapporteur, Mr. Giorgio Gaja, and provisionally adopted eight draft articles. The draft articles adopted this year basically follow the general pattern of the Draft Articles on State Responsibility.

As regards the taking of countermeasures by international organizations, the Commission is divided on whether an international organization could take or could be subjected to countermeasures, and whether the draft articles should contain any provisions on countermeasures. My delegation considers that the Commission should adopt a cautious approach with respect to countermeasures by and against international organizations, in view of the limited practice, the uncertainty surrounding their legal regime, and the risk of abuse that they would entail. Disputes between an international organization and its members should, as far as possible, be settled in accordance with the rules and through the internal procedures of the organization. The rules of the organization should be decisive in determining whether an organization can resort to countermeasures against its members or be the target of countermeasures by them.

On the topic "Expulsion of Aliens", the fourth report of Professor Maurice Kamto addressed two questions. On the first question, my delegation believes that persons holding dual or multiple nationalities could not be treated differently from other nationals, and the principle of non-expulsion of nationals must also apply to persons with one or more other nationalities.

On the second question, depriving a person of his nationality with a view to facilitating his expulsion is not justified.

In conclusion, I would again commend the International Law Commission for the excellent progress made at its 60th session.

Thank you, Mr. Chairman.

746. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Rajeev Shukla on Agenda Item 62 – Elimination of Racism and Racial Discrimination and Agenda Item 63 – Right of Peoples to Self-Determination at the Third Committee of the UNGA.

New York, November 3, 2008.

Mr. Chairman,

I have the honour to speak on Agenda items 62 and 63 on 'Elimination of racism and racial discrimination' and 'Right of peoples to self-determination' respectively. We thank the UN Secretary General for his various reports under these agenda items and also the Chairperson of the Committee on the Elimination of Racial Discrimination, the Special Rapporteur on Contemporary forms of Racism, Racial Discrimination and related Intolerance, and the Chairperson of the Working Group on the use of mercenaries as a means of impeding the exercise of the right of peoples to self determination, for their statements in the Committee. My delegation also associates itself with the statement made by the distinguished representative of Antigua and Barbuda, as the Chair of the G-77.

Mr. Chairman,

As the Secretary General's report has mentioned, the forthcoming Durban Review Conference in April 2009 will offer an opportunity for all stakeholders to assess the successes and shortcomings in the implementation of various measures adopted by member states to alleviate the discrimination faced by people on account of various factors, including, ethnicity, race and religion. The Review Conference will also contribute to strengthening

development and equality through the wider involvement of all the stakeholders, including civil society organisations. The Review Conference is also being convened at an opportune time as the problems of racism, racial discrimination, xenophobia and other related intolerance have not reduced. Instead, political violence induced by these are on the rise globally and has become more brutal and vicious.

We support a multi-faceted approach to combat racism, including through adoption of relevant legislation and amending existing laws combined with action at the national level based on strategies elaborated through national action plans. In addition, a sincere operationalisation of the commitments prescribed in the Durban Declaration and Programme of Action is extremely important to tackle this menace and promote social harmony and peace. We hope that the international community will be able to reach a consensus on this important issue. We look forward to a successful outcome of the Durban Review Conference in Geneva.

Mr. Chairman,

India has maintained unwavering support and solidarity for the goal of the people of Palestine of attaining their inalienable rights, including the right to self-determination. The establishment of an independent, contiguous, viable, independent and sovereign state of Palestine, existing side by side with Israel in peace and security, remains an important unfinished task in the realisation of the right of peoples to self-determination. We are with the overwhelming majority of countries who consistently affirm their commitment to a negotiated two-State solution, accepted by the two principals, that would result in such a state emerging in the Middle East.

It is in this context that India has welcomed the resumption of a direct dialogue between the parties to the conflict, and the process set in motion during the Annapolis Conference last year. We remain convinced that the Roadmap, as endorsed by UN Security Council Resolution 1515, remains a valid framework of reference for an eventual settlement, and we reiterate the central importance of all parties abiding by their commitments under the Road Map.

We welcome all efforts to take forward the ongoing dialogue and the achievement of the goal announced at Annapolis, ideally within the announced timeframe. We believe that all such efforts should be aimed at the earliest possible conclusion of an agreement that would ensure a just, fair, equitable and mutually-acceptable solution to this conflict, based on relevant UN resolutions, including Security Council resolutions.

Mr. Chairman,

Having said that, the United Nations and other international fora should not be used to selectively redefine some of the core principles of the United Nations Charter in order to satisfy domestic political rhetoric. This is true especially in the context of the right of peoples to self-determination. This concept should always be seen in a historic perspective. Relevant international principles reaffirm that self-determination is a right applicable to the peoples of non-self governing colonies and trust territories. Once exercised, this right enables people to freely choose their own form of Government and for all segments of society to collectively participate in national decision making through representative, democratic institutions. Additionally, the international community has consistently affirmed that the right of self-determination does not extend to component parts or groups within independent sovereign states and any attempts aimed at the partial or total disruption of their national unity are incompatible with the purpose and principles of the UN Charter.

The right to self-determination cannot become an instrument to promote subversion and erode the political cohesion or territorial integrity of sovereign member states of the UN. It cannot be abused to encourage secession and undermine pluralistic and democratic states. Moreover, there is no room for self-determination to be distorted and misinterpreted as a right of a group, on the basis of ethnicity, religion or racial criteria, or any other such categorization, and thus, use it to attempt to undermine the sovereignty and territorial integrity of a state.

Mr. Chairman, In this context, we regret the unacceptable reference to the Indian state of Jammu and Kashmir made by the delegate of Pakistan in his statement earlier today. Pakistan's comments pertaining to the Indian state of Jammu and Kashmir constitute a clear interference in the internal affairs of India. The allegations made are factually incorrect and bear no relationship to reality. The delegate of Pakistan would have been better served by avoiding making comments about an integral part of another member state. Such comments are incompatible with the purposes and principles enshrined in the UN charter.

It would suffice to point out that the people of Jammu and Kashmir exercised their right to self determination at the time of India's independence and have since then repeatedly participated in free, fair and open elections at all levels. In contrast, Pakistan pretends to be concerned over human rights, yet denied even a semblance of such rights to the people of Pakistan-Occupied Kashmir. What could be more phony?

I may add that by introducing its unwarranted reference in our discussions the delegate of Pakistan is also harming the cause of the inalienable right of the Palestinian people to self-determination. It will never succeed in its efforts.

On our part, we look forward to the continuation and deepening of a constructive bilateral dialogue between India and Pakistan and to a profound transformation of our bilateral relations, so that our two countries can work together on our shared objectives of peace, prosperity and security.

Thank you, Mr. Chairman.

747. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Rajeev Shukla on Agenda Item 39 – Report of the UN High Commissioner for Refugees, Questions Relating to Refugees, Returnees and Displaced Persons and Humanitarian Questions at the Third Committee of the UNGA.

New York, November 4, 2008.

Mr. Chairman,

We thank the UN High Commissioner for Refugees for his report under Agenda item 39 and also the statement made in the Committee.

Mr. Chairman,

The UNHCR was founded in 1950 with the objective of leading and coordinating international action to protect refugees and resolve refugee related problems, including their rights, globally. It hoped that the refugee problem would be temporary and localised. Over the years, UNHCR has helped settle more than 50 million people to restart their lives and are currently present in 110 countries. However, even after more than five decades, the refugee problem remains unresolved and growing. The latest report indicates that the number of refugees worldwide has increased to 11.4 million. Additionally, latest statistics indicate that the number of asylum-seekers remained at 0.74 million and the number of refugees who were repatriated voluntarily was at 0.73 million.

Mr. Chairman,

UNHCR, which is guided by the 1951 United Nations Convention relating to the Status of Refugees and its 1967 Protocol, strives to protect and promote the rights of refugees and asylum seekers to find safe refuge in another State, with the option to return home voluntarily, integrate locally or to resettle in a third country. In addition, international refugee law provides a framework of principles for UNHCR's humanitarian activities. However, with the change in ground realities since the end of the Second World War, UNHCR has expanded its involvement with other groups of people and situations, like settlement of migrants and internally displaced people, including those affected by conflict, climate change or economic reasons.

In partnership with other entities within and outside the UN, UNHCR has assumed a lead role in providing succor to the conflict-induced internal displacement situations in the areas of protection, camp management & coordination and emergency shelter. There is a need for greater clarity with respect to UNHCR's renewed focus on internally displaced peoples. UNHCR maintains that refugees would have the first charge on UNHCR's mandate and its limited resources. However, UNHCR's role in situations involving internally displaced peoples should be on the basis of explicit requests made to it by the States concerned. It should also take into account the complementarities of mandates and expertise of other relevant organizations. After all, the first and foremost responsibility of taking care of internally displaced persons rests with member states.

Mr. Chairman,

The source and destination of a majority of refugee movements lies primarily in developing countries. This is borne out by the fact that in 2007, 43 industrialised countries had only 0.3 million asylum seekers out of a total of 11.4 million. This large number of refugees invariably burdens the strained economy and limited resources of a developing country. Therefore, their concerns need to be recognised and addressed to a far greater degree than at present. The development agenda, including achievement of the Millennium Development Goals, has to buttress international efforts to ensure not only prevention but also address the needs of relief and rehabilitation of refugees. In the context of refugee populations, international solidarity and burden sharing are the

foundations on which refugee protection rests. UNHCR's mission, therefore, ought to be based on the principle of responsibility and burden-sharing. These new challenges deserve greater attention from the international community.

Mr. Chairman,

With greater integration of international economies, there is a growing trend of economic migration over and above the movement of people on account of well-founded fear of persecution, who qualifies to be categorised as a refugee. This has resulted in irregular mixed migration movements. There is an enormous problem in not just catering to their needs but also to identifying them. We must therefore develop capacities to differentiate refugees from economic migrants so as to better address their protection needs.

Mr. Chairman,

Voluntary repatriation remains the best durable solutions to the problem of refugees. Developing countries of origin should be given necessary assistance to facilitate such repatriation, particularly by creating economic opportunities, where required, for returning refugees. Resettlement, especially in countries with requisite economic means, is also a possibility. As regards local integration, its implications as a policy option for dealing with refugees in a situation of mass exodus into developing countries are far reaching and need to be considered carefully.

Mr. Chairman,

India is not a signatory to the 1951 Convention on Refugees as the Convention does not address the problem of massive refugee flows or factors such as mixed migration that accompany such flows. However, India's record in dealing with refugees has been exemplary. India stands steadfast in its commitment to provide humanitarianism assistance to them. India continues to host a large number of refugees and our programmes for them are managed entirely from within our own resources. Our protection regime is based on the fundamental rights guaranteed by the Indian Constitution and other relevant legal provisions. We have clearly demonstrated our abiding commitment to the principles of protection and non-refoulment. However, we will continue to work closely with the international community to address this major challenge.

Mr. Chairman,

We welcome the recent structural and management reform of the UNHCR to make it more flexible, effective and result-oriented. The ongoing efforts to enhance the accountability and transparency in UNHCR's working methods must continue. The organisation must preserve its impartiality in operations as well as its non-political character and work in close cooperation with the concerned States in achieving its goals.

While UNHCR has been tirelessly implementing its mandate, its activities suffer either because of lack of political will in some parts of the world or lack of means in others. Mere existence of international legal provisions would not suffice to tackle this major unresolved problem, unless states play a major role with complimentary support from UNHCR. The cycle of hopelessness, despair and deprivation of refugees continues to be real and unsettled and needs to be broken. The international community should address this re-emergent and worrisome challenge in a spirit of compassion, solidarity and burden-sharing. We believe that prevention of humanitarian crises, which leads to refugee problem, through investment in long term development in developing countries is the most cost effective approach available to the international community.

Thank you, Mr. Chairman.

748. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Dr. E. M. Sudarsana Narchiappan on Agenda Item 52 - Groups of Countries in Special Situations [A] Third United Nations Conference on the Least Developed Countries; and [B] Specific Actions Related to Particular Needs and Problems of Landlocked Countries; Outcome of the International Ministerial Conference on Landlocked and Transit Developing Countries and Donor Countries and International Financial and Development Institutions and Transit Transport Cooperation at the Second Committee of the UN General Assembly.

New York, November 4, 2008.

Mr. Chairman,

We would like to thank the Secretariat for the reports on the agenda item "Groups of countries in special situations" under consideration today. We associate ourselves with the statement made by the distinguished representative of Antigua and Barbuda on behalf of the Group of 77.

Mr. Chairman,

The Brussels Programme of Action provides a useful framework for addressing the multifarious challenges confronting Least Developed Countries [LDCs]. We welcome the finding in the report of the Secretary-General that LDCs, as a group, have grown on an average by 6% annually during this decade. This is a tribute to their success in implementing their commitments under the Brussels Programme of Action.

However, what is of concern in that finding is that this growth has not led to poverty reduction, and has in fact increased social disparities in some cases. Clearly, sustained economic growth does not automatically translate into the achievement of development objectives. It is in this context that greater international support and assistance, particularly from developed countries, is required for the LDCs to achieve the IADGs including the MDGs. Such efforts must focus on greater financial and technical assistance to the national development strategies of the LDCs. They must also effectively address the structural constraints and impediments to economic and social

development of the LDCs. Unfortunately, this has not been the case. As the report of the Secretary-General notes, Foreign Direct Investment, though increasing, remains concentrated in a few natural resource rich LDCs.

Such flows do not encourage linkages with the economy at large, have limited employment generation effect, and do not enhance productive capacities. In the absence of other flows, Official Development Assistance remains the significant source of financing, particularly for social and infrastructure sectors, but is far below the target of 0.15-0.2% of Gross National Income. Investment in trade capacity building is limited, thereby limiting ability of LDCs to reap the benefits of trade opportunities. Exports of LDCs remain non-diversified. Further, massive agricultural subsidies have severely undermined domestic production in many LDCs – the case of cotton highlights this eloquently. Debt repayment burden remains high for many LDCs, and some have not benefited from debt relief efforts.

Mr. Chairman,

What is required is a paradigm shift away from offering palliatives to the problems facing LDCs, so that the above problems are effectively redressed. This requires an integrated approach, implemented through new and additional financing, enhanced market access for products from LDCs, ensuring long-term sustainability of debt burden, technology transfer at affordable rates, as well as institutional and capacity building. The 4th UN Conference on LDCs, whose preparatory process is to be discussed this year, will be an important step in this process. We hope the conference will take an in-depth look at the constraints faced by LDCs, and commit to concrete actions.

I would like to highlight that India has been active in demonstrating its commitment to assist LDCs. Earlier this year, we unilaterally announced a scheme to grant duty-free and preferential access to products from all LDCs. The tariff lines covered under this scheme span 92.5% of global exports of all LDCs, and 94% of India's total tariff lines. In the area of debt, India has written off the debt owed by seven Highly Indebted Poor Countries [HIPC]. Further, our programme of Technical and Economic Cooperation, under South-South solidarity, has a special focus on assistance to LDCs in general, and with those in our extended neighbourhood, in particular. Nevertheless, efforts by fellow developing countries like India can only complement the requisite efforts by our developed partners. I would also like to refer to countries that are graduating from the list of LDCs. While this step represents a success of their development strategies, we must

be mindful of the challenges that these countries continue to face, and urge the international community to assist these countries in the post-graduation phase so that their achievements can be sustained. We also support the request by many LDCs for a re-examination of the graduation criteria.

Mr. Chairman,

The Almaty Programme of Action has resulted in a clear acknowledgement of the special needs and problems of landlocked developing countries, including the need for sustained international support to address these. Equally important is the understanding that any effective solution must address the constraints and challenges faced by the transit developing countries that neighbour landlocked developing countries. In this regard, we welcome the outcome of the mid-term review of the Almaty Programme of Action, which was conducted earlier this month in New York. The review meeting underlined the importance of greater efforts to implement the Almaty Programme of Action, particularly through enhanced financial and technical assistance. We look forward to concrete actions in this regard, so that the trade and transit issues can be holistically addressed.

India has special bilateral cooperation agreements with its landlocked neighbours for easy transit of their goods through India. We accord the highest priority to further strengthening our ties with these countries, including through regional initiatives. We will continue to contribute economic and technical support to their development efforts, as well as of other landlocked and transit developing countries, as part of South-South cooperation.

Before concluding, Mr. Chairman, permit me to highlight that there are regions within some developing countries that face, on account of geography or political boundaries, similar difficulties in accessing global markets as landlocked developing countries. We would urge cooperation for meeting special transit requirements of landlocked regions within a country.

Thank you, Mr. Chairman.

749. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Dr. E. M. Sudarsana Natchiappan on Agenda Item 47 – Macroeconomic Policy Questions [A] International Trade and Development at the Second Committee of the UN General Assembly.

New York, November 5, 2008.

Mr. Chairman,

We thank the Secretary-General and the United Nations Conference on Trade and Development [UNCTAD] for the report on “International Trade and Development”. We associate ourselves with the statement made by the distinguished representative of Antigua and Barbuda on behalf of the Group of 77.

Mr. Chairman,

International trade can play an important role in promoting economic growth and development. For developing countries, greater market access to developed country markets is crucial in their efforts towards poverty eradication and achievement of the development goals. Enhanced trade is particularly relevant in the context of the ongoing crises and expected global economic slowdown. However, developing countries can truly benefit from trade only if the international trading regime is more equitable and development oriented. In this regard, we must ask ourselves why the current trading system has not delivered for the poor, and has instead exacerbated the inequitable growth patterns. Our efforts at enhancing international trade must be undertaken with this perspective in mind. Trade must link exports to employment generation and to the overall domestic economy in developing countries. We must support value addition in developing countries, instead of perpetuating the role of developing countries as providers of raw materials. Restrictions on products of interest to developing countries must be eliminated.

Mr. Chairman,

We are disappointed that we have had to take a pause in the WTO negotiations earlier this year, and we welcome the recent resumption of the multilateral process in Geneva. India stands committed to constructively engage to move the Doha Development Round to an early and successful conclusion that will

have the development dimension at the core of the trade negotiations. However, we must be clear that the Doha round of trade negotiations is about the Doha Development Agenda. This Round is not about the perpetuation of structural flaws in global trade, especially in agriculture. This Round is not about developing countries opening their markets for developed countries for their subsidised agricultural products. This Round is not about negotiating livelihood security and subsistence of hundreds of millions of farmers. Instead, this Round is about opening new markets for developing countries especially in developed countries. This Round is about creating new opportunities and economic growth for developing countries in all sectors including Industries and Services. This Round is about extracting LDCs and vulnerable economies from the stranglehold of poverty. Attempts by many of our developed partners to include issues like a restrictive “anti-concentration” clause, mandatory “Sectorals” in Non-agricultural Market Access [NAMA], avoidance of commitments on eliminating cotton subsidies, etc., go against the mandate of the Hong Kong Ministerial Declaration and the spirit of the Doha Development Agenda. We are also concerned with the late attempts to increase demands on developing countries in the context of the modalities negotiations.

Mr. Chairman,

Progress on negotiations in agriculture remains a key issue at the Doha Development round. We agree with the report of the Secretariat that massive agricultural subsidies in developed countries have distorted international markets and weakened agricultural production in developing countries. As recent developments have demonstrated, such policies have severely impacted food security in developing countries and have played a significant part in the global food crisis. The energy crisis has further increased input costs for agricultural production. It is imperative for progress in this area in the trade negotiations. However, the livelihood security of subsistence and marginal farmers in the developing world cannot be compromised, and commercial interests cannot take primacy over these. We urge developed countries to demonstrate flexibility towards genuine reduction and elimination of agricultural subsidies. Industrial development is also a key component of achieving the development goals. It is important that nascent industrial development in developing countries is not harmed and that they do not face de-industrialization. NAMA negotiations must be in line with these objectives. Services, particularly Mode 4, is another area which is of interest to developing countries. However, administrative and procedural requirements by developed countries pose significant barriers, apart from other market access restrictions. We stress the need for

developed countries to ensure liberalized, commercially meaningful and effective market access in Mode 4. This would create a win-win situation by bringing tangible benefits to both developing and developed countries.

Mr. Chairman,

Technology can play a crucial role in development efforts. A fairer Intellectual Property Rights regime is required, which would facilitate transfer of technology to developing countries at concessional and preferential rates. This is particularly relevant for sectors like public health and for climate change technologies. In this regard, we stress the need for accelerating work on the development-related mandate concerning Trade-related Aspects of Intellectual Property Rights [TRIPS], including measures to make it fully supportive of the objectives of the Convention on Biological Diversity.

Mr. Chairman,

The international community also needs to take proactive steps to assist developing countries, particularly Least Developed Countries and other vulnerable economies, to remove supply side constraints so as to benefit from international trade opportunities. We must effectively operationalize "Aid for Trade", and address preference erosion issues. I am happy to inform that despite being a developing country, India has unilaterally announced, earlier this year, a scheme to grant duty-free and preferential access to products from all LDCs. The tariff lines covered under this scheme span 92.5% of global exports of all LDCs, and 94% of India's total tariff lines. We also provide assistance to numerous other developing countries, particularly in Africa, through our technical assistance programme. Nevertheless, efforts by fellow developing countries like India can only complement the requisite efforts by our developed partners. Before concluding, Mr. Chairman, I would like to reiterate our support to UNCTAD, which has a key role in supporting developing countries. We thank Ghana for successfully hosting UNCTAD XII and support the focus of the Accra Accord on measures to make globalization pro-development.

Thank you, Mr. Chairman.

750 Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Rajeev Shukla on Agenda Item 120 – Financial Situation of the United Nations at the Fifth Committee of the UNGA.

New York, November 6, 2008.

Mr. Chairman,

We thank the Under Secretary-General for the Department of Management for her statement on the financial situation of the United Nations. My delegation aligns itself with the Statement made by Antigua and Barbuda on behalf of Group of 77.

Mr. Chairman,

My delegation has consistently maintained that payment of assessed contributions by Member States, in full, on time, and without conditions, is not just a charter obligation but also a moral one. We also believe that sympathetic consideration should be given to those Member States that are unable to pay their assessed contributions due to circumstances beyond their control. While expecting clear and across the board accountability from the UN Secretariat for efficient and effective delivery of mandates given to it by Member States, we have to ensure the provision of timely and adequate resources for the Secretariat, so as to facilitate the full implementation of the mandated tasks.

Towards the achievement of this goal, it is imperative that Member States fully pay their assessed contributions in a timely manner.

Mr. Chairman,

On the regular budget, we welcome the decrease in unpaid assessments from \$ 836 million in October 2007 to \$ 756 million in October 2008. Nevertheless, the outstanding balance still amounts to a considerable 40% of the total assessments, a significant amount which could affect the Secretariat's mandates delivery capacity. Notably, 94% of the unpaid assessment is concentrated in one Member State. At the same time, we are concerned that the cash position of the regular budget is in a deficit of \$ 66 million due to higher expenditure on Special Political Missions and a general weakening of the dollar as compared to the budgeted exchange rates. While we could blame the deficit partially on the weakening dollar;

nonetheless, it is also a manifestation of poor budgetary practices, exacerbated by non-payment of assessed contributions. We hope that this unhappy situation would be addressed urgently by all sides concerned.

Mr. Chairman,

As a major troop contributing country, which also has significant contingent-owned equipment deployed with UN peacekeeping operations, we are particularly troubled by the amount of \$ 2.9 billion outstanding assessed contributions for peacekeeping operations. We acknowledge that the unpaid assessments are partly due to the peacekeeping financial cycle. However the major portion is due to non-payment by Member States. As in the regular budget, the unpaid assessments for peacekeeping operations are highly concentrated, with 62% owed by just two member states.

Mr. Chairman,

The delay in receipt of contributions from Member States adversely impacts the Secretariat's capacity to make quarterly payments to troop and equipment contributors of peacekeeping operations. India's contribution of troops and contingent-owned equipment to UN peacekeeping operations is not a commercial enterprise; it is a manifestation of India's commitment to the principles and purposes of the UN Charter. However, once a written MOU has been signed with the United Nations regarding the terms and conditions of our participation in peacekeeping operations, we are justified in expecting that all sides to the understanding fulfill their obligations. Delayed payments, sometimes non-payment as in a few closed peacekeeping missions, of troop costs and contingent-owned equipment reimbursements, reflects poorly on the United Nations. It also makes it difficult for the troop contributing countries to explain to national legislatures, why such debt is owed by the United Nations to Member States for their troops and equipment contributions. This situation must be rectified otherwise it could have a negative impact on Member States' commitment towards future peacekeeping operations.

Mr. Chairman,

We are happy to note that the Organization's debt to Member States at the end of 2008 is projected to be around \$ 645 million, which is lower than the \$ 779 million in December 2008 but still considerable by any standard. Despite the decrease, an indebted United Nations should not be expected to evoke confidence from the peoples it aspires to serve. It is, therefore,

essential that Member States assist the Organization in achieving zero indebtedness, as an integral part of our common quest for prudent budgetary and financial management. This would be done by fully meeting financial obligations in a timely manner.

Mr. Chairman,

Last week, the Under Secretary-General for Management in her remarks had concluded that the position of the regular budget was uncertain given the current and projected cash situation, and the final outcome would depend on the action taken in the next few months by a few Member States. Similar, action would be required for unpaid assessments of peacekeeping operations in order to reduce the organization's indebtedness to Member States. We urge all Member States, especially those with the requisite means, to take expeditious action to meet their financial obligations, so that the United Nations can return to a healthy and sound financial situation and does not have to draw unsavory comparisons with the collapsing giants of the global financial markets, which we have witnessed in the recent months. The financial well being of the Organization is in our common interest!

Thank you.

751. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Sukhdev Singh Dhindsa on behalf of the Government of Sweden and Government of India on Agenda Item 65 (a): Strengthening of the Coordination of Humanitarian and Disaster Relief Assistance of the United Nations in the Plenary Session of the UNGA.

New York, November 10, 2008.

Mr. President,

I have the honour to deliver this statement on behalf of the Governments of Sweden and India.

We would like to thank the Secretary General for the documentation presented under this item including his Report. We appreciate the introduction provided by Under Secretary-General John Holmes.

Mr. President,

India and Sweden recognize that the coordination of emergency humanitarian assistance is one of the most important responsibilities of the United Nations. The impartial, voluntary and multilateral nature of United Nations humanitarian assistance is highly valued by both countries.

Sweden and India have noted that the demands for humanitarian assistance are likely to show an increasing trend in the near future. We take note of the fact that there is an increase in the number and impact of natural hazards. We further take note of complex emergency situations and the humanitarian challenges these situations continue to pose.

Mr. President,

India and Sweden reiterate that humanitarian principles and international humanitarian law provide the basis for humanitarian assistance. The letter and spirit of these principles need to be scrupulously respected. Sweden and India reaffirm that humanitarian assistance must be provided in accordance with the principles of humanity, neutrality and impartiality.

Mr. President,

National governments have primary responsibility for disaster management. It is sometimes difficult for states to tackle emergencies on their own. Nations

can and must cooperate amongst themselves to find collective and cooperative solutions to the challenges that disasters represent. The efforts of Member States to come together to promote a more responsive, prompt, fair and need-based humanitarian assistance system must be augmented and strengthened.

Mr. President,

India and Sweden believe that the capabilities and role of the United Nations in coordination and delivery of international humanitarian assistance need to be strengthened. This would mean an augmentation of the operational coordination capacities of the Office for Coordination and Humanitarian Affairs (OCHA), improved delivery of humanitarian services by relevant UN funds and programmes as well as greater accountability to stakeholders.

Disaster management has to be a holistic process. India and Sweden believe that prevention is better than cure. We must therefore give greater attention and resources to disaster risk reduction and disaster preparedness. Disaster risk reduction and preparedness need to be mainstreamed into development policies

Sweden and India also believe that disaster management must be an inclusive process. Communities, civil society and the private sector all have important roles to play. We must act in partnership to exploit and augment synergies.

Cooperation to strengthen local, national and regional capacities in the areas of emergency response, disaster risk reduction and disaster preparedness will benefit all. In a globalised world, each nation has capabilities, resources, experiences and knowledge that can be used in partnership by all nations and the international community for their mutual benefit. Mechanisms that tap these capacities and disseminate best practices and knowledge therefore must be given high priority by the United Nations.

Mr. President, The world is going through an unprecedented financial crisis. It is important in these times to highlight the continued requirement for maintaining and augmenting the levels and predictability of funding for humanitarian assistance. In this regard, Sweden and India believe that the Central Emergency Response Fund (CERF) has been a success. The fund has succeeded in mobilizing US\$ 1 billion during its two years of operations. The disbursement of these funds have had a role in accelerating responses to

emergency situations and have had a positive impact on the management of these situations.

The institution and operation of the Central Emergency Response Fund has highlighted the collective and shared interests that all Member States have in the humanitarian agenda.

Mr. President,

Member States have a common interest in ensuring effective delivery of international humanitarian assistance. The consensus that exists on these common interests can be articulated and strengthened through constructive and informed dialogue. This will reinforce our common ability to face disasters whether natural or man-made.

Thank You

752. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Sukhdev Singh Dhindsa on Agenda Item 65 [A] – Strengthening of the Coordination of Humanitarian and Disaster Relief Assistance of the United Nations at the Plenary of the UNGA.

New York, November 10, 2008.

Mr. President,

I will now make a national statement on behalf of the Government of India. India would like to align itself with the statement made by Antigua and Barbuda on behalf of the Group of 77.

Mr. President,

The humanitarian role of the UN has assumed added importance in the recent past. The Secretary General, in his report on International Cooperation on Humanitarian Assistance in the Field of Natural Disasters (A/63/277), has stated that there is a longer term trend of increasing frequency and intensity of recorded disasters associated with natural

hazards. Asia, including India, has been affected by these hazards in the past year.

In addition to disasters associated with natural hazards, the global humanitarian scenario has been complicated and placed under greater stress by the emergence of new challenges such as the unprecedented increase in food prices. The rise in food prices will have a negative effect on populations living around and under poverty thresholds and will increase humanitarian distress in large parts of the developing world. The nature, contour and resourcing of the humanitarian response to this development is a matter of interest and concern to India and other developing countries. In these circumstances it would be logical to assume that the demands on the United Nations in the field of humanitarian assistance will continue to grow.

Mr. President,

Member States have the primary responsibility for provision of humanitarian assistance in response to all emergencies. While there is no substitute for effective national efforts, a national response alone can sometimes be inadequate. The United Nations has a key part to play in complementing and supplementing these efforts of Member States.

There is also a need for more bilateral, regional and international cooperation to deal with disasters and to make those effective uses of our capabilities. Greater cooperation is required not only in the emergency phase of reacting to disasters but also in relief and rehabilitation, in disaster preparedness, and in setting up and maintaining early warning systems. These all are, and should be, parts of effective disaster management strategies.

Mr. President,

The Central Emergency Response Fund has completed two years of existence. India has noted the report of the Secretary General that the Fund has largely achieved its objectives and has become, in a short time, a valuable and impartial tool for humanitarian action inter alia by helping to accelerate response and by catalyzing field-level coordination. CERF today accounts for about 5% of annual global humanitarian assistance flows. As a developing country with strong faith in the universality, neutrality, impartiality and multilateral nature of UN assistance, India would like to see this share increase.

Mr. President, India is deeply concerned by the increasing incidence of attacks on humanitarian personnel and UN premises. India has always opposed violence and condemns such attacks in the strongest possible terms.

India would also like to take this opportunity to reiterate that humanitarian assistance has to be given on the basis of humanitarian principles and International Humanitarian Law. The General Assembly has on numerous occasions, including in the Guiding Principles of resolution 46/182, stated that humanitarian assistance should be provided with the consent of the affected country and on the basis of an appeal by it. It also emphasizes that humanitarian assistance must be provided in accordance with the principles of humanity, neutrality and impartiality.

We have noted, however, that there have been efforts to expand this base and the scope for intervention. While the existing normative and legal basis for humanitarian assistance is adequate, India is open to new ideas to strengthen the operational and coordination capabilities of the UN. We also believe that the spirit and letter of inter-governmental processes must be adhered to in such initiatives.

Mr. President,

Disaster management in India aims to build a safe and disaster-resilient India by developing a holistic, proactive, multi-disaster and technology-driven strategy. A National Disaster Management Authority headed by the Prime Minister has been instituted to achieve this through a culture of prevention, mitigation and preparedness, so as to generate a prompt and efficient response at the time of disasters.

India's Disaster Management strategy is in conformity with the International Strategy for Disaster Reduction, the Rio Declaration, the Millennium Development Goals and the Hyogo Framework 2005-2015.

The pillars on which India's disaster management strategy are based are:-

- Community-based disaster management,
- Capacity development
- Consolidation of past initiatives and best practices.
- Cooperation with agencies at national, regional and international levels.

The Government of India is committed to promoting a culture of prevention and preparedness and encouraging mitigation measures based on state-of-the-art technology and environmental sustainability. It is also committed to mainstreaming disaster management into the development planning process and to creating an institutional and legal framework and an enabling regulatory environment and a compliance regime. It believes that an efficient humanitarian response must give special attention to those who are vulnerable and weak.

The Government lays great emphasis on developing contemporary forecasting and early warning systems. It also believes in working together with the media, NGOs and the private sector in generating awareness and capacity development in tackling humanitarian disasters.

Thank you.

753. Statement of Member of Parliament and Member of the Indian Delegation to the United Nations K. Yerrannaidu on Agenda Item 17 – The Situation in Afghanistan at the UN General Assembly.

New York, November 10, 2008.

Mr. President,

Let me begin by expressing India's appreciation for scheduling this discussion on a subject of great significance for us, our region and the world. I commend the effort by the delegation of Germany in coordinating inter-governmental negotiations that have led us to this annual General Assembly resolution on the situation in Afghanistan. We are happy to continue to co-sponsor this resolution, which is traditionally adopted by consensus.

Mr. President,

The arrangement of this resolution is in accordance with a few central themes. Thus the operative section of the text begins with issues relating to security, and follows up thereafter with paragraphs on governance, human rights, rule of law, economic and social development, counter narcotics and finally, coordination issues. It therefore accords with our

perspective of the substance of the challenge that the international community faces in Afghanistan. A similar perspective is borne out in the latest report of the UN Secretary-General on the scale of the challenge and the difficulties that beset our efforts to assist Afghanistan. Thus, as both the resolution and the Secretary-General's report before us underscore, the escalation in asymmetric attacks in areas cleared of the Taliban and the Al-Qaeda is deeply worrying. Civilians, humanitarian workers, international staff and diplomatic personnel—including our Mission in Kabul—have been attacked. While we correctly condemn the perpetrators of these savage acts, the ultimate responsibility lies with those who support, finance and empower the Taliban, Al-Qaeda, and other terrorist and criminal groups. Their acts of violence are callous and brutal, but not mindless, since they deliberately aim to weaken the resolve of the Afghan people and the international community. In fact however, the increase in random acts of violence targeting civilians only illustrates the desperation of terrorist groups in seeking to convert strategic defeat into tactical advantage.

It is for this reason that we need to pay attention to the signals we are sending through our actions and messages. Not only should we avoid inadvertently giving terrorists and their supporters comfort, we must also ensure that our legitimate concern at the complexity of the challenge is not mistaken for a weakening of our collective will to win this war. It is also important that we ensure that we do not accord the terrorists parity with the legitimate government of Afghanistan, or the international community that acts in support of the latter. But most of all, it is essential that we focus on ensuring that our message is clear and unequivocal—something that we occasionally neglect in the annual UNGA resolution on Afghanistan. It is in this sense that we commend the effort made this year to sharpen the focus of this text on several key messages.

To India, Mr. President, the central thrust of the message that we see in this resolution is clear: our support for and commitment to the central challenge in Afghanistan is unshaken. We will not be diverted from the task of helping the people of Afghanistan bring back to their nation peace, order, stability, governance and development, based upon the traditionally moderate and inclusive culture of Afghanistan. We may differ individually in prioritising and selecting strategies to reach the goal, but there should be no mistaking the collective determination of the international community to the larger goal. From this standpoint, therefore, the road ahead is clear.

India believes that there is no alternative but to work on simultaneously implementing a three-pronged strategy in Afghanistan. One element in this must be security, for without security neither the people of Afghanistan nor our own citizens can hope to see a peace dividend after decades of strife in Afghanistan. While we accept the argument that seems to be made more regularly of late that Afghanistan cannot be secured through military means alone, the converse is also true: without a robust military effort, we cannot secure Afghanistan through any other means either. It is for this reason that India sees a need for a much closer alignment between the consistent application of force wherever terrorist groups are present, and the achievement of the political objectives of our efforts in Afghanistan.

A second element must be to raise governance capacities in Afghanistan, to ensure that our Afghan partners will be left with the capacity and the resources to chart their own road, whenever the time for that comes. Developmental efforts are an important part of it, because any long term strategy of stabilizing Afghanistan must be predicated upon creating an impetus from the ground that builds upon ground cleared through military measures. Here too, we must collectively ensure better coordination of our collective efforts in support of the Government of Afghanistan. To begin with, we must make a greater effort to offset the humanitarian challenge posed by drought, climatic hardship and food scarcity.

The third element is to ensure that Afghanistan is at peace within its region, and vice versa. Without this, we cannot hope to stabilize Afghanistan solely from within. This includes, but is not limited to, regional economic cooperation. Afghanistan's entry into the South Asian Association for Regional Cooperation, and its membership in other regional groups are aimed at revitalizing Afghanistan's historic linkages with the countries of its region. The central challenge remains to ensure that programmes evolved in regional mechanisms are implemented. These include resolving barriers to effective overland trade and transit, as well as to the operation of mechanisms to deal with the challenge posed by trafficking in drugs, cross-border terrorism and so on. This is particularly so in the southern and eastern regions, where countering narcotics production remains an endemic problem. Unless robust security measures are followed by a larger strategy of crop substitution and securing market access for farmers, we cannot expect long term success in countering the production of narcotics in the region.

Mr. President,

In context of the regional aspect, I should like to reaffirm India's national commitment to assisting Afghanistan in this complex moment in its transition. We do so not only because of the long historical and cultural ties between our people, and not only because of the excellent relationship our two countries enjoy, but also because history has shown us that regional prosperity, security and progress is indivisible. Therefore our consistent effort has been to design our assistance programmes in a manner that focuses upon bringing developmental benefits both at the local level, and also at the larger national level. Not only has India recently announced an increase in its commitment to Afghanistan, now amounting to US \$ 1.2 billion, we are pleased to have completed the construction of the Zaranj-Delaram highway in Western Afghanistan. This is one of three major infrastructure projects India is undertaking in Afghanistan—the others being a large hydroelectric project and a large power transmission project. Another project of considerable symbolic value for us is the construction of a parliament building in Afghanistan. We hope to begin construction later this month.

Mr. President,

In conclusion, I should like to revert to the message of our resolution. For India, it is important that the clarity of our message should not be diluted by adding excessive expectations based on efforts that ultimately tend to replicate our national socio-economic models in an inappropriate setting. We need to remind ourselves that we cannot realistically resolve all of Afghanistan's problems at once. Given the challenge that faced us a little over seven years ago, we should recognize that progress will continue to be recorded but sectorally and partially. Patience and perseverance are essential for the long-term success of our investment: that and a willingness to listen to those whom we seek to help. It is for this reason that an Afghan-led process of prioritization of tasks remains essential.

I thank you, Mr. President.

754. Freely adapted from extempore remarks of Permanent Representative at the UN Nirupam Sen at the meeting of the Open-ended Working Group on the Question of Equitable Representation on and Increase in the Membership of the Security Council and other Matters Related to the Security Council.

New York, November 11, 2008.

Mr. Vice-Chairman,

I am grateful to the President of the General Assembly for organizing this meeting and I congratulate you on your appointment as Vice-Chairman, presiding over this meeting. It is a sign of the PGA's confidence in you which we share.

The latest OEWG Report [Document A/62/47] is factual (in the sense of providing bare facts without contextual meaning) and provides no useful insights whatsoever. The only document which is important meaningful and agreed to in it is Decision 62/557. In fact the Reports of the Vice Chairpersons, annexed to it, were expressly rejected in the OEWG by the UFC, the G4, the L.69, and their supporters.

Decision 62/557, adopted unanimously, recognized this reality and decided to commence intergovernmental negotiations in an informal plenary of the GA, based on proposals by Member States, within a defined time limit. In deference to requests made by a few delegations, the majority went along with the view that the OEWG may also be allowed to continue immediately to address the framework and modalities in order to prepare and facilitate intergovernmental negotiations. The OEWG in fact has been given a subsidiary role in the decision of September 15, 2008. Therefore, it is not clear why this meeting is being held. This is the conclusion that one can draw after listening to distinguished colleagues who have spoken earlier. It would have been better to have the OEWG meeting after the beginning of intergovernmental negotiations on November 21. There could then have been a discussion on how the framework and modality of the negotiations is operating. For fifteen years, this OEWG talk shop has been enough of a drain on our time, energy and resources. It should have been about time to put an end to this barefaced mummery.

Given the past record of the OEWG, we do not expect that any concrete progress will be achieved by it. In the highly unlikely eventuality of its coming

up with useful idea it can provide synergy to the negotiations. In the much greater likelihood of its failing to do so, it would not. In any case, the informal GA Plenary on negotiations is not bound to take it into consideration. It is abundantly clear that undertaking negotiations is not related in any way to actions taken under para (c) of Decision 62/557. The term "so far" in the first line of para (d) of Decision 62/557 removes any doubt on this issue. Thus, "so far" means that the GA plenary would only take note of what the OEWG has done till September 15, 2008; it is not bound to take note of what the OEWG does subsequently. So, let us be clear: the wording of Decision 62/557 excludes the possibility of any linkage between the conclusion of work of the OEWG and the commencement of negotiations in the informal GA plenary. I agree with the PRs of UK and France that "the OEWG cannot establish preconditions for negotiations since this would be against the GA Decision".

As regards the framework and modalities for the negotiations, we believe that these issues too are quite clear. The framework is the informal GA Plenary and the modality is the proposals of the Member States. Since we have decided to commence intergovernmental negotiations in an informal plenary of GA, based on proposals by member states, the rules of procedure of the GA would apply. Any further details on these issues can be worked out as part of the negotiation process, as has been the case with other negotiations.

A couple of speakers have said that we should define purpose and objective of negotiations, which have already been clearly formulated in the World Summit Outcome Document and Decision 62/557. These speakers talk of road map, parameters and the like. None of this figures in Decision 62/557. These are attempts to create artificial obstacles in order to go back to the pre-September 15 period and illegally, through these manoeuvres to undermine if not reverse the unanimous Decision 62/557.

Another speaker said that the informal GA Plenary can only be held after the OEWG presents its Report, latest by February 1, 2009. He completely ignored the important phrase "so far" in para (d) of Decision 62/557 in terms of which the informal GA Plenary is not bound to take into consideration the OEWG's future Report at all. He also made the suggestion that "first all proposals have to be tabled and only then negotiations can begin". The logical conclusion is that the proposal tabled by his Group, including through a formal Resolution, was after all not a proposal at all. Proposals of the Member States are well known and are contained in the Resolutions tabled,

the letters written to the Presidency and the Statements made since at least 2005. Another speaker talked of not rushing the process?. After fifteen years it is a little excessive to speak of rushing any thing.

One speaker referred to some kind of gentlemen's agreement. We proposed insertion of the phrase "so far" to the then PGA and we were not part of any such agreement nor are we aware of it. In any case, these are strange gentlemen who meet in a small group in secret that the rest of us know nothing about. Rather a select and secret league of gentlemen.

They are in fact ghosts holding on to the ghost of the OEWG, sitting crowned on the grave thereof. The cold, withered hand of the dead is trying to hold back living negotiations. The absurdity of continuing in this manner is shown by a simple thought experiment. Let us add a phrase to President-elect Obama's moving address after his historic election victory: "A man touched down on the Moon, a wall came down in Berlin and the OEWG met!" You can see from the reaction in this august assembly what the significance of the present OEWG is. After fifteen years of failing to achieve any concrete results the only language that is applicable to it is the question in the great American novelist Thomas Pynchon's latest novel "Against the Day": "What is it doing here, so late in history, with the dismal metonymies of the dead behind it?"

I am also somewhat surprised by the statements made by three colleagues representing countries that are part of the Ibero-American community. I would like to quote from the Special Communiqué of the Ibero-American Community on United Nations Reform, adopted as recently as October 31, 2008 by Heads of State and Government: "The Heads of State and Government of the Ibero-American countries, in their meeting in San Salvador, El Salvador, on occasion of the XVIII Ibero-American Summit Meeting, recognized that after fifteen(15) years of debates, on 15 September 2008 the United Nations adopted Decision 62/557 to initiate negotiations for the reform of the United Nations Organization...

They recognized the urgent [the word is not mine, it is in the communiqué] need to reform the Security Council in favour of its democratization and the just representation to which our peoples aspire."

A speaker raised the issue of OEWG as prepcom which was specifically raised by one of his distinguished colleagues on September 15 and equally specifically and decisively rejected. Also, democracy having been established in his country, we thought there would be greater sympathy

for the idea of voting. Its position is somewhat like saying in a democracy: "We do not want to lose. So let us not have elections." This is certainly no way to run a democracy and would be no way to run negotiations.

In conclusion, Mr. Vice-Chairman, we welcome and totally support the PGA's letter of October 10 announcing intergovernmental negotiations on November 21, 2008. I would like to reiterate that Decision 62/557 clearly says that we should „commence intergovernmental negotiations on the basis of proposals by Member States', not just have a proforma session. We would respectfully hold you to that.

I thank you, Sir

755. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Priya Dutt on Agenda Item 123 – Human Resources Management at the Fifth Committee of the UNGA.

New York, November 14, 2008.

We thank the Under Secretary-General for the Department of Management for her statement on the Agenda Item 123: Human Resources Management. We also thank the Under Secretaries-General for the Department of Field Support and for the Office of Internal Oversight Services; the Director of the Ethics Office and Chairman of the Joint Inspection Unit for introducing their relevant reports. We convey our appreciation to the Chairperson of the Advisory Committee on Administrative and Budgetary Questions for introducing the Advisory Committee's report. We welcome the presentation by the Staff representatives. My delegation aligns itself with the statement made by the distinguished Deputy Permanent Representative of Antigua and Barbuda on behalf of the Group of 77.

The human resources of an organization largely determine its success or failure. In this age of rapid change, marked by new and emerging technologies, it is vital for the United Nations to have a well-trained, multi-skilled, and versatile workforce that is committed to and equipped for confronting the growing challenges and complexities confronted by the Organization. For this, it is important not only to recruit high-quality staff,

but also to retain them and to provide motivation for continuous self-improvement and skill enhancement. These objectives can only be achieved through the collective efforts of the management and the staff, with unwavering support from Member States.

Given the critical importance of the human resources management reforms and the numerous proposals by the Secretary-General on the subject, some already approved and under implementation, others still being deliberated by the General Assembly; we are disappointed that the Secretary-General's report on Human Resources Management reforms (A/63/282) while providing an overview of and update on the implementation of the previous reform proposals, does not provide sufficient statistical data to substantiate the progress reported, nor does it include benchmarks against which progress could be measured. We also concur with the ACABQ that the report does not provide the financial implications of the proposed initiatives or clear timelines for their implementation. Above all, the report fails to analyze the interrelationships between the various human resources reform proposals that are interlinked and require synchronized implementation.

The Office of Human Resources Management (OHRM) is the pivotal entity in the UN Secretariat responsible for strategic human resources planning and policy development; interpretative guidance; and delegation of authority on human resources throughout the Secretariat. We commend the OHRM for its efforts despite the magnitude of its task and the relative scarcity of its resources. Nevertheless, we are troubled by the findings in the OIOS report on the in-depth evaluation of the OHRM (A/63/221), which underscores that the credibility of the staff selection process is not highly rated by stakeholders with regard to facilitating promotion opportunities, identification of highly qualified external candidates and support for geographical representation and gender balance goals. Furthermore, lengthy staff selection timeframes; lack of integrated approach to career development of staff and the failure of the managed mobility policy are the other areas of concern. We fully endorse the recommendations of the OIOS on the OHRM, especially the development of an integrated approach to enhance staff selection process, better support for career development and promotion of staff mobility; clarification and streamlining of delegation of authority and prioritization of the implementation of human resources reform initiatives. We are convinced that these measures would make a significant contribution in expediting and facilitating the effective and efficient human resources management.

We welcome the Secretary-General's intention to implement an integrated workforce planning system through establishment of a Talent Management Framework. Though, we are surprised that in a large and geographically diverse international civil service like the United Nations, this was not done much earlier, as it would have addressed a number of challenges, such as expensive and time consuming recruitment process, high vacancy rates, succession planning etc. While implementing the work force planning system, it would be essential to install a robust monitoring system that would ensure accountability for departmental planning and performance, especially at the senior management levels. It would also ensure effective monitoring of the delegated authority in human resources, which has been highlighted by the OIOS as an area of serious concern.

On career development and support, my delegation is convinced of the importance of training for staff development. The United Nations should nurture talent, learning and professional development of its staff. However, training should not be an end in itself. It is a means to creating an effective workforce that is efficient, versatile and multi-skilled. We agree with the ACABQ that a more integrated, strategic and results-based approach to training, encompassing both headquarters and the field, should be adopted, which fulfills the emerging needs of the United Nations. Moreover, clear linkages should be made between training programmes and career paths and measures to identify and promote future leaders in the Organization, should be inclusive, transparent, non-discriminatory, merit-based. This would also hold true for the staff recruitment process at all levels, particularly the senior management.

We all agree that a credible, fair and fully functioning performance appraisal system is critical to effective human resources management. Various surveys conducted amongst the staff in the Secretariat have indicated a lack of faith in the existing performance appraisal system. In order to develop a culture of rewarding performance and penalizing under/non-performance in the United Nations, it is essential that appraisals accurately capture performance. We encourage the Secretary-General to expeditiously address the reported shortcomings in the existing performance appraisal system and establish clear links between performance and future career paths, as an important step towards rewarding excellence and strengthening accountability.

The streamlining of contractual arrangements and harmonizing the conditions of service, including for the UN field operations, are important issues pending with the Member States. We have to move with deliberate

haste on these matters as they have a direct bearing on the overall functioning of the Organization. It is undeniable that having multiple contractual arrangements is inefficient. Similarly, having disparate compensation, benefits and entitlements amongst staff performing similar functions is not only unfair and unjust but also demoralizing. We look forward to a satisfactory resolution of these critical in the coming weeks.

The declared goal of the mobility policy is to develop a versatile, multi-skilled and experienced international civil service. Mobility is also expected to increase Secretariat's flexibility and responsiveness, improve its programme delivery capacity, and offer increased staff development and career advancement opportunities. As reported by the Secretary-General, we have taken note of the difficulties experienced in the initial implementation of the "managed reassignment" programme. The OIOS has also been critical of the "managed reassignment" programme. In light of these experiences, we call upon the Secretary-General to undertake the proposed comprehensive review of the mobility policy, taking into account the lessons learnt from the managed mobility programme; the OIOS evaluation and the outcome of Staff Management consultations. While there are challenges in achieving the desired mobility outcomes, the eventual implementation of the mobility policy, if approved by the General Assembly, would have to be based on a clear definition of mobility and implemented in a fair, transparent and inclusive manner, encompassing all levels of the Secretariat.

On recruitment and staffing, my delegation welcomes the efforts of the Secretary-General to achieve the gender balance and geographical distributions targets, but calls for additional measures, including intensive outreach activities, to further ameliorate the situation, which is far from satisfactory. We also endorse the comments of the ACABQ on the pre-screened rosters as a tool for staff selection and on the broadening of the scope of the National Competitive Exams as a useful, objective and competitive tool for recruitment of highly qualified young professionals at entry level.

The Secretary-General has reported an increase in the use of consultants and individual contractors by 88.7% and 166.6% respectively, involving a combined expenditure of \$131.5 million during the reporting period. Moreover, majority of the consultants have been engaged for programme implementation and advisory services, which should normally be the responsibility of the regular staff. We firmly believe that the practice of

hiring consultants should be restricted to only to those instances where the necessary in-house skills and expertise is not available. Meanwhile, factors contributing to the use of consultants should be identified and appropriate steps should be taken to address skill gaps within the Secretariat. However, if hiring of consultants becomes inevitable, we call for maintaining a balance in their geographical representation.

Before concluding, let me once again reiterate the importance of expeditious implementation of human resources management reforms in the United Nations. Especially, in view of the transformation of the United Nations from a conference servicing and meeting organizing body to a more field-oriented and operational Organization, which undertakes more and more complex tasks of peace & security and economic & social issues. We have to keep in mind that reform does not come free. Even if the initial costs seem considerable, over the long run this investment would reap high dividends in the form of more efficient and effective delivery of mandates and programme implementation. It is in our common interest to provide, in a judicious manner, the required resources for the implementation of this much needed and pressing reform.

Thank You.

756. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Sukdeo Paswan on Agenda Item 150 – Report of the Committee on Relations with Host Country at the sixth Committee of the UN General Assembly.

New York. November 14, 2008.

Mr. Chairman,

We thank the Chairperson of the Committee on Relations with the Host Country for presenting the Report of the Committee.

The Committee on Relations with the Host Country provides a useful forum for addressing issues relating to the functioning of Missions of Member States and for enabling their representatives to perform their functions without hindrance.

This year the Committee had examined a number of problems related to question of security of missions and safety of their personnel, acceleration of immigration and customs procedures, entry visas issued by host country, transportation and other matters raised by interested delegations. The open and transparent exchange of views in this forum helped in addressing these issues in a spirit of cooperation and in accordance with international law.

We appreciate the host country's commitment to fulfill its obligations under the Convention on the Privileges and Immunities of the United Nations and the Host Country Agreement, to accord facilities to missions accredited to the United Nations to ensure their smooth functioning.

Mr. Chairman,

India had brought to the attention of the Committee the issue of property taxes being imposed by the City of New York on diplomatic premises used by Permanent Mission of India to the United Nations to house its diplomats. The issue is presently being pursued in New York Courts.

In a very short judgment in February this year, the New York District Court held that the Vienna Convention on Consular Relations and the Vienna Convention on the Diplomatic Relations support the City of New York's position that the residential exception from taxes is limited to "residence of the Head of Mission" and not others. The Government of India has filed an appeal with the Court of Appeals against this order of the District Court.

Nevertheless, we continue to believe that under international laws and Vienna Convention on Diplomatic Relations, my government, being a sovereign, is immune from the jurisdiction of US Courts and is not liable to pay property tax in respect of the portion of the building of the Permanent Mission owned by it and occupied by its diplomats for residential purposes.

We understand that many Permanent Missions are facing a similar problem. We hope that the host country will devote urgent attention to the matter and remove the ambiguity in its laws so as to ensure that it grants to the UN Member States and their staff the same privileges as are granted to other diplomats accredited to it. This is also a requirement under the Headquarters Agreement between the UN and the United States.

On immigration and customs procedures, we recognize that the host country has a right to monitor and control entry into its territory and to adopt the requisite security measures it deems necessary. This has to be balanced, on the one hand, with the right of delegations to participate in the work of the UN and, on the other, to ensure that delegations do not misuse their privileges and immunities. Nevertheless, security and immigration officials must also be made aware of the privileges and immunities enjoyed by diplomats and their families with a view to maintaining respect for them.

We welcome the steps taken to address the parking problems of diplomatic missions and hope that the residual issues in this respect, including the request for parking slots by the Indian Mission, would also be addressed soon.

In conclusion, we commend the Host Country for taking all the complaints seriously and making efforts to address them promptly.

Thank You Mr. Chairman

757. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Tarit Baran Topdar on Agenda Item 107 – Follow-up to the Outcome of the Millennium Summit; 44 – Integrated and Coordinated Implementation of and Follow-up to the Outcome of the Major United Nations Conferences and Summits in the Economic, Social and Related Fields and 112 – Strengthening of the United Nations System at the UN General Assembly.

New York, November 17, 2008.

Mr. President,

We welcome the opportunity to participate in this joint debate on the various agenda items relating to the integrated and coordinated implementation of and follow-up to the outcomes of the major United Nations conferences and summits in the economic, social and related fields. We thank the Secretariat for the report on these issues.

Mr. President, United Nations conferences and summits held since the 1990s have generated an unprecedented global consensus on a shared vision of development. However, what is of concern is the lack of a similar consensus in the matter of implementation of this vision. Implementation remains hampered, firstly by a continuing lack of adequate resources and, further by absence of an enabling international environment. I do not need to repeat facts, like the continuing fall in Official Development Assistance flows or the net outflow of resources from developing to developed countries, to highlight the former. The current ongoing financial crisis, which did not originate in developing countries but is impairing their development efforts, is just one example of the latter.

The 2005 World Summit embraced a broader concept of internationally agreed development goals, not just limited to the Millennium Development Goals. These can only be reached through the implementation of the broader set of commitments undertaken at the major United Nations conferences and summits. Further, the different goals and targets adopted at these conferences and summits can be achieved only if they are pursued together, in an integrated manner.

In this regard, we have been repeatedly emphasizing the importance of development-oriented international economic, financial and trade policies

to assist developing countries in their development initiatives. Globalization, with its enhancement of flow of capital and goods without sufficient attention to its adverse impacts, has made the need for such pro-development policies imperative and most urgent. This has been amply demonstrated by the current financial crisis, coupled with the food crisis and a higher risk to energy security.

Mr. President,

To ensure that international policies are pro-development, concerns of developing countries in the formulation and implementation of these policies must be effectively taken on board. Unfortunately, current institutional structures do not permit this, even though developing countries are the most affected ones. We are heartened by the near global consensus on the need for an urgent and fundamental reform of the international financial and economic architecture. Such reform must enhance the voice and participation of developing countries in the decision-making and norm-setting processes. In order to make this process as inclusive as possible, the United Nations, with its unique position and legitimacy, could play a key role.

Trade must assist countries in their development efforts. An early development-oriented outcome of the Doha Development Round of trade negotiations, which does not sacrifice the livelihood concerns of millions of poor and marginal farmers, is of paramount importance. We also need to accelerate the implementation of the development mandate of the Agreement on Trade Related Aspects of Intellectual Property Rights. We must ensure that rewards for innovators must be balanced with benefits for humankind, particularly in issues like public health, benefit sharing of use of genetic resources, and affordable environment-friendly technologies that are crucial for addressing climate change and related aspects.

Mr. President,

The Economic and Social Council has a crucial role in fostering a comprehensive development agenda of the United Nations through an integrated and coordinated implementation of the commitments. The Council has an acknowledged role as a principal body for coordination, policy review, policy dialogue and recommendations on issues of economic and social development. The strengthening of the Economic and Social Council in 2006, and the incorporation of new elements in its functioning,

were useful steps in this regard. We particularly highlight the importance of the new mandate given to the Council in 2006 for undertaking a regular and periodic review and assessment of international economic and development policies and their impact on development. We must enhance the capacities of the Economic and Social Council in order to effectively implement this mandate, including periodic reviews based on a development perspective, of the policies of international financial institutions.

It is satisfying that the Annual Ministerial Review of the Economic and Social Council has become an important event to review efforts to achieve the Millennium Development Goals, and learn from sharing of experiences. This event must have an added focus on evaluating the implementation of the “global partnership for development”. The Development Cooperation Forum, which held its first session earlier this year, must consolidate its unique role in overseeing trends in international development cooperation. The Council should also continue to discuss topical and emerging issues, and provide policy inputs and guidance. Only through such an integrated approach can the development agenda be maintained at the core of the efforts of the United Nations.

Mr. President,

Strengthening the United Nations system without a comprehensive reform of the UN Security Council is inconceivable. The reform of the Security Council must include an expansion in both permanent and non-permanent categories and improvement in its working methods. Let us recall that at the 2005 World Summit, we had pledged for early reform of the Security Council, identifying it as an essential element of our overall efforts to reform the United Nations. The continued delay in reforming the Security Council illustrates the fundamental deficiency in implementing decisions adopted.

Consultations in the Open-Ended Working Group have outlived their utility. We are happy that there was unanimous recognition of this, and Decision 62/557 adopted on September 15, 2008 agreed to commence intergovernmental negotiations in an informal plenary of the General Assembly, based on proposals of Member States, within a defined timeframe. We fully support the decision of the President of the General Assembly to commence these negotiations on November 21, 2008. This is entirely in line with Decision 62/557, and we look forward to the negotiating process producing concrete results.

The United Nations system also cannot be strengthened without revitalizing the General Assembly. This must be not simply a technical process concerned with agenda and the technical means employed but a political process where the General Assembly takes important political decisions on comprehensively reforming the Security Council, on issues of peace under certain circumstances, on having an actual say in the election of the Secretary-General etc. An important part of such a reform would be increasing the accountability of the Secretariat to the Member States and an increase in the efficiency of the Secretariat.

Before concluding, Mr. President, let me highlight that we are now in the process of negotiating the outcome document of the Doha Conference on Financing for Development. It is important that we do not perpetuate an endless cycle of commitments without implementation, and the Doha outcome document appropriately focuses on means of implementation.

Thank you, Mr. President.

758. Statement by Member of Parliament and Member of the Indian Delegation to the UN Vijay Bahuguna during the Joint Debate on Agenda Items 9 – Report of the Security Council and 111 – Equitable Representation on and Increase in the membership of the Security Council and other related matters at the UNGA.

New York, November 18, 2008.

Mr. President,

We welcome the opportunity to participate in this joint debate on Agenda Item 9 – Report of the Security Council and Agenda Item 111 – Equitable Representation on and Increase in the Membership of the Security Council and Other Related Matters. We thank the delegation of Costa Rica for introducing the annual report of the Security Council for the period August 2007 to July 2008.

Mr. President,

My delegation notes that the Report remains a largely statistical compilation of events, a bland listing of meetings and outcome documents. In our view such a report must include an analysis of the issues on the Council's agenda. Pressing issues concerning international peace and security that are before the Council, such as the Middle East, cannot be simply dismissed by noting that despite seven attempts presented by different delegations over 12 months, the Council "was not able to reach the unanimity needed for it to take any action". It also needs to be shared as to why the Council was unable to reach an agreement. The Report reveals that only half of the formal meetings as well as consultation sessions of the Council were held in open format. This itself is indicative of a need for greater transparency in the Council's functioning. Further, in the context of the listing of resolutions and statements adopted, the Report does not indicate how often non-Council members immediately concerned with any particular issue were consulted. Perhaps the Report does not bring to the larger membership an analytical survey of the activities of this important organ because the Council itself remains insufficiently representative, its working methods remain non-inclusive, and its activities remain extremely opaque. Mr. President, Like most others, we remain convinced that the only remedy is a comprehensive reform of the Security Council, involving expansion in its permanent and non-permanent categories. There are a few who argue that an expansion

only in the non-permanent category would suffice. This is being unrealistic and has been proved wrong by history. We should not forget that we expanded the Security Council in 1965, with only additional non-permanent members, but the problems with the Council have only exacerbated. Non-permanent members have not been able to implement their ideas, to prevent the encroachment of the Council in areas beyond its competence as per the UN Charter, to improve its decision-making process, to ensure the full compliance with Articles 31 and 32 of the Charter, to enhance the participation of Troop Contributing Countries in decision making, or even to improve access and participation of non-members specially Small States. And this has not been for want of trying by many non-permanent members. Thus electing non-permanent members has failed to ensure the accountability of the Council.

It is self-evident that real change and improvement can come only through inducting new permanent members through the principles of election and subsequent accountability to the wider membership through an appropriate review mechanism while ensuring permanent institutional memory, with new points of view and fresh resources to ensure optimal decision making and its translation into action. Without expansion of permanent membership the real problems cannot even begin to be addressed nor political culture even begin to be transformed. Attempts to portray an "interim model" as a solution are inherently flawed. Such a model will simply add to numbers without addressing the issues, and in effect would be the worst of both worlds. Let me reiterate our demand for a reform of the Security Council with the following elements:

- Expansion in both permanent and non-permanent categories.
- Equitable geographical representation.
- Greater representation to the developing countries, including better access for small island, landlocked and other vulnerable states.
- Adequate representation to the developed countries and those with economies in transition.
- Comprehensive improvement in the working methods.
- Provision for a review mechanism.

In this context, we welcome the unanimous Decision 62/557 adopted by this Assembly on September 15, 2008. This Decision has clearly recognized the

futility of further consultations in the Open-Ended Working Group format. It is unambiguous in its decision to commence intergovernmental negotiations in the informal plenary of the GA, based on proposals by Member States, within a defined time limit. Further, the term "so far" used in para (d) of this Decision, which deals with the commencement of intergovernmental negotiations, makes it abundantly clear that the negotiating process is not bound to take into account any further activity in the Open-Ended Working Group after September 15, 2008. In the extremely unlikely scenario of the Working Group coming up with any useful result, these could be considered as inputs in the negotiating process. In terms of Decision 62/557, there have to be intergovernmental negotiations in the Informal General Assembly Plenary on the basis of the proposals of Member States. The framework is the formal GA Plenary and the modality is the proposals of the Member States. These proposals are well known and are contained in the Resolutions tabled, the statements made and the letters written to the Presidency since at least 2005. If further refinements are to be negotiated, these would be done in the informal GA Plenary, as in any other negotiation. Thus, we reject the proposal presented by Mexico for a schedule of meetings of the Open-Ended Working Group, purportedly to discuss objectives of the reform, nature of the agreement as well as guiding principles, rules, nature, agenda and terms of negotiations. These issues are not relevant for the Working Group, serve only to obstruct and delay the commencement of negotiations, and violate the mandate of Decision 62/557.

At the meeting of the Open-Ended Working Group yesterday, the President of the General Assembly indicated that the informal GA plenary to commence intergovernmental negotiations would probably not be held on November 21, 2008. We are intrigued by this development, especially since commencement of negotiations on that date had been supported by an overwhelming majority of Member States, and was in line with Decision 62/557. Well over two-thirds of Member States who spoke yesterday were skeptical of the future utility of the Open-Ended Working Group. Let me reiterate that vide Decision 62/557, we had all agreed that the commencement of negotiations is not conditional upon the future work of the Open-Ended Working Group. We look forward to the early convening of the informal GA plenary for commencing negotiations in accordance with Decision 62/557.

Thank you, Mr. President.

759. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Tiruchi Siva on Agenda Item 110 – Revitalization of the Work of the General Assembly, at the Plenary of the UN General Assembly.

New York, November 20, 2008.

Mr. President,

India is happy to participate in the debate on the Revitalisation of the General Assembly. This is one of the most important issues on agenda of the 63rd General Assembly as it addresses fundamental questions about the structure and functioning of the world order. India would like to align itself with the statement on this issue made by the delegation of Cuba on behalf of the Non-Aligned Movement.

Mr. President,

My delegation would like to take note of the proceedings of the ad hoc working group on the revitalization of the General Assembly created pursuant to a decision of the 61st General Assembly. The group has painstakingly catalogued decisions in this regard and divided them into three main clusters. These clusters, deal with firstly, working methods, documentation, agenda, etc; secondly, selection of the Secretary General and finally, the role and authority of the General Assembly. This helps us obtain an overview of where the revitalization process stands. A review of the situation reveals, to our regret, though perhaps not to our surprise, that very limited progress has been made on this issue since it was introduced into the Agenda of the General Assembly at its 46th session. My delegation acknowledges the importance of progress where it has taken place, particularly progress in those areas where practical results have been obtained. However, there is a limit to which discussions relating to time limits on speeches and provisions relating to modern technologies will revitalize the General Assembly.

Mr. President,

India's position on this issue is guided by its desire to have a more effective United Nations. India also wants an organization that is more responsive to the priorities and aspirations of the Member States, particularly the developing countries, who constitute the vast majority of members.

Mr. President,

India believes that the General Assembly will not be empowered merely by strengthening procedures. It will only be empowered if its position as the chief deliberative, policy-making and representative organ of the United Nations is respected in letter and in spirit. This requires that the General Assembly take a lead in setting the global agenda. The convening power of the United Nations must be used more decisively, particularly on economic issues. The General Assembly must also restore the centrality of the UN in development matters. The Thematic Debates have been a step forward as have been the Annual Ministerial Review and the Development Cooperation Forum of ECOSOC. However, more needs to be done. The benefits of involving the General Assembly in international economic governance have been made evident during the current financial crisis. A section of its membership drawn from the global South has consistently pointed out that economic orthodoxies proposed by a group of nations have grave shortcomings. These fears, often voiced in this Assembly and its Committees, have been validated by recent events. Events have also underscored the importance of giving a representative body such as the General Assembly a much greater say in shaping the international economic and financial architecture, particularly in the reform of the Bretton Woods Institutions.

Mr. President,

Control over legislation, over materials and over men, confers power. Within the United Nations system, it is the Security Council, with its opaque working methods and widely accepted need for reform that controls certain vital legislation and senior manpower. While the General Assembly has some influence, through the Fifth Committee and the budgetary process, there is a fundamental disparity of authority between the Security Council and the General Assembly. Mr President, One of the more egregious examples of how disparity manifests itself is through the process of selection of the Secretary General. India's view is that the General Assembly, being the voice of the international community, must be given a greater say in the process of selection. Several mechanisms to put in place a more inclusive and transparent procedure for the appointment of the Secretary-General, consistent with Article 97 of the Charter, have been proposed. Efforts in this direction are better undertaken when a selection process is not on the horizon or underway. This is an appropriate time.

Mr. President,

In our view the appointment of high-ranking UN officials, at the level of Under Secretary General and Deputy Secretary General, should also be subject to scrutiny by the general body of the Member States as represented through the General Assembly. Thus, candidates for such senior positions should require to be confirmed by the General Assembly. This practice is observed in many countries and is consistent with the principles of democracy and representative governance. The issue of preventing encroachment upon the mandate of the General Assembly and of making the Security Council more responsive to it must also be addressed. The General Assembly's competence in areas such as the process of standard-setting and codification of international law, must be scrupulously respected.

Mr. President,

I would like to conclude by submitting that it is only the presence of political will that would revitalize and empower the General Assembly. It is only political will that will provide the General Assembly with the tools and the mechanisms that will enable it to have a role in the making and implementation of international law and in the creation and maintenance of a just and equitable world order. Revitalization of the General Assembly has been on its agenda for the last 18 years. India believes that there must be meaningful progress in the areas outlined above to prevent this debate from becoming a sterile discussion.

Thank You

760. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Dr. K. Dhanaraju on Agenda Item 132 – Administration of Justice in the UN at the Fifth Committee of UN at the UNGA.

New York, November 20, 2008.

We thank the Under Secretary-General for the Department of Management for introducing the report of the Secretary-General on Administration of Justice in the United Nations. We also wish to thank the Ombudsman for introducing the report of the Secretary-General on the activities of the Office of the Ombudsman. We convey our appreciation to the Chairperson of the Advisory Committee on Administrative and Budgetary Questions (ACABQ) for introducing her Committee's relevant report. My delegation aligns itself with the statement made by the Distinguished Deputy Permanent Representative of Antigua and Barbuda on behalf of the Group of 77.

The General Assembly in its resolution 61/261 established a new, independent, transparent, professionalized, adequately resourced and decentralized system of internal justice, consistent with relevant rules of international law and the principles of the rule of law and due process, to ensure respect for the rights and obligations of staff members and accountability of managers and staff members alike. The new system, which emphasizes on informal resolution of employment-related disputes, is expected to improve accountability and have a positive impact on human resources management in the Secretariat.

While the new system of administration of justice was to become operational from 1st January 2009, we are cognizant that the Secretariat is behind schedule in the preparatory work related to the implementation of the new system, particularly on staffing of the Office of Administration of Justice, finalization of the terms of reference for the registries, establishment of the Mediation Division in the Office of the Ombudsman and finalization of cost-sharing arrangements with the funds and programmes. The inability of the General Assembly to consider the draft statutes of the two tribunals and the arrangement for transition from the current system to the new one has added to the delay. In order to avoid further setback in the timetable, we call upon the Secretary-General to expedite the completion of the preparatory work, including filling up of all vacant posts, required for the implementation of the new system of administration of justice and also to update the timeline for its execution, while awaiting the approval of the

statutes of the tribunals and the transitional measures by the General Assembly.

Given the considerable increase in the number of disciplinary cases, from 72 in 2006 to 277 in 2008 even before the new system of internal justice is in place, all necessary steps should be taken to ensure that the backlog of cases from the old system does not overwhelm the new system at birth, and the current system continues to function properly until the new system becomes fully operational. In this regard, we support the Secretary-General's proposals for the transitional measures, including, transfer of all pending cases to the United Nations Dispute Tribunal, once the new system is in place. We also endorse the recommendations of the ACABQ on appropriation of resources to finance the three ad litem Judges and nine registry staff for a 12-month period for placement in New York, Geneva and Nairobi, to deal with the backlog cases.

Decentralization is the basic to the reform of the UN's internal justice system. Given that the Secretariat is no longer headquarters-based and more UN staff work in the field [80% of the disciplinary cases in 2008 coming from peacekeeping operations], the Secretary-General has proposed a limited delegation of authority for disciplinary matters to heads of offices away from headquarters and heads of field missions to impose minor sanctions, including censures and/or fines at an appropriate level. My delegation is of the view that in order to ensure a consistent application of disciplinary measures, a robust system must be in place in the field, accompanied by certain safeguards, including legal capacity to advise the management and staff on disciplinary matters. The delegation of authority must also be accompanied by the pre-requisites in respect of human resources, administrative instructions, guidelines and training, as well as relevant manuals and standard operating procedures. Much work still needs to be done on these issues, besides other areas that have been identified by the ACABQ.

According to the ACABQ, the Secretary-General's proposals on delegation of authority do not fully respond to the General Assembly's request in paragraph 49 of resolution 62/228 in terms of an assessment of possible implications for due process rights of staff members and on other options for delegation of authority. Little data is provided on actual number of cases opened and disposed of in peacekeeping missions. No estimate has been given of the number of minor cases that would be processed at the mission level and those that would be handled at headquarters. Even the basis for requested resources for each peacekeeping mission is not clear. Therefore,

we must carefully examine all the unanswered issues related to proper delegation of authority for disciplinary measures before taking a final decision. The Office of Internal Oversight Services in its recent report on the in-depth evaluation of the Office of Human Resources Management has given a detailed critique of the delegation of authority in the area of human resources management. Though not perfectly comparable, it may be useful to draw on the lessons learnt from that study.

We urge the Secretary-General to expedite the early conclusion of cost sharing agreements with the funds and programmes. We reiterate paragraph 62 of resolution 62/228, wherein the General Assembly had approved the cost sharing arrangement for the new system of administration of justice on the basis of "headcount" approach, rather than on the basis of actual cases disposed, as proposed by the funds and programmes.

We welcome the use of Information and Communication Technology to improve the functioning of the system of administration of justice, in terms of transparency and speed in the processing of the cases, as well as providing access to information via internet and e-filing of submissions. In this process strict confidentiality should be ensured so that damage due to leakages may not be caused to the Organization and to the concerned staff member.

My delegation convey its appreciation to the Office of the Ombudsman and calls for an expedited recruitment of all approved posts in that office and the new Mediation Division, in view of its critical role in the new system of administration of justice for facilitating conflict resolution. Besides providing an informal mechanism for dispute resolution, the reports of the Office of the Ombudsman give valuable insight into human resources management issues, including identification of a number of areas of systemic malfunction, such as perceived disparities in recruitment processes, mobility and career development. The Secretary-General should utilize these findings in addressing the systemic problems faced in human resources management in the Organization.

In conclusion, my delegation hopes for an early resolution of all outstanding issues on the subject in the coming weeks so that the United Nations has in place, by January 2009, a fully functional system of administration of justice as approved by the General Assembly.

761. Intervention by Member of Parliament and Member of the Indian Delegation to the UN P. V. Joshi during the 2008 Parliamentary Hearing at the United Nations on the subject 'Towards Effective Peacekeeping and the Prevention of Conflict Delivering on our Commitments' Session II – Sexual Violence against Women and Children in Conflict at the UN General Assembly.

New York, November 20, 2008.

Mr. Chairman,

Thank you for this opportunity to speak on this important issue.

Sexual violence against women and children is an unacceptable crime that unfortunately remains a serious modern-day challenge. India has taken note of Security Council Resolution 1820 of June 2008, which called for immediate and complete cessation of all acts of sexual violence against civilians by all parties to an armed conflict. Regrettably, instances of violence against women and children continue to rise, despite repeated and forthright international condemnation and an increase in collective efforts to stop such violence. It is a matter of great shame that in this day and age, women and girls remain victims of sexual violence, and are often targeted for such violence as part of an effort to humiliate, dominate, instill fear in, and eventually as a means to instigate forcible relocation of peoples. Such violence leaves permanent psychological scars in the victims, and in their societies.

Mr. Chairman,

There are adequate international legal agreements as well as domestic statutory laws that condemn such violence. No society or country can ever justify this practice. The fact that such violence persists is not due to the deficiency of legal measures to punish perpetrators. In our view, the problem lies in the implementation of such measures. We agree that adequate training must be given to troops, including through the extension of training to inculcate sensitivity to such issues, especially those involved in peacekeeping and peacemaking efforts. At the same time, governments must also ensure the application of appropriate disciplinary measures whenever these are necessary.

At the same time, there is also a need for greater involvement of women in peace making, peace keeping and peace building processes. Women must be involved in all aspects of decision making, especially in conflict situations, and thereafter as well, as active participants in the post-conflict phase. It is for the

UN to set standards in all conflict or post-conflict zones by encouraging greater involvement of women in its activities. In this context, as the nation that provided the first all-women Formed Police Unit in a UN Mission, we appreciate the effort to expand the inclusion of women in peacekeeping operations. I reiterate India's commitment to assist the UN in reaching out to vulnerable sections, particularly women and children, in conflict and post-conflict societies.

Mr. Chairman,

Another way of setting an example is by ending impunity and meting out swift punishment to the perpetrators of crimes against women and children, in accordance with the obligations States have undertaken under international humanitarian law and international human rights law. Swift and exemplary punishment, within existing laws, will deter others from committing such acts. At the same time, it is essential to bear in mind the primary responsibility of nation States to respect and ensure the protection of the human rights of all of its citizens.

Mr. Chairman,

Concern over sexual violence should not be restricted to cases of armed conflict alone, even though this is certainly of great concern to all of us. It must also be recognized that such violence, unfortunately, occurs in all countries and must be urgently and seriously addressed. In India, we have a statutory legal provision for punishing perpetrators of such crimes, but in order to strengthen this further in the context of domestic violence, we enacted in 2005 'The Protection of Women from Domestic Violence Act'. This has become an important milestone in tackling this scourge in India.

From this standpoint, we see merit in a larger international effort to root out such violence against women and children. It should be based on the application of suitably-drafted legislative measures, improved enforcement and implementation of such legislation, capacity building and training programmes for the promulgation of gender-related legislation, and the creation of support services for victims. It should also be our endeavour to create an enabling environment for women; an environment that is safe and free from violence, making it possible for women to be full stakeholders and partners in every country's development. We can and must do so by actively expanding the participation of women in decision and policy-making processes.

Thank you, Mr. Chairman.

762. Statement by Member of Parliament and Member of the Indian Delegation to the United Nations Tiruchi Siva on Agenda Item 110 – Revitalization of the Work of the General Assembly, at the Plenary of the UN General Assembly.

New York, November 20, 2008.

Mr. President,

Thank you for scheduling this discussion on an important subject that demands our collective attention: The situation in the Middle East. This discussion is appropriately timed, as it follows the commemoration of the International Day of Solidarity with the Palestinian people yesterday.

Mr. President,

As a nation with age-old historic and cultural connections to each of the communities that make up the Middle East, India has an abiding interest in the early resolution of this problem that has troubled the region since the inception of the United Nations. India follows with close concern developments in this ancient and holy land. We have perused with attention the reports of the Secretary-General on the Situation in the Middle East and on the Peaceful Settlement of the Question of Palestine. For India, commitment to the Palestinian cause is a cornerstone of our foreign policy even prior to our own independence. We recognize that a resolution of the problems in the Middle East begins with addressing the Question of Palestine. However, we are also aware that genuine peace in the region also requires resolution of other issues on the remaining tracks of the Middle East Peace Process, including restoration of other Arab lands that remain under occupation.

It is in this context that despite the hope engendered by the Annapolis meeting almost exactly one year ago, the lack of substantive progress remains a matter of abiding concern. Despite praiseworthy efforts within the region to resolve divisions in the Palestinian community, the situation created by the events of June 2007 persists. We watch with grave concern as Gaza remains cut off, and barriers to free movement persist in the West Bank. These problems are accentuated by the relentless expansion of the separation wall, in the face of international opinion, and of illegal settlements in the occupied territories. Such activities create new facts on the ground and fresh grievances in an old conflict, and can only have the effect of

making any future solution harder to reach. At the same time, the expansion of Palestinian capacity to secure towns on the West Bank is paralleled by a rise in violence perpetrated by settlers. All acts of violence—no matter by whom—only vitiate the atmosphere for a result-oriented dialogue based on trust, without which no solution is possible.

This is in no party's interest, as it makes it hard for the parties to make the necessary compromises to resolve the key issues relating to an independent, sovereign and viable Palestinian State, a solution to the problem of refugees, and the question of Jerusalem. At the same time, several of the fundamental issues relating to the occupation of other Arab territories in Lebanon and the Syrian Golan remain unresolved. These too add to a sense of frustration and desperation within the affected states. Such issues have the potential of exacting an immediate and long-term impact on the lives of the people, potentially contributing more fuel to an already combustible situation. It is for this reason that India consistently urges all parties to eschew violence and exercise restraint.

All too frequently, violence has broken out, exacerbating sufferings and misery in the region, with profound repercussions for the entire world. The international community clearly has an immediate interest in a comprehensive and peaceful solution to the problems besetting the Middle East. Under the present circumstances, the possibility of creating a sovereign, viable and independent State of Palestine seems difficult. And yet the international community is committed to it, through its relevant resolutions of the UN General Assembly and Security Council resolutions 242, 338, 1397 and 1515. Our collective commitment can only be meaningful if we collectively strive to ensure that all parties to the conflict abide by their commitments under the Roadmap. We therefore urge the Quartet to do much more to push the process forward towards the desired outcome at the earliest. India remains in support of a political solution, based on the Road Map and the Arab Peace Initiative, which remain the main and widely endorsed frameworks for an agreement.

Mr. President,

While resolution of the six decade-long tragedy of Palestine will have an important impact on the situation in the Middle East, as I noted earlier, peace in the Middle East also requires forward movement on other tracks of the peace process. India is encouraged by regional efforts to resume the process of negotiations on the Syrian and Lebanese tracks, and we commend in particular the effort facilitated by Turkey to re-energize the Syria-Israel track. We look forward to the early resolution through dialogue

of the long-standing occupation of the Syrian Golan, to which this General Assembly annually commits itself.

At the same time, India recognizes the important progress made by countries of the region in assisting in resolving the political confrontation within Lebanon earlier this year.

This creditable effort was an important step towards returning Lebanon to the path of stability and economic development. We commend Qatar for its role in this regard. We also welcome the decision to establish diplomatic relations between Syria and Lebanon as a positive step in ensuring regional support for the stabilization of Lebanon. In the coming months, it will be essential for the international community to support the positive steps taken since the election of a President of the Lebanese Republic, including through expansion of assistance in building government capacity to fully assert its authority in all Lebanese territory.

Much remains to be done, but we are confident in the wisdom and determination of the Lebanese people in ensuring that their tragic past is never repeated. At the same time, it is important for the international community to help address other issues that are used as a means to sustain space for parallel structures of authority to flourish. For this it is essential that all parties concerned abide fully by their commitments under the relevant Security Council resolutions, and the processes begun under UNSCR 1559 and 1701, in particular. The practice of citing actions by other parties as a pretext for not abiding by these commitments only hinders the Government of Lebanon, which is of no benefit to any of the parties.

Mr. President,

The truism that all peace is indivisible is most clearly exemplified by the situation in the Middle East. In our interconnected world, we cannot allow the tragedy of the Middle East to continue to fester as it has for decades. An opportunity is at hand for us to collectively arrive at a just, lasting and durable solution to the various inter-related tracks that constitute the Middle East problem. We must seize the moment, in our collective interest, so as to enable the vision of an independent, viable and sovereign State of Palestine, living side-by-side and in peace with Israel, and a larger Middle East whose constituent nations remain at peace with each other and with the world at large.

I thank you.

763. Intervention by Member of the Indian Delegation to the UN Ashok Bhan during the 2008 Parliamentary Hearing at the United Nations on the subject “Towards Effective Peacekeeping and the Prevention of Conflict delivering on our Commitments” Session III – Integrating a Human Security Approach in the work of the United Nations at the UNGA.

New York, November 21, 2008.

Mr. Chairman,

I would like to thank you for giving me the floor. Let me also thank the participants for their useful insights into the emerging concept of human security.

Mr. Chairman, The concept of human security, though not clearly defined, encompasses a wide spectrum of issues with both domestic and international dimensions. On the one hand, it has been conceptualized as freedom from want, thereby calling on States to secure basic economic, social and cultural rights. On the other hand, it also includes freedom from fear, which comprises the securing of all aspects of civil and political rights, including protection of life in situations of terrorism and international and internal conflicts.

Mr. Chairman,

The major international challenge of today is not prevention of war or conflict, but tackling of unresolved chronic social and economic challenges like economic shortages and social deprivation, which has adversely affected the livelihood and survival of individuals. Having said this, I would like to add that the international community cannot handle social and economic challenge from a compartmentalized perspective, which is often the order of the day in the UN system. Instead, a comprehensive human security approach may help in handling the problem, as people's insecurities are mutually interconnected and responses cannot be effectively implemented in compartments, without proper coordination.

Furthermore, the international debate on human security should incorporate a greater role of States and Governments in national decision-making, as in today's world, terrorism, ethnic conflicts, social disintegration, pollution, organised crimes, international migration, financial crises and health

epidemics, are no longer isolated events, confined within national borders. Therefore, the concept of human security needs to be gradually realized through national effort and international cooperation, in keeping with the economic and other capabilities of States. While doing so, it must not be forgotten that a state has primary responsibility not only for the protection and promotion of all human rights of its citizens, but also for providing safe, healthy and secure environment to live in.

Mr. Chairman,

Parliamentarians have one of the key roles to play in this regard. As the ultimate law making authority in a country, Parliamentarians could be encouraged to develop a vision and knowledge of the complementary nature of various dimensions of human security, be it peace and security, development or promotion and protection of human rights of its citizens. They could focus on creating legal basis for sustainable development of the individual and the larger community.

Mr. Chairman,

In India, we, as parliamentarians, have been able to successfully enact laws and programmes in all spheres of human development. We have also successfully amended our Constitution to establish local governance at village levels, called *Panchayats*, thereby, encouraging empowerment of grassroots and institutionalization of inclusive decision making for national development programmes. We have also been able to enforce peace and security along with ensuring promotion and protection of human rights of all citizens by effectively overseeing the activities of government. With the further evolution of this concept of human security, we will be in a better position to conceptualize our efforts in a more focused manner and to bridge gaps in providing an adequate standard of living to our people.

Thank you, Mr. Chairman.

764. Statement by Member of the Indian Delegation to the United Nations Devendra Dwivedi on Agenda Item 16 – Question of Palestine at the UNGA.

New York, November 24, 2008.

Mr. President,

Thank you for convening this discussion on the Question of Palestine at the General Assembly today, as we mark the International Day of Solidarity with the Palestinian people. There can be little doubt that this issue remains of grave concern to the international community. Instability in this ancient and holy land begins with the question of Palestine, and has since impacted upon the wider situation in the Middle East, and thereby upon the entire world. As a nation with historical and cultural relations with all the communities of the Middle East through the millennia, and a strong tradition of support for a just and mutually acceptable solution to the question of Palestine, India has an abiding interest in the early resolution of this long-festered problem. The question of Palestine is a matter over which there is strong support among the people in every section of society, and political parties in India.

Mr. President,

Our meeting takes place almost one year after the international conference at Annapolis. We in India shared the sense of anticipation and hope that earnest and result-oriented discussions would commence at the earliest, aimed at finding the just, mutually acceptable and durable solution whose contours are well-known and hardly needs any reiteration. We had also hoped that the process of dialogue would help quickly address the daily litany of violence, blockades, rhetoric and privation. And yet our hopes remain unfulfilled. Settlements continue to expand in the occupied territories in contravention of the Fourth Geneva Convention and the Road Map. The separation wall continues to be built, in derogation of the advisory opinion of the International Court of Justice, and resolutions of the General Assembly. The division of Palestinian territories endures since the events of June 2007, despite efforts to unify the leadership. Most damagingly, the blockade of Gaza persists. Restrictions on movement and the enduring blockade of Gaza have serious humanitarian consequences in an already-precarious situation. Restrictions on supplies of fuel and electricity in Gaza have only intensified the humanitarian challenge. The announcement late last week of the suspension of humanitarian aid into Gaza, as a result of the resumption of the blockade, is deeply troubling and is cause of grave

concern. While we do hear reports of some resumption of access for humanitarian relief, we call for the lifting of this blockade to afford full access to Gaza for the supply of humanitarian aid and essential commodities. The security situation also remains a challenge. Despite efforts to maintain a ceasefire, incidents of indiscriminate violence and retaliation continue to erupt, thus perpetuating the cycle of violence. The rise of incidents of violence by illegal settlers is particularly disturbing as it runs the risk of inflaming further violence in these highly sensitive locations. In this context, India notes with satisfaction the positive progress recorded by the Palestinian Authority in securing several towns in the Palestinian territory. It is important that we retain clarity regarding the fundamentals. India believes that all violence must be eschewed if there is to be a positive atmosphere for any serious dialogue. However, this is not in itself adequate. There also needs to be a serious effort to dismantle the barriers to free movement within the West Bank, and the blockades around Gaza. Apart from facilitating the entry of humanitarian relief, it is also essential that normal supplies of basic facilities such as power and water, and essential commodities, are resumed. Citizens of Gaza also have the right to expect normalized access to medical facilities, like any other people. The construction of new settlements in the occupied territories, and of the separation wall, must stop forthwith.

Mr. President,

A sovereign, viable and independent State of Palestine, to which the international community is committed through all relevant resolutions, cannot be created under the current circumstances. Our collective commitment to UNSCRs 242, 338, 1397 and 1515 is devoid of meaning if we do not ensure that all parties to the conflict abide by their commitments under the Roadmap. As the Quartet leads the international community's efforts to assist the negotiations between Palestinian and Israeli leaders, we urge the Quartet to do much more so that the process is progressed in a manner that helps us achieve the desired outcome at the earliest. India remains in support of a political solution, based on the Road Map and the Arab Peace Initiative, which remain the only widely endorsed frameworks for an agreement.

Mr. President,

While India is not directly involved in supporting these negotiations, we have maintained our effort to help avert a larger humanitarian crisis. Last month, during President Abbas's visit to India, our Prime Minister not only

reaffirmed India's earlier commitment of \$ 20 million (15 million in project assistance and \$ 5 million assistance), he also announced a grant of \$10 million as budgetary support for the Palestine National Authority. An additional sum of \$10 million was announced for project assistance for Palestinian development programmes. India's assistance programmes in capacity-building, and in support to educational programmes were also expanded.

Mr. President,

This leads us to the larger point: the only lasting solution to the Question of Palestine is a just, lasting, mutually acceptable and comprehensive solution, drawn up along well-known contours that are set out and recognized in the relevant Security Council resolutions. The ongoing cycle of violence and counter-violence only makes the prospects of an eventual peace more remote. It remains critical for the parties to the conflict and the international community—in particular the Quartet—to redouble efforts to settle the Question of Palestine in the year ahead. India reiterates that an early, amicable and mutually-acceptable solution, in accordance with the relevant resolutions of the General Assembly and the Security Council, brooks no delay.

I thank you, Mr. President.

**765. Statement by Permanent Representative at the UN
Nirupam Sen on Agenda Item 11 - the role of Diamonds
in Fuelling Conflict at the UN General Assembly.**

New York, December 11, 2008.

Mr. President,

I have the honour to address the General Assembly today as Chair of the Kimberly Process Certification Scheme for 2008. In this capacity, it is my privilege to present, in fulfilment of the request of this Assembly made vide para 21 of its resolution 62/11, a report on the progress made in implementation of the Kimberley Process during the year.

Mr. President,

Diamonds have played a particularly significant role in causing and prolonging conflict in several countries, as a result of the misuse of wealth generated from this resource. In addition to financing devastating armed conflicts, the illicit trade in rough diamonds also impacts negatively on the legitimate international trade in diamonds. Efforts to address the problem, through the perspective of an overall development agenda, must focus not only on the supply side, but also on all parts of the supply chain, including processing, trading, and purchase by the consumer.

It is in this context that the Kimberley Process [KP] has proved to be remarkably successful, in breaking the linkage between conflict and illicit trade in diamonds, thereby protecting the peace, livelihood and security of millions of people across the globe. This success has translated into an increase in legitimate trade in diamonds. Today, diamonds have emerged as a vehicle of economic progress and as a means to confront developmental challenges in many countries. Over these years, the KP has emerged as a model for multi-stakeholder effort, in which national governments, industry and civil society have successfully collaborated to prevent conflict and promote peace, stability and development.

Mr. President,

India was privileged to lead the KP during 2008, in its continued multi-pronged efforts to further its implementation. The inclusiveness of the Process is a key area of its success. Membership is open on a non-discriminatory basis to all those willing and able to adhere to the requirements of the Scheme. Today, a substantial number of the diamond mining, trading and processing

countries are part of the KP. Mexico joined the Process in 2008, and approval was given for Republic of Congo to resume trading in rough diamonds. The inclusiveness of the Scheme is also reflected by the fact that almost all Participants are members of one of the many Working Groups of the Process. The commitment of the Participants has also been reaffirmed by their participation in review visits, in technical workshops designed to enhance knowledge and skill in the sector, and by their proactive extension of financial assistance to other Participants.

Mr. President,

During 2008, the KP engaged with the Bolivarian Republic of Venezuela by organizing a visit of Chair's nominees consequent to Venezuela's announcement during the June Intersessional in New Delhi to voluntarily separate from the KP for a period of two years and to cease certification for export of its diamonds. This visit has enabled the KP to arrive at a better understanding of the challenges faced by the country in its diamond sector. Venezuela no longer exports and imports rough diamonds. The KP has since decided that it will continue to engage with Venezuela in order to assist and support the country in developing appropriate internal controls over its alluvial diamond mining, consistent with the minimum standards of the Process. Venezuela will continue to be a Participant of KP, attend meetings of the KP and submit production statistics during the period of voluntary separation. This is yet another example of mutual inclusiveness inherent in the Scheme and stands testimony of the willingness of the KP family to stand together, learn from global best practices and proactively provide assistance as and when required.

Mr. President,

Transparency is another hallmark of the KP. The Process took a step forward in this regard by releasing the sub-annual data for rough diamond trade and production for 2004-2007. Statistics and Annual Reports submitted by Participants and reports of Peer Review Visits continue to be the key elements of monitoring. All Participants of the Scheme have submitted their respective statistics and Annual Report for 2007, which have also been analyzed to identify implementation issues and best practices. Statistical analysis for each Peer Review Visit has also been undertaken.

During the year, the Kimberley Process completed its ongoing work for finalizing the diamond production profiles for Côte d'Ivoire, Marange diamond fields of Zimbabwe and Togo. To complement this work, statistical

protocols have been developed. An initiative was also launched for harnessing Information Technology for improving the quality of the data.

Artisanal alluvial producing Participants of KP continued to follow up on the recommendations of the KP regarding artisanal alluvial production. A consolidated matrix of inventories of these participants of KP was published for the first time. The inventories will be updated every six months. Technical assistance and training in support of KP implementation also continued.

Mr. President,

During 2008, the KP further deepened its engagement with the United Nations. KP experts participated in the joint UN-KP visit to Côte d'Ivoire. At the request of the UN, a KP expert visited Mali to examine a seized consignment of rough diamonds and confirmed its possible Ivorian origin. The KP will continue its close cooperation with the UN in Côte d'Ivoire, which continues to be the subject of UN Sanctions and is not trading in rough diamonds.

Mr. President,

During its Chairmanship of the Process, India's endeavour has been to strengthen the KP, particularly by building on the previous traditions and conventions, and by coordinating with the KP Working Groups and Committees for improved implementation of the KP decisions. In this regard, we express our gratitude to the past KP Chairs for their efforts. Our sincere thanks also go to the Chairs of the Working Groups and Committees, and to all KP Participants, industry and civil society, for all the cooperation and support we received during the year.

Mr. President,

As Chair of the KP, India also has the honour to introduce draft resolution A/63/L.52 titled "The role of diamonds in fuelling conflict: breaking the link between the illicit transaction of rough diamonds and armed conflict as a contribution to prevention and settlement of conflicts". The support of the United Nations to the KP has been a key element of its success, and the UN General Assembly has traditionally adopted an annual resolution expressing support to the activities of the KP. As in previous years, this draft resolution highlights the important activities undertaken by the KP during the year.

The draft resolution also expresses satisfaction at the systematization of the work of the Kimberley Process with respect to continuing to develop

transparent and uniform rules and procedures. It welcomes the guidelines endorsed by the New Delhi plenary, recommending

interim measures on serious non-compliance with Kimberley Process minimum requirements listing out the guiding principles for determination of serious non-compliance and an indicative list of escalating measures. The draft resolution also highlights the development perspective of the KP, by acknowledging that the diamond sector is an important catalyst for achieving poverty reduction and meeting the requirements of the Millennium Development Goals (MDGs) in producing countries. We look forward to the support of all delegations in the adoption of this draft resolution, which will reaffirm the continued importance that the UN General Assembly attaches to the work of the KP. There are two small corrections to the document A/63/L.52 as circulated to bring it in line with the text agreed during informal consultations.

In OP 10, line 5, the word "urges" should be replaced by the phrase "led to the recommendation that". Further, the word "to" after Kimberley Process in the same line should be deleted.

In OP 13, line 7, the phrase "enabling Cote d'Ivoire to meet" should be replaced by the word "meeting". Further, in line 8, the phrase "imposed for" should be replaced by "on".

I thank you, Mr. President.

**766. Statement by Permanent Representative at the UN
Nirupam Sen on the Situation in Somalia at the UN
Security Council.**

New York, December 16, 2008.

Mr. President, Excellencies,

Thank you for scheduling today's open debate on the threat posed to international peace and security, and to the humanitarian situation in Somalia, by the acts of piracy in Somali territorial waters, and off the coast of Somalia. At the outset, let me express India's welcome for the adoption today by this Council of Resolution 1851, in this context.

As one of the nations that share the Arabian Sea with Somalia, India is particularly concerned by the incidents of piracy that are an unfortunate outcome of a larger and ongoing tragedy in Somalia. India endorses the need for coherent international efforts to anchor in Somali soil national and regional political processes, through an effective peacekeeping Mission, ideally, under UN leadership. A comprehensive approach that addresses the chaos that has long enveloped Somalia is the best long-term solution to the problem of piracy in Somali waters.

Nevertheless, recognizing the continuing tragedy of Somalia and our inability so far to integrate political processes in a larger peacekeeping effort cannot justify the lack of a well-coordinated response to the turmoil spilling out into the oceans. Piracy is a challenge that must be met urgently, collectively and cooperatively by the international community.

Mr. President,

Piracy in Somali waters and off the coast of Somalia is an immediate challenge not only to Somalia itself and the neighbourhood, but to international commerce and finance, besides international peace and security. India is directly affected by piracy. Attacks not only impact upon shipping to and from Indian ports and our extended neighbourhood, they also exact a heavy impact upon us, since the international merchant marine has a substantial proportion of persons of Indian origin. It is for this reason that India has responded to the challenge of piracy at the request of, and in consultation with the Transitional Federal Government

[TFG] of Somalia. Over the last two months, India has deployed two of its modern naval vessels to deal with the challenge of piracy. We have had some successes in this regard, including as recently as last weekend, but we recognize that piracy remains a significant threat. From this standpoint, India believes that the international response to piracy in Somalia needs to include the following:

- Enhanced and institutionalized coordination of international effort to deal with piracy. Not only must we institutionalize operational coordination among navies in the area, a mechanism must be set up for those involved in the anti-piracy effort to work with countries of the region in responding to the challenge. We welcome the announcement by the US Secretary of State of the decision to establish a Contact Group in this regard. India would also like to underscore the importance of ensuring a central role for the United Nations, given the international legitimacy that the UN brings, and not solely as a clearing house for the flow of information regarding anti-piracy efforts.
- Greater clarity is required as regards the legal framework of dealing with apprehended pirates. Moreover, common procedures need to be worked out to prosecute those arrested.
- There also needs to be a closer linkage between the arms embargo and the anti-piracy effort. This suggestion was made by the Monitoring Group on Somalia in its December 11 report, and we endorse it. It is important to stem the flow of weapons and to make those involved in planning, financing and enabling acts of piracy accountable, including by blocking their access to revenues generated from ransoms. This is required as payment of ransoms is encouraging further acts of piracy.
- Expansion of the capacity of Somali entities to deal with acts of piracy, both from land, where they are launched, and in Somali coastal waters.
- Other practical solutions could also be considered. In this regard, in May 2005 the Monitoring Group put forward a suggestion to establish a Caretaker Maritime Authority for Somalia. Although this had been rejected even earlier by the International Maritime Organization [IMO] after a Feasibility Study in 1998, the logic of the proposal continues

to resonate as the world needs to collectively develop a practical coastline monitoring programme for Somalia.

- Finally, the international community needs the IMO to lead a process of evolving effective protection n systems and strategies for merchant vessels to adopt when navigation piracy-infested waters. This will also help reduce the burden that is currently devolving upon a limited number of naval assets in protecting a large zone of impact.

In conclusion, Excellency, let me emphasize that while there is truth in the adage that an ounce of prevention is better than a pound of cure, we are currently beyond the phase where prevention can be contemplated. Therefore we have few options besides simultaneously attempting to deal with the symptoms and trying to cure the disease.

Thank you, Excellency.
