The political capital of two world leaders and the public interest of the world's two largest democracies have been exhausted by the effort to complete the Indo-US civilian nuclear deal. No surprise then that the culmination of three-and-a-half years of political drama has been treated as back page news. Some of the main sources of dissent against the N-deal continued to bedevil the agreement till the last. President George W. Bush was obliged to say that congressional language did not affect guarantees of nuclear fuel supplies to India. New Delhi insisted that the agreement doesn't curb India's right to conduct a test. Small-print quibblers continue to insist that both statements are false.

The truth is that the thicket of agreements that constitutes the N-deal is so densely written, so buffered with 'ifs' and 'buts', and is so vague in places, that there is a fair amount of leeway when it comes to interpretation. What is clear, and tangibly so following the French N-agreement, is that they allow India to have both N-weapons and participate in civilian nuclear trade. This was not an option open to India before the 123 agreement.

The greatest amount of grey surrounds three aspects of the agreement: the provision of certain nuclear technologies, the response to future Indian testing and the guarantees of nuclear fuel supplies. The US and India had to stretch language to its limits to bridge the gap between America's entrenched non-proliferation policy and India's insistence on insurance against any negative turn.

In these areas, the main accomplishment of Indian negotiators has been to incorporate wording that provides a future Oval Office resident options that favour India's interests. In other words, what will determine interpretation will have less to do with specific wording and will be more about the future state of Indo-US relations. This is nothing unusual; it is par for the course in negotiations between countries. India has won itself some remarkable concessions. Extracting the maximum from these will depend on circumstance, but even more so on how well India plays its cards regarding the US in the decades to come.

STATEMENTS OF THE POLITICAL PARTIES

APPENDIX - XXIX

Statement issued by the Polit Bureau of the Communist Party of India (Marxist) on the Statement made by the External Affairs Minister in the Lok Sabha on Nuclear Energy Cooperation Agreement while speaking on foreign policy related developments.

New Delhi, March 3, 2008.

The statement¹ made by the Minister of External Affairs in the Lok Sabha, "On Foreign Policy Related Developments", has referred to the negotiations with the International Atomic Energy Agency and in relation to the Indo-US Nuclear Cooperation deal.

The statement draws attention to "some statements by US officials" regarding the applicability of the Hyde Act to the Civilian Nuclear Cooperation and asserts that the Hyde Act is applicable only to the US side and India's rights are protected in the bilateral 123 agreement.

The US official concerned is none other than the US Secretary of State, Condoleezza Rice, who told the House of Representatives Foreign Affairs Panel on February 14 that:

"We will support nothing with India in the NSG that is in contradiction to the Hyde Act. It will have to be completely consistent with the obligations of the Hyde Act".

This has been the consistent position of the United States administration regarding the applicability of the Hyde Act. It has become the practice for the Indian government to reiterate that the Hyde Act has no relevance for India and it is not applicable to us. No one else believes this to be so. Neither the Hyde Act nor the 123 agreement which has been drafted within the framework of the Hyde Act provisions meet the assurances given by the Prime Minister in his August 2006 statement to Parliament.

It is ironical that the statement to parliament says that the government will continue to "seek" a broad political consensus within the country. The government should first respect the majority opinion expressed by parliament when the 123 agreement was discussed in the Winter session of 2007. The government should acknowledge that its stand on the nuclear deal does not have the support of parliament. There is no political consensus and hence it should not proceed further with the agreement.

1 Please see Document No.86.

APPENDIX - XXX

Media Report on the meeting of the United Progressive Alliance - Left Committee on the India-United States Civil Nuclear Cooperation.

New Delhi, March 17, 2008.

The Left Parties on Monday felt that further discussions were needed on the draft India-specific safeguards agreement that was negotiated with the International Atomic Energy Agency (IAEA).

Reading out a brief prepared statement after the seventh meeting of the 15-member committee that lasted for nearly 90 minutes, External Affairs Minister Pranab Mukherjee said: "The members of the committee felt that further discussions were needed. It was decided to hold the next meeting of the committee in April." He said the outcome of the negotiations between India and the IAEA on the India-specific safeguards agreement was presented to the members of the committee. Mr. Mukherjee was accompanied by Communist Party of India (Marxist) leader Sitaram Yechury, who is also a member of the committee.

(The committee met after a gap of four months*. No further meeting between the alliance partners materialized because of differences on the question of India proceeding with the negotiations with the IAEA on the Safeguard Agreement as a pre-requisite to the waiver from the Nuclear Suppliers Group.)

* The sixth meeting of the Co-ordination Committee was held on November 16, 2007 and it was agreed that another meeting would be held. The statement issued then read: *"The Committee has discussed the implications of the Hyde Act on the 123 Agreement, on foreign policy and security matters. After further discussion, it was decided that impact of the provisions of the Hyde Act and the 123 Agreement on the IAEA Safeguards Agreement should also be examined. This will require talks with IAEA Secretariat for working out the text of the India-specific Safeguards Agreement. The government will proceed with the talks and the outcome will be presented to the Committee for its consideration before it finalises its findings. The findings of the Committee will be taken into account before the operationalisation of the India-U.S. Civil Nuclear Cooperation Agreement."*

APPENDIX - XXXI

Statement issued by the All India Congress Committee on benefits of the Indo-US Nuclear deal.

July, 2008.

The fact is that the Indo US nuclear deal is in the national interest, what with Indian nuclear plants currently running at less than 50 per cent capacity for want of the fuel which the country cannot access without the IAEA agreement and the NSG waiver for nuclear trade. The agreement is a clear win-win situation for India. It will help India to not only access nuclear fuel supplies to step up generation from its existing power reactors, currently operating at no more than 30-50 per cent capacity, but also free it from sanctions that have debilitated its nuclear and more general technological progress, that too without compromising its strategic nuclear deterrence program.

Once India has given the go ahead for the deal, not only the United States, but leading NSG members like Russia, France and Britain would help the India-specific waiver come into force at the IAEA. And after it comes through; India will be able to resume trade in nuclear fuel and technology for its civilian power sector.

The draft of the safeguards agreement circulated at IAEA's Board recently and made public on 10th July, 2008; indicates that:

- India may take measures to ensure uninterrupted operation of civilian reactors in the event of the disruption of foreign fuel supplies.
- India will provide an assurance that no safeguarded and material is diverted from civilian use.
- IAEA shall avoid hampering India's development and interfering with any activity involving use by India of nuclear or non-nuclear material, equipment or technology acquired or developed by India, independent of agreement for its own purpose.
- Some nuclear materials can be exempted from safeguards. The draft agreement specifies that these may not exceed a Kg. in total fissionable material which may consist of plutonium or uranium of specified enrichment. Also exempt are 10 tonnes of natural uranium and depleted uranium as strategic reserve

Thus, after nearly three decades, India has been offered a golden opportunity to emerge out of its nuclear exclusion and be treated at par with the top nations of the world in terms of nuclear energy output. At present nuclear power production in India accounts for only a measly 3% of the total generation of 140,000 MW. Large scale nuclear power production would also mean less dependence on traditional sources of non-renewable fuel such as coal, oil and petroleum. Abundant nuclear power production would obviously lead to a fall in fuel and electricity prices. The fruits of privatization and rapid development are seen in the telecom sector. The nuclear deal could mean a similar boom in the field of energy.

It is very critical for India to have this deal fructify if we want to have 60,000-100,000 MW of nuclear power in our energy mix in the next 25 to 50 years. Given the growth of population and GDP, nuclear Power in India has the possibility of contributing 10% of our energy needs by the year 2022 and 26% of our energy needs by the year 2052. From the available uranium resources in our country, nuclear power can only yield a maximum of 10,000 MW of power, which is less than three percent of the power generated. India also has 40 percent of the world's thorium reserves. However, to reach the thorium stage, India needs the latest technology, which it can get only if it signs the deal with the US. Going it alone has not really worked for India, at least in the field of civilian nuclear energy. This deal will not only help in making India self-reliant so far as energy requirements go, but will also help in ending the country's enforced nuclear apartheid. And it should not be seen in isolation from the country's overall energy security which is in a precarious state as the recent oil price shocks illustrate. Other countries are increasingly going back to nuclear energy (and looking to follow the example of France where 80% of energy needs are met from nuclear power plants) as a relatively cleaner fuel option. Thus, China is also ramping up its domestic nuclear expansion plans, aiming for a total of 60 gigawatts by 2020 against its current nuclear capacity of only 9 gigawatts or fewer than 2 percent of its total installed power generation capacity. We on the other hand, are endangering our economic growth prospects for short term electoral prospects or due to blind ideological obduracy.

Some of our friends do not realize that there are a number of forces outside the country who are inimical to India and do not want the deal to fructify. The New York Times and the Economist have both recently carried lead

articles and editorials against the deal and it has also been assailed by some US lawmakers known for their anti-India slant. The New York Times for example wrote in its editorial on July 5th 2008,

President Bush gave away far too much and got far too little for this deal. No promise from India to stop producing bomb-making material. No promise not to expand its arsenal. And no promise not to resume nuclear testing.

The soaring price of crude oil and growing concern over climate change mean that governments can no longer afford to ignore nuclear energy, the nearest thing to a non-polluting energy source capable of generating power on a large scale. It is cleaner than coal and more reliable than wind. And when this deal looks set to resuscitate our nuclear energy program without endangering our nuclear deterrent, the last thing India needs is for some of its political parties to look a proverbial gift horse in the mouth because of partisan political considerations.

APPENDIX - XXXII

Statement by the Left Parties on the India - Specific Safeguards Agreement with the IAEA.

New Delhi, July 8, 2008.

The UPA Government has refused to submit the draft text of the IAEA Safeguards Agreement to the UPA-Left committee. As the experience of the 123 agreement has shown, the claims of the Government made prior to the negotiations are not borne out by the actual text. Thus the full text of the agreement is necessary to clarify the major issues involved.

The first major issue relates to the possibility of the US terminating civilian nuclear cooperation with India for any reason in the future. India already had such an experience, when the US suspended nuclear fuel supplies to the Tarapur Atomic Power Station in 1983, reneging upon a thirty year contract signed in 1963. In the present case, the IAEA safeguards would continue even in such a scenario, since they are applicable in perpetuity to the entire civilian nuclear energy sector. The text of the 123 agreement has very ambiguous references to India taking "corrective measures" if nuclear fuel supplies from abroad are discontinued. Therefore, the text of the IAEA Safeguards Agreement needs to be made available to see whether any corrective action is possible on India's part, if the US discontinues the fuel supplies.

Secondly, the 123 agreement claimed that the US would join India in negotiating with the IAEA an "India-specific fuel supply agreement". However, it is well-known that the IAEA is not at all concerned with fuel supply but only with the imposition of safeguards on nuclear equipment and material. Therefore, it is important to know how the IAEA Safeguards Agreement provides for the fuel supply assurances in the case of India as claimed in the 123 agreement.

The key concerns expressed by the Left Parties regarding the IAEA Safeguards Agreement and which have not been addressed by the UPA are the following:

- In case the US or other countries in the NSG renege on fuel supply assurances for imported reactors, will we have the ability to withdraw these reactors from IAEA safeguards?
- If US/NSG countries renege on fuel supply assurances, can we withdraw our indigenous civilian reactors from IAEA Safeguards?

- If we have to bring nuclear fuel from the non-safeguarded part of our nuclear programme for these reactors in case of fuel supply assurances not being fulfilled, will we have the ability to take it back again?
- What are the corrective steps that India can take if fuel supplies are interrupted by the US/NSG countries?
- What are the conditions that India will have to fulfill if the corrective steps are to be put into operation?

Once the text of the Safeguards Agreement is approved by the IAEA Board of Governors, which is what the UPA Government seeks to do now, the subsequent steps require no participation at all by the Government of India. It is the US Government that takes the next steps - moving the NSG countries for the waiver and then placing the 123 Agreement before the US Congress. Therefore, it is critical for the country that the IAEA Safeguards Agreement is discussed with full transparency and not kept secret.

Why is the Manmohan Singh government keeping the draft of the IAEA Agreement secret from the people of India?

APPENDIX - XXXIII

Statement by the Left Parties on the India - Specific Safeguards Agreement with the IAEA.

New Delhi, July 11, 2008.

The Left Parties had opposed the operationalisation of the Indo-US Nuclear Deal after the passage of the Hyde Act. After the 123 agreement was finalised, it was pointed out that the agreement was in conformity with the Hyde Act. The Left Parties had then asked the UPA Government not to take further steps to operationalise the nuclear deal.

In the UPA-Left Committee, the UPA claimed that they should be allowed to proceed with the IAEA Safeguards Agreement, which would incorporate uninterrupted fuel supplies and various corrective measures, which the Government had failed to secure in the 123 agreement. The Left Parties were skeptical about these issues being resolved in the IAEA. The UPA refused to show the negotiated text for the last four months.

The text of the Safeguards Agreement has now become public. It is clear that the text was hidden from the Left Parties and the Indian people in order to suppress the fact that India is about to bind its entire civilian nuclear energy programme into IAEA safeguards in perpetuity without getting concrete assurances for uninterrupted fuel supply, right to build strategic reserves and right to take corrective steps in case fuel supplies are stopped.

IAEA Safeguards in Perpetuity without Concrete Fuel Supply Assurance.

The text of the draft "Agreement Between the Government of India and the International Atomic Energy Agency for the Application of Safeguards to Civilian Nuclear Facilities"; the so-called 'India-specific Safeguards' agreement sent to the IAEA Board of Governors on July 9, 2008, makes it clear that the repeated assurances made by the UPA Government in Parliament and outside, on securing uninterrupted fuel supply assurances and strategic fuel reserves have not been fulfilled. There are no concrete corrective measures in the main enforceable body of the Agreement, only a vague mention of "corrective measures" in the preamble.

Under the Hyde Act, IAEA safeguards are to be imposed on India's civilian nuclear facilities in perpetuity. The UPA government had repeatedly claimed that India would put its civilian reactors under safeguards under the strictly reciprocal condition of assured fuel supply. If fuel supply was disrupted, as

happened in Tarapur, India would have the right to take corrective measures, including taking reactors out of IAEA safeguards.

The key question therefore with respect to IAEA safeguards is: how to ensure that once India's civilian reactors go under safeguards in perpetuity, the country would not be blackmailed by the withholding of nuclear fuel supplies, as the United States did in Tarapur following Pokhran-I?

The preamble to the Safeguards Agreement notes that India is offering its civilian nuclear facilities for IAEA safeguards on the "essential basis" of "the conclusion of international cooperation arrangements creating the necessary conditions for India to obtain access to the international fuel market, including reliable, uninterrupted and continuous access to fuel supplies from companies in several nations, as well as support for an Indian effort to develop a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India's reactors." The real point is that the preamble merely 'notes' India's intentions in these respects. IAEA has neither any obligation regarding fuel supplies or building strategic reserves nor does this noting India's basis for this offer give India any additional rights through this agreement. Therefore to read into this clause either a guarantee for fuel supplies or IAEA's support for building up a strategic reserve is misleading the people.

"Corrective Measures": Vague and Ineffective

The preamble of the IAEA Agreement notes: "India may take corrective measures to ensure uninterrupted operation of its civilian nuclear reactors in the event of disruption of foreign fuel supplies." Neither the "corrective measures" nor the precise relationship between these "corrective measures" and the in-perpetuity imposition is spelt out in any meaningful terms in the text. This means that should India for any reason decide to take the items subject to the Agreement out of IAEA safeguards on the contention that the "essential basis" no longer applies, it will open itself to the serious charge of violating an international agreement. In this connection, it is worth remembering that although India claims the right, under the provisions of the 1963 Indo-US agreement on Tarapur, to reprocess the considerable quantities of Tarapur spent fuel that have accumulated to India's great inconvenience and expense, it has not been able to enforce the claimed right to reprocess, which has long been disputed by the United States.

As against the vagueness of the "corrective measures" figuring in the preamble, what is spelt out clearly in the body of the agreement (Paragraph 32) is that India can withdraw its facilities from safeguards only if it is (a) jointly agreed between India and IAEA, and (b) if these facilities are no longer usable for any nuclear activity. What does this mean? It can only mean that India can withdraw any facility it wants out of IAEA safeguards only if it strips it of all capability of producing nuclear energy and that too only after the IAEA determines that "the facility is no longer usable for any nuclear activity relevant from the point of view of safeguards."

Even if the Agreement is terminated by mutual consent, the termination of safeguards on the items subject to the Agreement [these are material and facilities as defined in Paragraph 11(a)] would stay in place in accordance with GOV/1621 till all the conditions of GOV/1621 are met. The conditions of GOV/1621 are so stringent that the rights and obligations of the parties continue to apply on all nuclear materials till they have been returned or all fissionable materials supplied or produced goes out of the inventory - that is, until all the facilities and material, nuclear or non-nuclear, supplied to the country under these safeguards are either returned or consumed or no longer usable for any nuclear activity. Therefore, this provision will not allow a single reactor to be taken out of safeguards.

Preambular References Non-Enforceable

It is well established in international law that the preamble is a part of the treaty or international agreement and it can be used to give colour and tone to the interpretation of the operative part of the treaty/agreement. This does not however mean that it can be used to create additional rights or obligations that are not contained in the clauses of the Treaty/Agreement.

The text of the IAEA Draft Agreement makes clear there are no corrective measures identified in the operative of the clauses of the Agreement. The mention of corrective measures is only in the preamble and here too, no concrete corrective measures have been defined. Unless there are specific provisions in the operative clauses, a phrase such as "corrective measures" inserted in the preamble cannot create either omnibus rights or obligations outside the text of the treaty. A similar example is for instance the TRIPS Agreement in WTO. The preamble states that it recognizes "the underlying public policy objectives of national systems for the protection of intellectual property, including developmental and technological objectives". However, can any country use the "public policy objectives" to override, for instance, the need for providing product patents as contained the body of the TRIPS

agreement?

The way a facility can be withdrawn from safeguards has been spelt out in the main body of the draft agreement. Therefore, if the UPA government is trying to argue that the preambular statement of "corrective measures" gives India some kind of overriding right over all clauses in the body of the Agreement, it is committing a deliberate fraud on the people.

The final arbiter with regards to any interpretation of the Agreement and dispute settlement is the Board of Governors of IAEA. The Board of Governors decision is final in this regard and if India is held to be non-compliant, even though it is not so by its own interpretation, India can be referred to the Security Council for action including sanctions. The Iran case is an example. Though many countries including India had publicly endorsed Iran's right to the fuel cycle, it was referred to the Security Council for violation of its Safeguards Agreement by the Board of Governors at US's instance.

Left Parties' Concerns Not Addressed

The Left Parties, on July 8, 2008, asked the UPA government to spell out the following:

- In case the US or other countries in the Nuclear Suppliers Group renege on fuel supply assurances for imported reactors, will India have the ability to withdraw these reactors from IAEA safeguards?
- If the US/NSG countries renege on fuel supply assurances, can we withdraw our indigenous civilian reactors from IAEA safeguards?
- If we have to bring nuclear fuel from the non-safeguarded part of our nuclear programme for these reactors in case of fuel supply assurances not being fulfilled, will we have the ability to take it back again?
- What are the corrective steps India can take if fuel supplies are interrupted by the US/NSG countries?
- What are the conditions that India must fulfill if the corrective steps are to be put into operation?

What is clear now is that every one of these concerns remains, and that the unspecified "corrective measures" inserted in the preamble of the Safeguards Agreement will not address any of them.

India to be treated as a Non-Nuclear Weapons State for Safeguarded Facilities

Except for the preamble, which explains the context in which India is entering this Safeguards Agreement and outlines the basis of India's concurrence, the main body of the Text is a true copy of INFCIRC-66/Rev.2 (1968), which is the standard agreement applicable to all Non-Nuclear Weapon States of the NPT. The India-specific part comes not from INFCIRC 66 but from the fact that India has kept a part of its nuclear programme out of IAEA safeguards. But for the facilities it proposes to put under IAEA safeguards, it will be treated as a Non-Nuclear Weapon State. Clearly, India will not have any special rights in its safeguarded facilities and this directly contradicts the assurances given by the Prime Minister to Parliament. Nuclear Weapon States, as defined in the NPT, have the right to take any facility out of safeguards, a right India will not have for the reactors it is offering to IAEA for safeguards.

Against India's Interests

It is clear that the IAEA Safeguards Agreement does not address the fundamental problems in the Hyde Act and the 123 Agreement. As a result of operationalising the Indo-US Nuclear Deal, India will place its costly imported reactors under perpetual IAEA safeguards and risk their permanent shutdown in case it fails to toe the US line on foreign policy issues. Thus going ahead with the Safeguards Agreement will be harmful to India's interests.

APPENDIX - XXXIV**Statement issued by the Polit Bureau of the Communist Party of India (Marxist) on the India - IAEA Safeguards Agreement.****New Delhi, August 2, 2008.**

The Safeguards Agreement with India endorsed by the IAEA Board of Governors on August 1, 2008 has made it clear that 14 Indian civilian nuclear facilities will start coming under perpetual IAEA Safeguards from 2009. That the interpretation of the Indian Government regarding the "corrective measures" mentioned in the Preamble of the Safeguards Agreement providing for a check against disruption of fuel supplies, does not hold, has been made clear by the IAEA. In his introductory statement to the Board of Governors, IAEA Director General Dr. Mohamed El Baradei said: "As with other safeguards agreements between the Agency and Member States, the (Indian) agreement is of indefinite duration. There are no conditions for the discontinuation of safeguards other than those provided by the safeguards agreement itself. The termination provisions contained in the agreement are the same as for other 66-type agreements". Therefore, the Safeguards Agreement can only be terminated under the standard termination conditions contained in Articles 29 and 32 of the Agreement, implying that nuclear facilities can be withdrawn from safeguards only after these facilities are no longer usable for any nuclear activity.

This belies the Prime Minister's assurance in Parliament that India's civilian nuclear facilities would be put under perpetual IAEA safeguards only under the strictly reciprocal condition of uninterrupted fuel supply guarantees. Neither does the 123 agreement with the US provide any such fuel supply guarantee nor can the IAEA ensure uninterrupted fuel supply since it is only a monitoring agency. Thus, the provisions of the Hyde Act and not the assurances made by the Indian Prime Minister in Parliament are shaping the course of the Indo-US nuclear deal through the various stages.

APPENDIX - XXXV

Press Statement issued by BJP National Spokesperson Prakash Javadekar on the India - IAEA Safeguards Agreement.

New Delhi, August 2, 2008.

1. The passage of safeguard agreement at IAEA is not an occasion to celebrate but an occasion to introspect the consequences of the conditionality, which binds India in perpetuity. As was feared by BJP the agreement is not an India specific but is a modal agreement for non-nuclear-weapon states. The preamble pays lip service to India's concerns but it is not part of an operational agreement. The India-IAEA safeguards accord comes with perpetual, legally irrevocable obligations, which India can not suspend or end, even if the supplier-states cut off supply of fuel and replacement parts.

Now, India is under perpetual inspection regime of IAEA, without guarantee of fuel in perpetuity. BJP wanted strategic partnership with USA, but what UPA has achieved is strategic subservience. While the five established nuclear weapon states have offered only 11 facilities out of total 400 facilities for inspections, India has agreed to place 14 reactors and 21 other institutes under perpetual inspections.

BJP's yet another fear has also come true if we read the statement by Nicholas Burns carefully. He has clearly stated that Hyde Act is applicable to 123 agreement and prohibits India from further nuclear tests. If India tests in future USA can take back the fuel, plant, machinery and spares without India's permission. The statement by Nicholas Burns clearly vindicates BJP's interpretation and negates the govt. version, that is why govt. is keeping mum on the issue.

BJP wants to ask the government as to why it is not coming clear on the issue of energy to be generated through this agreement. We have three posers to the government.

- a. What is the total quantum of power (in M.W.) will be added after the agreement?
- b. When the new reactors will start generating the power?
- c. What is the cost of nuclear energy (per unit of electricity)?

We know that govt. is silent for last three years on these three vital questions as the answers to it are Inconvenient Truth.

2. The attempt to defame BJP by the dirty trick department of Congress-SP unholy alliance has failed miserably. Everybody suspects that the ill-conceived fake CD¹ seems to be the handy work of this department, where director is Congress, producer is Amar Singh and distributor is Uma Bharti. The role of Sh. Amar Singh in luring away MPs from various party has been accepted by himself in an interview to a national fortnightly in which he has stated "I don't break parties. They will start melting when I am around. I will gather them and put them in a pot. I will get MPs, more than I have claimed." He must explain the modus-operendi and formula of "getting the MPs" and melting of parties when he is around.

It is proved now that the fake CD was shot only after the trust vote just to defame BJP and divert the attention from the original CD which is being inspected by the Parliamentary Committee and which has not been telecast by the channel, which performed the original sting. BJP is confident that in this battle truth will emerge victorious and nefarious designs of Congress-SP unholy alliance will be defeated. People of the country have realised that this unholy alliance can go to any extent to hide their sin and their monstrous act of destroying democracy by manipulating forged the victory.

1. This refers to the allegations that some members of Parliament were bribed to vote in a particular manner during the vote of confidence in the Council of Ministers in the Lok Sabha on July 22.

APPENDIX - XXXVI

Statement by the All India Congress Committee on the waiver from the NSG: "An end to Nuclear apartheid".

New Delhi, September 8, 2008.

The clean waiver given to India by the Nuclear Suppliers Group (NSG) enables India to resuscitate our nuclear energy program without endangering our nuclear deterrent. India will not merely be able to access nuclear fuel supplies to step up generation from its existing power reactors, currently operating at no more than 30-50 per cent capacity, but also free it from sanctions and denial of nuclear commerce that have debilitated its nuclear and more general technological progress for several decades.

The NSG document while taking note of the energy needs of India and of the steps that India has voluntarily taken in deciding to separate civilian nuclear facilities in a phased manner and in filing a declaration regarding its civilian nuclear facilities with IAEA and agreeing to application of safeguards to its civilian nuclear facilities and to refrain from transfer of enrichment and reprocessing technologies to states that do not have them and supporting international efforts to limit their spread; has agreed that participating governments may transfer "trigger list items" and/or related technology to India for peaceful purposes and for use in IAEA safeguarded facilities and participating government may also transfer nuclear related dual use equipment, materials, software and related technology to India for peaceful purposes and for use in IAEA safeguarded civil nuclear facilities.

Both the US presidential nominees on Sunday have welcomed the NSG waiver to India, with Republican John McCain asking Congressional leaders to act "expeditiously" to pass the Indo-US nuclear deal and Democrat Barack Obama seeking its quick submission before lawmakers. Despite the fact that this is a huge breakthrough for India some critics continue to cry foul. The BJP calls the waiver a "non-proliferation trap" set by the US and other countries. It argues that by taking away India's right to test ever again, the NSG was continuing to punish India as it had done in 1974. It questions whether India's right to test become "illusionary" or can India undertake further tests, what are the benefits that can accrue to India. Will India be able to receive technology for enrichment and reprocessing (ENR), sensitive and dual use technology and whether India be able to maintain "lifetime reserves" of fuel etc Others have argued that the UPA Government

has "converted its voluntary moratorium on nuclear testing into a multi-lateral commitment". It will bind India to all the conditions set out in the Hyde Act. India would not get any better terms from any other country supplying nuclear fuel or reactors as all of them would now align with the 123 Agreement.

The principal criticisms of the agreement are that India will lose its rights to further nuclear tests and our foreign policy will be constrained due to the provisions of the Hyde Act. Both these criticisms are without basis. Neither the 123 Agreement nor the NSG Waiver explicitly refers to nuclear tests. The important point to note is that it was the NDA Government which had announced the unilateral moratorium on nuclear tests and the present Government is merely continuing that policy. A clear separation plan for our civil and military nuclear facilities has also been agreed to. Secondly the extraneous and prescriptive provisos of the Hyde Act are not binding on India which would only be bound by the international treaty it has signed viz the 123 agreement. India has also been allowed to build strategic reserves of fuel for its civil nuclear reactors up to their life cycles and to reprocess spent fuel.

It is useful to recollect that our former President and also the architect of Pokharan II, Dr. Abdul Kalam is a strong supporter of the agreement. Former president A P J Abdul Kalam has said the India-US nuclear agreement and the Nuclear Suppliers Group (NSG) waiver were good for the country and also that India may break its "voluntary moratorium" on further nuclear tests in "supreme national interest". Kalam made it clear that if the need arose, "India will do the test in the supreme national interest and nobody can stop it", and stressed that when it comes to national interest all political parties must come together. "Well, you see, supreme national interest, OK, every country got supreme national interest, any pact or any treaty; when the national interest comes in, it becomes the highest priority," Kalam said in an interview. In any case the 123 agreement recognizes India's implicit right to test should the geopolitical situation so warrant.

The Nuclear Suppliers' Group (NSG) through its waiver has lifted obstacles to India buying products and technologies associated with civilian uses of nuclear technology from (and selling these to) most significant nuclear powers save the US. To enable civil nuclear commerce with the US, that country's legislature must now ratify the 123 Agreement finalised between the Bush administration and New Delhi.

The implications are not just for nuclear energy, with our existing reactors that are running short of fuel now potentially able to run at full capacity and enable us to set up new nuclear plants. The unprecedented decision of the NSG giving exemption to India which has not signed the nuclear Non-Proliferation Treaty (NPT) and the Comprehensive Test Ban Treaty (CTBT) should also be recognized as India's coming of age in the world order.

Vital sectors of the economy stand to benefit from access to a range of high-technology products and technologies that had, till now, been outside India's reach because of its status as a nuclear pariah. Many advances in materials, communications, computing, signaling, chemical processing and avionics are deemed sensitive technologies not accessible to nuclear have-nots. Access to these technologies opens up now. This will improve efficiencies across the board in India, from weather forecasting to oil refining.

The country can now attract over \$40 billion in foreign investment in 18-20 nuclear plants over the next 10-15 years as the result of private sector entry into India's nuclear power generation. As Rajiv Gandhi once said, "India missed the industrial revolution; I don't want it to miss the electronic revolution". But without an energy boom even our electronics and IT sectors cannot sustain their growth levels. India at present has per capita power consumption of just 480 kwh against 1782 kwh for China and 7111 kwh for an advanced European country like Germany. India consumes 3.2 % of world's power against China's 14% and the USA's 24.2%. At present nuclear power production in India accounts for only a measly 3% of the total generation of 140,000 MW. Large scale nuclear power production would also mean less dependence on traditional sources of non-renewable fuel such as coal, oil and petroleum. We need new energy sources to sustain our growth prospects. Now after nearly three decades India has been offered a golden opportunity to emerge out of its nuclear seclusion and be at par with the top nations of the world in terms of nuclear energy output.

But the biggest gain is strategic. Non-proliferation activists objected to what they called India's "win-win deal" on the ground that it gives India an exceptional status: It is the only country that possesses nuclear bombs but is not part of the Nuclear Non-Proliferation Treaty to be accepted into the community of nations allowed to legitimately engage in nuclear commerce. The major powers of the world have recognized India's status as a growing power whose potential to contribute to a stable global order is huge. It is that recognition that persuaded them to work out the current exception to nuclear convention in the form of the waiver from NSG. Prime Minister

Manmohan Singh, Chairperson UPA, Smt. Sonia Gandhi our External Affairs Minister, Shri Pranab Kumar Mukherjee and the entire ruling UPA as well as our diplomats and nuclear scientists should get the credit for having made this global breakthrough.

Annexures

PART-I

- The Hyde Act constitutes internal US legislation that enables the US Government to negotiate an agreement for civil nuclear cooperation with India.
- The 123 Agreement, which has been negotiated between India and the US constitutes the enabling framework that will guide India-US civil nuclear cooperation. This agreement lays down the broad parameters for such cooperation. It will be ratified by the US Congress only after the conclusion of an India-Specific Safeguards Agreement between India and the IAEA and the adoption by the NSG of an exemption in favour of India.
- Actual nuclear trade between India and the US will be conducted on the basis of the existing trade laws, rules and procedures of both India and the US. As is the practice, when actual trade and cooperation starts, the partner countries facilitate the harmonization of their respective rules and procedures governing such trade. This may require India and the US to further amend some of their own laws, rules and procedures governing such trade. This will be done at the appropriate time.

PART-II

- In order to enable cooperation with the wider international community, the conclusion of an India-Specific Safeguards Agreement and an exemption by the NSG from its guidelines in favour of India are essential.
- The Safeguards Agreement has been concluded and was approved by the IAEA Board of Governors on 1 August, 2008. The process of NSG exemption has now been achieved. Taken together, these two elements constitute a passport for India to explore nuclear trade with the wider international community.

PART-III

- Once all these pieces are in place, India would be ready to consider nuclear trade with the wider international community, including Russia, USA and France on the basis of the already negotiated bilateral agreements with these countries, which are awaiting ratification/signatures. Actual trade will take place according to the existing trade laws, rules and regulations of the two countries.
- How to cooperate, with which country to cooperate and to what extent such cooperation will go - all these are matters of sovereign decision by India that will be made keeping national interest and other relative aspects in view.

PART-IV

- The US Congress sets rules for international trade in the US. As such, it is natural for it to engage in a dialogue with the US Administration as it goes about the process of amending and/or enacting laws/ regulations/procedures governing such trade, including nuclear trade.
- It is a matter of public knowledge that the US Congress poses questions for the record to the Administration about legislative matters and receives answers to them. The questions and answers that have been exchanged between the US Congress and the US Administration with regard to the 123 Agreement represent this process and there is nothing out of the ordinary about them. They reflect the fact that Congress is trying to seek clarifications on an urgent matter that is about to go before it. India's Parliamentary Committees undertake much the same line of enquiry whenever important matters of legislation are before them.
- It should be noted that these questions were posed in October 2007 and answers to them were provided in January 2008. Clearly, after the 123 Agreement was concluded between India and the US on 1 August 2007, parallel processes of enquiry, consultation and clarifications started both in United States and in India. Just as the Government of India undertook a process of informing Parliament about these developments and consulting with its allies, the US Congress started a parallel process of seeking clarifications from the Administration by way of posing these questions. These actions

were also relevant because both sides anticipated the next steps in the process, i.e., the conclusion of an India-Specific Safeguards Agreement with the IAEA and the adoption of an exemption to its guidelines by the NSG in favour of India.

- Insofar as the substance of these questions and answers is concerned, Government of India does not, as a matter of policy, comment on internal correspondence between different branches of another government. We are clear that cooperation between India and the US will be guided by the India-US 123 Agreement, which is based on the India-US Joint Statement of July 18, 2005 and the Separation Plan of March 2, 2006.
- Insofar as the issue of the testing is concerned, India's position is well known. We have a unilateral moratorium on testing and this is reflected in the Indian-US Joint Statement of July 18, 2005. There is nothing in any document that we have negotiated that limits India's rights with regard to a possible future nuclear test. As far as the consequences of such an action in terms of reactions by other countries are concerned, they have been a matter of public knowledge for quite some time. The 123 Agreement has been concluded in full knowledge of these possible consequences. It should be noted that the consequences would come about even in the absence of a 123 Agreement.

INDO-US NUCLEAR COOPERATION**

**NOTES EXCHANGED BETWEEN
THE UNITED PROGRESSIVE ALLIANCE
AND
THE LEFT PARTIES**

APPENDIX - XXXVII

Left Parties Statement on the Indo-US Bilateral Nuclear Cooperation Agreement.

August 7, 2007.

The Left Parties have consistently held that the nuclear cooperation agreement should not be seen in isolation from the overall strategic tie up with the United States. The nuclear cooperation deal is an integral part of the July 2005 joint statement, which has political, economic and strategic aspects. It is also closely linked to the June 2005 military framework agreement signed with the United States.

It is therefore not possible to view the text of the bilateral "123" agreement negotiated with the United States as a separate and compartmentalized entity without considering its implications for India's independent foreign policy, strategic autonomy and the repercussions of the US quest to make India its reliable ally in Asia. Following from the July 2005 Joint Statement, many steps have been taken to entangle India into a complex web of political, economic and military relationships as part of the "strategic partnership". The talk of the two democracies working together on a global scale, the growing influence of US-India forums on economics and commerce and the increasing military collaboration seen through the negotiations for the Logistics Support Agreement, the steadily escalating joint exercises and the inevitable demand that India purchase expensive weaponry from the United States, are all evidence of this trend.

Even now, the briefing by the US spokesman on the bilateral nuclear agreement emphasizes the cooperation India extended in efforts to isolate Iran by voting twice against it in the IAEA and the clear expectation that it will continue to extend this "cooperation".

Such an expectation is in line with the provisions of the Hyde Act, which looms in the background. The bilateral agreement cannot be seen outside the context of the Hyde Act. However much the two sides have sought by skillful drafting to avoid the implications of the Hyde Act, it is a "national law" which is there, at present, and will be there, in the future. The agreement which binds India into clauses of perpetuity and which legitimizes the US abiding by its "national laws" is something which should be seen objectively for its serious implications.

Serious concern had been expressed by the Left Parties about various conditions inserted into the Hyde Act passed by the US Congress. A number of them pertain to areas outside nuclear co-operation and are attempts to coerce India to accept the strategic goals of the United States. These issues are:

Annual certification and reporting to the US Congress by the President on a variety of foreign policy issues such as India's foreign policy being "congruent to that of the United States" and more specifically India joining US efforts in isolating and even sanctioning Iran [Section 104g(2) E(i)]

Indian participation and formal declaration of support for the US' highly controversial Proliferation Security Initiative including the illegal policy of interdiction of vessels in international waters [Section 104g(2) K]

India conforming to various bilateral/multilateral agreements to which India is not currently a signatory such as the US' Missile Technology Control Regime (MTCR), the Australia Group etc [Section 104c E,F,G]

All of these are a part of the Hyde Act. The 123 Agreement refers only to the narrow question of supply of nuclear materials and co-operation on nuclear matters. The provisions of the Hyde Act are far wider than the 123 Agreement and could be used to terminate the 123 Agreement not only in the eventuality of a nuclear test but also for India not conforming to the US foreign policy.

The termination clause is wide ranging and does not limit itself only to violation of the Agreement as a basis for cessation or termination of the contract. Therefore, these extraneous provisions of the Hyde Act could be used in the future to terminate the 123 Agreement. In such an eventuality, India would be back to complete nuclear isolation, having accepted IAEA safeguards in perpetuity. Therefore, the argument that provisions of the Hyde Act do not matter and only 123 clauses do, are misplaced.

The Left Parties have well-known views against nuclear testing for weaponisation, but that does not mean acceptance of any US imposed curbs on India's sovereign right to exercise that choice. The direction in the Hyde Act with regard to the Fissile Material Cut-off Treaty (FMCT) is unacceptable.

An important aspect of the Indo-US nuclear cooperation is the relegation of India's traditional commitment to universal nuclear disarmament. By getting accommodated in a US led unequal global nuclear order, India's leading role in advocating nuclear disarmament as a major country of the non-aligned community is being given the go-by.

While the 123 Agreement is being presented as a victory for India and conforming to the Prime Minister's assurances in the Parliament, we find that there are a number of issues on which it falls short of what the Prime Minister had assured the Parliament. While the Indian commitments are binding and in perpetuity, some of the commitments that the US has made are either quite ambiguous or are ones that can be terminated at a future date.

Under the terms set by the Hyde Act, it was clear that one of the key assurances given by the Prime Minister to Parliament on August 17, 2006 - that Indo-US nuclear co-operation would cover the entire nuclear fuel cycle - would be violated. The proposed 123 Agreement while superficially using the original wording of the Joint Statement of 2005, "full civilian nuclear co-operation", denies co-operation or access in any form whatsoever to fuel enrichment, reprocessing and heavy water production technologies. The statement of intent in the Agreement that a suitable amendment to enable this access may be considered in the future has little or no operative value.

Further, this denial (made explicit in Art 5.2 of the proposed agreement) also extends to transfers of dual-use items that could be used in enrichment, reprocessing or heavy water production facilities, again a stipulation of the Hyde Act. Under these terms, a wide range of sanctions on a host of technologies would continue, falling well short of "full civilian nuclear co-operation".

It is also important to recognise that the fast breeder reactors under this agreement would be treated as a part of the fuel cycle and any technology required for this would also come under the dual use technology sanctions. This would be true even if future fast breeder reactors were put in the civilian sector and under safeguards. Thus, India's attempt to build a three-phase, self-reliant nuclear power programme powered ultimately by thorium would have to be developed under conditions of isolation and existing technology sanctions.

It might be noted that dual-use technologies pertain to a wide variety of items, which are used well beyond the nuclear sector and by this clause the US has effectively armed itself with a lever for imposing sanctions on a wide range of Indian activities. Even in the new facilities built for reprocessing the spent fuel under safeguards, the onerous technological sanctions implied by the "dual-use" label will apply. This is certainly a major departure from what the Prime Minister had assured the House, namely that this deal recognises India as an advanced nuclear power and will allow access to full civilian technologies.

Another key assurance that had been given by the Prime Minister was that India would accept safeguards in perpetuity only in exchange for the guarantee of uninterrupted fuel supply. While the acceptance on India's part of safeguards in perpetuity has been spelt out, the linkage of such safeguards with fuel supply in perpetuity remains unclear. The assurance that the United States would enable India to build a strategic fuel reserve to guard against disruption of supplies for a duration covering the lifetime of the nuclear reactors in operation appears to have been accepted in the agreement. The agreement also assures that in the event of termination of co-operation with the United States, compensation would be paid for the return of nuclear materials and related equipment. This will be small comfort for the damage caused.

However, whether the fuel supply will continue even after cessation or termination of the agreement depends solely on the US Congress. The Hyde Act explicitly states that the US will work with other Nuclear Suppliers Group (NSG) countries to stop all fuel and other supplies to India if the agreement is terminated under US laws. Since this Agreement explicitly gives the domestic laws the over-riding power, it appears that fuel supply from the US will not only cease in case the US decides to terminate the Agreement but they are also required under the Hyde Act to work with Nuclear Suppliers Group (NSG) to bar all future supplies. Clause 5.6 on disruption of supplies therefore seems to be limited to "market failures" and not to cover a disruption that takes place under the clauses of the Hyde Act. In such an eventuality, the US will have to pay compensation to India but all future fuel supplies would stop. Therefore, the 123 Agreement represents the acceptance of IAEA safeguards in perpetuity for uncertain fuel supplies and continuing nuclear isolation with respect to a substantial amount of technological know-how.

It is clear that the UP A government looks forward to an agreement with the NSG that would be more wide-ranging than the 123 Agreement allowing for access to enrichment and reprocessing technologies, support for building a strategic reserve and provision of nuclear fuel in case of disruption of US supplies or termination or cessation of the 123 Agreement. In the likely event that the NSG does not oblige, the terms of the 123 Agreement would impact even more negatively than they appear now. The same consideration applies to any agreement that would be made with the IAEA.

The Prime Minister assured the Parliament that all steps would be taken by India reciprocally with steps by the US. The Agreement ties India into long-term virtually irreversible changes in its nuclear institutional structures and arrangements. It is crucial to ensure that India is fully satisfied on all aspects of the agreement as also other strategic and foreign policy concerns before it actually implements its separation plan and placing of 'its civilian facilities under permanent IAEA safeguards. Not only the provisions of the Agreement but also the sequencing of actions is therefore of vital importance.

The flawed nuclear cooperation agreement cannot be justified on the debatable basis of augmenting our energy resources, or achieving energy security. The motivation for the US side is commercial gains which will accrue for its corporates running into billions of dollars.

The bilateral nuclear agreement must be seen as a crucial step to lock in India into US global strategic designs. Alongside negotiations for the nuclear accord, steps have been taken for closer military collaboration. The Access and Cross Servicing Agreement, otherwise known as the Logistics Support Agreement is being pushed ahead as provided for in the Defence Framework Agreement. This would lead to regular port calls by US naval ships in Indian ports for fueling, maintenance and repairs. The regular joint naval exercises have now been widened to include India in the trilateral security cooperation which exists between the US, Japan and Australia. The September joint naval exercises in the Bay of Bengal are a major step in this direction. The United States is exerting pressure on India to buy a whole range of weaponry such as fighter planes, helicopters, radars and artillery involving multi-billion dollar contract-. The aim is to ensure "inter-operability" of the two armed forces.

The Left Parties had earlier cautioned the government not to accept nuclear cooperation with United States on terms that compromises India's independent foreign policy and its sovereign rights for developing a self-reliant nuclear programme. It had asked the UPA government to desist from proceeding with the negotiations for the 123 Agreement till the inimical provisions of the Hyde Act are cleared out of the way.

The Left Parties, after a careful assessment of the text of the 123 Agreement and studying it in the context of the burgeoning strategic alliance with the United States, are unable to accept the Agreement. The Left calls upon the government not to proceed further with the operationalising of the agreement. There has to be a review of the strategic aspects of Indo-US relations in Parliament. The Left Parties will press for a Constitutional amendment for bringing international treaties and certain bilateral agreements for approval in parliament.

APPENDIX - XXXVIII

Left Parties: Implications of the Hyde Act for the 123 Agreement and for Self-Reliance in the Nuclear Sector

September 14, 2007.

THE IMPACT OF US NATIONAL LAWS ON THE 123 AGREEMENT

Article 2.1 of the 123 Agreement states that "Each Party shall implement this Agreement in accordance with its respective applicable treaties, national laws, regulations, and licence requirements concerning the use of nuclear energy for peaceful purposes". This clearly means the following:

- That all relevant yet unspecified internal US laws such as the Hyde Act and the US Atomic Energy Act 1954 will directly impinge on the nuclear deal.
- That any legislation adopted in future by the US Congress will also apply.
- That the 123 Agreement is not a stand-alone Agreement but is circumscribed by various applicable US laws.
- That the 123 Agreement therefore does not give India any protection under international laws.

The China-US 123 accord states: "the parties recognize, with respect to the observance of this agreement, the principle of international law that provides that a party may not invoke the provisions of its internal law as jurisdiction for its failure to perform a treaty". Similarly, the Japan-US 123 Agreement (Article-14) states: ".1£ any dispute arising out of the interpretation or application of this agreement is not settled by negotiation, mediation, conciliation, or other similar procedure, the parties may agree to submit such dispute to an arbitral tribunal which shall be composed of three arbitrators appointed in accordance with the provisions of this paragraph"? In contrast, the Indo-US 123 Agreement has a single-sentence Settlement of Disputes (Article 15), which merely says, "Any dispute concerning the interpretation or implementation of the provisions of this agreement shall be promptly negotiated by the Parties with a view to resolving that dispute".

The Government may clarify why could we not have obtained a more meaningful "Settlement of Dispute" clause akin to what China and Japan appear to have obtained in their 123 Agreements, to preserve their long-term national interest?

Section 2.1 also refers to respective applicable treaties.

Has the Government identified the treaties being referred to and does it also mean discriminatory international treaties to which the US is signatory but India is not? This is important, as the 123 Agreement nowhere lists either the applicable domestic laws or international treaties, leaving considerable room for later disagreement.

FUEL SUPPLY ASSURANCES

Section 103(b)(10) of the Hyde Act limits the fuel reserve to be provided to India at anytime to that which is "commensurate with reasonable operating requirements." Article 5.6 of the 123 Agreement has been cited as an ostensible concession to India's demand for assured lifetime fuel supply. However, Article 5.6(a) appears to be only a US commitment to seeking agreement from the US Congress to amend its domestic laws rather than an outright assurance, and all options that follow in Article 5.6(b) are, therefore, contingent upon such future amendments. The following issues arise:

- Even if the 123 Agreement is approved by the US Congress, the situation will stay the same as stipulated in the Hyde Act whose Sections 104(g)(2)(F)(iii), 102(13), 103(a)(4) and 103(a)(6) limit nuclear fuel and other exports directly by the US. and even any role that may be played by the US in respect to such exports by other countries.
- Necessary amendments to the Hyde Act too would, therefore, have to be enacted.

IAEA SAFEGUARDS AND ADDITIONAL PROTOCOL

The Hyde Act 2006, through its Section 104(b)(2), requires India and the IAEA to conclude all legal steps required prior to signature by the parties of an agreement requiring the application of IAEA safeguards in perpetuity and make substantial progress towards concluding an Additional Protocol with the IAEA, applicable to India's civilian nuclear programme. The PM stated in Parliament on August 17, 2006 that "it is worth emphasizing that

the March 2006 Separation Plan provides for an India Specific Safeguards Agreement with the IAEA, with assurances of uninterrupted supply of fuel to reactors that would be placed under IAEA safeguards together with India's right to take corrective measures in the event fuel supplies are interrupted." The following issues arise:

- Since various reactors would be placed under safeguards "in perpetuity", what corrective measures are visualised to ensure uninterrupted operation of the civilian nuclear reactors in the event of disruption of foreign fuel supplies?
- What "India-specific" safeguards are envisaged over and above IAEA's INFCIRC-66 (Rev.2) referred to?
- Has the Government examined the implications of the IAEA Additional Protocol and its intrusive pursuit clauses?

SEPARATION PLAN OF MARCH 02, 2006

The Separation Plan has been tabled in Parliament and forms an important part of the nuclear deal, such as the approach and guiding principles which India follows in choosing facilities to be put in the civil list, the specific facilities agreed to be placed initially as civil entities, the assertion that India retains the sole right to determine which reactors will be designated as civilian in the future, etc. However, while the Hyde Act refers to the Indian Separation Plan, this finds no mention in the 123 Agreement except that Section 15 of the Separation Plan on Safeguards has been copied as Article 5.6 in the 123 Agreement without citing its origin. What are the implications of this omission from the 123 Agreement, particularly as regards any future designation by India of facilities in the civilian list or otherwise?

FULL NUCLEAR COOPERATION

On 17-8-2006, Prime Minister assured the Parliament, "The objective of full civil nuclear cooperation is enshrined in the July Statement. This objective can be realized when current restrictions on nuclear trade with India are fully lifted ... Only such cooperation would be in keeping with the July Joint Statement". Clearly, government has not succeeded in living up to this promise.

Sections 104(d)(4)(A)(i) and 104(d)(4)(B) of the Hyde Act together deny the export of any equipment, components or materials related to uranium enrichment, spent-fuel reprocessing or heavy water production to India,

unless it is for a multilaterally managed facility to be located in India. Section 103(a)(5) of the Act states that the US policy will be to work with other NSG members to further restrict transfers of such equipment and technologies to countries, including India. Article 5.2 of the 123 Agreement states such items may be transferred to India pursuant to an amendment to this Agreement, which appears highly unlikely.

While technologies, equipments and components for reprocessing plants are denied to India, India has agreed under the 123 Agreement to build a new reprocessing plant, solely to handle spent-fuel from imported reactors. Has the Government examined the implications of building a new reprocessing plant under technology sanctions, and then putting it under IAEA safeguards and Additional Protocols?

ANNUAL CERTIFICATION / ASSESSMENT BY THE US PRESIDENT

Regarding annual certification of India by the US President to the US Congress, the Prime Minister told Parliament on 17-8-2006 that, " ... [US legislation] requires the US President to make an annual report to the Congress that includes certification that India is in full compliance of its non proliferation and other commitments. We have made it clear to the United States our opposition to these provisions, even if they are projected as non-binding on India, as being contrary to the letter and spirit of the July Statement. We have told the US Administration that the effect of such certification will be to diminish a permanent waiver authority into an annual one. We have also indicated that this would introduce an element of uncertainty regarding future cooperation and is not acceptable to us."

Notwithstanding the PM's assertion, the US Congress has required in Section 104(g)(2) of the Hyde Act that annually the US President shall submit to the appropriate Congressional committees a report which includes a large number of evaluators of India's non-proliferation performance and the extent of cooperation we are extending to the US on various issues. Among other items, the US President is to annually furnish data on such uranium used in production of weapons, the rate of production in India of fissile materials for weapons and the number of nuclear explosive devices made.

The information on India's strategic programmes, materials and data to be collected by the US administration and presented every year to the US Congress is cause for serious concern. Does the government intend to furnish to the US President this sensitive data? If not, is the government

aware through what means the US administration plans to gather such information? And how has converting a permanent waiver authority into an annual one now become acceptable?

It has been argued that President Bush, while signing the Hyde Act into law, has noted that Section 103 on Statement of Policy is not binding and that he would treat the relevant clause as advisory, presumably also impinging on reporting on such policies as required under Section 104. However, President Bush's declaration of a large number of different clauses in various legislations passed by the US Congress as "advisory" has been highly controversial. Future US Presidents may not interpret the Hyde Act in this manner. Can we bind the country for 40 years based on the interpretation of the present President?

CONSENT TO REPROCESS SPENT-FUEL OF US ORIGIN

Article 6(iii) of the 123 Agreement indicates the grant of consent to reprocess spent-fuel of US origin. The procedures involved and the associated time-scale for getting full consent are not clear in the Agreement. There is a requirement that India must build a new, dedicated reprocessing plant for this purpose, without the benefit of any import of technology, equipment or components for this plant, which nevertheless will come under IAEA safeguards and Additional Protocol. US and India are to agree on arrangements and procedures under which reprocessing can take place in this facility. Consultations to finalize these procedures and arrangements are to be finished in one year. There is no indication as to when the actual clearance for reprocessing can be expected. There does not seem to be either an "up-front" consent for reprocessing or a guaranteed time frame in the 123 Agreement.

Government may clarify the time and financial expenditure it will take to build this new reprocessing facility. From the end of the year when the procedures and arrangements are finalized, how much longer will it take for the US to grant the one-time permanent consent to reprocess all US-origin spent fuel? Will the consent to reprocess US-origin spent-fuel indicated in this Agreement also include permission to reprocess the accumulated spent-fuel from Tarapur 1&2 plants of US supply?

ENERGY ISSUES

The issues that need to be addressed for working out our energy options are the following:

- Cost of imported reactors vis-a-vis domestic reactors.
- Cost of imported and domestic nuclear energy versus other sources of energy.
- An assessment of what is an appropriate energy mix taking into account domestic coal, hydro and recently discovered gas resources.

For the purpose of estimating future demand, we are' tabulating below the Planning Commission's estimates for 2016-17, 2021-22 and 2031-32.

Projections for Electricity Requirements with *% GDP Growth

2006-07	2016-17	2021-22	2031-32	installed
153,000	306,000	425,000	778,000	MW

Source: Integrated Energy Policy, Planning Commission, Table 2.5

The Integrated Energy Policy had estimated (Page 22) that in one scenario, it would mean reaching 150,000 MW hydro and 63,000 MW nuclear by 2031-32. It had also indicated that this was the outside limit of what could be achieved for hydro and nuclear and stated, "These scenario assumptions in respect of hydro and nuclear may not be fully realised and are made here in order to characterise the Left Parties on Implications of Hyde Act boundaries of alternative choices." The document also gives the figures for 2020 for nuclear as 29,000 MW as the optimistic scenario (Table 3.4, Page 37). With the above, it is difficult to understand the Government's sudden estimate of needing to reach 40,000 MW nuclear power by 2021. These figures do not seem to have come out of any study done by either the Planning Commission or any other agency. So we would like to know on what basis has the Government identified that it needs to reach 40,000 MW by 2021-22 and therefore, its need to import a large number of reactors for this purpose?

By all accounts, imported nuclear plants are the most expensive in terms of capital costs per MW. Therefore, any programme using imported reactors in large numbers would involve much larger outlays in capital terms than any other source. Has the Government done any exercise towards a perspective plan for the energy sector (apart from the Integrated Energy Policy already mentioned above), which factors in the high cost of capital and its implications for the Indian economy? How does the Government

propose to raise "this high amount of capital? It may be noted that the World Bank does not give any loans for nuclear power due to high cost and therefore, India will have to raise commercial loans in the international debt market for this purpose. Has any exercise been done in this regard? Has the Government done any study to see how it proposes to raise loans for the debt portion of these projects?

The Government has talked of a nuclear renaissance. Has the Government done a study regarding this "renais-sance"? From all accounts, the situation regarding the nuclear industry has not materially changed internationally. Amongst the developed countries, the US, Germany, Italy, the UK, Sweden, etc., are all not building new plants or proposing to phase out their existing nuclear plants. The only exceptions are France and Japan. Even here, there is a slow down in investing in new plants. The main reasons given for moving away from nuclear plants is the high cost of nuclear power in spite of certain. Governmental subsidies in terms of insurance and waste disposal. Has the Government done an exercise to evaluate the state of the nuclear industry in developed countries to support its claim of a nuclear renaissance?

IMPACT OF IMPORTED REACTORS ON DOMESTIC INDUSTRY

The Indian civilian nuclear energy programme has suffered immensely from the nuclear embargo imposed on it by the US and other countries in the nuclear cartel. It is only after we have now successfully built our version of the Pressurized Heavy Water Reactors (PHWRs), scaled it up to 540 MW, have successfully commissioned the experimental fast breeder facility at Kalapakkam, that we now see the US offering to lift these sanctions and supply nuclear reactors. Of course, importing these reactors would also mean making the nuclear energy programme dependent on imported uranium fuel and therefore be open again to future blackmail of the nuclear cartel. Therefore, importing a large number of reactors is not only a high cost option, but will also make our nuclear energy programme far more dependent on the Nuclear Suppliers Group. Why is then the Government thinking of importing Light Water Reactors (LWRs) from the international market? Has it done any study to evaluate the possible technology options, their costs, the impact on energy security and the ability of the manufacturers to meet the target that is being projected by the Indian Government?

COST OF ELECTRICITY FROM DIFFERENT SOURCES

When we look at the energy costs from nuclear power plants - the new Tarapur units or Kaiga for example - the cost per unit of nuclear power is relatively much higher than coal, gas or hydro plants of equivalent vintage. Has the Government done any analysis of the per unit cost of nuclear energy? Has the DAFINPC evolved norms for nuclear power and made this available for public scrutiny?

While nuclear energy using domestic PHWRs appears to be more expensive than coal-fired plants, the picture is much worse for imported reactors. As the major cost of nuclear energy is due to the capital servicing cost, obviously higher the capital cost, higher is the cost of energy derived from such plants. As the imported nuclear reactors based on independent international studies (not those made by nuclear associations and manufacturers) cost at least \$2,000/kW. This translates to about Rs. 9 crore per MW as against Rs. 6.2 crore per MW for domestic reactors. Given this, it is clear that nuclear energy using imported reactors would be much more expensive than any other option. For instance, the cost of power from imported reactors will be at least twice that of equivalent coal-fired plants. So why is the Government choosing this option? Even if it wants to put in substantial amounts in nuclear energy, why is it opting for the high cost imported reactor route?

SHORTAGE OF INDIGENOUS URANIUM SUPPLIES

Since the days of Homi Bhabha, India had planned its nuclear energy programme taking into account that uranium is not available in the country in abundance and can support only around 10,000 MW. The three-phase plan was therefore to build PHWRs to use natural uranium and convert it to plutonium, which could be used in the fast breeder reactors. In the second phase, the fast breeders would use this plutonium to produce much more energy than possible with just PHWRs. BARC had stated that the fast breeder route would allow the same amount of uranium to support 350,000 MW nuclear energy programme. In the third phase, thorium, of which we have 25-30 per cent of world's reserves, would be used for producing energy, thus making our indigenous resources virtually unlimited. This plan was to ensure India's energy security and insulating India from the vagaries of the international uranium market, which has a strong cartel. It was for this reason that we have gone slowly on nuclear power so that the fast breeder programme is commercially available before we make the big push.

India has uranium ores in its soil to sustain a total PHWR capacity of 10,000 MWe. We have so far installed only 4100 MWe of PHWRs, but already the uranium supplies are critically low and is well below the current demand. The PHWRs, which were operating some six years ago at a healthy plant capacity factor close to 90 per cent, are today edging close to a 45 per cent capacity factor, merely due to shortage of natural uranium. In a country where enough uranium ore is present underground, this is inexcusable. No explanation has been given officially of how this has come about. At the same time, it appears that using the poor performance and slow growth of the PHWR programme as an excuse, the government is pushing for the import of much costlier foreign reactors through the Indo-US nuclear deal as a substitute to the indigenous PHWRs. The attempt seems to be only to highlight the need for uranium imports and therefore justify the Indo-US deal.

The current uranium shortage over the last ten years has occurred due to allocation of insufficient funds to the uranium-mining sector since 1990. The Government failed to address the grievances of the local community regarding the mining. The shortage of natural uranium alone is considerably slowing down the indigenous three-stage nuclear power programme, while creating a false impression that the PHWR programme under the first stage is failing to produce desired results due to technical deficiencies.

Government may clarify what it is doing to address the gap between demand for uranium and supply. Has the government fixed the responsibility for this serious deficiency? How long will it take before the plant capacity factors of current PHWRs start coming up and reaching close to 90 per cent once again? Abandoning the indigenous route for imported supplies seems to be throwing the baby out with the bath water.

TECHNOLOGY SANCTIONS AND THEIR IMPLICATIONS

One of the consequences of the Hyde Act is now clear.

The technology for the fuel cycle as well as all dual use technology is outside the scope of this agreement. In other words, we can import reactors and uranium fuel so that we become dependent, but cannot access technology from the international market which will truly foster self-reliance. Not only would large parts of the existing technology sanctions stay, we

are also proposing to put ourselves in a double bind. We will open our new reprocessing facility and the future breeder programme to IAEA inspection, without securing any relaxation of the technology sanctions regime for these facilities and plants. Has the Government done any exercise to analyse the implications of this?

APPENDIX - XXXIX

UPA Response to Left Parties' Note of September 14 September 17, 2007

1. THE IMPACT OF US NATIONAL LAWS ON THE AGREEMENT

It is a normal and accepted practice that implementation of an International Agreement requires a domestic legal framework.

The internal US law, which has relevance to the signing of the 123 Nuclear Cooperation Agreement with India, is the US Atomic Energy Act. It has already been amended by the enactment of the Hyde Act, which provides permanent waiver to certain restrictions of section 123 of the US Atomic Energy Act read with sections 128 and 129. These are (i) subsection a (2) of Section 123 of the Atomic Energy Act of 1954 (Atomic Energy Act 123 (a) (2): a requirement of full scope safeguards (ii) application of section 128 of the Atomic Energy Act of 1954 with respect to exports to India; and (iii) application of Section 129 a (1) (D) of the Atomic Energy Act of 1954 (exemption from the stipulation that the intended partner for cooperation should not have detonated).

The US Congress passed the Hyde Act in December 2006. This is an enabling legislation which is applicable only to US Administration.

The core of this legislation is that it gives a permanent waiver in respect of the above provisions of the US Atomic Energy Act and there is implicit recognition of India's status as a Nuclear Weapons State. We are in a unique position. We have the benefit of civil nuclear cooperation with the USA and the rest of the world being opened to us while, at the same time, we are in a position to continue with our independent strategic nuclear programme, our autonomous three - stage indigenous nuclear programme and our independent research and development.

- It is to be noted that Hyde Act does not apply to India. India's commitment will arise from the 123 Bilateral Cooperation Agreement which once approved by the US Congress will become law. The 123 Agreement as the prevailing law will then delineate the specific rights and the responsibility of the US and India that govern and control the Agreement's implementation.
- The 123 Agreement is not circumscribed by various US laws and stands on its own as: Customary international law ensures that the Hyde Act does not apply to India or override the Agreement. Articles 26 and 27 of the Vienna Convention on the Law of Treaties, 1969 read:

"Article 26: *Pacta sunt servanda* - "Every treaty in force is binding upon the parties to it and must be performed by them in good faith".

Article 27: "Internal law and observance of treaties" "A party may not invoke the provisions of its internal law as justification for its failure to perform a treaty." These Articles of the Vienna Convention are a codification of a longstanding principle of customary international law, confirmed in state practice, international agreements, and authoritative commentaries.

Besides, the US Constitution provides that treaties made under the authority of the US Government "shall be the supreme Law of the Land."

Article VI (2) of the US Constitution states that: "This. Constitution, and the Laws of the United States which shall I be made in Pursuance thereof and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land and the Judges in every. State sh~ll be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding."

The Left Parties' Note refers to the China-US 123 Agreement which explicitly reproduces the principle of international law, that; parties may not invoke the provisions of international law as justification for failure to perform a treaty. In this context, attention is invited to Article 27 of the Vienna Convention which says, "A party may not invoke the provisions of its international law as- justification for its failure to perform a treaty".

In effect, Article 16.4 of the Indo-US 123 Agreement provides for this by stating that "this agreement shall be implemented in good faith and in accordance with the principles of International Law." China-US 123 Agreement only reiterates the principle of International Law which does not change or improve by reiteration. The absence of its reiteration in Indo-US 123 Agreement cannot change its applicability.

The Japan - US Agreement has two articles dealing with two different subjects: firstly, Article 14 which deals with any question concerning the interpretation or application of the agreement; and secondly, Article 12 which deals with termination of the agreement.

The provision in the India-US agreement comparable to Article 14 (of the Japan-US agreement) is Article 15, which deals with any dispute concerning the interpretation or implementation of the agreement. In the case of Japan, the remedy is to refer to arbitration whereas, in the case of India, the remedy is through negotiations. No other agreement has a clause similar to the one in the US-Japan agreement. Clearly, negotiations give India much greater freedom and flexibility than international arbitration.

Article 12 of the Japan-US Agreement is comparable to Article 14 of the India-US Agreement. In the Japan-US Agreement, there is a power to terminate and nothing further is provided. In the India-US Agreement, under Article 14, there is a multi-layered process of consultations with enough safeguards built into the same. Therefore, Article 14 of the India-US Agreement is far superior in the sense that no agreement with any other country allows a period of one year for consultation after the dispute has arisen, and terminates after the end of one year.

CHINA-US AGREEMENT VERSUS INDIA-US AGREEMENT

In the China-US Agreement, Article 7 deals with termination and it is styled as "cessation of cooperation". It provides that the parties shall promptly hold consultations on the problem and nothing more; In the India-US Agreement, under Article 14, there is a multi-layered process of consultation and a period of one year for negotiations before termination can come into effect.

There is no clause in the China-US Agreement on any dispute concerning the interpretation or implementation or application. In the India-US Agreement, as stated already, there is Article 15. Further, and more important, point to be noted is that in Article 14 of the India-US Agreement, there is a requirement to give "reasons" for the proposed termination.

2. FUEL SUPPLY ASSURANCES

The Joint Statement of 18 July 2005 provided inter alia that the US President would also seek agreement from the US Congress to adjust US laws and policies, and that the United States will work with friends and allies to adjust international regimes to enable full civil nuclear energy cooperation and trade with India.

Subsequently, the 2 March 2006 Separation Plan provided: "The United States has conveyed its commitment to the reliable supply of fuel to India. Consistent with the July 18, 2005, Joint Statement, the United States has also reaffirmed its assurance to create the necessary conditions for India to have assured and full access to fuel for its reactors.

As part of its implementation of the July 18, 2005, Joint Statement the United States is committed to seeking agreement from the US Congress to amend its domestic laws and to work with friends and allies to adjust the practices of the Nuclear Suppliers Group to create the necessary conditions for India to obtain full access to the international fuel market, including reliable, uninterrupted and continual access to fuel supplies from firms in several nations.

To further guard against any disruption of fuel supplies, the United States is prepared to take the following additional steps:

- i) The United States is willing to incorporate assurances regarding fuel supply in the bilateral US-India agreement to peaceful uses of nuclear energy under Section 123 of the US Atomic Energy Act, which would be submitted to the US Congress.
- ii) The United States will join India in seeking to negotiate with the IAEA an India-specific fuel supply agreement.
- iii) The United States will support an Indian effort to develop a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India's reactors.
- iv) If despite these arrangements, a disruption of fuel supplies to India occurs, the United States and India would jointly convene a group of friendly supplier countries to include countries such as Russia, France and the United Kingdom to pursue such measures as would restore fuel supply to India.

The US Congress passed, the Hyde Act in December 2006. This is an enabling legislation of the US, as noted above, which provides a permanent waiver for India from certain sections of the US Atomic Energy Act.

As noted above, the US had agreed to incorporate its assurances relating to fuel supply in the bilateral India-US Agreement. This has been achieved in Article 5.6(a) of the 123 Agreement which specifically provides for reliable, uninterrupted and continual access to fuel supplies to India's reactors. The US commitment to India under the 123 Agreement to supply fuel for the lifetime of India's reactors is specific. The assurances provided in Article 5.6(a) stand by themselves.

Article 5.6(a) could also be read as a US commitment to amend its domestic laws should any law stand in the way of US fulfilling these fuel-supply obligations.

Further, to provide additional comfort to India, in Article 5.6(b) of the 123 Agreement, the US has agreed to include . the provisions from the Separation Plan which elaborate the steps US would take to ensure uninterrupted and continual access to fuel supplies for India's safeguarded reactors.

The 123 Agreement also envisages, in consonance with the Separation Plan, US support for an Indian effort to develop a strategic reserve of nuclear fuel to meet the lifetime requirements of India's reactors.

As also noted above under (1), once the 123 Agreement is approved by the US Congress it will become US law, which as the US Constitution expressly provides "shall be the supreme Law of the Land". The US commitment for assured fuel supplies for the lifetime of India's safeguarded reactors should therefore be under no doubt.

Apart from the US commitment to which they are bound, after the NSG exemption, India will obtain fuel from other countries, consistent with our needs for assured uninterrupted fuel supplies for the lifetime of our reactors.

3. IAEA SAFEGUARDS AND ADDITIONAL PROTOCOL

The confusion in the Left Parties' Note arises from the fact that the Hyde Act is regarded as applying to India. Instead, India's obligation would arise from the India specific Safeguards Agreement with the IAEA.

In the 2 March 2006 Separation Plan, India had agreed to negotiate an India-specific Safeguards Agreement with the IAEA in light of the understandings with the US regarding reliable, uninterrupted and continual access to fuel supplies.

We had agreed to voluntarily place identified civilian nuclear facilities under India-specific safeguards in perpetuity and negotiate an appropriate Safeguards Agreement with the IAEA. The India-specific Safeguards Agreement will inter alia provide for corrective measures that India may take to ensure uninterrupted operation of its civilian nuclear reactors in the event of disruption of foreign fuel supplies. The 123 Agreement clearly provides for the application of IAEA safeguards, which are to be finalized through the India specific Safeguards Agreement with the IAEA (Article 10). As envisaged by the Separation Plan, this will be in a phased manner.

While India will negotiate with the IAEA an India specific Safeguards Agreement that Agreement will be brought into force only after the NSG exemption and bilateral cooperation agreements are in place, including the 123 Agreement with the US.

We will negotiate and finalise the India specific Safeguards Agreement just as we have finalized the 123 Agreement. The Prime Minister had stated that "We seek the removal of restrictions on all aspects of cooperation and technology transfers pertaining to civil nuclear energy -- ranging from nuclear fuel, nuclear reactors, to re-processing spent fuel, i.e. all aspects of a complete nuclear fuel cycle."

The India specific Safeguards Agreement will be linked to the fuel supply assurances to ensure the uninterrupted operation of our reactors over their lifetime. The IAEA safeguards system in INFCIRC 66/ rev.2 provide a template for facility-specific safeguards. We have agreed to apply safeguards (to the safeguarded reactors alone) in perpetuity in return for assurance of fuel supply. These will be reflected appropriately in our Safeguards Agreement and hence these will be India specific.

Our interest lies in using nuclear energy to meet our growing energy requirements, ensuring that there is no interruption in the operation of our nuclear reactors. To safeguard against any eventuality of disruption in fuel supply, the right to take corrective measures to ensure uninterrupted operation of the safeguarded reactors has been incorporated in the 123

Agreement. The exact nature of the corrective measures would depend upon the nature of the disruption.

The Left Parties' Note refers to "the IAEA additional protocol and its intrusive pursuit clauses".

In the case of India the Agreement is to negotiate an additional protocol that will be India-specific. The additional protocol that India will enter into will be consistent with our national interests. What will be negotiated will have safeguards in respect of the safeguarded facilities and the safeguarded material.

4. SEPARATION PLAN OF 2 MARCH 2006

There is no adverse implication of non-reference to Separation Plan in the 123 Agreement. The Separation Plan finalized voluntarily by Government of India is in our national interest. It is not a bilateral document. As noted by the Left Parties themselves, the Separation Plan provides the approach and the guiding principles which India would follow in deciding about the facilities it would put under safeguards. It is India which retains the sole right to decide which facilities would be designated as civilian. There is therefore no question of including a reference to the Separation Plan in the 123 Agreement which is a bilateral agreement with the United States. It is for India to decide which future reactors will come under safeguards. Foreign reactors using foreign supplied nuclear material, equipment and technology will come under safeguards. Decisions on future indigenously built and fuelled reactors will also be made by India voluntarily, keeping in mind our national interest, as has been done in the Separation Plan.

What has been incorporated in the 123 Agreement is that provision of the Separation Plan which is pertinent, namely, the fuel supply assurances as elaborated in paragraph 15 of the Separation Plan. These have been included in full in the 123 Agreement in Article 5.6.

5. FULL NUCLEAR COOPERATION

Prime Minister in his statement to the Parliament on 17 August 2006 had stated, "We seek removal from of restrictions on all aspects of cooperation and technology transfers pertaining to civil energy - ranging from nuclear fuel, nuclear reactors, to re-processing spent fuel, i.e. all aspects of a complete nuclear cycle."

The 123 Agreement meets all these benchmarks. The transfers of fuel and reactors have been obtained in Articles 2.2, 5.1 and 5.3. Assurances to guard against any disruption of supply over the lifetime of India's civilian reactors have been embodied in the Agreement (Article 2.2 (e), 5.6 and 14.8). Our right to reprocess, which is so critical for the three stage programme of nuclear development, has been secured (Article 6(iii)). The Agreement opens the possibility of enrichment and reprocessing technology transfers (Article 5.2). This is an exception made for India as US policy does not permit such transfers. The provisions of Article 5.2 keep this possibility open for India. Additionally, dual use items, which can be used for reprocessing and enrichment, will be transferred according to the respective laws and regulations (Article 5.2). The Agreement provides for both Parties to treat each other as they do other states with advanced nuclear technology.

We are not concerned with the Hyde Act as our obligations flow only from the 123 Agreement. The US will also be bound by the commitments it has undertaken in the 123 Agreement, which as noted earlier, will become law once the US Congress approves it.

Any restriction, at this point, on transfer of enrichment and reprocessing equipment to India at this point of time would not affect India as we have already developed and are currently operating our own equipment and facilities since 1964.

The 123 Agreement provides, in Article 5.2, that "Transfers of dual use items that could be used in enrichment, reprocessing or heavy water production facilities will be subject to the Parties' respective applicable laws, regulations and license policies". For the new dedicated national reprocessing facility that we would be building, we can source the dual use items if it is required. Furthermore, such technology can be accessed from other NSG countries as well and is not prohibited under the 123 Agreement.

6. ANNUAL CERTIFICATION/ASSESSMENT BY THE US PRESIDENT

The reporting requirements, which the Note of Left Parties refers to, (Section 104(g)(2) of the Hyde Act) are for the US President. As stated earlier, our obligations flow from the 123 Agreement. The Hyde Act does not apply to us at all and that is why there is no reference to it in the 123 Agreement. The Government of India is not bound to provide any information in this regard and it is not our intention to do so.

The 123 Agreement provisions confirm that the waiver enabling US cooperation with India in civilian nuclear energy is a permanent one (Article 16.2). Continuing cooperation is not contingent on any annual certification provisions. Article 16.2 provides that the Agreement shall remain in force for 40 years and can be extended thereafter for additional periods of 10 years at a time. There is a conceptual difference between the waiver of provisions of US Atomic Energy Act and the annual reporting requirements. The waiver is permanent and cannot be revisited. The reporting requirements are internal between the US Congress and the US President and India is not concerned with the same.

The Note from the Left Parties acknowledges that the US President has stated that certain provisions of the Hyde Act will be treated only as advisory and not binding. The Note however suggests that future US Presidents may not interpret the Hyde Act in this manner. This is a hypothetical Scenario. We cannot speculate as to what course of action a future US president may take. What we have done is to provide in the agreement that termination and deviation from the Agreement would be possible only if there is a material violation of the Agreement (Article 14) and to spell out steps, measures, rights and obligations to guarantee the continued operation of India's reactors.

7. CONSENT TO REPROCESS US ORIGIN SPENT FUEL

The 123 Agreement provides upfront consent to reprocess the US origin fuel (Article 6.3(iii)). There is no ambiguity in this. To bring this right into effect, India will establish a new national reprocessing facility dedicated to reprocessing safeguarded nuclear material under IAEA safeguards. The Agreement also provides that both Parties will agree on arrangements and procedures under which such reprocessing will take place. The consultations on arrangements and procedures would be with respect to physical protection standards, storage standard, and environmental protections as set forth in different provisions of the Agreement. Consultations on arrangements and procedures are to begin within six months of a request by India and are to be concluded within one year. There is, thus, a definite timeframe for completion of consultations once a request has been made for reprocessing rights into effect after arrangements and procedures are agreed in one year.

It is not, at this moment, appropriate for Government to foreclose its options regarding the new reprocessing facility. Once civil nuclear cooperation is opened to India, India would seek the best possible combination of technology and economic factors while building the new reprocessing facility. As this would reprocess the spent fuel that we will receive, it would logically be under India-specific safeguards.

As for Tarapur spent fuel, with the expiration of 1963 Tarapur Agreement, this is no longer an issue requiring US permission or consent. The 123 Agreement does not cover the fuel supplied to Tarapur I and II under the previous Agreement.

8. ENERGY ISSUES

India's three-stage nuclear power programme holds immense promise for the future. The unique thorium-based technology would become an economically viable alternative over a period of time, following sequential implementation of the three stages. We must, in the meantime, explore and exploit every possible source of energy.

Given the energy requirements of the country, all sources of power - coal, hydro, nuclear, gas, wind - need to be exploited. Estimates of nuclear power capacity over the XI and XII Plan periods are based on capacity generation arising from completion of projects under construction, and proposals for commencement of work on new reactors - PHWR, AHWR and Fast Breeder reactors. Eleventh Plan proposals also include additional capacity generation based on the unit sizes now available internationally and demonstrated potential of NPCIL to take up new projects. The projected figures have thus been worked out after careful analysis.

NPCIL has not been availing budgetary support for last couple of years for its ongoing programmes. NPCIL has been rated AAA by CRISIL consistently for the last few years. Banks have been lending to NPCIL for its capital programme at competitive rates. They have evinced interest for lending for future plants. Foreign banks have also approached NPCIL to extended funding through loans and through external credits. The question of funding is not unique to the nuclear power sector. Given the energy requirements of the country, this is an issue which is relevant to meeting the energy demands of the country regardless of the source of the power.

IAEA data corroborates the resurgence of interest in nuclear power globally. The use of nuclear power has so far been concentrated in industrialized

countries. The emerging pattern is of recent expansion being focused in developing countries. IAEA's projections for future growth have increased in recent years. Its most conservative projection shows nuclear power capacity growing by about 13 per cent through 2020. Its high projection shows steady growth to about 640 gigawatts by 2030 - almost 75 per cent more than current capacity. Apart from India, China, Finland, France, Japan, the Republic of Korea and the Russian Federation have initiated specific nuclear power expansion plans. The United States has announced tax credits for the first 6000 megawatts of new nuclear construction. China has plans for a five-fold increase in nuclear capacity to 40 GWe by 2020 and a further three to four-fold increases to 120 - 160 GWe by 2030.

9. IMPACT OF IMPORTED REACTORS ON DOMESTIC INDUSTRY

India's three-stage nuclear power programme is the mainstay of our power programme and holds immense promise for the future. Development of indigenous capabilities to support our nuclear power programme is a primary objective. Starting from the first two pairs of reactors viz. Tarapur (TAPS 1&2) and Rajasthan (RAPS 1&2), which were set up on a turnkey and technical cooperation basis respectively, we have achieved comprehensive capabilities in all aspects of setting up of Nuclear Power Plants. The imported reactors proposed to be sourced from many countries with guaranteed lifetime fuel supply will be additional to our indigenous nuclear power programme which will continue to grow, as noted above. The Indian nuclear industries have grown and diversified their operations and capabilities to many other high technology areas and have gained rich experience. Therefore, it is very likely that our own reactors, as commercially competitive systems, would become of interest to several other countries. This has the potential of opening up another set of opportunities. Besides, once international commerce and civil nuclear cooperation is available, India will have a wide choice of sources with competing technology levels, costs, and efficiencies.

10. COST OF ELECTRICITY FROM DIFFERENT SOURCES

There are seventeen nuclear power reactors in operation. The current tariff ranges from 95 paise per kWh for TAPS 1&2 and less than Rs. 2 per kWh for MAPS, NAPS and KAPS. The current annual average tariff for all seventeen power reactors is about Rs. 2.30 per kWh. These are competitive to tariffs of non pit head coal thermal power stations at contemporary

locations. There are very large areas in India away from coal pit heads, which do not have access to low cost fossil fuels. The tariff of coal based generation is sensitive to the distance of power station from the coalmines, whereas those of nuclear are location neutral.

A study "Economics of Light Water Reactors in India" in the year 2005, using levelised cost of generation, demonstrated that at 5 per cent real discount rate, the levelised cost of generation in paise/kWh for different fuels is as follows: Nuclear - 114; Domestic coal at 800 kms from pit head - 160; Imported Coal at port - 162; and Gas - 179. The sensitivity analysis also revealed that the impact of the fuel price on the generation costs is least in case of the nuclear option.

The developments since then, in terms of increase in the uranium prices internationally, increase in the overnight cost of nuclear power reactors, and offers received in response to coal based ultra mega projects have been reviewed. Results indicate a first year tariff of about 250 Paise/kWh in the year 2014-15, which is considered competitive with other sources, mainly coal. The norms of tariffs of nuclear power stations are periodically reviewed by the Government based on recommendations of a high level committee. These norms are notified through a Gazette notification.

The overnight costs of commercial nuclear power reactors in the world vary from 1200 to 2500 US \$/ kWe. It is well known that the total costs depend on a number of factors.

Coal based capacity addition at pit heads locations is limited in view of the cooling water and environmental considerations. Using indigenous coal for 10,000 MW would mean about 150 coal trains from pit head to power stations. The total requirement of imported nuclear fuel for 10,000 MW nuclear power is 350 tonnes a year, as against an imported coal requirement for the same energy of 35 million tones. The cost of such a magnitude of imports in terms of infrastructure at ports and the hinterland in terms of handling Be transportation and commercial pressure on international coal pricing would have to be taken into account.

Any exercise of comparative costing would also have to take into account the cost in the future of traditional sources of energy such as hydrocarbons, keeping in view the country's heavy dependence on hydrocarbon imports.

11. SHORTAGE OF INDIGENOUS URANIUM SUPPLIES

India has modest resources of Uranium but vast resources of Thorium. Work has been initiated to identify additional resources, particularly deep-seated Uranium resources, using the latest exploration technologies.

The current mismatch between demand and supply of Uranium has occurred because of an unprecedented improved performance of PHWRs, commissioning of new reactors, and a huge reduction in the gestation period of new reactors under construction.

The Government is fully seized of the need to, and has been working, to open new mines. During the last few years, new mines have opened at Turamdih and Banduhurang in the State of Jharkhand. Sustained efforts have been made to open green field Uranium mining and milling projects both in Andhra Pradesh and Meghalaya. Projects for opening up of new Uranium mines are being pursued. Government is confident to bridge the gap between demand for uranium and its supply over the next few years. It is closely monitoring various initiatives both in the areas of uranium exploration and uranium mining.

12. TECHNOLOGY SANCTIONS AND THEIR IMPLICATIONS

An exception has been made for India and the transfer of technology for the fuel cycle and dual use technology is envisaged in the 123 Agreement. Under Article 5.2, the Agreement opens the possibility of enrichment and reprocessing technology transfers. The US policy at present does not permit such transfers. Besides such technology can be accessed from other NSG countries as well and is not prohibited under the 123 Agreement. Consequently, we can import reactors, fuel as well as technology from the international market.

India has no intention to place fast breeder reactors under safeguards. The new reprocessing facility is not linked to India's breeder programme. The new facility is to reprocess foreign supplied spent fuel under safeguards and its products will be used in safeguarded reactors.

APPENDIX - XL

Left Parties Rejoinder to the UPA's Note.

September 19, 2007

1. THE IMPACT OF US NATIONAL LAWS ON THE 123 AGREEMENT

The UPA's Note has stated that the Hyde Act is only an enabling legislation and binding only on the US. It has further held that the core of the Hyde Act is that it provides "permanent waiver" to certain restrictions of section 123 of the US Atomic Energy Act and implicitly recognises "India's status as a Nuclear Weapons State". Neither of these statements is supported by the Hyde Act and the Joint Conference Report of the US Senate and House of Representatives on the Hyde Act. A relevant section of the Conference Report on the Hyde Act states:

"As in the Administration's proposed legislation, H.R. 5682 requires the President to determine that India is upholding its July 18, 2005 commitments as a prerequisite for using his waiver authority. The conferees believe that India's continued implementation of those commitments is central to the integrity of our bilateral relationship. Therefore, the bill contains reporting requirements and a provision that calls for termination of exports in the event of violations of certain commitments. In addition, the bill seeks to uphold existing statutory congressional oversight of US nuclear cooperation and exports." (Emphasis added)

It is clear from the above that the Hyde Act as its creators have envisaged and designed, does not provide a "permanent" waiver as claimed by the Government. The waiver is contingent upon "continued implementation" of certain commitments. The Hyde Act contains provisions of reporting requirements and a provision for termination and the reporting requirements have been designed with possible termination in mind. Moreover, the Hyde Act also calls for "reduction and eventual elimination" [Clause 103 (b) 5] of India's nuclear weapons. Therefore the claim that there is an implicit recognition of "India's status as a Nuclear Weapons State" is factually incorrect. The Government seems to have seriously misunderstood the implications of the Hyde Act. Much of the response of the UPA to the Left Parties' Note arises from such a misunderstanding of the Hyde Act and the legislative intent behind its provisions.

The UPA's response that the Hyde Act does not apply to India is irrelevant. What is germane to the discussion is how the Hyde Act would structure the implementation of the 123 Agreement by the US administration. The Government seems to believe that the 123 Agreement, once it is passed by the US Congress, will stand on its own and not be circumscribed by other domestic laws of the US. However, Section 2.1 of the 123 Agreement itself clearly states that the agreement shall be implemented in accordance with the respective national laws of the two countries. Officials of both sides have clarified that the Hyde Act and the 123 Agreement are consistent with each other. During the official briefing on the 123 Agreement on 27th July 2007, US Under Secretary of State Nicholas Burns categorically said: ". . . we were very careful when we began these - the latest phase of these negotiations to remind the Indian Government that since the President and Prime Minister had their two agreements of July '05 and March '06, something else had happened: The Congress had debated over six, seven months those agreements and the Congress has passed the Hyde Act. And so we had to make sure that everything in this US-India civil nuclear agreement, the 123 Agreement was completely consistent with the Hyde Act and well within the bounds of the Hyde Act itself." National Security Adviser M.K. Narayanan, in an interview to *The Hindu* dated July 28, 2007, has also confirmed the same: "As far as we are concerned, we haven't breached the Hyde Act. We have seen to [it] that no law is broken." If we take the above into account, this indicates that on all those matters that the 123 Agreement is silent, the Hyde Act will bind the US actions. Therefore both the 123 Agreement and the Hyde Act have to be read in conjunction in order to understand the implications of the Hyde Act and the 123 Agreement. Since both sides agree that the Hyde Act and the 123 Agreement are not in contradiction, therefore the 123 Agreement overriding the Hyde Act, being a subsequent legislation, does not arise.

The UPA's Note cites Article 27 of the Vienna Convention on the Law of Treaties: "A Party may not invoke the provisions of its internal law as justification for its failure to perform a treaty". While this is indeed a norm of customary international law, it is not appropriate in the case of the 123 Agreement, since the 123 Agreement itself explicitly refers to its implementation in accordance with "national laws". Article 27 does not appear to deal with a situation when a reference to national laws is made in the agreement itself. This situation, it is worth reiterating, is to be distinguished from a situation where national laws are invoked after the agreement has been accepted by both parties simply to avoid fulfilling

voluntarily undertaken obligations. It may also be noted that the US has not ratified the Vienna Convention. Thus the US cannot be held to account, in the ultimate analysis, on the basis of the Vienna Convention.

Similarly, the UPA's Note states, without any comment, that Article VI (2) of the US Constitution provides that "all treaties made" under the authority of the US "shall be the supreme law of the land". No attempt has been made to understand the scheme of Article VI (2). Reference to the widely accepted understanding of Article VI (2) of the US Constitution would reveal that there is no hierarchy between treaties and domestic legislations in the US, and whichever is enacted later overrides the earlier one. Therefore, any subsequent legislation passed by the US Congress can override the 123 Agreement. This has not been considered in the UPA's Note.

The provision for the application of the principles of international law contained in the China-US 123 Agreement is not an empty reiteration of Article 27 of the Vienna Convention as the UPA's Note seems to imply. The text of the Chinese 123 Agreement guards against the adverse consequences that may result from the US enacting fresh domestic legislation that would require the renegotiation of an earlier treaty. Moreover, the Chinese 123 Agreement recognises China as a nuclear weapons state and is quite different in terms of its obligations and safeguards than the Indian 123 Agreement. For example, Article 8(2) of the China - US 123 Agreement says "bilateral safeguards are not required", while in India's case, the US has not only insisted on IAEA safeguards but has provisions for US inspections also, in case IAEA fails to provide inspections.

The UPA's Note claims that the India-US 123 Agreement is "far superior" to the Japan-US Agreement since in the former there is a multi-layered process of consultations with enough safeguards built into the same. It also claims that the Indian 123, unlike the Japanese 123, allows for a one-year period of consultation before termination in case of dispute. The above is again inaccurate on many counts. The UPA's Note fails to mention in this regard that Article 14.2 of the India-US 123 provides an overriding escape clause from all considerations of consultations etc. and terminates the agreement immediately if "the Party seeking termination ... determines that a mutually acceptable resolution of outstanding issues has not been possible or cannot be achieved through consultations." Further the question of material violations arises only in the context of a violation of the Agreement being cited as the cause for termination as laid down in Article 14.3. The Hyde Act provides for other possibilities for termination as in Section 103 (a)(6), including the

provisions of the Hyde Act itself, the relevant provisions of the Atomic Energy Act of 1954 or any other United States law. Therefore, the India-US 123 Agreement has provided an open ended right of termination to the US by citing any reason it wishes. In contrast, the Japan-US 123 Agreement permits either party to cease or terminate cooperation only when there is non-compliance with the accord's provisions or the arbitral tribunal's decisions or a material breach of safeguards.

There are certain other inaccuracies in the UPS's Note. The claim that no 123 Agreement has a provision for arbitration by a tribunal similar to the provisions of the Japanese 123 is factually incorrect. There is a provision for arbitration by tribunal in the US-Euratom 123 Agreement as per Article 14.5 (b), (c) and (d) of that agreement. Article 14.5 of the Euratom 123 explicitly provides that the arbitration tribunal shall make its decision "on the basis of the application of the rules and principles of international law, and in particular the Vienna Convention on the Law of the Treaties." The argument that arbitration is inferior to consultation is again difficult to understand. It is only when negotiations fail that arbitration is undertaken. It is difficult to accept that Japan and Euratom, both close allies of the US, should have fought long and hard for the arbitration clause, if it is inferior to consultations. The government should also explain in what way the consultation clause is superior to the Tarapur 123 Agreement's consultation clause, which did not help India much when the US stepped out of its obligations to supply fuel.

While dishonouring international obligations is not undertaken lightly by any country, including the US, this fact will not in final analysis stand in the way of perceived "national interest". In this regard it may be noted that to the extent the provisions of the Hyde Act do not conflict with or cover the same ground as the 123 Agreement, even the explicit adoption of the latter by the US Congress will keep those provisions alive. This is also true of Section 103 [Statements of Policy] of the Hyde Act. It is often cited that while approving the Hyde Act President Bush observed:

Section 103 of the Act purports to establish US policy with respect to various international affairs matters. My approval of the Act does not constitute my adoption of the statements of policy as US foreign policy. Given the Constitution's commitment to the Presidency of the authority to conduct the Nation's foreign affairs, the executive branch shall construe such policy statements as advisory.

What needs to be noted here is that by similar reasoning a subsequent US President, invoking the President's authority under the US Constitution to conduct foreign policy, may treat the statements of policy under Section 103 of the Hyde Act with greater seriousness and of a binding nature. This matter has to be seriously addressed, especially because the 123 Agreement is for 40 years. Should India be bound on the expectation of permanent goodwill of all future US Presidents?

2. FUEL SUPPLY ASSURANCES

The UPA's Note reproduces Section 15 of the Separation Plan of March 02, 2006, which has now been included as Article 5.6 of the 123 Agreement, without citing its connection to the earlier Plan. However, the Hyde Act has ignored all the fuel supply assurances made in the Separation Plan and left them out of the Act. Moreover, several subsections were introduced in the Act, which run counter to those assurances. The UPA's Note contends that the matter of fuel assurance is settled in Article 5.6 (a) on the one hand, while stating on the other hand that Article 5.6 (a) could also be read as a "US commitment to amend its domestic laws, should any law stand in the way of US fulfilling these fuel-supply obligations". It is unfortunate that the Government is still not clear about the fuel supply assurances in the 123 Agreement, which it has itself negotiated. Several sections of the Hyde Act stand in the way of the fuel supply assurances contained in Article 5.6 of the 123 Agreement. Unless these sections in the Hyde Act are amended, the fuel supply assurance available through the 123 Agreement would remain illusory. Sections 103(b)(10) and 104(g)(2)(F)(iii) of the Hyde Act stand in the way of India accumulating adequate nuclear fuel reserves for imported reactors. Sections 102(13), 103(a)(4), 103 (a)(6) and 104(b)(7) may all need to be amended before other NSG nations can help us accumulate fuel reserves as stated in the fuel supply clause. The Left Parties are of the clear opinion that the Hyde Act stands in the way of fuel supply assurances and without its amendment those assurances would not hold. How can the Government go ahead committing the country irrevocably to such a 123 Agreement for the next 40 years before getting the Hyde Act amended?

The argument that other NSG countries will give us more generous terms may be examined in the context of the following section in the Conference Report on the Hyde Act:

Equally, the United States must maintain the consensus decision mechanism of the NSG, and not look for any way around that

requirement. The conferees believe that the effectiveness of the NSG rests upon its consensus decision-making, resulting in unified policies and enhanced compliance with those policies. The conferees are mindful that a country outside the regime that seeks an exception from NSG guidelines could agree to stringent safeguards with some NSG members, but later import only from other NSG members that did not impose such requirements. To preclude such a scenario, the conferees urge the Executive branch to persuade other NSG members to act in concert in terms of the timing, scope, and safeguarding of nuclear supply to all countries, including India. In particular, the conferees intend that the United States seek agreement among NSG members that violations by one country of an agreement with any NSG member should result in joint action by all members, including, as appropriate, the termination of nuclear exports. In addition, the conferees intend that the Administration work with individual states to encourage them to refrain from sensitive exports.

. . . if US exports to a country were to be suspended or terminated pursuant to US law, it will be US policy to seek to prevent the transfer to such country of nuclear equipment, material or technology from other sources. This concern could arise if, for example, there were a nuclear test explosion, termination or abrogation of IAEA safeguards, material violation of IAEA safeguards or an agreement of cooperation with the United States, assistance or encouragement of a non-nuclear weapon state in nuclear-weapons related activities or reprocessing-related activities, or (in India's case) failure to uphold its July 18, 2005, Joint Statement commitments. In such a circumstance, the conferees expect the United States to encourage other supplier countries not to undermine US sanctions.

3. IAEA SAFEGUARDS AND ADDITIONAL PROTOCOL

The UPA's Note states: "We have agreed to apply safeguards (to the safeguarded reactors alone) in perpetuity in return for assurances of fuel supply. These will be reflected appropriately in our Safeguards Agreement and hence these will be India specific". However, it is evident from the extensive debates on this issue in the US Senate Foreign Relations Committee in 2006, that the US administration and the Congress expect India to agree to unqualified IAEA safeguards in perpetuity, with no conditions on life-time fuel

supply guarantees associated with it. Has the government reconciled this major difference with the US administration before proceeding with negotiations with the IAEA? The UPA's Note has failed to mention any corrective measure which the Government may have in mind to ensure uninterrupted operation of the civilian reactors in the event of disruption of foreign fuel supplies; The UPA's Note evades the question by answering that "corrective measures would depend on the nature of the disruption". There does not seem to be any enforceable link between safeguards in perpetuity to be executed with IAEA and disruption of fuel supply. Will the UPA concretely elaborate upon some of the corrective measures that have been conceived, in the case of disruption of fuel supply?

4. SEPARATION PLAN OF MARCH 02, 2006

The UPA's response says: "There is no adverse implication of non-reference to the Separation Plan in the 123 Agreement. The Separation Plan finalized voluntarily by Government of India is in our national interest. It is not a bilateral document". However, on August 17, 2006 the Prime Minister told the Parliament

"...during President Bush's visit to India in March this year, agreement was reached between India and the United States on a Separation Plan in implementation of the India-US Joint Statement of July 18, 2005.

" This clearly indicated that the Separation Plan is a mutually agreed, bilateral document. However, now the Government holds that this Plan is not a bilateral document. There is no mention of the Separation Plan of March 2, 2006 in the 123 Agreement. This Plan is the only document wherein the Indian position on the approach and guiding principles under which separation will be done, the present and future facilities we intend to place on safeguards etc. are described. By not taking this document into official record through the bilateral 123 Agreement, the Government has left the possibility open for future US administrations to dispute the contents of the Plan, including the basic policy statements contained therein on separation. The only US document which calls for details of the Separation Plan of March 2, 2006 is the Hyde Act. Sections 104(c)(2)(a), 104 (g) (I)(A)(ii) and 104(g)(2)(D)(i) of the Act all refer to the Plan. At a later date, if there arises a dispute

on the contents of the Plan, India will have to take shelter under what is included about the Plan in the Hyde Act. Ironically, however, the UPA's Note repeatedly states that India has nothing to do with the Hyde Act and the 123 Agreement is a stand alone agreement.

5. FULL NUCLEAR CO-OPERATION

There are two separate issues regarding full nuclear cooperation: one pertains to "sensitive nuclear technology" and the other to "dual use technology". "Sensitive nuclear technology" is defined under Article 1(Q) of the 123 Agreement, while the definition of dual-use item appears in Article 1 (E), where it says: "'Dual-Use Item' means a nuclear related item which has a technical use in both nuclear and non-nuclear applications."

Regarding dual use technology, the UPA's Note quotes Article 5.2 of the 123 Agreement which says that "Transfers of dual-use items that could be used in enrichment, reprocessing or heavy water production facilities will be subject to the Parties' respective applicable laws, regulations and license policies". Clearly, no relaxation is being made for India on this count since even without the 123 Agreement, the applicable laws, regulations and license policies would have governed such transfers. The UPA's Note states: "For the dedicated national reprocessing facility that we would be building, we can source the dual use items, if it [sic] is required". Under the applicable laws, regulations and licensing policies presently existing, this is not possible for nuclear facilities. There are restrictions on the export of such technologies to India both by the US and by the NSG; Such items may be allowed to be exported on a case-by-case basis, for strictly non-nuclear use, after strict verification and application of end-use restrictions. These restrictions have not been lifted under the 123 Agreement.

For sensitive nuclear technology the UPA's Note states:

"Furthermore, such technology can be accessed from other NSG countries as well, and this is not prohibited under the 123 Agreement." It may not be prohibited under the 123 Agreement, but Sections 103(a)(5) and 104(d)(4)(A) & (B) of the Hyde Act will not permit such transfers. The intent of all US policy currently is to restrict enrichment and reprocessing technologies to the few countries that already possess them. India, as has been repeatedly declared by the US, is not in this list of countries. Further the Conference Report on the Hyde

Act states clearly that the US administration at no point required the inclusion of enrichment and reprocessing rights in the nuclear deal with India. To quote the Conference Report: "The conferees Note that the Administration has already stipulated that 'full civil nuclear cooperation', the term used in the July 18, 2005, Joint Statement between President Bush and Indian Prime Minister Singh, will not include enrichment or reprocessing technology"

Further, the Section 103(a)(5) stipulates that it shall be US policy "... to work with members of the NSG, individually and collectively, to further restrict the transfers of such equipment and technologies, including to India". Section 104(b)(7) requires the President to certify that the NSG has decided by consensus to permit supply to India of nuclear items covered by the guidelines of the NSG. The policy directive from Congress and the consensus requirement in NSG decisions would mean that the US administration representative in the NSG will be legally compelled to vote against any transfer of sensitive technology and equipment for enrichment, reprocessing and heavy-water production to India.

6. ANNUAL CERTIFICATION/ASSESSMENT BY THE US PRESIDENT

The UPA's Note fails to explain the rationale behind the clear contradiction of the Prime Minister's solemn assurance to the Indian Parliament that annual certification by the US President "is not acceptable to us". Since nothing materially has changed in the Hyde Act since the time of the Prime Minister's assurance (except calling certification as "assessment"),

it is not clear how the earlier unacceptability of the Hyde Act's provisions is now transformed into one of "India is not concerned with the same as these reporting requirements are internal between the US Congress and the US President". With respect to the UPA's contention of the hypothetical nature of the queries raised and the issue of permanent waiver, they have already been addressed in Section 1 above. If the proposition that a future President may choose to consider the sections that President Bush has stated are non-binding is considered hypothetical, so is the argument that no future President will differ with President Bush on this count.

7. CONSENT TO REPROCESSING

The UPA's Note states that it has got an upfront consent for reprocessing and there is no ambiguity on this. This is not borne out by Section 6(iii) of the

12i Agreement, which talks about "subsequent arrangements 'and procedures." which need to be arrived at. The UPA should first explain in what manner the in-principle consent for reprocessing in the current- 123 Agreement is different from that in the Tarapur 123 Agreement, where also there was such in-principle consent for reprocessing but no reprocessing has been allowed so far. In order to exercise the right to reprocess, as per Section 131 of the Atomic Energy Act of the US, a separate agreement has to be negotiated and Congressional consent taken. Therefore, at this stage the "upfront reprocessing rights" are only notional.

8. ENERGY ISSUES

Energy requirements of the country merit the exploitation of all sources of power. However, it must be recognised that capital cost of plants and the cost of electricity are also very important concerns, especially in the backdrop of experiences like the Enron fiasco. The Government of India for the last 15 years has not been able to find money to invest in the power sector, leading to a slow down in the sector. and increased shortages. Therefore, the capital cost of plants is important in choosing the energy mix for the future. In this, the capital cost of imported reactor based plants, which is , almost three times that of equivalent capacity coal-fired plants, will need to be considered.

The UPA's Note does not respond to the queries made in the Left Parties' Note regarding the basis of the Government's projection of reaching 40,000 MW of nuclear power generation by 2021-22. It is silent on the Integrated Energy Policy of the Planning Commission. It is simply stated, "projected figures have thus been worked out after careful analysis". No policy document is quoted or referred to. If the Government has indeed worked out a different energy scenario from that contained in the Integrated Energy Policy, there is a need to put this in the public domain for an informed debate. Only after that can future requirements of nuclear energy be projected instead of using arbitrary projections to justify very large investment in imported reactors.

The UPA's Note refers to IAEA data in order to show "the resurgence of interest in nuclear power globally". But again there is no reference to any specific document or study in this regard. Worldwide, there are 429 power reactors in operation, many of which are slated to be phased out in the coming years. Only 24 new plants are under construction. By all accounts, the major thrust in new nuclear plants is supposed to be in China and India and not the developed countries., In China's case, they are currently adding

about 50 GW of power generation capacity every year and therefore the 40 GW figure to be added by 2030 stated by the UPA's Note would be 4-6 per cent of their additional installed capacity. The US has announced various subsidies for the next 6 nuclear plants and hopes this will spur the dormant US market for nuclear plants. Even with this, no new nuclear plant has begun construction. Therefore the talk of a "renaissance" in nuclear power is at the present only speculative and very little evidence is visible regarding such a renaissance.

Even though various energy fora have been pushing for the use of nuclear power to reduce greenhouse gas emissions, the Inter-Government Panel on Climate Change has estimated that upto 2030, the expansion of nuclear power would have only marginal impact on greenhouse gas emissions. Thus de-carbonising the economy using nuclear power is also not a serious option.

9. IMPACT OF IMPORTED REACTORS ON DOMESTIC INDUSTRY

The UPA's Note has not addressed the central issue raised that if the power plants are set up with domestic reactors, a consequent sourcing of equipment from domestic industry will take place. If they are imported in large numbers as is being proposed, then such sourcing will help industries elsewhere but not domestic industry: we would be helping to revive the moribund nuclear industry in the US and elsewhere. By arguing, as the UPA's Note does, that imported Light Water Reactors would be additional to domestic ones, the real issue is not addressed. The UPA's Note has also failed to respond to the question how much of the future nuclear programme will be from domestic reactors and how much from imported reactors. As we had raised in our earlier Note, what is required is a detailed study of the proposed nuclear investments taking into account the imported and domestic options, a study which the Government appears not to have done.

10. COST OF ENERGY FROM VARIOUS SOURCES

The problem with UPA's Note is that it first talks about the historical costs of electricity from different vintages of plants and then tries to average the same. Such an approach does not carry much meaning in evaluating energy options today. For example, in coal-fired plants, NTPC's Singrauli plant delivers power at less than Re 0.80 per unit while its newer plants deliver power at around Rs. 2.00. This is because the capital servicing cost of older plants such as Singrauli and TAPS (Tarapur Atomic Power Station) 1 & 2 have been entirely written off, allowing for a cheaper generation tariff.

Similarly, hydro plants in Kerala supply power at only Re. 0.03. This in no way can be used to argue that a hydro plant today will generate power at similar costs nor can current hydro tariffs be clubbed with older ones to arrive at an average cost. Therefore the statement that the average cost of generating electricity from existing nuclear plants in the country is Rs. 2.30 is misleading. The key issue is the cost of power from 'the latest nuclear and coal fired plants or estimated cost of nuclear and coal fired plants today. If we take the cost of the newer nuclear plants, per unit costs are Rs. 3.03 from Kaiga and Rs.2.85 from Tarapur. These need to be compared to the cost of generation from the same vintage of coal fired plants, which are around RS,.2.00 per unit even for non-pithead plants.

For future plants, the Government has referred to costs of electricity from a study "Economics of Light Water Reactors in India" to justify the figures of Rs. 2.50 per unit of electricity and the comparative advantage of nuclear power. As such a study is not in the public domain, it is difficult to comment on its calculations. However, the levellised tariff of Rs.1.14per unit for nuclear is not in conformity even with the average tariff from nuclear plants that the UPA's Note mentions, let alone the latest generation costs of plants such as Kaiga and Tarapur quoted above.

We have a study of the Nuclear Power Corporation "Light Water Reactors in India: an Economic Perspective". This document also does not furnish any detailed calculations. However, it takes the capital cost per MW as Rs. 5.74 crore, which is lower than even the cost of domestic reactors. Even by UP A's own admission, the figure of Rs.5. 74 crore per MW corresponds to the lowest end of the capital cost band of \$1200-2500 per KW as per the UPA Note. The figures used are from the original cost estimates of Koodankulam, where two Light Water Reactors are being supplied by the Russians. According to press reports, the current cost estimates of Koodankulam are already around \$1,700 per KW. This is not surprising, as almost all nuclear plants including that of NPC have had large cost and time over runs. Therefore, the cost of electricity from nuclear plants by taking unrealistic capital cost is not very meaningful. It has been estimated that the cost of Koodankulam power is unlikely to be less than Rs.3.75 per unit, which is in consonance with the cost per unit from Kaiga and other such plants, factoring in time difference of installing these plants.

The UPAs Note talks about imported reactors costing between \$1200-2500 per KW. Again, the question posed in the Left Parties' Note was, what are the studies on the basis of which comparative costs of different

nuclear reactors and of the constructed nuclear plants have been arrived at? The wide range of prices of reactors quoted by the UPA's Note appears to indicate that no serious study has indeed been made in this regard. In the absence of such a study, we then would need to follow existing costs of nuclear plants and various studies done by independent agencies for estimating the capital costs of nuclear plants. And all this points to \$2,000 per KW as a reasonable cost: "the cheapest plants built recently, all outside the US, have cost more than \$2,000 per kilowatt. (Nuclear Power's Missing Fuel, 10-7-2006, Business Week magazine).

If we use the capital costs of Rs. 9 crore per MW for overnight costs (costs without taking interest during construction), the more commonly used figures internationally for Light Water Reactors, the cost of electricity from such plants is in the range of Rs. 4.75 per unit. As against this, the cost of electricity using imported coal in the Mundra project is Rs. 2.20. The Sasan project, which is at pithead and therefore has lower cost of fuel is around Rs. 1.19 per unit. Even gas-based units at much higher gas costs of \$4-5 per million BTU would be Rs. 2.50-Rs.3.00 per unit of electricity. These are well below the cost of electricity from imported reactors.

As we have said in our Note, we do believe that the nuclear option must be kept open and the technology that we have developed indigenously as well as investments for the Fast Breeder and the thorium cycle need to be kept up. The question here is how do high cost imported reactors fit into such a programme and are we not endangering our economy and the power sector by making investments in such high cost power?

11. SHORTAGE OF URANIUM

The UPA's Note has not answered why a shortage of uranium has occurred in the country, given that the amount of uranium required to power the indigenous PHWR programme was well known. However, if the Government states that the planned and on-going investments in uranium mining will bridge the gap between supply and demand, is it asserting that for the domestic PHWR and the Fast Breeder programme, we have enough uranium supplies? If so, where is the need for importing uranium? Is it then only for the high cost imported Light Water Reactors?

12. SERIOUS LIMITATION PUT ON INDIGENOUS THREE-STAGE POWER PROGRAMME

The UPA's Note states, "India has no intention to place fast breeder reactors

under safeguards. The new reprocessing facility is not linked to India's breeder programme". The Government's position has all along been that the import of foreign reactors was for the "additionality" they provided, in both the direct electricity production from these reactors, but more importantly due to the benefit of reprocessing their spent fuel and using the plutonium thus obtained in downstream fast breeders which form part of the three-stage power programme. For example, Table-11 from the DAE document "A Strategy for Growth of Electrical Energy in India" shows that from using the reprocessed plutonium from 8000 MWe of light water reactors (LWRs) by 2022, just the additional power produceable through the breeders in the three-stage indigenous programme could be 61,000 MWe. But, it is clearly stated in the UPA's response that the products (plutonium) from the new reprocessing facility will be used in safeguarded reactors and these do not include fast breeders.

The Separation Plan of March 2, 2006 stated that "India has decided, to place under safeguards all civilian thermal power reactors and civilian breeder reactors, and the Government of India retains the sole right to determine such reactors as civilian". It appears now the Government has taken a decision that India will have no civilian breeders. The plutonium from the new facility will then not be used in breeders, the mainstay of the three-stage indigenous programme. This is a major alteration of the Separation Plan presented to Parliament in March 2006 and harms the indigenous breeder development programme seriously.

The output from a safeguarded facility (in this case, the plutonium produced in the new reprocessing facility) can only be used in other safeguarded facilities. By taking the new decision that no fast breeder reactor will be placed under safeguards, the consequence is that no plutonium from foreign spent-fuel will ever be feeding the fast breeders of the three-stage indigenous programme. The earlier decision of the government was that we will have both civilian and military fast breeders. The civilian ones will be placed under safeguards and will use plutonium from foreign spent-fuel, while the military breeders will be outside safeguards and use the plutonium coming from our PHWR spent-fuel, where they have been fuelled with Indian natural uranium. By the current decision, the Government has succumbed to the US pressure to limit the fast breeder reactor and thorium utilization programme merely to using the plutonium that we can produce from limited Indian uranium supplies. If this is the case, the attractiveness of importing reactors to expand our future installed nuclear capacity has been substantially diminished. We are then proposing to expand that part of the

nuclear energy programme that will be far more dependent on external supplies and starving that part of the nuclear energy programme that could provide us with much greater energy security.

The purpose of reprocessing spent fuel is to use the plutonium thus recovered in breeder reactors. Otherwise, it is cheaper to hold the spent fuel in holding ponds and then bury them in stable geological strata. Reprocessing is much more expensive and is normally undertaken only for recovering the plutonium. This is the reason that the US, which has a stock-pile of plutonium and does not use breeder reactors, does not reprocess spent fuel anymore. Reprocessing' is important for India's three-stage indigenous programme only because it proposes to recover plutonium from spent fuel for use in the breeder programme. As any imported fuel would be under safeguards, the plutonium from such fuel would necessarily be under safeguards and cannot be used in non-safeguarded facility .. 1£ the breeder programme is kept out of safeguards, the purpose of reprocessing and building up this expensive facility is difficult to understand. Will the UPA explain what is the purpose of reprocessing that they see within the current scheme they are proposing? The UPA's Note states: "The new reprocessing facility is not linked to India's breeder' programme. The new facility is to, reprocess foreign supplied spent fuel under safeguards and its products will be used in safeguarded reactors." What then are these "safeguarded reactors" that are not breeder reactors and will still use the products of reprocessing spent fuel, presumably plutonium?

The UPA's Note has not responded to the specific query . made in the Left Parties' Note as to whether the implications, of building a new reprocessing plant under the present technology sanctions, and then putting it under IAEA Safeguards and Additional Protocol, have been examined.

APPENDIX - XLI

UPA Responses to the Assertions in the Left Parties' Rejoinder of 19 September

September 24, 2007

1. IMPACT OF US NATIONAL LAWS ON THE 123 AGREEMENT

- 1.1 Assertion:** UPA Note's contention that the Hyde Act provides a permanent waiver and implicitly recognizes India's status as a Nuclear Weapons State is not supported by the Hyde Act and the Joint Conference Report.

Response: The waiver provided by the Hyde Act is permanent in that it is not limited by time and does not require renewal through further and periodic acts of the US Congress. The Sunset provision [Section 104(f)] confirms that the waiver is one-time and not recurring. The Left Parties' Note appears to confuse reporting requirements as a qualification on the permanence of the waiver. The implicit recognition of India as a nuclear weapons state is affirmed by the Hyde Act's approval of civil nuclear energy cooperation with India despite our strategic programme and non-acceptance of full scope safeguards. In fact, Section 104 (b)(i) and Section 104 (c)(2)(A) of the Hyde Act both refer to India's military nuclear facilities, which is a terminology that can only apply to a nuclear weapons state.

- 1.2 Assertion:** UPA's response that Hyde Act does not apply to India is irrelevant. What is germane is how the Hyde Act would structure the implementation of the 123 Agreement . by the US Administration.

Response: There is a distinction between the Hyde Act, which is an internal US legislation, and the 123 Agreement, which has been bilaterally negotiated and agreed upon. India's commitments can only arise from an arrangement to which it is party, not from a legislation that was enacted by a foreign legislature. Once the US Congress approves the 123 Agreement, it would be the provisions of the 123 Agreement and not the Hyde Act that would determine the rights and

obligations of the Parties. The Left Parties Notes itself recognizes in paragraph 3 of page 2 that 'whichever is enacted later overrides the earlier one'. The approval by the US Congress of the 123 Agreement will obviously be enacted later than the Hyde Act and would be the definitive interpretation of US obligations in this regard. Left Parties may kindly clarify which Sections of the Hyde Act will impact the implementation of the 123 Agreement, once the Agreement is approved by the US Congress.

- 1.3 Assertion:** U/S Burns has stated that the 123 Agreement was completely consistent with the Hyde Act and well within the bounds of the Hyde Act itself. Our NSA has been quoted to the effect that we have not breached the Hyde Act and no law has been broken (in concluding the 123 Agreement).

Response: Secretary Rice in a public statement on 9 December 2006 took the position that the Hyde Act "explicitly authorizes civil nuclear co-operation with India in a manner fully consistent with the US-India Joint Statements of July 19, 2005 and March 2, 2006." It is clear from the statement that the Hyde Act is an enabling statute authorizing the US Administration to move forward with India in civil nuclear energy cooperation so that the commitments of the 18 July and 2 March Joint Statements could be fulfilled. This is the authoritative US position and it is in this context that the provisions of the Hyde Act should be considered.

The question of breaching the Hyde Act does not arise because the 123 Agreement, when approved by the Congress, will be the bilateral agreement determining the rights and obligations of the two parties. The position in this regard was recently affirmed by Assistant Secretary Richard L. Boucher who stated clearly during a briefing on 18 September 2007 that "the deal between the United States and India., the 123 Agreement".

- 1.4 Assertion:** After quoting remarks attributed to US Under Secretary and our NSA, the Left Parties' Note states that on all those matters that the 123 Agreement is silent, Hyde Act will bind the US actions.

Response: The text of the Hyde Act begins by defining its purpose as "to exempt from certain requirements of Atomic Energy Act of 1954 a proposed nuclear agreement for cooperation with India." The Hyde Act is an enabling legislation and not the implementing mechanism for cooperation between India and USA.

Assertion 1.5: Article 27 of the Vienna Convention the Law of Treaties does not appear to deal with a situation when a reference to national laws is made in the Agreement itself. This is to be distinguished from a situation where national laws are invoked after the Agreement has been accepted by both parties simply to avoid fulfilling voluntary undertaken obligations. The US has not ratified the Vienna Convention.

Response: As per Article 2.1 of the 123 Agreement, implementation of this Agreement will take place in accordance with the national laws of the respective parties. At the same time, Article 16.4 is clear that the 123 Agreement shall be implemented in accordance with the principles of international law. It is customary that when international obligations are undertaken, national laws are brought in conformity. Divergence between the two makes the performance of any agreement untenable. It cannot be the position of a Government that it would implement an international agreement in a manner inconsistent with its national laws. The reference to Article 27 of the Vienna Convention reflects a reiteration of customary international law that it codifies.

1.6 Assertion: There is no hierarchy between treaties and domestic legislations in the US and whichever is enacted later overrides the earlier one.

Response: This only confirms the Government's position on the 123 Agreement which was enacted later than the Hyde Act. International obligations such as the 123 Agreement are the "supreme law of the land" under Article VI (2) of the US Constitution. For the purposes of implementation of an international treaty, domestic law has to be brought in consonance with international obligations.

- 1.7 Assertion:** UP A's Note implies that the China-US 123 Agreement contains an empty reiteration of Article 27 of the Vienna Convention. The China-US Agreement "guards against the adverse consequence that may result from the US enacting fresh domestic legislation". The Agreement also states that bilateral safeguards are not required. It is different in terms of its obligations and safeguards than the Indian 123 Agreement.

Response: It may be noted that the first part of Article 2.1 of both the China-US and India-US Agreements are identical. In the second half of the Article, the reference to international law continues in the China-US Agreement but a similar provision has been shifted to Article 16.4 in the India-US Agreement. Therefore, Article 2.1 of the China-US Agreement should be compared as a whole to Article 2.1 read with Article 16.4 of the India-US Agreement.

The Left Parties' Note appears to imply that the formulation in Article 2.1 of the China-US 123 Agreement on international law is more advantageous than Article 16.4 of the India-US Agreement. In fact, the language of Article 16.4 of the India-US Agreement is more categorical through

its reference to "shall be implemented" rather than the China-US language of "recognize, with respect to the observance of this Agreement, the principle . . .".

There is no provision in the China-US Agreement that provides protection against the US enacting fresh domestic legislation;

The nature of our safeguards' provisions has also been contrasted with that of the China-US 123 Agreement. The Left Parties' Note has only cited Article 8(2) of the China-US Agreement, omitting any mention of the Memorandum of Understanding, dated 6 May 1998, between the two countries which provide for US personnel visiting the material, facilities and components subject to the Agreement annually and in special circumstances, making mutually acceptable arrangements for the addition or reduction of visits. The public testimony of ACDA Director Ken Adelman to the US Congress on 31 July 1985 is also relevant in this regard.

- 1.8 Assertion:** In advancing the merits of the India-US. Agreement, there is no mention of an overriding escape clause . in Article 14.2, where termination is sought when resolution has not been possible or cannot be achieved through consultations. The questions of material violations arise only when violation of the Agreement is cited as reasons for termination under Article 14.3. The India-US 123 Agreement provides for open-ended right of termination by the US; by citing any reason it wishes. In contrast, the Japan-US 123 Agreement provides for cessation/termination only when there is non-compliance with the accord's provisions, arbitral tribunal's decisions or material breach of safeguards.

Response: It should be recognized that as an Agreement between two equal partners, both sides can invoke Article 14.2 in exceptional circumstances as warranted by their national interests.

As noted in the earlier Note, the India-US 123 Agreement has a multi-layered process of consultations dealing with the contingency of termination and cessation of cooperation. No other 123 Agreement has a provision of the complexity and breadth of arrangements and processes that are contemplated in Article 14. The obligation to "consider carefully the circumstances" that may lead to cessation! termination is a significant commitment. So too is the Agreement to take into account circumstances resulting from a changed security environment and as a response to similar actions by other states impacting national security. Article 14.2 of the Agreement should therefore be read in its totality rather than have some of its provisions quoted selectively.

The drafting of the Article has taken into account the broader implications of India having a strategic programme. It would be fallacious to contrast these aspects with the Japan - US 123 Agreement since Japan does not have a strategic programme.

- 1.9 Assertion:** The argument that arbitration is inferior to consultations is difficult to understand. Government should, explain how the 123 Agreement's consultation clause is superior to the consultations clause of the 1963 Tarapur Agreement.

Response: India retains the right to ensure uninterrupted operation, of its civilian, nuclear reactors. Arbitration would only circumscribe our freedom of action and is not in our national interest.

We have learned from the Tarapur experience and Government has ensured that it will not be placed in a similar situation again. The consultations clause in the 123 Agreement (Article 13) differs from the 1963 Agreement, as now, the Agreement is between equal parties. It is explicitly recognized 'that they are between 'two states with ,advanced , nuclear technology, which have agreed to assume the same responsibilities and. practices and acquire the same benefits and advantages ,as, other .leading . countries with advanced nuclear technology. This is further buttressed by the. consultations provisions of Article 14.2 of the 123 Agreement.

- 1.10 Assertion:** The US will not, in the final analysis, 'allow its international law obligations to stand in the way of its perceived national interests.

Response: The Left Parties have stated that the US will not allow its international law obligations to stand in the way of its perceived national interests. They should be as confident of Government of India's ability to secure our national interest. After all, on nuclear issues, successive Indian Governments have resisted external pressures to accede to the NPT and the CTBT.

- 1.11 Assertion:** President Bush .may have treated Section 103 of the Hyde Act as non-binding in his Statement of Signing but future US Presidents may regard it as binding.

Response: Section 103 of the Hyde Act, which deals with Statements of Policy, is advisory in nature. The United States has a long history of Presidential Signing. Statements. These are neither unique to the present Administration nor to the Hyde Act. In any case, as mentioned in paragraph 1.2 above, with the approval by the Congress of the 123 Agreement, the issue of binding and non-binding aspects of the Hyde Act on the Administration would be permanently settled. There need

be no apprehension of future uncertainties on this score. While every legislature is sovereign, it is also customary for successor Governments to honour commitments made by their predecessors.

2. FUEL SUPPLY ASSURANCES

- 2.1 Assertion:** Hyde Act has ignored all the fuel supply assurances made, in the Separation Plan. Government is still not clear about the fuel supply assurances in the 123 Agreement, which it has itself negotiated. Several sections of the Hyde Act stand in the way of the fuel supply assurances. Hyde Act needs amendment before other NSG nations help us accumulate fuel reserves. The terms that other NSG countries would offer will have to take into account the Hyde Act.

Response: By its very nature as an enabling legislation, the Hyde Act is not required to include fuel supply assurances. The Act was meant only to exempt from certain requirements of the US Atomic Energy Act of 1954 a proposed nuclear agreement for cooperation with India. The 123 Agreement, which was negotiated thereafter, included them in toto. This validates our contention that it is the 123 Agreement and not the Hyde Act that should be treated as governing the rights and obligations of the parties.

It is only after the adjustment of NSG guidelines takes place that the position of NSG countries on fuel reserves will become final. It is not clear how the Left Parties assume that other NSG countries, who are all sovereign states, are bound by the Hyde Act. This is an enabling legislation applicable only to the US Administration. The question of it applying to NSG Governments, such as Russia or China, does not arise.

3. IAEA SAFEGUARDS AND ADDITIONAL PROTOCOL

- 3.1 Assertion:** UPA's Note evades answering the nature of corrective measures. There does not seem to be any enforceable link between safeguards in perpetuity to be executed with IAEA and disruption of fuel supply..

Response: It would not only be difficult to define corrective measures without context or circumstances, but will be

injudicious to do so. Any narrowing of the concept through arbitrary definition at this stage would diminish our flexibility of response. As regards the two issues of safeguards and fuel supply assurances, Article 5.6 and Article 10 of the 123 Agreement are self-explanatory. In fact, Article 10.2 specifically begins with the words "Taking into account Article 5.6" when committing to the conclusion of an IAEA Safeguards Agreement. The early conclusion of the India., specific Safeguards Agreement with the IAEA would further clarify matters. The Government has made clear that the application of safeguards on our civilian reactors would coincide with their receiving the benefits of international cooperation.

SEPARATION PLAN OF 2 MARCH 2006

- 4.1 Assertion:** UPA Note's claim that the Separation Plan is not a bilateral document is contradicted by PM's statement of 17 August 2006. Lack of reference to the Separation Plan in the 123 Agreement would allow future US Administrations to dispute its contents.

Response: There is no contradiction between PM's statement of 17 August 2006 and Government's view that Separation Plan is, not a bilateral document. Agreement was indeed reached on 2 March 2006 on some aspects of the Separation Plan pertaining to fuel supply assurances as they involved US obligations. However, the principles of separation and the identification of civilian facilities were entirely our prerogative. It remains our view that key decisions on our nuclear programme should be made solely by India and that bringing them into the purview of a bilateral arrangement is not in the national interest.

5. FULL NUCLEAR COOPERATION

- 5.1 Assertion:** Sourcing dual use items is not possible for nuclear facilities and restrictions have not been lifted under the 123 Agreement. Sensitive nuclear technology transfers are also restricted and the US would vote against any move to do so in the NSG.

Response: As, explained in the earlier UPA Note, the 123

Agreement meets all the benchmarks articulated by the Prime Minister in Parliament, i.e., nuclear fuel, nuclear reactors and reprocessing spent fuel. India is treated as other states with advanced, nuclear technology. Over and above that; we have secured forward-looking language in Article 5.2. There are no legal impediments to the supply of dual use items. The 123 Agreement, even if it is read in a restrictive manner, cannot in any case apply to other NSG 'suppliers. Other suppliers have shown interest in concluding bilateral agreements on civilian nuclear energy cooperation with India once ' NSG Guidelines are adjusted.

6. ANNUAL CERTIFICATION / ASSESSMENT BY THE US PRESIDENT

- 6.1 Assertion:** Certification 'has merely -been changed by calling it an assessment. Future US Presidents could differ with the current one regarding the non-binding provisions-of the Hyde Act.

Response: There is a major difference between a certification and an assessment. The absence of certification could constrain further cooperation and condition a 'waiver. That is not the case with assessments, which are an internal exercise between two branches of the US Government, without operational impact on the cooperating party. Such assessment requirements have existed well prior to the enactment of the Hyde Act. The issue of: future Presidents reopening the interpretation of the Hyde Act has already been addressed in paragraph 1.10 above..

7. CONSENT TO REPROCESSING

- 7.1 Assertion:** Section 6 (iii) of the 123 Agreement talks about "subsequent arrangements and procedures". The claim of upfront consent is not, borne out by Section 6 (iii) of the 123 Agreement. Government should explain how this is different from the earlier Tarapur Agreement.

Response: There is no reference to "subsequent arrangements or procedure" in Article 6 (iii) of the 123 Agreement. The consent rights secured in respect of

reprocessing are regarded as 'upfront' because they do not envisage case by case approval of reprocessing requests. Taking the Tarapur experience into account we have specified timelines to begin as well as conclude our discussions on the reprocessing arrangements. This represents a significant step forward.

8. ENERGY ISSUES

8.1 Assertion: The capital costs of imported reactor based plants, which is almost three times that of equivalent capacity coal - fired plants, will need to be considered.

Response: The 123 Agreement is an enabling mechanism for bilateral cooperation in civilian nuclear energy. It does not oblige us to invest in nuclear power projects, if they are not cost effective.

It is true that capital cost of electricity generating plants is important, but the most important aspect is the tariff to be paid by the consumers. In this regard, several studies carried out by analysts in India and abroad have clearly brought out the competitiveness of nuclear power. Such studies, analyzed by the CEA, have concluded that there is a clear confidence in the economic competitiveness of new nuclear builds in liberalized electricity markets, as well as in the economic affordability of the benefits, from a sustainable development perspective, brought by the reprocessing and recycling fuel cycle strategy (compared with the open once-through fuel cycle option).

8.2 Assertion: The UPA Note is silent on the Integrated Energy Policy of the Planning Commission and there needs to be an informed debate on different energy scenarios.

Response: The report of the Planning Commission on the Integrated Energy Policy was issued in August 2006 and at that point of time opening up of international civil nuclear cooperation with India was emerging as a distinct possibility. Therefore, on page 35, the Report says, "It is also envisaged that in the first stage of the programme, capacity addition will be supplemented by electricity generation through light water

reactors, initially through import of technology but with the longer term objective of indigenization". The XI plan proposals of the DAE consider launching construction of 10 large reactors during the XI plan.

- 8.3 Assertion:** Talk of a renaissance in nuclear power is speculative.

Response: There is a clear demonstration of resurgence of interest in nuclear power globally. In his speech to the General Conference at the IAEA on 17 September 2007, IAEA.

Director General stated the following: "Most of the recent expansion has been centred in Asia; Countries such as Indonesia, Thailand and Vietnam have concrete plans or have expressed their intent to introduce. nuclear power - and plans for expanding existing nuclear power programmes are being implemented in China, India, Japan, the Republic of Korea and Pakistan. And of course, this renewed interest is not limited to Asia. Other countries, such as Algeria, Belarus, Egypt, the Islamic Republic of Iran, Jordan, the Libyan Arab Jamahiriya, Nigeria, Turkey and Yemen are among those considering or moving forward with the infrastructure needed to introduce nuclear power programmes. And many others, such as Argentina, Bulgaria, Finland, France, South Africa the Russian Federation and the United States of America, are working to add new reactors to their existing programmes."

There are definite indications of the likely start of construction in the United States in the near future. The status of new nuclear power plants in the USA is available on the website of Nuclear Energy Institute." It may be worthwhile recalling that in March 2007, Exelon was awarded the first Early Site Permit (ESP) for this Clinton plant in Illinois, by the USNRC and the USNRC decided' to award the second early site permit to Entergy for its Grand Gulf site. Further ESP applications are pending with the USNRC. This indicates a clear movement towards setting up of new nuclear power plants in the United States.

- 8.4 Assertion:** Decarbonising of the economy using nuclear power is not a serious option.

Response: Decarbonising of economy using nuclear power is a slow process. Massive expansion of electricity will take place only in developing countries where initial introduction of nuclear power has to be preceded by building up of human resource and infrastructure needed for operation and management of nuclear power plants. Therefore, with regard to decarbonising one has to see the impact of nuclear power over a longer-term horizon.

9. IMPACT OF IMPORTED REACTORS ON DOMESTIC INDUSTRY

9.1 Assertion: UPA Note has not addressed the issue of domestic sourcing for the, new power, plants. We would be helping to revive the moribund nuclear industry in the US and elsewhere.

Response: Manufacturing capability of Indian industry is much more advanced as compared to what it was in the 60s~ when decision to launch nuclear power programme based on Pressurized Heavy Water Reactors was taken. Now it is within the capability of Indian industry to manufacture several equipment and component for light water reactors. As we proceed with setting up of light water reactors, progressive indigenization will be our goal as this will make the reactors much more competitive. We expect that opening up of international nuclear cooperation with India will not only provide an opportunity to Indian industry to manufacture components and equipment for light water reactors to be set up in India but also to provide, similar manufacturing services for setting up of reactors abroad. Manufacturing industry in India has been exploring all such possibilities with their counterparts abroad and has discussed their blueprints with NPCIL and the DAE. This is similar to outsourcing of manufacturing by advanced countries to India in other sectors, such as automobile industry.

It may be recalled that India is having a dialogue with the Russian Federation and France. As a result of the dialogue with the Russian Federation, a Memorandum of Intent for setting up additional reactors at Kudankulam and new sites was signed on 25 January 2007. A declaration by India and France on the development of nuclear energy for peaceful purposes was signed in February 2006 and this declaration

envisages cooperation to cover "application of nuclear energy to power generation, including setting up of power projects" .

Thus, the NPCIL's projection of reaching 40,000 MWe, of nuclear power by 2021 -- 22 is based on several parallel efforts viz. indigenous PHWRs and FBRs, and reactors to be set up in technical cooperation with France, Russian Federation and the USA. Even if there has been no construction of nuclear power plants in the United States itself, it would be erroneous to regard nuclear industry, particular in. countries like France, Russia or Japan as moribund.

10. COST OF ENERGY FROM VARIOUS SOURCES

10.1 Assertion: The UPA Note refers to historical costs that are not relevant to evaluating energy options today. The key issue is, to compare the cost of latest nuclear and, coal fired power plants. How do high-cost imported reactors fit into our indigenous programme and do they endanger the economy?

Response: Norms for fixing tariff of electricity from nuclear power plants in India have been continuously evolving. In the initial development phases, norms, for fixing tariff were based on single part tariff, a base capacity factor of 62.8 per cent, and levies for research and development, renovation and modernization. Later, the policy was revised and base capacity factor was increased to 68.5 per cent and the levies on research and development, renovation and modernization were withdrawn. This change in norms has made the tariff of electricity from nuclear power plants more competitive.

A high level tariff committee is presently studying the tariff policy afresh. It is likely that in the coming years, when the present mismatch of fuel demand and supply is overcome, the tariff policy would shift to two part tariff concept as applied in coal fired plants. This will result into tariff as attractive as thermal plants.

The policy on tariff for light water reactor is also being worked out. It is quite likely that two part tariff concept identical to the coal fired units will be applicable to such nuclear power plants right from the initial stage itself. For example at Kudankulam,

when the project gets complete on finished cost of Rs. 13,171 crores (\$ 1570/kWe), the tariff, on this basis is expected to be Rs.1.99 in the year 2008-09.

With regard to capital costs, the overnight costs of, commercial nuclear power reactors in the world vary from 1200 to 2500US\$/kWe. There are no international numbers available for the cost/kWe for the various types of reactors available viz. AP-1000, EPR-1650, BN-1000, ABWR, ACR1000 etc. The total cost will depend on the business model, participating organization/ country, mode of implementation i.e. turnkey/technical cooperation, indigenous content and the innovative financial schemes. Foreign vendors mostly provide Nuclear Steam Supply (NSS Island). The Generating Plant, Balance of Plant. and integration of these three islands (NSS, GP & BOP) is normally offered through a consortium. The cost towards construction and commissioning (local activities) form a sizeable portion of about 10 per cent of the total cost. By judicious choice in finalizing participating countries and the share of Indian industry (localization), a project costing between 1400 to 1500 \$/kWe can be conceived. A base case of overnight costs of 1500 US\$/kWe is considered possible. Though the capital costs are higher than thermal power stations, the imported reactors produce electricity at competitive rates in view of low fuel charge which is estimated at about 55 Paise/kWh. The corresponding fuel charge at non pit head locating for a coal thermal power station is about Rs. 160/kWh.

11. SHORTAGE OF URANIUM

11.1 Assertion: Do we have enough uranium supplies for domestic PHWRs and are we importing fuel only for imported LWRs?

Response: For domestic planned PHWR programme, i.e. up to a total installed capacity of 10,000 MWe, we do have enough uranium in the country. However, if additional uranium is available to us from the international market we need not limit the installed capacity to 10,000 MWe. We can import uranium and set up additional pressurized heavy water reactors.

12. SERIOUS LIMITATION PUT ON INDIGENOUS THREE STAGE

POWER PROGRAMME

12.1 Assertion: There is a major alternation to the Separation Plan in not using safeguarded plutonium from LWRs for the breeder which harms the indigenous breeder programme seriously.

Response: There is no change in the Government's position regarding placing fast breeder reactors under safeguards. As noted in paragraph 14 (ii) of the Separation Plan, India is not in a position to accept safeguards on PFBR and FBTR as they are at an R&D stage and technology will take time to mature. Where future reactors are concerned, the Government retains the sole right to determine such reactors as civilian, obviously taking all factors into account. As conveyed in the earlier UPA Note, we have no intention of placing current fast breeder reactors under safeguards. We will consider offering specific fast breeder reactors for safeguards only after technology has stabilized and we are ready to use plutonium recovered from spent fuel of foreign origin.

APPENDIX - XLII

Left Parties Note: Indo-US Nuclear Cooperation Agreement: Implications for India's Foreign Policy and Security Matters.

October 2, 2007.

INTRODUCTION

It is relevant to recall that in 2004, when the United Progressive Alliance government was formed, the National Common Minimum Programme contained in its foreign policy section the following: "The UPA government will pursue an independent foreign policy keeping in mind its past traditions. This policy will seek to promote multi-polarity in world relations and oppose all attempts at unilateralism." It is also significant that on relations with the United States, the NCMP stated: "Even as it pursues closer engagement and relations with the USA, the UPA government will maintain the independence of India's foreign policy position on all regional and global issues." There was no mention of strategic ties with the USA because it was evident that such a strategic relationship would go contrary to the main direction of foreign policy proposed in the NCMP.

The subsequent decision by the UPA government to project the building up of an India-US strategic partnership as the cornerstone of India's foreign policy is going against the spirit and direction of the foreign policy envisaged in the NCMP. As the Left Parties have pointed out, the proposed civil nuclear cooperation with the United States as embodied in the 123 Agreement cannot be regarded as a stand-alone project; it forms an integral part of a broader Indo-US strategic alliance. Indeed, senior officials of the Bush administration have been explicit about this connection. The US side has embellished the rationale of the "strategic partnership" in terms of a tryst with India's destiny - to "help" India become a "major world power in the 21st century". Ironically, when it comes to India's vital interest in claiming a permanent seat in the UN Security Council, the US has refused to back India.

The US side considers the civilian nuclear cooperation as deepening Indo-US strategic partnership and elevating it to a "new strategic level". A prominent India hand in the Bush administration, Ashley Tellis, argues:

For the United States, the ultimate value of the US-Indian relationship is that it helps preserve American primacy and the exercise thereof by constructing a partnership that aids in the preservation of the balance of power in Asia, enhances American competitiveness through deepened linkages with a growing Indian economy, and strengthens the American vision of a concert of democratic states by incorporating a major non-Western exemplar of successful democracy such as India.

The resonance of such strategic thinking in the Indian side is reflected in the words of K. Subramanyam, Chairman of the Task Force on Global Strategic Developments, set up by the Prime Minister in November 2005:

The US strategy is to help develop a balance of power in Asia so that China would not emerge as the sole superpower in the continent ... the US decision announced on March 25, 2005 that its (US') goal is to help India become a major world power in the 21st century. If we understand the long-term vulnerabilities of the US, and therefore its stake in the Indian partnership, we would have greater confidence in the American initiative.

The similarity between the thinking of the Chairman of a Prime Minister appointed task force on Strategic Developments and those arguing for a strategic relationship between India and the US, in order to preserve "balance of power in Asia", is indeed striking.

The text of the 123 Agreement in its preamble states that India and the US have arrived at the agreement being, among other things, "desirous of strengthening the Strategic Partnership between them". The vision of the US, as far as India's role in the strategic partnership is concerned, is clearly stated in the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006, enacted by the US Congress in order to enable civilian nuclear cooperation with India. The Hyde Act states that such cooperation with a non NPT signatory like India can occur if:

...the country has a functioning and uninterrupted democratic system of government, has a foreign policy that is congruent to that of the United States, and is working with the United States on key foreign policy initiatives related to nonproliferation; [Section 102 (6) B]

It goes without saying that "congruence" with US foreign policy also amounts to a subversion of India's independent foreign policy. The UP A has insisted that such provisions of the Hyde Act are not relevant for India. Unfortunately, the record of the UPA government so far shows that it has actually framed

policies, which reflect an effort to attain "congruence" with US policies. In its pursuit of a strategic partnership with the US, disregarding the commitment made in the NCMP, the UPA government has already made compromises on India's independent foreign policy.

1. Compromises on Independent Foreign Policy

STAND ON IRAN

The UPA government's foreign policy orientations have shifted in a direction where there is a deliberate attempt to harmonise India's policies with US' global strategies. The most glaring of the consequent aberrations that have crept into India's independent foreign policy, as envisaged under the NCMP, lies in the stance that India adopted on the Iran nuclear issue. The circumstances leading to the complete volte-face by India during the vote on Iran in the International Atomic Energy Agency [IAEA] meeting in Vienna on 24 September 2005 remain largely unexplained by the UPA government.

Prior to the second vote on Iran at the IAEA, the US Ambassador David Mulford had publicly warned in January 2006 that the US Congress would not approve the Indo-US Nuclear Agreement unless India voted against Iran. Despite such a humiliating threat from the US, the UPA government went ahead and voted against Iran in IAEA for a second time in February 2006. Following the second IAEA vote, the United Nations Security Council took up the issue and has since imposed sanctions against Iran. The Bush administration has exploited the situation to pressurize Iran by proposing unilateral sanctions and is now seeking tougher sanctions against Iran despite the IAEA's repeated affirmation that no evidence is available regarding Iran's alleged nuclear weapons programme. More alarmingly, there are reports suggesting that the Bush administration may resort to a military attack on Iran in the coming months, bypassing the UN Security Council altogether. The Bush administration has openly called for a "regime change" in Tehran. India's votes against Iran at the IAEA went a long way in enabling the US to transfer the Iran file to the UN Security Council and to resort to threatening measures. This has definitely damaged the mutual trust in Indo-Iranian relations.

Iran shares civilisational bonds with India. It is also a strategically important country in India's extended neighbourhood. Successive governments in Delhi have fostered close relations with Iran and have regarded Iran as a factor of regional stability. However, even now the UPA government fights shy of constructively engaging Iran for the fear of antagonising the US,

which is most evident in the slowing down on the Iran-Pakistan-India gas pipeline project on the part of India. Iran recently voiced its unhappiness over India dragging its feet in the negotiations over the project and complained that it is being forced into a situation to go ahead with the project with Pakistan alone.

Richard Lugar, who was Chairman of the US Senate Foreign Relations Committee, in his opening statement for a meeting on Indo-US civilian nuclear cooperation on 28 June 2006 stated: "We have already seen strategic benefits from our improving relationship with India. India's votes at the IAEA on the Iran issue last September and this past February demonstrate that New Delhi is able and willing to adjust its traditional foreign policies and play a constructive role on international issues".

Subsequently, the Hyde Act was enacted by the US Congress. In a section of the Hyde Act, which deals with annual assessment and reporting to the US Congress by the US President on a variety of foreign policy issues related to India, it is also stated:

... an assessment of whether India is fully and actively participating in United States and international efforts to dissuade, isolate, and, if necessary, sanction and contain Iran for its efforts to acquire weapons of mass destruction, including a nuclear weapons capability (including the capability to enrich uranium or reprocess nuclear fuel), and the means to deliver weapons of mass destruction, including a description of the specific measures that India has taken in this regard; and (ii) if India is not assessed to be fully and actively participating in such efforts, a description of- (I) the measures the United States Government has taken to secure India's full and active participation in such efforts; (II) the responses of the Government of India to such measures; and (III) the measures the United States Government plans to take in the coming year to secure India's full and active participation [Section 104g(2) E (i)]

No legislation enacted in any foreign country has ever made such intrusive observations about India's foreign policy. The issue cannot be sidestepped by suggesting that the Hyde Act does not apply to India. Given the experience of the IAEA vote against Iran it is clear that India would be continuously subjected to US pressure to toe its line on Iran. Is there no link between the Indo-US Joint Statement of July 2005, which announced the civilian nuclear cooperation, and India's vote against Iran at the IAEA in September 2005? Not very long ago, India had envisioned a "strategic

partnership" with Iran "for a more stable, secure and prosperous region and for enhanced regional and global cooperation." [India-Iran New Delhi Declaration, January 2003]. Can the UPA government take a clear-cut stand that it will pursue such relations with Iran? Can the UPA government assure that the Iran gas pipeline project will go ahead despite the slowdown in the recent period?

IRAQ

The elections in occupied Iraq in December 2005 were generally perceived by the world community as an orchestrated propaganda exercise by the US. However, the UPA government saw those developments only through the American prism and welcomed the elections as a significant step forward in the Iraqi political process. In retrospect, it is clear that neither was there a legitimate political process in occupied Iraq, nor could there be one so long as it remains an occupied country. The restoration of Iraqi sovereignty is the real issue. The UPA government's optimism was completely unfounded when it hailed the elections as leading to a more inclusive and broad-based Iraqi administration and a development in Iraq's transition to full sovereignty and democracy. The Iraqi people have since made it clear that the core issue is the continued military occupation of their country by the US led aggressors.

The stance taken by the UPA government on the execution of Saddam Hussein was also deplorable. It overlooked the fact that the US denied justice to the former Iraqi President, and his trial was completely arbitrary. In its keenness not to displease Washington, the UPA government carefully avoided any outright condemnation of the summary execution of Saddam Hussein even without a proper trial. The fact remains that Saddam Hussein was a close friend of India and a participant in the Non-Aligned Movement. Yet, all that the UPA government could say was that it was "disappointed" with his execution. The government failed to reflect the public opinion within India, which was one of revulsion and abhorrence over the US' arbitrary behaviour as an imperial power, flouting elementary tenets of law, justice and fairness.

In the entire period of the UP A government in power, India has not spoken out against the war crimes being perpetrated by the US occupying forces in Iraq' and the death of thousands of innocent civilians. The government remained unmoved even by the most glaring atrocities like the massacre at Fallujah or the shocking revelations regarding torture at the Abu Ghraib prison. There was a time not too long ago when India, though much weaker

as an economic power than today, didn't hesitate to stand up as the conscience keeper of the world community, especially of the developing countries, voicing opinions about justness, peace and equality. In the given circumstances when the UPA government has to constantly calibrate its foreign policy orientations in terms of the US global strategies, the UPA government has lost the courage to assert India's moral leadership. Is this in keeping with the NCMP commitment of opposing all attempts at unilateralism?

PALESTINE

In deference to the strategic ties with the US and Israel, the UP A government has incrementally distanced itself from the Palestinian cause. The barbaric attacks on the Palestinians in Gaza and West Bank by the Israeli security forces have not received the attention of the Government. After hailing the Palestinian elections held in January 2006, the UPA government completely ignored the subsequent blockade of the Palestinian government by the Israeli authorities through blatantly coercive methods aimed at making the newly elected Palestinian leadership ineffectual. The UP A government has also remained a mute witness to the Israeli attempt to create isolated Palestinian enclaves in order to preempt any just solution to the Palestinian problem. The government has also been found wanting in fulfilling its commitment to the cause of Palestinian people for a homeland of their own. Is the UPA government willing to give a "fresh thrust" to the traditional ties with West Asia, as promised in the NCMP?

ISRAEL

The UPA government has remained silent about the highly provocative Israeli air attack on Syria on September 6, 2007. Despite Syria being a close friend of India in the Arab world, the dependence on the Jewish lobby in the US to canvass support for the Indo-US nuclear deal has made the UPA government beholden to Israel. This has not only made the UPA government look the other way as far as the Israeli atrocities against the Palestinians are concerned, but have led to a broadening and deepening of India's security cooperation with Israel. India has already emerged as the largest buyer of arms from Israel in the world with purchases touching US \$1.5 billion in 2006. All this despite the NCMP not mentioning Israel even once in its text.

"LOOK EAST" POLICY

India's "Look East" policy, formulated in the early 1990s, has a continued rationale. It aims at meeting the challenges of globalisation as well as creating a stable external environment within which the country's development becomes possible. The NCMP also emphasises "intensified" relationship with East Asian countries. However, the politics of creating rival blocs in Asia, which underlies the vision of preserving the "balance of power in Asia" shared by the US and Indian strategic establishments, undercuts the very rationale of the "Look East" policy. It introduces animosities and antipathies in our region. The US does not belong to the Asian region. Geography dictates that India has to live with its neighbours. Ignoring these considerations, India has embarked upon a quadripartite strategic tie-up with the US, Japan and Australia. The strategic dialogue with these three countries, which have a tightly knit security partnership amongst them in the Asia Pacific region, only serves to create suspicions among the countries of Southeast and East Asia over India's gravitation towards a US-led security bloc in Asia. While such a bloc would serve US geo-strategic design of dividing Asia, it is difficult to understand how it would serve India's interests. Why has the UPA government moved in this direction?

SHANGHAI COOPERATION ORGANISATION

Distortions have also crept into India's policy toward the Central Asian region. After a promising beginning, Indian policy toward the Shanghai Cooperation Organisation (SCO) has become noticeably lukewarm. India was the only country among the SCO's members and observers that was not represented at the head of state/government level at its Shanghai summit in 2006. There does not seem to be a credible explanation for this other than being an effort to placate the Bush administration. However, it doesn't serve India's interests to be seen as a pillion rider of US "Great Central Asia" strategy. The Central Asian countries resent the US intrusive policies and its attempt to instigate "colour revolutions" in the region. Russia and China also perceive the US strategy as essentially aimed at undercutting their legitimate interests in Central Asia.

The SCO serves India's interests in many ways. Fighting terrorism, religious extremism and political separatism forms the core of the sea's agenda. In this sphere, India has shared concerns with the sea member countries. The sea has also shown keenness over India's participation.

It works on the basis of consensus and also shares India's traditional outlook not to be prescriptive. It stands for a democratised world order based on multilateralism and respect of international law. The sea holds significant potential for enriching India's "Look East" policy. It also offers immense prospects for economic cooperation. India can benefit through participation in the sea's regional projects in infrastructure development, energy and communications. It is inexplicable, therefore, why the UPA government has not pursued its relations with the sea more seriously.

AFGHANISTAN

The UPA government has viewed the Afghanistan problem exclusively through the prism of the Bush administration's "war on terror". The open-ended induction of the North Atlantic Treaty Organisation (NATO) forces in Afghanistan has profound implications for regional security. Under the fig leaf of a UN Mandate, the NATO forces are operating with impunity. It is a part of the US geo-strategy to expand NATO as the sole security organisation with a global reach and global partners. In Afghanistan, the activities of the US and NATO forces have proved to be highly controversial. The wanton use of force against unarmed innocent civilians has resulted in heavy loss of lives. Afghan people are increasingly showing their resentment over these atrocities. The UPA government has chosen to ignore these war crimes.

India has consistently stood for an independent, nonaligned Afghanistan free of foreign interference. From all accounts, the US and the NATO are determined to consolidate their military presence in Afghanistan on a more or less permanent basis. The US intends to use Afghanistan as a hub for its policy toward Central Asia and for threatening neighbouring countries like Iran. These are developments that have a direct bearing on regional stability, including India's security interests. It is surprising, therefore, to note that the UPA government has neither expressed its concern on the deteriorating situation in Afghanistan nor spoken out against the prolonged presence of US and NATO forces there.

SUMMING UP

It should be evident from the above that India's strategic alliance with the US has cast its shadow on India's policy towards the regions in its immediate and extended neighbourhood in Asia. The Left Parties have always held that a strategic partnership with the US cannot go hand in hand with the NCMP commitment of pursuing an independent foreign policy. Neither can

the civilian nuclear cooperation agreement be seen in isolation to the overall framework of strategic partnership with the US. The specific provision in the Hyde Act demanding that India's foreign policy be "congruent" to that of the US clearly shows the thinking of the US side on the matter. Notwithstanding protestations to the contrary, the fact is that there has been a deliberate attempt to harmonize India's foreign policy positions with that of the US, as has been elaborated above. This directly militates against the provision of the NCMP which states:

"Even as it pursues closer engagement and relations with the USA, the UPA government will maintain the independence of India's foreign policy position on all regional and global issues".

II. DEFENCE COOPERATION WITH THE US: IMPLICATIONS FOR INDIA'S SECURITY

DEFENCE FRAMEWORK AGREEMENT

The agreement on civilian nuclear cooperation with the US was preceded by a ten-year agreement titled "New Framework for the US-India Defence Relationship", signed in June 2005 during the visit of the then Defence Minister to Washington. The Defence Framework Agreement was clearly a continuation of the strategic engagement with the US pursued by the NDA government under Next Steps in Strategic Partnership (NSSP). In the history of independent India, this is the first time such a far-reaching defence cooperation agreement has been signed with any country. This unmistakable move towards cementing a strategic and military alliance with the US goes against the understanding on foreign and security policies contained in the NCMP.

MULTINATIONAL OPERATIONS

One of the provisions of the Defence Framework Agreement states that the Indian and US' defence establishments shall "collaborate in multinational operations when it is in their common interest". Through this provision on multinational operations India has accepted the US concept of such operations that might be undertaken in third countries outside of the UN auspices. There is no mention in the Defence Framework Agreement that such multinational operations will be with a UN mandate. It merely says that the two countries will "collaborate" in multinational operations in their "common interest". In fact, the Defence Security Cooperation Agency of the US, while notifying the US Congress about the sale of US-made C-130

J military transport aircraft and other equipment to India in May 2007, stated:

This proposed sale will contribute to the foreign policy and national security of the United States by helping to improve the security of an important partner and to strengthen the US-India strategic relationship, which continues to be an important force for political stability, peace, and economic progress in South Asia. India and the United States are forging an important strategic partnership. The proposed sale will enhance the foreign policy and national security objectives of the US by providing the Indian Government with a credible special operations airlift capability that will deter aggression in the region, provide humanitarian airlift capability and ensure interoperability with US forces in coalition operations.

The thinking embodied in the provision on multinational operations is without doubt a major departure from India's longstanding policy of regarding the UN Charter as a cornerstone of inter-state relations. The US has a dubious record of unilateralism, gunboat diplomacy and violation of international law. The Iraq invasion was carried out outside the UN auspices, by a US led "coalition of the willing". The UPA government, therefore, owes an explanation as to where it is that Indian armed forces could "collaborate" with US forces in multinational operations?

MISSILE DEFENCE SYSTEM

The Defence Framework Agreement calls for an expansion of "collaboration relating to missile defense" with the US. The so-called National Missile Defence (NMD) system is integral to the US strategy of establishing nuclear dominance and pre-empting any challenge to its hegemony in world affairs. The NMD is opposed by Russia as it aims at neutralising Russia's strategic capability and tilting the overall strategic balance in favour of the US. In other words, the NMD will undercut the processes leading to multi-polarity in the world order. It is nothing but a contradiction that on the one hand the UPA government professes commitment to a multi-polar world order, and on the other hand seeks to collaborate with the US in missile defence.

The UPA government's inclination to participate in the NMD can strain India's traditional ties of friendship and cooperation with Russia. It may also complicate the attempts to forge trust and mutual confidence in India-China relations. The recrudescence of tensions between Russia and the

US in the recent period is largely due to the US decision to deploy parts of its missile defence systems in Central Europe. The cold war mentality reflected in the US attitude towards Russia's resurgence and China's rise should serve as an eye opener for the UPA government that the US global strategies have only one underlying theme, the single-minded pursuit of its agenda of global dominance. Does India's interest lie in dovetailing its security interests with the global strategies of the US, like pitting the trans-Atlantic alliance against Russia or dividing Asia into blocs? What is the commonality of interest between India and the US, as far as the initiative on the missile defence system is concerned?

MARITIME SECURITY COOPERATION

India has taken several measures to build a joint security architecture with the US building-in interoperability and institutionalized capacity for joint operations. The signing of an Indo-US Maritime Security Cooperation Framework (MSCF) Agreement in March 2006 has paved the way for strategic naval links between India and the US covering the South-East Asian and the wider Asia-Pacific region. While ostensibly focusing on terrorism, piracy and security of commercial navigation, the strategic significance of the Indo-US MSCF have been noted widely. Nations in the region, especially the littoral States of the Malacca straits, have long regarded the aggressive US push for a sustained presence in the region as intrusive and with hegemonic ambitions. The Indo-US MSCF aims to give the US greater strategic depth in South East Asian and Asia-Pacific waters by leveraging Indian naval strength, while reducing its own profile in the region, especially at a time when US naval fleets are already over-stretched in the Mediterranean, Persian Gulf, Arabian Sea and elsewhere. The Indo-US MSCF has also raised suspicions of being a part of a strategy of containing China and excluding it from the security architecture of the Malacca Straits and other vital sea-lanes in South East Asia. The MSCF seems to be yet another link in the security chain being built by India and the US as part of the Defence Framework Agreement and the broader Indo-US Strategic Partnership. How does India stand to gain from such a security architecture of the Malacca Straits?

LOGISTICS SUPPORT AGREEMENT

The draft of a Logistics Support Agreement (LSA) has already been

negotiated with the US under the Defence Framework Agreement, and is currently pending with the Cabinet Committee on Security. The LSA seeks to provide for the respective militaries to use each other's facilities for logistics support such as refueling and berthing facilities and to borrow specified "non-lethal" defence equipment for use elsewhere, all on credit. The LSA is not simply an agreement governing minor courtesies extended by one friendly country to another. Extension of such support services has a clear military purpose: in fact they are designed for use during military operations. Even before the agreement has been inked, Chennai played host to the USS Nimitz in July this year. After being refueled and resupplied at Chennai, the aircraft carrier promptly rejoined active duty in the Persian Gulf where the US fleet is currently deployed to intimidate Iran.

The term Logistics Support Agreement has been coined to disguise the real intent of such an arrangement between military allies. The LSA is merely a different terminology for Acquisition and Cross-Servicing Agreements (ACSA), which itself is only another version of the NATO Mutual Support Act, modified for US dealings with non-NATO countries. All the goals and operational requirements remain the same, namely, interoperability between the armed forces with provision for use of base services, logistics support and borrowing of equipment for urgent use. The US has such Agreements with several allies in different parts of Asia and Latin America. Some of those allies like the Philippines have also felt compelled to rename the ACSA (terming it the Mutual Logistics Support Agreement) so as to deflect domestic criticism. Depositing before the House Armed Services Committee in June 2004, the then US Under Secretary of Defence for Policy, Douglas Feith stated:

... because our forward-deployed forces are unlikely to fight where they're actually based, we have to make those forces rapidly deployable. For this concept to work, US forces need to be able to move smoothly into, through, and out of host nations, which puts a premium on establishing flexible legal and support arrangements with our allies and partners.

The UPA government has turned a blind eye to the US recently entering into an ACSA with Sri Lanka. The studied Indian silence on the US-Sri

Lanka deal is in sharp contrast to earlier times when India would be wary of such moves to expand US military presence in its neighbourhood. India's silence on the US-Sri Lanka ACSA is a pointer towards its own willingness today to provide similar military facilities to the US under the LSA. Facilities used under ACSA or LSA can be virtually the same as that available in permanent military bases. Hitherto, Diego Garcia is the only military base that the US has in the Indian Ocean, which too was once the focus of much objection by India. What are the security considerations on the basis of which India is looking favourably at the increasing military presence of the US in the Indian Ocean region? How does India stand to gain by providing military facilities to the US forces under the LSA?

JOINT MILITARY EXERCISES

One of the most visible manifestations of the growing military ties between India and the US has been the increasing frequency and complexity of the military exercises between the two. Of added concern is the fact that these exercises of late have also involved the militaries of different US allies, giving such exercises the complexion of an incipient military alliance. According to Defence Ministry's figures provided in August 2007, 11 army exercises, 5 naval exercises and 3 air exercises have been conducted jointly with the US since 2004. This is more than the number of joint military exercises that India had with any other country during this period.

In November 2005, India and the US conducted their hitherto largest naval exercise in the Arabian Sea off the Goa coast. Even this was dwarfed by the quadrilateral naval exercises in the Bay of Bengal involving the US, Japan, Australia, Singapore and India, in September 2007. The deployment of aircraft carriers and anti-submarine manoeuvres conducted during the naval exercises make it amply clear that they were not simply meant for maritime security or anti-piracy operations. These exercises aim at promoting closer military-to-military ties, greater familiarity with each other's equipment and operational systems, and above all interoperability in joint operations. Visiting US Pacific Commander Admiral Timothy Keating said as much during the quad exercises and raised concerns across the region by adding that India and the US shared a mutual interest in the security of the Malacca Straits. It is curious, to say the least, that the UPA government did not think it appropriate to insist that the Malabar exercises, given their stated objectives, should also have involved the three important littoral

states of the straits of Malacca- Thailand, Malaysia and Indonesia. These three countries have sought a joint regional initiative in the ASEAN, an approach that does not suit the US geopolitical objectives. However, the reason why India chose the US, Japan and Australia for the joint exercises and excluded its immediate neighbours in the Southeast Asian region remains unclear.

India has also allowed US special forces to train with their Indian counterparts in specialized camps for mountain warfare in Ladakh and counter-insurgency jungle warfare in Vairangte, Mizoram. These exercises are clearly aimed to provide immediate assistance to on-going US special forces operations in the "war against terror", in Afghanistan and Philippines. The joint air exercises, especially the Cope India series, raise other issues of concern. Specifically upon US request, India fielded its Russian-origin Su-30 fighters in these exercises 'against' US F-16s. The US, which previously had no experience of the Su-30s, was provided with valuable insights into this frontline aircraft used by both China and Russia.

The frequency and pattern of the Indo-US joint military exercises raises serious concerns regarding India joining a US-led military alliance in Asia, which some commentators have termed as an "Asian NATO". Such a military alliance would obviously suit the interests of the US, since in India they would get a major Asian ally. Question arises, whether such a military alliance with the US serves India's geo-strategic interests in Asia? Wouldn't it adversely affect India's ties with traditional friends like Russia? Would it not antagonize friendly nations in West and South East Asia and detract from improving relations with China?

PURCHASE OF US MILITARY HARDWARE

One of the more direct benefits to the US from increased joint exercises and promotion of interoperability between the armed forces, as envisaged under the Defence Framework Agreement, is the stepped-up Indian demand these are likely to trigger for US military hardware. The more the two countries exercise together, the greater the rationale to provide India with compatible equipment, communications and technologies. US Under Secretary Nicholas Burns, in his on-the-record briefing on the 123 Agreement in July 2007 stated: ". now that we've consummated the civil nuclear trade between us, if we look down the road in the future, we're

going to see far greater defense cooperation between the United States and India: training; exercises; we hope, defence sales of American military technology to the Indian armed forces". (emphasis added) The US side seems to be quite clear about the linkage.

Indian defence purchases from the international market are projected to be around \$30 billion during the Eleventh Plan period. It is evident that the US is eyeing this huge Indian, market and seeking to bag multi-billion dollar contracts for US defence firms. Major sale of US military hardware to India has already commenced with the refurbished US warship USS Trenton for around \$48 million along with six UH-3H Sea King helicopters for another \$39 million. The other large transaction is the acquisition of six US-made Hercules C-130 J military transport aircrafts along with spare engines, missile-warning systems etc. for over \$1 billion. Apprehensions have been expressed that the US is set to emerge as the largest supplier of defence equipment to India, replacing traditional suppliers like Russia. The contract for the 126 multi-role combat aircrafts worth around \$10 billion, for which two US firms have already been shortlisted, would be a test case.

While the Defence Framework Agreement speaks of "increased opportunities for technology transfer, collaboration, co-production, and research and development" , what is taking place is simple sale of US military hardware, carefully selected by the US to fit in with their strategic plans in South Asia and the wider Asian region. Just as the "full civilian nuclear cooperation" has turned out to be anything but full, with dual-use technologies being denied even as per the 123 Agreement, so too in defence cooperation. Interestingly, the US-India CEO Forum Report, released during the Bush visit, while talking about the integration of "Indian private sector companies into the global supply chain of US defense manufacturers, combined with co-production" on the one hand, also recommended the adoption of a "liberal offset regime" in India on the other. This would imply a dilution of the current Indian policy, which requires compulsory sourcing of at least 30 per cent of all defence imports from domestic industry for purchases over Rs 300 crores. US pressure to use "indirect offsets" in the name of "global best practices" is basically meant to avoid technology transfers.

Question therefore arises whether dependence upon defence supplies from the US serves India's interests? The Bush administration considers Pakistan as its foremost ally in its "war against terror". President Bush has recently rewarded Pakistan by approving the sale of F-16s, which had been blocked earlier. While the US continues its strategic partnership with Pakistan, selling it force-multipliers and assuring it that it would do nothing to upset the balance of power in South Asia, does it make sense for India to rely on the US as a major supplier of defence equipment?

SUMMING UP

The Defence Framework Agreement signed with the Bush administration by the UPA government is a major deviation from the NCMP. The Defence Framework entails a military alliance with the US, which not only finds no mention in the NCMP but also goes against the commitments made regarding promoting multi polarity and pursuing an independent foreign policy. Growing military collaboration with the US would harm India's security interests.

APPENDIX - XLIII

UPA Response to Left Parties' Note on Foreign Policy and Security Matters.

October 5, 2007.

INTRODUCTION

Assertion: The 123 Agreement cannot be regarded as a stand-alone project; it forms an integral part of a broader Indo-US strategic alliance ... "congruence" with US foreign policy also amounts to a subversion of India's independent foreign policy.

Response: India today has strategic partnerships and relations with 12 countries and the EU. A list of these partnerships is attached¹. We do not see these partnerships as in any way restricting India's ability to pursue her national interests. If anything, these partnerships help India to pursue her interests. The primary goal of India's foreign policy is to assist the domestic transformation of India's economy and society and to improve the welfare of the Indian people. For this purpose, we have pursued non-alignment as a means to enhance our strategic autonomy and freedom of choice. The 123 Agreement meets this test.

The a priori assumption that "congruence with US foreign policy amounts to subversion of India's foreign policy" in fact limits India's ability to pursue an independent foreign policy. India's national interest has been and will be the only consideration while taking a position or action. If such actions have the support of USA, Russia or China or any other country, we will welcome that support.

I. INDIA'S FOREIGN POLICY

1. IRAN

Assertion: "There was a complete volte-face by India during a vote on Iran in the IAEA".

Response: India's vote on the IAEA resolutions on Iran is in keeping with our consistent position that confrontation should be avoided and that the Iranian nuclear issue should be resolved through dialogue in cooperation with the IAEA. India worked with other NAM countries to balance the IAEA

1. Not included here.

resolution which recognized the right of Iran to peaceful uses of nuclear energy consistent with its international commitments and obligations. The February 2006 resolution, for instance, had the support of Russia, China, Brazil, Egypt and several NAM members.

The fact is, however, that the IAEA has catalogued nuclear activities in breach of Iran's commitments under its Safeguards Agreement, and that Iran's clandestine collaboration had its source in Pakistan. No explanation of this has been made to us. India cannot afford to turn a blind eye to security implications of such activities.

Some progress has recently been made in resolving outstanding issues between Iran and the IAEA, and a workplan has been agreed between DG IAEA and Iran which will now be implemented to resolve outstanding verification issues.

Assertion: The UPA government fights shy of constructively engaging Iran which is most evident in slowing down on the Iran-Pakistan-India gas pipeline project. India had envisioned a "strategic partnership" with Iran "for a more stable, secure and prosperous region and for enhanced regional and global cooperation". [India-Iran New Delhi Declaration, January 2003]. Can the UPA Government assure that the Iran gas pipeline project will go ahead despite the slowdown in the recent period?

Response: The New Delhi Declaration, signed during President Khatami's January 2003 visit, lays down a five year target oriented framework focusing on key areas like political dialogue, oil and gas, bilateral trade and economic cooperation and investments. All these continue steadily.

Based on its own independent and objective interests and position, India continues to develop cooperation with Iran in areas of mutual interest such as energy and transit. Specific projects being taken forward include the development of the Chahbahar Port, the North-South corridor and proposals to broaden and deepen economic cooperation. The touchstone in decisions on economic cooperation projects will remain their technical and economic feasibility. India also continues to engage with Iran in the search for regional stability, particularly in Afghanistan.

In the case of the Iran gas pipeline project through Pakistan, Government is continuing discussions with both Iran and Pakistan so as to secure a technically and economically viable project, while minimizing security and other risks, so as to assure natural gas supplies to India at a reasonable

cost. India remains firmly committed to establish a long-term, cost-effective and secure mode of transfer of gas from Iran.

India - Iran relations stand on their own. They are independent of our engagement with Third countries.

2. IRAQ

Assertion: Stance taken by the UP A government on the execution of Saddam Hussein and on the elections in occupied Iraq in December 2005 were deplorable.

Response: India's response to the death of former President Saddam Hussein was clear and consistent, reflecting the primacy that we attach to the welfare of the Iraqi people and the need for enabling a process of reconciliation and restoration of peace in Iraq. Reactions by other governments such as China and Russia were similar in tone.

On the overall situation in Iraq, Government's stand has been consistently guided by the unanimous resolution adopted by both Houses of Parliament in April 2003. Since then India has been associated with various steps to contribute to the rehabilitation and reconstruction of Iraq and is assisting Iraq in capacity building and development of human resources. India's humanitarian assistance includes the supply of milk powder and fortified food to Iraqi school children.

3. PALESTINE

Assertion: The UPA Government has incrementally distanced itself from the Palestinian cause.

Response: India continues to be deeply engaged in the Palestinian cause. At the request of the Palestine Government, India sent observers to the Parliamentary elections in Palestine in January 2006. India has also been quick to condemn violence and the disproportionate use of forces by Israeli armed force against civilians when conflict broke out in Gaza and later in the West Bank, in statements by the Ministry of External Affairs and by the Prime Minister in both Houses of Parliament. India's support to the Palestine cause has been repeated on several occasions; most recently at the 19th Arab League Summit in March 2007 and following the formation of new emergency government of President Abbas on 17 June 2007. Nor is there any change in India's active support to the cause of Palestine in all UN

fora. In 2007, as in 2006, India voted in favour of all UN resolutions on Palestine, including key resolutions on Palestine statehood and against the construction of security walls on Palestinian territory.

4. ISRAEL

Assertion: The UPA Government has remained silent about the highly provocative Israeli air attack on Syria on 6 September 2007.

Response: Syria's 'reaction to the Israeli air raid has been limited to a complaint to the UN Secretary General and UN Security Council without actually demanding retaliatory action. Arab reactions have been muted and no major developing country apart from Iran has commented on the incident in public.

India's relations with Israel are distinct and differentiated from India's relations with Palestine, nor do they impact on our relations with other Arab nations.

5. LOOK EAST POLICY

Assertion: The politics of creating rival blocs in Asia, which underlies the vision of preserving the "balance of power in Asia" is shared by the US and Indian strategic establishment. India has embarked upon a quadripartite strategic tie-up with the US, Japan and Australia.

Response: The record shows that India's Look East policy in its initial years was primarily economic: India's trade with ASEAN increased almost 10 times from US\$ 2.4 billion in 1990 to US\$ 23 billion in 2005. Upon the economic basis which has been created, recent years have seen considerable movement towards institutional arrangements such as the East Asia Summit, India's dialogue partnership with ASEAN and accelerated discussions on free trade arrangements between India and ASEAN and India and individual ASEAN countries. Given the significance of the region to India's security, we have engaged in dialogue and practical security cooperation bilaterally and through the ASEAN Regional Forum (ARF), which is the only political and institutional security forum in the region. We have also engaged with ASEAN, Far Eastern and Pacific countries on issues such as counter-terrorism. While some ideas about a quadrilateral dialogue have been suggested by Japanese leaders, India has taken no action in the matter.

6. SHANGHAI COOPERATION ORGANISATION

Assertion: Indian policy toward the Shanghai Cooperation Organization (SCO) has become noticeably lukewarm. India was the only country among the SCO's members and observers that was not represented at the head of state/government level at the Shanghai Summit.

Response: India became an observer at the SCO Summit Meeting in Astana in July 2005. India remains interested and I has formally communicated its interest in specific projects to the SCO Secretariat in Beijing eighteen months ago. A response is awaited. The SCO itself is reportedly divided on the issue of whether to admit fresh members and on the level of involvement of observers. (Observers presently do not participate in the deliberations to finalize summit documents or in any other way in the summit except a five-minute presentation at the plenary.) India has, therefore, consistently been represented at Cabinet Minister level at SCO Summits.

7. AFGHANISTAN

Assertion: The UPA Government has viewed the Afghanistan problem exclusively through the prism of the Bush administration's "war on terror".

Response: To say so flies in the face of fact and denigrates the efforts of 3,500 Indians who are presently engaged in the reconstruction of Afghanistan. India's involvement and commitment to a peaceful, stable, democratic future for Afghanistan cannot be questioned given the scale and intensity of our effort and involvement in Afghanistan consistently over the last six decades. This independent engagement, at considerable cost, was recognized in the Bonn process and by India hosting the Regional Economic Cooperation Conference on Afghanistan in November 2006 In New Delhi. The nature of our projects and the type of our engagement negates any statement that Afghanistan is regarded only as an object of any so-called war on terror.

II. DEFENCE CO-OPERATION WITH THE US: IMPLICATIONS FOR INDIA'S SECURITY

DEFENCE FRAMEWORK AGREEMENT

Assertion: In the history of independent India, this is the first time such a far-reaching defence cooperation agreement (New Framework of the US-India Defence Relationship) has been signed with any country. This unmistakable move towards cementing a strategic and military alliance

with the US goes against the understanding on foreign and security policies contained in the NCMP.

Response: The 2005 Defence Cooperation Agreement with the USA is not the first such agreement to be signed with any other country. Nor are its terms a radical departure from other such agreements. The 2005 Defence Cooperation Agreement was debated at length in the Rajya Sabha and the Raksha Mantri in his reply had given clarifications on each and every point raised.

India has been strengthening ties in the defence and military field with various countries.

Since 1996, India has entered into 30 Defence Agreements with other countries including Russia, Germany, Chile, Oman, Mozambique, Australia, South Africa, UK and Northern Ireland, Kyrgyz Republic, Hellenic Republic, Indonesia, Iran, Kazakhstan, Poland, Armenia, UAE, Seychelles, Tanzania, Singapore, Czech Republic and Brazil.

We have also established mechanisms for defence cooperation with countries like Malaysia, Vietnam, Indonesia, Australia and Laos, Japan and the ROK. With the European Union and individual member countries, the co-operation covers training exchanges, joint exercises and defence procurement, production and R&D. Mechanisms for security dialogue exist with France, UK, Italy and Poland. Defence -related exchanges have also been expanding with other countries like Germany, the Czech Republic, Ukraine and Belarus and other Central Asian countries. With Russia, acquisition, licensed production, R&D and product support have been the focus of discussions.

The Raksha Mantri visited China in May 2006 and signed an MOU for exchanges and cooperation in the field of defence - including joint military exercises training programmes in the fields of search and rescue, anti-piracy, counter-terrorism and other areas of mutual interest.

The 2005 Defence Framework Agreement with the USA updates an agreement signed twelve years ago in 1995 on Defence Relations between the United States and India.

MULTINATIONAL OPERATIONS

Assertion: One of the provisions of the Defence Framework Agreement

states that that the India and US defence establishments shall "collaborate in multinational operations when it is in their common interest". Through this provision on multinational operations India has accepted the US concept of multinational operations that might be undertaken in third countries outside of the UN auspices. The UP A Government therefore owes an explanation as to where it is that Indian Armed Forces could collaborate with US forces in multinational operations.

Response: As a sovereign state with independent foreign policy decision making, India's engagement in third countries is determined by India's own calculation of her own interest and the request of the receiving state, and is not contingent upon UN auspices. For instance the use of Indian forces in Bangladesh (1971), Sri Lanka (1978 - 91) and Maldives (1988) were decided upon this basis. Whether or not Indian forces participate in multinational operations in third countries will also be decided upon the same basis.

The relevant provision of the 2005 India - US Defence Framework Agreement is qualified by the phrase "when it is in their common interest". India will decide when and in what manner it will collaborate with the United States in multinational operations. For instance, India has not participated in the US led coalition operations in Iraq and Afghanistan.

MISSILE DEFENCE SYSTEM

Assertion: UPA Government professes commitment to a multi-polar world order and on the other hand seeks to collaborate with the US missile defence. The UPA Government's inclination to participate in the NMD can strain India's traditional ties of friendship and cooperation with Russia. It may also complicate the attempts to forge trust and mutual confidence in India-China relations. Do India's interests lie in dovetailing its security interest with the global strategies of the US, like pitting the transatlantic against Russia or dividing Asia into blocs? What is the commonality of interest between India and the US, as far as the initiative on the missile defence system is concerned?

Response: India is not participating in the NMD. There is no cooperation with the US on development of missile defence.

MARITIME SECURITY COOPERATION

Assertion: The Indo-US Maritime Security Cooperation Framework aims to give US greater strategic depth in South East Asia and Asia Pacific waters by leveraging Indian naval strength while reducing its own profile in the region. The Indo-US Maritime Security Cooperation Framework has also raised suspicion of being a part of a strategy of containing China and excluding it from the security architecture of the Malacca Straits and other vital sea lanes in the South East Asia. How does India stand to gain from such a security architecture of the Malacca Straits?

Response: India attaches importance to the security of sea lanes as this is vital to our economy. As much as 90 per cent by volume of our foreign trade transits over the seas. Our geographical location ordains that we play an active role in promoting maritime security in the Indian Ocean Region. We are pursuing this in a cooperative framework, in expanding circles of engagement. The Indian Navy has taken a number of initiatives for meaningful cooperation with the Navies of the region. Conduct of bilateral exercise is not limited to USA but has been institutionalized with a number of countries like Russia, France, Oman, Singapore, Thailand, etc. Our Maritime Security Cooperation recognizes the primacy of the littoral States (Malaysia, Indonesia, Singapore, Thailand) in the security of Malacca Straits and our policies have been shaped accordingly.

We are also engaged with littoral and user states of important sea lanes of communication and have offered to build capacity for maritime security and safety. The ASEAN Regional Forum (ARF) of which both India and China are members now includes regular discussions on maritime security issues.

LOGISTICS SUPPORT AGREEMENT

Assertion: The LSA is not simply an agreement governing minor courtesies extended by one friendly country to another. Extension of such services has clearly a military purpose; in fact, they are designed for use during military operations. The LSA is nearly a different terminology for Acquisition and Cross-Servicing Agreements (ACSA). All the goals and operational requirements remain the same, namely interoperability between the armed forces with provision for use of base services, logistics support and borrowing of equipment for urgent use. India's silence on the US - Sri Lanka ACSA is a pointer towards its own willingness to provide similar military facilities to the US under the LSA. What are the security

considerations on the basis of which India is looking favourably at the increasing military presence of the US in the Indian Ocean region? How does India stand to gain by providing military facilities to the US forces under the LSA?

Response: We have not signed any Logistic Support Agreement with the USA. The other questions, therefore, do not arise.

JOINT MILITARY EXERCISES

Assertion: One of the most visible manifestations of the growing military ties between the US and India has been the increasing frequency and complexity of the military exercises between the two. The frequency and pattern of Indo-US joint military exercises raises serious concerns regarding India joining a US-led military alliance in Asia which commentators have termed as an Asian-NATO. Question arises whether such a military alliance with the US serves India's geo-strategic interests in Asia. Wouldn't it adversely affect India's ties with traditional friends like Russia? Could it not antagonize friendly nations in West and South East Asia and detract from improving relations with China?

Response: The interaction of Indian Armed Forces with armed forces of other countries through activities that include training, joint exercises, etc, increases their own competence and tests their preparedness in a non-battle field environment. The nature and frequency of such cooperation and exchanges is solely determined based on the requirements of the Indian armed forces and benefits accruing to us.

India's defence ties with countries in the region and beyond have continuously increased in recent years - as our forces and our defence production have gained recognition as among the best in the world.

India conducts joint exercises with a number of countries including Russia, China and countries of South East Asia. These exercises cover areas like counter insurgency, high altitude mountain warfare and jungle warfare. It may be pointed that countries mentioned in Left Parties' Note include both Russia and China also conduct joint exercises with the USA.

JOINT EXERCISES WITH FOREIGN DEFENCE FORCES SINCE 2002

Conducting joint exercises is not unique to USA. The Indian Army has been conducting such joint exercises with foreign countries since 2002. Regular exercises are now planned with Russia, China, UK, USA, Thailand, Seychelles, Mongolia and Maldives.

PURCHASE OF US MILITARY HARDWARE

Assertion: One of the more direct benefits to the US from the increased joint exercises and promotion of interoperability between the armed forces envisaged under the Defence Framework Agreement is the stepped up demand that these are likely to trigger for US military hardware. While the US continues its strategic partnership with Pakistan selling its force-multipliers while assuring it that it will do nothing to upset the balance of power in south Asia, does it makes sense for India to rely on the US as a major supplier of defence equipment?

Response: India's acquisition of defence equipment will be in accordance with the Defence Procurement Policy which prescribes the procedure to be followed in making acquisitions of defence equipment - duly taking into account the extent to which the competing bids satisfy our technical, financial and offsets requirements as prescribed in the DPP 2006 (our offsets policy envisages joint development, co-production and technology transfer). Government has laid out a transparent policy of acquisitions wherein Requests for Proposals are circulated to a number of countries. Currently, our defence procurements are sourced from Russia, Israel, Germany, France, UK and South Africa. USA will, like other competitors, participate on a level playing field.

SUMMING UP

Assertion: India's strategic alliance with US has cast its shadow on India's policy. A strategic partnership with the US cannot go hand in hand with the NCMP commitment of pursuing an independent foreign policy.

Response: Despite the changing world order, the fundamental tenets of India's foreign policy have remained remarkably steadfast and unaltered and successive Governments have reinforced these guiding principles. At the core is our independence in decision making on foreign policy issues. The principles of Panchsheel, enunciated by India's first Prime minister are still relevant and we have, over the years, on every occasion, reiterated our commitment to an independent foreign policy - and the strengthening of multilateral mechanisms and institutions.

India's foreign policy has been pragmatic in its orientation and approach - not driven by ideology, maintaining and strengthening good relations

with both blocs of the Cold War. At the same time, India did not refrain from expressing her position on important issues - as when she supported Egypt during the Suez crisis.

India has advocated, since her independence, general and complete disarmament - and made such far-reaching proposals in 1950s on cessation of nuclear testing and production of fissile material. Here, too, while actively involved in NPT negotiations, India eventually stepped back from signing on to the Treaty as she saw that the Treaty did not meet India's security interests - and was discriminatory as it legitimized the possession of nuclear weapons only by the P-5.

While pursuing the goals of disarmament and nonproliferation, India developed, in her own national interest, an indigenous strategic programme. Even in the face of the consequences that followed her Peaceful Nuclear Test in 1974, India reiterated her need and intention to maintain a credible minimum deterrent, and kept in view the implications for India's security of the emergence of nuclear weapons states on our borders.

India is recognized in today's world as an independent minded nation. In fact, India's national interests require that it should maintain this while simultaneously cultivating close ties with key global players and playing a key role in global affairs - whether trade or security or climate change issues. India today has strategic dialogues with Brazil, China, EU, France, Germany, Iran, Indonesia, Japan, Russia, South Africa, the United Kingdom, United States of America and Vietnam.

Our international friends and partners recognize our commitment to pursue an independent foreign policy. They understand that a country like India cannot be persuaded to follow a course in its foreign policy which does not pass the litmus test of meeting our interests. If India could exercise autonomy in its decision-making during the cold war period, there is no reason to believe that today, when our strength as UPA's Response on Foreign Policy and Security Matters a global power is recognized, we can be coerced into following a foreign policy dictated by another country.

APPENDIX - XLIV

Left Parties Rebuttal to the UPA's Response dated 24th September, 2007

October 5, 2007

The purpose of this exchange is to clarify the issues and caution the UPA that an Agreement binding the country for the next 40 years must not be entered into without proper examination of all issues and clarity on what the Agreement entails. If there are differences on the interpretation of various clauses in the 123 Agreement and the implications of the Hyde Act, it is incumbent on all of us that these are clarified at this stage.

However, even after two sets of Notes and responses on both sides, as can be seen from below, there are a number of issues on which the Left Parties are unable to agree with the UPA's interpretation. It is in this context that the UPA should evaluate whether they should go ahead with this Agreement before clarifying these issues. It is in the interest of the country that we reach a consistent and clear position on these issues before entering into such a far-reaching agreement.

1. THE IMPACT OF US NATIONAL LAWS ON THE 123 AGREEMENT

1.1. Permanent Waiver and Recognition of India as a Nuclear Weapons State: The UPA's 24th September response argues that the waiver provided in the Hyde Act is a permanent one, as it does not require to be renewed every year. However, UPA's Note also admits that the waiver is a one-time waiver. There are two independent issues here. One is the one-time waiver, which refers to waiver regarding India's activities between 1978 and 2005 and whether this one time waiver can be considered as a permanent one. The other issue is whether there is an annual process of determination by which the US can terminate the Agreement, which has been dealt with in Clause 5 below.

1.1.1. One-time Waiver and the Sunset Clause: The UPA's response dated 17th September, 2007 had identified the sections 123, 128 and 129 of the US Atomic Energy Act, 1954 as relevant for the civilian cooperation agreement and stated that the Hyde Act gives "*a permanent waiver in respect to the*

above provisions of the Atomic Energy Act" (Emphasis added). It is in this context that the Left's Response of 19th September 2007 had stated that it is not a permanent waiver.

The waiver under discussion is required as the Nuclear Non-proliferation Act (NNPA) passed in 1978 prohibits transfer of any nuclear materials to any non-nuclear weapons country (as defined by NPT) which has exploded a nuclear device or has violated other clauses of NNPA. The Hyde Act makes clear that this waiver is not a permanent one and only a one-time waiver. Any future nuclear test and other violations as defined in NNPA will attract the provision of sanctions and termination of the 123 Agreement. A permanent waiver would have meant that the clause of sanctions as defined in NNPA would have been lifted permanently and not as a onetime waiver.

The UPA Response has quoted the sunset clause in the Hyde Act [104(f)]. The sunset clause makes this one-time waiver issue amply clear. It states that the President's waiver authority under section 104(a)(1) to exempt a US-India nuclear cooperation agreement will expire once the 123 Agreement is enacted. The purpose of this provision is to ensure that the President can use this waiver authority only once.

1.1.2. India Recognised as a Nuclear Weapons State: The Hyde Act categorically demands the termination of the nuclear cooperation between India and the United States in the event of a nuclear explosive test, vide Section 106: "A determination and any waiver under section 104 shall cease to be effective if the President determines that India has detonated a nuclear explosive device after the date of the enactment of this title." This clearly shows that India has not been recognised as a nuclear weapons state, implicitly or otherwise. This section, inter alia, also makes it evident that the Hyde Act does not offer a permanent waiver in relation to the application of Sections 128 and 129 of the Atomic Energy Act of the United States to India-US nuclear cooperation, both of which apply only to non-nuclear weapon states. Therefore, the application of US laws including the Hyde Act will recognise India as a non-nuclear weapon state. This has relevance to the way the

safeguard and other regimes apply in the 123 Agreement as the earlier Notes by the Left Parties have argued.

1.1.3. National Laws of the US that apply to 123 Agreement vide

Section 2.1: UP A's Response dated 17th September identifies some sections of the US Atomic Energy Act which will apply to the 123 Agreement, namely section 123 read with sections 128 and 129. This does not appear to be a comprehensive list of domestic laws or sections of the Atomic Energy Act. For example, Section 131 of the Atomic Energy Act applies to the implementation of the 123 Agreement but is not mentioned. The Left Parties insist that a comprehensive list of domestic laws of the US that are applicable for the implementation of the 123 Agreement, should be framed. Without such a list and a thorough evaluation of the sections of these laws, the Government should not proceed further with the 123 Agreement.

- 1.2. Hyde Act is of concern only to the US and not to India:** It is true that the Hyde Act is an internal US legislation. But it becomes an integral part of the 123 Agreement through Article 2.1 that requires conformity with national laws. Therefore it is erroneous to claim that the Hyde Act is of concern only to the US and not to India. It is correct that once the 123 Agreement is approved by the US Congress it will have precedence over the Hyde Act, but only to the extent that they conflict with each other and not where they do not conflict or cover the same ground. Is it the UP A's contention that where the Hyde Act and the 123 do not conflict with or cover the same ground, the Hyde Act provisions will not apply on the US Administration?

But it becomes an integral part of the 123 Agreement through Article 2.1 that requires conformity with national laws. Therefore it is erroneous to claim that the Hyde Act is of concern only to the US and not to India. It is correct that once the 123 Agreement is approved by the US Congress it will have precedence over the Hyde Act, but only to the extent that they conflict with each other and not where they do not conflict or cover the same ground. Is it the UPA's contention where the Hyde Act and 123 do not conflict with or cover the

same ground, the Hyde Act provisions will not apply on the US Administration?

The bridge to the Hyde Act is provided by the Preamble to the 123 Agreement. It may be mentioned here that the Preamble to the 123 Agreement states that the Agreement is "desirous of strengthening the strategic partnership between them". This preambular statement can be used to lend a certain colour and tone to the interpretation of the 123 Agreement. The 123 Agreement is to be interpreted in accordance with rules of interpretation in international law. Article 31 of the Vienna Convention on the Law of Treaties notes the general rule of interpretation: "A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose". Article 31 (2) notes that "the context for the purpose of the interpretation of a treaty shall comprise, in addition to the text, including its Preamble ... ". Therefore the Preamble can always be taken cognizance of in the act of interpretation. The point is also dealt with in 1.5 below.

- 1.3. Hyde Act does not apply to India:** There is no need for the US to breach the Hyde Act for it is an integral part of the 123 Agreement through the terms of Article 2.1. It is inconsequential that the Hyde Act does not apply directly to India. For the Hyde Act continues to frame the obligations of the US through the reference to national laws in Article 2.1 of the Agreement.

The UPA's response quotes the US Assistant Secretary of State to suggest that the 123 Agreement is a deal between US and India. However, in the same briefing that the UPA's response refers to, Mr. Richard Boucher had also stated: "We have met all requirements of the Hyde Act. The 123 Agreement is in conformity with the Hyde Act". In response to a specific question whether the 123 Agreement superseded the Hyde Act, Mr. Boucher further stated: "I don't think that's a meaningful statement one way or the other".

- 1.4. On matters that 123 Agreement is silent, the Hyde Act will not bind the US actions:** The implementation of the 123 Agreement cannot neglect the provisions of the Hyde Act,

because Article 2.1 specifically provides that the 123 Agreement will be in accordance with the respective national laws of the parties to the Agreement. The UPA's 24th September response on the issue of Hyde Act binding the US Administration on matters that are not mentioned in the 123 Agreement is that the Hyde Act is an enabling legislation and not the implementing mechanism. The response seems to imply that since the Hyde Act is not the implementing mechanism, therefore the US actions in the civilian nuclear agreement are not going to be bound by it.

The key issue here is that as an enabling mechanism exempting the civilian nuclear agreement from certain provisions of the US Atomic Energy Act of 1954, the Hyde Act has also defined limits of the 123 Agreement. It has also set up various reporting and oversight mechanisms. It has prescribed what the US must do in the NSG negotiations so that India can not get more favourable terms from the NSG than what the US has given. Finally, it has not only defined the conditions for termination of the Agreement if India violates what the US Congress considers as Indian commitments, but also what the US administration should do if the Agreement is terminated. All these provisions of the Hyde Act are not in conflict with the 123 Agreement. Therefore the UPA's response that the Hyde Act is either not binding on India or is overridden by the 123 Agreement is not relevant. The Left Parties' Note had stated: "In this regard it may be noted that to the extent the provisions of the Hyde Act do not conflict with or cover the same ground as the 123 Agreement, even the explicit adoption of the latter by the US Congress will keep those provisions alive." The UPA's response has evaded this issue.

- 1.5. **The Vienna Convention, the Law of Treaties and Domestic Laws:** The UPA's response of 24th September does not appreciate the difference between a situation when domestic legislation is to be brought in conformity with international agreements and a situation when an international agreement is to be implemented in accordance with national laws. To take an example of the former, Article 16 (4) of the Marrakesh

Agreement Establishing the World Trade Organization explicitly states: "Each Member shall ensure the conformity of its laws, regulations and administrative procedures with its obligations as provided in the annexed Agreements". (The annexed Agreements contain all the multilateral Agreements on Trade in Goods, General Agreement on Trade in Services, Agreement on Trade-related Intellectual Property Rights, etc.). There is no such provision requiring the US to bring its domestic laws in conformity with the 123 Agreement. Indeed, to the contrary, it states that the 123 Agreement will be implemented in accordance with national laws and international treaties.

The UPA's response also states that in the case of an international treaty, domestic laws have to be brought in consonance with international obligations. As we note above, this does not happen automatically and has to be done explicitly. On the Fuel Supply Assurance, the 123 Agreement does explicitly mention that the US domestic laws would be amended for this purpose. The question which the Left Parties' Note dated 19th September 2007 had raised, is what are the specific domestic laws of the US and their provisions that need to be amended to bring them in consonance with the fuel supply obligations under the 123 Agreement? The UP Ns response does not answer that question. In view of the vital nature of the fuel supply assurance, any ambiguity of this kind even at this stage does not speak well of the Government's homework regarding the 123 Agreement.

The Left Parties' Notes, dated 14th September and 19th . September had specifically asked, what are the international treaties that are referred to in Section 2.1. Again there has been no response to this in the UPA's Note. The Government must surely be aware of the international treaties in accordance with which the 123 Agreement will be implemented. Therefore, not furnishing this list appears inexplicable. And if the Government is not aware of the international treaties referred to in Article 2.1 of the 123 Agreement, then this has to be clarified before proceeding further.

- 1.6. India and China : 123 Agreements:** The UPA's Note dated 17th September had claimed that the India-US 123 Agreement is superior to the China-US 123 Agreement. The Left Parties' response dated 19th September 2007 had cited just one instance, comparing the two 123 Agreements, to question that claim. The 1998 MOU between China and the US that the UPA's response refers to was signed 13 years after the 123 Agreement and not as a part of the 123 Agreement. It is in the nature of a subsequent arrangement that operationalises the relevant part of the Agreement. However, the provision for "mutually acceptable arrangements" for exchanges of information and visits to "material, facilities and components", that the UPA response of 24th September refers to in the MOU are in lieu of bilateral safeguards.

The Article 8(2) of the China-US Agreement is reproduced below:

The parties recognize that this cooperation in the peaceful uses of nuclear energy is between two nuclear-weapon states and that bilateral safeguards are not required. In order to exchange experience, strengthen technical cooperation between the parties, ensure that the provisions of this Agreement are effectively carried out, and enhance a stable, reliable, and predictable nuclear cooperation relationship, in connection with transfers of material, facilities and components under this Agreement the parties will use diplomatic channels to establish mutually acceptable arrangements for exchanges of information and visits to material, facilities and components subject to this Agreement.

A detailed examination of the 1998 MOU will also show that these are not safeguards but merely visits and cannot compare either in scope or in depth to IAEA safeguards that India will have to negotiate or even bilateral safeguards.

Unlike the India-US 123 Agreement, there is also no provision for IAEA safeguards or any other safeguards in the China-US 123 Agreement. There are also other differences between the India-US and the China-US 123 Agreements. As China is recognised by the US as a nuclear weapons power, there is no clause for return of materials on termination! cessation of

the agreement in China's case as exists in India's 123 Agreement.

The provisions in the China-US Agreement and the India-US Agreement regarding compatibility with national laws are not comparable. The China-US Agreement clearly states that a party "may not invoke the provisions of its internal law as justification for its failure to perform a treaty". The India-US 123 Agreement states precisely the opposite by allowing the Agreement to be implemented in accordance with national laws. The mention of the principles of international law in Article 16.4 of the India-US 123 Agreement has no bearing on this matter. Indeed, if anything, the principle of international law requiring treaties to be observed in good faith (which is explicitly stated in Article 16.4), achieves the opposite result. The provisions of the Agreement have to be interpreted in accordance with the principles of interpretation contained in Articles 31 and 32 of the Vienna Convention of the Law of Treaties which can exclude the interpretation offered in the UPA Note.

- 1.7. Termination Clause and Consultations:** The UPA's response essentially confirms that the US can terminate the agreement without consultations if it so desires. This is vide Article 14.2 of the 123 Agreement which states: "The Party seeking termination has the right to cease further cooperation under this Agreement if it determines that a mutually acceptable resolution of outstanding issues has not been possible or cannot be achieved through consultations". That they also may go through a detailed process of consultations and carefully consider various issues, does not detract from this central point raised in the Left Parties' notes.
- 1.8. Arbitration versus Consultation:** The provisions of consultations and arbitration are not mutually exclusive. All forms of dispute settlement should be provided for. For instance, the WTO Agreements provide all possible alternatives from consultations to arbitration.

The UPA's response while dealing with the question regarding the Tarapur 123 Agreement and in what respects the present 123 Agreement differs from it, talks of the present Agreement

being between two equal parties and the consultations clause. The Tarapur Agreement showed that the US, as a supplier, could not be bound by the provisions of the 123 Agreement regarding supply of fuel. Since the issue in the current 123 Agreement is also how we can bind the US, as a supplier, to the provisions of this Agreement, the UPA's answer is essentially the consultations clause. We have already pointed out the limitations of the consultations clause in 1.8 above, namely Article 14.2 of the 123 Agreement.

- 1.9. International Law Obligations and the US:** It is one thing for India to resist signing or ratifying a treaty and entirely another matter to get the US to abide by its obligations under the 123 Agreement. One situation is entirely in the hands of the Government of India and the other outside its purview. The UPA's responses show that the Government does not seem to recognize that given the wordings of the 123 Agreement, as the Left Parties have pointed out, the US can advance a strong legal case to justify the violation of obligations if feels its national interests are not being served by the 123 Agreement. It is this ambiguous nature of the provisions binding the US to respect vital requirements of India's, such as fuel supply, that makes it possible for the US to escape from its obligations if it so wants.

In recent years this is the general predisposition of the US, as Professor Vagts (Professor Emeritus at Harvard Law School) points out:

The commitment of the United States to its treaty obligations has recently been put in question ... What is especially unsettling is the change in the style of verbalization that has accompanied these breaches. In the past, the courts and the political branches consistently acknowledged that on a different plane treaties are binding upon the United States and that, if the United States breaches one, it has an obligation to set the matter straight. In recent years, however, the executive, Congress, the courts, and influential commentators have each conspicuously verbalized the idea that the later-in-time rule is the final answer and that the binding effect of international law carries little weight.

One author has interpreted this "later-in-time rule" under which later statutes may override treaty provisions as expressing "a clear disregard for the pacta sunt servanda rule" [Pierre Klein, "The effects of US predominance on the elaboration of treaty regimes and on the evolution of the law of treaties", in Michael Byers and George Nolte eds., *United States Hegemony and the Foundations of International Law*, Cambridge University Press, Cambridge, 2003, p. 386].

There are other examples of the US not respecting international laws and claiming the superiority of its national laws. The US quitting the jurisdiction of the International Court of Justice after the verdict of the ICJ went against it on Nicaragua is a pointer to this.

1.10. President Bush and binding/ non-binding sections of the Hyde Act: The UPA's response accepts that there is nothing that obliges a subsequent US President to follow President Bush's position on the Signing Statements. The UPA has not stated its understanding of the implications of a future US President not agreeing to President Bush's understanding of what is binding and not binding on the US. Should India be bound for 40 years on the premise of continued goodwill of US Presidents for this entire period?

2. FUEL SUPPLY ASSURANCE

The Left Parties' notes had raised the issue that the 123 Agreement is still talking about amending the US domestic laws (Clause 5.6). To repeat, the specific clause reads:

As part of its implementation of the July 18, 2005, Joint Statement the United States is committed to seeking agreement from the US Congress to amend its domestic laws and to work with friends and allies to adjust the practices of the Nuclear Suppliers Group to create the necessary conditions for India to obtain full access to the international fuel market, including reliable, uninterrupted and continual access to fuel supplies from firms in several nations.

The question here is what are the future amendments that the US will bring about in the Congress apart from the 123 Agreement? Which are the domestic laws where these amendments will be introduced? Is Hyde Act one of these laws? Till date, no clarification has been furnished on the above. On the face of it, it appears that

the fuel supply assurance in the 123 Agreement is conditional on future amendments to US laws. As the US Congress has already rejected giving fuel supply assurances except for market failures, to expect the US Congress to change its position in the future and base our course on such expectations seems to be a dangerous way to conduct the affairs of the country.

The other question that the Left had raised is whether the fuel supply assurance will hold good if the Agreement itself is terminated. Again, no answer has been given to this in the UP A's responses. The UP A's response misrepresents the Left Parties' argument as suggesting that the other NSG nations are bound by the Hyde Act. The Hyde Act Joint Explanatory Statement of the Committee of Conference was cited in the Left's Note to show what US policy would be in the NSG. The US can enforce its will on the NSG, as all NSG decisions have to be a consensus. The US can ensure that no extra beneficial terms are provided to India by any other NSG member-state while relaxing the NSG Guidelines. Further, as the US is supposed to present India's case to NSG, it is unlikely to present terms in the NSG that are commercially prejudicial to itself. Therefore, proceeding with this Agreement on the basis of securing better terms from the NSG is not a tenable proposition.

3. IAEA SAFEGUARDS

The UPA's response dated 24th September claims that there is symmetry between safeguards and fuel assurances as can be seen from Art. 5.6 and Art. 10. That it is not so can be seen from Art. 16.3 and Art. 5.6 (c) of the 123 Agreement (which deals with IAEA safeguards), which will continue to be valid even after the termination of the Agreement (together with Art. 6, 7, 8, 9, 10, 15). However this does not apply to the specific assurance of fuel supply that is contained in Art. 5.6(a) and Art. 5.6(b).

4. FULL NUCLEAR CO-OPERATION

The UPA's response of 24th September essentially confirms the Left's argument that restrictions on sensitive technology and dual use technology have not been lifted and all that we have secured is "forward looking language". Language is no substitute for actual measures required to lift the technology sanctions, which has been advanced as the *raison d'être* for the Agreement.

The UPA's response also states that "there are no legal impediments to the supply of dual-use items." This is indeed a strange assertion, as the technology control regimes are well known and there are legal impediments to import of such dual use items. Is it UPA's contention that all the technology control regimes - like the NSG and MTCR - are not restricting India's import of dual use items for the nuclear and space sectors? Dual use items require a lengthy and cumbersome procedure to satisfy the relevant regulatory authorities in the United States with the assurances and verification provided by the importing nation to guarantee that it would be used only for the stated non-nuclear or non-missile purposes. However the satisfaction of the relevant regulatory authority was never to be easily had in practice and this was the source of great difficulties in the acquisition of relevant scientific and technological materials even for non-nuclear uses.

There is also another category of institutions ('entities' in the language of the Bureau of the US Department of Commerce) in India, consisting of the key organisations under the Departments of Atomic Energy, Space and Defence, that face much stricter controls when they are required to import any of these dual-use items. These entities will also continue to face dual-use sanctions because of their direct connection to enrichment, reprocessing and heavy water technology or to launch vehicle and missile technology. The continuation of restrictions on dual use technologies on the new safeguarded reprocessing facility and civilian fast breeder reactors would have serious consequences. This is what the Left's notes had cautioned the UPA on. The response of the UPA on this shows a casual approach, which it is hoped is only in its response to the Left Parties' notes, and not reflected at the actual policy level. If a similar lack of application of mind takes place also in the realm of policies, the country will have to pay a very heavy price indeed in the future.

5. ANNUAL CERTIFICATION/ASSESSMENT

The operative content - what the President is expected to furnish every year to the Congress - remains the same even if it has been changed from Certification to Reporting! Assessment. The US Congress can still act on the basis of these reports. The Joint Conference Explanatory Statement makes clear that the annual reporting requirement was introduced in order to monitor continued

implementation of India's commitments as understood by the US Congress.

The conferees believe that India's continued implementation of those commitments is central to the integrity of our bilateral relationship. Therefore, the bill contains reporting requirements and a provision that calls for termination of exports in the event of violations of certain commitments. In addition, the bill seeks to uphold existing statutory congressional oversight of US nuclear cooperation and exports.

The Hyde Act also has specific provisions in the Reporting section, that the Report will contain "whether it is in the US security interest to continue with nuclear commerce" [104(g)(2) D (ii)(IV)] in case India does not comply with its commitments and obligations, one of which is working with the US to deny Iran the fuel cycle. Therefore, the Reporting/Assessment section of the Hyde Act is not an innocuous requirement as is being made out to be in the UPA Response.

6. REPROCESSING

On the question of reprocessing, is it the UPA's contention that the arrangements and procedures mentioned in the 123 Agreement are not subsequent to the Agreement or that the word subsequent is not there in the text? The substantive issue is whether the "arrangements and procedures" are subsequent to the 123 Agreement or not. It is clear that the arrangements and procedures" are subsequent from on-the-record briefing of July 27, 2007 of Deputy Secretary of State, Nicholas Burns. He states: "Our two countries will also subsequently agree on a set of arrangements and procedures under which reprocessing will take place. And for those of you who are steeped in this, you know that that's called for by Section 131 of the Atomic Energy Act of 1954." (emphasis added). Clarifying the matter further in response to a question he again stated: ". Section 131 of the Atomic Energy Act, of course, calls for subsequent arrangements in reprocessing, arrangements in procedures that would need to be agreed upon before the reprocessing could actually take place."

Therefore, the Left's contention that the reprocessing consent is only notional at this stage remains valid. It is not very different from the Tarapur 123 Agreement. It is more a consent to reach an agreement in the future 'on reprocessing, which mayor may not be reached.

The arrangements and procedures noted above have to be under Section 131 of the US Atomic Energy Act and will also need Congressional approval. This may be contrasted to the 123 Agreements with Japan and Euratom, which have prior consents for reprocessing along with pre-approved activities. In the US-Japan nuclear cooperation, both the 123 Agreement and the subsequent arrangement, that identified current and future reprocessing facilities, were offered for US Congressional consideration at the same time - a one-step process. Why has the Government chosen to keep the question of a new reprocessing facility and related technological options open to a later unspecified date instead of securing 'an immediate subsequent arrangement; i.e. why has it chosen a two-step process rather than a one-step one?

7. ENERGY ISSUES

7.1. Capital costs of imported nuclear reactors: The UPA's response dated 24th September states that although the capital costs of nuclear plants are higher, CEA analysis of studies by analysts in India and abroad, have concluded that nuclear power is competitive. Again, no details are provided regarding either the studies referred here or about CEA's analysis. The Left's Notes of 10th September and 17th September had asked for the studies which have been used as the basis for considering 40,000 MW of nuclear energy by 2020, that too largely using imported reactors. Before committing the country to a route with such large numbers of imported reactors, the minimum that we expect from any Government is such detailed and transparent analysis of the pros and cons of various sources of energy. It is the first time after Enron that, the fuel mix of the country is being determined with no public discussions of various options and their costs. During the Enron days also, a similar ill thought -out liquid fuel policy for 12,000 MW was promoted, leading to very high costs from such plants.

7.2. Lack of Sufficient Study and Techno-economic analysis: The Left's Note of 17th September had stated that the only detailed study on techno-economics and fuel availability for 'meeting future energy needs was that of the Planning Commission's "Integrated Energy Policy". The UPA's Note has

responded by stating that this document was drawn up in 2006 and had kept open the possibility of international co-operation on nuclear energy. This does not address the issue. The Left's Note wanted to know whether with the new scenario in mind, either the Planning Commission or any other body had done a similar exercise? The Planning Commission's study above had considered 11 different scenarios and was quite comprehensive. If it needs changes or modifications, there can be no quarrel with that. But can it be thrown out of the window now in order to promote 40,000 MW of power to be generated through imported reactors without any corresponding studies? That DAE has proposed 10 reactors for the 11th Plan, as the UPA's response states, again misses the point that we need alternate options to be evaluated by a planning agency before deciding on our future energy mix. Therefore, the question regarding the quantum of capital needed for the electricity sector, what should be the fuel mix and energy mix and an evaluation of the future energy basket still remain unanswered.

- 7.3. Nuclear Renaissance:** The UPA's response essentially firms that no new nuclear plant in the US has received license or has started construction. No new commercial reactor has come on line since May 1996, when Watts Barr Unit 1 came into operation. It took 23 years to build. The Early Site Permit for the two new plants that the UPA's response talks about can take anything from 2 to 20 years to receive a license. After the Early Site Permit, the party concerned still needs to seek a license from the NRC to build and operate a reactor. Therefore, the Early Site Permits mean very little.
- 7.3. Nuclear Renaissance:** The UPA's response essentially confirms that no new nuclear plants in the US has received license or has started construction. No new commercial reactor has come into operation. It took 23 years to build. The Early Site Permit for the two new plants that the UPA's response talks about can take any thing from 2 to 20 years to receive a license. After the Early Site Permit, the party concerned still needs to seek a license from the NRC to build and operate a reactor. Therefore, the Early Site Permits mean very little.

Similarly, very few new reactors are being constructed in Western Europe, where many countries are phasing out their nuclear plants or not building any replacement plants. Only France and Finland are building one new reactor each. India, China and Russia account for more than 50 per cent of the 34 reactors currently under construction. This, in our view, does not constitute a nuclear renaissance as claimed by the Government.

We do believe that nuclear energy as an option should be kept open and some investments made in this sector to support our domestic PHWR, FBR and thorium based AWR technology. The major manufacturers in the US and Western Europe are facing a shrinkage of their home market. GE and Westinghouse are surviving exclusively on foreign orders and are of course very keen to expand their market. Similarly, Areva NP, the French company, is largely dependent on sales outside Western Europe. Therefore, if we compare the nuclear industry now to its heydays, it is indeed in a moribund state. In fact it is because of the need to rescue these nuclear manufacturers that their Governments are creating this hype of a nuclear renaissance, hoping to get countries such as India to invest in large numbers of such plants.

7.4. Decarbonising the economy: We give below from the IPCC Working Group III Report "Mitigation of Climate Change", Summary for Policy Makers, its view on the impact of nuclear energy for de-carbonising the economy:

Given costs relative to other supply options, nuclear power, which accounted for 16 per cent of the electricity supply in 2005, can have an 18 per cent share of the total electricity supply in 2030 at carbon prices up to 50 US\$/tCO₂-eq, but safety, weapons proliferation and waste remain as constraints.

The impact of de-carbonising the economy, using nuclear energy in a big way will at best lead to a 2 per cent benefit in electricity terms by 2030, even assuming a high carbon price. If we reduce it to actual greenhouse gas reduction, it is of the order of 1 per cent. While it does remain an option for the long-term, it is not a major greenhouse gas mitigation strategy for the short or medium term. In fact, with the recent discoveries

of gas in large quantities in India, using gas for power generation would reduce greenhouse gases from power generation more effectively.

Even for India, the ambitious nuclear energy route will increase the share of nuclear energy from 5 per cent to at best 9 per cent. This constitutes a 4 per cent reduction in terms of greenhouse gases from electricity and only about 2 per cent if we take the total greenhouse gas emissions from India. Therefore, greenhouse gas emissions reduction cannot be a major argument for civilian nuclear power for the short and medium term.

This once again brings out the need for a comprehensive look at the techno-economics of our energy options taking also greenhouse gas reduction into account. This is what the Left has been arguing, that we need these studies before making up our mind on the quantum of nuclear energy we need and the strategy to be followed. Instead, what we seem to have is a strategy that has been already decided on extraneous considerations and is now being supported by dubious arguments regarding energy needs and greenhouse gases.

8. Impact of Imported Reactors on Domestic Industry:

The UPA's response dated 24th September argues that the imported reactors will be progressively indigenised by Indian industry. This still does not address the issues that we had raised. The issues are that Indian scientists and engineers have already scaled up the PHWR technology to 540 MW and have designs to scale it up to 700 MW. This is already indigenised. Comparable imported reactors will not only lead to outflows of foreign exchange but also manufacture and jobs. They are also about 50 per cent higher in costs to corresponding Indian reactors. The argument that the imported reactors will be progressively indigenised does not explain why higher cost reactors which will have to be completely imported at least in the initial phase are being considered when equivalent indigenous reactors are available at much lower costs.

Regarding the relationship between manufacturing reactors and creation of jobs, we quote below Condoleezza Rice, "Our Opportunity

With India," Washington Post, March 13, 2006:

... our agreement is good for American jobs, because it opens the door to civilian nuclear trade and cooperation between our nations. India plans to import eight nuclear reactors by 2012. If US companies win just two of those reactor contracts, it will mean thousands of new jobs for American workers.

If importing two reactors from the US means thousands of jobs in the US, surely manufacturing them here would similarly create jobs and opportunities here. This is why the Government's plan to import most of the 40,000 MW nuclear plant capacity is against our national interest. This is apart from the issue of imported Light Water Reactors introducing energy dependence through imported fuel.

9. COST OF ENERGY FROM VARIOUS SOURCES

Nuclear Power Corporation's Chairman and Managing Director, Mr. V. K Chaturvedi had stated in the joint press conference at the time of the inception of the Kudankulam project that power generated from it was likely to cost between Rs. 3.50 and Rs. 3.75 a unit. This was based on a capital cost estimated at that time to be Rs. 7 crore per MW. The total project cost was estimated to be Rs.14,000 crore with 50 per cent being met by soft loans from Russia at 4 per cent interest (From Volga to Ganga: The Story of Kudankulam, Al Siddiqui, NuPower - Vol. 16 No. 1-2,2002). In spite of this, the cost per unit was then estimated to be Rs.3.50-3.75 even after considering the low rate of interest. Somehow, this has now dropped to Rs. 1.99 in the UPA Note! Neither has this figure been backed by any calculations nor any break-up of costs.

We give below the tabulated figures for Kaiga Atomic Power Station as computed by NPC originally and the final computed figures.

Component of Tariff	Originally computed by NPC paise/kWh	Final Figures paise/kWh
Return on Equity	117.45	86.40
Interest on Govt. loan	10.77	10.57
Interest on market Borrowing	54.32	53.27

Interest on working Capital	21.70	18.97
Depreciation	110.11	51.84
Fuel consumption	48.06	47.14
Heavy Water Lease	50.55	49.58
Heavy Water Makeup	16.85	16.53
O & M Cost	35.85	35.16
R & D levy	3.00	3.00
Annual Fuel Recovery Charge	3.21	3.15
Provisioning for Decommissioning	2.00	2.00
R & M levy	5.00	--
Total Tariff	478.89	382.60

Even though the tariff - composite and not two part - arrived at was 382.60 paise/unit, it was further negotiated and fixed as follows, for the five-year block from the date of commercial operation, i.e 2001:

Year 1	295 Paise/unit
Year 2	310 paise/unit
Year 3	325 paise/unit
Year 4	340 paise/unit
Year 5	350 paise/unit

These figures are comparable to that of Kudankulam as originally stated by Mr. Chaturvedi and therefore it is difficult to accept the figures given in the UP A's response.

It is not very meaningful to compare the fuel cost of nuclear plants to the fuel cost of coal-fired plants, that too for locations far away from coal mines. The tariff from comparable coal fired plants (Ultra Mega

Power Projects awarded recently) varies from Rs.1.19 for Sasan at pithead to Rs.2.26 paise for Mundra with imported coal. If we take the 500 MW unit sizes, the tariff from coal-fired units varies from Rs. 2.20 to 2.60 per unit. This is considerably lower than the tariff from nuclear plants. If we take the international price of imported reactors, considering market rates of interest, a debt equity ratio of 70:30 as in other commercial projects, all of which are unlike Kudankulam, the tariffs for imported reactors will be in the range of Rs. 4.60 to Rs. 5.00 per unit as we have indicated earlier.

This once again brings out the central point regarding the techno-economics of nuclear power - that we need serious and comprehensive studies to substantiate the capital costs and tariff of imported nuclear plants. The Common Minimum Programme had incorporated the need for integrated energy planning, "An integrated energy policy linked with sustainable development will be put in place." This, we believe, was the Integrated Energy Policy, 2006 of the Planning Commission. If we are to consider changing that, we need another study to carry out a similar exercise. This is needed for identifying our future energy needs and the mix of energy to meet these needs.

10. URANIUM SUPPLIES

The UPA's response of 24th September, accepts that domestic supplies of uranium are sufficient for the domestic PHWR programme for generation up to 10,000 MW and that uranium imports are needed only for power generation beyond this limit. However, if the FBR route is followed, there is no restriction on the 10,000 MW either and India can have a nuclear energy programme up to 350,000 MW without importing either uranium or using thorium. With thorium, there is no restriction in terms of fuel for nuclear energy.

If indeed there is no shortage of uranium fuel immediately, it is difficult to understand the need for import of uranium. It is in this context we had asked whether the Government or any agency had done a detailed study for the 40,000 MW programme, identifying capital requirements, tariff from such plants, requirements of fuel and reprocessing of imported fuel. This would have identified our actual requirements of imported fuel and the requirement of reprocessing for either PHWR/LWR or for the FBR

programme. It is the absence of any concrete study on which this ad hoc 40,000 MW figure is based that is the cause for concern. This is further compounded by statements, as in the UPA's Response dated 17th September that "India has no intention to place fast breeder reactors under safeguards. The new reprocessing facility is not linked to India's breeder programme". The UPA's response of 24th September has stated a different position, saying: "(a)s conveyed in the earlier UPA Note, we have no intention of placing current fast breeder reactors under safeguards". It does appear that the plan of 40,000 MW being talked about is without a serious exercise taking all aspects of the nuclear energy programme into account. The role of FBR in this is also not clear. A programme based on imported reactors and fuel does not seem to take into account that the nuclear suppliers' cartel, though technically of 45 countries, is in effect a very narrow one. Therefore, dependence on imported fuel would be a deviation from the original three-phase path of nuclear energy development, and would be detrimental for future energy security.

APPENDIX - XLV

UPA Response to Left Parties' Rebuttal dated 5 October 2007.

October 8, 2007.

1. This is a negotiated agreement: A careful balance of obligations has been agreed upon. Both sides are obliged to implement the provisions of the Agreement. There is no reason to apprehend that India will be locked in or constrained from exercising the right to give notice of termination, take corrective measures or seek consultations should there be difficulties in implementing the Agreement.

It is envisaged that the Agreement will result in benefits to the people of India while at the same time securing vital interests: the autonomy of our strategic programme, our indigenous research and development and India's 3-stage Nuclear programme.

The 123 Agreement was negotiated after the Hyde Act was passed. Provisions in the Hyde Act that could have had implications for the proposed terms of the co-operation have been carefully addressed in the operative Agreement.

Query 1.1. Permanent waiver: "The Hyde Act makes clear that this waiver is not a permanent one and only a onetime waiver A permanent waiver would have meant that the clause of sanctions as defined in NNPA would have been lifted permanently and not as a one time waiver."

Response: The waiver provided by the Hyde Act is permanent in that it is not limited by time and does not require renewal during the lifetime of the Agreement - nor is there a requirement of periodic assessment or determination by the US for the continuation of the Agreement. In the context of India, the waiver means that the US can cooperate with India despite India having conducted a test, not having full scope safeguards and continuing to have a non-civilian nuclear programme. Should India conduct a test in future, which is our sovereign right, the US retains its right to impose sanctions. Just as we have a right to test, they have a right to respond.

Query 1.1.2. India's status as a nuclear weapons state:

"India has not been recognized as a nuclear weapon state, implicitly or otherwise. The application of the US laws including the Hyde Act will recognize India as a NNWS. This has relevance to the way the safeguards and other regimes will apply in the 123 Agreement."

Response: The Hyde Act as well as the 123 Agreement recognize India's strategic programme and endorse a waiver for India from full-scope safeguards. The safeguards and their applicability will be negotiated to make them India-specific and fully acceptable to India.

Query 1.1.3. National Laws of the US that apply:

"The Left Parties insist that a comprehensive list of the domestic laws of the US that are applicable for the implementation of the 123 Agreement should be framed."

Response: The US side will, naturally, implement the Agreement in accordance with US laws. There is no reason for India, who will ensure that implementation by India, too, is in accordance with her own national laws, to expect otherwise.

It has been clearly stated in the 123 Agreement (Article 16.4) that the Agreement "will be implemented in good faith and in accordance with the principles of international law— a concept that has been explained in the response of 17 September 2007.

Query 1.2. Applicability of the Hyde Act. "Hyde Act ... becomes an integral part of the 123 Agreement through Article 2.1 that requires conformity with national laws ... Is it the UPA's contention that where the Hyde Act and the 123 Agreement do not conflict with or cover the same ground as the 123 Agreement, the Hyde Act provisions will not apply on the US Administration?"

Response: It may be noted that there is no provision to the effect that the Agreement is subject to the national laws of the parties. Under Article 2.1, it is only the implementation of the Agreement that will be in accordance with the national laws of the respective parties. Accordingly, the substantive rights and obligations under the Agreement are not affected by the national laws of the parties.

The 123 Agreement, when it becomes law with US Congressional approval, will override Hyde Act. The 123 Agreement and its provisions will indicate the rights and obligations of both sides. The request that Left Parties may clarify which sections of the Hyde Act will prevent the US from fulfilling obligations committed in the 123 Agreement has not been answered in the October 5 response of the Left Parties.

2nd Query under 1.2: "The bridge to the Hyde Act is provided by the Preamble to the 123 Agreement It may be mentioned here that the Preamble to the 123 Agreement states that Agreement is 'desirous of strengthening the strategic partnership between them.' ... This preambular statement can be used to lend a certain colour and tone to the interpretation of the 123 Agreement. Article 31 of the Vienna Convention of the Law of Treaties notes the general rule of interpretation ... Therefore the Preamble can always be taken cognizance of in the act of interpretation."

Response: The Preamble of the 123 Agreement has been partially quoted in para 1.2. It is relevant to state that by the same argument, the Preamble also mentions that the two Parties enter into the Agreement "wishing to develop such co-operation on the basis of mutual respect for sovereignty, non-interference in each other's internal affairs, equality, mutual benefit, reciprocity, and with due respect for each other's nuclear programmes".

Article 31, para 2 of the Vienna Convention states:

"2. The context for the purpose of the interpretation of a treaty shall comprise, in addition to the text, including its preamble and annexes:

- (a) any agreement relating to the treaty which was made between all the parties in connection with the conclusion of the treaty;
- (b) any instrument which was made by one or more parties in connection with the conclusion of the treaty and accepted by the other parties as an instrument related to the treaty."

It may be noted that all the elements included in the "context" are based on agreement between the parties. Accordingly, the national laws of one party cannot be considered as being included as relevant for the purpose of interpretation of a treaty.

Query 1.3. Applicability of the Hyde Act: "The Hyde Act continues to frame the obligations of the US through the reference to national laws in Article 2.1 of the Agreement"

Response: The Hyde Act is an enabling legislation, an internal requirement in the US legislature. If its sections were meant to stipulate the terms of the civil nuclear cooperation between India and the USA agreement, then there would have been no need for it to enable a further Agreement - there would have been no requirement for the US Government to negotiate a separate agreement that spells out rights and obligations and send it for approval to the US Congress. The Hyde Act itself - and later the US government - have made very clear which sections are binding and which are nonbinding - even on the US Government. As far as India is concerned, it is the 123 Agreement, when it becomes law, that will govern the rights and obligations of the parties.

Query 1.4. Coverage of the Hyde Act regarding termination: "The Hyde Act has also defined limits of the 123 Agreement. . . . It has not only defined the conditions for termination if India violates what the US Congress considers as India's commitments, but also what the US Administration should do if the Agreement is terminated."

Response: The Agreement gives equal rights to both Parties to seek termination. Once the 123 Agreement becomes law, the termination clause in the 123 Agreement, and no other will apply.

Query 1.5. The Vienna Convention, Law of Treaties and Domestic Laws: "... What are the International treaties that are referred to in Section 2.1 ... if the Government is not aware of the international treaties referred to in Article 2.1 of the 123 Agreement, then this has to be clarified before proceeding further."

Response: A listing of international treaties to which a State may be party is not needed. What is relevant and logical is for the Agreement to clearly provide that international treaties that one Party is committed to should not become a liability for the other. This clause protects the Parties from unwittingly committing to additional or unknown obligations of the other Party.

Query 1.6. India and China Agreements: "The UPA's Note ... had claimed that the India-US 123 Agreement is superior to the China-

US 123 Agreement ... The provisions in the China US Agreement and the India-US Agreement regarding compatibility with national laws are not comparable."

Response: This Agreement is about India and the USA. It should be recognized that we have achieved terms that are appropriate for us. The position and rationale for preferring the formulation that we chose has been explained earlier in detail in the 17 September Note.

As stated in the Note of 24 September 2007, Article 16.4 of the India-US Agreement clearly stipulates that the 123 Agreement shall be implemented in accordance with the principles of international law, which includes the principles of law of treaties, and more specifically, includes the customary rule embodied in Article 27 of the Vienna Convention. This has also been addressed in the response at 1.1.3.

Query 1.8 Arbitration vs. Consultation: "The provisions of Consultations and Arbitration are not mutually exclusive. All forms of dispute settlement should be provided for. For instance, the WTO Agreements provide all possible alternatives viz. from consultations to arbitration."

Response: This is a bilateral agreement and not a multilateral treaty. There is a strong rationale for preferring consultations over subjecting ourselves to arbitration by a third party.

Arbitration involves a third party compulsory binding dispute settlement process, whereas in consultations, disputes are to be settled between the parties themselves, and no settlement may be forced on either party.

Query 6. Reprocessing: " ... the reprocessing consent is only notional at this stage ... It is more a consent to reach an agreement in the future on reprocessing, which may or may not be reached."

Response: The reprocessing consent has been granted and it is not "consent to reach an agreement in the future on reprocessing". The future negotiations will only be on arrangements and procedures under which such reprocessing or other alternations in form or content will take place.

The arrangements and procedure for reprocessing will, as provided in the Agreement, be negotiated. Nowhere in the 123 Agreement is there a commitment to follow a particular model prescribed in US or Indian Law or to use any existing template of either side.

Article 6 (iii) provides a definitive time-frame for finalizing the arrangements and procedures.

7. ENERGY ISSUES

7.1 **Capital costs of imported nuclear reactors:** Rebuttal asks for details of analysis by Commissariat a l'Energie Atomique (CEA). A paper by Eric Proust is enclosed. Studies carried out by DAE and reported in the document titled, "A Strategy' for Growth of Electrical Energy in India" (www.dae.gov.in) issued in 2004 concludes that even when, full potential of the fast breeder reactors have been realized, . cumulative import of primary energy till the middle of this century will be about 30 per cent. Obviously there is a need to reduce this dependence on import of fossil fuels. Report on Integrated Energy Policy prepared by the Planning Commission in 2006 recognizes this and recommends import of light water reactors to supplement the indigenous programme. In parallel, NPCIL has been also seized with this issue and carried out a detailed study in 2005 on economics of light water reactors. This study was updated recently and update was attached to inputs from DAE for the questionnaire dated 14 September 2007 received from the Left Parties. It is enclosed again for ready reference. It is based on all these analyses that NPCIL has formulated the programme to set up nuclear generation capacity of 40.000 MWe by the year 2020.

7.2 **Lack of sufficient study and techno-economic analysis:**
Please see response to paragraph 7.1

7.3 **Nuclear renaissance:** First, let us recall historical facts. While no new plant has been built in the recent past in the West, electricity produced from existing power plants has been continuously increasing. In Nineteen Seventies, nuclear power plants were operating at capacity factors of the order of 50 per cent, while at present they are operating at capacity factors of the order of 90 per cent. Simultaneously, nuclear power

plants set up earlier had certain operating margins, which were decided based on the knowledge of nuclear science and engineering in the seventies. As the knowledge base and operating experience increased, it was possible to upgrade the capacity of existing plants and this has been done. As a result of these two factors, electricity generated from nuclear power plants in the world has been continuously increasing (enclosed figure). Now when full potential of existing nuclear power plants has been realized, industry in the OECD countries where most of the nuclear power plants are located, is looking forward to building new plants and NRG Energy and South Texas Project Nuclear Operating Co., USA have filed the first full application with US NRC for a construction and operating license for a new nuclear power plant in September this year. Left Parties have already mentioned about new nuclear power plants in Finland and France and very soon one will see new plants in USA as well. Current nuclear capacity is about 370 GWe. Several forecasts have been made with regard to growth and even the MIT study, which has made very negative assumptions with regard to economics, postulates a global growth scenario that by mid-century would see 1000 to 1500 reactors of 1000 MWe capacity each deployed worldwide. License applications being moved now is a step towards increase in installed capacity in the future.

- 7.4. **Decarbonizing the economy:** IPCC has forecast an increase in the share of electricity supplied by nuclear plants from 16 per cent in 2005 to 18 per cent by 2030. This indicates that they expect that all existing nuclear power plants after completion of their life time will be replaced by nuclear power plants and new power plants will also be built. It must be remembered that several of the existing power plants are nearing the end of their life and will not get license for continued operation and will have to be closed down. Significant increase in nuclear generation will start only after existing plants have been replaced and developing countries have started setting up nuclear power plants. Setting up of additional nuclear power plants will also decrease carbon emissions, which otherwise would increase. It is worth recalling what Joint Science

Academies' statement (enclosed) on growth and responsibility: sustainability, energy efficiency and climate protection issued in May 2007 has to say, "Against this background it will be necessary to develop and deploy new sources and systems for energy supply, including clean use of coal, carbon capture and storage, unconventional fossil fuel resources, advanced nuclear systems and advanced renewable energy systems (including solar, wind, biomass and geothermal energy), smart grids and energy storage technologies." (emphasis added)

8. Impact of imported reactors on domestic industry:

Inherent assumption in the argument of the Left Parties is that imported reactors will replace indigenous reactors. It is restated that imported reactors will be in addition to the ongoing indigenous programme. As indicated earlier, at present India imports about 30 per cent of its primary energy. What we are proposing is to continue with our indigenous programme and use the additionality provided by opening up of civil nuclear cooperation for replacing import component of primary energy. It can take two forms: setting up of additional Pressurized Water Reactors using imported uranium as fuel and setting up of light water reactors. Setting up of additional reactors will thus provide additional jobs to Indian industry. We have also to remember that at present India faces shortage in peak power as well as average electricity supplies. Estimates by TERI with regard to the cost to the economy for each kilowatt-hour of energy not supplied are in the range of Rs 15-25.

9. Cost of energy from various sources:

The estimated cost of Kudankulam Nuclear Power Project units 1&2, as approved in the financial sanction was US \$2804 million. It consisted of Rs. 3796 crores (807 million US \$) Indian cost component and US\$1996 million as foreign component. The sanctioned cost of Rs. 13171 crores was estimated on the basis of prevailing exchange rate of Rs. 47/US \$.

As was mentioned in the communication written in response to the rejoinder of Left Parties dated 19 September, norms for fixing tariff of electricity from nuclear power plants in India have been continuously evolving. In the initial development phases, norms for

fixing tariff were based on single part tariff, a base capacity factor of 62.8 per cent, and levies for research and development, renovation and modernization. Later, the policy was revised and base capacity factor was increased to 68.5 per cent and the levies on research and development, renovation and modernization were withdrawn.

Also, the interest rate assumptions with regard to us \$ exchange rate have undergone significant shifts in the last few years. For example, it was assumed with regard to tariff estimates quoted earlier for Kudankulam Project, that US \$ will appreciate with respect to Rupee at a rate of 4 per cent per annum. Similarly, components in the tariff like return on equity, depreciation rate, interest on working capital etc. have generally seen downward trends in the last few years. Based on such varying parameters different tariff estimates have been quoted during the period.

As was stated in the Communication written in response to the rejoinder of Left Parties dated 19 September, the policy on tariff for light water reactor is being worked out. The estimate of Rs. 1.99 per kWh for Kudankulam Project has been carried out on the basis of the prevailing thermal power plant tariff norms and taking into account the present financial scenario. The broad Techno-Economical parameters assumed earlier and those at present are tabulated below:

	Sanction	Present Scenario
Debt: Equity Ratio	1.1	2.1
Exchange Rate Rs/\$	Rs.47/US \$	Rs.40/US\$
Rate of Return on Equity	16%	14%
Depreciation	5%	3.6%
Interest on working capital	16%	10.5%
Annual O&M cost	3% of capital cost (including plant insurance)	2% insur. on actual
Capacity Factor	68%	80%
R&M Levy	5 paise per kWh	Nil
R&D charges	3 paise per kWh	Nil

Comparison of Kudankulam tariff with that obtained at Kaiga is out of place. The high tariff of Kaiga 1&2 as worked out in year 2000 was an exception and not the norm. The dome de-lamination incident during the execution of the project and the subsequent regulatory review & reconstruction delayed the project completion. As most of the expenditure on the project had already been incurred, the high interest regime prevalent then led to a high Interest During Construction (IDC) component of about 37 per cent in the completion cost. Hence, a negotiated tariff as given in the Left Parties' Note of 5 October was adopted. However, tariff reduction measures and changes in economic parameters, brought out above, reduced the tariff. The current notified tariff of Kaiga 1&2 at present is 279.50 paise/kWh.

Kaiga-1&2 as mentioned above suffered delays and increase in cost due to higher accumulated interest during construction. It will be appropriate to look at the recently completed PHWR projects as at TAPP-3&4 (540 MWe units). These units have been completed ahead of schedule and well within the sanctioned cost. The current notified tariff is 265.48 paise/kWh. The project has been completed at the cost of Rs. 5570 core against Rs. 6525 core considered in the tariff notification. Further, the debt equity structure of the project is also being changed to 2:1 from the 1:1 envisaged earlier. These factors would result into further lowering the current notified tariff. Over the years, NPCIL has demonstrated maturity in handling multiple projects efficiently and in the recently completed projects there has been no time and cost overruns. The profitability achieved by NPCIL with the present reduced tariff has been such that it has not been drawing any budgetary support for the past two years for its projects. NPCIL is geared up to take up the XI plan projects from its own resources and debt from the market.

10. URANIUM SUPPLIES

Import of uranium is to provide additionality to the ongoing domestic nuclear power programme. It will help reduce import of primary energy.

As already stated NPCIL has done a detailed study of economics of light water reactors before arriving at the proposal to set up 40,000 MW by the year 2020.

Government has full clarity with regard to role of FBRs and about FBRs to be offered to the IAEA for safeguards. As noted in the response of 24 September, Government will consider offering specific fast breeder reactors for safeguards only after technology has stabilized and we are ready to use plutonium recovered from spent fuel of foreign origin.

APPENDIX - XLVI

Left Parties Rejoinder to UPA's Response of 8th October.

October 20, 2007

Despite several rounds of exchanges, the UPA has not been able to satisfactorily clarify upon the substantive issues raised by the Left Parties regarding the implications of the Hyde Act for the 123 Agreement and self-reliance in the nuclear sector. Clarity is essential before India can proceed on a path that involves obligations and commitments in perpetuity. The UPA continues to offer, on several questions relating to the 123 Agreement, interpretations that are different from the official and publicly stated positions of the United States. In some cases the positions enunciated by the two sides are contradictory. The record of the US reflects a tendency to continuously shift the goalposts on nuclear issues. This has become evident through actions taken by the US since the July 18, 2005 Joint Statement of Prime Minister Manmohan Singh and President Bush, especially the passage of the Hyde Act. The resolution of such contradictions and differences between the Indian position and that of the US is therefore imperative, before the Government proceeds further.

ISSUES RELATED TO THE 123 AGREEMENT

1. **Imbalance of Obligations Regarding Fuel Supply and Safeguards:** The UPA's Note continues to insist that a "careful balance of obligations has been agreed upon" in the 123 Agreement. However, the Left Parties' notes have repeatedly drawn attention to the actual lack of balance of obligations in the Agreement, where IAEA safeguards in perpetuity are clearly written into the text whereas the fuel supply guarantees are ambiguous and will cease on termination of the Agreement. This point is not clarified in the UPA's latest response. Various other clarifications that have been sought on fuel supply guarantees, particularly with regard to future amendment of US domestic laws as mentioned in Article 5.6(a), are also not forthcoming.
2. **Hyde Act and Permanent Waiver:** The UPA's Note now accepts that the provisions of the Hyde Act that are relevant to the terms of cooperation "have been carefully addressed in the operative Agreement". The UPA's Note also implicitly admits that in respect of the provisions of the Hyde Act that are not incorporated in the 123

Agreement, it is the Hyde Act that will prevail. This is evident in the admission contained in the UPA's Note that any nuclear test by India will result in the imposition of sanctions by the US. As the Left Parties' Note had pointed out, this is precisely the content of Section 106 of the Hyde Act. While the 123 Agreement itself is silent on this question, it is clear from the admission in the UPA's Note that it is the provision of the Hyde Act that is operative here. Similarly, there are other provisions of the Hyde Act, which are outside the 123 Agreement and could therefore be used to put pressure on India's foreign policy. The same admission in the UPA's Note also negates the claim that the Hyde Act constitutes a permanent waiver of the relevant provisions of the Nuclear Non-Proliferation Act of 1978. The Left Parties' Note had pointed out that these provisions of the NNPA prohibit the transfer of any nuclear material to any non-nuclear weapons country (as defined by NPT), which has exploded a nuclear device or has violated other clauses of NNPA and that the Hyde Act provides only a one-time waiver of these provisions.

3. **Hyde Act and the 123 Agreement:** The UPA's Note continues to assert that the 123 Agreement, once it becomes law with Congressional approval, will override the Hyde Act. The Left Parties' Note had referred to the clarification made by US Assistant Secretary of State, Richard Boucher that this was not "a meaningful statement". The UPA's Note remains silent on this obvious contradiction between its claim and the official position of the US.

4. **Reference to National Laws in the 123 Agreement:**

The UPA's Note seeks to make a distinction between the statement that "the Agreement is subject to the national laws of the parties" and the statement that "only the implementation of the Agreement that will be in accordance with the national laws of the respective parties". In the light of the above discussion relating to the Hyde Act, it is clear that this distinction cannot be maintained. In any case, an Agreement has meaning only in so far as it is implemented. Hence, the request made by the Left Parties to provide a list of all national laws relevant to the 123 Agreement is crucial and remains to be answered.

5. **Reference to International Treaties in the 123: Agreement:**

The UPA's Note insists that the reference in Art. 2.1 of the 123

Agreement to international treaties is innocuous. However, it ignores the sharp differences between the international obligations of the India and the US. One such difference relates to the Nuclear Non-Proliferation Treaty, where India is a non-signatory and the US is a nuclear weapons state signatory. It is therefore necessary to consider the possible conflict between the obligations of the US under the NPT and its obligations under the 123 Agreement. In this regard it is relevant to Note that the Hyde Act explicitly insists on the US maintaining its obligations under the NPT. Therefore, the Left Parties' request for providing a list of international treaties relevant to the 123 Agreement is an important one and remains unfulfilled.

6. Interpretation of Viena Convention:

The UPA's Note repeats its own reading of the status of the 123 Agreement in international law, particularly the Vienna Convention on the Law of Treaties. However, it fails to address the central issue raised in the Left Parties' Note that according to Article 31 of the Vienna Convention, the 123 Agreement would be interpreted in the way it is written. Since the implementation of the Agreement "in accordance with its respective applicable treaties, national laws" is categorically mentioned in Article 2.1 of the 123 Agreement, these would have to be considered and cannot be wished way, which the UPA's Note does. The Left Parties' Note had emphasized that the key issue was to get the US to abide by its obligations under the 123 Agreement. Given the wordings of the 123 Agreement, it is open to the US to advance a strong legal case to justify the violation of obligations if it feels its national interests are not being served by the 123 Agreement. The UPA's Note fails to provide any assurance that the wording of the 123 Agreement incorporates substantial guarantees against attempts by the US to renege on its obligations and commitments later on. The US obligations on fuel supply guarantees and reprocessing have been hedged in different ways, permitting them to rescind from these obligations later if they so wish. India's obligations, on the other hand, have been defined much more categorically and in hard treaty language.

7. Termination of the Agreement:

The UPA's response essentially confirms that the US can terminate the agreement without consultations if it so desires vide Article 14.2 of the 123 Agreement. The assertion made in the UPA's Note that

the Agreement "gives equal rights to both Parties to seek termination" is irrelevant, since the issue is to bind the US to its commitments and obligations as a supplier. It was in this regard that the Left Parties' notes had brought out the examples of the 123 Agreements that the US has with other countries. In particular, the nature of the guarantees in these agreements and the clear commitments that they impose on the US in specific terms of international law and/or the Vienna Convention were highlighted. The UPA, after having earlier claimed that India's 123 Agreement was "superior", is now justifying the wording of the current Agreement as one which is "appropriate for us". Thus, unambiguous guarantees that hold the US to its obligations in terms of international law is an issue that the UPA's Note has not addressed satisfactorily.

8. Reprocessing Rights in the 123 Agreement:

The UPA's Note repeats a position on reprocessing that has been flatly contradicted by US officials. The UPA's Note denies the role of Section 131 of the US Atomic Energy Act, despite the statement of the US Deputy Secretary of State, Nicholas Burns made on July 27, 2007, that "Section 131 of the Atomic Energy Act, of course, calls for subsequent arrangements in reprocessing, arrangements in procedures, that would need to be agreed upon before the reprocessing could actually take place." It is clear that the interpretation of the UPA, that further "arrangements and procedures" to be negotiated for reprocessing are of a routine nature, is not shared by the US side. Without agreement on the "arrangements and procedures", the so-called "consent" on reprocessing has little value. Apart from a timeline, the consent to reprocess in the 123 Agreement is the same as in the Tarapur 123 Agreement. The UPA Note appears to suggest that no further problem could arise between the in-principle consent for reprocessing and its actual implementation. Is the UPA aware that arrangements and procedures under Section 131 include US Congressional approval, which could lead to unacceptable policy pressures at a later date? Another potential source for shifting the goalposts on this issue is already evident in the repeated reference by Nicholas Burns to a "state of the art" reprocessing facility that India will set up. Has the Government considered the possibility that this may imply further conditions from the US side regarding the nature of the new reprocessing facility?

9. Reprocessing and the Fast Breeder Programme:

The UPA has failed to clarify upon the relationship, under the proposed nuclear cooperation regime, between the new reprocessing facility and the indigenous fast breeder programme. The timeline for the new reprocessing facility in relation to the setting up of fast breeder reactors that will be in the civilian sector under safeguards, utilizing spent nuclear fuel of imported origin, is totally unclear. Moreover, before the fast breeder technology is stabilized, what will happen to the large quantities of spent nuclear fuel that will be generated from imported uranium that will be utilized in safeguarded reactors, many of which themselves may have been imported? These issues remain unclear.

10. Restrictions on Dual-Use Technology:

The UPA's Note has once again evaded the issue of dual-use restrictions. The question of how burdensome the dual-use restrictions on reprocessing and enrichment are likely to be and how they will affect future reprocessing activity, fast breeder reactor development and construction and the full development of the three-stage closed nuclear fuel cycle, has not been addressed. There is no clarity on this in the UPA's response despite the Left Parties having repeatedly raised this issue. This is a central aspect of the discriminatory global nuclear regime that India has always resisted.

ENERGY ISSUES

1. **Capital Costs of Imported Reactors:** The question the Left Parties' Note had raised was whether independent studies have been carried out to examine the costs claimed by nuclear industry. Studies by either Commissariat à l'Énergie Atomique or Nuclear Power Corporation do not fulfill this requirement. It is well known that nuclear industry has made optimistic projections of costs, which have not been backed up by actual experience. The UPA's Note had mentioned CEA and other studies as the basis for arguing that electricity generated from imported reactors would be cost competitive with coal based plants. CEA in Indian energy circles would be considered Central Electricity Authority and not Commissariat à l'Atomique.

The basic question remains unanswered. If we want to invest 40,000 MW of nuclear power by 2020, we need studies, which analyze cost of domestic

reactors, imported reactors and also energy costs from other sources of energy. The Planning Commission study that was quoted in the Left Parties Note --- Integrated Energy Policy -- had done this exercise and had come out with a detailed plan. There is no such study which has undertaken a similar exercise for 40, 000 MW of imported nuclear by 2020 that the government is talking about. Without such a study and proper evaluation of other options, the country should not be committed to this path.

The study quoted in the UPA's Note brings out clearly how other countries have gone about evaluating their energy options. France has to import coal and gas/oil and therefore, the economics of nuclear energy is quite different from India, which has very large reserves of coal. France has also to take into account its per capita green house gas emissions (which are about six time more than India's) and the commitment it has made in Kyoto. Therefore what may be an economically viable option for France cannot be used as a basis for India. However, the French study is interesting for analyzing the cost of imported reactors. The study by Eric Proust takes the overnight cost (cost of the plant without taking interest during construction) as - Euro 1300 per KW (over \$ 1800 per KW at the current exchange rate). The first plant in Western Europe in ten years - the Olkiluoto Unit 3 of 1600 MW in Finland - started with a similar assumption of costs. However, when the actual order was placed on Areva, the French company, even after significant French Government subsidies, the cost had gone up to Euro 3.2 billion, i.e, the cost per KW was euro 2000 per KW (over \$ 2800 per KW at the current exchange rate). After the placement of order, it has seen a time overrun of 18 months in the first 18 months of its construction and a further cost overrun of more than 25 per cent (Nuclear Bid to Rival Coal Chilled by Flaws, Delay in Finland, By Alan Katz, September 5, 2007, Bloomberg).

Similar cost and time overruns have dogged other nuclear projects abroad. Internationally, investors and experts discount the highly optimistic figures given by the nuclear industry. The Finnish example only confirms our view that the actual cost of imported reactors is much higher than what the Government is considering.

The US Energy Information Administration, in its Annual Energy Outlook 2007 With Projections to 2030 has computed that with capital costs of nuclear reactors at 2006 levels, cost of electricity from nuclear plants will be higher than that from either coal or gas. (The chart from this study is reproduced (not reproduced here)).

It is in the light of the above that the need for an India specific independent study analyzing India's energy options was emphasized, rather than relying on the claims of the nuclear industry. There is also no detailed DAFJNPC study that has been enclosed with the UPA's Note, without which the basis of the capital cost of imported light water reactors considered by them cannot be commented upon.

2. Nuclear Renaissance: Nuclear renaissance is a hype created by the nuclear industry in the US, Western Europe and Japan. In all these countries, the total number of nuclear plants being built is only 3. This is in contrast to over 20 new plants being commissioned every year in those countries during the heydays of nuclear energy in the 1980s (see Chart 2). The majority of new plants are today in countries that are expanding their electricity sector significantly and as a part of that they are also investing in nuclear energy. Here also, the proportion of nuclear plants does not show any sign of the renaissance that the UPA's Note talks about. For example, China currently gets only 1.8 per cent of its electricity from nuclear plants, not very different from India. Even if we take the future nuclear plants that China proposes to build, nuclear energy is not going to be more than 5 per cent of its total installed capacity.

The talk of nuclear renaissance is based on the US Government trying to kick-start their moribund nuclear industry. There is up to half a billion dollars available as subsidy for the first six nuclear plants in the US, apart from numerous other measures such as soft loans and Government indemnity against time and cost overruns. Despite that, the first licenses to construct and operate nuclear plants are as much as 5 years away. Jim Rogers, the CEO of Duke Power, one of the companies proposing to build a new nuclear plant in the US, expressed his pessimism about Duke's ability to build this plant. About nuclear renaissance, in his testimony before the North Carolina Utilities Commission in January 2007, he said, "I'm not a true believer ... We're talking about a renaissance in nuclear. I don't see it." He also indicated in this testimony that he believed the cost per KW would be of the order of \$2500-2600 and not \$1800 as claimed by Westinghouse.

3. Decarbonizing the Economy: The Indian Government is on record that with our per capita emissions being one tenth to one twentieth of countries such as the US and other developed countries, we cannot take measures to decarbonize the economy before developed countries bring down their emissions. Indian estimates suggest that it will cost \$2.5 trillion to decarbonize the economy and would severely impact development. If

the Government wants to re-look at these issues, it is welcome. But that needs to be done in an analysis of what are the emission levels that we would like to reach, the impact of various options on such emission levels and the costs involved. If after that, it is felt that the nuclear option should be seriously pursued for decarbonizing the economy, the nuclear option of 40,000- MW can be considered. Otherwise, there are many other ways to limit greenhouse gas emissions, nuclear energy being only one amongst many. The key issue here is a quantitative analysis of the options before us including limiting greenhouse gas emissions and working out the targets. Instead, what the Government seems to be doing is first deciding on how much nuclear power we would like to add with imported reactors and then finding various justifications for this.

Nicholas Burns, in his recent article in Foreign Affairs, Nov/Dec 2007, stated: "This Agreement will deepen the strategic partnership, create new opportunities for US businesses in India, enhance global energy security, and reduce India's carbon emissions". It is ironical that the US is talking about helping India to reduce carbon emissions while not agreeing to reduce its own. This reflects the US position: if the world is endangered by greenhouse emissions, it is countries such as India and China that need to limit their emissions. For the US, no reduction of greenhouse gases is possible; George Bush senior expressed this quite clearly, "American lifestyles are not open to negotiations". India seems to be succumbing to the US view of greenhouse gas emissions and not developing a perspective of its own.

4. Impact of Imported Reactors on Domestic Industry:

It is difficult to understand the contention contained in the UPA's Note that imported nuclear reactors would be additional to the ongoing indigenous programme, and help in "replacing import component of primary energy". The bulk of our import of primary energy is oil and this cannot be substituted by nuclear energy. The country's fuel policy has to recognize coal as its immediate primary energy source and invest in technology upgradation and further prospecting. At present, we waste huge amounts of coal due to inefficient mining. This is where lack of capital is a major bottleneck. Instead of looking for high cost import of reactors, we should allocate larger resources for more efficient mining of coal and oil/gas exploration.

As far as power generation is concerned, if we decide to increase the share of nuclear power with imported reactors, the investment will have to be made either from the allocations earmarked for the power sector, or elsewhere. If we

import reactors in large numbers, then this investment will not lead to domestic manufacture or jobs. While the UPA is busy arguing that import of reactors would not have any impact on the domestic industry, US officials like Condoleezza Rice have been arguing that civilian nuclear cooperation with India would create jobs in the US. The other important issue related to this is that originally India had planned to overcome its shortage of uranium by the fast breeder route. From the UPA's Note, it appears that the focus is shifting towards an expansion of the nuclear energy sector by primarily promoting imported fuel based light water reactors. As we have noted earlier, this has long-term adverse implications for energy security.

5. Cost of Electricity from Kaiga and Kudankulam:

While the UPA's Note has talked of electricity from Kudankulam being Rs 1.99 per unit, the CMD of NPC, SK Jain has stated that power from Kudankulam would not exceed Rs. 2.50 per unit. No calculations have been provided to support these figures. Calculations using the figures from the UPA's Note and the NPC's document "Light Water Reactors in India, An Economic Perspective", show that the cost per unit of electricity comes to Rs.2.50-2.75 per unit and not Rs.1.99. However, NPC's figures, particularly for fuel costs, are questionable. We are not aware of the fuel contract with the Russians, but based on current international prices of uranium, the figures in NPC's document appear quite optimistic. The Annual O&M costs are similarly taken on an optimistic basis. No information is available on the impact of project slippage on the project cost. Once these are taken into account, the figures for Kudankulam, even with the low capital cost that the Russians have offered, would be around Rs.3.00 per unit.

Kudankulam is a project where an exceptionally low price for reactors was offered by the Russians and the Russian price was fixed in dollar terms. We have benefited from depreciation of the dollar. The Russians have also given us soft loans, again denominated in dollars, and this has helped the project cost. As the NPC CMD has explained, without the drop in dollar rate, the price would have been in the range of Rs.3.00 per unit. However, unless the project is finished and we have the actual costs, the figures quoted are only in the realm of conjecture. The other issue in the Kudankulam cost is the cost of reprocessing the fuel. If we take the cost of reprocessing fuel, waste disposal and decommissioning costs, the cost per unit would be higher.

Regarding Kaiga, the UPA's Note suggests that the high capital cost for the project is to be attributed to the dome failure and consequent delays leading to a high Interest During Construction. According to the UPA's

Note, the IDC part of the project cost is about 37 per cent. However, Sudhinder Thakur, Executive Director (Corporate Planning), NPC has given the figures of IDC for Kaiga as below:

The revised completion cost of the project is Rs 3,282 crore consisting of the base cost of Rs 2,727 crore and an interest during construction (IDC) component of Rs 555 crore ... The percentage of IDC in completion cost (inclusive of IDC) is therefore 16.9 per cent. (Economics of Nuclear Power in India: The Real Picture, Economic and Political Weekly, December 3, 2005)

If we take the capital cost of Kaiga as Rs. 2,727 crore and other parameters as given in the UPA's Note, and the operating cost as given during tariff calculations, the cost of power from Kaiga would be around Rs.3.20-3.50 per unit.

The key question here is what would be the future capital cost of nuclear plants? If we take the cost of other imported reactors, the prices are much higher than Kudankulam.

If we take the capital cost of Rs.9 crore per MW, the levelled fixed component of the cost (capital servicing cost) from nuclear plants would be around Rs.3.50. If we add the Kaiga variable cost to this, the cost per unit would be of the order of Rs.5.00. The UPA's Note also claims that NPC would be able to meet all its future requirements from its own resources and market borrowings. No information has been provided regarding the cash reserves of the NPC and how much it proposes to borrow. Is the UPA suggesting that NPC would be able to provide the equity for the entire 40,000 MW proposed to be constructed and raise the entire loan all by itself? The NPC balance sheet certainly does not show this picture. This is quite different from NPC meeting of the 11th Plan Project on their own.

The above shows that there are a number of questions with regard to the economics of nuclear energy that need to be answered. Merely producing figures from NPC, which is obviously advocating a very large share for nuclear power, is not the best way for planning the future of the power sector. This exercise needs to be undertaken by the Planning Commission to rigorously establish the baseline costs and plan for future investments in a holistic manner.

APPENDIX - XLVII

UPA'S Issue-wise Response to Rejoinder by Left Parties dated 22 October 2007.

November 16, 2007.

STRATEGIC RELATIONS WITH US

India has always followed an independent foreign policy. There is no change at all in this. The aim of such a policy is to create conditions where we can focus on the economic development of our people. The Government is, thus, committed to continuously improving bilateral relations with our immediate neighbours, the countries in our region and all other major powers in the world.

In an era where there is increasing interdependence among nations, the development of good relations with all major powers without being constrained by Cold War era thinking of blocs and alliances adds to our ability to pursue our independent path as dictated by our national interest. This provides us the leverage and space to pursue our independent foreign policy.

In this context, Government has pursued cooperation with the USA to the extent that it helps to achieve the goals set by successive governments for the welfare of our people, and in overall national interest.

IRAN

India's overall approach to Iran has been clear and consistent. EAM's recent remarks in May 2007 layout very clearly the approach towards Iran:

Throughout history, Iran has radiated through Persian language and culture its influence over all its neighbouring countries. In Iran, therefore, we deal with not just a political entity but also a cultural force that takes great pride in its civilizational achievements. I think it is worth reiterating this to ourselves when we deal with that country on difficult issues such as security, non-proliferation, etc. In our view,

Iran must be engaged purposefully and candidly -not by demonizing its social and cultural mores but by recognizing their internal dynamic even while we may not accept them for ourselves. For those of us who inhabit the same region as Iran and are aware of the richness of its history and culture, and the pride they take in their civilization, it is axiomatic that threats against or denigration of the country will not work.

Iran has to be mindful of its international obligations, but progress on the issues that concern us will not be possible by the use or the threat of use of force or sanctions. It is only engagement which will enable us to see that Iran views following its international obligations as being in its pragmatic self interest. It is a country of tremendous natural and human resources and the development of these resources will make Iran a factor for regional security. The threat or the implied threat of use of military or economic force will not.

IPI GAS PIPELINE

The statements of officials of the Iranian Ministry of Petroleum, that India has slowed down the IPI Project, are only intended to secure better financial terms for Iran in what is a commercial negotiation. On occasion, such statements may also be found in the Pakistani press based on background briefings. Here again, the attempt is to secure more favourable terms on transit fees.

The facts of the matter are that in the tripartite (India - Pakistan - Iran) meeting in January 2007, a pricing formula was negotiated. Pakistan had declared itself satisfied with the formula and we had agreed to consider it subject to the transit fee and transportation tariff issue being concluded with Pakistan. However, in the next meeting in May 2007, Iran presented a fresh set of proposals by insisting on inclusion of a price revision clause and thus altering the agreed formula. Neither Pakistan nor India could agree to the revised terms. The setback in the negotiations was therefore largely on account of the new Iranian position. Pakistan and Iran in their subsequent meetings have reportedly agreed to a pricing formula. The Government will negotiate with the concerned parties once we know the price of gas at the Pakistan - Iran border.

INDIA'S VOTES IN THE IAEA

The IAEA voting allowed India to articulate its principled and balanced stand on the issue. There is no question of double standards as Iran is a non-nuclear weapon state party to the NPT.

The assertion that it was India's votes in the IAEA in September 2005 and February 2006 that helped the US to transfer the subject of the Iran nuclear issue to the UN Security Council and to impose a sanction regime against Iran is incorrect. The breakdown of the IAEA vote in February 2006 is as follows:

Yes	:	27
No	:	3 (Cuba, Syria, Venezuela)
Abstain	:	5 (Algeria, Belarus, Indonesia, Libya, S. Africa)

It is clear that the IAEA Resolutions would have carried even without India's vote. Regardless of India's vote, there was a clear majority in favour of referring the Iran nuclear issue to the UN Security Council. The restrictive measures were imposed unanimously by the UN Security Council, where India is not a member.

IRAQ

The Government has always acted in a balanced and mature manner to developments in Iraq and has consistently been guided by the unanimous resolutions adopted by both the Houses of Parliament in April 2003. It has on every relevant occasion expressed the hope that Iraq would return to full sovereignty and political stability with control over its natural resources. On seeing reports that former President Saddam Hussein of Iraq had been sentenced to death by a Tribunal in Iraq, External Affairs Minister had said that such life and death decisions required credible due process of law and, while not appearing to be victor's justice, also needed to be acceptable to the people of Iraq as well as the international community. Once the sentence was confirmed, the Government had again expressed the hope that the execution would not be carried out and expressed its disappointment once it was carried out. In keeping with its civilizational ties, India wants the people of Iraq to succeed in their efforts towards nation-building and has, on various occasions, expressed this readiness to cooperate in the reconstruction effort.

PALESTINE AND ISRAEL

India has had a consistent policy of unwavering support for the Palestinian cause right from the days of our freedom struggle under Mahatma Gandhi and this has been continued by the Government. The last dignitary to meet President Arafat was Minister of State Shri E. Ahmad, who was deputed

specially by Prime Minister in September 2004 to Palestine to demonstrate to the world India's solidarity with the Palestinian people and their cause. Former EAM attended President Arafat's funeral in November 2004 in Cairo.

India has contributed much in practical terms in the last three years with the grant of more than \$15.5 million for Palestinian development projects which are under process, in addition to Rs. 10 crores in life-saving medicines delivered to the Palestinian people in 2006. India's support for the Palestinian cause has been reiterated on several occasions, including at the Arab League Summit in Riyadh in March 2007, after the formation of the emergency Palestinian government in June 2007 and most recently at the IBSA Summit in South Africa this month. Our support for a Palestinian homeland and the legitimate rights of the Palestinians is well known. We have welcomed the resumption of direct dialogue between the Palestinian and Israeli leaders. India's relations with the Arab world too have grown in key sectors in the last three years, demonstrating the goodwill for India in these countries.

India's diplomatic relations with Israel were established after the Madrid Peace Process and the establishment of formal relations between Israel and some Arab States. Our relations with Israel are not at the cost of our good relations with the Arab world.

"LOOK EAST" POLICY AND THE STRATEGIC DIALOGUE WITH US, JAPAN AND AUSTRALIA

The process of consultations between the US, Japan, Australia and India is an informal dialogue between the four countries to discuss issues of common interest. Our approach to this dialogue is reflected in the Joint Statement signed between the Prime Ministers of India and Japan in December 2006, in which, they agreed to share view with other "likeminded countries" in the Asia-Pacific region on themes of mutual interest. This informal consultation is not an exclusive group. Our understanding is that other like-minded countries could be included in this process in the future. It is also clear to all parties that this is not a strategic dialogue or strategic consultative mechanism. At the informal consultation between senior officials held in the margins of the ASEAN Regional Forum (ARF) Senior Officials' Meeting in Manila on 25 May 2007, the concerned countries agreed to discuss non-core security matters. These include possibilities of cooperation on issues like counter terrorism, anti-piracy, disaster relief,

energy, environmental issues, counter-narcotics trade and response to pandemics.

While it is true that the ARF is a broader platform for discussions on security issues, it is also true that there are other smaller frameworks for dialogue and cooperation based on the degree of interest in specific issues and their relevance for member countries. This includes groups such as the Six Party Talks on North East Asia and the 'Shepherd's group' on Disaster Management in ARF, both of which do not have India as a member. Our participation in restricted format dialogues is based on our belief that in an increasingly complex and interdependent world, it is important to have regular and focused consultations with all major powers.

SHANGHAI COOPERATION ORGANISATION

The six SCO Member States are Russia, China, Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan. The four Observer countries are Mongolia, Pakistan, Iran and India. The SCO chose to make India an Observer and not a member in July 2005. The then EAM represented India in 2005 at the SCO Summit and the Minister for P&NG did so in 2006 and 2007. At the SCO Summits, Heads of delegations from Observer countries are not included in the closed-door sessions, which are attended by Member countries to finalise Summit documents. At the three summits (Astana: July 2005, Shanghai - June 2006 and Bishkek - August 2007), India has been consistently represented by a Cabinet Minister.

AFGHANISTAN

India is involved substantially in the reconstruction of Afghanistan and is committed to a peaceful, stable, democratic future for Afghanistan.

India has a consistent policy towards the Taliban. The defeat of the Taliban in 2001 was, in fact, due to efforts of the Northern Alliance, whose cause we had supported against the Taliban. It is also a fact that the defeat of the Taliban in 2001 and the establishment and continuation of a new administration in Afghanistan thereafter would not have been possible without the UN mandated US and NATO forces.

India has been at the forefront of resisting calls which propose accommodation of Taliban in the power structure of Kabul. It must be noted in this context that our interest will not be served by a precipitate withdrawal of foreign troops. Any weakening of the international commitment to

Afghanistan at this juncture carries the grave risk of a reversion to a Talibanised Afghanistan, which would certainly not be in our interest. India is, therefore, engaged, along with the international community, in reconstruction efforts in Afghanistan. It would be wrong, however, to interpret this as harmonizing our policy with the US regional policy in Afghanistan.

DEFENCE FRAMEWORK AGREEMENT AND "MULTINATIONAL OPERATIONS"

As noted in an earlier response, the 2005 Defence Cooperation Agreement with the USA is not the first such Agreement. The framework is substantially similar to other such agreements signed with different countries.

As a sovereign State with an independent foreign policy, our engagement with other countries is determined by our own calculation of national interest and the request of the receiving State, and is not contingent upon UN auspices. The India - US Defence Framework Agreement clearly states that the Indian and US defence establishments shall "collaborate in multinational operations when its is in their common interest." It is India, therefore, that will decide the time and manner of cooperation. Such cooperation will only be when it is in common interest.

For example, in humanitarian relief operations or operations related to disaster management, India has participated in multinational operations such as in the aftermath of the Tsunami in 2005.

MISSILE DEFENCE

The subject of Missile Defence has been part of our overall dialogue with the US, just as it is part of the US's dialogue with other major players, including Russia. During this dialogue, both sides have had the opportunity to convey their respective perspectives on missile defence. Dialogue neither implies involvement nor participation.

MARITIME SECURITY COOPERATION

India is engaging with other countries of the region in a cooperative framework to ensure security of sea lanes. Besides the US, our naval forces cooperate with a number of countries of the South East Asian region, including Singapore, Indonesia and Thailand. We have stated clearly that the littoral states of the region have the primary responsibility for the security

of the Malacca Straits and that we are ready to work with them.

LOGISTICS SUPPORT AGREEMENT

The LSA provides for two specific areas of mutual interest: (i) joint exercises and (ii) disaster relief. This does not envisage providing military facilities to US forces. Neither does it provide for unqualified Indian support to the US in any armed conflict to which India is not a party. Items not eligible for transfer under this Agreement include weapon systems, lethal military equipment and those items which are barred for transfer under the national laws of the two countries. The proposed LSA does not carry any commitment to assist each other during periods of armed conflict.

JOINT MILITARY EXERCISES

Our forces conduct exercises with a number of countries and these are not unique to the US. The Indian Navy conducts regular annual exercises with Singapore, Thailand and Indonesia, as well as with other countries.

ARMS PURCHASE FROM THE US

Our defence procurements are currently from various countries, including Russia, France, Germany, UK and South Africa. The aim of the Government remains to ensure the procurement of the best technology and systems globally for the defence forces and there is no question of our getting dependent on a single country.

INDEPENDENT FOREIGN POLICY

The UPA government has continued to follow and build upon the basis tenets of India's independent foreign policy a foreign policy of peace, non-alignment and autonomous choice based on national self interest and the expansion of India's strategic autonomy and capability.

In an international situation marked by simultaneous competition and cooperation among the major powers, and of unprecedented interdependence created by globalisation, representing both a threat and an opportunity for developing countries, the government has steadily improved India's relations with all major powers.

In its interaction with the other major powers and the EU, India believes that multilateral and multi-polar solutions are the need of the hour for the world's major issues. Today's challenges - terrorism, proliferation of weapons of mass destruction, climate change, energy security and food

security - cut across borders and demand broad-based multilateral cooperation between nations and groups of nations.

As the world moves into a more complicated environment of interdependence and competition, multilateral solutions to international problems become even more necessary. The UPA Government has strengthened India's contribution and role in international organizations such as the UN and added meaningful content to other multilateral groupings in which India participates, such as IBSA, India-China-Russia Trilateral Forum and other such fora.

APPENDIX - XLVIII

Left Rejoinder to UPA's Response on Foreign Policy and Security Matters.

October 22, 2007.

The Left Parties appreciate the prompt response by the United Progressive Alliance vide its Note dated October 5, 2007 on the subject. Regrettably, however, most of the issues and questions raised in the Left Parties' Note dated October 2, 2007 have not been adequately addressed in the UPA's response. Any substantial and meaningful discussion can emanate only when the issues raised by the Left Parties are addressed effectively.

FOREIGN POLICY ISSUES

1. **Strategic Relations with US:** As far as the Left Parties are concerned, the National Common Minimum Programme (NCMP) should guide the foreign policy orientations of the UPA government, rather than subjective and unilateral perceptions of "national interests". The touchstone should be whether the government follows an independent foreign policy aimed at promoting multi-polarity in world relations and opposing all attempts at unilateralism. The issue is not the statistical data as to India's strategic partnerships and relations with the world community. It is about India's relations with the US, which are not envisaged in the NCMP as a strategic relationship. The nature, scope and depth of the "strategic partnership" with the US are at a qualitatively different level, making

it virtually a strategic alliance. The 123 Agreement forms part of a "strategic partnership", and influential Indian and US strategic thinkers have dwelt on the parameters and directions of such a partnership. Indeed, the text of the 123 Agreement itself acknowledges this in its preamble. The so-called Hyde Act makes explicit reference to this aspect. The UPA's Note is impervious to the understanding of independent foreign policy in the NCMP, and characterises it as an "a priori assumption".

2. **Iran:** It needs no reiteration that the final Indian stance at the IAEA vote on Iran in September 2005 was on the basis of last-minute instructions at the highest levels of government. While it is natural that a laboured attempt became subsequently necessary for the Indian side to explain away the shift in the UPA government's stance as a "consistent position", the fact remains that the shift: as such was prompted by the US pressure at the highest levels of government. Indeed, US officials and public figures - and even the Hyde Act acknowledged that India was "able and willing to adjust its traditional policies" with regard to Iran. No amount of pleas regarding "national interests" can cover the fact that the shift in India's stance has negatively impacted on Indo-Iranian cooperation, including in the LNG deal. Iranian officials are on record on the matter.

Second, the fact remains that the progress on the Indo - US (Iran) gas pipeline project has slowed down. This is a veritable reality. Again, the Iranian side, including the concerned officials and diplomats, are on record that India has slowed down the progress of the project, and Iran is, therefore, left with no option but to proceed ahead with Pakistan.

Third, India's votes in the IAEA in September 2005 and February 2006 helped the US to transfer the subject of the Iran nuclear issue to the United Nations Security Council and to impose a sanctions regime against Iran. The US has since then mounted a campaign threatening Iran with military attack and "regime change". Any balanced, principled Indian stance should have taken note that Israel is a virtual nuclear power, thanks to clandestine Western collaboration, and the US is blatantly adopting double standards.

3. **Iraq:** It is a fact that all that the UPA government could say about

the execution of Saddam Hussein was that it was a matter of "disappointment". The Indian statement completely overlooked the sort of "unilateralism" by the US that the NCMP precisely finds abhorrent in the conduct of international relations. Motivated solely by the urge not to cause annoyance to the US, the UP A government ignored the fact that India's relations with Iraq are in no way comparable to China's or Russia's with that country. The reality is that the UP A government is silent in the face of the war crimes being perpetrated by the US in Iraq. The continued military occupation of Iraq is the root cause of the anarchy in that country. Yet the UPA government remains silent on that score in deference to the compulsion not to annoy the US or to pose difficulties for the US regional policies in the Middle East. The UPA government's vulnerability at a time when the nuclear deal is under negotiation is all too apparent.

4. **Palestine and Israel:** The UPA government has continued with the previous NDA government's policy towards the Palestine issue. While keeping up verbal support to the Palestinian cause, UPA government has rapidly expanded India's relations with Israel. Considering the atrocities being perpetrated by the Israeli regime against innocent, defenceless Palestinian communities, the UP A government's policy is regrettable, both in moral and practical terms. It is not even expedient in so far as it may find acceptance with the pro-US Arab regimes in the region but is completely contrary to the opinion and feelings of the Arab people. This is particularly so because the UPA government is emphasising security and military cooperation with Israel involving precisely those agencies of the Israeli government that carry out the atrocities against the Palestinians. The UPA government entered into arms purchases from Israel worth \$1.5 billion as of 2006. India has emerged as the largest buyer of arms from Israel. Yet, Israel does not figure even cursorily in the text of the NCMP. The UPA government's zealousness in expanding and deepening India's security relationship with Israel cannot be sidetracked in any discussion over the UPA government's policies in the Middle East.
5. **"Look East" Policy and the Strategic Dialogue with US, Japan and Australia:** The UPA should clarify whether India has participated in a strategic dialogue with the US, Japan and Australia. If so, what is the rationale for such a limited grouping? The outgoing Japanese

ambassador to India has been quoted in an interview to The Hindu on October 1, 2007 that yet another round of the strategic dialogue is in the offing in the near future, and that there is a thinking to raise the dialogue to foreign minister level. Is it so? How does this dialogue mesh with India's "Look East Policy"? It is well known that the US, Japan and Australia have a tightly knit security coordination, which more often assumes the form of a de facto military alliance. How is India's security interest served by its cooperation with the US-led exclusive security grouping in the Asia-Pacific when the ASEAN Regional Forum already includes all the relevant countries in the Asian region?

6. **Shanghai Cooperation Organisation:** The Shanghai Summit in 2005 was not a routine meet of the Shanghai Cooperation Organisation (SCO). Yet, India was the only country not to be represented at the summit at the head of state/government level. This is a statement of fact. What was the basis for the Indian decision to keep its representation at the 2005 extraordinary summit at the ministerial level? Wasn't this yet another signal regarding India's growing harmony with the US's regional policies, which takes a negative view regarding the SCO?
7. **Afghanistan:** India should contribute optimally to the reconstruction of Afghanistan, which has profound links with India. But at the same time, India cannot be oblivious of the establishment of the long-term, virtually open-ended, military presence of the US and the North Atlantic Treaty Organization in India's neighbourhood. Second, India cannot ignore the killings of civilians being perpetrated by the Western forces present in Afghanistan. Third, the political rationale of the "war on terror" is becoming apparent with the ongoing efforts by the Western powers to accommodate the Taliban in the power structure in Kabul. Finally, the presence in Afghanistan is enabling NATO to make efforts to expand into the Central Asian region and to establish a naval presence in the Arabian Sea and the Indian Ocean. The US is using Afghanistan as a base from where it can threaten Iran. The growing opposition to the Western military presence among the Afghan people is leading to increased support for terrorists and fundamentalist elements in the region. All this directly affects the security environment around India. Yet, the UPA government remains silent on this score. It has not taken any initiative to address these security challenges, as it remains riveted to the one-point agenda of

harmonising its policy with the US regional policy in Afghanistan and Central Asia.

DEFENCE AND STRATEGIC ISSUES

1. **Defence Framework Agreement and "Multinational Operations":**

The issues raised by the Left Parties regarding the Defence Framework Agreement with the US should not be treated in a cavalier fashion, since they will profoundly impact on India's security interests for decades to come. It is the contention of the Left Parties that the NSSP and the Defence Framework Agreement remain by far the most far reaching defence cooperation agreement with any country in the history of independent India. No comparison can be drawn between the defence agreement with the US and India's defence cooperation agreements with Kyrgyz Republic or Armenia. The issues that deserve special attention are:

- I. The UPA Note says, "India will decide when and in what manner it will collaborate with the United States in multinational operations". Is this a new policy? In 60 years of independence, has India ever participated in a "multinational operation" outside the UN umbrella?
- II. Apart from the "use of Indian military force" in Bangladesh (1971), Sri Lanka (1987-91) and Maldives (1988), has India ever used its military force outside the UN umbrella in any part of the world? If so, what are the kind of "multinational operations" that are being envisaged where India and US can jointly participate? Can the UPA categorically assure that such "multinational operations" will never be outside the UN auspices?
- III. Other than with the US, has India entered into any defence agreements with any other country in the world for undertaking "multinational operations"? Is the agreement with the US an exception or a common feature of the 30 Defence Agreements that India has signed with other countries?

2. **Missile Defence:** It is well known that the US missile defence system (NMD) is under development and the first deployments outside the US mainland are under way. The UPA's Note is factually correct in maintaining that "India is not participating

in the NMD". However, it is well known that the US does not allow even its close allies to "participate" in the NMD programme. Thus, the issue is not about "participation" or "development" of the NMD alone, but about its deployment. In an answer to a question in the Lok Sabha on August 18, 2004, the Minister of State for External Affairs stated that "presentation and briefing by the US side on missile defence have been on the agenda of the Indo-US Defence Policy Group since 2001". Why should NMD form part of the NSSP? Is it a fact that the UPA government has held discussions with the US more than once regarding cooperation in the NMD? Is it a fact that the NMD figures in the agenda of "strategic dialogue" between the Indian defence officials and their American counterparts in the Pentagon? Is it a fact that the US has sensitised the Indian side, including through demonstrations, on the components of the NMD system? More important, does the UPA government recognise that any sort of involvement with the NMD would impact negatively on India's relations with Russia and China?

3. **Maritime Security Cooperation:** There is no gain saying the fact that India has concerns over maritime security. The issue here is of the rationale behind the Indo-US Maritime Security Cooperation Framework, covering the South-East Asian and the wider Asia-Pacific region. How does India stand to gain from the US-led security architecture of the Malacca Straits?
4. **Logistics Support Agreement:** It is true that India has not yet signed any Logistic Support Agreement with the US. The question is whether the UPA government has all but negotiated a draft for such an agreement, as claimed by senior US officials. If that is the case, what is the rationale for negotiating such an agreement? Is the UPA government aware of the negative impression that such a close identification with US naval power would create in India's adjacent regions?
5. **Joint Military Exercises:** The UPA should clarify whether the bulk of India's military exercises during the last 5 years period have been with the US? If so, what is the rationale for developing such an intensive level of "interoperability"? How does such close military cooperation with the US serve India's geo-strategic interests? Has

India ever conducted a collective military exercise before the joint military exercises conducted in the Bay of Bengal in September 2007"? The rationale advanced by the UPA government for the recently held Malabar exercises - as forming part of a struggle against sea piracy and drug trafficking or for rendering relief work during natural disasters - does not sound convincing. It is all too apparent that the size of the naval exercises was extraordinarily large and it was a carbon copy of a similar naval exercise involving the US, Australia and Japan in the Asia-Pacific. What is the rationale for the joint naval exercises involving the US, Japan and Australia? Why weren't India's immediate neighbours in the South East Asian region, including major countries such as Thailand, Malaysia and Indonesia, included in these joint naval exercises?

6. **Arms Purchase from the USA:** The UPA should respond to the specific questions raised in the Left Parties' Note dated October 2, 2007 regarding the contradictions involved in dependence upon defence supplies from the US. These remain unanswered, especially the implications for India-Pakistan relations. The issue is not about the UPA government's "transparent policy of acquisitions" of weapons for the armed forces. The Bush administration considers Pakistan as its foremost ally in its "war against terror". President Bush has recently rewarded Pakistan by approving the sale of F-16s, which had been blocked earlier. While the US continues its strategic partnership with Pakistan, selling it force-multipliers and assuring it that it would do nothing to upset the balance of power in South Asia, does it make sense for India to rely on the US as a major supplier of defence equipments?

SUMMING UP

What needs to be reiterated all over again is that the UPA government during its period in office has overlooked the commitment to an "independent foreign policy", as reflected in the NCMP. The departures are of major character. Admittedly, diplomacy can be pragmatic; it can and must safeguard national interests. But the foreign policy on which diplomacy is based, must always remain true to the guiding principles. The NCMP underlines that the guiding principle for the UPA government must be an "independent foreign policy". The NCMP further stresses the importance of the UPA government working for a "multi-polar" world and opposing all attempts at "unilateralism". These are fundamental principles. They demand

that India must speak its mind clearly and unambiguously over issues such as Iraq, Palestine and Afghanistan, where the US is the principal source causing, instigating or conniving with aggression, occupation and state sponsored violence.

As the UPA's Note recalls, what India did in the Suez crisis 50 years ago is a matter of pride for the country. More important, in the present juncture, it should remain a beacon light for India's policies in the Middle East. India should have the courage to dissociate itself from the double standards being adopted by the US over the Iran nuclear issue. India should call for the vacation of military occupation of Iraq. India should have the moral courage to maintain that what Israel does to the Palestinians is no less than what the South African apartheid regime did. India should curtail its security and military cooperation with Israel until the historic rights of the Palestinian people are recognised. There are so many countries other than Israel from where India can source its defence materials.

It is clear that the Indo-US nuclear cooperation agreement poses the real danger of locking India into a "strategic partnership" with the US. By the very nature of the relationship, India can only end up as a subordinate ally in the US geo-strategies, aiding and abetting its military misadventures. The Left Parties therefore reiterate their demand for a thorough scrutiny of the implications of the 123 Agreement and the Hyde Act on India's independent foreign policy.

APPENDIX - IL**Press Release of the UPA-Left Coordination Committee
on the 6th Meeting of the Committee.****New Delhi, November 16, 2007.**

The UP A-Left Committee on the India-US Civil Nuclear Cooperation held its Sixth meeting today. All members of the Committee, except Shri Laloo Prasad Yadav, who was out of Delhi, participated in the meeting.

The Committee has discussed the implications of the Hyde Act on the 123 Agreement, on foreign policy and security matters. After further discussion, it was decided that impact of the provisions of the Hyde Act and the 123 Agreement on the IAEA Safeguards Agreement should also be examined. This will require talks with the IAEA Secretariat for working out the text of the India-specific Safeguards Agreement. The Government will proceed with the talks and the outcome will be presented to the Committee for its consideration before it finalises its findings.

The findings of the Committee will be taken into account before the operationalisation of the India-US Civil Nuclear Cooperation Agreement.

APPENDIX - L

Left Parties:

Issues in the IAEA Agreement.

April 9, 2008

THE CONTEXT OF THE IAEA AGREEMENT

There is a difference between the context of the current negotiations and previous negotiations that India has conducted with the IAEA. Whereas on earlier occasions, the IAEA was brought in to oversee safeguards that were associated with nuclear agreements that preceded them, the current negotiations are a pre-condition to the conclusion of a nuclear cooperation agreement with the United States. This has been made clear through the entire course of Indo-US negotiations and reinforced by the terms of Indo-US cooperation as set out by the Hyde Act.

The content therefore of the IAEA agreement must be understood in the light of the Hyde Act primarily and the 123 Agreement.

The Hyde Act specifically states:

- "(b) DETERMINATION BY THE PRESIDENT.-The determination referred to in subsection (a) is a determination by the President that the following actions have occurred:
- (1) India has provided the United States and the IAEA with a credible plan to separate civil and military nuclear facilities, materials, and programs, and has filed a declaration regarding its civil facilities and materials with the IAEA.

H. R. 5682-5

- (2) India and the IAEA have concluded all legal steps required prior to signature by the parties of an agreement requiring the application of IAEA safeguards in perpetuity in accordance with IAEA standards, principles, and practices (including IAEA Board of Governors Document GOV1621 (1973)) to India's civil nuclear facilities, materials, and programs as declared in the plan described in paragraph (1), including materials used in or produced through the use of India's civil nuclear facilities. (3) India and the IAEA are making substantial progress toward concluding an Additional Protocol

consistent with IAEA principles, practices, and policies that would apply to India's civil nuclear programme."

It appears therefore that GOV/1621 is crucial to implementing safeguards. No reference is made to INFCIRC/66/Rev2 in the Hyde Act, which as per UPA's briefing in the last meeting is the template for the agreement with the IAEA whereas GOV1621 finds explicit mention.

The IAEA safeguards agreement is in effect a treaty, and obligations of such an agreement would be binding on India. In case a dispute arises between India and the IAEA regarding the interpretation and application of the safeguards agreement, there is no court or established judicial tribunal which has the competence to resolve such disputes. The IAEA is not subject to the jurisdiction of national courts, nor is it eligible to be a party to an action before the International Court of Justice (ICJ), according to the ICJ Statute. For this reason, all safeguards agreements contain a provision for submitting the disputes to binding arbitration.

If a dispute regarding an alleged violation of the safeguards agreement by India cannot be satisfactorily settled with the IAEA Secretariat, the Director General of the IAEA is required to report to the IAEA Board of Governors that India is in non-compliance with its safeguards agreement. Any actions which the Board then decides as essential and urgent to correct the situation are to be implemented by India without delay. If India does not act on this directive, the Board will have to report India's non-compliance to all members of the IAEA, as well as to the UN General Assembly and the Security Council. This could then trigger collective international condemnation and even binding punitive actions against India, such as the imposition of sanctions and embargos by the Security Council, if they so decide.

Therefore, the specific provisions in the India-IAEA safeguards agreement for dispute resolution have to be examined carefully to ensure that India's long terms interests and legitimate rights as a sovereign nation are protected.

FUEL SUPPLY ASSURANCES AND CORRECTIVE MEASURES

The UPA briefing acknowledges that the agreement with the IAEA does not deal with fuel supply and only facilitates foreign fuel supplies. The briefing also indicated that the Safeguards Agreement contains a clause declaring that India and the IAEA have agreed to the safeguards provision taking into account the fuel supply assurances and the right of India to take corrective action in case of disruption of such applies.

While it appears that India's commitments regarding safeguards are binding and will continue as per GOV11621, it is not clear that the IAEA has any binding obligations. It is not clear whether the clauses regarding fuel supply assurances and fuel reserves by the IAEA are in the preambular section or binding on the IAEA in any way. Is there a firm IAEA commitment to this effect included in the binding clauses of the agreement for ensuring facilitation of life-time fuel supply?

The UPA's briefing talked about a legal right that India can exercise to report a breach or material violation using IAEA document Article 52(c). It is not clear what these breaches or material violations are nor what is entailed in India's exercise of this right. The briefing also mentioned India's right to make a case for withdrawal of its indigenous reactors from safeguards, but again did not make clear the basis of such a case nor what happens after such a case is made. The right to make a case is quite different from right to take a course of action.

From the above, it appears that right to withdraw from safeguards would exist at best only for indigenous reactors. Even if these fuel supply assurance fail, as they did in Tarapur, India would have no recourse to withdrawal of facilities built with international collaboration from safeguards, for which safeguards will apply in perpetuity.

For the indigenous reactors, the UPA briefing made clear that the termination of safeguards will be implemented taking into account the provisions of GOV11621. Thus the crucial issue now is the implications of how INFCIRC/66/Rev2 is to be implemented together with IAEA Board of Governors document GOV11621 of 1973.

In our understanding, the primary purpose of GOV11621 is to deal with the duration and scope of the safeguards on all nuclear materials from safeguarded nuclear installations. In effect, the above could mean that all foreign supplies imported by India for civilian reactors till the date of withdrawal would have to remain under perpetual safeguards thereafter. Thus, any unused imported fuel or spent-fuel containing plutonium in these reactors, and all foreign equipments and components in them will remain under IAEA safeguards surveillance in perpetuity. Therefore, it is difficult to accept the UPA's position that the corrective measures mean that India can walk out of safeguards if the fuel supply arrangement fails or that the corrective measures in the IAEA agreement will lead to uninterrupted operations of all civilian reactors.

It might be noted that all previous safeguard agreements are now also to be subsumed under this new Safeguards Agreement. This means that while the earlier agreements carried no reference to GOV11621, it will now be applicable to such agreements also. Thus, a more restrictive regime will be imposed on plants such as Kudankulam or RAPP 1 & 2 or Tarapur 1 & 2, compared to the Safeguards Agreement that India had signed for term earlier.

The Prime Minister had stated in Parliament that India will have the same rights as any other nuclear weapon states. It might be noted that any nuclear weapon state can unilaterally and without any preconditions withdraw its facilities from safeguards. From the briefing, it appears that once India puts its civilian facilities including its indigenous reactors under safeguards, the withdrawal of such facilities are hedged in with various conditions.

GOV/1621 appears to be a restricted document. To understand the implications of GOV/1621, the explicit text of GOV/1621 therefore needs to be made available. The UPA Note does not provide sufficient basis to determine the exact import of the Safeguards Agreement with the IAEA in respect of the concerns that have been raised earlier. So detailed clarifications to the above and GOV/1621 would be required before we can arrive at an understanding of the IAEA text.

ADDITIONAL AND SUBSIDIARY PROTOCOLS

Government may clarify whether the draft safeguards agreement stipulates that the safeguarded Indian nuclear facilities shall be subjected to the IAEA Additional Protocol. Through this safeguards agreement, has the Government committed India to adhere to either the Model Additional Protocol applicable to non-nuclear weapon States or to an India-specific Additional Protocol to be developed in the future? If the safeguards agreement is silent on the question of Additional Protocol, is there a confidential "subsidiary arrangement" or "side letter" finalized between the Government and the IAEA Secretariat on the subject of Additional Protocol as applicable to India?

The legal framework of the IAEA safeguards also consists of a number of elements, including the basic IAEA documents (such as INFCIRC/66/Rev.2, GOV11621, etc.); the India-specific safeguards agreement between the IAEA and India, supply agreements calling for verification of nonproliferation undertakings, along with relevant protocols and "subsidiary arrangements"

(which usually detail how the procedures in the agreement are to be implemented). The UP A needs to clarify whether any other text of subsidiary agreement or protocol has been agreed upon or frozen between Government of India and IAEA or IAEA Secretariat.

APPENDIX - LI

Left Parties: Need for Further Clarifications Regarding India Specific Safeguards.

May 16, 2008.

The IAEA India-Specific Safeguards Agreement has to be seen along with the 123 Agreement and the Hyde Act. The Hyde Act has made clear that India must submit its civilian nuclear programme to a regime of perpetual IAEA safeguards. The Hyde Act has also made clear that if any of its conditions are not met, the US will terminate the 123 Agreement and stop all nuclear material and fuel supplies. Further, the Hyde Act has also asked the US Government to ensure that other members of the Nuclear Suppliers Group do not give any preferential treatment to India and that the NSG terms incorporate all these elements of the Hyde Act. Therefore, the India Specific Safeguards Agreement must be seen in this context and not in isolation.

The issue with respect to IAEA Safeguards has never been whether IAEA will accept that a part of India's nuclear programme will be outside of safeguards, but what are the terms under which we are putting our civilian programme under safeguards? Therefore, the argument that we have now received a major concession in terms of the India Specific Safeguards - that of keeping a part of our nuclear programme out of the purview of IAEA Safeguards - does not hold. The key issues for the IAEA Agreement were:

- In case the NSG countries renege on fuel supply assurances for imported reactors, will we have the ability to withdraw these facilities from safeguards?
- If we have to bring nuclear fuel from the nonsafeguarded part of our nuclear programme for these reactors in case of fuel supply assurances not being fulfilled, will we have the ability to take it back again?

- If NSG countries renege on fuel supply assurances, can we withdraw our indigenous reactors from IAEA Safeguards?
- When the UPA claims that IAEA has incorporated the fuel supply Assurances in the Safeguards Agreement, are there any operative obligations on the IAEA?
- Finally, how will the regime of inspections, etc., play out, specifically in view of the Hyde Act provisions that require monitoring of India's programme including its non-civilian component; in other words can the regime of inspections be used to examine the history of the nuclear programme and its technology development?

It is clear from what the UPA has stated that for imported reactors, in case of a dispute or fuel supply commitments being breached by countries supplying us with reactors or nuclear fuel, India will not have the option to withdraw them from safeguards - the safeguards regime will apply to them in perpetuity. Therefore, we cannot temporarily tide over a shortage of fuel by bringing it from the non-safeguarded part of the programme.

The Prime Minister had stated in Parliament that India will have the same rights as any other nuclear weapon state. It might be noted that any nuclear weapon state can unilaterally and without any preconditions withdraw its facilities from safeguards. Obviously, in India's case this right will not exist for imported reactors.

Regarding withdrawing of indigenous reactors from safeguards, the issues we had raised are not properly addressed in the UPA clarifications:

- Under what conditions can India exercise the legal right to report a breach or material violation using IAEA document Article 52(c)? What are these breaches or material violations?
- What is entailed in India's exercise of this right?
- Under what conditions can India exercise the right to withdraw its indigenous reactors from safeguards?
- What are the conditions that India will have to fulfil if it wants to withdraw its indigenous reactors from safeguards?

GOV/1621, as the UPA has clarified, pertains to the duration and termination of the safeguards. This means that if India wants to withdraw its indigenous

reactors from safeguards, the clauses of this document will apply. As we are not aware of what these clauses entail, we cannot therefore comment on whether the right of withdrawing indigenous reactors from safeguards is a real one or only cosmetic.

The argument that we have accepted GOV/1621 in the past regarding other safeguarded reactors is not relevant in this context, as all such reactors were imported ones. As the UPA has now clarified, in any case the right to withdraw such reactors from IAEA Safeguards is not there in the Agreement. The issue is not whether India will be in breach of the IAEA Safeguards Agreement, but if other countries breach their agreement with India, what protection does India have? Can it then withdraw its indigenous reactors from safeguards and will the provisions of GOV/1621 stand in its way? Therefore, clarifications regarding what conditions will need to be fulfilled before India can withdraw its indigenous reactors from safeguards are still required.

Regarding fuel supply assurances, it is clear from UPA clarifications that the fuel supply clause in the Agreement has no operative value and has been put there for largely cosmetic purposes.

The UPA has clarified that India had put its reactors and fuel supplies under IAEA safeguards on earlier occasions. With respect to past IAEA safeguards for reactors and fuel, there is a distinction. The imported reactors were put under INFCIRC/66/Rev2 with GOV/1621, while the fuel supplies to indigenous reactors were dealt with differently. However, now all the reactors - both imported and indigenous - offered as civilian under the Separation Plan, will be under INFCIRC/66/Rev2 with GOV/1621. The conditions therefore are not identical with respect to the past safeguards for supplying fuel to indigenous reactors. Therefore, the need to know what GOV/1621 entails in case of withdrawing indigenous nuclear reactors from IAEA safeguards.

APPENDIX - LII

Left Stand for UPA-Left Committee Meeting.

June 25, 2008.

Regarding the request for going to the IAEA Board of Governors for seeking approval of the Safeguards Agreement:

1. The sixth meeting of the UPA-Left Committee on the Indo-US civil nuclear cooperation held on November 16, 2007 had decided as follows:

The Committee has discussed the implications of the Hyde Act on the 123 Agreement, on foreign policy and security matters. After further discussion, it was decided that impact of the provisions of the Hyde Act and the 123 Agreement on the IAEA Safeguards Agreement should also be examined. This will require talks with the IAEA Secretariat for working out the text of the India-specific Safeguards Agreement. The Government will proceed with the talks and the outcome will be presented to the Committee for its consideration before it finalises its findings.

The findings of the Committee will be taken into account before the operationalisation of the India-US Civil Nuclear Cooperation Agreement.

Since the Committee is still engaged in discussions on the Safeguards Agreement and since the representatives of the Left Parties on the Committee are not able yet to come to any definite opinion in the absence of the text, and since the Committee has not yet arrived at its findings, the Government should not go for seeking the approval of the Board of Governors. The Left Parties expect the UPA to adhere to the understanding arrived at on November 16, 2007.

2. The reason for going to the Board of Governors at this stage is to ensure that the next step for operationalisation of the deal i.e. going to the Nuclear Suppliers Group for a waiver can be ensured. In this context the joint statement between President Bush and Prime Minister Manmohan Singh of July 2005 obligates the United States

to get its partners in the Nuclear Suppliers Group to agree to a waiver for India. The Prime Minister in his suo moto statement on India's separation plan to Parliament in March 7, 2006 confirmed this by stating:

Under the July 18 Joint Statement, the United States is committed to seeking agreement from its Congress to amend domestic laws and to work with friends and allies to adjust the practices of the Nuclear Suppliers Group to create the necessary conditions for India to obtain full access to the international market for nuclear fuel, including reliable, uninterrupted and continual access to fuel supplies from firms in several nations The United States Government has accepted this Separation Plan. It now intends to approach the US Congress for amending its laws and the Nuclear Suppliers Group for adapting its Guidelines to enable full civilian cooperation between India and the international community.

3. The former Chairman of the Nuclear Suppliers Group (till May 2008), Abdul S Minty, has gone on record as follows regarding the request for exemption for India: "The NSG has not formally considered this matter. It can only start the procedure once the Safeguards Agreement is complete with the IAEA. The way it will go will be that the US would make a request formally for an exemption and once we have the wording and see the implications of that wording for all the members of the NSG, then they will be in a position to judge what they should do." (Interview with Science Editor of NDTV, published in The Hindu of June 14, 2008.)
4. It should be underlined that the consultation process in the Nuclear Suppliers Group has already been initiated by the United States. In September 2007, the US presented a Pre-decisional Draft on "Submission on Civilian Nuclear Cooperation with India" to an informal meeting of the NSG. We are told that a revised Note has been submitted subsequently. The process of informal consultations will get formalized when the Board's approval is taken. So the Board's approval is an essential step to take the process of operationalisation of the Indo-US Nuclear deal forward.
5. So it is clear that India has a responsibility of concluding the Safeguards Agreement with the IAEA and the step of getting a waiver

from the Nuclear Suppliers Group has to be undertaken by the United States.

6. Given the fact that the Board approval is required for going ahead with the India-US nuclear deal, the Left Parties cannot agree to this proposal.
7. The Left Parties suggest that the Committee complete its deliberations quickly and arrive at its findings before any further step is taken.

APPENDIX - LIII

Letter From the Left Parties to the Convenor of the UPA- Left Coordination Committee,

New Delhi, July 4, 2008.

Dear Shri Pranab Mukherjee,

Various pronouncements are being made by leaders of the ruling coalition and some Union Ministers that the Government is going ahead with the nuclear deal.

We wish to know definitely whether the Government is proceeding to seek the approval of the safeguards agreement by the Board of Governors of the IAEA.

Please let us know the position by 7th July, 2008.

(Prakash Karat)
(Debabrata Biswas)

(A.B. Bardhan)
(T.J. Chandrachoodan)

APPENDIX - LIV**Letter of the Convenor of the UPA-Left Coordination Committee.****New Delhi, July 7, 2008.**

Dear Shri

This has reference to your letter dated 4 July, 2008. As decided In our discussions in the 9th meeting of the UPA-Left Committee on Indo-US Civil Nuclear Cooperation (copy of press release enclosed), we are now ready with a draft report for the consideration of the Committee. A meeting to consider this draft is being scheduled for 1600 hrs. on 10th July, 2008 at 13, Talkatora Road. Kindly make it convenient to attend the meeting. Early submission of the report by the Committee would enable the UPA Government to take into account the Committee's findings.

Yours sincerely,

(Pranab Mukherjee)

Shri Prakash Karat,
General Secretary
CPI (M),
New Delhi

APPENDIX - LV**Left Parties letter to the Convenor of the UPA-Left
Coordination Committee.****New Delhi, July 8, 2008.**

Dear Shri Pranab Mukherjee
Convenor
UPA-Left Committee on Indo-US Nuclear Cooperation

Dear Shri Pranab Mukherjee,

This is regarding your letter dated July 7, 2008. You have stated that a meeting of the UPA-Left Committee on Indo-US Civil Nuclear Cooperation will be held on July 10.

We wish to point out that in the sixth meeting of the Committee held on November 16, 2007, it was decided, regarding the talks with the IAEA, that: "the government will proceed with the talks and the outcome will be presented to the Committee for its consideration before it finalises its findings".

Till now, the "outcome of the talks", i.e., the text of the Safeguards Agreements negotiated with the IAEA Secretariat has not been made available to the Committee.

Without the text, the Committee cannot come to any findings.

Since the UPA has refused to provide the text to the members of the Committee, no purpose will be served by having a meeting on July 10.

Further, your proposal for a meeting on the 10th is rendered meaningless since the Prime Minister, while travelling abroad, has chosen to announce that the government will be going to Board of Governors of the IAEA "very soon".

As you are aware, the Left parties had decided that if the government goes to the IAEA Board of Governors, they will withdraw support. In view of the Prime Minister's announcement, that time has come.

(Prakash Karat)
(Debabrata Biswas)

(A.B. Bardhan)
(T.J. Chandrachoodan)

APPENDIX - LVI**Letter of the Convenor of the UPA-Left Coordination Committee to the General Secretary of the Communist Party of India (Marxist).****New Delhi, July 8, 2008.**

Dear Shri Karat

Thank you for your letter of July 8, 2008. You are correct in pointing out that, following the sixth meeting of the UPA-Left Committee on India- US Civil Nuclear Cooperation on November 16, 2007, it had been agreed that the Government would proceed for talks with the IAEA and that the outcome would be presented to the Committee before the latter's findings were finalized.

In the seventh, eighth and ninth meetings of the Committee held, respectively, on 17th March 2008, 6th May 2008 and 25th June 2008, the UPA did exactly this. We presented to the Committee the outcome of the negotiations with the IAEA. As far as the exact text of the Safeguards Agreement is concerned, you would recall that at the seventh meeting, in which the contours of the Safeguards Agreement were discussed for the first time, I had pointed out that the text was a privileged document held in confidence between GOI and the IAEA Secretariat and that it could not be shared with third parties without going through laid down procedures of the IAEA. It was for this purpose, in fact, that confidential briefing texts summarizing the contents of the Agreement and the outcome of the negotiations were circulated to all members of the Committee in all the three meetings in which the text of the Agreement was discussed. You would also recall that when some members of the Committee asked for the full text, I had pointed out that they would have to joint Government in order to have access to the text.

I am pointing out the above in order to set the record straight.

INDIA'S FOREIGN RELATIONS - 2008

SECTION - IV

**REGIONAL AND INTER-REGIONAL
COOPERATION**

ASEM

140. Statement by Prime Minister Dr. Manmohan Singh on his departure to Japan and 7th ASEM Beijing Summit.

New Delhi, October 21, 2008.

I will be visiting Japan from October 22-23 for the Annual Summit meeting between the Prime Ministers of India and Japan.

I consider our bilateral relations with Japan to be one of the most important bilateral relationships we have. India and Japan are two major countries in Asia, sharing many similar interests and subscribing to common values. A strong India-Japan relationship will play a significant role in the emerging Asian security architecture and will contribute to the peace, stability and prosperity of Asia and the world.

During my visit in Japan I will have the honour to call on Their Majesties The Emperor and Empress of Japan. In my discussions with Prime Minister Taro Aso, who is a close friend of India, we will review the progress that has been achieved in our bilateral ties over the last one year and set the agenda for the next year. Even though over the last four years there has been significant progress in all aspects of our bilateral relationship, there is still a lot of untapped potential that remains to be realised.

Japan is an important economic partner for India. The second meeting of the India-Japan Business Leaders Forum will be held on the sidelines of my visit. I look forward to addressing a gathering of Japan's business leaders being organized by the Nippon Keidanren.

After my visit to Japan, I will be traveling to Beijing for the 7th ASEM Summit. This will be the first time India will be participating in an ASEM Summit. Our participation in this Summit is a natural corollary of our close and growing ties with countries in Asia and Europe.

On the margins of the ASEM Summit, in addition to meeting President Hu Jintao, I will have the opportunity to meet with other world leaders, including President Purvanov of Bulgaria, President Enkhbayar of Mongolia, Chancellor Merkel of Germany, Prime Minister Berlusconi of Italy and Prime Minister Nguyen Tan Dung of Vietnam.

141. Remarks by Prime Minister Dr. Manmohan Singh on International Financial Crisis at the Asia - Europe (ASEM) Summit.

Beijing, October 24, 2008.

The international financial crisis has resulted from three failures:

- (a) A regulatory and supervisory failure in major developed countries;
- (b) A failure in risk management in private financial institutions;
- (c) A failure in market discipline mechanism

These are not my views but those of the distinguished Managing Director of the IMF, with which I agree.

We must analyse objectively how and why these failures have occurred with such ferocity. This is necessary to put in place a new set of rules which will prevent reoccurrence of such failures.

The sad truth is that in this age of globalisation we have a global economy of sorts but it is not supported by a global polity to provide effective governance.

The resulting crisis of liquidity, accumulation of bad assets, shortage of capital and collapse of confidence threatens to spill over into the real economy by way of reduced demand for goods and services particularly exports, reduced access to trade and suppliers credits superimposed on other crises - food and fuel price rises that have strained budgets and balance of payments leading to rising inflation and living costs in many developing countries.

The President of the World Bank has identified at least 30 developing countries whose balance of payments will experience a severe deterioration in the wake of this financial crisis.

The immediate task is to de-clog the credit markets the world over. Coordinated global action is essential to restore a measure of confidence in the credit markets.

From the standpoint of developing countries, international financial institutions, particularly the IMF and World Bank, need to put in place

exogenous shock facilities to provide assistance to the affected countries more quickly and in larger amounts with less service conditionalities and greater flexibility.

Countries with strong foreign exchange positions could make additional resources available to the international financial institutions on appropriate terms to finance their operations.

As a counter cyclical device, increased infrastructure investments in developing countries, if backed by increased resources flows from multilateral financial institutions such as the IBRD and Regional Development Banks, can act as a powerful stabilizer.

The IMF should revisit the potentially powerful instrument of creating liquidity through fresh allocation of Special Drawing Rights in favour of multilateral development finance institutions.

The reform and reconstruction of the financial system has to be a collective international effort since borders no longer confine financial institutions or can keep out financial turmoil. Given the growth in cross-border investment, trade and banking in the last three decades, the world must ponder over the need for a global monitoring authority to promote global supervision and cooperation in the increasingly integrated world in which we live.

In devising a reform agenda, one must bear the wise saying of John Maynard Keynes regarding the economically damaging role of excessive speculative activity. To quote Keynes :

"Speculators may do no harm as bubbles on a steady stream of enterprise. But the position is serious when enterprise becomes the bubble on a whirlpool of speculation. When the capital development of a country becomes a byproduct of the activities of a casino, the job is likely to be ill-done"

Clearly, there has been a massive failure of regulatory and supervisory powers. Speculators have had a free run for far too long a period. International institutions like the IMF have also not covered themselves with glory. There has been an unacceptable failure of effective multilateral supervision of major developed economies and in particular of what has been going on in their financial markets.

India's banking system is sound and well capitalized. It is not exposed to the type of assets which have given rise to this crisis. Our real economy will grow at the rate of 7 to 7.5 percent this year despite the global slowdown of export demand and capital inflows. We have injected fresh liquidity in the system.

We realize that we cannot remain totally unaffected when the global economy and financial system are in deep trouble. Our stock markets and the exchange rate of the rupee are under pressure due to capital outflow of foreign institutional investors. Sooner or later, the real economy is bound to experience the pain.

We are therefore sincere in our desire to cooperate and coordinate our actions with the world community to find effective and pragmatic solutions to the formidable challenges the world economy is now faced with.

Thank you.

142. Statement of Prime Minister Dr. Manmohan Singh on Sustainable Development at the Asia - Europe (ASEM) Summit.

Beijing, October 25, 2008.

Driving Sustainable Development

(Millennium Development Goals, Energy Security and Climate Change, Social Cohesion)

Sustainable development is among the biggest challenges of our times. However, a lot of cooperative work is needed to transform it from a mere buzz word to an operational strategy for development.

We know that Asia is home to the largest concentration of the world's poor. Poverty eradication at this scale requires a collaborative global effort to promote development and in particular to create job opportunities. If we fail, we will continue to live in a world of instability and conflict.

The development strategies that we adopt have to result in a fair, equitable and balanced distribution of the economic dividend. At the same time, it must also preserve and protect the environment. Only then can we make faster progress in meeting the Millennium Development Goals.

We therefore need to put in place a global action plan to promote both food and energy security for managing the challenges of both accelerated growth and its environmental sustainability.

Unfortunately, the international community has not lived up to its commitments for technology transfer and additional financing since the Rio Conference. We should pursue innovative mechanisms for raising finance for development and creating a favourable IPR regime.

Ladies and Gentlemen,

Climate change threatens our environment and our development. A holistic approach is needed to tackle this problem. We cannot do so by perpetuating the poverty of the developing countries, or by preventing their industrialization. The challenge ahead is to put in place development strategies which improve living standards, create opportunities for job creation and are also environment friendly.

Thus, common but differentiated responsibility should be the cardinal principle of negotiations to find practical and pragmatic solutions within the UN Framework Convention on Climate Change.

Progress on the implementation of the Kyoto Protocol has been slow. Emissions of developed countries have actually increased by 2.6 % from 2000 to 2005. We should call upon our European partners to do more in this regard. The developing world is committed to doing its share.

I believe that the principle of convergence of per-capita emissions of developing countries with advanced developed countries is catching the imagination of the international community. We should recognize that each citizen of the world has equal entitlement to the global atmospheric space.

Our dependence on fossil fuels is a cause of many problems. Greater effort is needed to promote clean and renewable sources of energy, including nuclear energy.

The world therefore needs a new compact to increase efficiency in the use of available energy resources.

Ladies and Gentlemen,

Without peace there can be no sustainable development. Terrorism, extremism, and intolerance threaten our social cohesion.

We need to continuously strengthen international cooperation to combat terrorism. We must bring perpetrators, organizers, financiers and sponsors of terrorism to justice.

Finally, globalization, if it is to succeed, must be fair and benefit the whole of humanity. Development has to be inclusive. It must reduce disparities of income and wealth. It should create ever widening circles of stake-holders. It should respect pluralism and diversity.

Ladies and Gentlemen,

Asia is growing rapidly and has proven capabilities as a provider of goods, services and knowledge. Europeans are world leaders in the scientific, technological and financial areas. We have therefore much to learn from each other. We seek on this historic occasion a meeting of minds and of these complementarities to bring both stability and prosperity to our two continents and to the world at large.

Thank you.

143. Intervention by Prime Minister at Working Lunch of ASEM.**Beijing, October 25, 2008.****(PM was the first speaker)**

We have had a very fruitful discussion and dialogue. There is complete agreement among all of us that ASEM is a powerful forum to deal with global issues.

We are all agreed regarding the Millennium Development Goals (MDGs). But our pre-occupation with the global financial crisis should not detract from pursuing the goal of fulfillment of MDGs.

We are half-way in 2008 to reach the targets (of MDGs) set for 2015. However, the way things are moving, few believe that those targets will be met. One participant had mentioned the amount required for the purpose. The UN Secretary-General has been able to secure pledges of only US \$ 16 billion. This is reflective of the unequal world that we live in.

We should be concerned about the fulfillment of the MDGs which requires far more energetic efforts. Far more energy is required if we are to meet the goals by 2015, rather than later discuss why we did not realize those goals.

Thank you.

ASEAN & EAST ASIA SUMMIT

144. Press Release issued by the Ministry of External Affairs on the visit of Minister of State Anand Sharma to Singapore in connection with the East Asia Summit (EAS) Foreign Ministers' Meeting.

New Delhi, July 23, 2008.

Minister of State for External Affairs, Shri Anand Sharma led an Indian delegation to Singapore in connection with the East Asia Summit (EAS) Foreign Ministers' Meeting, ASEAN-India Ministerial Meeting and the 15th ASEAN Regional Forum from 22-24 July 2008.

Shri Sharma had bilateral meetings on 22-24 July with Foreign Ministers/ heads of delegation of Singapore, Australia, Canada, Russia, Japan, Republic of Korea, China, Philippines, France, Malaysia, Canada and Thailand on the sidelines of ASEAN/EAS Meetings. The bilateral meetings covered a wide range of issues of shared interest. The Minister also held discussions on India's civil nuclear energy program and sought support of member countries of the IAE board of governors and the Nuclear Suppliers Group.

He also met with US Secretary of State Dr Condoleezza Rice and discussed with her the next steps for concluding Indo-US civil nuclear energy agreement.

145. Joint Press Statement at the conclusion of 6th ASEAN - India Economic Consultations.**New Delhi, August 29, 2008.**

The Sixth Consultations between the ASEAN Economic Ministers (AEM) and India (6th AEM-India Consultations) was held in Singapore on 28 August 2008. The Consultations was co chaired by Mr. Lim Hng Kiang, Minister for Trade and Industry of Singapore and Mr. Kamal Nath, Minister of Commerce and Industry of India. The annual consultations provided the opportunity for Ministers to exchange views on issues and developments affecting global and regional trade, particularly those that are significant to the bilateral trade between ASEAN and India. The Ministers noted that, despite the challenges prevailing in global and regional trade, ASEAN-India bilateral trade continues to grow at impressive rates. From 2005-2007, trade in goods between ASEAN and India increased at an average annual rate of 28 percent. ASEAN exports to India during the same period grew at an annual rate of 31 percent on average, the fastest among ASEAN's exports to major trading partners. The share of ASEAN-India trade in relation to total ASEAN trade continued to increase and India remains ASEAN's seventh largest trading partner. On the investment side, in 2007, India's Foreign Direct Investment to ASEAN, valued at USD 641 million, was the highest ever recorded since 2000. The other Ministers who attended the meeting were Mr Pehin Dato Lim Jock Seng, Second Minister of Foreign Affairs and Trade, Brunei Darussalam; Mr. Cham Prasidh, Senior Minister and Minister of Commerce, Cambodia; Mr Mari Elka Pangestu, Minister of Trade, Indonesia; Mr Nam Viyaketh, Minister of Industry and Commerce, Lao PDR; Mr Tan Sri Muhyiddin Yassin, Minister of International Trade and Industry, Malaysia; Mr U Soe Tha, Minister for National Planning and Economic Development, Myanmar; Mr. Peter B. Favila, Secretary of Trade and Industry, the Philippines; Mr. Pichet Tanchareon, Deputy Minister of Commerce, Thailand; (representing Mr. Chaiya Sasomsub, Minister of Commerce, Thailand); Mr. Nguyen Cam Tu, Vice Minister, Ministry of Industry and Trade, Viet Nam (representing Mr. Vu Huy Hoang, Minister of Industry and Trade, Viet Nam and Mr. Surin Pitsuwan, Secretary-General of ASEAN.

The Ministers announced the conclusion of the ASEAN-India Free Trade Agreement (AIFTA) negotiations for trade-in-goods. The Ministers were pleased that, despite the difficult issues in the negotiations, both sides were able to reach an agreement on the modality for tariff reduction and/or

elimination, which is among the key elements that will facilitate the creation of an open market in a region comprising about 1.7 billion people and with a combined gross domestic product of approximately USD 2,381 billion as of 2007. The Ministers viewed that the AIFTA could be a major avenue in harnessing the region's vast economic potentials towards sustained progress and improved welfare not only for ASEAN and India but for the greater East Asian region as well. The Ministers agreed that officials finalise the text of the ASEAN-India Trade in Goods Agreement in time for signing during the ASEAN-India Summit in December 2008, together with the ASEAN-India Agreement on Dispute Settlement Mechanism. The Ministers agreed to target implementation of tariff reduction commitments starting 1 January 2009. The Ministers also instructed officials to commence, as soon as possible, negotiations on trade in services and investment as a single undertaking, and to work towards the conclusion of substantive discussions on these two agreements by 2009 to bring about a complete ASEAN-India Comprehensive Economic Cooperation Agreement. The Ministers also took stock of the latest developments in the Doha Round and emphasised that a stronger multilateral trading system would benefit all Members, especially the developing countries. Since the Doha Round is a Development Round, the developing countries have a special stake in its successful conclusion. The Ministers reaffirmed their commitment to active and constructive engagement in the negotiations to bring about balanced and ambitious outcomes in all areas, especially in agriculture, NAMA and services. The Ministers assured Lao PDR of their continued support in her accession to the WTO.

The Economic Ministers of ASEAN, Australia, the People's Republic of China, the Republic of India, Japan, the Republic of Korea and New Zealand had a productive exchange of views on the areas of cooperation within the East Asia Summit (EAS) framework. The Ministers welcomed the establishment of the Economic Research Institute for ASEAN and East Asia (ERIA) with the Inaugural Governing Board Meeting of ERIA held at the ASEAN Secretariat on 3 June 2008. The Ministers also welcomed the research activities of ERIA and looked forward to ERIA's practical policy recommendations for deepening economic integration, narrowing development gaps and sustainable development. In particular, the Ministers noted with appreciation the ERIA East Asia Industrial Corridor Project for the region-wide comprehensive development, affirming the importance of linking the infrastructure development and industrial development planning. The Ministers also expressed interests in the ERIA Energy Outlook which

demonstrates the importance of enhancing energy efficiency for sustainable development. The Ministers agreed to report the outcome of ERIA's activities to the EAS Leaders.

The Ministers also discussed current regional and international policy issues such as the increase in the energy and foods prices and its impact on the region. In this regard, the Ministers welcomed Japan's proposal to host the symposium on the energy and food security in cooperation with ERIA. The Ministers noted the report of the Track Two Study Group on Comprehensive Economic Partnership in East Asia (CEPEA), which shows greater potential trade and GDP growth if enhanced integration among EAS members is achieved. Consistent with the request of Leaders, the Ministers agreed to convey the report to Leaders at the 4th East Asia Summit (EAS). The Ministers also agreed to a Phase II Track II Study on CEPEA, detailing the pillars of economic cooperation, facilitation and liberalisation as well as institutional developments. The Ministers acknowledged that substantial progress was made during the World Trade Organisation (WTO) Mini-Ministerial in July and members came very close to agreement. However, there are still outstanding issues before modalities in Agriculture and Non-Agriculture Market Access (NAMA) can be resolved. The Ministers agreed that all economies must work together to preserve what has been achieved to date, and to show constructive and continued engagement to conclude the Round. The Ministers also agreed that a strong and equitable global rules-based trading system is necessary for continued growth. The Ministers also stressed the importance of concluding the round to achieve development objectives and to respond effectively to the global financial and food crisis. The Ministers committed to intensify efforts in the coming weeks to resume negotiations and achieve convergence in the remaining areas before the window of opportunities closes. The Ministers supported WTO DG Pascal Lamy's efforts to bridge gaps among the key economies and his call on these economies to show political commitment and flexibility to work towards a balanced and ambitious outcome. The Ministers agreed that it is important to ensure the integrity of the multilateral trading system, and that work on the remaining areas of the single undertaking should resume in Geneva even as modalities in Agriculture and NAMA are being worked out.

BIMSTEC

146. Joint Statement of the Tenth BIMSTEC Ministerial Meeting.

New Delhi, August 29, 2008.

[The Tenth BIMSTEC Ministerial Meeting was held in New Delhi, India on 29 August, 2008.

The meeting was attended by H.E. Dr. Iftekhar Ahmed Chowdhury, Adviser for Foreign Affairs of the People's Republic of Bangladesh, H.E. Lyonpo Ugyen Tshering, Minister for Foreign Affairs, of the Kingdom of Bhutan, H.E. Mr. Pranab Mukherjee, External Affairs Minister of the Republic of India, H.E. U Nyan Win, Minister for Foreign Affairs of the Union of Myanmar, H.E. Mr. Upendra Yadav, Minister for Foreign Affairs of Federal Democratic Republic of Nepal, H.E. Mr. Rohitha Bogollagama, Minister of Foreign Affairs of the Democratic Socialist Republic of Sri Lanka. and H.E. Mr. Tej Bunnag, Minister of Foreign Affairs of the Kingdom of Thailand.

H.E. Mr. Pranab Mukherjee, External Affairs Minister of India chaired the Meeting.

The Meeting approved the Report of the Twelfth Meeting of the Senior Officials held on 28 August, 2008.

At the conclusion of the Meeting, the Heads of Delegation issued the following Joint Statement:]

We, the Heads of Delegation of the Tenth BIMSTEC Ministerial Meeting, having gathered in New Delhi on 29th August, 2008 reiterated our commitment to the founding objectives and principles of BIMSTEC to accelerate economic and social growth in the region and noted with satisfaction the progress made since our last Meeting in New Delhi in August 2006.

We considered it opportune to review activities in the regional cooperation grouping, with BIMSTEC having crossed the landmark of its 10th Anniversary last year. We reviewed the progress made in the various sectors and noted with satisfaction the achievements since the last Meeting.

We reiterated our agreement to pursue cooperation in the following 13 areas identified under the BIMSTEC framework:

Trade and Investment

We reaffirmed the importance of realizing a BIMSTEC Free Trade Area for increasing trade and investment, enhancing competitiveness and promoting socio-economic development of BIMSTEC countries. We noted with satisfaction the progress made at meetings of the Trade Negotiating Committee. We reiterated our resolve to conclude the negotiations on trade in goods under the proposed FTA at an early date, preferably before the next BIMSTEC Summit.

We noted the progress made at the Experts Group meetings on the BIMSTEC Business Visa Scheme as well as the BIMSTEC Business & Economic Forum during the last two years since the 9th Ministerial Meeting.

Transport and Communication

We reaffirmed that optimal transport linkages are necessary for achieving efficient levels in connectivity amongst member countries to promote movement of goods and people. Accordingly, we recognized the need for development of key infrastructure, including transportation and communication linkages. In this context, we noted with satisfaction the progress made since our last meeting. We complimented the Asian Development Bank which has concluded the mandated study on BIMSTEC Transport Infrastructure and Logistics (BTILS). We noted BTILS including the proposed institutional mechanisms and the terms of reference which are being examined by BIMSTEC member countries.

Tourism

We recalled our earlier decision that tourism should be actively encouraged, both intra-BIMSTEC cooperation among member countries as well as from outside the BIMSTEC region. In this context, we expressed satisfaction that considerable progress had been made since our last meeting. We welcomed the 2nd Round Table and Workshop of Tourism Ministers held in Kathmandu in August 2006 and endorsed the Kathmandu Declaration and the Plan of Action for taking forward tourism related activities in the BIMSTEC framework. We decided to constitute a Tourism Working Group to implement tourism programmes and follow up on the Plan of Action. We

welcomed the establishment of the BIMSTEC Information Centre in New Delhi for promoting tourism.

Energy Cooperation

We reemphasized the importance of sharing experiences and strengthening cooperation amongst member countries in the fields of grid connectivity, gas pipelines, hydro power, renewable sources of energy, energy efficiency and energy sector reforms, restructuring, regulations and best practices with a view to promoting energy security in the BIMSTEC region. In this context, we welcomed the BIMSTEC meetings and activities during the last two years, and particularly the progress made in realizing the BIMSTEC Energy Centre in India. We approved the Memorandum of Association (MoA) for setting up the BIMSTEC Energy Centre in India and recommended the MoA for signing during the forthcoming BIMSTEC Summit. We expressed the hope that the Energy Centre would be operational as soon as possible.

Technology

We reiterated the need to enhance cooperation in advanced areas of fundamental and applied scientific and technological research. We welcomed the progress made since our last meeting including regarding the BIMSTEC Technology Transfer Exchange Facility and expressed the hope that the facility would be realized as soon as possible.

We appreciated the progress in the sector including the decision to establish the BIMSTEC Centre for Weather and Climate. We approved the Memorandum of Association (MoA) for setting up a BIMSTEC Centre for Weather and Climate in India and recommended the MOA for signing during the next BIMSTEC Summit.

Fisheries

We reiterated our commitment to continue our efforts to promote the sustainable use of marine resources through effective conservation and management of the resources in the Bay of Bengal in close coordination with existing frameworks. We welcomed the progress in terms of the Workshop and Joint Survey undertaken during 2007.

Poverty Alleviation

We welcomed the progress made particularly at the first Ministerial Meeting on Poverty Alleviation held in Dhaka in July 2008 and noted the observations

of the Ministerial meeting. We focused on poverty alleviation in the context of ensuring food security in the BIMSTEC region. We noted the proposal of Nepal to prepare a Plan of Action on Poverty Alleviation to be submitted to the second BIMSTEC Ministerial Meeting on Poverty Alleviation to be held in Nepal in 2009. We noted with appreciation the proposal of Bangladesh to host BIMSTEC Poverty Alleviation Centre in Dhaka.

Culture

We recalled the Paro Initiative and Plan of Action adopted at the First BIMSTEC Ministerial Meeting on Cultural Cooperation held in Bhutan in May 2006. We welcomed the finalization of the Memorandum of Understanding (MoU) for the establishment of the BIMSTEC Cultural Industries Observatory (BCIO) and BIMSTEC Cultural Industries Commission (BCIC) as the institutional mechanisms to facilitate cooperation in the area of culture. We recommended that the approved MoU be signed during the Second BIMSTEC Summit.

Agriculture

We welcomed the progress made during meetings held in the last two years and the wide array of cooperation activities and projects identified at the Expert Group meetings along with lead coordinating country for each. We expressed the hope that these concrete activities and projects would be implemented expeditiously. We felt the need to address the issues relating to agricultural productivity in this regard.

Counter-Terrorism & Trans National Crimes

We welcomed and accepted the offer of India to be the lead country. We reiterated the significance of the work done in the Joint Working Group on Counter Terrorism & Transnational Crimes and its four sub-groups covering Intelligence Sharing; Legal and Law Enforcement Issues; Combating the Financing of Terrorism and Prevention of Illicit Trafficking in Narcotic Drugs, Psychotropic Substances and Precursor Chemicals. We expressed the hope that the draft BIMSTEC Convention be finalized as soon as possible for signing during the next BIMSTEC Summit.

Environment & Disaster Management

We welcomed the Workshops organised since our last meeting and endorsed the Agenda for Action for effective regional cooperation among

BIMSTEC countries prepared by the Workshop on Disaster Risk Reduction and Management in October 2006.

Public Health

We welcomed initiatives to host the BIMSTEC meeting on Traditional Medicine and Generic Drugs for the poor and to organise a study visit regarding Avian Influenza Pandemic. We appreciated India's ongoing programme offering 30 'Ayush' scholarships to BIMSTEC students to study traditional medicine.

People-to-People Contacts

We expressed appreciation for initiatives to organise various events and activities including to mark the 10th Anniversary of BIMSTEC in Thailand last year to promote people-to-people contacts and interaction among member countries.

We the Heads of Delegation of the BIMSTEC tenth Ministerial Meeting, on the recommendation of the 12th BIMSTEC Senior Officials Meeting, approved the following:

- (a) The Memorandum of Association of the BIMSTEC Centre for Weather and Climate in India
- (b) The Memorandum of Association of the BIMSTEC Energy Centre in India
- (c) The Memorandum of Understanding (MoU), of BIMSTEC Cultural Industries Commission (BCIC) and BIMSTEC Cultural Industries Observatory (BCIO)
- (d) The setting up of Tourism Working Group and its Terms of Reference (ToRs), and
- (e) The setting up of a BIMSTEC Joint Working Group to consider:
 - (i) all aspects including organisational structure, financing mechanism and staffing, pertaining to the BIMSTEC Secretariat, and thereafter
 - (ii) operational structure and financing of BIMSTEC Centres.

Further, **we** the Heads of Delegation of the tenth BIMSTEC Ministerial Meeting agreed to the following:

BIMSTEC Centre

We also thanked Thailand for its continued contribution to the BIMSTEC Centre particularly its decision to extend the contract of the BIMSTEC Centre for another year.

BIMSTEC Official Website

We expressed satisfaction on the improvements made to the BIMSTEC website www.bimstec.org maintained by Sri Lanka in coordination with BIMSTEC Centre in Bangkok and BWG.

BIMSTEC Summit

We noted with satisfaction BIMSTEC achievements thus far and reaffirmed our commitments to further deepening our partnership within the BIMSTEC framework. We expressed confidence that the 2nd BIMSTEC Summit to be hosted by India in November 2008 will carry forward our cooperation activities with renewed dynamism. The 2nd BIMSTEC Summit will also provide an opportunity to review the achievements since the establishment of BIMSTEC which as a regional cooperation and integration grouping celebrated its 10th Anniversary last year. It will also provide further impetus to BIMSTEC cooperation activities and projects.

11th Ministerial Meeting

The Eleventh BIMSTEC Ministerial Meeting will be held in India in November 2008.

147. Extract from the Briefing by Secretary (East) N. Ravi relevant to the BIMSTEC Summit.

New Delhi, November 7, 2008.

Official Spokesperson (Shri Vishnu Prakash): Good evening and welcome to the Media Hall.

Secretary (East) Mr. N. Ravi is here to brief you about the forthcoming visit of Prime Minister to Oman and Qatar*. He will also be talking to you about the forthcoming BIMSTEC Summit. To Secretary (East)'s right is Joint Secretary (Gulf) Mr. A. Manickam, and to my left is my colleague Joint Secretary (Economic Relations) Mr. J.S. Mukul. Secretary will also be taking a few questions after his opening remarks.

Secretary (East) (Shri N. Ravi): Thank you Vishnu.

* * * *

After returning from the visit to the Gulf, the major event is being hosted here in Delhi, and that is the BIMSTEC Summit. It is the Bay of Bengal Area for International Multisectoral Technological and Economic Cooperation. But it also simultaneously coincides with the members of the organization who are the littoral states of the Bay of Bengal. Initially it started off with Bangladesh, India, Myanmar, Thailand and Sri Lanka, and then Bhutan and Nepal joined us a little later. This would be the second Summit of BIMSTEC which is being held. The first one was held in 2004 in Bangkok. This is the second Summit which will take forward the process of integration of the states around the Bay of Bengal.

When we look back at the progress achieved since the first Summit, the states that are members have got expertise in very similar areas. Keeping that in mind we have as many as thirteen sectoral areas which cover areas like trade and investment, technology, energy, transportation and communication, tourism, fisheries, agriculture, cultural cooperation, environment disaster management, public health, people-to-people contact, poverty alleviation, counter terrorism, and trans-national crime.

Each country is given one particular sector, some countries are given more than one, to have meetings at the official and the experts level to come up programmes to enhance cooperation among the countries concerned. To

* For briefing relevant to Oman and Qatar, please see Document No.452.

go back a little, the Summit proper would be held on the 13th of November. The Summit would be held in Taj Palace Hotel, all the events would be held there. And there is a press interaction which is being organized soon after the Summit. The Summit would be followed by a retreat followed by a special lunch for the leaders, and then there would be a brief press interaction with all the Summit leaders.

Separately, in order to draw the link from where we started with BIMSTEC, a curtain raiser event is being held over the weekend, in fact tomorrow, in Kolkata organized by the Indian Chamber of Commerce - because BIMSTEC forms a very important part of our Look-East Policy - a curtain raiser event by which the Indian Chamber of Commerce has called its compatriots from other countries. And they would be unveiling a report that they have prepared on trade facilitation and certain other areas of joint investment and wherever joint ventures can be established.

In Delhi, the events actually start on the 11th. On the 11th, we have the senior officials meeting of the BIMSTEC countries. On the 12th, we have the Ministerial Meeting where the Foreign Ministers of all the BIMSTEC countries would be taking part, followed by the Summit on the 13th. The programme of the Heads of State and Government who are going to attend would conclude with a joint call on the President in the evening of the 13th. This is the general programme of the BIMSTEC Summit.

A business summit is also being organized in Delhi on November 12th by our apex chambers of commerce and industry - CII, FICCI and ASSOCHAM - with themes like energy including hydel power, agri-business including fisheries, as well as transportation and connectivity.

When we look at BIMSTEC as a multilateral, regional organization, we do see that the BIMSTEC actually includes the bridge between India and South-East Asia because Myanmar is a member of the ASEAN. So, we have the connection with ASEAN through BIMSTEC. Then we also find that other members like Bangladesh, Nepal, Bhutan, Sri Lanka are members of SAARC. So, there is a certain degree of overlap, but it has an independent character of its own mainly because it forms a bridge between South and South-East Asia. Over a period of time the focus has been to enhance transportation and connectivity; and discussions have been held among experts; and there are many projects on the anvil.

After the Summit, a declaration would be issued and this would include some of the major conclusions that the Heads of State and Government

would have arrived at in the course of the Summit. Needless to add, the Summit would also complement the existing state of bilateral relations with all the member countries because the Heads of State and Government would like to have, are having, independent calls and meetings with our External Affairs Minister, with their counterparts; and also with the Prime Minister the Heads of State and Government would be meeting.

So, we look at the Summit as a major event being hosted by India in the regional context particularly keeping in mind that the economic structure of development of all the countries is highly comparable, and the ring, the Bay of Bengal countries all of whom have a major portion of their population who draw their sustenance not only from the Bay of Bengal itself through fisheries but also through the rivers that empty into the Bay of Bengal through all these countries.

Thank you.

* * * *

Question: Do we have any figures for BIMSTEC of total trade and how much do we export to the region and how much do we import?

Secretary (East): We have close to 20 billion dollars worth of trade amongst the BIMSTEC countries although it is not as large as what we have with ASEAN with much larger economies. We look at this way. I think in terms of population, about a little over 20 per cent of the world's population is in this region of BIMSTEC with very significant contribution to the GDP of the region mainly through agriculture and that really sustains the cooperation among the countries concerned.

Question: Are you also thinking in terms of a Free Trade Area among the BIMSTEC members?

Secretary (East): This is one of the topics that are under discussion, and a certain degree of progress has been achieved. But there are certain other areas within the free trade area discussions, two or three in fact that some countries are still to get back to us. But the discussions are on.

* * * *

Question: Is there a bilateral meeting planned between Prime Minister and Myanmar's leader? The UN Secretary-General was here and he said that perhaps India could do more to promote democracy in Myanmar. What will be your message to Myanmar's leader?

Secretary (East): Meetings with all the leaders are being planned. Our message to Myanmar continues to remain the same that we would like the special offices of the UN envoy to really be given the centre stage, and that all countries with similar interests in Myanmar cooperate with that UN initiative; and that the process of reconciliation should be all-inclusive and should proceed forward expeditiously.

Question: There was some talk of doing something with the river waters in Nepal and India so that there are no floods damaging North India most of the time; and ADB and other financial institutions were supposed to be involved. Is there any development on that? Also, what is the position on the rail link through Burma?

Secretary (East): You referred to the ADB. They have done a study on BIMSTEC's infrastructure and connectivity. But I am not aware of anything done on river waters by them. We have, of course, our bilateral discussions with all our neighbours on this particular subject.

As regards the rail link, that comes under a slightly different umbrella. There is a much older, shall we say, project of connecting Delhi to Hanoi through the Mekong-Ganga Cooperation. It was one of that organisation's projects. But purely as a matter of connectivity, we are discussing various possibilities with all the neighbouring countries.

Question: Any bilateral meeting scheduled with the Sri Lankan President on the margin of the BIMSTEC Summit?

Secretary (East): As I just now mentioned, bilateral meetings are being scheduled with all the Heads of States and Government who are coming to Delhi. These would become known as we pass on to early next week.

Official Spokesperson: Thank you very much for joining us today.

**148. Speech by External Affairs Minister Pranab Mukherjee
as the Curtain Raiser to BIMSTEC Summit 2008.**

Kolkata, November 8, 2008.

Shri Buddhadeb Bhattacharjee, Chief Minister of West Bengal

Shri Sanjay Budhia, President, Indian Chamber of Commerce

Lt. General (Retd.) B.S. Malik, President, CSIRD

Members of the Indian Chamber of Commerce,

Distinguished Guests,

Ladies & Gentlemen

It gives me great pleasure to participate in this Curtain Raiser event to BIMSTEC Summit 2008. I would like to congratulate the Indian Chamber of Commerce and the Centre for Studies in International relations and development (CSIRD) for organizing this special event and for its continuing efforts in the service of the industry. The publication of "BIMSTEC Cooperation Report" in this connection is well-timed and I am sure such efforts would help in carrying forward the objectives of this Initiative.

The BIMSTEC Summit's curtain-raiser programme this evening is very important from West Bengal's perspective. The geographical location of this State is significant for promoting business and trade in the BIMSTEC region. In the past, West Bengal has played an instrumental role in furthering the objective of BIMSTEC cooperation. Hence, it is indeed appropriate that the Curtain Raiser to the second BIMSTEC Summit is being held in Kolkata. The business potential within BIMSTEC region is huge and our nation can gain immensely if the basic objective of BIMSTEC economic cooperation is properly addressed.

The Bay of Bengal Initiative for Multi-Sectoral Technical and Economic Cooperation (BIMSTEC) has evolved from its origins as Bangladesh, India, Sri Lanka, Thailand Economic Cooperation (BIST-EC). Today, BIMSTEC is in the second decade of its existence. BIMSTEC provides a unique link between South Asia and Southeast Asia bringing together more than 20 percent of the world population. This region is also witnessing some of the strongest economic growth in recent years. There are many areas of

complementarity among BIMSTEC countries, given geographical contiguity and resource endowments.

The main aim of this Group is to fully utilize the existing potential of BIMSTEC partner countries for promoting economic co-operation in the areas of investment, industry, technology, human resource development, agriculture and infrastructure. BIMSTEC provides an opportunity to optimize complementarities in trade, investment and production between South and Southeast Asian countries. This Grouping cutting across regions can be considered an important step towards the process of economic cooperation between different regions of Asia.

Distinguished Guests,

BIMSTEC has emerged as one of the fastest growing regions of the world with a growth rate of 8 percent sustained over the past five years. The proposed BIMSTEC Free Trade Agreement will contribute to mutually beneficial regional economic integration. The FTA regarding 'Trade in Goods' would be a meaningful instrument for increasing intra-regional trade if the members make joint and focused efforts to deal with tariff and non-tariff barriers. It has been observed that India's export and import baskets with other BIMSTEC countries are well diversified. Other BIMSTEC countries also have much to offer. Our businessmen should make full use of the opportunities offered by the BIMSTEC framework for two-way trade.

BIMSTEC region has very high scope to exploit the potential of intra regional FDI flows especially in the context of emergence of BIMSTEC as a significant source of FDI in recent years with Indian and Thai companies undertaking relatively large investments in different parts of the world. Deeper regional economic integration in BIMSTEC is needed to enable the region not only emerge as a more attractive destination for FDI inflows but also for intra-regional FDI. The BIMSTEC FTA, in addition to Trade in Goods, also envisages agreements covering Investments and Services.

Considering the importance of energy, it is necessary to ensure energy security through cooperation among BIMSTEC countries. The energy resource endowment, namely, natural gas in Bangladesh and Myanmar, coal and petroleum products in India and hydropower in Nepal and Bhutan provide a basis for regionally integrated energy cooperation. BIMSTEC has

taken the initiative to promote regional cooperation through the BIMSTEC Energy Centre to be set-up in India.

Ladies & Gentlemen, BIMSTEC countries also face many challenges. The major challenge is the need to enhance transport and communication infrastructure. This can help increase the capacity of the BIMSTEC economies to gain from a liberal trading environment. The potential in BIMSTEC will not be fully realized without development of infrastructural facilities like transport and communications. Once physical connectivity is established, the next step should be developing the software of transport and communications, namely, rules and regulations facilitating cross-country movements.

The Group has identified 13 major areas for strengthening economic cooperation and have also assigned one lead country for each group. India is the lead country for tourism, transport and communications, counter-terrorism, and environment and disaster management and BIMSTEC is the first formal link between South Asian and South East Asian countries. Added to the important contributions made by all members, India's 'Look East' Policy with Thailand's 'Look West' Policy help in strengthening the internal bonds of cooperation in BIMSTEC.

The Asian Development Bank (ADB) has completed a technical assistance project for BIMSTEC Transport Infrastructure and Logistics Study. This will contribute to the ultimate objective of increasing trade and travel among BIMSTEC member countries.

Tourism in the BIMSTEC cooperation framework is an expanding sector. It provides significant foreign exchange and employment to BIMSTEC countries. It constitutes about 2 per cent of world's total tourism.

Finally, we would like to underline the need for collective action for poverty alleviation through exchange of best practices and mobilization of resources, especially in rural areas employing innovative approaches and initiatives such as micro-credit and development of Small and Medium Enterprises (SMEs). This is because despite robust growth, the region is home to more than 40% of the world's poor. Large sections of BIMSTEC population are still to attain efficient access to education, health, nutrition and basic amenities like safe drinking water and sanitation. Hence, the developmental challenge faced by this region is huge.

We believe that regional cooperation can help us develop partnerships with countries that share with us similar developmental experiences and thus have the potential for identifying win-win solutions. They also help by widening market opportunities and generating greater flow of investment into the country.

In conclusion, I am confident that BIMSTEC Summit's curtain-raiser programme at Kolkata will provide the necessary focus and momentum to intra-BIMSTEC business cooperation. It is for our business community to seize the opportunities BIMSTEC processes and initiatives offer for further deepening and diversifying our economic-commercial relations which are already strong.

Thank you.

149. Statement of Prime Minister Dr Manmohan Singh at the Second BIMSTEC Summit.

New Delhi, November 13, 2008.

Excellencies,

It is my great honour to welcome all of you for the Second BIMSTEC Summit in New Delhi. I would like to thank the Government of Thailand for their efforts in preserving the momentum of our organization.

BIMSTEC is an opportunity we should seize together. Your presence here today is an indication of our political will to do so.

In the past ten years, our combined GDP increased two and a half times to reach 1.7 trillion US dollars. There is much greater connectivity between us, more trade and investment and more people to people exchanges.

The winds of democracy have swept across our countries.

Globalisation and economic interdependence offer opportunities for growth and prosperity but also have their downside, as the recent international economic and financial crisis has shown.

Regional integration has increased dramatically. ASEAN Summits are now held annually. The East Asian Summit process has begun. SAARC has been revitalized.

In this period, new trans-national challenges have emerged. Climate Change, energy and food security threaten our developmental efforts. Terrorism and threats from the sea continue to challenge the authority of the state.

This Summit provides an opportunity for us to give a new strategic thrust to BIMSTEC in the backdrop of these changes.

There are a few cross-cutting issues I wish to place for your consideration on which we should focus so as to strengthen BIMSTEC and make it a viable regional entity.

Firstly, from the experience we have gained, we should undertake a comprehensive review of our activities. We should prepare a blue print for future activities that is focused on a limited number of areas of common priority. These areas should have the maximum potential for producing visible results and strengthen our common vision of the region and of BIMSTEC. We must force the pace of implementation of our projects and ideas.

Excellencies,

BIMSTEC is the bridge between South Asia and South East Asia. We all belong to the Bay of Bengal community. Nature and geography have bound us together by land and by water.

We should reflect on how best to create opportunities for growth and prosperity centred around the riches of the Bay of Bengal, keeping in mind also the dangers posed by the sea.

Transport infrastructure and logistics would be a key. We need to coordinate on issues of maritime transport such as construction of a deep-water port to service the region, inter-modal connectivity, cooperation among our port authorities and our shipping and logistics networks.

We should examine cooperative mechanisms to exploit our marine resources. I am pleased that a BIMSTEC Business Summit was organized yesterday with themes on energy, including hydel power, agri-business including fisheries as well as transportation and connectivity.

The devastating tsunami in 2004 highlighted the imperative need for collective action, and a review of our approach to disaster management.

India has set up a Tsunami Early Warning Centre. We would be happy to extend information exchange and data sharing arrangements to BIMSTEC countries. This could also include training facilities for capacity building.

People to people contacts should certainly be one of our priority overarching goals. The areas of education, tourism and training come to mind.

India is already in the process of establishing the Nalanda University as an international university of excellence. We would be happy to have BIMSTEC closely associated with it.

The 300 scholarships that India had offered in 2004 under the ITEC programme for BIMSTEC countries have had a utilization rate of more than 80%. We would be happy to offer an additional 150 scholarships to encourage greater exchange of technical know-how in areas of mutual benefit.

Each of our countries is an important halt on the tourist map. We already have Buddhist circuits. These can be popularized much more and other innovative packages can be worked out by our tourism boards and jointly promoted.

Lastly, I feel that we should do something visible in the area of trade and economic cooperation as a manifestation of our ability to do something big together.

Considerable progress has been made in the negotiations on the BIMSTEC Free Trade Agreement for trade in goods. The early conclusion of such an agreement would be a shining symbol of our cooperation. We also look forward to the next stage of an agreement in the area of investment and services.

Excellencies,

The 21st century belongs to Asia. Asia will be the engine of the world economy. BIMSTEC is an important part of the wider Asian community. It has the potential of playing a vital role in the Asian community of nations linked by effective road, rail, air and shipping services across which there would be free movement of people, capital, ideas and goods.

India is firmly committed to the ideals and objectives of BIMSTEC. Our resources are at the disposal of member States.

I look forward to your valuable suggestions.

Thank you.

150. Joint Press Conference at the end of the Second BIMSTEC Summit.

New Delhi, November 13, 2008.

Official Spokesperson (Shri Vishnu Prakash): A very good afternoon to you and welcome to the press interaction with BIMSTEC leaders.

Hon'ble Prime Minister of India, Dr. Manmohan Singh, would be making the opening address. Thereafter, the Leaders will take one question from each country. Hon'ble Prime Minister, Sir, the floor is yours.

Prime Minister of India (Dr. Manmohan Singh): Excellencies; ladies and gentlemen of the press;

We have just concluded the second BIMSTEC Summit. This is a very special occasion. The Summit has taken place four years after the first Summit in Thailand. It marks the completion of ten years of the creation of BIMSTEC in 1997.

Ten Ministerial meetings of BIMSTEC have taken place so far. In addition, meetings at Senior Officials level are held twice a year, and there is a BIMSTEC Working Group based in Thailand which meets every month. BIMSTEC is the bridge between South and South-East Asia. There is far greater regional and sub-regional integration in Asia than was the case when BIMSTEC was created in 1997. We all belong to the Bay of Bengal community. Nature and geography have bound us together by land and by water. We are all developing countries faced with similar challenges. BIMSTEC is therefore an idea whose time has come.

It is against this background that we have held very positive and forward-looking discussions today. We were unanimous that the commonalities between us provide vast opportunities to enhance cooperation and connectivity between us.

We agreed to focus on enhancing our rail, road, air and shipping links to further promote people-to-people contacts and to further facilitate cultural exchange, business and tourism flows.

The leaders expressed their satisfaction at the progress that has been made in the negotiations for a Free Trade Agreement in trade in goods and called for their early conclusion. They welcomed the establishment of the Centres for Energy and Weather and Climate in India and the BIMSTEC

Cultural Observatory in Bhutan. They expressed concern at the threat which terrorism poses to our region.

The Retreat provided us a useful opportunity to exchange views on several pressing issues such as the international financial crisis, energy security, food security and climate change. There was a common desire among all leaders to work together to meet these challenges.

The Summit has given a strong political impetus to the strengthening of our cooperation in the identified thirteen areas. We have agreed to direct our officials to focus on concrete outcomes and implementation of decisions that have been reached.

I would like to personally thank the leaders of Bangladesh, Bhutan, Myanmar, Nepal, Sri Lanka and Thailand for their active contribution in making this Summit a success. Their guidance and suggestions helped to enrich our discussions and to chart out a new roadmap for BIMSTEC.

Thank you.

Official Spokesperson: Thank you, Sir.

Now, one question will be taken from one media representative of each country in alphabetical order. You will please introduce yourselves and your organization; and indicate whom the question is addressed to. As a courtesy to our guests, the Indian side would be taking the last question.

First question goes to Bangladesh.

Question (Mr. Rashid Ahmed, UNB, Bangladesh): I have a question to the Prime Minister of India. His Excellency, as you know, food security is a serious concern in this region. Did you consider in detail how the issue can be addressed? And, would you please tell us something on the proposed BIMSTEC Food Bank?

Prime Minister of India: There was a very extensive discussion on issues relating to food security. There are two aspects to it. First, how can agricultural production be increased, how can agricultural productivity be increased? That is fundamental to solving the problem of food scarcity. In this context we discussed the role of cooperation with regard to the research and extension facilities in which the countries of BIMSTEC could cooperate with each other. There was yet another idea which was mooted that the countries of BIMSTEC should pool a part of their reserves and set up a

Food Bank which could be drawn upon by needy countries whenever there are difficulties.

Question (Mr. Tenzing, Bhutan): I was supposed to ask you, Mr. Prime Minister, this question but I will second it to the Bhutanese Prime Minister Mr. Lyonpo Jigme Thinley also. The question basically first to you Prime Minister Manmohan Singh is that how will the countries benefit from BIMSTEC in terms of economy, transport, communications, and technology and so on and so forth. The same question is seconded to you as well. First if the Indian Prime Minister could answer that question.

Prime Minister of India: Well, as you know, BIMSTEC has decided to concentrate on thirteen sectors for priority consideration. They are: (1) trade and investment, (2) transport and communication, (3) energy, (4) tourism, (5) technology, (6) fisheries, (7) agriculture, (8) public health, (9) poverty alleviation, (10) counter terrorism and transnational crime, (11) environment and natural disaster management, (12) culture, and (13) people-to-people contacts. For each of these topics we have a lead country. The choice of topics is such that if cooperation in the BIMSTEC region increases, it will help to promote balanced growth of all countries of the region, particularly laying emphasis on the needs of smaller countries like Bhutan.

Connectivity, transportation, the establishment of new links, is fundamental to accelerating the development of poorer countries. If we succeed in charting out a cooperative path of development in these areas, it will have a definitely positive affect on sustained development of smaller countries like Bhutan.

Prime Minister of Bhutan (Mr. Lyonpo Jigme Thinley): After His Excellency the Prime Minister of India's response to your question, I am not so sure whether I need to elaborate anything. But, may I say that true to its nomenclature, BIMSTEC is about cooperation multisectorally in all disciplines, thirteen areas, in fact, the Prime Minister mentioned. These are all areas in which Bhutan stands not only to benefit but also can contribute. It is with the belief that we have the capacity to contribute as well as to benefit for the overall development of the region that we have become a member. May I assure you that small as we are, we have been contributing in all the discussions and in the framing of the various policies, the various projects, and the ideals that we intend to pursue and that we are pursuing. To be very specific, Bhutan's principal contribution will be in the cultural area. It is with respect to the development of this area that

Bhutan has volunteered and has been accepted and endorsed as the country that will be the venue, that will play the host, to the BIMSTEC Cultural Observatory. This will have a very important contribution to make to the development of the entire region. For one thing what we will do is change the conventional notion of our culture as an area that needs protection but contributes very little to the economy of a country.

We, by firstly adopting this nomenclature of industry, we will recognize the culture as an industry that has a very definite and a very significant substantial contribution to make in enhancing and expanding a country's economy. And as you know, our region comprises of members all of which are rich in our culture, in cultural heritage, in all forms, both in terms of tangible and intangible, as well as movable and immovable properties. Among other things, by preserving and promoting this industry, we intend to also address the problem of unemployment in our region. When we talk about intangible forms of culture, we are also talking about the arts and crafts, the skills that are mainly in the possession of the rural deprived by promoting cultural industries, as an industry, as an economic sector, I believe, Bhutan will be contributing and benefiting through collaboration. Thank you.

Question (Mr. Moe, Myanmar Radio and Television): My question is addressed to Mr. Chairman, Prime Minister of the Republic of India. As we all know, next year Myanmar will take over the Chairmanship of the BIMSTEC. Mr. Chair, could you kindly make a comment that starting from now to the next year, as current BIMSTEC Chairman, what steps and priority should be taken for BIMSTEC as a group?

Prime Minister of India: As I mentioned earlier, we have identified thirteen sectors where we must expand areas of cooperation. Sometimes they involve joint thinking, exchange of best practices, learning from each other's experience. That is a process which will benefit all member countries of BIMSTEC. In addition, we have nearly completed work, though formal signatures have yet to be appended to the following four major areas. (1) A Convention on Combating International Terrorism, Transnational Organised Crime and Illicit Drug Trafficking; (2) A Memorandum of Association regarding BIMSTEC Energy Centre to be established in India; (3) A Memorandum of Association regarding BIMSTEC Weather and Climate Centre to be established in India; (4) A Memorandum of Understanding on BIMSTEC Cultural Industries Observatory and BIMSTEC Cultural Industries Commission in Bhutan, about which the Hon'ble Prime

Minister of Bhutan has already mentioned. In all these four areas work is in progress. We have nearly completed our discussion. Only formalities with regard to signing ceremonies have to be completed. They will be done in due course of time.

Question (Mr. Lakshman, Nepal Television): My question goes to the Prime Ministers of both India and Nepal. Despite several meetings of BIMSTEC, a landlocked country like Nepal does not seem to be getting much benefit from BIMSTEC. How do you think the BIMSTEC should try to give more benefit to the needy country like Nepal?

Prime Minister of India: I think the important thing is that we must accelerate the progress of the work of BIMSTEC in all the thirteen priority areas that have been identified. I am confident, if cooperation grows in all these thirteen areas, all countries of the BIMSTEC would benefit. But certainly a country like Nepal would also benefit enormously from this expanded area of cooperation.

Prime Minister of Nepal (Mr. Pushpa Kamal Dahal 'Prachanda'): As everybody knows, previously Nepal was in a very serious internal conflict, and during that period it was not possible to have a serious interaction and serious effort, developmental effort, because we were mainly fighting against feudal autocracy, we were fighting against this feudal property relation and cultural relation. As everybody knows, a tremendous change is going on. Now, we already have a historic election of the Constituent Assembly and we declared this a Federal Democratic Republic. Now the situation has qualitatively changed. Now we have a historic and unique peace process which is going on. I think that through this Summit and through this tremendous change that is going on in Nepal, a very conducive atmosphere has emerged and I hope that now a country like Nepal, landlocked and least-developed, will be benefited from this type of regional institutions like BIMSTEC and other institutions. This new Government is completely committed to create such an atmosphere. In this meeting also we proposed to establish a Tourism Centre in Nepal. I hope that in the near future this will be established and we will be benefited from this institution. Thank you.

Official Spokesperson: I would request you, given the time constraints, to kindly address your question to one BIMSTEC leader. I think you for your cooperation.

Question (Mr. Mohan Karunaratne, Rupvahini): My question is addressed to His Excellency Dr. Manmohan Singh, Prime Minister of India, and His

Excellency Mr. Mahinda Rajapakse, President of Sri Lanka. Was there any discussion on the subject of terrorism amongst BIMSTEC leaders? After all this is an issue that has affected many of the BIMSTEC member states. If it was addressed, what were the decisions and how will they benefit the people living within the BIMSTEC region?

Prime Minister of India: I mentioned in my opening statement that all leaders referred to the threat that terrorism poses to our societies and to our economy, and the need to combat this threat. As I also mentioned a few minutes ago, we are working on a convention on combating international terrorism, transnational organized crime, and illicit drug-trafficking, which I hope will address this question of combating terrorism in precise ways.

President of Sri Lanka (Mr. Mahinda Rajapakse): The Prime Minister of India has already answered your question. Terrorism is a major concern of the BIMSTEC. Our Summit Declaration fully reflects our collective concern on this issue. Especially we discussed about the Bay of Bengal Maritime Surveillance because the terrorists are using the Bay of Bengal sea lines to transport arms and ammunition, and drugs and all that. So, we have discussed it. And it will help the people of the BIMSTEC. All the countries and societies are affected by terrorism. Thank you.

Question (Mr. Pisano, Thailand media): Your Excellency Prime Minister of India, has the BIMSTEC Summit discussed and agreed on any specific measure to address current global financial crisis? If so, can you bring about concrete outcomes and you can tell us how such measures will relate to the forthcoming ASEAN Summit in Chang Mai, Thailand next month?

Prime Minister of India: The global crisis affects all countries though it originated in the United States and in Europe. We are affected, though relatively less than the banking and the financial sectors of the developed countries. Our countries' banks are relatively well regulated. They have adequate capital-asset ratios. Therefore, there is no danger to the health of the financial system in the BIMSTEC region. But because of the slow down in the developed countries growth rates in those countries are likely to be adversely affected. That will affect the demand for our exports. Also because of the financial crisis, banks and other financial institutions are reluctant to lend money to the developing countries both for investment and for trade credit. That will, therefore, create problems for some of the developing countries in managing their balance of payment. If the flow of resources from developed to developing countries gets affected, that could

also interfere with the effective implementation of the Millennium Development Goals. So, therefore, our message to the G-20 will be that they must do everything in their power that the process of development particularly with regard to the implementation of the Millennium Development Goals by the developing countries is not adversely affected by the global economic crisis. The international financial institutions - both the International Monetary Fund and the World Bank and Regional Development Banks, and that also includes regional arrangements among developing countries like Chang Mai Initiative - should be strengthened to ensure that the fall out on developing countries of the global crisis is minimal.

Official Spokesperson: This is the last question, from India.

Question (Mr. Ajay Kaul, India): Actually I had to ask the same question as to what would be your message to the G-8.

Prime Minister of India: I have already answered that.

Question (Mr. Ajay Kaul, India): Yes, that is answered. Thank you.

Official Spokesperson: Thank you. The Press Interaction now draws to a close.

151. Declaration of the Second BIMSTEC Summit.**New Delhi, November 13, 2008.**

We, the Chief Adviser of the People's Republic of Bangladesh, the Prime Minister of the Kingdom of Bhutan, the Prime Minister of the Republic of India, the Prime Minister of the Union of Myanmar, the Prime Minister of the Republic of Nepal, the President of the Democratic Socialist Republic of Sri Lanka and the Prime Minister of the Kingdom of Thailand met in New Delhi, India on November 13, 2008 for the Second BIMSTEC Summit Meeting;

Recognising that with our geographical contiguity, abundant natural and human resources as well as rich historical and cultural heritage, BIMSTEC Member States have great potential for economic and social development which provides a sound basis for mutually beneficial cooperation,

Acknowledging that our economies and societies have become increasingly inter-linked and inter-dependent,

Realizing that globalization has brought about increased opportunity for economic and social development, and that increasing complexity of economic, social and environmental challenges facing the world highlights the need for concerted regional efforts to respond to these challenges,

Noting the progress made in promoting and strengthening active collaboration and mutual assistance in the economic, social, technical and scientific fields for attaining the purposes and objectives of BIMSTEC,

Recognizing that the recent extraordinary volatility in fuel and food prices not only puts our resources and growth prospects under pressure, but also hits hardest the poorest sections of our population calling for timely and effective responses,

Recognizing the adverse impact of climate change on the lives and livelihoods of our populations and the serious threat it poses to our region,

Convinced that through our close cooperation we can maximize the potential of our capabilities and resource endowments for economic and social development of our states and peoples,

Recognizing the threat that terrorism poses to peace, stability and economic progress in the region, emphasise the need for close cooperation in combating all forms of terrorism and transnational crimes,

Reiterating our commitment to BIMSTEC as a regional cooperation grouping,

Do hereby:-

Underscore our resolve to abide by the founding objectives and principles of BIMSTEC.

Take note with satisfaction of the progress of our cooperation in the energy sector and in the establishment of the BIMSTEC Energy Centre in India.

Take note with satisfaction of the progress and substantive outcome of our cooperation in the environment and disaster management sector and in the establishment of the BIMSTEC Weather and Climate Centre in India.

Take note with satisfaction of the progress made in the establishment of the BIMSTEC Cultural Industries Commission and the BIMSTEC Cultural Industries Observatory in Bhutan.

Take note with satisfaction of the finalization of the BIMSTEC Convention on Combating International Terrorism, Transnational Organized Crime and Illicit Drug Trafficking.

Take note with satisfaction of the progress made on the negotiations of the Agreement on Trade in Goods with agreed General Rules of Origin and Product Specific Rules under the BIMSTEC Free Trade Area.

Direct the BIMSTEC Trade Negotiating Committee to conclude the negotiations on Trade in Goods as soon as possible, and to continue its efforts for Agreements on Services and Investments.

Agree that improved transportation and communication linkages and greater connectivity between our Member States is an important element for the BIMSTEC process that will lead to direct benefits to our peoples through increased trade and investment, tourism, and people-to-people contacts. In this regard, we acknowledge and note the BIMSTEC

Transport Infrastructure and Logistics Study (BTILS) conducted by the ADB in association with the BIMSTEC Member States as an important first step in identifying the bottlenecks and suggesting ways to overcome them.

Agree to harness the region's natural, cultural and historical endowments in order to enhance intra-BIMSTEC tourism as well as tourism from other countries.

Agree to continue our cooperation in the area of energy and decide to hold the second BIMSTEC Energy Ministers' Conference in Thailand in 2009.

Agree to cooperate in expanding the technology base of Member States through collaborations and partnerships targeted towards micro, small and medium scale enterprises and decide to establish a BIMSTEC Technology Transfer/Exchange Facility in Sri Lanka.

Agree to continue cooperation for the sustainable use of marine resources through effective conservation and management of resources in the Bay of Bengal and decide to include inland fisheries in the scope of cooperation in this area.

Agree to continue and strengthen our cooperation on poverty alleviation in the context of ensuring food security for the vulnerable people in the region and decide to hold the second BIMSTEC Ministerial Conference on Poverty Alleviation in Nepal in 2009 and to establish a BIMSTEC Poverty Alleviation Centre in Bangladesh.

Agree to expand cooperation in culture to include cultural values, diversity and heritage and decide to support the establishment of the BIMSTEC Cultural Industries Commission and BIMSTEC Cultural Industries Observatory in Bhutan.

Agree to continue cooperation in the field of agriculture and decide to initiate short and long term joint research programmes to increase productivity and yields in our region.

Agree to continue our collective efforts to combat public health threats from emerging and re-emerging infectious diseases as well as to cooperate in the area of traditional medicine by setting up a BIMSTEC Network of National Centres of Coordination in Traditional Medicine.

Agree to augment our efforts to further promote people-to-people contacts among our States and decide that India will take the lead to establish a BIMSTEC Network of Policy Think Tanks.

Agree to share experience and enhance collaborative efforts to jointly face the current global financial crisis, while taking into account the needs of the vulnerable sections of the society.

Agree to intensify our efforts to strengthen cooperation in all areas of activities within the framework of BIMSTEC so as to promote regional cooperation and cohesion.

Agree to establish an institutional structure to serve as a focal point for coordination and to follow up on decisions taken by BIMSTEC Summits, Ministerial Conferences and other official meetings, and decide to establish a Permanent Secretariat for BIMSTEC.

We, the leaders from Bangladesh, Bhutan, Myanmar, Nepal, Sri Lanka and Thailand, express our appreciation to the Government of India for its hospitality and for the arrangements made for the Summit.

INDIA-RUSSIA-CHINA TRILATERAL CONFERENCE

152. Briefing by Official Spokesperson on External Affairs Minister Pranab Mukherjee's visit to Yekaterinburg (Russia) to attend the meeting of Foreign Ministers of India, Russia and China.

New Delhi, May 12, 2008.

Official Spokesperson (Shri Navtej Sarna): Good afternoon....., the (External Affairs Minister) will be visiting Yekaterinburg in Russia from 14th to 16th of this month for a trilateral meeting of India, Russia and China at the Foreign Ministers' level. He will also participate in a meeting of the Foreign Ministers of Brazil, Russia, India and China on the 16th of May.

To give you some background, the trilateral Foreign Ministers meeting in Yekaterinburg will be the fourth stand-alone trilateral minister-level meeting. Earlier meetings have been held in Harbin, China in October 2007; in New Delhi in February 2007; and Vladivostok in June 2005. Beside these stand-alone meetings the Foreign Ministers have also met on the sidelines of several other international meetings in September 2002, September 2003, October 2004 and September 2005.

As part of this trilateral process, India has also hosted a trilateral seminar¹ on the evolution of geopolitical strategic trends in New Delhi in March 2008, as well as a trilateral business conference in New Delhi in December 2007.

¹ The Seminar to discuss evolution of geo-political strategic trends was attended by senior officials and academics from Russia, India and China and was hosted by the Indian Council of World Affairs and the Institute of Chinese Studies in Delhi. It discussed climate change, the current international situation and prospects for trilateral economic cooperation. Inaugurating the seminar on March 27, Secretary (East), Ministry of External Affairs N. Ravi reminded his audience that the meeting was the outcome of the decision taken by the Foreign Ministers of Russia, India and China in 2007. Their task was to examine ways of taking the trilateral process forward in different areas. He said that between them, the 'RIC countries' account for 20 per cent of global land mass and 40 per cent of the world's population. He expressed his confidence that the trilateral process would help tap the energy already existing in bilateral relations to the advantage of the three. The three countries had to play a leading role in pushing the principle of common but differentiated responsibilities in tackling climate change, and for multi-polarity and multilateralism in international affairs. The Director of the Institute of Chinese Studies Patricia Uberoi in her remarks said the involvement of both officials and academics from the three countries would allow the participants to think both "in and out of the box." She appreciated the fact that the three countries had brought in social issues such as education, public health, climate change and disaster management within the trilateral dialogue, apart from strategic issues.

The BRIC (Brazil, Russia, India and China) Foreign Ministers meeting at Yekaterinburg will be the first stand-alone meeting of the Foreign Ministers of the BRIC countries.

To give you some idea of the agenda, the trilateral meetings have essentially discussed political and economic issues, issues related to UN reforms, terrorism, proliferation of WMD, situation in the region, in Central Asia, Iran, Iraq, DPRK, Middle-East and so on, as well as trilateral economic cooperation. Particularly in the last meeting at Harbin they decided to form a consultative mechanism at the level of Head of Department in the Foreign Offices and hold expert level consultations in agriculture, health and disaster management.

The BRIC meeting, which is the first one, also has a wide agenda which covers strategic issues of international politics and security, a review of the international situation, proliferation and disarmament, counter-terrorism, fight against organized crime and drug-trafficking as well as economic issues and issues of global interest such as climate change, international development assistance², and so on.

That is it. That is the full three days of meetings in Yekaterinburg after Abu Dhabi and Dubai. We will keep you posted when we get reports from there.

Question: Are there going to any bilateral interactions?

Official Spokesperson: We will let you know if there is any occasion for bilaterals.

Question: Any separate bilateral meetings?

Official Spokesperson: We will let you know once they happen. I know that bilateral meetings did take place in Harbin. But it again depends upon scheduling and various other things.

2 The BRIC concept which was first articulated by the corporate sector and the four countries found it practical to adopt it as part of foreign diplomacy by enlarging the trilateral concept. The Goldman Sachs report "Dreaming with BRICs: The path to 2050," focusing exclusively on the economic potential of the four countries, underlined the fact that they complement each other. It pointed out that while China and India are strong in manufacturing, Brazil and Russia were rich in raw materials. The Sachs report predicted that by 2050, the economies of the four countries could disturb the pecking order of rich countries. Collectively, their wealth will outstrip that of the original G-6 countries (the U.S., France, Germany, the U.K., Japan and Italy).

Question: Since Iran, Iraq and North Korea may be discussed....

Official Spokesperson: These were the subjects discussed at previous trilateral meetings.

Question: What has been in general the reaction of the United States and Western European countries to BRIC?

Official Spokesperson: That you must ask those countries. I cannot speak on behalf of other countries.

Thank you.

153. Joint Communiqué on the outcome of the 8th Meeting of the Foreign Ministers of the Russian Federation, the People's Republic of China and the Republic of India.

Yekaterinburg, (Russia), May 15, 2008.

1. The Eighth Meeting of the Foreign Ministers of the Russian Federation, the People's Republic of China and the Republic of India was held on May 14-15, 2008 in Yekaterinburg, Russia.
2. The Ministers noted with satisfaction the increasing interaction between Russia, China and India, fast growing, multi ethnic countries with rich history and culture. It was underlined that trilateral interaction was contributing to the shaping of a multi polar, stable and harmonious world, to democratization of international relations and a more just and rational international order.
3. The Ministers positively assessed the efforts made by the three Parties to build up the potential of cooperation in accordance with the outcome of the Harbin Meeting on October 24, 2007.
4. The first round of consultations between the Heads of Departments of the Russian, Chinese and Indian Foreign Ministries held in February 2008 in Moscow was highly appreciated. It signals the beginning of regular exchange of views at this level on

implementation of understandings reached during the Russia-China-India Foreign Ministers' meetings and preparation for their future meetings. Russia - China - India forum on agricultural cooperation on April 28, 2008 in Beijing is an important step towards promotion of trilateral interaction in this sphere. Substantial work to establish cooperation between experts of the three countries on health & medicine and disaster mitigation & relief has also been started. It was agreed that the first trilateral meetings on these subjects would be held in 2008.

5. The Ministers highlighted the importance of enhancing contacts between the business communities of Russia, China and India and in this regard commended the outcome of the first trilateral business forum held in New Delhi in December 2007. A meeting of the Chambers of Commerce and Industry of Russia and India and the China Council for the Promotion of International Trade will be held in Moscow in the autumn of 2008. The second trilateral business forum is scheduled to take place in China in 2009.
6. The Ministers appreciated the holding of the trilateral Seminar on Evolution of Geo-Political Strategic Trends in New Delhi in March this year with the participation of officials and experts from Russia, China and India which further encouraged the multifaceted dialogue between the official circles and academic communities of the three countries.
7. The Ministers reiterated their intention to actively deepen dialogue and interaction between the three countries. Special attention was paid to the wide-ranging possibilities of cooperation in the humanitarian field. In this context, Russia, China and India stated that they attach great importance to international cooperation in promoting and protecting human rights and basic freedoms. Bearing in mind that drawing lines on the ground of ideologies and values or on geographical criteria is not conducive to peaceful and harmonious coexistence, the Ministers believe that such cooperation should take due account of specific characteristics of cultural and historical development of each of the countries and respect for traditional values of civilizations. The Ministers emphasized that international humanitarian assistance should focus on disaster relief, reconstruction etc and refrain from interference in internal affairs.

8. The Ministers discussed in detail the global situation and the major international and regional problems and reaffirmed the commonality in the approaches of the three countries.
9. The Ministers reiterated that today's world order should be based on the rule of international law and the strengthening of multilateralism with the United Nations playing the central role. They reaffirmed the need for a comprehensive reform of the UN with a view to make it more efficient so that it can deal with the current global challenges more effectively. The Ministers of Russia and China reiterated that their countries attach importance to the status of India in international affairs, and understand and support India's aspirations to play a greater role in the United Nations.
10. The Ministers confirmed their countries' commitments made under the UN Framework Convention on Climate Change and the Kyoto Protocol and underlined the need to develop greater interaction in international cooperation to combat global climate change. They declared the intention of the three nations to take all necessary efforts to implement the Bali Plan of Action.
11. The Ministers agreed that elaboration of a common position in the field of counteracting new challenges and threats within the framework of the United Nations is of particular importance. They expressed their confidence that their anti-terrorism cooperation should be actively supported both within the framework of the UN system and regional organizations. They also called upon all member states to comply with relevant international terrorism conventions and related protocols, and the Security Council resolutions on counter-terrorism. While supporting the implementation of the UN Global Counter-Terrorism Strategy the Ministers emphasized that all member states should make concerted efforts towards expeditious finalization of a Comprehensive Convention on International Terrorism at the UN. They reaffirmed their commitment to further strengthening cooperation among their countries to combat terrorism.
12. Reviewing the situation in the Asia-Pacific Region (APR), the Ministers stated that it is defined by the aspiration of the region towards peace and sustainable economic development. Guided by the principles of multilateralism and equal security they stressed the necessity of a regional security system based on mutual confidence,

mutual taking into account the interests of the other sides, equality and cooperation. They expressed themselves in favor of expanding the economic integration in the APR on a mutually beneficial and non-discriminatory basis in accordance with the principles of open regionalism.

13. The Ministers reaffirmed their countries' common desire to expand multifaceted cooperation with the Central Asian countries, including in the fields of combating terrorism, separatism, extremism, illegal drug trafficking and trans-boundary crime. The Ministers spoke in favor of identifying various forms of trilateral interaction in order to promote further development of the region. The Ministers of Russia and China welcome India's aspirations for playing an enhanced role as an Observer State within the SCO framework.
14. The Ministers praised the achievements of Afghanistan on the way for its reconstruction, but at the same time expressed concern at the continuing deterioration of the security situation there due to continued terrorist attacks and resurgence of the Taliban and Al Qaeda. They stressed the importance of rendering assistance to the Afghan government in fulfilling its tasks in the field of security, in improving the functioning of governmental institutions and social and economic development of the country. They highlighted the need for strict observance of the sanctions regime against Afghan extremist leaders and other persons and entities listed by UN Security Council Committee 1267, tough rebuff to the forces of terrorism and extremism in Afghan territory as also for further increasing the efforts to eradicate the drug threat coming from Afghanistan. The Sides noted the importance of international and regional cooperation in creating a comprehensive system of anti-drug security belts alongside the borders of Afghanistan with the UN playing a central coordinating role and cooperation of the neighboring countries.
15. The Ministers noted the need to continue the efforts to achieve at the earliest a political and diplomatic settlement of the situation around the Iranian nuclear program through negotiations. The purpose of these negotiations is to find a long-term comprehensive solution that provides for the trust of the international community to be restored in the exclusively peaceful nature of the program to ensure that Iran can exercise its right to the peaceful use of atomic energy and to open up the path to wider international cooperation with Iran.

16. The Ministers call upon all interested parties to continue active efforts to promote the six-party talks on resolving the Korean Peninsula nuclear problem towards peaceful and full denuclearization of the Peninsula in accordance with all relevant agreements achieved earlier in Beijing.
17. The Ministers noted the importance of settling the issue of the status of Kosovo in accordance with norms of international law with the UN playing the leading role and on the basis of an agreement between the parties. The unilateral declaration of independence of Kosovo is contrary to the UN Security Council Resolution 1244, which should remain the legal basis for the settlement of Kosovo issue till new decisions by the UN. The Ministers call upon Belgrade and Pristina to act within the framework of international law in order to search for an appropriate solution to the problem through negotiations.
18. The Russian and Indian Ministers reaffirmed their countries' support to the Beijing Olympic Games and efforts to ensure their successful holding.
19. The Ministers expressed satisfaction with the outcome of the meeting and decided to hold the next trilateral meeting in India.

CHOGM

154. Press Release issued by the Ministry of External Affairs On Finance Minister's participation in Commonwealth Foreign Minister's Meeting and a Special Meeting of the Commonwealth Heads of Government (CHOGM) during the 63rd UNGA in New York.

New York, September 24, 2008.

Shri P. Chidambaram, Finance Minister represented India at the Commonwealth Foreign Minister' Meeting and a Special Meeting of the Commonwealth Heads of Government (CHOGM) held in New York on 24 September, 2008 during the 63rd Session of the UN General Assembly in New York.

These meeting were chaired by Foreign Minister and President, respectively of Uganda -current Chair of the Commonwealth. Commonwealth Secretary General Mr. Kamallesh Sharma gave an overview of major activities of the Commonwealth Secretariat. The deliberations at these meeting covered a wide range of issues of interest to the Commonwealth Member States, including the status of implementation of salient mandates of the last CHOGM held in Kampala (Uganda) in November 2007, Millennium Development Goals (MDGs), climate change, terrorism, international trade, global food crisis and reform of international institutions. In his highly acclaimed interventions, Finance Minister presented India's perspective on major issues such as terrorism, climate change, Doha Development Round of trade negotiations and the global food crisis. He reaffirmed India's commitment to further strengthening its engagement and cooperation within the Commonwealth in areas of common interest.

CICA

155. Opening Statement by Minister of State Anand Sharma at the 3rd CICA¹ Ministerial Meeting.

Almaty, August 25, 2008.

Your Excellency Marat Tazhin, Excellencies, Ladies and Gentlemen,

At the outset, I would like to thank our hosts Kazakhstan for their warm hospitality and excellent arrangements. I would also like to (join my colleagues in extending) a warm welcome to the Ministers of the Kingdom of Jordan, Qatar and the United Arab Emirates. India has age old civilizational and historical links with these countries, which in the contemporary context are manifested in strong mutually cooperative and beneficial relations.

Mr. Chairman, India is proud to be associated with the CICA process since its inception. It is a matter of satisfaction to us that CICA has emerged as an important forum for dialogue in Asia, offering member states an opportunity to exchange views on a broad range of issues impacting on security and stability in our region. By bringing together countries from various parts of Asia, CICA has successfully laid down a framework that

¹ The meeting was opened by President Nazarbayev and was attended by 18 country delegations. The meeting inducted Jordan and UAE as CICA member states and Qatar was given an Observer Status. The heads of delegation adopted a Ministerial declaration which outlines the blueprint of common understanding reached among participating States on peace, security and stability in the region. The meeting adopted the Protocol amending the Statute of the CICA Secretariat and in principle adopted the Convention of Legal Capacity and the Immunities and Privileges of Personnel of CICA. On the margins of the ministerial meeting, Sh Sharma held a bilateral meeting with the Kazakh Foreign minister Mr Marat Tazhin, covering a wide range of issues of shared interest. Mr Tazhin articulated his country's interest in cooperation in the fields of high technology, textiles and space. Shri Sharma also emphasized the importance of cooperation in the energy sector. It is pertinent to mention that negotiations between ONGC Videsh Limited and Kazmunaigaz, the Kazakh national oil company for joint exploration are underway. It may be recalled that the idea of Conference on Confidence Building Measures in Asia (CICA) was originally floated by Kazakhstan President Nursultan Nazarbayev at the annual U.N. General Assembly in 1992. A decade later in 2002 a summit meeting with the heads of government of 11 countries, including India participating, was held in Astana. Two years later, the grouping laid down five dimensions for realisation of confidence building measures - military, political, fight against new threats and challenges, economic, environmental and humanitarian. After another two years the CICA Secretariat took shape with diplomats seconded from India, Russia, Turkey, Kazakhstan and Pakistan. The 16 nations signed the Almaty Act, establishing the CICA and pledging to work "towards

will take us closer to realizing our shared vision of peace and prosperity in our region.

CICA member states are no strangers to each other. As heirs to a rich heritage, we share common strands in our history and culture which, to this day, plays the role of a binding force. It is, therefore, a matter of great personal satisfaction to me to be here today in Almaty, a city closely associated with the legend of the Silk Route, which was a meeting place of different cultures through many centuries.

Mr. Chairman, the two decades since the end of the Cold War marks a period of significant change, of new opportunities and new challenges. There is no doubt that fundamental shifts are underway in the global distribution of economic and political power. The complexities of the present day demand an orderly transformation and recasting of the world order so that it reflects the realities and the urges of our age, in which globalization is moving ahead. The discourse on globalization, the setting of the international agenda has to be a cooperative global effort in which Asia has to play a prominent part to ensure that the world order is inclusive, just and equitable.

Our meeting today offers us an opportunity to take stock of where we are and the road ahead. The emergence of complex, transnational threats and security challenges, whose influence and potential impact is global, not only regional or local, is necessitating the crafting of security responses that go beyond traditional solutions. Some of these issues were previously viewed as law and order problems, viz. drug smuggling and illegal

promoting peace, security and stability in Asia." The Act was signed in June 2002 after the first CICA Summit by Chairman of the Administration of Afghanistan Hamid Karzai, President of China Jiang Zemin, Prime Minister of India Atal Behari Vajpayee, President of Kazakhstan Nursultan Nazarbayev, President of Kyrgyzstan Askar Akayev, President of Mongolia Natsagiin Bagabandi, President of Pakistan Pervez Musharraf, President of Russia Vladimir Putin, President of Turkey Ahmet Necdet Sezer, and President of Tajikistan Imomali Rakhmonov. Signatories from other CICA members included the prime ministers of Azerbaijan and Uzbekistan, a deputy prime minister of Israel, as well as special high-level envoys from Egypt, Iran, and the Palestinian National Authority. Ten more nations, including the United States, have observer status in the forum, as do a number of international organizations, such as the UN, the OSCE and the Arab League. In 2007, the Senior Official Committee of CICA met in Bangkok - the first time outside Kazakhstan - to adopt the Cooperative Approach for the realisation of the implementation of CBMs. Now, the process has begun with members having volunteered to act as coordinating countries for certain CBMs. India along with Korea and Azerbaijan, offered to act as coordinator for the implementation of CBMs in energy security cooperation and development of secure and effective systems of transportation. It currently has on its

immigration; or, required intervention by frontline agencies dealing with pandemics and sea piracy. There is also today a better understanding of the impact of climate change on the earth's biodiversity and the cross-sectoral stresses it is causing, particularly in the less developed countries where adaptive capacities remain limited. Taken together with the persistence of terrorism and onward proliferation of nuclear weapons related technologies, the security challenges we face reinforces the need for comprehensive approaches and obliges cooperation and collaboration among states. We believe that CICA has a role to play in devising collaborative strategies that help deepen cooperation among member states.

Mr. Chairman, of all the threats we in Asia face today, none is as dangerous as that of terrorism. Many Member countries in the CICA process are victims of terrorism. Thus there is common need to combat extremism and terrorism. In our view, no goal or grievance can justify terrorism. CICA had recognized the need to eliminate this scourge early and in 2002 adopted a "Declaration on Eliminating Terrorism and Promoting Dialogue Among Civilizations". We hope the forum will be able to take firm steps in this direction.

India will continue to actively participate in the CICA. We have contributed in the drafting of the basic documents of CICA, an exercise which for us showcases the uniqueness of the CICA process, whose ultimate goal is to create a pan Asian dialogue on cooperation mechanism on security issues. We believe that we need to concentrate on simple and uncomplicated issues for cooperation and focus on CBMs that are practical and achievable and at a pace comfortable to all. The Catalogue of Confidence Building Measures elaborates a broad framework of CBMs in the economic, social and humanitarian dimension. We appreciate the progress made on these issues and the experts level meetings hosted by meetings in Turkey and Iran on New Threats and Challenges and cooperation on combating illicit drugs. We have also noted the circulation of draft concept papers by

rolls Israel, Iran, Pakistan, Korea, India, Jordan, Tajikistan and Turkey among others. With the gaining of confidence about the CICA approach, it has been decided that majority of events would be held outside Kazakhstan, pointed out Mr. Yermekbayev. The venues too are diverse - Ankara, Moscow, Seoul and New Delhi. CICA is defined by two major approaches. One, it is heterogeneous character. Geographical distances or difference in political approaches are not inhibiting factors. The membership itself gives an indication. The second is its resolve to progress gradually, keeping in mind the diverse profile of CICA and to focus more on realisation of CBMs in non-traditional security challenges to generate sufficient goodwill among the members. While CICA is seeking cooperation with other regional organisations, all its members have agreed its primary task would be to supplement them.

Azerbaijan and Republic of Korea in the areas of Secure and Effective Systems of Transportation Corridors and on Energy Security. We look forward to contributing in realising these concepts. We will also carefully study Russia and Tajikistan's draft concept papers on Development of Small and Medium Enterprises and Tourism respectively.

Mr. Chairman, India believes that CICA can help contribute to the development of a cooperative and pluralistic security order in Asia, based on mutual understanding, trust and sovereign equality. We need to be mindful of the diversity and the heterogeneity that pervades through our social, economic, political and cultural systems. It is this distinctive panorama which requires that we pay heed to our unique Asian framework. We believe that replication of models, which have perhaps been successful elsewhere, may not necessarily be suitable for us. India has, therefore, consistently emphasized that CICA has to evolve its own approach, rooted in the realities of Asia. In CICA, we have recognized this diversity and the consequent need, therefore, to move ahead gradually, building upon the basis of consensus and voluntary participation. We have pledged to work together to build a cooperative architecture by enlarging the areas of common advantage and convergence. I would like to reiterate that our focus should be on what unites us and set aside areas of divergence.

Mr. Chairman, it is only by evolving certain reliable ground rules, that CICA can more effectively promote peace and security in Asia and help reconcile the diverse concerns and interests of its member states. Deeper and broader Asian cooperation, with an emphasis on dialogue, holds the key to unleashing the full potential of Asia for peace and development both in our own continent and around the world.

Before I end, I am pleased to announce that New Delhi will host the next round of CICA SWG/SOC (Special Working Group/Senior Officials Committee) meetings on February 18-20, 2009. We would look forward to welcome delegates from all CICA Member States for these meetings.

Thank You.

EUROPEAN UNION

156. Press Release of the Ministry of External Affairs on the 19th India-EU Troika Ministerial Meeting.

New Delhi, May 29, 2008.

The 19th India-EU Troika Ministerial Meeting is scheduled to take place on May 30 2008 in New Delhi. Sh. Pranab Mukherjee, Hon'ble Minister of External Affairs, will lead the Indian delegation. The EU side will be represented by Mr. Dimitrij Rupel, Minister for Foreign Affairs, Slovenia, in his capacity as President of the European Council. Ms. Rama Yade, MoS, Ministry of Foreign Affairs, France, is representing the incoming French Presidency. The last Troika meeting took place in Berlin on May 31 2007.

The EU 27 is an important trade, technology and investment partner for India. The EU is India's largest trading partner (1/5th of India's total external Trade). The Bilateral Trade has crossed 55.6 billion euro in 2007 (Indian exports of euros 26.2 billion; Indian imports of euros 29.4 billion). The EU is also home to a large Indian diaspora.

India and the EU share a 'Strategic Partnership' since 2004. The relations have diversified from what used to be a purely trade and economic driven relationship to one covering a wider cross-section of interaction. The annual Summits and Troika ministerial meetings are the highlights of the institutional structure that has facilitated regular high level contacts between the two sides. The Troika Ministerial meetings provide an opportunity for general exchange of views on bilateral, regional and global issues.

**157. Opening Remarks of Prime Minister Dr. Manmohan Singh
at the Joint press meet with President Sarkozy.**

Marseille, September 29, 2008.

At the outset, I would like to thank President Sarkozy for the most gracious hospitality that has been extended to me and to my delegation in this beautiful city of Marseilles.

I have had very useful and constructive discussions with President Sarkozy and EC President Barroso.

Our partnership based on shared values and commitment to democracy, human rights, fundamental freedoms and pluralism is an important pillar of the emerging international order.

We shared assessments of our respective regions and exchanged ideas on major global issues. This included the current international financial crisis, need for reform of international institutions, including of the United Nations, energy and food security, climate change and terrorism.

We have agreed to achieve an annual bilateral trade turnover of 100 billion Euro within the next five years and to work towards the conclusion of the India-EU Broad based Trade and Investment Agreement by end-2008.

We reviewed the Joint Action Plan adopted in 2006 and agreed to add several new areas of cooperation. These include vocational training, post harvest technologies, exploitation of solar energy in India and civil nuclear research and development including in fusion energy. We discussed various issues related to counter terrorism, including cooperation between Europol and counterpart organisations in India.

We have also launched Joint Working Programme on Energy, Clean Development and Climate Change. This provides for collaboration in clean coal technologies, energy efficiency, renewable energy, climate change adaptation and mitigation and financing and transfer of climate friendly technologies. The Horizontal Civil Aviation Agreement between India and the EU was signed yesterday. We have also decided to work towards the finalisation of Memorandums of Understanding in the field of education and culture.

I am extremely satisfied with my discussions today. The holding of annual Summits between India and the EU reflects the importance both sides place on this relationship. It is our belief that the India-EU strategic partnership contributes to global peace, prosperity and stability. I am confident that our relations will continue to grow and diversify on the basis of the many synergies and complementarities that exist between us.

158. Joint Press Communiqué issued at the end of the India -European Union Summit.

Marseille, September 29, 2008.

The ninth European Union - India Summit was held in Marseille on 29 September 2008. The EU was represented by President Nicolas Sarkozy, in his capacity as President of the European Council; by Mr. José Manuel Barroso, President of the European Commission; by Dr Javier Solana, High Representative for the EU's Common Foreign and Security Policy; by Mr. Bernard Kouchner, French Foreign Minister; by Mme Anne Marie Idrac, French Secretary of State for external trade and by Mr. Peter Mandelson, European Commissioner for Trade. The Republic of India was represented by Prime Minister Dr. Manmohan Singh; Shri Kamal Nath, Minister for Commerce and Industry; and Shri M. K. Narayanan, National Security Adviser. The Leaders discussed regional situations, global issues and the strengthening of EU-India relations.

I. Regional and international issues

The EU and India, as the two largest democracies in the world and global actors in a multipolar world, reiterated their commitment to their strategic partnership. The Partnership is firmly based on shared values of democracy and human rights, fundamental freedoms (including religious), pluralism, rule of law and multilateralism.

The EU and India are committed to promoting international peace and security. They reaffirmed their strong and continued commitment to the Government of Afghanistan in its efforts to build a democratic and pluralistic society.

They agreed that strengthening Afghan security and military forces would help in the enforcement of the rule of law. They further agreed to assist the Afghan authorities in ensuring free and fair elections in the period ahead. They recalled their commitments taken at the Paris International Conference in Support of Afghanistan. They expressed deep concern at the continued deterioration of security conditions in areas bordering Afghanistan, and reiterated that the situation required sustained action. They noted the new commitments of the Government of Pakistan to address regional and international concerns.

They expressed their serious concern over the Iranian nuclear issue and called on Iran to take steps to re-establish confidence in the nature of its nuclear programme, as required by the IAEA Board of Governors. They expressed their support for the current diplomatic efforts and steps in order to find a satisfactory solution to the nuclear issue.

They discussed the situation in Burma/Myanmar, agreed on the need to strengthen efforts towards national reconciliation and reaffirmed the need for an inclusive dialogue, including with Daw Aung San Suu Kyi and the Myanmar ethnic groups, to progress towards democracy.

The Leaders condemned terrorism in all its forms and manifestations, committed by whomever, wherever and for whatever purpose. The EU and India agreed to work actively towards a swift finalisation of a Comprehensive Convention on International Terrorism at the UN. At the bilateral level, the two sides expressed commitment to continuing their cooperation on counter-terrorism and early formalisation of cooperation between Europol and Indian agencies.

II. Global issues

Food security

The Leaders exchanged views on how best to deal with rising commodity prices, which pose a serious challenge to stable growth and further increases in global inequalities. They recalled that, in the short-term, actions should be taken to address and mitigate the effects of the food price shocks on the most vulnerable groups of population. They agreed that the international community needs a fully coordinated response and a comprehensive strategy to tackle this issue in an integrated manner, from short to medium and long term. They also declared that a high level of priority should be given to rural development policies, in particular with a

view to enhancing agricultural productivity. Finally they called for a global partnership on food and agriculture.

Climate change and energy

The Leaders stressed that climate change is one of the great challenges of our time and decided that clean and sustainable development should be a joint priority area of EU-India cooperation. They called for tangible action in this field, involving all stakeholders. They also reiterated their determination to step up the pace of negotiations in order to reach, by the end of 2009, an ambitious and comprehensive agreed outcome, in accordance with the principle of common but differentiated responsibilities and respective capabilities as set out in the UN Framework Convention on Climate Change. Recognising each other's efforts to tackle climate change, as demonstrated by India's National Action Plan on Climate Change and the EU's emissions reduction targets of at least 20% by 2020 (and 30% in the event of a satisfactory global agreement), the Leaders agreed to work towards a long term cooperative action including a long term global goal. The EU and India also reaffirmed their commitment to promote energy security and energy efficiency as a key to stable and sustainable development.

Global economy

EU and India discussed the pressing need to address the impact of current problems in the international financial sector and to adjust global economic imbalances through concerted action from leaders of the world economy. The Leaders took note of the current state of play of the Doha Development Agenda negotiations and reaffirmed their willingness to conclude a comprehensive and balanced trade agreement which would bring substantial gains to the world economy and in particular to developing countries.

III. EU-India bilateral relations

Developments in Europe and India

The Leaders discussed developments in the EU and in India. Regarding Europe, the EU focused on the Lisbon Treaty and the recent developments in EU's migration policy, in particular the proposed Pact on Migration and Asylum, the initiatives taken to facilitate the employment in the EU of skilled migrants. India shared its assessment of India's economy and the

opportunities it offers; the challenges faced in areas such as infrastructure, energy, agriculture and human resource development in its endeavour for inclusive growth.

Developments in EU-India cooperation

The EU and India agreed to further develop their political exchanges and cooperation.

The EU and India recognised the importance of the early conclusion of the broad based trade and investment agreement, to fulfil the expectations of businesses on both sides and to further strengthen the bilateral economic relationship. Towards this end, the EU and India endeavour to achieve a balanced and ambitious outcome. While welcoming the signature of a horizontal civil aviation agreement, they encouraged the conclusion of a maritime transport agreement that is mutually beneficial. They also noted that joint cooperation in the framework of the International Thermonuclear Experimental Reactor (ITER) Agreement remains a priority that will be further enhanced through the conclusion of a bilateral agreement between Euratom and India in the field of fusion energy research, for which negotiations are being finalised.

The EU and India announced their intention to promote dialogue and cooperation in education and culture. In the field of education, areas identified for this purpose include vocational training, technical education, recognition of qualifications, the modernisation of higher education with emphasis on quality, transparency and partnership, and the promotion of languages.

In the field of culture, particular focus will be placed on the implementation of the 2005 UNESCO Convention on the Protection and Promotion of the Diversity of Cultural Expressions, the promotion of intercultural dialogue and multilingualism, including through mutual TV broadcasts. Joint declarations will be signed between the Commission and India to implement the above objectives.

The EU and India welcomed efforts to increase people to people exchanges.

The EU and India approved the following:

- a revised Joint Action Plan extending the strategic partnership of 2005 to new areas;

- a joint work programme on energy, clean development and climate change;
- horizontal civil aviation agreement;
- the launch of a European Business and Technology Center in India, which shall support business-to-business and research co-operation between the EU and India.

159. Joint Action Plan (JAP) for global challenges issued at the end of India - European Union Consultations.

Marseille, September 29, 2008.

The EU-India Joint Action Plan (JAP) has now been working for three years. It has provided an agreed measure of progress, a mechanism for coordination and a spur to stronger cooperation.

The period since its adoption has been marked by worldwide growth of interdependence. Climate change, terrorism and instability remain as much of a threat as in 2005 and new challenges have arisen. The unprecedented pressure on energy and natural resources, including foodstuffs, poses new difficulties and calls for immediate action, as well as long-term structural measures.

In light of these challenges, and on the basis of the shared values expressed in the 2005 JAP, the EU and India will build on the achievements of the past three years and ensure further progress in the coming period.

I. REVIEW

1. Political dialogue and cooperation have been strengthened

Better political cooperation between the EU and India has been a notable achievement. Existing channels for dialogue have been consolidated since 2005, with a regular calendar of Summits, ministerial meetings, and expert level meetings on subjects such as human rights and consular issues. In addition, new channels have been established, such as the annual security dialogue. New formats for dialogue have also been created through Indian membership of ASEM and EU observer status at SAARC. The EU and

India have also pursued issues of common concern within the framework of the United Nations including peacekeeping & peacebuilding. In so far as cooperation between Europol and the CBI is concerned, it needs yet to be activated. The European and Indian Parliaments now have special delegations for promoting bilateral parliamentary relations.

2. Trade, investment and economic policy dialogue have expanded

In the last five years, trade has more than doubled, and bilateral investment has increased ten-fold. The parties launched negotiations for a bilateral trade and investment agreement in 2007. In specific policy dialogues on trade and investment, more progress has to be made.

New dialogues have been created on macroeconomic policy and on financial services, which underline the importance of financial and monetary stability, and of inclusive growth, in particular in the context of price rises associated with food, basic metals and energy.

3. Scientific and technical co-operation has developed

An EU-India Energy Panel has been established. The International Thermonuclear Experimental Reactor (ITER) Agreement, to which both India and the EU are parties, has come into force. Science and technology activities have intensified and exchanges have been elevated to ministerial level, with increased co-operation across the board, shared partnerships with co-investment in research and technology development, and the renewal of the EU-India Science and Technology Agreement.

Co-operation on information and communications technologies continues to be strengthened, as indicated by the connection of the European high speed research network GEANT2 with its Indian counterpart ERNET, allowing European and Indian researchers to develop joint projects. The area of transport will benefit from the signature of a horizontal aviation agreement.

Co-operation and exchanges on pharmaceuticals and biotechnology have provided a better understanding of the complex issues in the sector. The two sides have made progress towards validating Ayurveda products as para-medicines or food supplements. In the field of employment and social affairs, there have been substantial activities under the sector policy dialogue and associated work programme.

Clean development and climate change needs more concrete activities involving all stakeholders. The maritime agreement discussions are yet to come to fruition. In space technology, dialogue between the two sides needs to be further strengthened. In global navigation satellite systems, the EU-India agreement on Galileo has yet to be finalised.

4. Cultural and people-to-people links have deepened

Specific funding has been made available to increase the participation of Indian students in European graduate programmes. The Community Culture Programme has launched a special action for EU-India cultural co-operation for the period 2007-2009. Work continues on promoting civil society exchanges and people-to- people interaction in diverse fields. There is a need for more progress in the area of culture and in the shared ambition of establishing chairs of study in both partners' academic institutions. Further effort is needed to facilitate the movement of persons, based on a comprehensive approach to migration issues.

II. NEW ACTIVITIES

The EU and India identified the following new activities to complement the 2005 India-EU Joint Action Plan, with the objective of promoting international peace and security and working together towards achieving economic progress, prosperity and sustainable development:

1. PROMOTING PEACE AND COMPREHENSIVE SECURITY

- To strengthen their consultations in the United Nations Human Rights Council and sustain their dialogue on human rights with a view to promoting the universality of human rights.
- To organise seminars and exchange best practice on civil-military peace building issues, including on Africa.
- To reinforce co-operation in fighting proliferation and in export control.
- To intensify contacts in the fight against terrorism including through the operationalisation of co-operation between Europol and India.
- To co-operate on regional issues.
- To join efforts in the international fora in using expertise in global development policy to promote the achievement of the MDGs and aid effectiveness.

2. PROMOTING SUSTAINABLE DEVELOPMENT

- To implement a bilateral Work Programme on Energy, Clean Development and Climate Change to promote joint activities, research and policy development.
- To explore the up-scaling of financing for activities to address climate change and further explore the potential for research and technology co-operation and the options for technology transfer.
- To foster co-operation on solar energy with a view to jointly developing a flagship programme in solar energy.
- To make substantive and efficient progress for the early conclusion of an ambitious and balanced broad-based trade and investment agreement.
- To strengthen the exchange of best practices and co-operation in customs matters, covering areas such as supply chain security and trade facilitation, customs Intellectual Property Rights enforcement, environmental protection, tackling commercial fraud, modernisation of processes, of procedures and of working methods.
- To share experience, views, and non-confidential information on competition law policy and enforcement.
- To use the EU-India regulatory dialogue on financial services launched in 2006 to make progress on regulatory convergence.
- To establish a Working Group on engineering sector including automotive industry; a dialogue on sustainable industrial policy; and the strengthening of co-operation on the small and medium-sized enterprises (SME) sector.
- To develop business-to-business and research co-operation with the help of the future European Business & Technology Centre (EBTC).
- To extend the current dialogue on agriculture to address agricultural productivity, including new technologies, input use efficiency, and improved selection of seeds and crops.
- To enhance technical and regulatory co-operation in the field of civil aviation, spanning such areas as aviation safety, aviation security, environment, air traffic management, economic regulation and business issues.
- To further co-operate in the field of decent work.

- To increase exchanges in the fields of sustainable extension of social protection, social dialogue, equal opportunities and gender equality.
- To launch a joint study on decent work covering priority areas relating to global employment, social cohesion, and sustainable development.
- To conduct a dialogue on issues relevant to co-operation with third countries.

3. PROMOTING RESEARCH AND TECHNOLOGY

- To co-operate in civil nuclear research and development in a manner consistent with their international obligations.
- To enhance co-operation in the framework of the International Thermonuclear Experimental Reactor (ITER) Agreement and through the conclusion of a bilateral agreement between Euratom and India in the field of fusion energy research.
- To create links and to increase exchanges between both sides' statistical services to foster co-ordination in statistical methodology and research on social and economic data.
- To undertake collaborative research and capacity building in new fields of science and technology, which will be determined by the Steering Committee of the EC-India S&T agreement.
- To strengthen dialogue between the Indian Space Research Organisation (ISRO), the Department of Space (DOS), the European Space Agency (ESA), and the European Commission.
- To explore co-operation in the field of Pharmaceutical Education and Research.

4. PROMOTING PEOPLE-TO-PEOPLE AND CULTURAL EXCHANGES

- To strengthen dialogue between the two Parliaments.
- To continue the promotion of civil society exchanges and interaction through the reinforcement of the mandate of the EU-India Civil Society Roundtable in order to ensure greater involvement of economic and social partners, especially trade unions, farmers, consumers and business associations.
- To improve co-operation and foster greater linkages between European and Indian higher education institutions.
- To promote the development of European Union Study Centres in

India and Modern Indian Study Centres in the EU.

- To increase exchanges of students and academics, inter alia, by offering masters and doctoral-level scholarships and a wide range of opportunities for academic co-operation through the second phase of EU's Erasmus Mundus External Co-operation Window.
- To explore the possibility to train teachers in view of the setting up of a large number of national level educational institutions and central universities in the Eleventh Five-Year Plan in India.
- To disseminate tools and good practices regarding transparency, transferability and mutual recognition of qualifications.
- To promote modernization of higher education and vocational training in the EU and in India with an emphasis on quality, openness, transparency and partnerships between academic and business communities to enhance innovation and employment.
- The EU and India take note of the work carried out by the International Center for Promotion of Enterprises (ICPE) within the UN framework to promote cooperation in areas of entrepreneurship and SME development, corporate governance, trade and knowledge-based society through research and consultancy.
- To engage further in intercultural dialogue building up on cultural diversity and multilingualism.
- To enhance cultural co-operation, in particular within the context of the 2005 UNESCO Convention on the Protection and Promotion of the Diversity of Cultural Expressions.
- To promote the conservation and management of monuments and sites.
- To launch a dialogue in order to exchange information and expertise in the areas of education, training, culture and multilingualism.
- To use the EC indicative budget of • 470 million for India for the period 2007-2013 in support of the health and education programmes of the Government of India and for the implementation of the Action Plan's initiatives.

160. Joint Work Programme of European Union - India Cooperation on Energy, Clean Development and Climate Change.

Marseille, September 29, 2008.

The EU and India as key Strategic Partners hereby reiterate their joint commitment to urgently address climate change and deepen co-operation in fields relevant to energy, clean development and climate change. Both India and the EU also attach high priority to the promotion of energy security as a key to stable and sustainable development. Both Parties recognize the cross-cutting nature of climate change, its impacts and that urgent actions are necessary to address all aspects of climate change.

Urgent action is required by all countries to tackle climate change - the urgency of which was confirmed by the latest findings of the Intergovernmental Panel on Climate Change (IPCC) - in accordance with the principle of common but differentiated responsibilities and respective capabilities, as outlined in the United Nations Framework Convention on Climate Change (UNFCCC). The EU and India also recall that the fight against climate change is closely linked to the fight against poverty, inequality and exclusion. They recognize that the efforts undertaken to move towards a low carbon economy must go hand in hand with development and with improving the conditions of the poorest sections of the population. They also stress the need to exploit the synergies between the promotion of energy security, improved air quality and the reduction of greenhouse gas emissions, adaptation and mitigation measures to ensure consistency between meeting the ultimate objectives of the UNFCCC and energy policy, and between economic growth and development goals.

In the context of the ongoing negotiations for a post-2012 regime, the EU and India reiterate their determination to reach by 2009 an ambitious and comprehensive agreed outcome, in accordance with the principle of common but differentiated responsibilities and respective capabilities, to combat climate change within the framework of the UNFCCC. To that end, they underline the importance of attaining results in relation to all the components of the Bali Roadmap adopted in December 2007 (e.g. shared vision, mitigation, adaptation, technologies, financing). The Conference of the Parties to the Convention in Poznań in 2008 will constitute a critical step towards leading ultimately to the success of these negotiations.

The EU and India agree on the necessity to adopt a shared vision that includes a long-term objective to address the IPCC's scenarios. Accordingly, they note the desire of the G8 nations to share with all the parties of the UNFCCC the vision of reducing global emissions by at least 50% by 2050. They welcome the declaration of the Major Economies Meeting, where leaders of the world's major economies, both developed and developing, committed to combating climate change in accordance with their common but differentiated responsibilities and respective capabilities and to confronting the interlinked challenges of sustainable development, including energy and food security, and human health.

In this context, they note the EU commitment in March 2007 to reduce emissions by at least 20% from their 1990 levels by 2020, which would be increased to 30% in the context of a comprehensive and ambitious international agreement. They also note India's National Action Plan on Climate Change, aimed at further enhancing the ecological sustainability of India's development path and adapting to the effects of climate change.

The EU-India initiative on Clean Development and Climate Change, the EU-India Energy Panel and the EU-India Science and Technology Steering Committee are the relevant fora under which bilateral co-operation can be advanced on these important global issues. The EU and India have decided to adopt concrete activities and practical initiatives mentioned in the following rolling joint work programme on energy, clean development and climate change:

List of Activities

Co-operation on energy

- Work together to advance co-operation on achieving safe, secure, affordable and sustainable energy supplies under the auspices of the India-EU Energy Panel and its Working Groups.
- Intensify discussions, information sharing and co-operation on coal and the full range of clean coal technologies in the EU-India Coal and Clean Coal Technologies Working Groups.
- Promote energy efficiency and energy conservation through the International Partnership for Energy Efficiency Co-operation, complemented by bilateral activities as appropriate.
- Conclude negotiations on an agreement for co-operation in the field of Fusion Energy Research.

- Facilitate networking of institutions for research & development in the field of renewable energy.
- Identify joint priorities for future research co-operation under the EU's 7th Framework Programme and seek to launch specific co-operation activities in selected fields of research related to energy, environment and climate change including renewable energy sources, such as solar, wind, biomass, waste-to-energy and research in Clean Coal Technologies (CCT).

Co-operation on climate change

- Organise climate change workshops in areas such as Modelling Mitigation Options, deployment of climate-friendly technologies and on the future of the Clean Development Mechanism.
- Follow-up on a study on monitoring atmospheric and green house gas emissions realised in 2008.
- Establish a pool of expertise under the Action Plan Support Facility to support capacity building in India on climate change issues.

Private Sector Co-operation

- Use the European Business and Technology Centre as a platform for advancing Private Sector and Research Co-operation in the field of climate change including in the key areas of environment, energy and transport.
- Step up joint efforts to mobilise on mutually agreeable terms European Investment Bank funding to support investment projects in India that contribute to climate change mitigation and adaptation, and facilitate in particular transfers of technology for renewable energy and energy efficiency projects.

161. Press Release issued by the European Union on the signing of the India-European Union Civil Aviation agreement.

Marseille, September 29, 2008.

At today's EU-India Summit in Marseille, a Horizontal Aviation Agreement was signed which will restore legal certainty to the bilateral air services agreements between India and EU Member States and reinforce EU-India aviation relations¹.

"The agreement signed today is good news for Indian and EU airlines and passengers as it removes the legal uncertainty from the bilateral air services agreements. But equally important, it represents a very significant step forward in strengthening our relations with India and in opening up new areas of cooperation.

India is an important partner for Europe¹ and is one of the world's fastest growing aviation markets. The EU and India have much to gain from closer cooperation in this sector. This agreement is a further tangible result of the EU-India strategic partnership. I expect the cooperation in aviation to deepen much further in the coming years in a range of areas such as regulatory and technical cooperation", said Vice-President Antonio Tajani.

The horizontal agreement will restore legal certainty to the 26 bilateral air services agreements that India has with individual EU Member States by bringing these into conformity with Community law². It will thus create a sound legal basis for further developing EU-India air transport relations and cooperation in the future.

1 With nearly 5.7 million passenger travelling between the EU and India in 2007, India is ranked 11th in terms of passenger traffic between EU27 and non-EU countries. Over the past 3 years, EU-India passenger traffic has increased by 75%.

2 The agreement with India is the thirty-seventh "horizontal" aviation agreement negotiated by the European Commission. In total, 750 bilateral air services agreements between EU Member States and partner countries around the world have now been brought into conformity with EU law.

162. Joint Work Programme: European Union - India Co-operation on energy, clean development and climate change.

Marseille, September 29, 2008.

The EU and India as key Strategic Partners hereby reiterate their joint commitment to urgently address climate change and deepen co-operation in fields relevant to energy, clean development and climate change. Both India and the EU also attach high priority to the promotion of energy security as a key to stable and sustainable development. Both Parties recognize the cross-cutting nature of climate change, its impacts and that urgent actions are necessary to address all aspects of climate change

Urgent action is required by all countries to tackle climate change - the urgency of which was confirmed by the latest findings of the Intergovernmental Panel on Climate Change (IPCC) - in accordance with the principle of common but differentiated responsibilities and respective capabilities, as outlined in the United Nations Framework Convention on Climate Change (UNFCCC). The EU and India also recall that the fight against climate change is closely linked to the fight against poverty, inequality and exclusion. They recognize that the efforts undertaken to move towards a low carbon economy must go hand in hand with development and with improving the conditions of the poorest sections of the population. They also stress the need to exploit the synergies between the promotion of energy security, improved air quality and the reduction of greenhouse gas emissions, adaptation and mitigation measures to ensure consistency between meeting the ultimate objectives of the UNFCCC and energy policy, and between economic growth and development goals.

In the context of the ongoing negotiations for a post-2012 regime, the EU and India reiterate their determination to reach by 2009 an ambitious and comprehensive agreed outcome, in accordance with the principle of common but differentiated responsibilities and respective capabilities, to combat climate change within the framework of the UNFCCC. To that end, they underline the importance of attaining results in relation to all the components of the Bali Roadmap adopted in December 2007 (e.g. shared vision, mitigation, adaptation, technologies, financing). The Conference of the Parties to the Convention in Poznań in 2008 will constitute a critical step towards leading ultimately to the success of these negotiations.

The EU and India agree on the necessity to adopt a shared vision that includes a long-term objective to address the IPCC's scenarios. Accordingly, they note the desire of the G8 nations to share with all the parties of the UNFCCC the vision of reducing global emissions by at least 50% by 2050. They welcome the declaration of the Major Economies Meeting, where leaders of the world's major economies, both developed and developing, committed to combating climate change in accordance with their common but differentiated responsibilities and respective capabilities and to confronting the interlinked challenges of sustainable development, including energy and food security, and human health.

In this context, they note the EU commitment in March 2007 to reduce emissions by at least 20% from their 1990 levels by 2020, which would be increased to 30% in the context of a comprehensive and ambitious international agreement. They also note India's National Action Plan on Climate Change, aimed at further enhancing the ecological sustainability of India's development path and adapting to the effects of climate change.

The EU-India initiative on Clean Development and Climate Change, the EU-India Energy Panel and the EU-India Science and Technology Steering Committee are the relevant fora under which bilateral co-operation can be advanced on these important global issues. The EU and India have decided to adopt concrete activities and practical initiatives mentioned in the following rolling joint work programme on energy, clean development and climate change:

List of Activities

Co-operation on energy

- Work together to advance co-operation on achieving safe, secure, affordable and sustainable energy supplies under the auspices of the India-EU Energy Panel and its Working Groups.
- Intensify discussions, information sharing and co-operation on coal and the full range of clean coal technologies in the EU-India Coal and Clean Coal Technologies Working Groups.
- Promote energy efficiency and energy conservation through the International Partnership for Energy Efficiency Co-operation, complemented by bilateral activities as appropriate.
- Conclude negotiations on an agreement for co-operation in the field of Fusion Energy Research.

- Facilitate networking of institutions for research & development in the field of renewable energy.
- Identify joint priorities for future research co-operation under the EU's 7th Framework Programme and seek to launch specific co-operation activities in selected fields of research related to energy, environment and climate change including renewable energy sources, such as solar, wind, biomass, waste-to-energy and research in Clean Coal Technologies (CCT).

Co-operation on climate change

- Organise climate change workshops in areas such as Modelling Mitigation Options, deployment of climate-friendly technologies and on the future of the Clean Development Mechanism.
- Follow-up on a study on monitoring atmospheric and green house gas emissions realised in 2008.
- Establish a pool of expertise under the Action Plan Support Facility to support capacity building in India on climate change issues.

Private Sector Co-operation

- Use the European Business and Technology Centre as a platform for advancing Private Sector and Research Co-operation in the field of climate change including in the key areas of environment, energy and transport.
- Step up joint efforts to mobilise on mutually agreeable terms European Investment Bank funding to support investment projects in India that contribute to climate change mitigation and adaptation, and facilitate in particular transfers of technology for renewable energy and energy efficiency projects.

163. Speech of Prime Minister Dr. Manmohan Singh at India-EU Business Summit: "India - EU : New Synergies for Partnership".

Paris, September 30, 2008.

Ms. Parisot, President, MEDEF,

My Cabinet Colleague Mr. Kamal Nath,

Ms. Idrac

Mr. K.V. Kamath, President, CII,

Distinguished Ladies and Gentlemen,

It gives me great pleasure to join the representatives of Indian and EU industry for the Indo-EU Business Summit meeting. I am glad that this event coincides with the annual political Summit. It enables the governments to benefit from the advice and suggestions of captains of industry.

Ladies and gentlemen,

The global economy faces uncertain times. The crisis in the financial markets has cast its shadow on global liquidity. We have also seen sharp rises in petroleum and food prices. It is unfortunate that just as many developing countries were beginning to benefit from the positive potential of globalisation, the tide has turned and the economic prospects have deteriorated.

I emphasise the urgent need to restore confidence in the functioning of international financial markets and in the collective ability to coordinate macro economic policy in the major economies in a manner conducive to the restoration of global growth.

The Indian economy has grown at an average rate of 9% in the past four years. It is expected to slow down in 2008-09 reflecting the slow down in the global economy. Even so, it will grow between 7.5-8%. More importantly our medium term prospects remain strong based on sound fundamentals. We have weathered the current credit crisis facing the global banking and financial sectors. Our savings rate is touching 35%. Our direct tax collections for the first five months of the current financial year grew by 48 per cent compared to last year. India would, therefore, continue to provide a stable platform for businessmen and investors.

The Indian market is changing rapidly. The middle class is expanding. Rural consumers are shifting from commodities to branded products. There is growing urbanization and a surge in demand for consumer durables and luxury brands. The upside for growth therefore is enormous, with rising incomes continuing to support demand.

Our bilateral trade has been experiencing double digit annual growth for many years now. There is reason to believe that we could increase our annual bilateral trade volume to 100 billion Euros within the next five years.

The early conclusion of the Broad-based Trade and Investment Agreement would no doubt stimulate such growth and achievement of these targets even earlier.

Special Economic Zones are at the centre of our strategy for export growth. As many as 253 SEZs have been notified and SEZ exports have nearly trebled in the past two years. We have crafted a very attractive set of incentives for developers setting up SEZs and also for the units to be located within such Zones.

Ladies and Gentlemen,

I would like to draw your attention to seven areas where we see clear synergies for cooperation: investments in infrastructure including power generation, cooperation in services, skill development, solar energy, nuclear commerce, agricultural productivity and research and space. In many of these areas, it would be our expectation that technology transfers would be the key to promoting the synergies.

Our Government is placing special emphasis on infrastructure development - both urban and rural infrastructure. Huge investments are needed in the areas of energy, power, roads, railways, airports and ports. We hope that Foreign Direct Investment would contribute substantially. I urge you to look at the investor friendly policy regime we have created, including by encouraging public-private partnerships.

Services is not only the fastest growing sector of our economy but also the most visible face of India in the global economy. The potential however is enormous and we need to facilitate the collaboration between us in this area.

We seek easing of restrictions on movement of people, agreement on totalization of social security and improvement in living conditions of our professionals.

To retain the competitive advantage we have in manpower, we have embarked on a massive programme of expansion of capacity at all levels of education, including vocational education. We are aware of the expertise that EU Member States have developed in this area. Innovative ways to promote vocational training including through its integration into our secondary school programs is a priority for my Government. I see clear synergies between your strengths and our needs in skill development.

India today has a renewable power capacity of over 12,000 MW, constituting around 8% of the total installed capacity in the country. However, almost none of this comes from grid connected solar power. We have recently begun work on a 50 MW demonstration solar power program in public private partnership mode. We have also launched a National Solar Mission as part of our National Action Plan on Climate Change. I believe solar energy can emerge as a priority area of our cooperation.

Civil nuclear commerce is another area that has opened up for cooperation. Today we signed a bilateral agreement in this area with France and we expect to finalise agreements with other European partners too.

I have spoken of the need to have a second Green Revolution to respond to the global agricultural crisis. This cannot be realized without business innovation and enterprise. Development of new technologies, input use efficiency and improved seed and crop selection are areas where we could join hands.

India has a successful space program for launch of small and medium class satellites in both near earth and geo-stationary orbits. EU could make use of our launch vehicles for meeting launch requirements for small and medium class payloads.

Ladies and Gentlemen,

The democratic system in India may seem a little unwieldy at times. We recognize that there are infrastructure bottlenecks, system delays and problems in land acquisition.

We are addressing these issues in a transparent manner. But for every project that faces problems, there are hundreds that take off. So I urge you to have faith and to invest in the future of our relationship.

Lord Keynes once said that the difficulty lies, not in the new ideas, but in escaping from the old ones, which ramify....into every corner of our minds.

In conclusion, I wish to stress my conviction that India-EU economic and trade ties will not only be to our mutual benefit but will also be a stabilizing force for the global economy. I see a bright future for our partnership built on your innovation, dynamism and enterprise.

Thank you.

G-8 OUTREACH SUMMIT

164. Special Media Briefing by Foreign Secretary Shivshankar Menon on Prime Minister's visit to Japan to attend G-8 Summit.

New Delhi, July 4, 2007.

Official Spokesperson (Shri Navtej Sarna): Welcome to this briefing by the Foreign Secretary on Prime Minister's visit to the G-8 Summit in Japan. After Foreign Secretary has spoken we will do the questions in our usual fashion.

Foreign Secretary (Shri Shivshankar Menon): Good morning ladies and gentlemen. I thought I would run over the programme and brief you on what we expect from Prime Minister's visit to Japan for the G-8 Summit and the Summit of the Outreach-5 countries which will be taking place early next week.

Prime Minister will be leaving on Monday the 7th and will spend the 8th in Sapporo in Okaido in the north of Japan. On the 8th he will have several bilateral meetings. There will also be a Summit that afternoon of the five Outreach Countries of India, China, Brazil, Mexico and South Africa.

The next day is really the outreach day with the G-8 in Toyako, which is slightly away in Okaido in Japan which begins very early in the morning with a working meeting over breakfast between the O-5, who I just mentioned, and the G-8, where they will review the Heiligendamm process which was started at the last Summit. I will go into the substance of it later.

That will be followed by a meeting of the G-8 with the O-5 and three additional Outreach Countries - Republic of Korea, Australia and Indonesia. Primarily, it is the same group as the major economies meeting which has been discussing climate change and energy security for the last year. But

it will be the first meeting at leadership level of these countries and they will be considering climate change issues and energy security issues.

Thereafter, there will be a working lunch again with the same sixteen countries which is expected to cover broader issues of the world economy and so on. Through these two days, both on the 8th and on the 9th, Prime Minister will also be having a series of bilateral meetings with other leaders.

On the multilateral side, the Summit of the O-5 leaders is really the second such Summit. You would remember, last year in Berlin as well before the Outreach Meeting with the G-8 there was such a Summit. That is an occasion where, because we have shared attitudes towards most of the major international issues, they express themselves. We are working on an outcome document from that Summit which we hope to issue on the 8th itself. It will naturally cover all the issues that really bother us. One is, of course, development and the need for a much greater international effort at that. Energy is an issue which affects us all, us particularly, us meaning the members of the O-5. Food security, which is a big issue for us because of the tremendous increase in food prices, though India, per se, thanks to what we have done over the last few months, might not be as critical an issue as it might be for other countries but it is a global issue when we see global food prices rising at these levels. It is an issue that concerns all of us.

The subsequent working meeting on the 9th morning between the G-8 and the O-5 is really a sort of mid-term review of the Heiligendamm process which had been begun after the last year's summit in Germany. This was a process where for the first time there was a structured dialogue between the O-5 and the G-8 members. It has held several meetings on four subjects. One is innovation which is critical for us in terms of technology transfer, in terms of upgrading our economies; the other is energy efficiency which is important to us both in terms of environmental affects and also in terms of energy security, in both senses that is a very important issue for us; the third is development and the achievement of MDGs. These two are linked.

The MEM Summit, this is the first time there is a summit of this nature, is an attempt to encourage the UNFCCC process. You know, our approach to climate change has been that primarily we have an agreed framework within which the international community should address the climate change issues. That was agreed starting at Rio, subsequently in the Kyoto Protocol, and most recently in Bali where we agreed on an Action Plan on how we

would try and deal with climate change issues over the next few years and how we would negotiate an outcome to come out of the Copenhagen Summit in 2009.

So, there are major issues involved including the issues of a long-term goal of technology and how it should be transferred, financing, both mitigation and adaptation activities, and on mid-term plans and goals on how to push this process forward. The MEM meeting actually includes sixteen economies who among themselves represent a major part of the global economy and, therefore, have the capacity to push this discussion forward. But we see this as primarily an assistance to what we are trying to do under the UNFCCC parties' negotiations in the UN framework. We hope that as a result of this it will be possible for many of not only our ideas but common interests that we have with the others to be implemented on climate change.

Our own approach, as you know, since last year I think we have made it quite clear that we think primarily it is the developed countries who will need to limit their emissions, that they have already occupied the carbon space by what they have done historically; and that our primary responsibility is to develop and to create the means to adapt to and mitigate climate change. That needs to be done in a sustainable manner.

Within the last few weeks actually we have issued our own National Action Plan for dealing with climate change which gives you an idea of how our approach is. I do not know if you have all seen it. But I would really recommend that you read it. We have identified eight missions which we think are critical to our own future and how we will deal with climate change. We would like to see an international environment and an international framework which is supportive of that effort naturally, and we will work with others.

We have also made it clear, as Prime Minister said last year in Heiligendamm, that our per capita greenhouse gas emissions will not exceed those of the developed countries. This is in a sense a double challenge. It is a challenge to us naturally to find sustainable ways of development. It is also a challenge to the developed countries to bring down their emissions to levels which are sustainable, because they are not today, and to start implementing their prior commitments. We will see how the discussion goes and how it turns out. But we would like, at the end of the MEM meeting, to see real impetus to the UNFCCC discussions and

negotiations which naturally will take a little time to work themselves through because it will have to go through 2009 after the Copenhagen Summit.

Over the working lunch between the Outreach members and the G-8 the main issue will be the state of the world economy. There is clearly much more stress in the world economy today than there was when they met one year ago in Heiligendamm both in terms of financial structures and financial adjustments that are required and in terms of energy security and food prices. So, the expectation is that the leaders will exchange ideas on how they should deal with the situation; how they see the economy growing and what they think can be done collectively to address these issues which worry us all. Even if India, for instance, we are not a food importer and are largely sufficient, just the fact that we stay out of the market itself is a contribution I think to global food security. But it still means that we are affected by the prices as long as we run an open economy. We had to stop exports for instance because prices outside were so much higher and we did not want to import more inflation. We do import inflation in terms of very high-priced oil but the last thing we wanted was food prices also to be driven up by that effect. So, frankly it is an issue that concerns all countries. No matter which side of this contract you are on, you need to worry about it. We are hoping that there will be some results out of that discussion. Even if it is not codified, agreed, legally binding, but at least we will have a common sense of what we can do.

Overall, I think that is the real advantage of meetings like this that it gives the leaders a chance to talk directly to each other on issues that concern us all. It is in fact the very informality of the process which is the useful process. The sherpas prepare these meetings. We prepare the subjects, we talk about things but ultimately it is really what the leaders themselves choose to do and what they bring to the table and what they exchange with each other. So, there is only so much that I can tell you at this stage. I hope to tell you more about it after they meet. That is roughly on the multilateral meetings.

On the bilateral meetings, we are still in the process of firming them up. But the ones that we have already scheduled are with the Presidents of China, of Russia, of the USA, of Mexico, Republic of Korea, Indonesia, the Japanese Prime Minister, the Australian Prime Minister. There will be also a brief informal meeting of the BRIC leaders just after the lunch together. There will be meetings also with some of the others. The UN Secretary-General will be there for instance. Our PM will probably meet him. There might be other pull-asides. There are other meetings we are trying to

schedule but it is a very tight programme, you have heard already from what I said. So, some of it will have to be pull-asides and so on and I will tell you about them after they happen.

I am happy to answer questions.

Question: When is the meeting scheduled with the US President?

Foreign Secretary: On the 9th.

Question: On the nuclear deal front, are we going to ...(Inaudible)... Secondly, all these countries which are going to G-8 happen to be also members of the NSG. Are we going to be asking for their support? How do you see it in terms of NSG ...(Inaudible)...

Foreign Secretary: We have been in touch with all the countries. We have spoken to the NSG as well. At previous meetings of the NSG we have been in contact with them and that would continue. As soon as we have a decision on going to the IAEA Board of Governors, I will let you know.

Question: American Congressman Gary Ackerman said yesterday that though they would not have ...(Inaudible)... session and all that of the US Congress, after pushing so much if it does not go to the US Congress, how do you take that?

Foreign Secretary: Frankly, I have always avoided all your questions, you all know this, about what is the timeframe, which day will this happen, which day will that happen. I do not want to get into that. We want to go ahead with it. We will do our best to go ahead with it as soon as we can.

Question: What is the status of negotiations on IPI gas pipeline?

Foreign Secretary: We continue our discussions both with Iran and with Pakistan and it is mentioned each time. I think from our point of view the purpose of the discussions is to ensure that we have a project which is economically and commercially viable, where supplies are assured and where security of the project is also guaranteed. That is what we are trying to do in the process of discussing it both with Pakistan and with Iran bilaterally and also trilaterally. We have had both kinds of meetings because these are issues which we will all have to solve together.

Question: Will the Prime Minister of India talk to President George W. Bush on the possibilities of getting support from the NSG at the G-8 Summit?

Foreign Secretary: I think that is a discussion that we have had before. I think the US is committed under the July 18, 2005 Joint Statement to get us an exemption from the NSG and they have committed themselves to helping us to achieve that.

Question: *Sir, is the Prime Minister, during his visit to Japan, likely to meet the officials of the IAEA?*

Foreign Secretary: *There is unlikely to be any body from the IAEA in Japan during this summit. As far as I remember DG, IAEA did not come even the last year at Helligendamm.*

Question: I want you to confirm if all bilateral meetings will be organized in Toyako or in Sapporo.

Foreign Secretary: Some of the bilaterals are on the 8th in Sapporo.

Question: Which ones are they?

Foreign Secretary: I think with those who are staying in Sapporo, like with Mexico, with China, with Republic of Korea, the Indonesia. I think these are the ones that are likely to be on the 8th. The UN Secretary-General's probably is also on the 8th. We are actually still slotting all these moving pieces.

Question: Will the Prime Minister be meeting leaders of the NSG also?

Foreign Secretary: I think many of the leaders who are there are members of the Nuclear Supplier Group. I have not done the tally but I think most of them are members of the Nuclear Suppliers Group.

Thank you.

(Text in italics is translated from Hindi text)

165. Statement of Prime Minister Dr. Manmohan Singh on the eve of departure to Japan for G-8 and Outreach Countries Summit.

New Delhi, July 6, 2008.

I am leaving tomorrow for Japan to attend the Summit Meeting of the G-8 and Outreach Countries (Brazil, China, India, Mexico and South Africa) being hosted at Hokkaido Toyako on July 9 by the Japanese G-8 Presidency.

Prior to the meeting with the G-8 leaders, I will attend a meeting of the G-5 group of Outreach countries being hosted by the President of Mexico on July 8.

Over the years, India 's participation in the G-8/G-5 dialogue process has enabled us to articulate our concerns on a wide range of issues in a forthright manner, on an equal footing. Today, India 's views are heard with respect, and there is recognition of the fact that solutions to global issues require India 's involvement.

At the forthcoming Summit I will present India 's perspectives on a wide range of global issues, including the state of the world economy, development, trade, transfer of technology, energy security and food security. I will, in particular, highlight the impact of the sharp rise in fuel prices on the global economy and the need for joint action by both producing and consuming nations.

I will also participate in the meeting of the Leaders of Major Economies at which the issue of climate change will be discussed.

I will convey to the international community India 's belief that climate change, energy security and food security are interlinked, and require an integrated approach. The National Action Plan on Climate Change which was released recently underscores our commitment to address the challenge of climate change, and outlines concrete steps to meet this challenge. At the international level, we will work with others to find solutions within the UN Framework Convention on Climate Change and the Bali Road Map, based on the principle of common but differentiated responsibilities and respective capabilities. In our view there can be no solution without taking into account the developmental imperatives and

aspirations of developing economies. For us, the foremost priority is the removal of poverty, for which we need sustained rapid economic growth.

I will have bilateral meetings with our host - the Prime Minister of Japan, and some of the other leaders present, including those of Australia, Canada, China, Indonesia, Mexico, Republic of Korea, Russia, USA and the Secretary General of the United Nations. In addition, I look forward to participating in an informal meeting of the Brazil-Russia-India-China (BRIC) leaders on the sidelines of the G-8 Summit.

I thank Prime Minister Fukuda of Japan for inviting India to this important gathering of world leaders.

166. Political Declaration issued by the Five Outreach Countries attending the G-8 Summit.

Hokkado, July 8, 2008.

We the Leaders of Brazil, China, India, Mexico and South Africa, gathered in Sapporo, Japan, on 8 July 2008, have resolved to issue this Political Declaration:

1. Mankind is at a critical historical crossroad. The potential of globalization and innovation to raise living standards is unprecedented, but so are social and sustainable development challenges around the world.
2. The interrelationships of a global economic slowdown marked by financial uncertainty, the persistence of trade protectionist distortions, soaring food and oil prices, and the threats posed by climate change add complexity to the current scenario.
3. Our increasing interdependence demands an integrated and concerted response to these global challenges. We must ensure development and prosperity on a sustainable path, both within and across nations. That is the historical challenge of our generation. To achieve this fundamental goal, we must act in a coordinated manner to ensure equitable growth with care for the environment, taking appropriate account of cross-border interactions in fulfillment of our shared responsibility.

World Economy

4. The global economy continues to expand, but at a slower rate than in previous years. Most emerging and developing economies have proved resilient so far to adverse circumstances. Nevertheless, the international community as a whole faces important policy challenges to maintaining financial stability and mitigating global economic risks. Headline inflation is of particular concern.
5. We reaffirm our commitment to the establishment of a stable and orderly international financial system, more transparent and legitimate. The voice and representation of developing countries in the decision making of international financial institutions should be significantly improved, especially at the International Monetary Fund and the World Bank.
6. Given current global macroeconomic imbalances, it is essential to enhance policy coordination not only among advanced economies but also with emerging market economies, including by reinforcing existing multilateral mechanisms for coordination. The Financial G-20 is an appropriate forum for this endeavor.
7. The global financial architecture and its surveillance capacities must be also strengthened to contribute to the prevention and resolution of potential financial crises but, more importantly, to support sustainable development. In particular, it is necessary to provide international financial institutions with an adequate array of instruments to preserve global financial stability and smoothen the supply shocks derived from higher food and oil prices, especially in support of least developed and middle income countries.
8. The world economic outlook lends urgency to the establishment of a just, open, reasonable and non-discriminatory international trade system. It is essential to achieve an early conclusion to the Doha Round that fully supports development in accordance with its agreed mandate. Developed countries must dismantle barriers and distortions, especially agriculture subsidies and domestic support that affect the overall efforts of developing countries. This would provide a much needed impetus to global economic growth and would positively contribute to an enabling environment for development.

Food Security

9. The rise in global food prices poses a new challenge to the fight against poverty and hunger. To ensure food security is a shared responsibility that calls for swift and resolute action by all Governments and relevant actors.
10. The world produces enough food, but not enough people have access to it. We call upon the international community to devise better ways and means of producing and distributing food. Multi-billion agricultural trade-distorting support in developed countries have hampered the development of food production capacity in developing countries, critically reducing their possibilities of reaction to the present crisis. We therefore reaffirm the imperative of creating an enabling international environment for agro-produce related trade, establishing a just and reasonable international trade regime for agricultural products and concluding the Doha Round with meaningful commitments to agricultural subsidies reductions. Also, it is necessary to combat speculation and minimize the use of measures that could increase volatility of international food prices.
11. The food security crisis demands a rapid and substantial increase in the allocation of resources to support rural development and combat hunger and poverty. We urge developed countries, in particular, to increase their emergency aid at an early date. Innovative mechanisms of financing and enhanced flows of investment can also play an important role in addition to the required increase in flows of official aid.
12. Technological innovations and international cooperation can significantly increase agricultural productivity and contribute to combating the current food security crisis. Intellectual property rights in the agricultural domain should strike a balance between the greater good of humankind and incentives to innovation. In particular, we encourage collaborative action for better seeds and farm outputs that are sustainable and environmentally sound as well as a comprehensive approach in all fields including finance, trade, aid, environment, intellectual property rights and technology transfer, so as to create a conducive international environment for food security.
13. The current food security crisis has multiple and complex causes whose assessment requires objectiveness. It is essential to address

the challenges and opportunities posed by biofuels, in view of the world's food security, energy and sustainable development needs. If developed sustainably, biofuels can effectively contribute to generating opportunities and achieving food and energy security altogether. To this purpose, it is important that public policies for production of biofuels contribute to sustainable development and the well-being of the most vulnerable people and do not threaten food security.

Climate Change

14. We urge the international community to address the challenge of climate change through long term cooperative action in accordance with the United Nations Framework Convention on Climate Change (UNFCCC) and its Kyoto Protocol, especially the principle of common but differentiated responsibilities and respective capabilities. We take our responsibilities seriously and welcome the Bali Action Plan and the Bali Roadmap and are committed to the completion of negotiations by 2009.
15. Negotiations for a shared vision on long-term cooperative action at the UNFCCC, including a long-term global goal for greenhouse gases (GHG) emissions reductions, must be based on an equitable burden sharing paradigm that ensures equal sustainable development potential for all citizens of the world and that takes into account historical responsibility and respective capabilities as a fair and just approach. It is essential that developed countries take the lead in achieving ambitious and absolute greenhouse gas emissions reductions in accordance with their quantified emission targets under the Kyoto Protocol after 2012, of at least 25 40 per cent range for emissions reductions below 1990 levels by 2020, and, by 2050, by between 80 and 95 per cent below those levels, with comparability of efforts among them.
16. We also urge the international community, particularly developed countries, to promote sustainable consumption patterns and lifestyles responsive to mitigation requirements.
17. For developing countries, adaptation is of cardinal importance, particularly given their vulnerability, limited capacity and inadequate means. We stress the need of scaling up resources for adaptation and strengthening of adaptive potential in developing countries in

order to reinforce capabilities to prevent and confront the increased frequency and scale of natural disasters and the other adverse effects of climate change.

18. We, on our part, are committed to undertaking nationally appropriate mitigation and adaptation actions which also support sustainable development. We would increase the depth and range of these actions supported and enabled by financing, technology and capacity-building with a view to achieving a deviation from business-as-usual. In this regard, in the negotiations under the Bali Road Map, we urge the international community to focus on the core climate change issues rather than inappropriate issues like competitiveness and trade protection measures which are being dealt with in other forums.
19. Affordable access to adaptation and mitigation technologies, achieved through a suite of funding mechanisms, investment structures and policy tools, is a key enabling condition for developing countries to tackle climate change. We call upon the international community to work towards a strengthened scheme for technology innovation, development, transfer and deployment, and a comprehensive review of the intellectual property rights regime for such technologies in order to strike an adequate balance between rewards for innovators and the global public good.
20. Enhanced financial support for developing countries must cover incremental and opportunity costs to meet the challenges of climate change. New and innovative financial mechanisms must mobilize additional resources beyond the flexibility mechanisms of the Kyoto Protocol and other instruments of the carbon market, without diverting national or multilateral and ODA resources from the imperatives of development and poverty alleviation.
21. Developed countries should commit clearly to significant additional financing to support both mitigation and adaptation in developing countries. We recognize the need for further financing options to complement, not substitute, the financial arrangements under the Kyoto Protocol. In this regard, we welcome for further exploration, inter alia, the proposal by China for setting a climate financing goal for all developed countries, such as 0.5% of GDP (in addition to ODA) for climate action in developing countries, as well as the Mexican initiative for a World Climate Change Fund

Energy Security

22. Energy security is essential to ensure the steady growth of the global economy. We call upon the international community to strengthen overall cooperation on energy development and utilization, with emphasis on renewable energy and energy efficiency and giving adequate consideration to solar, wind and hydro-electrical power, and bio-fuels such as ethanol and bio-diesel without adversely affecting food security.
23. More efforts should be made to develop clean energy technologies that are affordable, environment-friendly and suitable to the conditions of developing countries, ensuring that these technologies be adequately transferred to developing countries.
24. We must take an integrated approach to international energy cooperation and international development cooperation, ensuring access to energy by developing countries on an equitable and sustainable manner.

Millennium Development Goals and Monterrey Consensus

25. The global community of nations has recognized that achieving the internationally agreed development goals, including those contained in the United Nations Millennium Declaration, demands a new partnership between developed and developing countries.
26. This was stated in the Monterrey Consensus, whereby the international community agreed to work in a coordinated manner to support development by mobilizing domestic resources, attracting international resource flows, developing innovative financial mechanisms, harnessing the benefits of international trade, increasing international financial and technical cooperation, achieving sustainable debt financing and external debt relief, and enhancing the coherence and consistency of the international monetary, financial and trading systems.
27. As we reach with uneven success the mid-point in the process to achieve the Millennium Development Goals, particularly in the least developed countries in Africa and other regions, the international financial community should join efforts to preserve financial stability and resume the path of vigorous and sustainable economic growth as necessary conditions to attaining these goals.

We urge developed countries to renew their resolve to support these processes in the global interest, particularly regarding trade openness, the fulfillment of their commitments to allocate at least 0.7% of their GNP to ODA, and the reform to global governance.

28. The international community should ensure that, from their holistic perspective, the upcoming UN Millennium Development Goals High-level event and the Doha Follow-up International Conference on Financing for Development contribute to achieving all-round and balanced progress towards the Millennium Development Goals at the global level. A follow-up mechanism to continue to monitor the implementation of the Monterrey Consensus should be one of the results of the Doha Conference.

South-South cooperation

29. We reaffirm the role of South-South cooperation in the context of multilateralism, and the need to strengthen it as an important platform for developing countries to jointly respond to development challenges.
30. We reiterate that South-South cooperation enjoys important comparative advantages and complements rather than replaces North-South cooperation. In this context, we call upon Governments, international organizations and all relevant actors, to support South-South cooperation, by fully tapping the synergies of triangular cooperation.
31. While acknowledging progress in South-South cooperation in recent years, we are committed to continue broadening its reach and impact through innovative models of cooperation based on the principles of equality and mutual benefit.

The Role of the G5

32. In fulfilling our shared responsibility as major developing countries, we are determined to continue engaging in all efforts leading to achieve the improved global economic governance and other major global changes required to ensure that globalization and interdependence work for the benefit of all.
33. We thus commit ourselves to a strengthened multilateralism, keeping fully engaged to intensified international cooperation under the

leadership of the United Nations. We will continue to strive for a comprehensive reform of the United Nations that includes strengthening the General Assembly, revitalizing ECOSOC, reforming the Secretariat, strengthening the UN gender architecture and, in particular, achieving an early reform of the UN Security Council. We urge the international community to faithfully implement the outcomes of major World Summits, especially the Millennium Development Goals,

34. the Monterrey Consensus and the Johannesburg Plan of Implementation and to continue promoting shared initiatives to rise to the new global challenges and opportunities of our era.
35. As a key strategic objective, we will continue contributing to multilaterally promote an action-oriented global partnership for equitable and sustainable development, including by making positive contributions in such critical areas as global governance, financial stability, climate change as well as food and energy security.
36. With these purposes, based on the principles of equality, mutual respect and cooperation for the common good, we are ready to consolidate bilateral relations, improve our cooperation level and mechanisms, and continue the dialogue and collaboration with the G8 and the international community at large.

167. Intervention by Prime Minister Dr. Manmohan Singh at Major Economies Meeting on Climate Change at the G-8 Outreach meeting.

Hokkado (Japan), July 9, 2008.

At the outset please allow me to express my appreciation for your personal engagement with the very serious issue of climate change.

A text for our declaration has been agreed by our officials after protracted negotiations. This has been done in a spirit of compromise and willingness to accept each others views. Even if some of our views have not been incorporated as we would have wished, we should adopt the text as it is.

I welcome the fact that we are all engaged in serious negotiations for enhanced implementation of the UNFCCC through long term cooperative action.

It is very important that the provisions and principles of the Convention, especially common but differentiated responsibilities and respective capabilities, are respected in these negotiations and their outcomes in letter and spirit.

The first and overriding priority of all developing countries is poverty eradication.

More than 600 million people in India are still without access to modern energy sources and a quarter of our population lives on less than a dollar a day.

The imperative for accelerated growth is even more urgent when we consider the disproportionate impact of climate change on us as a developing country with little choice but to devote even more and huge resources to adaptation in critical areas of food security, public health and management of scarce water resources.

And, this comes at a time when we are faced with an ever increasing energy bill putting our energy security at extreme risk.

Sustained and accelerated economic growth is, therefore, critical for all developing countries and we cannot for the present even consider quantitative restrictions on our emissions.

Moreover, there should be no detracting of public and private development transfers and flows. Rather there must be new and additional resources made available to developing countries.

We have not seen demonstrable progress on even the low levels of agreed GHG reduction from developed countries and, indeed, the prognosis is that their emissions as a whole will continue to rise even in the years to come.

This must change and you (the G8) must all show the leadership that you have always promised by taking and then delivering truly significant GHG reductions.

Let me assure you that as a responsible nation that is particularly mindful of its international obligations, India is committed to a path of sustainable development. Though India's per-capita emissions are among the lowest in the world and we are certainly not free riders or major emitters, we have recently adopted a strong National Action Plan on Climate Change.

Our efforts, of course, would be greatly enhanced with global support, especially in terms of financial flows and technology access.

India is determined that even as we pursue our economic growth and development, our per-capita emissions will not go beyond those of the developed countries.

But, this convergence idea is also a challenge to the developed countries. The quicker you reduce your emissions, the greater the incentive for us to follow.

I am grateful to Chancellor Merkel, President Sarkozy and Prime Minister Gordon Brown, who have welcomed this approach.

If we are to honestly address the climate change challenge, it is important that we recognize the right to equal sustainable development and historical responsibility.

An equitable burden and carbon space sharing paradigm is also the key to realizing the ultimate objective of the Convention.

And, for real success, we have to eschew unsustainable consumption patterns and lifestyles worldwide.

I also believe that technology is a critical transformation agent for both mitigation and adaptation.

Collaborative R&D between developing and developed country institutions for affordable advanced clean technologies as well as their transfer, deployment and diffusion in developing countries needs to be expedited.

There is also a need for a fairer IPR regime for advanced clean technologies so that rewards for innovators are sufficiently remunerative and at the same time they are made available to developing countries at affordable cost. Indeed there is a strong case that critical technologies be treated as global public goods.

It is also important that standards and norms are reflective of the developmental context to which they apply.

Climate Change is a certainly huge challenge for all of us.

But it should not be used to add conditionalities to the already complex development challenges that we face in developing countries or maintaining economic status quo or attempting to introduce protectionism by another means.

We should look at it as a challenge and as an opportunity and work together for cooperative and collaborative action on an issue of great importance to the future of mankind¹.

Thank You.

1 Foreign Secretary on board the Prime Minister's Special flight on way back to New Delhi briefing the accompanying media about the discussions that took place around the table said: "They then moved to the Major Economies Meeting which was to decide on climate change. I presume you have seen the declaration that issued and seen what Prime Minister said. I think you have seen the main issues. The G8 communiqué, declaration yesterday, for the first time had a long-term goal, not very clear but saying 50 per cent reduction in greenhouse gas emissions by 2050 without saying what the base was, 50 per cent on what, or saying how one would get to 50 per cent by that time. In other words it was not clear at all how this would be divided, who would take what cuts. Our criteria have been quite clear right through. In fact, we have pushed for interim goals as well, for the primary responsibility of the developed countries that those who made the problems should really take the cuts, and that those who have already occupied the carbon space cannot keep occupying it. We have for our part said that we are willing to do our bit as well by making it quite clear that our per capita emissions will not exceed those of the average emissions of the developed countries. Prime Minister made the same offer again and made it clear that while we are willing to be responsible partners in this exercise there has to be common and differentiated responsibilities according to the capabilities, and that the primary responsibility is with the developed countries to address this problem. The polluter pays, I think, was the principle that we use."

168. Declaration of Leaders of Major Economies on Energy Security and Climate Change.

Hokkado (Japan), July 9, 2008.

We, the leaders of Australia, Brazil, Canada, China, the European Union, France, Germany, India, Indonesia, Italy, Japan, the Republic of Korea, Mexico, Russia, South Africa, the United Kingdom, and the United States met as the world's major economies in Toyako, Hokkaido, Japan, on 9 July, 2008, and declare as follows:

1. Climate change is one of the great global challenges of our time. Conscious of our leadership role in meeting such challenges, we, the leaders of the world's major economies, both developed and developing, commit to combat climate change in accordance with our common but differentiated responsibilities and respective capabilities and confront the interlinked challenges of sustainable development, including energy and food security, and human health. We have come together to contribute to efforts under the U.N. Framework Convention on Climate Change, the global forum for climate negotiations. Our contribution and cooperation are rooted in the objective, provisions, and principles of the Convention.
2. We welcome decisions taken by the international community in Bali, including to launch a comprehensive process to enable the full, effective, and sustained implementation of the Convention through long-term cooperative action, now, up to, and beyond 2012, in order to reach an agreed outcome in December 2009. Recognizing the scale and urgency of the challenge, we will continue working together to strengthen implementation of the Convention and to ensure that the agreed outcome maximizes the efforts of all nations and contributes to achieving the ultimate objective in Article 2 of the Convention, which should be achieved within a time frame sufficient to allow ecosystems to adapt naturally to climate change, to ensure that food production is not threatened, and to enable economic development to proceed in a sustainable manner.
3. The Major Economies Meetings constructively contribute to the Bali process in several ways:
 - First, our dialogue at political, policy, and technical levels has built confidence among our nations and deepened mutual

understanding of the many challenges confronting the world community as we consider next steps under the Convention and continue to mobilize political will to combat global climate change.

- Second, without prejudging outcomes or the views of other nations, we believe that the common understandings in this Declaration will help advance the work of the international community so it is possible to reach an agreed outcome by the end of 2009.
 - Third, recognizing the need for urgent action and the Bali Action Plan's directive for enhanced implementation of the Convention between now and 2012, we commit to taking the actions in paragraph 10 without delay.
4. We support a shared vision for long-term cooperative action, including a long-term global goal for emission reductions, that assures growth, prosperity, and other aspects of sustainable development, including major efforts towards sustainable consumption and production, all aimed at achieving a low carbon society. Taking account of the science, we recognize that deep cuts in global emissions will be necessary to achieve the Convention's ultimate objective, and that adaptation will play a correspondingly vital role. We believe that it would be desirable for the Parties to adopt in the negotiations under the Convention a long-term global goal for reducing global emissions, taking into account the principle of equity. We urge that serious consideration be given in particular to ambitious IPCC scenarios. Significant progress toward a long-term global goal will be made by increasing financing of the broad deployment of existing technologies and best practices that reduce greenhouse gas emissions and build climate resilience. However, our ability ultimately to achieve a long-term global goal will also depend on affordable, new, more advanced, and innovative technologies, infrastructure, and practices that transform the way we live, produce and use energy, and manage land.
 5. Taking into account assessments of science, technology, and economics, we recognize the essential importance of enhanced greenhouse gas mitigation that is ambitious, realistic, and achievable. We will do more ? we will continue to improve our policies and our

performance while meeting other priority objectives ? in keeping with the principle of common but differentiated responsibilities and respective capabilities. Achieving our long-term global goal requires respective mid-term goals, commitments and actions, to be reflected in the agreed outcome of the Bali Action Plan, taking into account differences in social and economic conditions, energy mix, demographics, and infrastructure among other factors, and the above IPCC scenarios. In this regard, the developed major economies will implement, consistent with international obligations, economy-wide mid-term goals and take corresponding actions in order to achieve absolute emission reductions and, where applicable, first stop the growth of emissions as soon as possible, reflecting comparable efforts among them. At the same time, the developing major economies will pursue, in the context of sustainable development, nationally appropriate mitigation actions, supported and enabled by technology, financing and capacity-building, with a view to achieving a deviation from business as usual emissions.

6. We recognize that actions to reduce emissions, including from deforestation and forest degradation, and to increase removals by sinks in the land use, land use change, and forestry sector, including cooperation on tackling forest fires, can make a contribution to stabilizing greenhouse gases in the atmosphere. These actions also reduce climate change impacts and can have significant co-benefits by maintaining multiple economic goods and ecological services. Our nations will continue to cooperate on capacity-building and demonstration activities; on innovative solutions, including financing, to reduce emissions and increase removals by sinks; and on methodological issues. We also stress the need to improve forest-related governance and cooperative actions at all levels.
7. We recognize that adaptation is vital to addressing the effects of inevitable climate change and that the adverse impacts of climate change are likely to affect developing countries disproportionately. We will work together in accordance with our Convention commitments to strengthen the ability of developing countries, particularly the most vulnerable ones, to adapt to climate change. This includes the development and dissemination of tools and methodologies to improve vulnerability and adaptation assessments, the integration of climate change adaptation into overall development strategies, increased implementation of adaptation strategies,

increased emphasis on adaptation technologies, strengthening resilience and reducing vulnerability, and consideration of means to stimulate investment and increased availability of financial and technical assistance.

8. We affirm the critical role of technology and the need for technological breakthroughs in meeting the interlinked global challenges of energy security and climate change. In the near term, broader deployment of many existing technologies will be vital for both mitigation and adaptation. In particular, energy conservation, energy efficiency, disaster reduction, and water and natural resource management technologies are important. We will promote the uptake and use of such technologies including renewables, cleaner and low-carbon technologies, and, for those of us interested, nuclear power. Technology cooperation with and transfer to developing countries are also vital in this effort, as is promoting capacity building. For the longer term, research, development, demonstration, deployment, and transfer of innovative technologies will be crucial, and we acknowledge the need to enhance our investment and collaboration in these areas. Mindful of the important role of a range of alternative energy technologies, we recognize, in particular, the need for research, development, and large-scale demonstration of and cooperation on carbon capture and storage. We also note the value of technology roadmaps as tools to promote continuous investment and cooperation in clean energy research, development, demonstration, and deployment.
9. We recognize that tackling climate change will require greater mobilization of financial resources, both domestically and internationally. There is an urgent need to scale up financial flows, particularly financial support to developing countries; to create positive incentives for actions; to finance the incremental costs of cleaner and low-carbon technologies; to make more efficient use of funds directed toward climate change; to realize the full potential of appropriate market mechanisms that can provide pricing signals and economic incentives to the private sector; to promote public sector investment; to create enabling environments that promote private investment that is commercially viable; to develop innovative approaches; and to lower costs by creating appropriate incentives for and reducing and eliminating obstacles to technology transfer relevant to both mitigation and adaptation.
10. To enable the full, effective, and sustained implementation of the Convention between now and 2012, we will:

Work together on mitigation-related technology cooperation strategies in specific economic sectors, promote the exchange of mitigation information and analysis on sectoral efficiency, the identification of national technology needs and voluntary, action-oriented international cooperation, and consider the role of cooperative sectoral approaches and sector-specific actions, consistent with the Convention;

Direct our trade officials responsible for WTO issues to advance with a sense of urgency their discussions on issues relevant to promoting our cooperation on climate change;

Accelerate enhanced action on technology development, transfer, financing, and capacity building to support mitigation and adaptation efforts;

- Support implementation of the Nairobi Work Programme on impacts, vulnerability, and adaptation to climate change;
 - Improve significantly energy efficiency, a low-cost way to reduce greenhouse gas emissions and enhance energy security;
 - Continue to promote actions under the Montreal Protocol on Substances That Deplete the Ozone Layer for the benefit of the global climate system; and
 - Intensify our efforts without delay within existing fora to improve effective greenhouse gas measurement.
11. Our nations will continue to work constructively together to promote the success of the Copenhagen climate change conference in 2009.

G-77

169. Statement of Permanent Representative at the UN Nirupam Sen at the Handing Over Ceremony of the Chairmanship of the Group of 77.

New York, January 11, 2008.

Mr. Chairman,

At the outset, let me join others in conveying greetings and warm wishes to Your Excellency Mr. Prime Minister and to Antigua and Barbuda on your election as the Chairman of the Group of 77 for the year 2008. We are confident that you will enjoy a very fruitful and productive tenure as our Chair. Allow me to underline India's full support to you and your team in all your efforts to promote and project the interests of developing countries. Such strength as India has is with you always.

I would also like to felicitate Ambassador Munir Akram and his team for ably articulating the views and concerns of this Group. Mr. Prime Minister, you have rightly emphasized unity. As the recent meetings in Bali have demonstrated yet again, a united G-77 is essential to ensure that the voice of developing countries is effectively heard. It is to our credit that despite our diverse concerns and sensitivities, the Group has been successful in projecting common positions, which takes into account the concerns of all countries, including Small and Island States. For us it is a matter of special satisfaction that a Small Island Developing State of the Caribbean has taken over the Chairmanship of this Group.

The priorities of the United Nations sometimes appear to be suboptimal because of the developed countries disproportionate control of both resources and decision making. The G-77 therefore has a vital historic role not only to resist but to transform, not just to hold the line but to be proactive. In our work in New York, we cannot hold firm if we give ear to rumours, a weapon of those who wish to erode our solidarity. Let us go by deeds, not hearsay. Sometimes pressure may be used and wherever there is the probability of pressure, we can stiffen resolve and reinforce strength through economic and technological assistance where possible and political solidarity where necessary. Very rarely even if difficulties are overwhelming and an issue dear to us is likely to be dead meat, let us at least not supply the carving knives.

The Secretary General and the representative of Suriname rightly referred to the Right to Development. Partly thanks to the G-77 this has become an established Right. At the beginning, the Right was dismissed as "a letter to Santa Claus". If this was so, then obviously Santa Claus was an honorary member of the G-77. The working group in Geneva came to the conclusion that the performance of WTO and the Bretton Woods Institutions should be examined from the point of view of this Right. We cannot be pro-active and transform unless we act boldly on economic matters. In the context of climate change, MDGs and economic development, we would have to give an impetus to the reform of the Bretton Woods Institutions (using the oversight role of ECOSOC and Resolution 61/16 as a beginning); influence the trade agenda and address the inequities of the IPR regime. Let us try to be firm and proactive in formulations and resolutions designed to achieve these objectives. This organization sometimes has skewed priorities. During the Budget negotiations, a representative of the Department of Economic and Social Affairs (DESA) had told the Fifth Committee that they did not need any more posts or resources. The Under Secretary General, DESA, has just told us authoritatively that they do. He called DESA the 'least developed' part of the Secretariat. In fact, he spoke almost like a member of G-77. The least we can do is to give him these resources so that DESA can graduate from being the least developed to being the most rapidly developing part of the Secretariat. There is core funding for peacekeeping and human rights but not for development. The successful struggle over the Budget therefore was not just for the Budget but to restore the values and character of this organization itself. We seldom recognize the quality and contribution of our delegates to this success. Let me therefore express my appreciation of Minister Imtiaz Hussain. He listened carefully to all opinions in the Group, contributed to unity and combined a knowledge and grasp of detail with unwavering firmness of articulation. This remains the formula for our success.

During 2008, proposals relating to important reform items, including strengthening of the UN Secretariat's development architecture, Department of Political Affairs, and those pertaining to human resources management, Procurement, ICT, ERP etc, would be presented by the Secretary-General to Member States. As in the past, we have to remain vigilant to ensure that the outcome of deliberations on these proposals is favorable to the developing countries. Needless to say, the unity of the Group of 77 would be of paramount importance in ensuring this objective.

We stand to make significant gains through unity and cohesion. We must not underestimate our position - the world economy has continued with

steady growth in the recent past due mainly to growth in the developing world. The real challenge is to broad-base and sustain this growth. Allow me to recall G-77's special role in promoting and fostering South-South cooperation. India has been active in sharing its developmental experiences and expertise, and we remain ready to expand such cooperation with our developing country partners in future as well. Sometimes there may be even heated discussions but it is a law of physics that amplitude is directly proportional to temperature: high temperature also means high amplitude. As you had said Mr. Prime Minister, G-77 is frequently able to propose effective solutions because diversity is our strength. It is precisely because it springs from this diversity of opinion that what we propose is rational and optimal. And it should be accepted. If the economic status quo that marked the closing years of the 20th century continues deep into the 21st century it would simply worsen security for all. As the poet says: "The One remains, the Many change and pass". We come and go but the Group remains. Therefore, above everything else is solidarity. When we go out of the door, we may sometimes be strangers among strangers but here inside in this Group we are always friends among friends.

We know your Ambassador Mr. Prime Minister from his work on sustainable development and his Chairmanship of the Fifth Committee. We have every confidence in his ability. Let me reiterate our best wishes to Antigua and Barbuda for the challenging journey ahead, as well as our whole-hearted support to it in pursuit of our common goals and objectives.

Thank You.

170. Statement by Minister of State Anand Sharma at the 32nd Annual Meeting of Ministers for Foreign Affairs of the Group of 77.

New York, September 26, 2008.

Mr. Chairman,

Allow me to congratulate and thank Antigua and Barbuda for its untiring effort in promoting the Group's interests at various UN fora this year. My greetings also extend to the Republic of Sudan on its election as the Chairman of the Group of 77 for the year 2009. We wish it all success in discharging this important role, and reiterate India's whole-hearted support.

I would also like to thank Cote d'Ivoire for its generosity and wonderful hospitality in hosting the Twelfth Inter-governmental Follow-up and Coordination Committee on Economic Cooperation among Developing Countries earlier this year.

Mr. Chairman,

The role of developing countries in the world has undergone much change since the founding of this Group. Sustained poverty eradication efforts have borne fruit in many countries, though significant challenges remain. Intra-South trade and investment flows have re-invigorated South-South cooperation. Our economies are now playing a key role in backstopping global economic growth. Yet, the shared concerns that brought us together continue to be relevant even today, particularly the challenges of poverty eradication and development.

The ongoing financial crises caused by developed country markets have also demolished the myth that the need for reform is limited to developing countries.

Unfortunately, the international economic and financial architecture, and its institutions, are not in line with the new global realities. This must change. A comprehensive review of the international economic and financial architecture, so as to ensure a greater voice and increased participation by developing countries in decision-making and norm setting processes, is urgently needed.

Mr. Chairman,

Our meeting is taking place at a crucial time. We are at the halfway stage to the MDG target date of 2015, and it appears that many parts of the world are not on track to achieve the MDGs. The global food and energy crises have exacerbated the problems, whose impact is particularly severe on the most vulnerable. The Monterrey Review Conference is to be held in end-November 2008, against the backdrop that commitments by developed countries continue to remain unfulfilled. Projections for global growth remain pessimistic.

The global partnership for development must be genuinely implemented. We have, on various occasions, highlighted the need for effective action by developed countries to reverse the declining trend in ODA, to promote investment and trade that is pro-development and facilitate transfer of and access to developing countries of advanced technologies on preferential and concessional terms. In this context, a fairer IPR regime is a must so that critical technologies, be it in public health or climate change, are treated as global public goods, and rewards for innovators are balanced with the common good of humankind.

The success of the Monterrey Review Conference should be judged against these benchmarks. The Development Cooperation Forum of the Economic and Social Council must also play a key role in overseeing the effective implementation of all facets of development cooperation, including the global partnership for development.

We are disappointed that we have had to take a pause in the WTO negotiations; on our part we remain engaged towards a successful conclusion that will have the development dimension at its core. The livelihood security of subsistence and marginal farmers in the developing world can hardly be compromised.

Mr. Chairman,

The need for unity and solidarity among developing countries remains crucial. It is a tribute to our collective efforts that we have been able to project our common interests with one voice, despite unsuccessful efforts to divide us on artificial lines. As the ongoing negotiations on climate change in the UNFCCC have demonstrated, even in areas where some of our members have somewhat varying concerns, the Group has been able to coalesce around common elements and ensure that the interests of

developing countries are adequately protected and promoted. As these crucial negotiations progress, we must ensure that the cohesiveness of the Group is maintained, and the Group takes a unified approach, based on the principle of "common but differentiated responsibilities", which recognizes the differences in the contribution of developed and developing countries to global environmental problems as well as the differences in their respective financial and technical capabilities to tackle such problems.

Another notable success of our group has been the ability to project the needs and concerns of special groups amongst us - the Least Developed Countries, the Landlocked Developing Countries, the Small Island Developing States, the African countries and others who are vulnerable and need our support. In this regard, we reaffirm India's support to the High-Level meeting on Africa's development needs held earlier this week, and the Mid-term review of the Almaty Programme of Action, to be held next week.

Before concluding, Mr. Chairman, I would like to reiterate India's commitment to South-South cooperation and the role of the G-77. India is already active in sharing its developmental experiences with numerous partner countries, as also its expertise in certain areas of capacity building and technology. India will further expand and intensify such cooperation with our developing country partners in the years ahead.

Thank you, Mr. Chairman.

IBSA

171. Press Statement issued on the Ministerial Meeting of the INDIA - BRAZIL - SOUTH AFRICA (IBSA) DIALOGUE FORUM.

New York, September 29, 2008.

The Ministers of Foreign Affairs of India, Mr. Pranab Mukherjee; Brazil, Mr. Celso Amorim; and South Africa, Dr. Nkosazana Dlamini Zuma; met in New York on 29 September 2008 on the occasion of the 63rd Session of the United Nations General Assembly. They exchanged views on a number of issues on the international agenda and discussed topics related to the India-Brazil-South Africa Dialogue Forum (IBSA).

The three Ministers reaffirmed their commitment to the further strengthening of IBSA and their joint resolve to enhance coordinated positions on global political and multilateral issues of importance, especially in terms of those issues which have a major impact on developing countries, such as the imperative to reform Global Governance institutions to be more representative and democratic.

They further discussed improved mechanisms to streamline and fast-track the disbursement of funds from the IBSA Trust Fund to identified beneficiaries from least developed countries in order to make progress with the implementation of projects. In this regard, the three IBSA partners approved the review report and expressed satisfaction that the IBSA Facility Fund for Poverty and Hunger Alleviation, which is a tangible example of South-South cooperation, has approved support projects, in addition to existing projects in Haiti (solid waste management) and Guinea-Bissau (agriculture development), in the following developing countries:

- **Guinea-Bissau:** agriculture development (phase II) and reliable energy supply in key locations
- **Burundi:** strengthening infrastructure and capacity to combat HIV/ Aids
- **Lao People's Democratic Republic:** irrigation and watershed management
- **Cape Verde:** refurbishment of health care infrastructure

- **Palestine:** building of a sports facility to promote constructive youth engagement

The Ministers took note with satisfaction that most of the Working Groups of IBSA have met or would be meeting in India in September - October, 2009, prior to the forthcoming Third IBSA Summit. They welcomed the new agreements/MOUs that are envisaged to be signed at the Summit.

They noted with satisfaction that preparations for the Third IBSA Summit were proceeding satisfactorily.

The Ministers noted that the Focal Points will meet in New Delhi on 10 October 2008, and if necessary, prior to that, to finalize arrangements for the Summit.

The Ministers also discussed UN Security Council Reform, and expressed satisfaction at the decision of the General Assembly to commence intergovernmental negotiations, based on proposals of Member States, in the informal plenary of the UN General Assembly, no later than 28 February 2009. They emphasized the need for urgent reform of the Security Council, that would include its expansion in both categories of membership, permanent and non-permanent, in order to render it more democratic, legitimate, representative and responsive. They reiterated their commitment to continue to jointly pursue a decision on the Security Council expansion on an urgent basis, with a view to achieving concrete results.

The preparations for the 3rd IBSA Summit were also part of the three Minister's agenda and they agreed to meet again on the eve of that occasion.

172. Inaugural Address By External Affairs Minister Pranab Mukherjee at the Academic Forum : "IBSA Partnership For Shared Prosperity & Inclusive Globalization".

New Delhi, October 13, 2008.

Dr. Arjun Sengupta, Member of Parliament and Chairman, RIS,

Excellencies,

Academicians from India, Brazil and South Africa,

Ladies and Gentlemen,

It gives me great pleasure to inaugurate the Third IBSA Summit Academic Forum organized by RIS. The meeting of minds of academics and members of think-tanks of the IBSA has to contribute a lot to the IBSA process by constantly providing ideas and visions. I believe that over time the Academic Forum of IBSA should evolve into a think-tank of the IBSA process.

2. IBSA represents an important milestone in the area of South-South Cooperation (SSC) bringing together three leading democracies in the developing world representing the three continents combining between them substantial developmental experiences.
3. Developing countries have talked of the philosophy of South-South Cooperation for development for a very long time. A number of initiatives were launched during the 1960s and 1970s. However, progress was modest because of lack of resources and institutional weaknesses in developing countries. With the emergence of countries like Brazil, India and South Africa in this millennium with considerable capabilities and collective development experiences that South-South cooperation has begun to be seen as a viable strategy. Recent trends suggest that developing countries are revitalizing South South Cooperation as a new engine of growth. Developing countries in different regions are also establishing their own schemes of regional economic integration, e.g. Mercosur, Comesa and SACU, AFTA, SAFTA and BIMSTEC. The Bangkok Agreement and the GSTP are being revitalized. The South-South trade is growing rapidly. With the emergence of new dynamic enterprises in these countries even South-South investments and technology transfers have begun to increase.

4. IBSA is among the latest developments with respect to South-South Cooperation set up to explore the possibilities for closer economic cooperation in a Trilateral Dialogue for mutual benefit and for international development.
5. India, Brazil and South Africa share common economic and political history and have stood together in different multilateral fora on more than one occasion for the cause of developing world. India's contribution to South Africa's struggle against apartheid has been widely acknowledged. India and Brazil, though separated by geographical distance, found close to each other on various issues of concern for the developing countries and worked together in the GATT/WTO negotiations for many years. Three of us were instrumental in setting up of the G-20 group of developing countries in the WTO at Cancun Ministerial Conference in 2003 that has since become an important coalition of developing countries to articulate collective interests of the South in a critical area of negotiations viz. agriculture.
6. Apart from shared political and economic history there are significant synergies between these countries that offer fertile ground for economic cooperation. Over the years these countries have built up substantial capability in different spheres. The capabilities of these countries in different spheres could be shared among them and fully utilized for the development of the South in general.
7. I believe that our trilateral cooperation has much potential for reinforcing the economic strengths of each other by synergizing their complementarities in areas of industry, services, trade and technology. We are moving towards a comprehensive economic cooperation arrangement bringing together members of South African Customs Union - India and members of MERCOSUR countries. Such an arrangement would create a large and expanding economic space and provide a framework to exploit our synergies in trade, technology and industrialization for our mutual advantage. In a number of sectors of industry and services, IBSA countries have developed considerable expertise which can be shared for mutual benefit. Studies conducted by think-tanks such as RIS point to fruitful opportunities for cooperation in many areas such as energy, agriculture and food processing, tourism, transport infrastructure, mining, ICT, among others. We can also benefit from each other's

development experiences such as in development and promotion of small and medium enterprises, or expanding universal education as in Brazil, empowerment of weaker sections in South Africa, or Indian experiences in e-governance, among others. IBSA partnership will help in exploitation of this potential.

8. The recent rise in oil and food prices the world over has also led to a major concern about development as it affects poor the most. In that context a discussion of the issues concerning food and energy security is most timely. We need to consider ways and means of our mutual cooperation contributing to enhanced food and energy security.
9. We should also exploit the strategic potential of IBSA partnership in building a more inclusive and equitable global economic order. This would include our cooperation along with other co-developing countries in shaping a more development-friendly world trading system that is responsive to our developmental aspirations. IBSA cooperation can also expedite the long-pending reform of the international financial architecture to serve our requirements. Need for such a reform has become all the more critical in view of the current financial crisis in the US leading to turmoil in the capital and financial markets the world over.
10. Such turmoil in the global markets further enhances the imperative of South-South cooperation. In these times, we can serve as growth poles for each other. India-Brazil and South Africa, being amongst the leading economies of the three continents are also conscious of their responsibility to other developing countries. Hence they have set up an IBSA Fund for Poverty Alleviation. This Fund has begun to support projects of cooperation in some of the poorest countries such as Guinea Bissau, Haiti, Burundi, Laos, etc. I believe that the IBSA cooperation has a potential to emerge as a new role model for the South-South Cooperation in the new millennium.
11. I am happy to learn that the IBSA Academic Forum will be discussing some of these issues in your deliberations.
12. I wish you all the best in your endeavours.

**173. Remarks of External Affairs Minister Pranab Mukherjee
at the Inaugural Session of 2nd IBSA Editors' Forum.**

New Delhi, October 13, 2008.

Secretary Shri Nalin Surie

President of the Centre for Policy Research, Dr. Bhanu Pratap Mehta,

Distinguished Editors from Brazil, South Africa and India

Ladies and Gentlemen,

It is my pleasure to formally inaugurate the 2nd IBSA Editors Forum this morning in New Delhi, on the eve of the 3rd IBSA Summit.

I warmly welcome the distinguished opinion makers from Brazil, South Africa and India. As fellow democracies, we all understand and commend, the critical role being played by the media in shaping public opinion. That is precisely why this forum is so important. While IBSA since its inception in 2003, has already gained a lot of traction, yet the potential is still to be attained and the marked information gap is still to be bridged, which can only be done with the media leading from the front.

I would at the outset like to commend the Centre for Policy Research, under Dr. Mehta's stewardship for crafting such an imaginative and pertinent agenda for the 2-day forum. We IBSA nations, collectively and individually, are grappling with issues like capacity building; New Architecture of Global Governance including UN reforms; Breaking Global Deadlocks on Trade, Climate Change and Energy matters; managing the unfolding global economic crisis - to name just a few.

I am pleased to note that IBSA nations have a similarity of approach on many global issues, including UNSC reforms, the future of multilateralism, South-South Cooperation and multilateral trade negotiations. This has led to fruitful cooperation at various forums such as the UN, IAEA, WTO, G-77, G-20 and G-8 plus 5 outreach nations. India greatly appreciates the strong proactive support of Brazil and South Africa to the proposal to enable full civil nuclear cooperation with India at the IAEA and the NSG meetings, which enabled India to get the historic waiver from the NSG.

IBSA countries have taken rapid strides in building on synergies and forging trilateral linkages, in a number of key areas including health, agriculture,

education, transport, energy, science & technology and IT. To cite just one example Brazil agreed to share with India and South Africa, on a preferential basis, its technologies and expertise in ethanol and other bio-fuels. India offered to share expertise in wind resource. South Africa too has world-class technologies in the synthetic fuels industry from which the other two countries can benefit. Our cooperation is a Win Win proposition benefiting our nations, as well as, fellow developing countries.

Economic and commercial relations among IBSA nations are flourishing. We have established a target of US \$15 billion in intra-IBSA trade by 2010. Investments in all three directions are on the upswing. IBSA is now recognized as a grouping with enormous potential for political, economic and people-to-people cooperation. Not only our people but also the international community looks at IBSA with admiration, which has demonstrated that geographical distance is no hindrance in forging cooperative ties when there is a will, similarity of outlook and commonality of aspirations.

Brazil, South Africa and India have together charted out an ambitious road map for the future and are taking purposeful strides towards attaining the targets, as well as, establishing new benchmarks. I am certain that this forum will yield fruitful ideas. Your recommendations will provide valuable inputs for the deliberations of the IBSA summit, which will be held on the 15th. I wish all success to the 2nd Editors Forum and hope you have a pleasant experience in India.

Thank you.

**174. Remarks by Secretary (West), Ministry of External Affairs
Nalin Surie at the Inaugural Session of 2nd IBSA Editors'
Conference.**

New Delhi, October 13, 2008.

I am delighted to be present at the Second IBSA Editors' Conference in New Delhi, which is taking place within a span of just over a year. The idea for this forum came up when we were in the midst of the IBSA trilateral Ministers Meeting in Delhi in July last year. We all agreed that for IBSA to meaningfully evolve, it must belong to the people of the three countries and to our civil societies. And, hence, the criticality of the media of the 3 countries and in particular of opinion makers in the media to meet and help propagate the Forum in our countries.

IBSA is a unique forum. Shared values, beliefs, interests, concerns and challenges have brought and bonded us together. It is still in its infancy but it is growing well. It has gained a clear international salience. The 16 WGs have drawn up concrete plans of cooperation. Information and cultural differences are being overcome.

This Editors Conference, on the theme - "Multipolarity and the New World Order" will afford you a useful platform to reflect on important issues on our agenda. We look forward to your suggestions and recommendations on these.

I do not wish to stand much longer between you and the Hon'ble EAM. We look forward to hearing his inaugural address. He has, over the last 2 years devoted great time and energy in helping IBSA grow steadily.

Thank you.

175. Media Briefing by Secretary (West) Ministry of External Affairs Nalin Surie on 3rd IBSA Summit.**New Delhi, October 14, 2008.**

I last briefed you on the IBSA Forum on 9 October last year prior to PM's departure to Nigeria and South Africa. In South Africa, PM had attended the Second IBSA Forum Summit. I will, therefore, not repeat to you what IBSA is all about.

The Third Summit will be hosted by Prime Minister Manmohan Singh in Delhi tomorrow and will be attended by President Lula of Brazil and President Motlanthe of South Africa. In the run up to the Summit, the Focal Points (my counterparts and I) have been preparing the documentation and since early September the Working Groups have been meeting. Fourteen of the sixteen have met just prior to the Summit. The other two on Culture and Agriculture had met earlier in South Africa in May this year. The Working Groups that met are on Climate Change & Environment, Defence, Education, Energy, Health, Human Settlement Development, Information Society, Trade & Investment, Transport, S&T, Social Issues, Tourism, Public Administration and Revenue Administration. The scope of the Working Groups reflects the very wide-ranging areas of cooperation that we are covering under IBSA.

Prior to this Summit, we have also had meetings yesterday and today of the IBSA Academic, Business Summit, Editors and Women's Forums. Many of you may have covered these meetings. The Forums represent outreach activity which is considered vital for the steady development of IBSA.

The Forums will report directly to the Summit tomorrow. The Working Groups' Reports will reach the Summit through the Focal Points whose Report in turn will be reviewed by the Ministers tonight and then placed before the Summit.

Associated with the Summit, we have also organised IBSA Food and Cultural Festivals. We expect that an IBSA Film Festival will be part of the next IFFI.

The Summit tomorrow will be divided in two segments. The morning Plenary will be an open one and the afternoon Plenary will be closed. The Heads of State / Government will address a Joint Press Conference tomorrow

afternoon. A Delhi Summit Declaration will issue. We also expect to sign up to seven MOUs/Agreements/Action Plans.

The Summit will also provide the leaders an opportunity to exchange views on issues of international and regional interest and concern to them.

Tomorrow night, Presidents Lula and Motlanthe will call on our President who will thereafter host them to a cultural show, followed by a banquet.

Prime Minister will hold bilateral consultations with both Presidents Lula and Motlanthe after the Summit meeting.

The Delhi Summit will complete the first cycle of IBSA's annual Summits. The second cycle will begin with the Fourth Summit in Brazil next year.

The IBSA Dialogue Forum is developing well and gaining salience. It is our intention to further strengthen this unique Forum of three very large developing country democracies from three different continents.

176. Opening Remarks by Prime Minister Dr. Manmohan Singh at the Third IBSA Summit.

New Delhi, October 15, 2008.

Your Excellency President Lula of Brazil

Your Excellency President Motlanthe of South Africa

Distinguished delegates and participants in the IBSA Forums

Ladies and Gentlemen,

I wish to welcome Presidents Lula and Motlanthe and their delegations to India for this Third Summit meeting of the IBSA Dialogue Forum.

We are honoured that President Motlanthe's first visit overseas after assuming office is to India for the IBSA Summit. I would like to take this opportunity to place on record, on behalf of all of us, our deep appreciation for the contribution made by President Thabo Mbeki in supporting and taking IBSA forward.

Ladies and Gentlemen,

IBSA is a unique forum. It brings together three democracies, with dynamic developing economies located in three different continents.

Our countries are bound together by shared values and commitment to pluralism, human rights and the rule of law.

The IBSA Forum provides a platform for us to learn from each other's experiences and to synergise our complementarities in a mutually beneficial manner. Our three countries also have a key role to play in ensuring equitable global growth and in contributing to international stability.

As a result of our first Summit in Brazil and second Summit in South Africa, we have intensified our trilateral cooperation. We are grateful to Brazil and South Africa for their untiring efforts towards this end. Today, IBSA has emerged as a role model for effective South-South cooperation. I compliment our Foreign Ministers and officials who have guided the process and kept faith in the idea of IBSA.

This is our third Summit. It marks the end of the first cycle of our Summit meetings. This is an ideal opportunity to take stock of how far we have travelled, where we stand and what the road ahead should be.

I am pleased that the Working Groups are now making efforts to identify concrete projects and activities for trilateral cooperation. Our focus must constantly remain on implementation so that the benefits of our cooperation can be brought to the doorsteps of our people.

The Dialogues held during the last two days by the Business, Academic, Editors and Women's Forums have been enriching and have contributed to making IBSA a truly people's movement. We look forward to receiving the reports of the Forums' deliberations.

A good beginning has been made in evolving a Social Development Strategy for IBSA. India has also circulated a Concept Paper on the future of agricultural cooperation within IBSA.

Improving connectivity among ourselves remains a challenge and must remain a strategic objective.

IBSA has an important role to play internationally. We are meeting against the backdrop of the international financial crisis.

Our voice on how to manage this crisis in a way that does not jeopardize our development priorities needs to be heard in international councils.

We need more than ever before a renewed effort to reform the institutions of international governance, whether it is the United Nations or the G-8. We need to work purposefully towards the conclusion of the Doha Round of trade talks in a manner that promotes development and inclusive growth. The increase in energy and food prices and the challenge of terrorism threaten our developmental efforts.

IBSA is uniquely placed to cooperate in these important areas. I am confident that our Summit today will lead to productive outcomes on all these important issues.

India is committed to ensuring that IBSA realises its great potential.

Thank you.

177. Remarks of Prime Minister Dr. Manmohan Singh after the presentation of IBSA Reports.

New Delhi, October 15, 2008.

I have listened with great attention to the reports presented on the outcome of the IBSA Academic Forum, Business Summit, Editors Forum and Women's Forum. Together with the proposed Parliamentary Forum, these Forums are critical for mainstreaming and broad basing IBSA's cooperation activities.

It is only with the broadest possible participation of different segments of society, decision makers and intelligentsia that we will be able to attain the full potential of IBSA for cooperation.

The range of issues covered in the discussions of these Forums is indeed impressive. Discussions have covered reform of global economic governance and the UN, food and energy security, WTO, transportation and connectivity, role of bio-fuels, visa facilitation, climate change, gender equality and poverty eradication.

These are all vital issues that affect our three countries. Our collective experiences and joint activities would be of benefit not only to us but also to other developing countries.

We have set for ourselves a target for trilateral IBSA trade of US\$ 15 billion by 2010. As per current trends, it appears that we would be able to achieve this. If President Lula and President Motlanthe agree, I propose that we set a target of US\$ 25 billion by 2015. This would be a challenge not only for our three governments but also for trade and industry to work with greater enthusiasm and vigour.

A study prepared for the IBSA Business Summit concludes that the three IBSA countries have a lot to contribute to each other's economies to augment the process of international economic integration. However, the current levels of intra-IBSA economic linkages are far from optimal though growing rapidly.

I suggest that all the three governments reflect on some of the proposals that have been mooted at the Summit for greater trade integration and multi-sectoral linkages. These include a Comprehensive Economic Cooperation Agreement and a Protocol on Trade and Business Facilitation that includes the major business associations of the three countries.

We should also study some of the proposals made for enhancing connectivity and logistical linkages by encouraging private sector participation in IBSA routes. These include promotion of long term arrangements between shippers and carriers using incentives, development of a dedicated IBSA trans-shipment facility in South Africa to connect India and Brazil and strategic partnerships between the large domestic logistics operators of the three countries.

The Academic Forum is a valuable part of the IBSA process. Lively exchanges among our academics and scholars are essential to develop the intellectual basis for common understandings. I know that the Forum has had very substantive discussions on the current economic crisis over the past few days. The Forum must now think of how to develop mechanisms for structured interaction with the governments so that their findings can be factored into policy making.

The subject of women's empowerment is not often given the importance it deserves. As we saw from the presentation that was made, there are a number of issues, many of them cross cutting in nature, on which the Women's Forum has had substantive discussions. I commend the work of the Forum.

Each of our countries has a vibrant media. They will play the most important role in educating our people about IBSA and in general about each other. I do hope that the ideas presented today will be carried forward.

I am happy that we are discussing the establishment of an IBSA Parliamentary Forum. This will add a vital new dimension to our process of cooperation. The strengthening of the IBSA ethos in our Parliaments would help further strengthen our collective effort to bring our countries and people closer together.

Before I conclude, I would like to congratulate the participants in the different Forums and thank them for their contribution and efforts. I would urge them to widely disseminate the outcome of their endeavours in their countries so that we can further engender the IBSA spirit.

178. Joint Press Conference by IBSA Leaders at the end of 3rd Summit of IBSA Dialogue Forum.

New Delhi, October 15, 2008.

Official Spokesperson (Shri Vishnu Prakash): Good evening and welcome to the Joint Press Conference. Hon'ble Prime Minister of India, His Excellency the President of Brazil, His Excellency the President of South Africa, in that order, would be making opening statements. Thereafter they will take one question from each side. Thank you.

Prime Minister of India (Dr. Manmohan Singh): Your Excellency President Lula; Your Excellency President Motlanthe; Excellencies; ladies and gentlemen of the media:

We have just concluded the Third Summit of the IBSA Dialogue Forum. We have had very friendly and constructive discussions. I thank President Lula of Brazil and President Motlanthe of South Africa for their guidance and for their contribution in making the Summit a success.

This Summit completes the first cycle of IBSA annual summits. Our unique forum has covered considerable distance since we established it. Our cooperative programmes are beginning to take effect. The process of coordinating on international issues of importance and of assisting other countries in the South has also taken root.

We exchanged views in depth on some of the crises that confront the international community today, viz. the international financial crisis and the rise in energy and food prices. We agreed on some ideas to tackle them and to collaborate closely as the international community grapples to find satisfactory solutions. To this end, we have decided to instruct our Finance Ministers and Governors of Central Banks to convene a meeting, as soon as possible, in order to establish a coordination mechanism. We already have Working Groups on Energy and on Agriculture and these bodies would carry forward our discussions.

India has circulated a paper on possibilities in cooperation in agriculture within IBSA and there are suggestions there on how to deal with food security. We discussed the role of clean energy in dealing with our energy needs. I thanked the Presidents of Brazil and South Africa for their support in opening up civil nuclear cooperation for India.

Trade and investment linkages among our three countries are growing. The current crisis affecting the international economy has made it that much more important for us to explore one another's markets for mutually beneficial opportunities.

It is our expectation that the target of US\$ 15 billion by 2010 would be achieved. We have accordingly agreed to set a target for trilateral trade of US\$ 25 billion by 2015. For this purpose, we have agreed to instruct our appropriate financial authorities to explore new mechanisms to facilitate and increase trade among us and our trade negotiators should address the negotiation of the India-MERCOSUR-SACU trade arrangement in a time bound manner. Inadequate connectivity, in particular air connectivity, continues to impede greater trade and investment linkages. The Business Summit has discussed some proposals and we will examine them expeditiously.

We are currently in the phase of consolidation of the IBSA Forum and of propagating its benefits within our three countries. In this context we agreed on the importance of greater association and participation of civil society in our activities.

We are, therefore, pleased that the academic, business, editors and women's forums met just prior to our Summit and made useful suggestions for further strengthening collaboration among our three countries. We look forward to expanding the coverage of the forums to include our Parliamentarians in the near future.

I am fully satisfied with the outcome of our Summit. We look forward to the fourth summit to be held in Brazil in early October, 2009.

I thank you.

President of Brazil (Mr. Luiz Inacio Lula da Silva): *My dear friend and Prime Minister Singh; my dear friend President of South Africa President Motlanthe; dear friends from the press; Ministers:*

I believe that at the end of this Summit meeting it gives me the certainty that we were following the right path when we decided to create IBSA. It is very important for the press to perceive that IBSA has no executive secretariat; it has no headquarters. What drives IBSA is motivation and

the understanding that three very strong countries from the South are together adding up their forces, are becoming even stronger; and together we can do much more.

I believe that it is extremely important, the participation of civil society representatives at IBSA. I believe the participation of the segments - business community, women, intellectuals, Ministers, judges from the judiciary power, editors - is extremely important because they give us the substance and they embody what we plan to do from here onwards.

Certainly we are discovering everyday the need that we have to work more and more. The number of agreements and memorandums of understanding that our Ministers have signed here today was really very important. But at the same time it demonstrates that we are still far away from achieving a fulfillment of all the potentiality that exists for South Africa, Brazil and India. That is why I would like to thank Prime Minister Singh for conducting the work today, for the warmth and hospitality that we received here in India.

I hope that next year I will host the meeting in Brazil and receive you all and have the same performance to reach the same number of agreements that have been signed here, and to treat you with the same warmth that I received here.

So my dear friend, thank you very much. I can reassure you that our meeting was extraordinary.

President of South Africa (Mr. Kgalema Petrus Motlanthe): His Excellency Prime Minister Singh, His Excellency President Lula of Brazil, hon'ble Ministers, members of the media:

We have emerged from a very successful IBSA Summit. We had fruitful deliberations covering a whole range of subjects, but most important of all we emerged with concrete plans contained in the memorandums of understanding and cooperation and action plans. We discussed and analysed the current financial crisis raging through Europe and the United States of America, and agreed that we need to direct our Ministers of Finance, Governors of Central Banks, Ministers of Trade and Industry, to come together and develop an adequate response to this crisis.

We have also explored possibilities of consolidating and strengthening trade among the IBSA countries with a view of expanding on participation of our people in order to ensure that we meet the Millennium Development Goals as set by the United Nations. The natural affinity between our countries and our people is a strength that we believe, properly tapped and harnessed, could elevate IBSA into a very important player in matters of wealth and development.

I take this opportunity to thank His Excellency Prime Minister Singh for his hospitality and the able manner in which he guided the deliberations today. I also take this opportunity to thank President Lula for his incisive analysis of the current situation. I believe that going forward in a concerted effort we could place IBSA on a very high pedestal and ensure that it serves as an engine for the economic development of our three countries and our three continents.

With these words I would like to pay my respects and thanks to President Lula because among the three of us he is a co-Founder together with those who came before us, in my case former President Mbeki, for their vision of establishing IBSA because I believe it has got a very important role to play in today's world affairs.

Thank you.

Question (Mr. Manish Chand, Indian Media): Two quick questions. The first is addressed to the South African President. Sir, your country is very rich in uranium. Now that the NSG has granted waiver to India, will your country consider selling uranium to India? My second question is addressed to Prime Minister Manmohan Singh. Sir, a very grim situation is developing in Sri Lanka. Apparently thirty MPs have threatened to resign over the situation in Jaffna peninsula. Have you spoken to the Sri Lankan President on this issue?

President of South Africa: As you would no doubt know, we supported India's efforts in their negotiations with the United States of America regarding nuclear power, and we have absolutely no difficulties or objections to selling uranium to India. That we will do without any difficulties.

Prime Minister of India: To the question that was addressed to me with regard to the situation in Sri Lanka, let me say that the situation in Sri Lanka remains a cause of serious concern to the Government of India. We

are concerned about the escalation of hostilities, the losses suffered by the civilian population and also the increasing number of internally displaced persons. Also we have been concerned about the harassment and killing of Indian fishermen while fishing in the neighbouring areas. In all these matters we have made representations to the Government of Sri Lanka. Only a week ago, the National Security Advisor called the Sri Lankan High Commissioner to make necessary representations to Sri Lanka. We have always believed that the situation in Sri Lanka does not call for a military victory. It calls for a negotiated political settlement which respects the unity and integrity of Sri Lanka and at the same time respects and grants the essential human rights of the minorities, particularly the Tamil minorities.

Question (Mr. Paulo, Brazilian Media): President Lula has talked a few times about the need of a new architecture for the world both to tackle this crisis and the new architecture that should arise after this crisis is finished. President Lula, what role should the major developing countries such as ours play on this new architecture? And concretely what should we do to get to such role; what should we do to tackle this crisis; and what should our countries do concretely to fulfill this role? Secondly, President Lula, I would just like to extend the question of my Indian colleague to you also. Is Brazil intending to sell uranium to India?

President of Brazil: *I just have to remember the first part of your question and that is what do the Brazilians do; what is our share? First on the economic crisis, the first task that should be undertaken by the emerging countries, we have done it already. Our economies are stabilized. We all have reserves in hard currency. We all have surplus. We have a positive balance in our trade balance. And we have full control over our financial system. So this first part of the issue, we have done well.*

Now the second part is not to allow that this crisis should come and affect our countries. What should we do? In my opinion, against the crisis we should be more bold. We should have much more determination. And at the same time we should establish, we should have much more understanding to increase the trade flow amongst the emerging countries to enhance our domestic markets and continue with the stabilization of our economies in our countries. Here in the IBSA meeting we have decided that it is necessary to call for immediate meeting of the Finance Ministers of Brazil, South Africa and India, that we should also call the Governors

of the Central Banks of the three countries, the Trade and Industry Ministers of the three countries, plus the Foreign Affairs Ministers. So we can assume a joint position of the three IBSA member countries. And I will even say that this call is urgent. The second issue that we have to undertake is to talk with our friends either in the US or in the European Union that they should undertake the action that they should do immediately so that the effects of the crisis should not reach the less-developed countries that did not participate in this financial casino. They did not attend the casino and at the same time they were concerned and implemented surveillance and supervision in their financial systems. So, what are we watching?

The first time I mentioned about the subprime crisis was in September, 2007. We are already in October of 2008 now. And it was only in the last two weeks when the main leaders of Europe and of the US finally understood that there was a crisis going on in their countries. This is something unimaginable that it took more than a year for them to assume the responsibility that there was a crisis when they could have acted ten months ago, or five months ago, and thus could have avoided the situation to reach the results that it has reached now.

Can the crisis reach the emerging countries? If there is a deep recession in the European Union and in the US, yes, it may affect the emerging countries because they are buyers and we are sellers. That is why we need to diversify our trade relations. Brazil and India for example do not even exploit ten per cent of the trade potential that they have; and Brazil and South Africa are far away from exploring their potential fully. So, now what we have to do is to take care of our domestic economies, strengthen our domestic market. We will not stop investments in major infrastructure work and expect that the money that has been hidden will show up to guarantee liquidity at the international financial system.

Last but not least, I hope that now the IMF should tell the US that it is necessary for them to undertake regulatory measures for the functioning of the financial system, and that the Central Banks gathered in Basil should determine that it is forbidden that an investment bank should have no cap for leverage. So, if the rich countries now undertake what we did yesterday, I think the economy will go back on the track again.

Question (Mr. Dumisane, South African Media): My question can be responded to either by the Prime Minister or President Motlanthe. It seems that the WTO negotiations are still not moving forward as expected. What can the IBSA countries, as the ones leading the G-20 nations, do to move the talks to their conclusion?

Prime Minister of India: It is certainly a fact that the WTO negotiations have not moved as was anticipated. The July meetings of Ministers reached an impasse. There are issues which are of concern to developing countries particularly in the area of agriculture, the livelihood strategies of small and marginal farmers. There are also concerns about NAMA issues. There are other issues, services, intellectual property rights. But we all believe that every effort should be made to resume the dialogue. At this meeting the three of us have agreed that we should make every effort to send the right message to the world at large that we are keen to have the dialogue process resume so that an agreement can be reached as soon as possible.

(Text in italics is official interpreter's translation from Portuguese)

179. Delhi Summit Declaration of the 3rd Summit of the India-Brazil-South Africa (IBSA) Dialogue Forum.**New Delhi, October 15, 2008.**

The Prime Minister of India, H.E. Dr Manmohan Singh, the President of Brazil, H.E. Mr. Luiz Inácio Lula da Silva, and the President of South Africa, H.E. Mr. Kgalema Petrus Motlanthe (thereafter referred as "the leaders") met in New Delhi, India, on 15 October 2008, for the 3rd Summit of the India-Brazil-South Africa (IBSA) Dialogue Forum.

2. The leaders of Brazil and South Africa expressed appreciation to H.E Dr Manmohan Singh, the Government and people of the Republic of India for the warm reception and for hosting this Summit.
3. The leaders expressed their deep satisfaction with the progress on the consolidation of the IBSA Dialogue Forum in the five years since its inception in 2003 and their gratitude to the sterling contribution of former President TM Mbeki of the Republic of South Africa in the formation and consolidation of IBSA and South-South cooperation in general. They reaffirmed their commitment to further strengthening the trilateral cooperation and reaffirmed that the Forum is an important mechanism for closer coordination on global issues, for promoting the interests of developing countries, enhancing cooperation in sectoral areas and improving their economic ties.
4. The leaders of Brazil and South Africa noted with regret the recent bomb blasts in India that resulted in the loss of innocent lives, damage to property and offered condolences to the government and the people of India. They joined the international community in condemning these acts of brutality and committed to strengthen mechanisms aimed at ending terrorism.
5. The leaders expressed satisfaction with the developing participation of civil society in its activities. They acknowledged with appreciation the involvement and participation by academicians, business leaders, editors and women in their respective forums. They welcomed the holding of IBSA Cultural Festival and the first Food Festival in New Delhi.

GLOBAL ISSUES

GLOBAL GOVERNANCE

6. The leaders reiterated the need to make the structures of global governance more democratic, representative and legitimate by increasing the participation of developing countries in the decision-making bodies of multilateral institutions.

Millennium Development Goals (MDGs)

7. The United Nations (UN) High level Event on MDGs held on 25 September 2008 has helped focus the world's attention on the urgent need to accelerate work towards achieving the MDGs. The leaders recognized that invigorated global efforts are required for developing countries to achieve the MDGs.
8. The leaders reiterated their support to the efforts towards the achievement of the MDGs and expressed their concern at the fact that the assistance for development is currently insufficient. In this context they called upon the developed countries to fulfill their commitments in the global partnership on increased financial flows to developing countries, including increasing Official Development Assistance (ODA) to 0.7% of their GNI, and on transfer of technology and capacity building.
9. The leaders recognized the importance of and instructed their officials to explore new models of cooperation for development and the substantive role of innovative finance mechanisms, complementary to the ODA, in order to support the efforts made to the fulfillment of the MDGs, to the fight against hunger and poverty and to sustainable development.
10. The leaders reaffirmed their determination to work together and coordinate their positions at the "Financing for Development" Monterrey Review conference that will take place in Doha, Qatar, in November 2008.

South-South Cooperation

11. The leaders underscored the importance and relevance of South-South Cooperation in an uncertain international environment contributed to by factors such as rising food and energy costs, climate change and financial uncertainty, which made it all the more

imperative to strengthen the collective voice of the South, in order to assist in its development efforts.

12. The leaders noted with satisfaction that the dynamism of the South is driving growth today with a substantial part of global GDP growth and trade being on account of countries of the South and intra-South trade. They pledged to promote these mutually beneficial trends through enhanced linkages such as trade, investment and technology transfer including trade agreements of bilateral or multilateral nature such as the Global System of Trade Preferences (GSTP).
13. They reiterated that South-South Cooperation cannot replace commitments by developed countries but is only a complement to North-South Cooperation. In this context, they welcomed the convening of the High-level Conference on South-South Cooperation to be held in 2009.

Sustainable Development

14. The leaders reaffirmed their commitment to sustainable development and the eradication of poverty and hunger. They noted with appreciation that Brazil intends to host a meeting in 2012 to mark twenty years of Rio and in this context called upon the international community to support this initiative and to vigorously enhance the implementation of the principles and goals in the Rio Declaration, Agenda 21 and the Johannesburg Plan of Implementation in an effort to work towards a sustainable agenda.

UN Reforms

15. The leaders reaffirmed their continued support for the reform of the United Nations to make it more democratic and responsive to the priorities of its Member States, particularly those of developing countries that constitute the vast majority of its membership. They expressed their full support for a genuine reform of the Security Council, with expansion in both permanent and non-permanent categories of membership, with greater representation for developing countries in both, to ensure that its composition reflects contemporary realities. They also emphasized that inter-governmental negotiations on the issue of Security Council reform should commence expeditiously and welcomed, in this regard, the General Assembly's Decision of 15 September 2008, which determined that negotiations shall begin no later than 28 February 2009, in an informal Plenary of

the General Assembly. They agreed to further strengthen cooperation amongst their countries and with other member states interested in a genuine reform of the Security Council.

Climate Change

16. The leaders underscored the importance for urgent action on climate change. The on-going negotiations needed to move at an invigorated pace for long-term cooperative action in accordance with the provisions and principles of the United Nations Framework Convention on Climate Change (UNFCCC), especially the principle of common but differentiated responsibilities and respective capabilities, and the critical priority of sustainable development for developing countries. They highlighted the imperative of priority action with vastly scaled up resource allocation for adaptation in developing countries given their vulnerabilities and low capacities to cope.
17. An equitable burden sharing paradigm for equal sustainable development potential for all citizens of the world that takes into account historical responsibilities must guide the negotiations on a shared vision on long-term cooperative action, including a long-term global goal for greenhouse gases (GHG) emissions reductions.
18. Given their overwhelming contribution to the concentration of GHGs in the atmosphere and continuing high levels of GHG emissions, developed countries must take quantified time bound targets and deliver truly ambitious and absolute greenhouse gas emissions reductions under the Kyoto Protocol after 2012 with comparability of efforts among them. Moreover, developed countries have to put in place policies and measures that promote sustainable consumption patterns and lifestyles. Developed countries should also make clear commitments under the UNFCCC for significant financing to support both mitigation and adaptation in developing countries. New and innovative financial mechanisms must mobilize additional resources beyond the flexibility mechanisms of the Kyoto Protocol and other instruments of the carbon market, without diverting national or multilateral and ODA resources from the imperatives of development and poverty alleviation.
19. The leaders stressed that as developing countries pursue sustainable development, they are committed to taking nationally appropriate

actions to address climate change. Their capacities for such actions need to be greatly enhanced through financing, technology and capacity building support.

20. Technology and transfer of advance clean technologies to developing countries has the potential to be a critical transformation agent in addressing climate change. The leaders called upon the international community to actively promote technology innovation and development and its transfer and deployment in developing countries. The intellectual property rights regime must also move in a direction that balances rewards for innovators and the global public good.

Bio-diversity

21. The leaders stressed the importance of a timely and successful conclusion of the ongoing negotiations of a legally binding international regime on access to genetic resources and sharing of the benefits derived from their use and from associated traditional knowledge (Access Benefit Sharing - ABS). In this regard, the leaders reaffirmed the urgent need for an adequate legal framework at the international level to prevent biopiracy, ensure that national rules and regulations on ABS are fully respected across borders and recognize the value of biological resources and of traditional knowledge as an additional tool to promote sustainable development. They recognized the positive role of the IBSA Forum in enhancing the coordination within the Group of Like Minded Megadiverse Countries, of which the three countries are members, in the context of ABS negotiations.

Human Rights

22. Noting that 2008 marked the 60th anniversary of the adoption of the Universal Declaration of Human Rights, the leaders reiterated their commitment to the promotion and protection of human rights. They expressed satisfaction at the progress in the development of the institutional framework of the Human Rights Council (HRC) including the Universal Periodic Review Mechanism and emphasized that the work of the HRC should be free from politicization, double standards and selectivity and should promote international cooperation.
23. The leaders underscored the importance of promoting cooperation on Human Rights with a view to exchanging information on national

policies and initiatives, which could translate into dialogue and mutual benefit in the field of Human Rights promotion and protection.

Intellectual Property

24. The leaders agreed on the need for establishing trilateral cooperation in the field of intellectual property rights with the aim of promoting a balanced international intellectual property regime and to make a meaningful contribution to the economic and social progress of developing countries, ensuring access to knowledge, health care and culture. Moreover, they agreed that the countries should hold consultations on a regular basis on the evolution of the international agenda.

Gender

25. The leaders called on the international community to reaffirm its commitment to gender parity and to identify concrete and action-oriented steps to advance the implementation of the Beijing Platform for Action, and the outcomes of the 23rd Special Session of the UN General Assembly of 2005.

Disarmament and Non-Proliferation

26. The leaders reiterated their commitment to the goal of the complete elimination of nuclear weapons and expressed concern over the lack of progress in the realisation of this goal. They emphasised that nuclear disarmament and nuclear non-proliferation are mutually reinforcing processes requiring continuous, irreversible progress on both fronts, and reaffirmed, in this regard, that the objective of non-proliferation would be best served by the systematic and progressive elimination of nuclear weapons in a comprehensive, universal, non-discriminatory and verifiable manner. They further emphasised the necessity to start negotiations on a phased programme for the complete elimination of nuclear weapons with a specified framework of time to eliminate nuclear weapons, to prohibit their development, production, acquisition, testing, stockpiling, transfer, use or threat of use, and to provide for their destruction. The leaders discussed the threat posed by non-state actors or terrorists acquiring nuclear weapons or their related materials and technologies. They reaffirmed their commitment to contribute to multilateral efforts to counter such threats and promote co-operation in this regard.

Peaceful Uses of Nuclear Energy

27. The leaders underlined the importance of ensuring the supply of safe, sustainable and non-polluting sources of energy to meet the rising global demand for energy, particularly in developing countries. The leaders further agreed that international civilian nuclear co-operation, under appropriate IAEA safeguards, amongst countries committed to nuclear disarmament and non-proliferation objectives, and could be enhanced through acceptable forward-looking approaches, consistent with their respective national and international obligations. In this context, they welcomed the consensus decision of the IAEA Board of Governors to approve the India Specific Safeguards Agreement and the decision by the Nuclear Suppliers Group to adjust its guidelines to enable full civil nuclear cooperation between India and the international community. They also reiterated the importance of ensuring that any multilateral decisions related to the nuclear fuel cycle do not undermine the inalienable right of States to pursue nuclear energy for peaceful purposes in conformity with their international legal obligations.

Terrorism

28. The leaders reaffirmed that terrorism presents a grave threat to international peace and security. They strongly condemned terrorism in all its forms and manifestations. They stressed that there can be no justification, whatsoever, for terrorist acts. They emphasized the need for a comprehensive and cooperative approach to eradicate terrorism. In this regard, they called for an early conclusion of negotiations leading to expeditious adoption of the Comprehensive Convention on International Terrorism (CCIT).

Doha Development Round & International Trade

29. The leaders acknowledged that while substantial progress was made during the informal ministerial meeting of the World Trade Organisation (WTO) in July this year, the final modalities in agriculture and NAMA could not be achieved. They agreed that there must be a concerted effort by all member countries to take the process forward towards a successful conclusion of the Round. They emphasized the importance of concluding the Round to achieve its development objectives, which had assumed even greater significance in the wake of the global financial and food crises.

30. The leaders welcomed the resumption of the multilateral process in the WTO and expressed the hope that this would lead to the early finalization of modalities in agriculture and NAMA. They also expressed the hope that multilateral discussions would resume in other areas of the negotiations as well, particularly issues of concern to developing countries.
31. The leaders reiterated the importance of the development objectives of the Doha Round and observed that many of the issues, which either remained unresolved or could not be addressed at all during the July informal ministerial engagement, were issues critical to developing countries. They called upon developed country members to demonstrate greater flexibility to address the development concerns, so that members could collectively achieve a positive and development oriented outcome in the Doha Round.
32. With reference to paragraph 8 of the Somerset West Ministerial Communiqué, South Africa, 11 May 2008, the leaders reaffirmed the importance of granting support to the goal of/the envisaged MERCOSUR-SACU-India Trilateral Trade Arrangement (TTA) at the highest political level. In this regard, they welcomed the proposal of a MERCOSUR-SACU-India trilateral ministerial meeting in order to promote high level discussions on the topic. Furthermore, they greeted with satisfaction the significant progress made on the regional preferential agreements between MERCOSUR-SACU, MERCOSUR-India and SACU-India towards a trilateral MERCOSUR-SACU-India TTA.

International Financial Crisis

33. The leaders took note of the very serious financial crisis that has spread from the United States to the European Union and has begun to impact developing countries. This unprecedented turbulence in financial markets and the resulting instability threatens global prosperity. The explosion of new financial instruments, unaccompanied by credible and systemic regulation, has resulted amongst others in a major crisis of confidence for which those responsible should be held accountable and liable. Developing countries are not immune from this and many would be very seriously affected. The leaders, therefore, stressed the need for a new international initiative to bring about structural reforms in the world's financial system. The new initiative must take into account the fact

that ethics must also apply to the economy; that the crisis would not be overcome with palliative measures and that the solutions adopted must be global and ensure the full participation of developing countries. The reform must be undertaken so as to incorporate stronger systems of multinational consultations and surveillance as an integral part. This new system must be designed to be as inclusive as possible and must be transparent.

Energy

34. The leaders recognized that energy resources are a vital input upon which the socio-economic development of nation states rests. The recent price volatility of crude oil has posed a challenge to the economic growth and stability of emerging and developing economies. Increasingly, energy markets have become susceptible to political considerations, driving energy security concerns into strategic and foreign policy agendas. They agreed to collaborate in diverse policy and technology areas to strengthen energy security in the three countries. They also look forward to working towards the diversification of energy baskets for a larger share of renewable, alternate and clean energy. Towards these common aims, IBSA will deepen regular exchanges, to further knowledge and know-how in the areas of biofuels, nuclear, hydro, wind and solar energy. They recognized that fossil fuels continue to be a primary source of energy supply and any reduction of emissions would be considered within the framework of the UNFCCC and Kyoto Protocol. They also encouraged the sharing of best practices in energy conservation and efficiency.
35. Renewables have come to the centre-stage in the recent times from the perspective of sustainable development, energy security and climate change. While the developing countries are pursuing this mostly to address the needs of sustainable development and energy security, the developed countries have a responsibility in the deployment of renewables for their mandated GHG reduction under their commitments within the Kyoto Protocol. The leaders recognized the need of a concerted effort for jointly developing renewable energy technologies with the developed countries for the overall benefit of the mankind. Taking into account the principle of common but differentiated responsibilities, they also called upon the developed countries to consider innovative modalities in the field of intellectual

property so as to facilitate the access to such technologies by developing countries.

Food Security

36. Food and nutritional security is critical for developing countries. The rise in global food prices has added a new and huge challenge to the fight against poverty and hunger, which can lead to the roll-back of hard-won development gains in several developing countries. It is imperative that the international community act resolutely and with urgency to vastly improve ways and means of producing and distributing food. This includes stepped up international collaboration to increase agricultural productivity and sharing the intellectual property of the research with developing countries in a manner that takes care of the greater good of humankind. There is also need for increased emergency aid and significant reduction in the very large trade-distorting support in developed countries. While welcoming the declaration of the High level Conference on World Food Security convened by FAO in Rome in June 2008, the leaders urged countries to deliver on the commitments made to provide funding to address issues of food security.

REGIONAL ISSUES

NEPAD

37. The leaders reiterated their firm support to the New Partnership for Africa's Development (NEPAD) as the key African Union (AU) socio-economic programme for Africa. Recognizing the central role of infrastructural development in growth and development of Africa, they re-affirmed their continued support of the programme and agreed that further cooperation should continue to focus on NEPAD's identified priorities in this regard in such sectors as ICT, energy, water and sanitation and transport.

Sudan

38. The leaders noted that the 14 July 2008 formal application for a Warrant of Arrest under Article 58 of the Rome Statute of the International Criminal Court against the President of the Republic of the Sudan is a cause for concern for Africa. In this regard, IBSA countries as members of the global South community expressed their support for the African Union's Peace and Security Council position, which amongst others, expressed the AU's conviction that in view of the delicate nature of the processes underway in the Sudan, the prosecution could

undermine the ongoing efforts aimed at facilitating the early resolution of the conflict in Darfur and the promotion of long-lasting peace and development in the Sudan as a whole.

39. The leaders expressed concern on the situation in the Sudan and urged all parties involved to work and commit to a speedy resolution of the serious humanitarian situation in Darfur, the implementation of the Comprehensive Peace Agreement, and stopping attacks on UN personnel, in accordance with the commitment made by the government of the Sudan and the resolutions of the UN and the AU.

Zimbabwe

40. The leaders congratulated the people of Zimbabwe for their agreement reached on 11 September 2008 in Harare on a government of national unity. They also paid tribute to former President TM Mbeki for his tireless mediation efforts on behalf of the Southern African Development Community and the AU. They also urged the parties to the agreement to fully implement it.

Afghanistan

41. The leaders reaffirmed their long-term commitment to a democratic, pluralistic and stable Afghanistan. They expressed concern at the continuing deterioration of the military and political situation in Afghanistan due to a determined and coordinated resurgence of the Taliban and Al Qaeda, the growth in cross-border terrorism, its links with international terrorism, and the consequential danger these developments pose to the gains made in the recent past. They condemned the terrorist attack on the Indian Embassy in Kabul on 7 July 2008 and also the continued attacks on aid workers, civilians, Afghan and international forces by the Taliban and other insurgent groups. They reiterated, in this context, that a coherent and a united international commitment, both in its developmental and security/military aspects, remained of paramount importance and agreed to continue to cooperate and coordinate their efforts to impart greater strength to this process. They underlined the centrality of the regional aspect in the reconstruction and development process in Afghanistan.

Iraq

42. The leaders took note of the developments in the security environment in Iraq in 2008 and emphasized the need for the return of peace and stability in Iraq, which are essential for its development

and prosperity. A peaceful, united and stable Iraq requires a democratic and inclusive polity. The UN together with the international community has an important role to play in this regard. They reiterated support to Iraq for its efforts at reconstruction and development and its process of nation building and national reconciliation.

Lebanon

43. The leaders welcomed the establishment of a Government of National Unity in Lebanon and the approval of the new electoral law. They also expressed confidence that the consolidation of the national dialogue will contribute to the further strengthening of the democratic institutions in Lebanon in accordance with UNSC Resolutions 1559 and 1701.

The Middle East Peace Process

44. The leaders underlined that the conflict between Israel and Palestine remains essentially political in nature and cannot be resolved by force. In this regard, they condemned the use of violence, particularly against innocent civilians and urged further easing of restrictions at checkpoints and road-blocks on humanitarian grounds. They reiterated their support for a negotiated solution resulting in a sovereign, independent, viable and united State of Palestine living, within secured and recognized boundaries at peace with Israel, in accordance with UN Resolutions 242, 338, 1397 and 1515. In this context, the leaders recalled the decision to donate US\$ 1 million per year, from the IBSA Fund, over three years. In this regard, they welcomed the project for the construction of a sports complex in Ramallah.

IBSA Facility Fund for Alleviation of Poverty and Hunger

45. The leaders recommitted themselves to assist developing countries in the fight against poverty and hunger. They reiterated that the Fund constitutes a pioneer and unique initiative to enhance South-South Cooperation for the benefit of the neediest of nations of the South. The leaders reviewed the modalities of the disbursement of IBSA Trust Fund as well as the criteria for Project proposals and concurred with the new programme guidelines. In this context, the leaders welcomed with satisfaction the projects in Burundi, Cape Verde, Guinea-Bissau, Haiti, Laos and Palestine.

IBSA Sectoral Cooperation

46. The leaders reviewed the activities under sectoral cooperation and

while acknowledging the meetings of the Working Groups and concurring with their reports, expressed satisfaction on the progress made. The leaders welcomed the signing of (i) Tripartite Agreement on Tourism, (ii) MoU on Trade Facilitation for Standards, Technical Regulations and Conformity Assessment, (iii) MoU on Environment, (iv) MoU on Human Settlements Development, (v) Five Year Action Plan for Maritime Transport, (vi) Five Year Action Plan for Civil Aviation, and (vii) MoU on Women's Development and Gender Equality Programmes, to enhance cooperation in these sectors. They urged time-bound and concrete deliverables, in all the sectors.

47. The leaders noted with satisfaction progress made by the various Working Groups since the last IBSA Summit. They welcomed that Working Groups on Agriculture, Climate Change and Environment, Culture, Defence, Education, Energy, Health, Human Settlement Development, Information Society, Public Administration, Revenue Administration, Science & Technology, Social Issues, Tourism, Trade & Investment and Transport had met and finalized their reports regarding trilateral cooperation, with many of them agreeing on Action Plans. The leaders noted with satisfaction the IBSA diplomatic academies have also met in New Delhi in September 2008. The leaders also took note of and instructed that work that had begun on the drawing-up of Social Development Strategy for IBSA and the future of agricultural cooperation in IBSA should be pursued in a meaningful manner so that these could be finalized in time for the 4th IBSA Summit.
48. The leaders expressed satisfaction that IBSA Ministers of Health as well as Science & Technology had met since the 2nd IBSA Summit.

Fourth IBSA Summit

49. The leaders of India and South Africa welcomed the offer of Brazil to host the 4th IBSA Summit in Brazil on 8 October, 2009.

Diwali

50. In the month of October, India marks the celebration of various festivities and auspicious days, including Diwali (the celebration of light). The leaders of Brazil and South Africa wished the Government and the people of India well during these celebrations.

180. Outcome of the Working Group Meetings – post 2nd IBSA Summit of 2007.

New Delhi, October 15, 2008.

Agriculture

- The five sub-groups identified the thrust areas of cooperation action points and time lines which include prioritizing projects, information exchange, project design, workshops, seminars, technical meetings,
- Two Workshops on Mega Food Parks, Delhi and Avian Influenza, Pune would now be held in later part of the year.
- India is hosting training on cotton production and value addition on 17-29 November 2008 in Nagpur, expecting at least 5 participants each.
- The Concept Paper on IBSA Agriculture Strategy was circulated by India. This would further be discussed and presented to the 4th IBSA Summit.

Culture

- India, Brazil and South Africa agreed to organize the audio-visual conference focusing on films, a seminar on Conservation of Architectural Heritage, Indigenous Knowledge System Conference
- As agreed at this WGM, India is hosting the first IBSA Food Festival from 11-17 October 2008.
- South Africa to organize a Workshop on Indigenous Knowledge Systems in areas of traditional medicine and pharmaceuticals.

Climate Change and Environment

- An MoU has been finalized for signing during the 3rd IBSA Summit in New Delhi on 15 October 2008.
- Discussions were held on Climate Change, Biodiversity and Forestry and the three countries agreed to enhance implementation of UNFCCC and Bali Action Plan;
- The three countries agreed to share their detailed comments on working together on the issue of forestry at a later date.

Defence

- Areas of collaboration to further the strategic cooperation were discussed. Presentations made by the 3 countries highlight defence capabilities.
- The need to promote joint training and exercises was recognized. The first joint IBSAMAR Naval Exercise was held in South Africa in May 2008.
- While cooperation in defence production was underscored, it was felt that this could initially be at the level of seminars and symposiums to understand strengths.
- India took lead in providing Technology and functional training in Defence Institute for Advance Technology, Pune, Brazil and SA to be invited for Seminars/Conference conducted under the aegis of Indian Ocean Naval Symposium Course on UN Peace Keeping for IBSA countries etc.
- Brazil took lead in tri-service scoping mission, Search and Rescue (SAR) support during IBSA Sailing Regatta-2009, courses in Brazilian Military Schools, experience sharing in Special Forces.
- South Africa took lead in hosting IBSAMAR II – 2010, Hosting of IBSA Sailing Regatta, Jan 2009, IBSA Trilateral Map Exercise-2011 (UN Peace Keeping Scenario), Military Adventure Sports Event.
- A draft MoU and Terms of Reference would be drawn up for enhanced cooperation in the area.

Education

- IBSA Studies Programmes to be established on two thematic areas : (i) Social Transformation and Social Cohesion and (ii) Global Governance and International Trade and Investment;
- Opportunities and resources to be made available to facilitate student exchanges;
- Each country to provide funding and student exchange programmes (as undertaken at the 2nd IBSA Summit) out of finances of US \$ 50000 set aside by each country.
- An Academic Seminar was held in Brazil in August 2008 where nine projects for further action, including 4 in Biotechnology, 4 in engineering and one in Information Technology were identified.

Energy

- It was agreed to start implementing concrete projects; Under renewable energy, the focus of cooperation was on biofuels, wind and remote electrification primarily through application of solar technologies.
- In Implementation of the MoU, India offered the use of their expertise w.r.t. mapping of wind resources, supply of wind equipment on commercial basis, a training programme in wind energy covering policy, technical aspects for experts from Brazil and South Africa, to host a trilateral seminar on "Trade and Investment Opportunities in Wind Energy in IBSA countries" and the use of their institutions;
- Agreed to exchange information on rural electrification programme.
- South Africa to initiate the process of formulating an MoU in the solar sector.
- India would host a Workshop in Energy Efficiency.
- The Need for active engagement of all stakeholders, viz. expert and research institutions and industry for a meaningful cooperation was underscored;
- Agreed to cooperate in engine technology, capacity building, research and development and
- Brazil, India and South Africa to host a seminar each on flexi-fuels engines modification for cars and two-wheeler standards in March 2009; first and second generation technologies; and technical standards and specifications for biofuels.

Health

- It was agreed to collaborate regarding strategies on health surveillance systems and emerging and re-emerging diseases, traditional Indian systems of medicine (especially Ayurveda and Yoga), public health laboratories and collaboration in drug registration and regulation processes.
- Cooperation in Health sector to help develop and expand national systems for delivering quality health care to citizens.
- Exchange of experience from Brazil in reducing counterfeiting of medicines and identifying good practices for cooperation.
- The IBSA Health Ministers met in New Delhi on 29 July 2008.

Human Settlement Development

- An MoU has been finalized for signing at the 3rd IBSA Summit in New Delhi on 15 October 2008.
- Policy and programme perspectives of the three countries were shared.

Information Society

- Adoption of an Action Plan 2008-09;
- Aims to exchange experiences and practices on e-readiness measurement among IBSA countries;
- The existing IBSA website would be made more user-friendly by providing ID and Password to each designated IBSA Focal Point for uploading by respective Working Groups
- India hosted a Technical Workshop on e-Governance on 13 October 2008 to promote cooperation in e-Governance standards and data management
- IBSA Digital Inclusion Award to be launched based on country specific criteria on common guidelines, to be provided by Brazil. Funds to be requested from IBSA.

Administration

- Review of implementation of PoA 2007-08 and progress made
- Technical Task Forces identified in six areas viz. Governance, Human Resource Development, Citizen Oriented Service Delivery, Anti-corruption and Ethics, Accountability and Transparency, Integrated Monitoring and Evaluation.
- Each country leading in two areas would meet to discuss and finalize the Concept Papers.
- In-depth study of setting and improving service standards through exchange of each others standards in specific areas;
- Proposal to set up a standard charter on Public Administration on the basis of areas outlined in the MoU – Brazil to lead;
- India has identified a Task Force represented by a focal point for each of the areas identified in the MoU;
- India to host and take leadership in setting up of IBSA Virtual Centre of Excellence

Revenue Administration

- Progress has been made in various areas of cooperation in Customs and Tax Administration, including development of a shared approach towards Large Business Centre operations, Taxpayer Relationship management, audit and investigations and dispute resolution.
- Steps have been initiated towards establishing an 'Exchange of Information' mechanism to help the three countries in sharing knowledge on customs valuation data, abusive tax avoidance schemes, arrangements and transactions, to strengthen the existing cooperation in terms of Double Taxation Avoidance Agreements (DTAAs) and Customs Mutual Assistance Agreements (CMAAs). This will help curb tax evasion occurring through the use of tax havens, complex corporate structures and other tax avoidance schemes.
- The three administrations resolved to effectively meet the challenge of the growing threat to their respective tax bases through misuse of their tax treaties. Emphasis was laid on cooperation for capacity building, modernization and for having common approach in multilateral fora for mutual benefit.

Science and Technology

- The IBSA S&T Ministers also met after the Working Group Meeting on 14 October 2008.
- An MoU on S&T was discussed with possible modes and areas of collaboration and sharing expenses/funding of collaborative activities.
- It was agreed to support the Nanotechnology project in the areas of development of sensors and nano-devices; nanostructures organic/inorganic hybrid solar cells; water purification, human capacity development etc. and that Nano schools would be organized to train about 200 scientists/future leaders from IBSA countries.
- Workshop on HIV/AIDS organized on 10 October 2008. It was agreed that projects in priority areas would be developed.
- Brazil would host two Workshops on Malaria and Bio Technology in 2009 and an Antarctic Symposium in 2009 to establish framework cooperation on Antarctic issues.
- A call for proposals will be launched soon.
- It was recommended to include three new areas, viz. Indigenous

knowledge systems, Alternative and renewable energy, information and communication technology.

- Ph.D students to be attached to the approved projects for a period of six months. Idea of IBSA fellowships have been mooted and will be further worked out.
- An IBSA Science Council would be set up to provide high level guidance and overview of collaboration activities.
- The S&T Ministers reaffirmed their commitment to support R&D projects and to create a seed fund of US \$ 1 million annually in each country for making adequate provision to implement scientific projects.

Social Issues

- A Workshop on IBSA Social Development Strategy was organized by Indian Council of Social Science Research (ICSSR) on 3-4 October 2008 to discuss and prepare a Paper on 'IBSA Social Development Strategy'. This would further be discussed and presented at the next Summit.
- Detailed Activity Plan has been drawn up.
- Exchange programmes/seminars proposed to be held.
- South Africa and Brazil to identify counterparts of ICSSR to take up issues with the objective to share experience and make joint research studies to support the research agenda. The Working Group will ensure that the identified institutions enter into partnership agreement.
- NABARD to host a Seminar in December 08/January 09 on poverty eradication strategies in the rural non-farm sectors, tribal development and disadvantaged communities.
- Brazil to host an Int. Seminar on Social Development in April/May 2009.

Tourism

- An MoU has been finalized for signing at the 3rd IBSA Summit;
- Exchanged views on economic, social and political importance of tourism sector in respective countries and the need to strengthen tourism cooperation under IBSA;
- To establish a mechanism to encourage exchange of information related to tourism resources, tourist arrivals to understand the

dynamics of the sector in each other's country and to provide an opportunity to share experience;

Trade and Investment

- An MoU on Standards, Technical Regulations and Conformity Assessment to give concrete shape to the working mechanism and work agenda to be finalized for signing at the 3rd IBSA Summit;
- An MoU on IPR Issues circulated by India earlier was revised with Brazilian comments and provided to South Africa for their comments.
- Matter relating to inclusion of Tri-Nations Summit on Small Business in the IBSA process as a people-to people forum was discussed and to hold the Tri-Nations Summit to coincide with future IBSA Summits starting 2009 in Brazil.
- Re-affirmed earlier decision to constitute a subgroup on SMMEs with government representatives
- The WG agreed on the importance of undertaking confidence-building measures among the other members of SACU and MERCOSUR for a successful outcome of the Trilateral Trade Arrangement (TTA) Initiative.

Transport Maritime Shipping

- Five Year Action Plans on Maritime Shipping and Civil Aviation have been finalized to be signed during the 3rd IBSA Summit.

Civil Aviation

- The Technical Groups under Civil Aviation would be identified by all three countries.

NAM

181. Speech of External Affairs Minister Pranab Mukherjee at the NAM Ministerial Council.

Tehran, July 30, 2008.

Your Excellency Mr. Chairman

Excellencies

Ladies and Gentlemen,

At the outset may I thank the Government and people of Islamic Republic of Iran for the warm and generous welcome extended to us and the excellent arrangements made for our meeting. I would like to complement H. E. President Mahmoud Ahmadinejad for his inspiring Inaugural Address. Please accept my felicitations, Mr. Chairman, on assuming the Chair of this Conference. There is no doubt of its success under your wise and able guidance.

2. I also bring the best wishes of the Government and people of India to this meeting being hosted by Iran, a country with which India shares civilizational affinities and traditionally warm and friendly relations. I would also like to record our deep appreciation for Cuba's chairmanship and effective leadership of our Movement during a period of challenge and promise for all of us.
3. AS a founding member of the Non-Aligned Movement, India remains strongly committed to Its purposes and principles and will continue its active and constructive engagement within it. India will always work to strengthen solidarity and cooperation among the Member States of NAM.

Mr. Chairman,

The theme of this Conference, "Solidarity for Peace, Justice and Friendship", reflects the basic purpose of the Non-Aligned Movement. Solidarity is central to our quest for a fair and equitable world. The theme also reminds us of the five fundamental principles - "Panchsheel" - enunciated by India's first Prime Minister and a principal architect of our Movement, Jawaharlal Nehru. These principles constitute the eternal cornerstone of NAM and it would be

timely to recall them. They are: respect for territorial integrity and sovereignty; mutual non aggression; mutual non-interference in domestic affairs; equality and mutual benefit; and peaceful co-existence. It is only through the application of these principles of "Panchsheel" that fair and just solutions to the issues that divide the world today and challenge global peace can be found.

5. Prime Minister Indira Gandhi, while chairing the 7th NAM Summit in New Delhi in March 1983, had described the Non-Aligned Movement as the "largest peace movement in the world". By avoiding involvement in the power struggles and block rivalries of the Cold War, the Movement sought to create political space for States to consider issues on their own merits, not from the narrow prism of pre-defined positions of power blocs. Consequently, NAM was able to play an active and crucial role on significant global issues and causes, such as decolonization, apartheid, Palestine and a non-discriminatory approach to disarmament and development. We can be justly proud of our Movement's work for seeking to usher in a more peaceful and just world order and in promoting friendship among nations.
6. Today, when the world is undergoing rapid transformation, the role of the Non-Aligned Movement is as vital as it was in the decades that followed its founding in 1961. With 118 members, the Movement represents more than half the world's people and almost two-thirds of the UN membership. It provides an independent point of view on international issues, and functions as a platform from which its members collectively address key issue of common concern.

Excellencies,

7. In order to build an international order characterized by greater peace, harmony, justice, equality and mutual respect our Movement needs to overcome the social and economic difficulties arising out of the simultaneous impact of crisis in food fuel and finances, as well as threats to our political and security systems. These and other challenges facing the international community make it more imperative than ever before that our Movement collectively projects the central and universal values that bind us and focuses on issues that unite us. We must focus on matters that concern the lives of our people, particularly the poorest among them. In this context our energies should be devoted to sustainable development, the

eradication of poverty, hunger and disease; environment protection; energy security; social justice; fighting pandemics such as HIV / AIDS; disaster management; and the long overdue reform of International Institutions including the United Nations and the Bretton Woods Institutions. In the framework of these and other major contemporary priorities for our Movement, the need for substantive South-South cooperation and solidarity, as also for enhanced and constructive North-South engagement, can hardly be overemphasized.

8. Nuclear disarmament and non-proliferation in all its aspects has been a long-standing priority for our Movement. India's commitment to universal, non-discriminatory and verifiable nuclear disarmament is consistent and firm. We share the belief of our friends in NAM that all states should commit to early negotiations on the complete and verifiable elimination of all nuclear weapons. We also firmly believe that all states have the right to develop peaceful uses of nuclear technology in accordance with their obligations. In this context, the advantages of nuclear power as a clean and affordable source of energy are well known.
9. Excellencies, the evil of terrorism is one particular challenge that faces us all. Terrorism is one of the most serious threats to global peace; it negates the fundamental principles of justice. An act of terrorism anywhere is a threat to peace and stability everywhere. There can be no justification whatsoever for any act of terrorism. Three Weeks ago, terrorists attacked the Indian Embassy in Kabul, killing five Embassy personnel, including two diplomats as well as over 60 Afghan civilians. including young girls on their way to school. Over the last three days, terrorists have targeted innocent men, women and children in the Indian cities of Bangalore and Ahmedabad, killing over 50 and wounding more than 200. In Ahmedabad, their targets included hospitals as well, where the injured were being treated. The terrorists intention, quite clearly, is to rupture India's resilient social fabric. But India's resolve and capacities are strong and can withstand all that these terrorists can do the terrorists may claim to act on behalf of religion, but in truth they have no religion, because the essence of religions is peace and universal brotherhood, and not violence and the violation of human rights.

10. Excellencies, Dear Colleagues, we shall be remiss in our commitment to the theme of this Conference if we do not send a strong message that our Movement stands resolutely for international cooperation in bringing the perpetrators, organizers, financiers and sponsors of all acts of terrorism to justice. In this context, I would particularly underline the need for concerted efforts by all of us to work towards early finalization and adoption of a Comprehensive Convention on International Terrorism, a draft for which was presented by India at the United Nations as far back as 1996.

Excellencies,

11. We have always been successful when we have shown unity, commitment and perseverance. The history of our Movement is a testimony to that. With unity and commitment there is no doubt that we will achieve our goals and objectives.
12. Prime Minister Jawaharlal Nehru had eloquently observed that when we march step-in-step with history, success will be ours. I quote: "... the past is over and it is the future that beckons to us now. That future is not. one of ease or resting, but of incessant striving so that we might fulfill the pledges we have so often taken and the one we shall take today." Unquote.
13. Let me conclude by reaffirming that India will remain steadfast in its earnest endeavours to further strengthen friendship, solidarity and cooperation within our Movement.

Thank You, Mr. Chairman.

182. Statement by External Affairs Minister Pranab Mukherjee at the Ministerial Meeting of the NAM Committee on Palestine.

Tehran, July 30, 2008.

Mr. Chairman,

I would like to express my gratitude to you for convening this meeting, and also my congratulations on your effective Chairmanship of this important Committee. I recall India's special connection with this body ever since its establishment at the VII NAM Summit in New Delhi twenty five years ago.

Mr. Chairman,

West Asia and the Gulf region are of obvious importance to India, given our long civilizational links. Over the course of this year, particularly over the recent days, we have been concerned with the situation in West Asia. We continue to urge an end to the cycle of violence, the ongoing blockade of Gaza, the expansion of settlements and the construction of the separation wall. Just now, H.E the Foreign Minister of Palestine has very clearly depicted a picture of the situation since the Annapolis Conference last year. He reminded us of the commitments made there, and also of the commitments of Israel and Palestine under the Road Map. From the briefing by the Foreign Minister, it seems that we are not getting anywhere on this issue, which we believe is political in nature and cannot be resolved by force.

India's commitment to the Palestinian cause, as well as its solidarity with the Palestinian people, are well-known and I need not reiterate it. In keeping with India's support to the Middle East Peace Process in all its tracks, we have consistently supported the Palestinian people in realizing their legitimate aspirations for a sovereign, independent and viable State of Palestine, existing side-by-side in peace with the State of Israel. India remains convinced that a just and comprehensive solution can be achieved, based on the principle of 'land for peace' and in accordance with the series of UN Security Council resolutions, some of which you also referred to, such as 242, 338, 1397 and 1515. The Arab Peace Initiative and the Quartet Road Map offer ways forward.

Mr. Chairman,

India has always rendered assistance to the Palestinian people, including in capacity building and national reconstruction. India announced humanitarian assistance equivalent to US \$ 2.3 million, following economic sanctions imposed by Israel and the West in 2006. At the Paris Donors' Conference for Palestine in December 2007, India pledged US\$ 5 million for development projects and committed to provide training to 400 Palestinian officials under our ITEC Programme. Our project assistance proposals include construction of the Mahatma Gandhi Library and Student Activity Centre at the Palestine Technical College in Gaza. At the recent Ministerial conference on capacity-building for Palestine, held in Jakarta earlier this month, we announced an increase in the allocation of technical training opportunities for Palestine. But from what has been presented by H.E the Foreign Minister of Palestine just now, it appears that additional Budgetary Support will be required by Palestine, and we will all need to consider what we can do.

Mr. Chairman,

We thank you for your active promotion of the Palestinian cause. India pledges to continue to work with other members of this Committee in our noble endeavour to collectively support the Palestinian cause.

We endorse the draft statement circulated by our Palestinian friends. We look forward to it being issued at our Ministerial Conference today.

With this brief intervention, once again I thank you, Mr. Chairman.

S.C.O.

183. Statement by the Leader of the Indian Delegation and Minister of Petroleum and Natural Gas Murli Deora at the Heads of State Council Meeting of the Shanghai Cooperation Organisation.

Dushanbe, August 28, 2008.

Your Excellency Mr Emomali Rahmon, Distinguished Heads of State and Government of the member and observer states of the Shanghai Cooperation Organisation, Distinguished Leaders of the observer countries and special invitees, Mr Secretary General of the SCO, Excellencies, Ladies and Gentlemen,

May I take this opportunity to convey our appreciation and gratitude to the Government of Tajikistan for immaculate arrangements for the Summit and generous hospitality extended to us.

Excellencies and Distinguishes Guests,

India has been associated with the SCO as an Observer since 2005. We have stated clearly our interest in engaging with the SCO activities more actively and constructively at its past meetings. We understand that there has been progress towards evolving ways and means of involving Observers more closely and providing them a more clearly defined and substantive role in the Organization. We would welcome early steps by the SCO in that direction and hope that this involvement would become substantive in form and content.

Recently, our Prime Minister, Dr Manmohan Singh, had stated: 'the success and prosperity of each one of us provides opportunities to the others to promote their own success and prosperity. This mutuality of interests is the central driving force of regional cooperation everywhere'. This approach is the guiding spirit behind India's interest in participating in and contributing to the Shanghai Cooperation Organization processes.

India has witnessed rapid economic growth over the last several years, and is well-poised to attain even higher rates of growth in the future. This has given us greater capacity to engage and strengthen our commitment for working together with the countries of the SCO. We believe that India's developmental experiences would be relevant for SCO states and we would

also gain from ongoing processes in these states. Exchange of knowledge and human skills will strengthen our mutual capacities. These exchanges must go beyond government-to-government interactions and embrace our academicians, artists, writers and civil society.

Excellencies,

My travel to Dushanbe took less time than that required to reach some the Indian cities. We are geographically so close to this region and our historical and cultural linkages go back to the days of the ancient silk route or even earlier. We share many legends and folk traditions. The ethos of tolerance and inclusiveness prevailing in our multi-ethnic and pluralistic societies is the consequence of such confluences. Our geographical, historical and civilizational closeness reaffirm the potential for harnessing them for present-day connectivities and linkages. We welcome the proposed meeting of Transport Ministers of SCO members and observer countries, and possibly other Ministerial meetings and hope that these meetings would deliberate on pursuing mutually beneficial possibilities among us.

The international community faces numerous challenges - across many fronts - food security, energy security, pandemics, economic development, terrorism, narcotics, environment and so on. The SCO has mechanisms in place to address some of them and there are deliberations to work towards tackling these collectively. It is in our mutual interest to work together in addressing these challenges jointly.

Terrorism is a major challenge confronting the global community which requires effective, collective measures. The SCO's Regional Anti-Terrorist Structure based in Tashkent has an important role to play to check the growth of extremist and terrorist influences in the region. As a country which has been time and again targeted by these radical forces, India believes that its association with RATS would be mutually beneficial. India's strong commitment to and extensive participation in the re-construction of Afghanistan through wide-ranging projects, programmes and initiatives is aimed at the long term peace and prosperity of the whole region. We feel that the SCO Contact Group on Afghanistan also seeks the same long term objectives. An inclusive approach of the Contact Group could be mutually beneficial.

Energy and food security are subjects of much debate around the world. As the Minister responsible for Energy matters in the Government of India, I am confronted with a difficult energy scenario closely associated with

global trends which impinges on our developmental targets. The SCO could take a lead in evolving a constructive partnership among the energy producing and energy consuming nations. The SCO Energy Club offers immense possibilities and solutions and India, as a developing economy, would be willing to engage with SCO countries.

India's cultural links with the region are well known. Our arts and cinema enjoy widespread popularity here and some of our movies have also been shot in this beautiful landscape. We feel that cultural exchanges in all forms provide an excellent platform for showcasing rich and diverse cultural and contemporary traditions of each one of us and bring us closer. We welcome the initiative of an SCO Film Festival in Yekaterinburg in 2009. The organization of such events provides an opportunity to the peoples of our countries to recognize and appreciate each other's cultures and societies.

Excellencies and Distinguished Guests

I have put forward a few ideas where India, as an Observer country, could constructively engage and contribute to the SCO. Lord Buddha, whose followers have left eternal trails in all parts of this region, had said, 'an idea that is developed and put into action is more important than an idea that exists only as an idea'. I think the time has come when ideas should translate into action, to create mechanisms and means for more active engagement in the SCO. We would welcome a partnership that is anchored in the fundamental principles of mutual recognition, respect and benefit.

In conclusion, I thank the Government of Tajikistan & President Rahmon once again for hosting this important meeting in the beautiful city of Dushanbe and for the warmth and hospitality extended to us. I also congratulate Your Excellency President Rahmon for ably conducting today's meeting¹.

1 While in Dushanbe Minister Murli Deora took the opportunity to call on Tajik President Emomali Rahmon. The latter while thanking India for the assistance extended to Tajikistan hoped that the economic cooperation between the two countries would expand particularly in the field of tourism and involvement of Indian private sector in various fields of Tajik economy. He also repeated his invitation to Prime Minister to visit Tajikistan.. Shri Murli Deora, along with the Tajik First Deputy Minister of Energy and Industry Mr. Mukhidinov Pulot Mukhidinovich attended the launch of modernization of Varzob-I hydro power station which was being carried out with the cooperation of Indian companies like

SAARC

184. Press Release of the Ministry of Commerce on the Commerce Minister Kamal Nath's call for a review of the Negative List to expand trade among SAARC countries and announcement at the Third SAFTA Ministerial Council meeting reduction of India's unilateral Negative List for Least Developed Countries of SAARC from 744 to 500.

New Delhi, March 3, 2008.

Shri Kamal Nath, Union Minister of Commerce and Industry, has called for a review of negative lists to expand trade in goods and enlarging the scope for further trade cooperation among SAARC countries. India has unilaterally decided to reduce its negative list with reference to the Least developed Countries (LDCs) of SAARC from seven hundred and forty four to around five hundred and the necessary notification to this effect would be revised within a few months. This was stated by Shri Kamal Nath while addressing the Third SAFTA Ministerial Council meeting here today. He said: "in keeping with our commitments, we have already notified the advancement of the trade liberalisation programme in respect to LDCs by one year and with effect from 1st January 2008, the import duty on all items other than those in the negative list has been reduced to zero". The Meeting was attended by Dr. Sheel Kant Sharma, Secretary General of SAARC; Shri G.K. Pillai, Commerce Secretary; and representatives from the SAARC region.

Bharat Heavy Electrical Limited and National Hydro Power Corporation.. The MOU for the modernization of Varzob-I was signed in August 2007 with Government of India providing a grant of Su \$ 17 million.

The Petroleum Minister also met the Chinese Foreign Minister in Dushanbe. Media reports suggested that Mr. Deora took up with Mr. Jiechi the issue of the need for "energy security" for the two fast growing economies of the world and suggested that instead of rivaling each other at various international auctions, the two nations along with Vietnam and possibly some other countries could join hands to make bids for acquisition of bids abroad, including those in African nations that have emerged major oil and gas holding countries. "The Chinese Foreign Minister was quite responsive to the idea of Asian nations joining hands to bid for oil and gas assets abroad but nothing concrete had emerged during the meeting. It is a good beginning and hopefully things will work out positively in future. This development needs a quick follow-up and close monitoring," a senior official said. Mr. Deora had a meeting with the Russian President, Dmitri Medvedev, on the sidelines of the summit and sought his support for OVL's acquisition of Imperial Energy.

Speaking on the occasion, Shri Kamal Nath emphasised that the SAARC region is broadly characterised by more or less similar developmental levels of member countries and the biggest challenge before us is the pursuit of economic development with inclusive growth. He said that SAFTA is the first major step towards economic cooperation and integration within the region. "We all appreciate that the agreement is only the initial step and requires a continuous effort by all of us to improve and smoothen its implementation", he added.

While drawing the attention of the participants, Shri Kamal Nath said that the regional study on Trade in Services has been completed, which would give government an opportunity for an effective services agreement amongst SAARC countries. As regards for upgradation of global supply chain, he said that it would be natural for us to adopt technical standards in accordance with global benchmarks. "In India, we are trying to see that this transformation is least painful both for the producers within the country and those connected with our supply chain outside the country'.

"Various SAARC mechanisms have focussed on developing specific short, medium and long term cooperation projects to deliver direct benefits to the people. Operationalisation of the SAARC Development Fund and full implementation of SAFTA would pave the way for this development. The South Asian University and the SAARC Food Bank can also bring benefits to South Asia", the Minister said.

Recognizing the importance of Trade in Services in the region, the Meeting directed Research and Information System for Developing Countries (RIS) to draft a SAARC Framework Agreement on Trade in Services (SAFAS) under SAFTA Agreement. The Multilateral Meeting directed the establishment by 30th June 2008 of an Expert Group to negotiate the Framework Agreement on Trade in Services. The 13th and 14th SAARC Summits had directed the 'finalization of an Agreement in the services sector at the earliest'. Member Countries also commended RIS for preparing the 'Regional Study on Potential of Trade in Services under SAFTA'.

The Meeting appreciated the good work being done by the SAFTA sub-group on Non-Tariff Measures and recommended that the future meetings of the sub-group may take place on the sidelines of SAFTA Committee of Experts (SCOE) for better co-ordination. It was also decided to revise its Terms of Reference to avoid duplication with other SAARC mechanisms.

The Meeting finalized the Draft Protocol for implementation of SAFTA

Agreement by the Islamic Republic of Afghanistan thereby paving the way for formal entry of Afghanistan in SAFTA. The Meeting recommended that Afghanistan would be treated at par with Maldives as far as Mechanism for Compensation of Revenue Loss (MCRL) under SAFTA is concerned.

The Meeting welcomed the offer of Maldives to host the Fourth Meeting of SAFTA Committee of Experts and the SAFTA Ministerial Council.

185. Statement of Finance Minister P. Chidambaram at the informal meeting of SAARC Finance Ministers.

Madrid, May 4, 2008.

I would like to welcome your Excellencies to the Informal Meeting of the SAARC Finance Ministers.

SAARC meetings are important and we must maintain the momentum of activities for the greater good of our people. Against the back drop of increasing international efforts aimed at strengthening regional and global cooperation and integration, our efforts aimed at regional cooperation and integration among the SAARC countries assumes particular significance.

As the countries in SAARC are working to build a web of linkages with countries within and outside South Asia, there is growing need to build economic, social and infrastructural connectivity within SAARC. The 14th SAARC Summit clearly brought out that improved regional connectivity in South Asia would also be a strong catalyst in promoting trade and economic cooperation in the region. It is a matter of satisfaction that SAARC has begun to attract greater interest within Asia. Afghanistan has been admitted as the Eighth member of the SAARC and as of now seven observers from outside the region viz. China, Japan, Korea, US, EU, Iran and Mauritius have been attending the recent Summits. SAAARC has definitely benefited from these external linkages and we hope this will further our economic integration with the international community.

The extent and quality of a country's infrastructure plays a vital role in economic growth, with direct and indirect effect in reducing poverty. Almost every country in Asia is faced with the daunting task of providing good infrastructure to its citizens. The GDP growth rates in many countries including India are adversely impacted on account of inadequate

infrastructure. There is a growing clamor from some quarters that public sector engagement with financing of infrastructure must be drastically reduced. Even in the Long Term Strategic Framework (LTSF), ADB has projected that by 2020, 50% of its total lending is likely to be through the private sector operations. I would urge that we advise ADB to proceed with caution. I am convinced that ADB must continue to engage effectively with the public sector to address the massive task of eradicating poverty in the region while also increasing its private sector operations. It should not be a case of substitution of one by the other. The continuing importance of the public sector can be seen by the investment requirements in India in the next five years.

It is our estimate that out of the 500 billion dollar investment requirement in core infrastructure in India in the five years, only 150 billion dollars would be contributed by the private sector. This would perhaps be the most ambitious public private partnership programme in the world. However, the contribution of the public sector would be a significant 350 billion dollars. Clearly, the role and responsibility of the public sector has not diminished.

On environmentally sustainable growth, we support the global focus on climate change and urban environment. India is committed to following an environmentally sustainable energy policy with a spirit of mutual accountability and the principle of "common but differentiated responsibilities". In this context, India urges ADB to secure larger amounts of financing resources at more concessional terms for energy efficiency and clean energy Projects.

It is a matter of concern for us that the ADB is facing headroom issues concerning resource mobilization on account of inadequate equity base. For nearly two years now, India has been stressing the need for augmenting the capital resources of ADB. We have now come to a situation where any delay will be at the cost of ADB's commitments and its credibility. There is an urgent need to start the discussions on augmenting the capital resources of ADB. We will need to finalize the GCI proposals before the next meeting of the Board of Governors. It is in the interest of the SAARC countries that a concerted effort is made by all of us to press this point.

Economic and financial connectivity is the unassailable logic of a globalized world if the benefits of globalization are to be maximized and enjoyed among different regions and groups. It is in this context, we discussed crucial issues like development of Capital Markets in South Asia; early operationalization of SAARC Development Fund (SDF) and finalization of Agreement on Protection and Promotion of Investments when we met in New Delhi in September last

year. I am happy to note that substantial developments have taken place since then. Both the draft Agreement and the operational guidelines on SDF have been finalized. India and Pakistan have prepared the Concept Papers on the three areas of women empowerment, teachers training and maternal and child health as committed by them. India has taken necessary internal approvals for releasing of its voluntary contribution of US \$ 100 million and assessed contribution of US \$ 38 million and is ready to release the funds. There has also been a forward movement in the text of the Agreement on Protection and Promotion of Investments. The SAARC Colloquium on Capital Markets held last month was also very successful.

I would like to point out here that the discussions on financial and infrastructure connectivity must be built on the bedrock of developments in other areas within SAARC. I am happy to learn that various SAARC mechanisms have started focusing on developing specific short, medium and long term projects to impart specificity to our cooperation efforts so as to deliver direct benefits to the people. The land and the interim-CEO for the South Asian University have been identified. The pilot project connecting one/two hospitals in each of the SAARC countries with 3-4 Super Specialty hospitals in India has also started between Bhutan and India. India is also proposing projects on the solar rural electrification for 300 houses in a country; project on water harvesting in Sri Lanka and Bhutan; setting up seed testing laboratories; tele-education project and sharing of India protocol of optimally utilizing rhyzobium bacteria for increased nitrogen fixation for high yielding pulse. The draft Agreements on Mutual Legal Assistance in Criminal Matter, Motor Vehicles and Trade in Services under SAFTA are being considered and negotiated.

Lastly, I would underline that there can be no economic progress in the region without peace and security. A major theme at the 13th Summit was cooperation in counter - terrorism. I would urge that we collectively pledge to meet this challenge single mindedly for the benefit of the entire region. The first meeting of SAARC Home Ministers, which was held in Dhaka on May 11, 2006, called upon member states to provide enabling legislation for the Convention on Suppression of Terrorism. An effective implementation of this Convention and the Additional Protocol will help us collectively tackle the problem of terrorism.

**186. Address by External Affairs Minister Pranab Mukherjee
at the Dedication Ceremony on Land for South Asian
University.**

New Delhi, May 26, 2008.

Good Evening

Excellencies:

Ladies and Gentlemen:

It is my proud privilege to be amongst you this evening at this dedication ceremony. This moment, which has the potential of deeply influencing the collective future of South Asia, represents also the collective will of South Asia's leaders to pursue projects aimed at promoting harmony among the future generations of this region. The path-breaking project for a South Asian University will help realize the dream of thousands of young men and women who will gather here, not only for high quality education, but also in a spirit of fraternity and friendship. Their endeavours, we hope, will ultimately contribute to building a better, more peaceful and developed South Asia.

The 21st century is clearly the age of the "knowledge economy". As such, education is the pivot not only for creating wealth, but also for addressing developmental challenges. High quality education, particularly, is emerging as a key building block for the overall health of an economy. While South Asia is home to some of the world's finest institutions of learning, a lot needs to be done to ensure that high-quality educational infrastructure is not only accessible but also affordable to deserving students.

It is in this context that India committed at the 13th Dhaka Summit to host the South Asian University. Today, we have taken the first step in that direction. It is my hope that this University will develop as a center of excellence for higher learning and will meet some of the requirements of quality education in our region.

This evening's event is significant also on account of the fact that it is among the first manifestations of concrete SAARC achievement on the ground. And we have come to this stage relatively quickly, given that the SAARC member states signed the inter-governmental agreement on establishing the South Asian University at the 14th SAARC Summit in New Delhi only in April 2007. The main campus of this University will be set up

in India. SAARC member states have also formally appointed Professor G.K. Chaddha, Member, Economic Advisory Council and former Vice Chancellor, JNU as the CEO of the Project Office that will be responsible for acquiring land for the University, oversee its construction, and draw up its Charter, Byelaws, Business Plan, Governance Structure and Course Curricula, etc. Under the able guidance of Prof. Chaddha, we hope to witness the University's first academic session in 2010. India deems it an honour to host this flagship project which is being executed by the Ministry of External Affairs in consultation with the University Grants Commission and the Department of Education of the HRD Ministry. With the main campus in New Delhi hosting nearly 5,000 students and an international faculty, the South Asian University is expected to also have linked campuses in other member states and we look forward to these coming up in the very near future.

Ladies and Gentlemen,

It is perhaps not an accident that the future South Asian University will be located at a spot where it will have as a not-too-distant neighbour another great institution of learning that bears the name of India's first Prime Minister and one of the architects of Asian solidarity. More than 60 years ago, Pandit Jawaharlal Nehru set the standard for a university's objectives. He said: "A university stands for humanism, for tolerance, for reason, for progress, for the adventure of ideas and for the search for truth. It stands for the onward march of the human race towards even higher objectives". If the future South Asian University were to realize Pandit Nehru's words, I have no doubt that it will prove to be a shining success in the field of education as well as contribute to national progress and regional solidarity.

In conclusion, Ladies and Gentlemen, at the risk of repetition, I would like to say that it is time for SAARC to translate into reality the vision of its founding fathers and to realize our shared goals of peace, prosperity and cooperation. I would like to reaffirm India's commitment to these goals. The South Asia University will be one of the principal vehicles for this purpose. It is my hope that the students graduating out of the South Asian University would be assets to South Asia, taking the region to a higher level of development and self-reliance. I wish the University all success.

Thank You

187. Media Briefing by Official Spokesperson on Prime Minister's visit to Colombo to attend 15th SAARC Summit.

New Delhi, July 31, 2008.

Official Spokesperson (Shri Navtej Sarna): Good afternoon everybody.

*

*

*

*

The hon'ble Prime Minister will leave tomorrow morning for Colombo to attend the 15th SAARC Summit. The departure will be tomorrow morning. Tomorrow in the afternoon there will be bilateral aspects. There will be a meeting with the President of Sri Lanka Mr. Mahinda Rajapakse and perhaps another meeting in the evening with groups of persons of Indian origin and representatives of other political parties, etc. The finer details of the programme, we will be able to give you tomorrow.

The day after is the SAARC Summit. There will be the opening ceremony and the traditional ceremonies which are associated with it, the lighting of lamp, release of the SAARC Summit commemorative stamp, photo opportunity of all the Heads of State/ Government present, and the Inaugural Session which will be started off by the Prime Minister of India being the current Chairman taking Chair and then moving to the election of the Chairperson, and statements by all attending Heads of State/Government.

The same evening there will be a banquet by President Rajapakse in honour of the Heads of State and Government of SAARC member countries and their spouses. The next day is a visit to the Parliament House followed by a retreat for the SAARC Heads of State. The retreat is followed by the Concluding Session in the afternoon of the 3rd August, which will be followed by departure. That, broadly speaking, is the programme structure.

As far as bilaterals are concerned, as soon as they are confirmed and they come up we will keep you informed. The Heads of State and Government will be looking for mutually convenient timings.

To give you some background and some details of the SAARC Summit and the developments of the year leading up to the Summit, as I said, India will hand over the Chairmanship to Sri Lanka. The Summit, in fact, is being preceded by the Council of Ministers on today and tomorrow, and the Standing Committee Meeting which has already been held on the 29th and 30th, as well as the Programming Committee Meeting.

As is the practice, the Inaugural and Closing Sessions of the Summit are likely to be attended by six Observers namely China, RoK, Japan, Iran, USA and the European Union. Decisions on expanding the Observer List as well as modalities of cooperation with Observers will naturally be taken during the Summit.

As far as India is concerned, we would be handing over the Chairpersonship with a certain sense of satisfaction as India has worked very hard since taking over the Chairmanship to move the SAARC from a declaratory process to an implementation stage. As part of this, for instance, the negotiations on the SAARC Development Fund have been finalized and an interim cell has been set up in the SAARC Secretariat in Kathmandu. Projects have been launched to help the more needy sections of the population of South Asia.

India has already transferred its first tranche of 19.235 million US dollars towards the SDF out of its assessed contribution of 99 million US dollars. We propose to transfer the entire amount of voluntary contribution to SDF within this financial year also. The first project of the SDF was the project for empowering women through vocational skills and setting up trade facilitation centres. This is being implemented through the well-known NGO SEWA.

Also, the process for setting up the South Asian University in New Delhi has been accelerated. As you know, in May, 100 acres of land which has been identified for the university was dedicated to the people of South Asia by Shri Pranab Mukherjee, External Affairs Minister in the presence of Lt. Governor, Delhi; Chairman, UGC and other dignitaries. A Project Office for the university has been set up in New Delhi under Prof. G.K. Chaddha, Member, Prime Minister's Economic Advisory Council, as the CEO along with five experts and consultants to assist him.

Several projects of socioeconomic importance in the field of health, education, infrastructure, food, environment are also under way, for instance, the pilot telemedicine project which connects one or two hospitals in each of the SAARC countries with three or four super-specialty hospitals in India started first between Bhutan and India and now between Sri Lanka and India. And India has also proposed projects on tele-education, solar electrification for 300 houses in a country, project on rainwater harvesting, and projects in the agriculture field which are of somewhat more technical nature.

We had, as you recall, proposed the theme "of connectivity" for the 14th SAARC Summit. Sri Lanka would be taking the process forward by continuing action on this theme and ensuring that the benefits directly accrue to the people through the theme "Growth Through Partnership". You have already seen demonstration of connectivity in various other projects which had been attempted like the SAARC Car Rally, the SAARC Bands Festival, the SAARC Cultural Festival, SAARC Textile Exhibition, SAARC Fashion Show and so on.

Also in physical terms India has upgraded our railway linkages up to the border points of Raxaul-Birganj, Jogbani-Biratnagar, as identified by the SAARC Transport Ministers' meeting held last year. We also proposed to accelerate the upgradation of the road at Akhaura-Agartala border points shortly.

We have also circulated a draft Regional Motor Vehicles and Railway Agreement to the SAARC countries and this has received favourable initial comment from various countries. Naturally, while development aspects will add momentum to SAARC and bring benefit to those, the SAARC Governments also have a collective responsibility to show that growth and development within the region takes place in a crime-free atmosphere whereby people are secure, something which has been underlined by the recent Kabul bomb blasts, and is shown how South Asia is vulnerable to the scourge of terrorism which needs collective action. To this end, discussions on a draft Convention on Mutual Legal Assistance in Criminal Matters has been initiated to implement actions against such crimes in the neighbourhood within the ambit of regional cooperation.

It is possible that some documents will be signed but I think we would wait for discussions to begin before starting to outline these. I think many of you would be travelling to Colombo. We will brief you there tomorrow and the day after. That is a fair amount of detail.

Question: The investigations show that the blasts which took place have a link in Karachi.

Official Spokesperson: Which blasts are you speaking of?

Question: I am talking of Gujarat blasts.

Official Spokesperson: I do not have any comment on that at the moment. The investigations are being carried on. If MEA has to say something, we will let you know.

Question: EAM is meeting Pakistan FM. What is India ...

Official Spokesperson: I have seen that only on your channel so far. I do not have any confirmation yet of the meeting.¹ Let me wait to see what happens, if it happens; what discussions take place, if they take place, we will tell you. My briefing is to tell you what is going to happen, not what has happened.

Question: Regarding the way the Tamil Nadu fishermen have been targeted by the ... The Chief Minister of Tamil Nadu and other major political party leaders met Prime Minister today and requested that the issue be taken up during the SAARC meeting with the Sri Lankan President. Has any agenda been prepared for the meeting?

Official Spokesperson: As I said, there is a separate bilateral meeting on the first day itself between Prime Minister Dr. Manmohan Singh and President Rajapakse. Naturally, I cannot say what all agenda items will come up between the Prime Minister and the President. I am sure that they will have an excellent opportunity to review all bilateral issues. On this particular issue, yes, this has been an issue which has come up earlier. There have been some incidents in the past and, in fact, at India's behest an enquiry was set up and in discussions I think about two weeks ago it was reiterated that the results of the enquiry should be shared with us. And in

1 The meeting between External Affairs Minister and Pakistani Foreign Minister did take place on July 31 in Colombo to prepare the groundwork for a formal meeting between their Prime Ministers Manmohan Singh and Yousuf Raza Gilani on August 2 on the sidelines of the SAARC Summit. After an hour parleys Mr. Mukherjee and Mr. Makhdoom Shsh Mahmood Quereshi told journalists that their talks were "frank, candid and open" and covered all issues of concern to both two sides, including the recent ceasefire violation across the Line of Control (LoC) and the bomb blast outside the Indian Embassy in Kabul. Mr. Mukherjee said the discussion was held in a "cordial atmosphere" and they would report to their Prime Ministers the outcome of their talks. "We shared our perceptions on the composite dialogue and some of the recent events." Media reports suggested that India expressed to Pakistan New Delhi's concern over the recent incidents across the LoC besides raising the issue of elements within Pakistan attempting to create trouble in India. Mr. Quereshi told journalists "Lot of steam has been let out of the pressure cooker after today's meeting....The dish being cooked in the pressure cooker is obviously for better, and hopefully we will be able to share the prosperity and peace in the region." On the ceasefire, he said Islamabad viewed it as the "most important confidence-building measure" and desired to strengthen it. He, however, conceded that there could be elements within Pakistan trying to spoil relations with India. Pakistan would continue to respect the ceasefire. Both sides had gained enormously from the nearly five-year long ceasefire. "By and large, the ceasefire has held. Yes, recently there have been minor incidents but such irritants cannot be ruled out. We have a solid mechanism in place to sort out any misunderstandings," said Mr. Quereshi.

general terms we have been reiterating to the Sri Lankan Government that in any such incident involving Indian fishermen, the fishermen should be treated in a humane manner.

Question: *Sir, Will there be discussion on terrorism? What is proposed to be discussed with Pakistan?*

Official Spokesperson: At SAARC there will be discussion on terrorism. Whether there will be meetings on bilateral issues, I cannot say anything now.

Question: What is the latest development regarding railway connectivity between Akhaura and Agartala?

Official Spokesperson: I said that we are working on that and we hope to make progress on this shortly. We want to accelerate the upgradation of that road.

Question: In the last meeting, ... SAARC Convention, the concept of Food Bank was proposed. Any progress on that?

Official Spokesperson: Yes, that is a very important aspect and I am sure there will be a discussion on the Food Bank. Let us see what the leaders decide to accelerate progress on that. As I said, the areas in which we have made tangible progress are the SDF, which has a part of agricultural projects, and the South Asia University. The Food Bank was set up last year. Let us see what happens this year in terms of further implementation.

Question: The signing of safe CEPA between India and Sri Lanka, is it going to happen?

Official Spokesperson: We do not know at the moment. Let us see what happens during the visit. The position is that the agreement is under negotiation.

Question: Will the Observer's be represented by the Foreign Ministers or at any other level?

Official Spokesperson: I do not have details of who is coming from each country. As you know, in India at least three Foreign Ministers came and other people were represented at different levels.

Question: Which countries have shown interest in the expansion of SAARC?

Official Spokesperson: Australia and Myanmar.

Question: During the Prime Minister's visit, is has any special security coverage likely to be given to him?

Official Spokesperson: I do not brief on security issues. I am sure whatever is necessary is being done.

Question: You said that you will inform us later on the bilaterals. I just want to know if the Pakistani side has sought a bilateral meeting with India.

Official Spokesperson: I do not have information on what exactly is the state of play on each of the bilaterals. I think I will only get information once we fixed them

Question: There has been a lot of tension on the border². Has the Indian Government taken it up with Pakistan?

Official Spokesperson: I think there have been already reports of DGMO meetings, etc. So, if MEA has to say something, we will tell you.

* * * *

Thank you.

(Text in italics is a translation of Hindi original)

2 Media reports quoting army spokesman in Srinagar said in the first major breach of the ceasefire between India and Pakistan since 2003, a group of Pakistani soldiers sneaked into the Indian side of the Line of Control (LoC) on July 28 and fired on Indian positions, killing one jawan. The attack was repulsed with casualties on Pakistani side. Inspector-General of Police (North Kashmir) B. Srinivas said in Srinagar that the Pakistani troops made an attempt to breach the LoC at Eagle 5 Post in Nowgam, Handwara. They were challenged, and in the gunfight that followed the Indian jawan was killed. "Heavy casualties were also inflicted on the Pakistani side," he added. This was the third Indian fatality in intermittent skirmishes which erupted along the LoC since January. Border Security Force Head Constable Bhanwar Lal was killed in the Rajouri sector earlier in July, while the 8 Gurkha Rifles' Jawashwar Lami Chhame was killed when jihadists shelled an Indian forward post in Poonch in May.

188. Statement of Prime Minister Dr. Manmohan Singh before leaving for Colombo to participate in the SAARC Summit.

New Delhi, July 31, 2008.

I will be visiting Sri Lanka tomorrow to attend the 15th SAARC Summit being hosted by Sri Lanka.

In the 23 years since SAARC was established, the South Asian region has traversed a long distance. Today, there is a realization amongst SAARC countries that it is only by cooperating within SAARC that we will be able to strengthen ourselves individually and as a region and address the many common challenges that face us.

At the 14th SAARC Summit in New Delhi, we had agreed to move SAARC from a phase of declaration to a phase of implementation and action. As part of this approach, several initiatives have been taken, notably the establishment of the SAARC Development Fund, the SAARC Food Bank, the proposal to establish a South Asian University, SAFTA and greater people-to-people contacts. I am confident that the forthcoming Summit will consolidate these gains and provide an impetus to the implementation of the many decisions that are in place.

During my visit, I also look forward to holding discussions with His Excellency President Mahinda Rajapakse on our relations with Sri Lanka as well as holding bilateral meetings with the other leaders of the SAARC countries.

189. Colombo Declaration Issued by South Asia Free Media on Freedom and Safety of Media in Conflict Situations.

Colombo, August 1, 2008.

We, the participants at SAARC Journalists Summit-IV on 'Freedom of media in conflict situations' in Colombo, Sri Lanka, on July 30-31, and August 1, 2008, have agreed to adopt the following Colombo Declaration on Freedom and Safety of Journalists:

Deeply concerned by attacks on the freedom of media and media persons including murder, deliberate attacks, abductions, hostage-taking, harassment, intimidation, illegal arrest and detention and incitement to violence against them due to their professional activities in the conflict zones and beyond in the South Asian region;

Believing that media freedom is inseparable from the fundamental human and civil rights guaranteed by the constitution and enforceable through independent judiciary in a democratic system where both the state and society respect freedoms, show tolerance to dissent and practice pluralism;

Recalling Article 19 of the Universal Declaration of Human Rights that guarantees freedom of expression as a fundamental right, and confirming that freedom of expression is essential to the realization of other rights set forth in international human rights instruments, and endorsing Resolution 29 entitled "Condemnation of violence against journalists", adopted by the General Conference of UNESCO on 12 November 1997 that calls on Member States to uphold their obligations to prevent, investigate and punish crimes against journalists,

Endorsing the adoption by the Security Council of the United Nations of Resolution 1738 on 23 December 2006 calling on all parties to an armed conflict to fulfill their obligations towards journalists under international law, including the need to prevent impunity for crimes against them and further requesting the Secretary-General to include as a sub-item in his next reports the issue of the safety and security of media professionals;

Concerned about the increasing tide of intolerance by state and non-state violent elements against free expression among the member countries of SAARC;

Welcoming the extension of the last SAARC Summit's theme of Connectivity to "Partnership for the people of SAARC" for the 15th SAARC Summit as a

leap forward if translated into concrete measures to relax visa regimes and multiple restrictions on free flow of information and goods and unhindered movement of people across our borders;

Call on Member States of SAARC:

To take both short and long term comprehensive measures to eradicate extremism and violent practices by both state and non-state actors against civilians and journalists in particular;

To investigate all acts of violence and intimidation against media professionals in their territory and bring such persons/outfits who have allegedly committed such crimes to justice while compensating for the losses incurred by the victims;

To promote awareness and train their armed forces, intelligence and law enforcement agencies to respect and promote the safety of journalists in situations of risk, and to ensure that journalists are able to work in full security and independence in their territory;

To recommend to multilateral and bilateral institutions of international cooperation and financial assistance that they require from recipient countries as a specific condition of eligibility respect for freedom of expression and effective protection of the exercise of press freedom, also to recommend to these institutions that a state's failure to comply with its obligation to investigate and punish killers of journalists could be cause for revision, suspension or revocation of such cooperation;

To sign and ratify the Additional Protocols I and II to the Geneva Conventions, the Rome Statute of the International Criminal Court and other relevant international instruments of international humanitarian law and international human rights law, and to take the appropriate legislative, judicial and administrative measures to ensure application of the aforementioned instruments nationally, in so far as they provide protection for civilians, in particular those working in journalism;

To comply with the commitments of UNESCO Resolution 29 to promote legislation with the intention of investigating and prosecuting the killers of journalists and to combat impunity;

To adopt SAFMA's Protocol on Freedom of Information and implement SAFMA's Protocol on Free flow of information and movement of journalists across our borders.

Call on SAARC and Professional Associations:

To struggle at all levels in stemming and eradicating the tide of intolerance and violence against one section of the people or the other, journalists in particular;

To take resolute action against all expressions of intolerance towards freedom of expression and for the safety of journalists in situations of risk and to ensure respect for their professional independence;

To sensitize news organizations, editors and managers about the dangers surrounding their staff when covering hazardous stories, particularly the dangers present to local journalists;

To urge news associations to develop and sustain safety provisions that work regardless of whether their staff are covering domestic stories such as crime and corruption, disasters and demonstrations or health issues or international armed conflict;

To promote actions that secure the safety of journalists, including, but not limited to, safety training for journalists, safety codes, healthcare and life insurance, and equal access to social protection for free-lance employees and full-time staff;

To coordinate widespread publicity campaigns on unpunished crimes against journalists and other acts of violence to bring about news coverage of all violations of press freedom;

To encourage journalism schools and mass communication departments to include in their curricula studies on the impact that crimes against journalists - and subsequent impunity - have on democratic societies. In addition to promote the inclusion in the curricula of subjects or specific courses on press freedom and to coordinate activities, including safety training, among press freedom associations, news media and journalism schools;

To further encourage collaboration amongst journalists, media owners, educators, press freedom groups and appropriate development agencies, at national and global level, to ensure the inclusion of media development activities in social and economic development programmes;

To act in favour of measures to better ensure application of the rules and principles of a humanitarian nature safeguarding journalists, media

professionals and associated personnel in situations of armed conflict, and to promote the security of the persons concerned;

To work against the emergence of new threats to journalists and media staff, including hostage-taking and kidnapping;

To require that data be submitted to the SAARC Conference in a report on crimes against journalists and the number of cases that continue with impunity;

To sensitize governments regarding the importance of freedom of expression and threat that impunity for crimes against media professionals represents to this freedom;

To recall to member states their legal and moral obligations to comply with UN Resolution 29 and prevent crimes against journalists.

To take concrete remedial measures and remove all hindrances to connectivity, people's partnerships, people to people contact and free movement of information, goods and people across all our borders.

190. Media Briefing by Foreign Secretary Shivshankar Menon during the 15th SAARC Summit.

Colombo, August 1, 2008.

Official Spokesperson: Welcome to the Media Centre. We have with us the Foreign Secretary who will brief you on various issues of interest and there will be time for a few questions.

Foreign Secretary: What I would like to do is to first read to you the statement by the Prime Minister on the IAEA Board of Governors approving India Specific Safeguards Agreement by consensus earlier today. And then I thought I would brief you what happened today in the SAARC Summit and then I would be happy to answer your questions.

"I am delighted to hear that the IAEA Board of Governors has decided today by consensus to approve the India Specific Safeguards Agreement. This is an important day for India, and for our civil nuclear initiative for the resumption of India's co-operation with our friends abroad.

The civil nuclear initiative is good for India and good for the world. As we move forward towards our goal of sustainable development and energy security, the peaceful uses of atomic energy will play an increasingly important role.

I am grateful to the members of the IAEA Board of Governors, to our partners and friends abroad, and in particular, to the USA, for making this important step in the IAEA possible.

The DG of the IAEA, Dr. El Baradei, has played a significant role and we look forward to working with him and his Agency in implementing this agreement.

I am deeply appreciative of the historic significance of this milestone in our cooperation with the IAEA and the international community in peaceful uses of atomic energy."

On the SAARC meetings, as you know, the Council of Ministers met yesterday and completed its work and was preceded by the meeting of the Foreign Secretaries in the SAARC Standing Committee. Our primary function in the Standing Committee and in the Council of Ministers is to

prepare for the Summit which will open tomorrow morning and conclude day after a retreat by the Heads of State or Government day after tomorrow. So, what we did in the Standing Committee and subsequently in the Council of Ministers will now go up to the Summit meeting to the Heads for their consideration. We have worked on the Declaration which is traditional in such cases. We have also dealt with certain topics which were rather urgent significance to the member States of SAARC. One was food security, which is a subject which affects us all in SAARC not only because of the rising prices of food which affects many of us but also because we do feel that the region has the potential in terms of resource endowment to do much better by way of feeding itself and also feeding the rest of the world. The other issue which we were to consider was the guidelines for the cooperation with and participation by Observers of SAARC. As you know over the last few years there has been a great deal of international interest in being associated with SAARC. There are two additional States who have applied for Observer status whose applications are being considered at this Summit. So, Myanmar and Australia, once their applications are approved, there will be 9 observers actually in SAARC. So, we have been asked by the last Council of Ministers, in the Standing Committee to prepare guidelines how we will cooperate with the Observers. So that part of the work we have been doing. In the meantime, SAARC processes have resulted also in significant agreements which will be finalized and signed during the Summit.

One is the Charter and the bye-laws of the SAARC Development Fund which you would remember we operationalised before we had actually finished doing the Charter. The other that we have been discussing is the Convention on Mutual Legal Assistance in Criminal Matters. We are also considering setting up a SAARC Regional Standards Organization so that we harmonize our standards through the region. This would be a concrete contribution to making it easier to produce goods which can then go through and sold in the entire region. And, Afghanistan is acceding to SAFTA at this Summit. So, the other member states of SAFTA accept Afghanistan and then Afghanistan accedes to SAFTA. So, there are likely to be four Agreements.

During the year, during the Economic Ministers meetings, it is also agreed to now start discussing how to extend SAFTA to services. SAFTA so far covers trade in goods. But, there is a fair amount of trade in services and this is going to get more and more important as we move into the tertiary sector as our economies get more sophisticated. So, you would notice that

we are now looking at the relatively concrete steps which would help us to increase regional economic integration and to build up ties - economic and other ties - between us. So, we are looking forward to this Summit carrying forward our attempt to bring SAARC from the declaratory phase to a state of actual implementation and action. These are some of the issues that we have been considering in the formal meetings. I don't want to get ahead of myself. You know the Summit will consider this - the Heads will see which bits they are comfortable with and which bits they will approve. So, we will probably brief you again either at the end of tomorrow or possibly day after about the actual outcomes of the Summit. But I thought I will give you a preview of the sorts of issues that we are looking at.

In terms of the bilateral meetings that the External Affairs Minister has been having, he met yesterday with the Foreign Ministers of Pakistan, Bangladesh, Nepal and today he met with the Foreign Minister of the Maldives and also called on Nepalese Prime Minister Koirala this morning. With the Foreign Minister of Pakistan, I don't think I need to go over the issues, you know they had a frank and candid discussion and covered all the issues in our relationship but they will both be reporting to the Prime Ministers about their discussions. This is an ongoing conversation, as you know because these are issues which we need to address jointly and we will brief in detail about this after the Prime Minister's meeting on the 2nd (August) tomorrow.

With the Foreign Affairs Advisor of the Caretaker Government in Bangladesh, EAM and the Foreign Affairs Advisor reviewed bilateral relationship, expressed satisfaction at the various steps that have been taken over the last years to improve relationship. On the economic side, we have taken some very significant measures to open up trade, duty free access and they also reviewed our cooperation in international fora where we have worked together well. The Bangladesh Foreign Affairs Advisor also briefed EAM about the internal situation in Bangladesh and the regime's stance to move towards elections later this year. They will announce the schedule, I think they will hold the elections in December.

In the evening yesterday, in the meeting with the Nepalese Finance Minister who is representing Nepal at the Council of Ministers, EAM and Mr. Mahat both discussed the nature of our relationship which, as you know, is very close, we have an open border, we have free trade between the two countries. Mr. Mahat described the political transition that Nepal is going

through after the elections and this was the subject which was also discussed between EAM and Prime Minister Koirala earlier today, in the morning when he called on Prime Minister Koirala. Later in the evening yesterday, EAM also met with the Sri Lankan Foreign Minister Mr. Bogollagama where again they covered the bilateral relationship, the need to strengthen economic ties to build on the FTA that we brought into effect in 2000. EAM mentioned the issue of fishermen which has been a difficult issue in the recent past and both sides agreed that they would try and find steps, concrete steps, that we could take to deal with this humanitarian problem. They both also discussed the SAARC and how we expect it to be to make major progress in moving SAARC forward.

In his meeting with the Foreign Minister of Maldives, the Foreign Minister of Maldives briefed the EAM on domestic developments in the Maldives where there is a transition to a new Constitution and Presidential elections later this year. EAM also invited his counterpart to visit India very soon in the near future. We have an absolutely trouble-free relationship between India and Maldives and both sides expressed satisfaction at that.

Today afternoon, Prime Minister after his arrival here, called on President Rajapakse in his office this afternoon where PM expressed his conviction that in South Asia our destinies are inter-linked and that our prosperity is also inter-linked. The prosperity of one would need the prosperity of others to buttress it. We would all benefit from a rising tide. They discussed various issues in our bilateral relationship, about deepening economic cooperation as well. PM also mentioned the fishermen issue which will be dealt with in practical ways so that we can minimize the hardship and the difficulties that are faced by the fishermen. Both sides expressed satisfaction at the state of the relationship and said that they would be working to try to carry this forward. I think that is all I have for you at this moment but I would be happy to answer any questions which you might have.

Question: Now that India has crossed this important milestone in the IAEA, how difficult is the next step at the NSG.....

Foreign Secretary: Well, I can only say that we will give it our best effort just as we did at each stage of this process. I think we are convinced that what we are doing is, as Prime Minister has said good for India, good for the world. Therefore, we will do our best to see that we move through the next steps in the future.

Question: What constitutes clean exemption at NSG.....unconditional exemption?

Foreign Secretary: I think we have made it clear that what we would expect in order to move forward is a clean, unconditional exemption. I don't want to get into, you know, what would constitute clean, whether this clean means any other word which you might find. But, we have been consistent in saying this right through. Quite frankly, for us, the exemption is important because this would enable us to resume full civil nuclear cooperation with the rest of the world, with members of the NSG and we are looking forward to that prospect.

Question:the issue of terrorism is being talked about for the past one week...did it come up in your discussions....(inaudible)...

Foreign Secretary: Well, there was a discussion on terrorism both in the Standing Committee and in the Council of Ministers and many of us, India included Sri Lanka and other members also stressed the importance of fighting terrorism and taking concrete steps to deal with terrorism and also came up in our bilateral meetings, not surprisingly and this is certainly one of the issues which for us is a very important part of the Summit because we want to carry the SAARC's Economic and Social agenda forward and to continue the kinds of rates of growth and progress that we have seen in South Asia in recent years which have been quite high, which are part really of the Asian resurgence, if we want to continue that, it is essential that we managed to do this in an atmosphere free of violence where there is peace and tranquility and the greatest threat to many of our societies today is really from terrorism. So, it is natural that it did come up, how it will be reflected at the end of the Summit, I think it is little too early to say, we are still working on it. I would expect some reference to it in the Declaration and certainly in our bilateral conversations as well.

You mentioned the Convention on terrorism which we have tabled in the United Nations. We naturally spoke to the other members and ask their support and many of them did and we are looking forward to carrying that effort forward in the United Nations during this General Assembly.

Question: ... (inaudible)...

Foreign Secretary: We still do not have the international convention in the UN yet. That has not yet been agreed upon. We are still working on it. We have proposed it a long time ago. Certainly, there is a SAARC

Convention on terrorism which was signed several years ago and in addition there is an Additional Protocol to that Convention on stopping financing of terrorism from 2004. But the specific issues that you mentioned, we will deal with it under the existing law, we have a standing request for the extradition of Prabhakaran. With Pakistan, we have made it clear what sort of action by Pakistan we are looking for. We have a joint anti-terrorism mechanism where we raise these issues and where we discuss and try to do what we can. So, it is a combination of steps actually that we need to take. We will work with the existing law and we will try to improve the law whether it is a international convention in the UN, we will try and see whether we could do anything additional within SAARC or even in terms of legislation and we will see how we can address this specific problem that you have mentioned.

Question: Germany has called a meeting of the NSG in Vienna. Can you confirm that and after that what are the next steps?

Foreign Secretary: I can't confirm because we are not NSG members. So nobody sends us the notice. But the fact is yes we hear from the NSG members that a plenary meeting of the NSG has been called on 21st/22nd of August. We are not in the room, by the way, we are not members of the NSG, so, that is why I don't want to confirm it formally. But, the fact is, yes, we believe a meeting has been called and that they will consider the exemption for India. We will work with the NSG members. We have been in touch with them now for some time, as you know and we will work with them to try and get a clean, unconditional exemption. Thereafter, once the NSG clears we look forward to entering into the specific detailed agreements that we will need to do with individual partner countries whether they are inter-governmental agreements like the 123 with the US which needs US domestic processes to be complete which includes Congress or whether there are inter-governmental agreements with other States who are willing to work with us in this area. And then, after that, the next step is really the actual contracts for material, equipment, reactors whatever. So, there is a fair amount of detailing still to be done in this process before you actually come to the stage of placing a commercial order and shipping it. What we are doing here is creating the international enabling environment within which such transfers can take place. One big step has been taken today in having a Safeguards Agreement which is an umbrella agreement into which we can bring various arrangements that we will enter into with our partners. The NSG would be the next big step.

Question: Is the meeting in Vienna?

Foreign Secretary: I am not sure. I will check and let you know.

Question: The Pakistan Foreign Minister said that they will give a detailed statement after the meeting of the Prime Ministers of the two countries...

Foreign Secretary: I am sure they will speak in detail so will we..... in our normal tradition of transparency, openness, frankness, friendliness.

Question: During Prime Minister's meeting yesterday with Mr. Rajapakse, was there any discussion on the Comprehensive Economic Partnership Agreement and if so, what did Mr. Rajapakse say? And the PM was also supposed to meet Tamil leaders....

Foreign Secretary: He is doing so right now actually. He is meeting with several political parties and representatives at this moment. But I do not want to brief you on some event that is going on at the same time as this briefing. We will have to naturally work our way through whatever worries and so on there are about the CEPA. You know, this is part of a process I think of bringing an agreement through, if you look at the FTA for instance, it took us once we had done the negotiations but it also took us a year or two to actually digest what it meant for ourselves. So, I think we are really at that stage of needing to look through it, talk about it, see how it works in practice and then when we are both comfortable because any such agreement can only work if both sides are equally comfortable. But, at the leadership level it is clear both sides wanted to do it, saw it as useful, saw it as beneficial, and look forward to doing it.

Question: What is the kind of evidence do we have on the Kabul blast?

Foreign Secretary: We are still at the stage of investigation and at this stage, I have nothing further to tell you than what I told you on 21st of July in New Delhi about what we have. It is a jigsaw puzzle, we have some of the pieces, the pieces that we have I told you where it leads. When we have more to share with you, we will.

Question: As of today, what would you describe as the state of the Indo-Pak dialogue...(inaudible)...after the meeting of the two Foreign Ministers.

Foreign Secretary: If you ask me to describe the state of the dialogue, it is in a place where it has been for the last four years because we face a situation where things have happened in the recently which were

unfortunate and which quite frankly have affected the dialogue. So, that is why we are talking to Pakistan, that is why we are carrying on this conversation, I said to you this is an ongoing process. I am afraid I have to run. Thank you, Thank you very much.

**191. Statement of Secretary General of the SAARC Secretariat
at the inaugural session of the SAARC Summit.**

Colombo, August 2, 2008.

Hon. Chairman;

Hon. Heads of State or Government;

**Distinguished Representatives from Observer States and
Organization;**

Excellencies;

Ladies and Gentlemen;

1. It is, indeed, a great privilege and honour for me to address the Inaugural Session of the Fifteenth SAARC Summit in this beautiful city of Colombo. I would like to begin with profound thanks to the Government of Sri Lanka for the warm reception and gracious hospitality extended to us and for the excellent arrangements made for the Summit. Our hearty greetings go to the Government and people of Sri Lanka on the Sixtieth Anniversary of Independence.
2. I warmly felicitate His Excellency President Mahinda Rajapaksa on his election as Chairperson. I am confident that his vast knowledge and rich experience would be invaluable in directing the work of SAARC. We are confident that under His Excellency's Chairmanship, the achievements of previous Summits would be greatly expanded.
3. Grateful tributes are due to the outgoing Chairperson His Excellency Prime Minister Manmohan Singh for steering the Association since April last year with keen personal interest and unwavering support. During his leadership, SAARC has made significant headways in diverse areas of its work to move from declaratory to

implementational phase.

4. I would also like to extend a warm welcome to Hon'ble Ministers and the high representatives of Observers at the Summit.

Excellencies;

5. The Fifteenth Summit is taking place at a time when our region copes with a fast evolving global context. Internationally, increase in food, fuel, fertilizer and commodity prices is constraining the growth rate of SAARC economies. The exorbitant rise in price of oil may also impact on globalizing trends in general eroding the benefits derived by South Asia. The countries of South Asia are also vulnerable to climate change issues. We are confident that the Fifteenth Summit would provide direction on the nature of our response to the existing and emerging challenges facing the Region.

Excellencies

6. I am happy to Report that since the Fourteenth Summit, SAARC has made remarkable progress in a number of important areas. I would briefly present them for Summit's consideration.
7. In regard to SAARC role in addressing the overarching goal of Poverty Alleviation, the SAARC Ministers of Poverty Alleviation agreed to provide specific leads during the Malé Meeting in May this year. These included speedier national implementation of SAARC Development Goals; their mainstreaming into national policy approaches; strengthened regional policy responses on poverty alleviation efforts; increased ODA assistance; better access to the markets and debt relief.
8. In line with the directive of the Fourteenth Summit to expedite project based cooperation, SAARC mechanisms are focusing on identifying regional and sub-regional projects. The SAARC Development Fund (SDF), as a key instrument in this regard, has now finalized its Charter and bye-laws. I am happy to announce that the meeting of the SDF Board last month already approved one project on women's empowerment, a project which aims at covering 7 SAARC States. There are a couple of other projects too pertaining to women and child health and education being pursued by SDF interim cell at the SAARC Secretariat.

9. Transport Ministers of SAARC Member States had identified several sub-regional, regional and pilot projects for improving intra-regional connectivity. The Inter-governmental Group on Transport has been mandated to develop transport and transit agreements. SAARC Regional Multimodal Transport Study (SRMTS) now includes Afghanistan also. The agenda of next Transport Ministers' Meeting may address implementing regional/sub-regional connectivity projects at an early date and early conclusion of transport and transit Agreements.
10. SAARC has continued to work on policy goals to promote and strengthen regional trade and economic cooperation. Trade under SAFTA has already commenced. The relevant mechanisms are focusing on reducing the size of Sensitive Lists and strengthening trade facilitation measures. Important steps for Harmonizing of Standards are also taken including by the agreement on SARSO. An Expert Group is expected to commence the negotiations on Draft Framework Agreement on Trade in Services in the next couple of months. The Inter-governmental Group on Financial Issues is also contemplating discussions on identifying specific steps by the Member States towards deeper economic integration.
11. The vision of His Excellency Dr. Manmohan Singh to establish the South Asian University, the Agreement on which was signed during the Fourteenth Summit, has rapidly moved towards implementation. Specific steps, including appointment of the Interim CEO of the project, identification of land for the University in Delhi etc. have been taken. This would give concrete shape to a regional educational institution to impart quality education to students from the SAARC Member States beginning in 2010. Along with good progress in the implementation of SAARC Tele-medicine Project and Model Villages project, this would contribute to some of the key objectives of the SAARC Social Charter.

Excellencies

12. On Climate Change, the SAARC Environment Ministers at their meeting last month in Dhaka adopted the Dhaka Declaration and a comprehensive SAARC Action Plan on Climate Change (2009-2011) with prioritized list of measures.
13. In the field of energy, the Regional Study on Energy Trade is due for completion in December 2008. The Expert Group on Energy Efficiency has finalized a road map, which, inter alia, includes reviews

of the national policies and legislation relating to energy efficiency and conservation; and developing and harmonizing standards, testing procedures and appliances. The SAARC Regional Centre on Energy is also keeping up good work on promoting studies and exploring and devising steps for regional cooperation.

14. The SAARC Interior Ministers at their Second Meeting in August 2007 took a number of important decisions to address the menace posed by terrorism, drugs and human trafficking. They underlined proactive steps and operational cooperation amongst Member States. The signing of the instrument on mutual legal assistance at this Summit would also reinforce SAARC legal corpus for combating terrorism.
15. SAARC approach to the issue of Food Security is a comprehensive one aiming to develop a mix of short term and long term responses and regional/sub-regional projects. As we operationalize the SAARC Food Bank to provide immediate relief in food crises, the Colombo Declaration on Food Security emphasizes urgency of action on multiple fronts.
16. Pursuant to the directives of the Twelfth Summit, a SAARC Regional Strategy on HIV and AIDS has been developed. In this context, two eminent personalities from the region, Ms. Shabani Azmi from India and Mr. Sanath Teran Jayasuriya of Sri Lanka, have agreed to be SAARC Goodwill Ambassadors.

Excellencies;

17. The Association should, now more than ever, focus on pursuing tangible project-based cooperation in economic, social and infrastructure areas. The SAARC Development Fund has enormous potential in this regard as it offers diverse avenues which need to be harnessed with care and speed and constant focus on peoples of South Asia. The measures taken and the steps announced at this Summit can demonstrate SAARC's ability to muster its own regional self-help to deal with the challenges. This would be a compelling factor for raising SAARC's profile internationally and adding value to SAARC's outreach.

We, the heads of State or Government, participating in the Fifteenth SAARC Summit held in Colombo on 2-3 August 2008, affirm our

resolve to ensure region-wide food security and make South Asia, once again, the granary of the world.

In view of the emerging global situation of reduced food availability and worldwide rise in food prices, we direct that an Extra-ordinary Meeting of the Agriculture Ministers of the SAARC Member States be convened in New Delhi, India in November 2008, to evolve and implement people-centred short to medium term regional strategy and collaborative projects that would, among others, lead to:

- Increase in food production;
- Investment in agriculture and agro-based industries;
- Agriculture research and prevention of soil health degradation;
- Development and sharing of agricultural technologies;
- Sharing of best practices in procurement and distribution; and
- Management of the climatic and disease-related risks in agriculture.
- We direct that the SAARC Food Bank be urgently operationalised. We also emphasize early drawing up of the SAARC Agriculture Perspective 2020.

We further direct that SAARC region should forge greater cooperation with the international community to ensure the food availability and nutrition security in South Asia.

18. This is my first SAARC Summit and I am grateful for the trust reposed and the kindness shown to me personally. It would be my endeavour to maintain and upgrade the current momentum in SAARC activities and their orientation towards action on the ground and to ensure that the Secretariat implements directives of the Summit and other SAARC bodies.

Thank you.

192. Statement by Prime Minister Dr. Manmohan Singh at the Inaugural Session of the 15th SAARC Summit.

Colombo, August 2, 2008.

Your Excellency President Mahinda Rajapaksa,
Excellencies, Heads of State and Governments,
Secretary General of SAARC,
Ladies and Gentlemen,

I wish to begin by congratulating His Excellency President Mahinda Rajapaksa for his election as Chairperson of SAARC. I also convey my deep appreciation to the Government and people of Sri Lanka for the excellent arrangements made for the 15th Summit, and for the warm and generous hospitality that has been extended to all of us.

I also wish to extend a very warm welcome to our newest Observer, Mauritius, a country with whom South Asia shares enduring historical and cultural ties.

South Asia has travelled a long distance in the twenty three years since SAARC was established. The winds of democracy and political change have swept across our region. Our people's aspirations, particularly of our youth, for a better life and for greater empowerment, are rising. With globalisation, our economies are ever more inter-connected with our neighbours and with the world.

It is however a fact that South Asia has not moved as fast as we all would have wished. We have only to see the rapid integration within ASEAN and its emergence as an important economic bloc in Asia to understand the opportunities that beckon.

The success and prosperity of each one of us provides opportunities to the others to promote their own success and prosperity. This mutuality of interests is the central driving force of regional cooperation everywhere.

Our aim should be to create virtuous cycles of growth in our region. A prosperous South Asia will also be a peaceful and stable South Asia. Realising this vision requires a change in our mindsets, and a new paradigm of thinking. We can and must do more to give meaning to the theme of this year's Summit: "Growth through Partnership".

Terrorism continues to rear its ugly head in our region. It remains the single biggest threat to our stability. We cannot afford to lose the battle against the ideologies of hatred, fanaticism and against all those who seek to destroy our social fabric.

Terrorists and extremists know no borders. The recent attack on the Indian Embassy in Kabul and the serial blasts in Bangalore and Ahmedabad are gruesome reminders of the barbarity that still finds a place here in South Asia. We must act jointly and with determination to fight this scourge. We must defend the values of pluralism, peaceful coexistence and the rule of law.

South Asia clearly has the resources and the skills needed to meet our development challenges. I am happy to say that India has experienced vigorous growth at an average of 8.8% per year for the past four years. India is now an open economy welcoming investment from everywhere. The other countries in our region have also done well. Today, Asia has become the engine of growth of the world economy and South Asia is a part of this resurgence.

This growth must have a multiplier effect in the region. We have rich and varied experience in development, which we must pool together to create a model of inclusive and sustainable regional development. The SAARC Development Fund has made a promising start with the launching of two maternal and child healthcare projects. The development of SAARC Model Villages in each of our countries within the last year is an equally encouraging development.

Economic cooperation, connectivity and integration will be the cornerstone of SAARC in the years ahead. We have already agreed to move towards a South Asian Customs Union and a South Asian Economic Union in a planned and phased manner.

India has granted zero duty access to our markets to LDC members from January 1, 2008, one year ahead of the target and also pruned our sensitive list for these countries. India's FTA with Sri Lanka is working satisfactorily bringing benefits to both our economies.

We will go ahead with these initiatives at a pace we are all comfortable with.

All the leaders have emphasized the importance of physical connectivity. On its part, India has upgraded its railway connection to broad gauge at

the Raxaul-Birgunj and Jogbani-Biratnagar borders, the Dhaka-Kolkata rail service has begun, and work is underway to upgrade infrastructure along our borders with other neighbours. India looks forward to the finalization of the draft Agreements on Motor Vehicles and Railways.

I have always believed that the people of South Asia know much more about countries of the West than they do about themselves. The fraternity that exists among our students and professionals outside the region must be re-created in South Asia. The overwhelming response generated by the first SAARC Cultural Festival and the first SAARC Youth Camp reflects the latent desire for such exchanges.

We are excited about the establishment of the South Asian University. The land for the University in New Delhi has been acquired and a Project Office has been set up. When the University becomes operational in 2010, it will cater to 5000 students, and will create a pool of world-class scientists, technologists and thinkers. When they go out into the world, they will represent not just their respective countries but all of South Asia.

To be a dynamic and responsive body, SAARC must identify and address new challenges as they emerge. The unprecedented increase in oil and food prices risks jeopardizing our developmental gains.

SAARC must make its voice heard in the councils of the world to ensure that there is an effective global response that protects the interests of oil consuming countries. We should also pool our resources to tap renewable sources such as solar energy, hydropower and wind energy, all of which South Asia has in abundance.

The establishment of the SAARC Food Bank in 2007 was an extremely forward looking decision. In the context of the global food crisis today, this decision stands out as an example of our foresight and our ability to help ourselves. We should now move forward to an early ratification of the Intergovernmental Agreement by all the Member States.

We in India are acutely conscious that we need a Second Green Revolution. The countries of South Asia need to work towards a collective response that leads to a quantum leap in agricultural productivity, food grain output and farm incomes so that the spectre of food shortages vanishes from our region.

India will actively work with Member States to realise the several proposals that have been made, including greater exchange of knowledge and

experience on breeding livestock, improvement in yields of protein rich pulses and in adoption of modern post-harvest technologies.

We are inheritors and trustees of one of the most vulnerable eco-systems in the world. It is most encouraging that our Ministers have finalised a SAARC Action Plan on Climate Change, which recognizes that rapid development provides the best form of adaptation.

India has recently launched a National Action Plan on Climate Change, and we will be more than willing to share experiences. There are a number of areas in the Plan where we need to cooperate with SAARC member countries such as in our mission on sustaining the Himalayan ecosystem, in our plans for protection of coastal areas, disaster management strategies and programmes, early warning systems and research on climate modeling. SAARC already has projects on water harvesting and afforestation.

I am confident that under the able leadership of Sri Lanka, we will continue to move these initiatives forward. In recent years we have shifted our focus from declarations to action and implementation, and this has begun to show results. As we consolidate, prioritize and rationalize our activities, we will bring closer to the doorsteps of our people the benefits of SAARC.

India stands ready to play her part in the evolution of a stable, vibrant, and prosperous South Asia. I am optimistic about our future, and am confident that the best is yet to come.

Thank you.

193. Colombo Statement on Food Security issued at the Fifteenth SAARC Summit.

Colombo August 3, 2008.

We, the heads of State or Government, participating in the Fifteenth SAARC Summit held in Colombo on 2-3 August 2008, affirm our resolve to ensure region-wide food security and make South Asia, once again, the granary of the world.

In view of the emerging global situation of reduced food availability and worldwide rise in food prices, we direct that an Extra-ordinary Meeting of the Agriculture Ministers of the SAARC Member States be convened in New Delhi, India in November 2008¹, to evolve and implement people-centred short to medium term regional strategy and collaborative projects that would, among others, lead to:

- Increase in food production;
 - Investment in agriculture and agro-based industries;
 - Agriculture research and prevention of soil health degradation;
 - Development and sharing of agricultural technologies;
 - Sharing of best practices in procurement and distribution; and
 - Management of the climatic and disease-related risks in agriculture.
- We direct that the SAARC Food Bank be urgently operationalised. We also emphasize early drawing up of the SAARC Agriculture Perspective 2020.

We further direct that SAARC region should forge greater cooperation with the international community to ensure the food availability and nutrition security in South Asia.

¹ The proposal for Food Bank was ratified at an Extraordinary Meeting of Agriculture Ministers of the SAARC Countries in New Delhi on October 31. Each country's share was determined by the SAARC Food Bank Board based on production capacity, per capita consumption and availability. It was agreed to operationalize the Bank by the end of December 2008. India has announced a contribution of 153,200 tonnes of food grains of the total capacity of the Bank of 2,43,000 tonnes. Pakistan and Bangladesh agreed to contribute 40,000 tonnes each, while Nepal and Sri Lanka would contribute 4000 tonnes each followed by Afghanistan (1,420 tonnes), Maldives (200 tonnes) and Bhutan (180 tonnes). It has been agreed to store the food in the border areas of the member countries. The Board was authorised to work out the mode of pricing for distributing food grains in case of emergency but it is expected to be lower than the prevailing international prices.

194. Declaration issued at the Fifteenth SAARC Summit.**Colombo, August 3, 2008.****Partnership for Growth for Our People****Introduction**

The President of the Islamic Republic of Afghanistan, His Excellency Mr. Hamid Karzai; the Chief Adviser of the Government of the People's Republic of Bangladesh, His Excellency Dr. Fakhruddin Ahmed; the Prime Minister of the Kingdom of Bhutan, His Excellency Lyonchhen Jigmi Y. Thinley; the Prime Minister of the Republic of India, His Excellency Dr. Manmohan Singh; the President of the Republic of Maldives, His Excellency Mr. Maumoon Abdul Gayoom; the Prime Minister of the Federal Democratic Republic of Nepal, the Rt. Hon'ble Girija Prasad Koirala; the Prime Minister of the Islamic Republic of Pakistan, His Excellency Syed Yousuf Raza Gilani; and the President of the Democratic Socialist Republic of Sri Lanka, His Excellency Mr. Mahinda Rajapaksa, met at the Fifteenth Summit meeting of the South Asian Association for Regional Cooperation (SAARC) held in Colombo, Sri Lanka on August 2-3, 2008.

Regional cooperation

2. The Heads of State or Government reaffirmed their commitment to the principles and objectives enshrined in the SAARC Charter. They renewed their resolve for collective regional efforts to accelerate economic growth, social progress and cultural development which would promote the welfare of the peoples of South Asia and improve their quality of life, thereby contributing to peace, stability, amity and progress in the region.
3. The Heads of State or Government recognized that SAARC has been making steady and incremental progress over the years, in particular since the last Summit held in New Delhi in April 2007, towards realizing the objectives of the Charter. They accordingly emphasized the importance of maintaining the momentum, through clear links of continuity between the work already underway and future activities. The Heads of State or Government recognized the need for SAARC to further strengthen its focus on developing and implementing

regional and sub-regional projects in the agreed areas on a priority basis. Each Member State may consider taking up at least one regional/ sub-regional SAARC project as the lead country.

4. The Leaders noted with satisfaction the considerable progress made in various domains of partnership among SAARC Member States and emphasized the need to consolidate and ensure effective implementation of all SAARC programs and mechanisms by rationalization and performance evaluation on a regular basis.

A Partnership for Growth for the Peoples of South Asia

5. The Heads of State or Government were convinced that the process of regional cooperation must be truly people-centered, so that SAARC continues to strengthen in keeping with expectations as a robust partnership for growth for the peoples of South Asia. They accordingly directed all SAARC mechanisms to abide by the Charter objective of promoting the welfare of the people and improving their quality of life. In this regard they directed the Council of Ministers to ensure that SAARC mechanisms identify further areas of cooperation where people-centric partnership projects could be initiated.
6. The Heads of State or Government observed that an effective and economical regional tele-communication regime is an essential factor of connectivity, encouraging the growth of people-centric partnerships. They stressed the need for the Member States to endeavour to move towards a uniformly applicable low tariff, for international direct dial calls within the region.

Connectivity

7. The Heads of State or Government recognized the importance of connectivity for realizing the objectives of SAARC. They accordingly directed the SAARC mechanisms to continue to embody in their programs and projects a strong focus on better connectivity not only within South Asia, but also between the region and the rest of the world. They further stressed the necessity of fast-tracking projects for improving intra-regional connectivity and facilitating economic, social and people-to-people contacts.

Energy

8. The Heads of State or Government noted that increased access to energy is critical for fulfilling the legitimate expectations of growth

and development in South Asia. They observed in this regard that the escalation of oil prices threatens both the energy security of the region, as well as the economic growth witnessed in South Asia. In this context, they recognized the need to expeditiously develop and conserve the conventional sources of energy and to build up renewable alternative energy resources including indigenous hydro power, solar, wind and bio, while introducing energy reforms, energy efficiency and the trade and sharing of technology and expertise. They also noted that there is tremendous potential for developing regional and sub-regional energy resources in an integrated manner and noted the efforts being made to strengthen regional cooperation in capacity development, technology transfer and the trade in energy. While expressing satisfaction at the progress over the recent years to strengthen energy cooperation, the Leaders directed that the recommendations of the Energy Dialogue be implemented through an appropriate work plan.

9. The Heads of State or Government stressed the urgent need to develop the regional hydro potential, grid connectivity and gas pipelines. They noted that the possibility of evolving an appropriate regional inter-governmental framework may be explored to facilitate such an endeavour. They welcomed Sri Lanka's offer to host the Third Meeting of SAARC Energy Ministers in Colombo in 2009.

Environment

10. Being increasingly aware of global warming, climate change and environmental challenges facing the region, which mainly include sea-level rise, deforestation, soil erosion, siltation, droughts, storms, cyclones, floods, glacier melt and resultant glacial lake outburst floods and urban pollution, the Heads of State or Government reiterated the need to intensify cooperation within an expanded regional environmental protection framework, to deal in particular with climate change issues. They were of the view that SAARC should contribute to restoring harmony with nature, drawing on the ancient South Asian cultural values and traditions of environmental responsibility and sustainability.
11. The Leaders expressed satisfaction at the adoption of SAARC Action Plan and Dhaka Declaration on Climate Change by the SAARC Environment Ministers at the SAARC Ministerial Meeting on Climate

Change held at Dhaka on 3 July 2008. In this context they stressed the need for close cooperation for capacity building, development of CDM projects and promotion of programs for advocacy and mass awareness raising on climate change. They also expressed satisfaction at the adoption of a SAARC Declaration on Climate Change for the United Nations Framework Convention on Climate Change (UNFCCC) by the Twenty-ninth Session of the Council of Ministers.

12. The Heads of State or Government expressed deep concern over global climate change and its impact on the lives and livelihoods in the region. They also noted the urgency of the immediate need for dealing with the onslaught of climate change including sea level rise, on meeting food, water and energy needs, and taking measures to ensure the livelihood security of the peoples in the SAARC region. They resolved to work together to prevent and address the threats to the livelihoods of the peoples and to provide access to remedies when these rights are violated and also to find an equitable distribution of responsibilities and rights among the Member States. They also emphasised the need for assessing and managing its risks and impacts. In this regard, they called for an in-depth study on "Climate Justice: The Human Dimension of Climate Change," to come up with a rights-based approach that would highlight the human impact when responding to the impacts of climate change.
13. The Heads of State or Government affirmed that every citizen of this planet must have an equal share of the planetary atmospheric space. In this context, they endorsed the convergence of per capita emissions of developing and developed countries on an equitable basis for tackling climate change. They were of the view that any effort at addressing climate change should take into account historical responsibility, per capita emissions and respective country capabilities.
14. The Heads of State or Government expressed concern at the human loss suffered through natural disasters in the region and stressed the need for the timely provision of relief in humanitarian emergencies. In this regard they directed that a Natural Disaster Rapid Response Mechanism be created to adopt a coordinated and planned approach to meet such emergencies under the aegis of the SAARC Disaster Management Centre.

Water Resources

15. The Heads of State or Government expressing their deep concern at the looming global water crisis, recognized that South Asia must be at the forefront of bringing a new focus to the conservation of water resources. For this purpose they directed initiation of processes of capacity building and the encouragement of research, combining conservation practices such as rain water harvesting and river basin management, in order to ensure sustainability of water resources in South Asia.

Poverty Alleviation

16. The Heads of State or Government while acknowledging the significant steps taken to alleviate poverty in the region, resolved to continue to combat poverty through all available means, including especially through people's empowerment. They committed themselves to continuing to share each other's experiences and success stories of pro-poor poverty reduction strategies such as micro-credit systems, community-driven initiatives and the raising of the consciousness of the poor on their right to resources and development.
17. In this respect, they emphasized on undertaking sustained efforts, including developing and implementing regional and sub-regional projects towards the attainment of SAARC Development Goals (SDGs). They noted the decision by the Ministers on Poverty Alleviation to obtain an inter-governmental mid-term review of the attainment of the SDGs to be completed by 2009.
18. The Leaders welcomed the offer of Nepal to host next Ministerial Meeting on Poverty Alleviation.

SAARC Development Fund (SDF)

19. The Heads of State or Government expressed satisfaction at the signing of the Charter of the SAARC Development Fund (SDF), and finalization of its Bye-laws, and called for an early ratification of the SDF Charter. They also welcomed early operationalization of the Fund from the available funds. They expressed satisfaction at the launching and identification of the projects on women empowerment, maternal & child health and teachers' training under the social window of the SDF, as directed by the Finance Ministers. They reiterated

their commitment to expedite their financial contributions to the Fund. In this regard, the Heads of State or Government accepted with appreciation the offer of the Kingdom of Bhutan to host the SAARC Development Fund Secretariat in Thimphu.

Transport

20. The Heads of State or Government expressed satisfaction at the progress through the Meetings of the Ministers of Transport. They reiterated the critical importance of an efficient multi-modal transport system in the region for integration and for sustaining the region's economic growth and competitiveness. They urged early implementation in a gradual and phased manner of the proposals of the SAARC Regional Multimodal Transport Study (SRMTS).
21. They noted the progress made in the consideration of the draft Motor Vehicle Agreement (MVA) by Member States. They also noted that technical inputs related to Regional Transport and Transit Agreement and Regional Multilateral Railway Agreement were being examined by the Member States. In this context, they directed the next Transport Ministers Meeting to expedite work in this regard. They appreciated the offer of Sri Lanka to hold the Second Meeting of SAARC Ministers of Transport in Colombo in 2008.

Information and Communications Technology (ICT) Development

22. The Heads of State or Government urged the need for even more expeditious and close regional cooperation in information and communication technology. They welcomed the enhanced digital connectivity among the Member States and the ongoing work to upgrade the regional telecommunication infrastructure. They directed that the arrangements needed to implement the proposed collaborative tele-projects such as those for health care and education, be expedited.

Science and Technology

23. The Heads of State or Government acknowledged the ongoing contribution of Science & Technology including cutting edge technology in information and bio-technology in improving the quality of life of the peoples of South Asia. They noted the offer of India to host the Ministerial Meeting on Science & Technology on September 15-16, 2008 for development of a roadmap on identifying

implementable focused regional and sub-regional projects in SAARC.

Tourism

24. The Heads of State or Government underscored the vital contribution that tourism could afford to the economic development of the SAARC region. They agreed to make every effort to implement the comprehensive action plan adopted by the Second Ministerial Meeting held at Cox's Bazaar, Bangladesh. These efforts would include facilitating the movement of people through improved travel infrastructure and air, sea and land connectivity among the SAARC countries, collaboration in human resource development and the promotion of SAARC as a common destination through public-private partnerships and joint campaigns.

Culture

25. The Heads of State or Government emphasized the role of cultural connectivity in bringing the peoples of South Asia closer, while reinforcing and projecting a distinct South Asian identity. They directed that the Agenda for Culture be implemented in full.

SAFTA and Trade Facilitation

26. The Heads of State or Government emphasized their commitment to implement SAFTA in letter and in spirit, thereby enabling SAARC to contribute as well to the dynamic process of Asia's emergence as the power house of the world. Recognizing the need to continue to address the major barriers hindering effective trade liberalization in the region, which include sensitive lists of items and Non-Trade Barriers (NTBs), they directed that the decision to revise the sensitive lists by the SAFTA Ministerial Council (SMC) be implemented early. They also recommended that while revising the Sensitive Lists, special consideration be given to the LDCs. The Leaders directed that SAFTA Committee of Experts (SCoE) to expeditiously resolve the issue of Non Tariff Measures (NTMs) and Para Tariff Measures (PTMs) in order to facilitate and enhance the trade under SAFTA.
27. The Heads of State or Government underlined the need for taking concrete measures to improve trade facilitation in terms of the mutual recognition of standards, the adoption of common tariff nomenclatures, the harmonization of customs procedures. They directed the relevant SAARC bodies to expedite their work in these

areas. They also recognized the importance of development of communication system and transport infrastructure and transit facilities specially for the landlocked countries to promote intra-SAARC trade.

28. The Heads of State or Government observed that the SAARC legal instruments on trade liberalization and the measures and initiatives for trade facilitation are increasingly affording significant openings for mutually beneficial trade, investments and economic co-operation within South Asia. These openings are complemented by the uniformly sound levels of national economic growth being attained by the Member States of SAARC. The Leaders accordingly noted the growing and urgent need for enhancing capacity within SAARC dedicated to encouraging national and regional strategies that would further maximize the positive trade, investments and economic cooperation climate in South Asia. In this regard they welcomed the offer of Sri Lanka to prepare a Concept Paper and a Working Paper on the subject and directed that the Paper be discussed at a Session of the Standing Committee specially convened for this purpose, to enable the adoption of appropriate follow-up measures.
29. The Heads of State or Government welcomed the signing of the text of the Agreement on the Establishment of the South Asian Regional Standards Organization. The Heads of State or Government welcomed the signing of the Protocol on Afghanistan for Accession to SAFTA.

Trade in Services

30. The Heads of State or Government expressed satisfaction at the conclusion of the Study on Trade in Services and welcomed the decision of SAFTA Ministerial Council to commence negotiation on the Framework Agreement on Trade in Services. Towards achieving further economic integration, they directed that the Draft Agreement on Investment Promotion and Protection be finalized early and the SAARC Arbitration Council be operationalized.

SAARC Social Charter

31. The Heads of State or Government underscored the imperative to make steady progress in the implementation of the SAARC Social Charter and directed the Member States to complete the National

Plans of Action with a perspective of seeking to transform current challenges into opportunities. They further directed the National Coordination Committees (NCCs) to recommend activities in conformity with the Social Charter and to introduce an efficient and effective monitoring and evaluation mechanism for reviewing the progress in the implementation of the Social Charter. The Leaders emphasized the need to implement the selected regional and sub regional programs and projects to complement national implementation efforts. They urged that such activities be suitably accommodated in the SAARC Calendar. They called for people's participation in strategy initiatives, planning and implementation to ensure people's responsibility and ownership. The Leaders directed to develop a policy on the protection of rights of the senior citizens for their geriatric care taking into account existing national policies of the Member States.

Women and Children

32. The Heads of State or Government noted with satisfaction the increased cooperation in the region towards achieving the all important goal of bringing women fully into the mainstream of development, on the basis of gender equality. They called for focused attention on women's economic empowerment and skills development, while addressing key health issues and violence against women. The Leaders directed to work for a regional cooperation for the elimination of all forms of discrimination and abuse against women in general and widows in particular and guarantee their rights to live in the society in a dignified manner.

Education

33. The Heads of State or Government welcomed the substantial progress made in the establishment of the South Asian University in New Delhi and directed that the University should begin its Session from 2010. They also directed that increased interaction between students should be encouraged through institutionalization of students, academics, teachers and youth exchange programs. They further directed early institutionalization of an elaborate SAARC Scholarship Scheme in ICT and related areas.

Combating Terrorism

34. The Heads of State or Government strongly condemned all forms of terrorist violence and expressed deep concern over the serious threat posed by terrorism to the peace, stability and security of the region.
35. They further recognized the growing linkages between the phenomenon of terrorism, illegal trafficking in narcotic and psychotropic substances, illegal trafficking of persons and firearms and underscored the need to address the problem in a comprehensive manner. They reiterated their commitment to strengthen the legal regime against terrorism, including by undertaking to implement all international conventions relating to combating terrorism to which Member States are parties, as well as the SAARC Regional Convention on Suppression of Terrorism and the Additional Protocol to the SAARC Regional Convention on the Suppression of Terrorism. The Head of States or Government while recalling United Nations Security Council Resolution 1373 (2001) emphasized the importance of criminalizing any act for the provision, collection and acquisition of funds for the purpose of committing terrorist acts.
36. The Heads of State or Government recognized in this regard the value of the proposed UN Comprehensive Convention on International Terrorism. They noted the progress made during recent rounds of negotiations and called for an early conclusion of the Convention.
37. They emphasized the need for strongest possible cooperation in the fight against terrorism and transnational organized crime amongst the relevant agencies of the Member States especially in the area of information exchange. The Heads of State or Government further emphasized the importance of completing all legislative and other relevant measures to implement within Member States, the provisions of the Regional Convention on Narcotic Drugs and Psychotropic Substances. The Leaders noted the considerable work done to promote cooperation in Police matters. They appreciated the offer of Pakistan to host the Third Meeting of SAARC Ministers of Interior/ Home in Islamabad during 2008.
38. The Heads of State or Government expressed satisfaction on the finalization of the text of the SAARC Convention on Mutual Legal Assistance in Criminal Matters at the Fifteenth Summit and its signing. They expressed appreciation at the accommodating manner in which

the negotiations were conducted by the Member States to provide each other the widest measures of mutual assistance in criminal matters to ensure a greater sense of security within the region, the Heads of State or Government urged for early ratification and implementation of the Convention.

Joint Positions

39. The Heads of State or Government resolved to encourage consultations among delegations of SAARC Member States at the appropriate international forums and agreed to cooperate accordingly.

Observers

40. The Heads of State or Government welcomed the Observers namely the People's Republic of China, the Islamic Republic of Iran, Japan, the Republic of Korea, Mauritius, the United States of America and the European Union and appreciated their participation in the Summit. They also welcomed Australia and Myanmar to be associated as Observers to SAARC. They approved the guidelines for cooperation with Observers and looked forward to working with them in the common pursuit of the partnership for growth for our people.

Sixteenth Summit

41. The Heads of State or Government welcomed with appreciation the offer of the Maldives to host the Sixteenth Summit Meeting of the Heads of State or Government of the South Asian Association for Regional Cooperation (SAARC).

INDIA'S FOREIGN RELATIONS - 2008

SECTION -V

- (i) SOUTH ASIA**
- (ii) SOUTHEAST - EAST ASIA
AND PACIFIC**
- (iii) CENTRAL AND WEST ASIA**

(i) SOUTH ASIA

195. Extract relevant to SAARC countries from the Media Briefing by Official Spokesperson on the meeting of the Consultative Committee of Parliament attached to the Ministry of External Affairs.

New Delhi, February 15, 2008.

Official Spokesperson:

*

*

*

*

This morning EAM also addressed the Consultative Committee on External Affairs on India's bilateral relations with SAARC countries and he also included Myanmar and China in these discussions. Just to give you a sense of the discussions. EAM reiterated that India attaches the highest priority to building closer political, economic and cultural ties with its neighbours, given the fact that the countries of the sub-continent are bound by history, culture and ethnic ties and share a common destiny. India views South Asia as an integrated region in which there is a free flow of goods, peoples and ideas unfettered by boundaries and our belief is that South Asian countries can advance together by establishing peace and security, containing threats from extremism, terrorism, removing sources of political discord, creating a common space for prosperity and enhancing the economic, trade and investment linkages, improving connectivity and creating sustainable social and economic development.

He briefly discussed relations with the countries under review. He discussed India's relations with Nepal in the context of the critical transition that Nepal is undergoing in its political history and India's position on the decision to hold the Constitutional Assembly elections in April 2008 which we have seen as an encouraging development in the right direction. He explained that India stands ready to assist in Nepal's transition to a democratic, stable, peaceful and prosperous state and to enable the people of Nepal to choose their own future. He briefly touched upon economic relations and bilateral infrastructural projects in Nepal.

Similarly with Bhutan, EAM explained the close relationship which is characterised by close consultations, maturity, trust and mutual understanding, in fact a model of good neighbourly relations, particularly in the context of the political changes happening in Bhutan. He also highlighted the development partnership between India and Bhutan, particularly the hydroelectric aspects, in which the three major hydroelectric projects namely Chukha, Kurichu and Tala have already been

set up in Bhutan which have been set up with Indian assistance but supply surplus power to India, and the signing of the agreement in July 2007 when EAM visited Bhutan of the 1095 MW Punatsangchhu-I project which is the largest hydro electric project to be undertaken in Bhutan in partnership with India.

He also dwelt upon relations with Bangladesh. India has provided bilateral aid and assistance to Bangladesh to overcome the natural disasters last year including the mudslide tragedy in June 2007, floods during July-September 2007 and cyclone in November 2007, in which you would recall India provided cash assistance of \$10million, food aid comprising rice, wheat and milk powder costing Rs.100 crores, blankets, medicines, emergency relief and ready-to-eat meals worth \$1.5 million and also when he visited Bangladesh there was a waiver of the ban on export of rice to the extent of five lakh tons and the adoption of 10 severely affected coastal villages.

He also touched upon India's relations with Myanmar, our dialogue with Myanmar, our support for the UNSG's good offices and the efforts of his Special Envoy Mr. Ibrahim Gambari's in his mission to initiate a process of dialogue. We have reiterated our position that the process of national reconciliation should be broad-based and include all sections of the society including Aung San Suu Kyi and various ethnic groups. So these positions which you are already familiar with were again explained in the Consultative Committee.

Similarly on Sri Lanka, India-Sri Lanka relations which have undergone a qualitative and quantitative transformation in the last few years, our abiding commitment to the sovereignty and territorial integrity of Sri Lanka and our constant position that the problems there should be solved keeping these in view as well as keeping the aspirations of all the ethnic communities of the country in view.

He also covered relations with Maldives which is a close and friendly neighbour and the developmental projects there including the Indira Gandhi Memorial Hospital in Male.

EAM also dwelt on the situation in Pakistan and our relations with Pakistan. India is committed to peace, friendship and good neighbourly relations with Pakistan and the fact that Fourth Round of Composite dialogue has been held and India is committed to this Dialogue, the background of the Dialogue which is the January 2004 Statement and the commitments against terrorism.

Similarly also on Afghanistan, EAM gave an overview of our relationship and the political relationship as well as India's commitment to the reconstruction and rehabilitation of Afghanistan. Present level of India's assistance make us the 5th largest bilateral donor in Afghanistan. The way our projects are spread across Afghanistan, they cover the entire gamut of economic and social developmental activities. About 4000 Indians are engaged in the task of rebuilding Afghanistan in a security situation which is deteriorating and which remains a matter of concern for us.

He also gave the broader rubric which is the SAARC rubric and explained the achievements of the 14th SAARC Summit, particularly on the agreements on the establishment of the South Asian University and SAARC Food Bank. He highlighted the theme of Connectivity which was the main theme of the Summit, as you know.

He also briefly spoke about Prime Minister's visit to China which was the first such visit in five years and where the Prime Minister was received with warmth and special gestures, the discussions that were held, the Shared Vision document for the 21st Century, the MOUs that were signed, the institutional framework of the Special Representatives which continues to work on the Boundary issue.

That was the entire sort of tour d'horizon that he gave this morning to the Members of the Consultative Committee. There was a discussion after that. Members talked on various issues and to which he responded. So we thought that we would give you a flavour of those discussions.

Question: Given the deteriorating law and order situation in Afghanistan, there has been some speculation in some sections of the media that India may possibly pull out of Afghanistan.

Official Spokesperson: I am glad you have correctly characterized it as speculation in some sections of the media. That is what it is.

Question: On India-Pakistan civil aviation talks and the decision to add three carriers, by what time that becomes effective?

Official Spokesperson: There is no specific on which this becomes operational. It is contained in the joint press statement. Perhaps all it needs is working arrangements to be finalised. They have said that they will meet again within the year to review the capacity and frequency framework and additional destinations in each other's territory keeping in view the market demand. So, that is a review of the new arrangement. So, those would

obviously be done faster. But we will try and see if there is a date in the MoU. I do not see it in the statement.

Question: The frequency of flights from 12 to 28, what airlines will use which routes?

Official Spokesperson: A decision has to be taken which are the airlines which want to use this route. The airlines have to get into the act. They have to decide when they want to go. These are commercial and technical details which are not done at this level.

Thank you.

196. Keynote Address by Vice President Hamid Ansari at the International Seminar on: "Changing Political Context in South Asia and Prospects of Security and Regional Cooperation", organized by the Institute of Defence Studies and Analysis.

New Delhi, November 5, 2008.

I feel privileged to be here amidst such a distinguished audience. Over the years the IDSA has provided the impulse for such gatherings of scholars and analysts. The end products add to the compendium of knowledge.

The attention of this conference, I understand, would be on dimensions of change in South Asia and its possible implications.

The logic of geography is compelling. For India, the neighbourhood radiates in concentric circles, buttressed by history, cultural affinities and economic necessities.

Our political commitment to closer ties with our neighbours in South Asia is serious. India's security interests are better served if our neighbours evolve as viable states with moderate and stable political and social environments and vibrant economies.

We wish to see South Asia at peace with itself, leading to ever widening circles of security, peace and prosperity in the region.

The theme of this seminar is twofold: security and regional cooperation. Both need to be understood in themselves as also in their mutual relationship. Their logical manifestations could be (1) security exclusively in national terms (2) regional security cooperation (3) regional economic cooperation and (4) a mix of all these resulting in comprehensive security. In terms of linkages, it would be valid to ask if the perceived regional economic cooperation is to be the first step in our quest for regional security cooperation, or vice versa.

Perceptions, as this audience is well aware, have changed overtime. At one point security in the conventional sense offered a menu of choices in regard to security cooperation and suggested options ranging from alliances to collective security, security regimes and security communities. At a later stage, frameworks for communication and dialogue emerged. Each of these was experimented with; results varied from region to region.

Regional economic cooperation has tended to be influenced by a set of factors relating to intra-regional relations and convergence of political interests and cultural compatibility. The potential for economic cooperation is stymied when historic fears cloud security perceptions.

II

South Asia presents a varied picture towards the end of 2008. In some areas, forces of change are resonating noticeably. Bhutan has opted for a new system of governance through a constitutional monarchy. Change is the message of the election in Maldives last week. Nepal has witnessed historic transition from a monarchy to a democratic republic with a new leadership, and a new constitution in the offing. Pakistan has reverted to civilian rule with a new Parliament and a democratically elected President.

Less specific are the readings on Bangladesh and Sri Lanka. The former seeks a return to constitutional democracy and the latter an end to internecine strife.

The conflict in Afghanistan remains a source of considerable concern and calls for innovative solutions premised on national unity.

India, having registered rapid growth in recent years, is itself moving into a period of state and national elections.

The move towards popular and democratically elected governments in South Asia, however, has not eclipsed the existing challenges to

governance in all the countries of the region. Poverty and economic disparities coupled with ethnic and social divisions have created political and social fault lines that have been exploited by non-state actors with their own agendas.

Human Development indices of most countries of South Asia are not flattering and it would be a miracle if the targets of the Millennium Development Goals are achieved.

Yet, economic growth has continued as most of the South Asian countries have liberalised and moved towards market economies. Regional cooperation has made headway within the framework of SAARC which itself has expanded to include Afghanistan as well as nine observers.

New initiatives on the operationalisation of the SAARC Food Bank, establishment of the SAARC Development Fund, setting up of the South Asian University, the launching of negotiations to bring services into SAFTA and signing of the Convention of Mutual Assistance in Criminal Matters are significant for regional integration.

The question that one must ask is whether the changed and changing political context in many SAARC countries would confine itself to domestic politics or go beyond it to develop a changed context for security and economic cooperation with India? In other words, do the new political elites in our neighbourhood harbour a new paradigm of bilateral and regional cooperation?

We have to admit that the traditional pattern of bilateral state-to-state relations has already been transformed in varying degrees as a result of globalisation. Governments today do not control information or patterns of human interaction. Across the region, we see a web of connectivities between political actors, media centres, civil society organisations and commercial entities. Common people freely exchange views and ideas on their governments and their lives.

The prospects of security and economic cooperation are thus correlated to the ability of States to broad-base their relations beyond the traditional frameworks.

Friends

Let me venture to summarise some overarching themes that characterise the emergence of this new political context.

First, there is recognition of the importance of good relations with India and an advocacy for closer economic and political relations. There is also a desire for updating, where relevant, the existing instrumentalities of such cooperation to reflect the new ground level realities. The question for renegotiating existing treaties has been raised in this context.

Second, India on its part has tried - incrementally and non-reciprocally - to incentivise economic cooperation through confidence building measures. As a result, some in our neighbourhood have begun to feel that a prosperous and economically vibrant India is an opportunity for them to reap both economic and political benefits.

Third, political elites are increasingly emphasising that the desired economic outcomes transcend investments, growth or development. The focus is on the human development of people, the quality of the lives of citizens and even Gross National Happiness!

Fourth, all countries in South Asia realise that globalisation would be meaningless without the improvement of intra-regional connectivities. Informal trade and third country trade is still predominant with formal intra-regional trade constituting under 5% of South Asia's overall trade.

On the other hand, negative security perceptions continue to cloud cooperation in tackling trans-national and cross-boundary issues. These include security concerns such as terrorism, drug-trafficking and money laundering, as well as economic and developmental issues such as food, water, climate change and energy security.

Some initiatives need to be mentioned. India has taken the lead in building infrastructure for intra-regional trade in the full knowledge that the economic importance of intra-regional trade is considerable for the smaller regional economies. Taking the theme of connectivity forward, the SAARC Transport Ministers identified specific corridors for implementation linking Nepal, Bhutan, India and Bangladesh. A draft Motor Vehicles Agreement and a draft Railway Agreement are also being negotiated.

The expectation is that cross-border trucking and container movements, improved regional air and rail links and upgraded customs and trade facilitation would knit our neighbourhood in a network of mutually beneficial economic partnerships contributing to long term political and social stability.

Such partnerships are the need of the hour and can help address problems that cannot be solved nationally. Two instances of these lie in (i) rivers and flood control; and (ii) energy generation, energy trade and energy transit.

Both are critical to the achievement of development goals of the countries of South Asia.

Experience elsewhere in the world shows that political constraints need not be permanent barriers to economic cooperation and that the latter could help create a climate of opinion to resolve conflicts.

III

Ladies and Gentlemen

We live in times of great change. The challenges we confront overflow national frontiers. The public in South Asia has, in diverse ways, signalled its impatience with the politics of the status quo. This is most evident in the younger generation. It is now for the governments to think innovatively and encapsulate this impulse in national policies.

History is witness to occasions when bold thinking has led to creativity. Why should South Asia be an exception and remain embedded in the unproductive routine and ritual of six decades?

Would it then be altogether unrealistic to hope that South Asian cooperation would seek to achieve the following?

- Free travel and trade across frontiers, a euro-style single currency, environmentally sustainable and regionally balanced development.
- Security coordination resulting in Joint action on crime and terror.
- Speak with a single voice and work closely together on trade issues and development policy.
- Develop a mechanism for dispute resolution.
- Coordinate approaches on major foreign and defence policy questions?

The meandering River of Time is mighty and can flow in many directions. The answers to the above questions lie in harnessing it for common good and regional betterment. The analyst should go beyond identifying the obstacles and pitfalls to suggesting solutions. I venture to hope that today's conclave would be part of such an effort.

I thank Mr. Sisodia for inviting me today. I wish the Seminar all success

197. Inaugural Address by External Affairs Minister Pranab Mukherjee at the Seminar on "Sub-Regionalism Approach to Regional Integration in South Asia: Prospects and Opportunities" hosted by Sikkim University.

Gangtok, December 19, 2008.

Shri B.P. Singh, Hon'ble Governor of Sikkim & Chief Rector of Sikkim University

Shri Mahendra P. Lama, Vice-Chancellor, Sikkim University,

Dr. Peter Gey, regional Representative, Freidrich Ebert Stiftung,

Shri Rishi Ram Ghimire, Director SAARC Secretariat,

I am indeed happy to have this opportunity to address this distinguished gathering of academics, policy makers, civil society organizations, experts on international relations and media representatives at this International Conference organized by the Sikkim University.

I note that this conference is focusing on sub-regionalism and how it can catalyze activities of regional organizations - in this particular case SAARC, which itself has traveled a long way, and is at the threshold of its silver jubilee. I visualize sub-regionalism like a small cog, with an array of other wheels around it, driving a much bigger device. The output of that bigger device is mutually beneficial and all inclusive socio-economic development in a conducive environment.

For this device to function efficiently, however, there should be a confluence of views at the bilateral levels too so that synergies are created. Needless to add, the foreign policy of the respective countries that make up our sub-region within SAARC, does find reflection in organizations like the BIMSTEC. Our aim is to arrive at a commonality of views, giving all of us a means for ensuring socio-economic development in India as well in its neighbourhood. For this, we need a peaceful periphery.

- India's foreign policy seeks to promote an environment of peace and stability in our region, and in the world, aimed at enabling India's accelerated socio-economic development and safeguarding our national security.

- One cannot choose one's neighbours. Our goal, as I mentioned just now, is a peaceful periphery, to enable us to pursue our own development.
- While a peaceful periphery is our goal, internal developments in our neighbours and cross border issues, ethnicities, migration and sensitivities make these among our most complex and sensitive relationships, where domestic and foreign policy appear closely intertwined.

As I speak to you, our minds automatically go to the unfortunate happenings in Mumbai about three weeks ago; this makes this gathering even more significant. Without going into the details of the horrible and heartrending event, the obtaining environment in our region is a case in point we would do well to ponder on, and see where we go from here. The Mumbai terrorist attack is the latest instance of how sub-regionalism, regionalism and multilateralism are directly threatened by non-state actors with the aid of para-state apparatus. In the face of the gravest of provocations perhaps the time has come now to fine-tune India's priorities.

Terrorism remains a scourge for our region. The recent attacks in Mumbai only reflect the extent to which terrorists have spread their network. The repeated appeals that we have made to our neighbours, over the years, to ensure that they do not provide any support to terrorist activities and dismantle the terrorist infrastructure, has been ignored, despite assurances given by them. If a country cannot keep the assurances that it has given, then it obliges us to consider the entire range of options that exist, to protect our interests and our people from this menace.

Economic Integration: Since the mid eighties, it has been our attempt to overcome the strategic disadvantages imposed upon us by Partition and the political fragmentation of South Asia in 1947 by working to recreate the economic integration of the past. We have had considerable success in this, creating SAFTA - the South Asia Free Trade Area and working bilaterally through unilateral gestures and asymmetrical economic concessions to integrate our immediate neighbours into our economy. India's rapid growth in the last few decades provided an opportunity to accelerate this process and to transform economic inter-dependence into productive political co-existence. However, we still have a long way to go.

Cross Border Infrastructure: A critical element in our long-term strategy of economic integration of our neighbours is the development of border

infrastructure which can facilitate faster movement of goods and people. With this in mind Government is in the process of setting up 13 Integrated Check Posts (ICPs), on land borders with Bangladesh, Nepal, and Myanmar, with immediate priority given to Petrapole, Moreh, Raxaul etc. Each ICP will be complete with all required facilities

Cross Border Ethnicities and Migration: Our relatively porous land borders have led to unrestricted levels of migration of refugees and economic migrants into India from Bangladesh, Tibet, Nepal and Sri Lanka, not counting the enforced migrations of Partition and the birth of Bangladesh. The political and economic consequences of this are borne by our states. What we now need is a system, particularly in the border districts, which is able to make boundaries a reality and is able to monitor and, where necessary, control developments.

In our neighbourhood, India continues to help the Afghan government and people in building a stable, democratic, and pluralistic society. India's direct bilateral multifaceted cooperation for Afghanistan's rebuilding is, by now, well over US\$ 1 billion, across a whole range of sectors and several thousand Indians remain engaged in development work in Afghanistan.

The deterioration in the internal security situation, the resurgent Taliban influence, and attacks on our personnel, establishment and projects in Afghanistan, epitomized by the dastardly attack on our Embassy in Kabul in July, remain a matter of deep concern. Developments in Afghanistan impinge directly and otherwise on our national security, and stability in that country is clearly in our interest.

In Pakistan, the internal security situation continues to deteriorate. Power has fragmented landing in many hands, leading to the emergence of multiple centres of power. This has been reflected in attempts at cross border infiltration as also in the increase in cease fire violations, recently climaxed by the appalling terrorist attack in Mumbai. It is also true that the issue of terrorism within Pakistan is deeply embroiled in the internal politics of that country. The infrastructure of terror remains unchallenged in Pakistan as does logistical support to anti-Indian terrorists, from the multiple hands, I referred to earlier,.

We have regular high-level interactions and sustained exchanges and dialogue mechanisms with China. These include the meeting of the expert-level mechanism on trans-border rivers, annual defence dialogue, and dialogue mechanism on disarmament and non-proliferation, buttress the

relationship. For some more time China would require peaceful conditions so that it can concentrate on its objective of continued economic growth, (just as we ourselves do). One other immediate issue is the border issue, where, talks continue but progress has been slow.

With regard to Bangladesh, we have made some limited progress in the last two years on promoting connectivity with the commencement of the Kolkata-Dhaka Passenger Train Service in April 2008 and signing of a new air-services agreement to increase flights between our two countries. We are also undertaking several initiatives to improve the trade infrastructure, including Land Customs Stations (Kolkata-Petrapole), Road, Rail and riverine routes to facilitate increased levels of trade.

There has been a historic change in Nepal in the last two years. We have had a useful interaction with the new political leadership of Nepal and have agreed to work towards further strengthening our unique and special relationship. Major elements of this would include cooperation to ensure our mutual security interests; economic and infrastructure cooperation including through the development of border infrastructure; cooperation in development of hydel power projects and flood relief measures; as well as trade and transit.

Bhutan is now a constitutional monarchy with a new King and an elected PM. We revised our Treaty of Friendship with Bhutan last year and continue our economic cooperation which has been highly successful. The 1,020-MW Tala hydroelectric project in Bhutan, built with our cooperation, has started full commercial operations. We have also signed an agreement for the 1,095-MW Punatsangchhu hydroelectric project and more such projects are in pipeline. The two governments plan to produce 10,000 MW of hydropower in Bhutan by the year 2020 for export to India.

While we pursue our relations bilaterally with each of our neighbours, we have also tried to utilize SAARC to realize our aim of economic re-integration. During 2007, as Chairman of the SAARC we put emphasis on concrete regional initiatives, moving from a declaratory phase to implementation, keeping in view the need to have better intra-regional physical, economic and people-to-people connectivity. Several initiatives were launched including the South Asian University whose ground breaking ceremony was held in May this year in New Delhi. The SAARC Food Bank, SAARC Development Fund and physical and social connectivity projects, are other instances of our effort to share advantages from regional groupings which have bilateral as well as sub-regional effects.

Myanmar is our link to ASEAN. In line with our 'Look East' policy and our commitment to developing the North-Eastern States of India, several cross-border development projects are being taken up with Myanmar, including [Rhi-Tidim and Rhi-Falam] Roads in Mizoram sector, and in Manipur sector. [Tamu-Kalewa-Kalemyo Road, besides upgradation of Jiribam-Imphal-Moreh road.]

We have also finalized the agreement on Kaladan Multi-Modal Transit and Transport Project which envisages connectivity between Indian ports on the eastern seaboard and Sittwe port in Myanmar and then through riverine transport and by road to Mizoram, thereby providing an alternate route for transport of goods to the states of North-East India.

Enhancement of Indo-Myanmar trade is being promoted by converting existing cross border trade into normal trade, and by facilitation measures such as ICPs and Land Custom Stations in Manipur and in Mizoram. To secure our energy interests, India has also signed production - sharing contracts for offshore deep-water blocks in September 2007.

The region we are presently meeting in, is at a geographical crossroad as it were. SAARC, BIMSTEC, MGC and our summit partnership with the ASEAN overlap here. I see that the participants in this conference from outside India are from countries that belong to one organization or the other, I have just now referred to. At the multilateral level, every member of the World Trade Organization (WTO) today is also a member of at least one sub-regional or regional cooperation arrangement, many are members of both. Transport networks in the sub-region have the potential to transform its economic geography. Sub-regional initiatives not only promote regionalism but also in some way contribute to multilateralism as trade and investment increase. However, in today's environment of international financial crisis, this aspect has come under strain as options have become more limited.

The consolidation of our relations with ASEAN is a significant element in our Foreign Policy profile. India's Look East policy seeks to develop relations within bilateral and sub-regional framework with a dynamic and rapidly growing region of Asia which will become the third pole of the world economy within the next few decades. The significance of this development will be reflected in every aspect of our foreign relations including diplomatic policy, foreign trade, foreign investment, science and technology collaboration and cultural exchanges.

The conclusion of the India - ASEAN FTA in goods, the establishment of entrepreneurship development centres in Myanmar, Laos, Cambodia and Vietnam; the establishment of Centres for English Language Training, IT centers are successful examples of sub-regional cooperation between India and the CLMV countries within the ASEAN framework.

India has also interacted with south east Asian countries in the context of our membership of Mekong-Ganga Cooperation (MGC) and the Bay of Bengal Initiative for Multi-Sectoral Technical and Economic Cooperation (BIMSTEC). The MGC comprising of six countries including India and five ASEAN countries - Cambodia, Lao PDR, Myanmar, Thailand and Vietnam was launched in 2000 and focuses on cooperation in culture, tourism, human resource development, education, transport and communication. One of the successful events under the MGC was the pilgrimage undertaken by 100 Buddhist priests and others during 2007. This has renewed the civilizational links of India with these countries and enables people to people contacts through education, culture and tourism.

The BIMSTEC which presently has India, Bangladesh, Bhutan, Nepal, Sri Lanka, Myanmar and Thailand as members focuses on trade and investment, technology, transport and communication, energy, tourism and fisheries. It plays the role of a bridge between countries of South and South East Asia with the North East region of our country as the centre of this bridge. The 2nd BIMSTEC Summit was successfully held in November 2008 in Delhi roughly 10 years after the establishment of the grouping. Significant progress has been made in the negotiations for BIMSTEC Free Trade Area Agreement.

Among others, the Member States finalized a convention on combating international terrorism, transnational organized crime and illicit drug trafficking. It was agreed to establish a BIMSTEC Energy Centre and BIMSTEC Weather and Climate Centre in India and BIMSTEC Cultural Industries Commission and BIMSTEC Cultural Industries Observatory in Bhutan that would contribute greatly to the consolidation of this initiative for deepening sub-regional and by extension, regional integration. The need to coordinate on issues of maritime transport such as construction of a deep-water port to service the region, new trans-national challenges such as climate change, energy and food security that threaten our developmental efforts also came under focus. At the summit, the leaders agreed that terrorism and threats from the sea continue to challenge the authority of the State.

India thus has had some significant success in its relations with all countries in the SAARC, ASEAN, MGC and BIMSTEC frameworks. While these frameworks help us to engage at a sub-regional level, the actual impact is felt at the bilateral level since project and idea implementation enables people to people contact at the professional and other levels.

The linkages from the bilateral base on the sub-regional framework, helping us to graduate to regional and multilateral cooperation, is the task before us. To achieve this however, we need a peaceful environment devoid of envy, jealousy. The environment has to be replete with respect for human life and endeavour. Unless this is adhered to, we will find ourselves moving forward three steps but sliding back by two. There must be genuine understanding and respect for the tradition and cultures of each others' societies. Violence is not a virtue by any stretch of imagination. Its presence, encouragement for it within and across the borders will only lead us to a society devoid of values that elevate human existence.

It is my hope that the deliberations you are due to have over the next few days will focus just as much on human innovation and evolution in the modern day, just as you leave a message for human values to flower in the future.

It gives me great pleasure to inaugurate the International Conference on Sub-regionalism Approach to Regional integration in South Asia: Prospect and Opportunities. I wish you all success in your work.

Thank you.

198. Remarks by External Affairs Minister Pranab Mukherjee at the Panel Discussion on "Vision for a new South Asia" at the Conference on "Development, Freedom and Welfare" in honour of Nobel Laureate Prof. Amartya Sen.

New Delhi, December 20, 2008.

Distinguished Guests,

It is an honour to preside over this Panel Discussion on the theme Vision for a New South Asia. The panelists for this session are all very distinguished persons, who are highly respected in India and among the South Asian fraternity. Yesterday and today, we have heard great minds who have all come together to celebrate the 75th birthday of Nobel Laureate Amartya Sen through the sharing of ideas on development, freedom and welfare - all of which have been Amartya's lifelong search.

Interestingly this panel will talk about a 'new' South Asia, suggesting thereby that the 'old' South Asia is either dead or dying. At one level, it is true that there has been dramatic and truly momentous political developments in some countries of South Asia, especially Bhutan, Maldives and Nepal. All of us in South Asia applaud these developments. However, if a 'new' South Asia is to emerge, I believe that there would need to be a change in mindsets in the first instance.

If we were to identify, as sovereign nations, the one single thing that is critical to our national interests, I would say that it is freedom or the absence of insecurity.

Security has many dimensions and I do hope it would be possible for the panelists to explore these aspects in some depth during their presentations. Let us take the element of economic security. Without economic security can there be freedom? Today, much of South Asia is characterized by high rates of economic growth and yet, it remains as amongst the poorest regions in the world. There are almost 450 million persons who live below US\$ 1 per day. The prevalence of extreme poverty and human deprivation reflects the acute income inequality and disparity prevalent in the region. Statistically there has been progress in terms of poverty reduction but the countries in the region have a long way to go before they can attain the Millennium Development Goals (MDGs) by 2015. Unless we can guarantee

economic security or development for our people, a 'new' South Asia will not emerge. Indeed, economic security or the freedom from hunger, destitution and poverty is the only path towards dignity and development.

Our government is committed to pursuing policies of inclusive growth because we believe that when the benefits of growth are shared equitably, growth will be transformed into development. Economic security is, thus, the primary focus of our government. At the same time, we have consciously sought to find ways and means through which the positive performance of the Indian economy could usher in 'shared prosperity' in the region. We believe, quite pragmatically, that 'shared prosperity' is mutually advantageous. As a result, during India's chairmanship of SAARC, we consciously tried to infuse dynamism in the SAARC process in a non-reciprocal manner.

Another element of security may be loosely termed as 'political freedom'. In a recent paper, Professor Kanti Bajpai has argued that democracy and democratization are vital for peace in South Asia. India believes it is the sovereign right of any people to decide on the kind of government they would like, whether democratic or military. We have seen a fresh wave of democracy sweep over many parts of South Asia and these are encouraging signs. However, genuine democracy does not come about simply by holding an election but rather through a process of democratization that makes the elected representatives accountable and more importantly, in ensuring that there does not exist a separate and de facto centre of power that is actually pulling the puppet strings. The pretense of democracy is not equivalent to democratization. We do not believe that it is for us to advocate how other countries should be governed but we would, most certainly, like to know whom we should deal with vis-à-vis another government; in other words, who runs the show?

While discussing a 'new' South Asia, can we forget the plural character of the region? India alone is home to every great religion in the world and we are proud of our secular and plural heritage. It is a heritage we will not abandon or forsake for it is the cornerstone of idea that is India. Security of all religious faiths is, thus, critical to the vision of a 'new' South Asia.

Finally, we need to focus on the aspect of physical security. Less than a month ago, India was held hostage to a dastardly terrorist attack in the city of Mumbai. Across the globe, the faces of the terrorists have been seen.

The deaths of the innocent people, the wanton loss of life and property, were not accidental or unintended as is sometimes referred to as collateral damage. On the other hand, this was cold and calculated murder. One of the terrorists, who has been captured alive has given us a chilling accounts of his handlers. A few months earlier, the Indian embassy in Kabul was the target of a terrorist attack. The impunity with which these attacks are carried out is possible only because of the safety the handlers have been assured. For as long as this continues, we will remain mired in the 'old' South Asia.

I am confident that the eminent panelists and the discussions that follow will try and explore the vast canvas that the theme of the panel opens up before us.

Thank you.

AFGHANISTAN

199. Statement by Official Spokesperson on the suicide attack on a convoy of the Border Roads Organization in Afghanistan.

New Delhi, January 3, 2008.

We have just heard that a suicide attack on a convoy of the Border Road Organization which is constructing the Zaranj - Delaram Road in Afghanistan. We understand that at least two of our security personnel have been killed and some others injured. A number of Afghan security personnel have also been killed.

2. The Government of India deeply regrets the loss of life and offers its heartfelt condolences to the families of the deceased.
3. Our Ambassador in Kabul is in touch with our personnel and is making efforts to airlift the injured to a place where they can be provided better medical treatment. We are contacting the families of the deceased and wounded. Compensation and insurance for the victims will be disbursed immediately.
4. The Government of India will work with the Government of Afghanistan to strengthen security at project sites and other locations where Indian nationals are working for the reconstruction of Afghanistan. A team to review security arrangements and identify additional measures is visiting Afghanistan immediately.
5. The Government of India strongly condemns this act of terrorism aimed against its aid and humanitarian programme in Afghanistan and reiterates its determination to continue to work for the rehabilitation and reconstruction of Afghanistan and the well-being of Afghan people.

200. Extract relevant to Afghanistan from the Statement of External Affairs Minister Pranab Mukherjee in the Lok Sabha on “Foreign Policy Related Developments”.

New Delhi, March 3, 2008.

* * * *

The security situation in Afghanistan remains a concern to us, but will not be allowed to affect our commitment to Afghanistan's reconstruction. We lost two of our personnel in a terrorist attack on a major road building project in Afghanistan in early January this year. Five of our personnel were also wounded in this attack, which also claimed the lives of twelve Afghan security persons. We extend our heartfelt condolences to all their families. The international community must stand firmly with President Karzai and his Government as they face up to the twin challenges of a major threat from terrorism in the form of the Taliban, and seek to build a democratic and pluralistic polity.

202. Media Briefing by Official Spokesperson on External Affairs Minister Pranab Mukherjee's condemnation of dastardly attack¹ on Afghan President Hamid Karzai in Afghanistan.

Kolkata, April 27, 2008.

Speaking to the media in Kolkata, EAM condemned the dastardly attack in Kabul and expressed his relief that President Karzai was unhurt.

He also underscored the need for the international community to show zero tolerance for terrorism.

¹ Afghan President Hamid Karzai on April 27 survived an assassination attempt by Taliban militants who staged a daring attack with rockets and gunfire on the country's largest annual military parade, killing three people, including a lawmaker, and injuring a dozen. Karzai as well as scores of ministers from his Cabinet and top foreign diplomats escaped unhurt from the attack.

203. Terrorist attack¹ on the Indian Embassy in Kabul and Government of India's reaction.**Statement by Prime Minister Dr. Manmohan Singh on the terrorist attack on the Indian Embassy in Kabul.****On Board the Air India One, July 7, 2008**

I am horrified to know of the death of our personnel in the dastardly terrorist attack on our Embassy in Kabul. The loss of these precious Indian and Afghan lives in the service of their country must be condemned in the strongest terms possible. Those responsible, directly or indirectly, for this terrorist attack and for making this possible are no better than the worst criminals.

I offer my deep condolences to those who have lost their loved ones and those who have suffered grievous injuries. India is with the families of those bereaved today. We will do all that we can to help them bear their loss and grief. This is our pledge.

We have lost Indians who were helping their Afghan brothers to rebuild their lives and country. That endeavour must continue with renewed commitment.

1 Over 40 people, including four Indians, were killed when a suicide bomber rammed his bomb-laden car into the gates of the Indian Embassy on July 7th morning. Others killed in the attack, the first of this magnitude on an Indian mission anywhere in the world, were local security personnel and Afghans who had queued up for visas to travel to India. Indian diplomat, V. Venkateswara Rao, and the military attaché, Brigadier Ravi Datt Mehta, were killed as their car was entering the compound and the jawans of the Indo-Tibetan Border Police, Ajai Pathaniya and Roop Singh, Minister of External Affairs Pranab Mukherjee told journalists in New Delhi. About 10 Afghan security personnel were among those dead or injured. Several shops across the road, including the Indian Airlines office, were damaged and many Afghan shopkeepers injured. An Indian Air Force transport plane left for Kabul in the evening to bring back the bodies of the Indian victims. Greatly concerned about the security and safety of the Indian personnel in Kabul a special team led by Secretary in the MEA Nalin Suri rushed to the Afghan capital to review security measures and interact with local officials to improve safety measures for the nearly 3,000 Indians working at missions and development projects in the country. It included representatives from the Foreign Office and the Ministry of Home Affairs besides trauma specialists.

Afghan President Hamid Karzai on the same night called up Prime Minister Manmohan Singh and conveyed his condolences over the loss of lives in the suicide bomb attack. In the telephonic conversation, Prime Minister told Mr. Karzai that India had lost some of its precious officers. He, however, assured the Afghan President that this would not

Statement by External Affairs Minister Pranab Mukherjee on the terrorist attack on the Indian Embassy in Kabul.

New Delhi, July 7, 2008

It is with very great regret and a heavy heart that I have to announce that in the terrorist attack on our Mission in Kabul this morning, we have lost five of our personnel. Brig. R.D. Mehta, Defence Attache, Shri V.V. Rao, Counsellor and S/Shri Ajai Pathaniya and Roop Singh both from the ITBP security contingent were killed in the attack. One of our Afghan staff members Mr. Niamatullah was also killed in the attack. Government offers its deepest condolences to their families as also to the families of the others who were killed in this dastardly attack.

A special team under the leadership of Secretary (West) Shri. Nalin Suri will be flying to Kabul immediately to attend to this emergency situation concerning our Mission.

deter India from continuing its reconstruction and rehabilitation work in Afghanistan. He reiterated the bilateral commitment to fight terrorism. Prime Minister took the opportunity to condole the Afghans killed in the dastardly attack. He also spoke to Indian Ambassador Jayant Prasad and told him that the country was behind the Indian mission.

India strongly suspected involvement of Pakistani intelligence agency ISI but Pakistan denied any involvement in the incident. In order to give the pretence of being innocent and appearing to be taken aback itself by the incident, Mr. Asif Ali Zardari in a statement on July 8 condemned the attack as "barbaric and cowardly" and said the perpetrators were "enemies of peace" who wanted to destabilise the region. "The incident should not deter the countries in the region from pursuing their common agenda of peace. If anything, it should further strengthen their resolve to fight terror in all its manifestations and forms," he said. Pakistan, however rejected the veiled accusation by Afghanistan that it was behind the suicide attack. Interior Adviser Rehman Malik, who functioned as the Interior Minister, said the accusation was "baseless". Speaking in the Malaysian capital Pakistani Prime Minister Yousuf Raza Gilani said Pakistan was determined to fight terrorism with an "iron fist", adding that a destabilised Afghanistan was not in his country's interests. The Pakistani Foreign Minister Makhdoom Shah Mahmood Qureshi, in his statement condemned the bomb blast and said that Pakistan "condemns terrorism in all its forms and manifestations as this menace negates the very essence of human values."

Despite Pakistan's denial of any links with the attack the National Security Adviser M.K. Narayanan on July 12 indicated that India had a "fair amount" of intelligence inputs about Pakistan's involvement in suicide attack on its embassy in Kabul. Mr. Narayanan's remarks came on a day when the U.S. also ramped up pressure on Pakistan, reportedly making a similar charge that Pakistani security agencies were backing Taliban and Al Qaeda. Media reported that the U.S. Joint Chiefs of Staff Chairman Admiral Mike Mullen arrived in Pakistan on July 14 in what seemed to be an unscheduled visit, and apparently

The Statement issued by the Official Spokesperson of the Ministry of External Affairs on the bomb blast at the Indian Embassy.

New Delhi, July 7, 2008.

We convey with deep regret that there was a suicide car bomb attack on the Indian Embassy in Kabul a little while ago. We fear that there may be casualties among our personnel and are ascertaining full details. We are in touch with the Ambassador who is supervising arrangements for medical assistance. The Government of India strongly condemns this cowardly terrorists' attack on its diplomatic mission in Afghanistan. Such acts of terror will not deter us from fulfilling our commitments to the Government and people of Afghanistan.

Resolution passed by the Foreign Service Association on July 7, mourning the untimely passing away of Foreign Service officer Shri V. Venkateswara Rao.

"It is with a deep sense of anguish and deep sorrow that the Indian Foreign Service Association mourn the untimely passing away of Shri V. Venkateswara Rao, a 1990 batch IFS officer, under tragic circumstances, in Afghanistan.

Shri Rao was a bright and energetic officer. He had served in various capacities in our Missions in Berlin, Colombo, Kathmandu and Washington. His latest tour of duty in Kabul under extremely difficult conditions, revealed his determination,

did some tough talking in his meeting with Pakistan Army chief General Ashfaq Parvez Kayani. The *News* from Pakistan reported that Admiral Mullen made the one-day visit to share evidence of American claims that "responsible elements within Pakistan's security agencies were giving comprehensive support to Taliban and Al Qaeda elements." *The Dawn* said that Admiral Mullen conveyed Washington's growing frustration with Pakistan's inability, or unwillingness, to act decisively against Taliban and Al Qaeda militants hiding in "safe havens" in the tribal areas in the north-west frontier, from where they are known to mount cross-border attacks in Afghanistan. Foreign Secretary Shivshankar Menon while in Kabul on the 13th and 14th July reviewed the security of the Indian Embassy and other Indian assets and also held talks with the Afghan President Hamid Karzai. During the 30-minute meeting on July 13, the two sides discussed security and strongly felt that the attack was the handiwork of "enemies" of relations between the two countries. Mr. Menon, who also met Afghan Foreign Minister Rangeen Dadfar Spanta, was told that the Afghan government would do everything possible to protect

sincerity and a courage of immeasurable proportions. It is extremely distressing that he has had to lay down his life to a cowardly act of terrorism. His death, while answering the highest call of duty will be an inspiration to all of us reflecting the professionalism that our service represents.

The Indian Foreign Service Association conveys its heartfelt sympathies and condolences to the family of Shri Venkateswara Rao. We stand by the bereaved family in their hour of grief. We also convey our condolences to the families of Brigadier R.D.Mehta, Defence Attache, Shri Ajai Pathaniya and Shri Roop Singh, both from the ITBP security contingent and the Afghan official who was working in the Embassy.

I now request the assembly to rise and observe one minute silence in memory of Late Shri V.Venkateswwara Rao."

Remarks by Foreign Secretary Shivshankar Menon at the memorial service to commemorate victims of the terrorist attack on the Indian Embassy on 7th July, 2008.

Kabul, July 13, 2008.

Hon'ble Members of the Afghan Cabinet, Excellencies, ladies and gentlemen,

I have come from Delhi to be here with you on this significant and poignant occasion. We, Afghans and Indians, have suffered grievous losses in the dastardly terrorist attack on our Kabul Embassy on 7 July. Our heart goes out to the victims, the injured and their families.

the Indian assets. The two sides agreed that "terrorism is a threat to both countries, as well as the stability and democracy of the region," Afghan Foreign Ministry spokesman Sultan Ahmad Baheen told the media and added that both Mr. Karzai and Mr. Menon were of the view that it was "not enough to fight the symptom of terrorism" that was visible in Afghanistan but the menace should be "rooted out from the region by targeting bases, recruitment places and financial links." The *New York Times* came out with a damning report that U. S Government officials told the paper that their conclusion about Pakistan involvement in the Indian Embassy bombing in Kabul "was based on intercepted communications between Pakistani intelligence officers and militants who carried out the attack." However, the *New York Times* reported that a top CIA official travelled to Pakistan to confront officials with evidence of the ISI's continued support of terrorism. CIA deputy director Stephen R. Kappes carried with him a large mass of evidence,

The attack on July 7 is the work of our common enemies, of the enemies of our friendship, and of the enemies of peace in Afghanistan and our region. No words of condemnation are too strong for the perpetrators and organisers of this attack. They must and will face a reckoning. Justice must be served.

Previous speakers have spoken eloquently about those we have lost. It is for us who remain to ensure that their sacrifices will not be in vain.

We in India are determined to continue the work of these martyrs to our friendship. India's commitment to the reconstruction of Afghanistan and to work with our Afghan brothers is unwavering.

Earlier today, our Embassy in Kabul began issuing visas again. As they rebuild and regroup, the Embassy personnel under Ambassador Jayant Prasad's leadership have set a magnificent example that makes every Indian proud.

The strong and spontaneous support and sympathy that we have received from the Afghan Government and from people in all walks of life, inspires us. Earlier today, President Karzai expressed his shock and horror and determination to work together against the forces behind the attack. These words and actions are a great comfort to us all. We are most grateful.

Let there be no doubt that India and Afghanistan are and will be, today and in the future, partners.

Thank you all for coming today.

including the available communications intelligence on the Kabul bombing. Media reports said that the U.S. President George Bush was believed to have confronted Pakistani Prime Minister Yusuf Raza Gilani on the ISI's support for terrorism during their recent meeting. President Bush complained that tactical intelligence provided by the U.S. to Pakistan was being leaked by ISI elements to terrorists. Before his visit to the U.S., Mr. Gilani issued orders placing the ISI under the control of the Interior Ministry, but interestingly backed down under pressure from the Pakistan Army. Government officials who spoke to the *Times* said the ISI officers whose conversations with terrorists had been intercepted "had not been renegades," suggesting that the Kabul bombing was authorised by the organisation. "It confirmed some suspicions that I think were widely held," one State Department official told the *Times* of the intercepted communications, the *Times* report said. "There was a sense," he said, "that there was finally direct proof." Given that the ISI director was a three-star Army general, this would imply that the attack on the Indian embassy was endorsed by Pakistan's strategic establishment.

204. Press Trust of India report on the remarks of National Security Advisor M. K. Narayanan on the involvement of Pakistan's Inter Services Intelligence agency in the bombing of the Indian Embassy in Kabul.

New Delhi, July 12, 2008.

On July 12 the National Security Advisor M. K. Narayanan, when asked about the involvement of the Pakistan's Inter Services Intelligence agency in the terrorist bomb attack on the Indian Embassy in Kabul said: "We not only suspect but we have a fair amount of intelligence [on the involvement of Pakistan]," Mr. Narayanan told television channels when asked whether India suspected Pakistan's hand. ...The ISI needs to be destroyed. We made this point, whenever we have had a chance, to interlocutors across the world... there might have been some tactical restraint for some time, obviously that restraint is no longer present".

Specifically asked about reports that the agency was involved, he said "we have no doubt that the ISI is behind this....The people of this country deserve to know the facts rather than being carried away by people who make statements that these are insinuations. There are no insinuations."

(Four Indians, including senior IFS officer V.V. Rao and Brigadier R.D. Mehta, Defence Attache, were killed in the blast caused by a suicide bomber) The NSA said there was a need to retaliate against such acts. "I think we need to pay back in the same coin. We are quite clear in our mind," he said. Asked who should be paid back, he replied, "Those who are responsible."

1 There was no official Pakistani reaction to the charge of NSA, and his statement that it was India's case to the world that the ISI must be "destroyed." Mr. Narayanan also said if things continued in this manner, there would be no choice but to "retaliate in kind." While the Pakistan Government and the ISI itself chose to observe silence on NSA's remarks the Pakistani Defence Minister Chaudhary Ahmed Mukhtar, on July 13 in response to a question on a private TV channel Express News described the remarks as "inappropriate... without proof" and added it would have no effect on the peace process. In a parallel development the United States also ramped up pressure on Pakistan, reportedly making a similar charge that Pakistani security agencies were backing the Taliban and Al Qaeda. According to media reports the U.S. Joint Chiefs of Staff Chairman Admiral Mike Mullen who arrived in Pakistan on July 12 in what seemed to be an unscheduled visit, apparently did some tough talking in his meeting with Pakistan Army chief General Ashfaq Parvez Kayani. The News, an influential Pakistani daily reported that Admiral Mullen made the one-day visit to share evidence of American claims that "responsible elements within the country's security agencies were giving comprehensive support to Taliban and Al Qaeda elements." According to another report in the Dawn, Admiral Mullen conveyed Washington's growing frustration with

When asked if such retaliatory acts would not impede the peace process, he said: "I don't think the ISI has ever been a part of the peace process.... I think we need to make a distinction" between the two. "The anti-terror mechanism was one piece of this picture. The hope was that in course of time both sides would share whatever information they have and come up with a holistic idea of what was going on," he said.

"Talk-talk is better than fight-fight. But it hasn't worked so far. In some way, we haven't arrived at the decision that we should go for fight-fight so let talk-talk continue for the moment," he said. The NSA said there was a "hiccup" in the peace process towards the end of 2006 and early 2007. "It hasn't really picked up....we are hoping that the new administration will take this up again."

Pakistan's inability, or unwillingness, to act decisively against Taliban and Al Qaeda militants hiding in "safe havens" in the tribal areas in the north-west frontier, from where they were known to mount cross-border attacks in Afghanistan as well. Belatedly on July 21 Pakistan chose to react to NSA's comments saying that the "blame-game" should be avoided. It brought "disquiet for us," Pakistan Foreign Secretary Salman Bashir told reporters. "It is imperative to refrain from blame-game. We have played it for too long," he said, adding it was important for both the countries to voice their concerns directly rather than publicly. Mr. Bashir said the two countries have had a "gentleman's agreement" not to air allegations in public which was not being kept. "We reject allegations from anyone," he said, adding there will be problems if "intentions are questioned." He also attacked the Afghanistan government for pointing fingers at Pakistan over the bomb attack on Indian Embassy in Kabul.

When Pakistan Prime Minister Yousuf Raza Gilani met the Prime Minister in Colombo on the sidelines of the SAARC Summit on August 2 he assured his Indian counterpart, Manmohan Singh that Islamabad would independently investigate the terrorist attack on the Indian embassy in Kabul which killed 60 people, including four Indians. Mr. Gilani said he would interact with Afghanistan President Hamid Karzai to "get to the root" of the case. Pakistan would do everything required to put the dialogue process back on track. Dr. Manmohan Singh told Mr. Gilani that New Delhi and Islamabad were working on this goal for the last four years but unfortunately the recent events had cast a shadow on the process. Foreign Secretary Shiv Shankar Menon told the media later that Dr. Singh was "frank" in expressing his concern to the Pakistani counterpart over the recent events.

205. Press Statements of Prime Minister Dr Manmohan Singh and Afghan President Hamid Karzai.

New Delhi, August 4, 2008.

Prime Minister of India (Dr. Manmohan Singh): I am delighted to welcome His Excellency President Hamid Karzai to India. The President's visit is a reflection of the close and friendly ties that exist between India and Afghanistan.

President Karzai's visit takes place at a critical juncture for India, Afghanistan, and our region. Our discussions today were held against the backdrop of the serious threat posed by terrorism to the security and stability of Afghanistan, India and the region. As the attack on our embassy in Kabul on July 7 has tragically shown, terrorism has no barriers, and is not bound by any restraints. It was an attack on the friendship between India and Afghanistan.

We have agreed that we will not allow terrorism to stand in our way. We will fight it unitedly and with full determination. I conveyed our deep condolences on the loss of so many innocent Afghan lives in the attack on July 7, and re-affirmed to President Karzai India's abiding commitment to Afghanistan's efforts to build a democratic, pluralistic and stable polity. Such a vision is not only in keeping with our age-old association with Afghanistan, but is necessary for regional peace and stability.

I conveyed to the President that we will fulfill all our commitments to Afghanistan. For this purpose, we will allocate an additional amount of 450 million US dollars over and above the existing 750 million US dollars to meet the requirements of our ongoing and forthcoming projects.

I also informed the President that one of our important infrastructure projects in Western Afghanistan - the road from Zaranj to Delaram - is now complete. We will hand this over shortly to the Government of Afghanistan. The road is a symbol of our cooperation with Afghanistan, and a tribute to the precious Indian and Afghan lives that were lost in making this project a reality. The road has brought our two peoples closer together.

India's contribution in the reconstruction and development of Afghanistan is part of a larger international effort to help the Afghan people in forging a pluralistic and democracy society. India will be happy to host a meeting of the Joint Coordination and Monitoring Bureau, the body which oversees

and harmonizes the activities of different countries in the reconstruction process in Afghanistan.

In conclusion, I would like to pay tribute to the sagacity and wise leadership of President Karzai as he leads Afghanistan through a difficult and challenging period. He represents the new face of Afghan nationalism, which draws strength from the diversity and pluralism of Afghan society. He has always stood for India-Afghan friendship. We wish President Karzai well in his noble endeavours, and all success in guiding Afghanistan through these testing times to a better future.

President of Afghanistan (Mr. Hamid Karzai): *Bismillah-e-Rahman-e-Rahim!*

Thank you very much Mr. Prime Minister. It is a great honour and privilege for me and my delegation to be once again in India, a country of deep history, and values, and humanity.

Mr. Prime Minister, I convey my condolences and deep sadness over the tragic loss of life yesterday at Bilaspur's incident. Mr. Prime Minister, also please accept my condolences once again on the tragic incident of the bombing of the Indian Embassy in Kabul, and the bombings in Bangalore and Ahmedabad.

Mr. Prime Minister, Afghanistan and India indeed share in common the interests of peace and stability in the two countries, in the region, and in the larger world. And we know that together India and Afghanistan are facing the challenges of terrorism, of cold-blooded, brutal murderous activity in our two countries. And we recognize that the two countries and the world at large have no option but to be united in fighting the menace of terrorism as it affects us and as it affects the international community. I would call upon all our allies to recognize the seriousness and the brutal nature of militant radicalism as it attacks innocent lives, women, children, elderly alike wherever they can manage to attack them.

Mr. Prime Minister, Afghanistan will stand resolutely with our friends in India in fighting the menace of terrorism; Afghanistan stands resolutely with our allies in the conduct of war against terrorism. As India has suffered immensely from this menace, Afghanistan has too. Therefore, Mr. Prime Minister, it is a moral responsibility for us - not a political activity, I would like to underline, it is a moral responsibility for us - as human beings to protect the lives of our women and children, and to prevent the loss of life

caused by terrorism by defeating terrorism and by eliminating it completely, and thereby bringing security to our peoples and the world at large.

Mr. Prime Minister, Afghanistan is very grateful to India's assistance all along. Historically we have been friends; and India has proven in particular to be a very valued ally and at the forefront of its assistance to Afghanistan in Afghanistan's effort in rebuilding itself. India has been among the best contributors of assistance to the rebuilding of Afghanistan. You have provided us help in education in a significantly important way. A thousand scholarships a year for five years; you have been building transmission lines for us; constructing dams for us; building new roads for us; and helping in all manners where India could. On behalf of the Afghan people, Mr. Prime Minister, please convey our regards and thanks to the people of India.

Mr. Prime Minister, I am grateful for the new announcement that you have made of 450 million dollars of fresh assistance to Afghanistan. Afghanistan will value this and I am sure it will be spent correctly for the betterment of the lives of the Afghan people.

I bring you once again greetings from the Afghan people and gratitude from the Afghan people. And I assure you that Afghanistan will be a steadfast ally in the war against terrorism and Afghanistan will remember and cherish the memory of India's assistance to the rebuilding of Afghanistan at an extremely critical juncture of our history.

Of course, I must re-emphasize, as you did, that both of us will continue the journey of democracy and pluralism, values that our nations definitely enjoy and will protect.

Thank you very much.

206. Joint Statement issued during the State Visit of Afghan President Hamid Karzai.

New Delhi, August 4, 2008.

1. At the invitation of His Excellency Dr. Manmohan Singh, Prime Minister of the Republic of India, His Excellency Mr. Hamid Karzai, President of the Islamic Republic of Afghanistan, is currently paying a State Visit to India (August 3-5, 2008).
2. During the visit, the two leaders held talks on a range of bilateral issues and regional issues.
3. India reiterated its full support to the goal of a sovereign, democratic, peaceful and prosperous Afghanistan, conducive to the peace, security and stability of the region.
4. President Karzai's visit comes at a time when there has been a resurgence of terrorism whose specter profoundly threatens our societies. The attack on the Indian Embassy in Kabul on the 7th of July was an attack on the friendship between India and Afghanistan. President Hamid Karzai's presence today conveys a befitting response to that attack. The leaders expressed their determination to fight terrorism unitedly and with all the forces at their command.
5. Prime Minister Dr. Singh conveyed to President Karzai that all of India's commitments to Afghanistan would be fully met. To this end, the Government of India pledged an additional 450 million US dollars over the 750 million US dollars announced so far to effectively meet the requirement of our ongoing and forthcoming projects.
6. Prime Minister Dr. Singh also conveyed to President Karzai that one of the important infrastructure projects in Western Afghanistan - the road from Zaranj to Delaram - is now complete and will be handed over shortly to the Government of Afghanistan. The construction of this road was a major test of our joint resolve.
7. India's efforts for the reconstruction and development of Afghanistan are also part of a larger international endeavour to help the Afghan people in forging a pluralistic and democratic society. It was agreed that a meeting of the Joint Coordination and Monitoring Bureau would be hosted by India next year.

8. The two leaders reaffirmed their common interest in developing a robust, strategic partnership, building on the foundation of the historically rich ties and suited to the dynamic of the 21st century.

207. Speech of President Shrimati Pratibha Devisingh Patil at the Banquet in honour of Afghan President Hamid Karzai.

New Delhi, August 4, 2008.

Your Excellency, President Hamid Karzai,

Excellencies,

Ladies and Gentlemen,

We are privileged to welcome Your Excellency and the distinguished members of your delegation to India.

Mr. President, you are in our midst today as a leader of the Afghan nation and as a friend of India. We welcome you also as a partner in our common endeavour of working for the stability and prosperity of our two countries and that of our region.

Our relations with Afghanistan span centuries and millennia. We are embedded in each other's historical and cultural consciousness. SAARC became a truly South Asian Association only after Afghanistan joined it. Our bonds are dictated by geography and forged by history. We share traditions and our culture has been enriched over the centuries by this interaction.

Mr. President, in sharing a history, we have also shared the pain of the Afghan people caused by years of conflict and destruction. We have directly felt the tragic consequences when your land was used as a safe haven for training terrorists.

Since 2002 under your resolute leadership, Afghanistan has taken many steps to attain its goal of a pluralistic, democratic and inclusive society. Mr. President, we most sincerely and warmly congratulate and felicitate you, as you guide your nation through a critical period of its history. You face extraordinarily difficult circumstances and challenges. But Afghanistan is today in a moment of hope and to us, you do represent hope.

India has admired the progress made by Afghanistan over the last six years. We have applauded the achievements of the Afghan people in rebuilding

their lives as well as in rebuilding the physical and human infrastructure of Afghanistan. We have noted with great admiration the school enrolment figures, the percentage of populace covered by basic health care, the thousands of kilometers of roads that have been rebuilt, the significant drop in infant and maternal mortality rates, as well as the large number of communities being serviced under the National Solidarity Programme. These developments demonstrate that the Afghan people welcome democracy, desire prosperity and seek to become a source of stability in the region.

India has endeavoured to be a partner in Afghanistan's progress and in its quest for peace, stability and development. We have endeavoured to be a meaningful partner and follow the priorities of the Afghan Government and people. Unfortunately, we have become also a target of those who do not share the vision of a stable and democratic Afghanistan. The attack on our Embassy last month on the 7th of July was a barbaric act of terrorism. It was an attempt directed to undermining the friendly relations between India and Afghanistan. Your visit to India is a demonstration that such attempts will not, and cannot, succeed and that our friendship has emerged the stronger from this most unfortunate tragedy.

Our partnership has grown into a multi dimensional cooperation programme. This encompasses education, health, telecommunications, transport, civil aviation, agriculture and irrigation, industry, power generation and transmission, capacity building and human resource development. I have no doubt that this cooperation will grow in the years to come.

Earlier this morning, we announced an additional pledge of US \$ 450 million from the people of India for the people of Afghanistan under our Assistance Programme, in alignment with the priorities of the Afghanistan National Development Strategy, as a mark of our affirmation of support.

Mr. President, on behalf of the Government and the people of India, I reaffirm our commitment in working together to support you in your efforts in making Afghanistan a stable and prosperous country and in achieving for the people of Afghanistan the dreams that you cherish and that we share as part of our historical traditions.

In conclusion, may I propose a toast to: -

- the health and happiness of His Excellency President Hamid Karzai;
- peace, progress and prosperity of the friendly people of Afghanistan; and
- abiding friendship and cooperation between India and Afghanistan.

**208. Statement by Permanent Representative at the UN
Nirupam Sen on the Report of the Secretary General on
the Situation in Afghanistan at the Security Council.**

New York, October 14, 2008.

Mr. President,

Let me begin by formally welcoming you both to your new post, and to the Presidency of this Council. I also wish to express appreciation for scheduling today's debate on the UN Assistance Mission in Afghanistan, and the situation in that country. This is a topic of immediate interest for our delegation. We also welcome the report of the Secretary-General, while thanking Ambassador Eide for his comprehensive briefing.

Mr. President,

The latest report of the UN Secretary-General makes it clear that we stand at a very difficult juncture in Afghanistan. The escalation in asymmetric attacks to include areas that were cleared of the Taliban and the Al-Qaeda is a deeply worrying sign. The fact that civilians, humanitarian workers, UN convoys and diplomatic representations-including our Mission in Kabul-have been attacked clearly underlines the barbarity of the foe that we face. The escalating civilian death toll is truly distressing, but the ultimate responsibility for such casualties must be laid at the door of the Taliban, Al-Qaeda, and those who support and empower them. Such callous violence underlines the need to ensure that care is taken in our collective actions and messages. We must avoid giving them a sense of comfort or a hint of desperation, but most of all, we must not dignify them by according terrorists parity with the forces of order. It is in this context that we feel a sense of some discomfort with references in this report to casualties caused by anti-government forces and "pro-government forces".

Mr. President,

The course ahead may be difficult, but it is clear. We have no other option but to collectively work on a three-pronged strategy in Afghanistan. One element in this must be security, for without security neither the Afghan people nor those of our own countries will see the long-awaited peace dividend after decades of privation in Afghanistan. A second element must be to raise governance capacities in Afghanistan, otherwise we run the risk of placing responsibility upon our Afghan partners without ensuring

that they have the wherewithal to live up to it. The third element is the regional aspect, because unless Afghanistan is at peace within its region, and equally, vice versa, we cannot hope to stabilize Afghanistan solely from within. I should like to briefly elaborate on these three inter-related aspects. Firstly, security. Now is not the moment for doubts or hesitation in implementing robust measures within Afghanistan, while expanding coordinated politico-military efforts beyond Afghanistan's borders. We need to go much further in realizing the well-established objective of degrading the ability of the Taliban to fight, while simultaneously denying them safe-havens, finances and armaments. There must be a much closer alignment between the consistent application of force wherever terrorist groups are present, and the political objectives of our efforts in Afghanistan, in which UNAMA must play an important role.

This brings me to my second point, which relates to development and international assistance. With the adoption of the Afghan National Development Strategy (ANDS) at the Paris Conference this June, we now have a clear road map. From the new mandate of UNAMA, we have a designated guide to help us align our assistance in accordance with the strategy. The onus is upon us to take forward our efforts in a manner that coheres with the objectives set out in the ANDS. In this, UNAMA and the Afghan government must play a leading role. We share the sense reflected in the UNSG's report of the need for the international community to provide not just the resources but also political momentum to "turn back negative trends and accelerate progress in those areas where we have achieved success". In the particular context of the UN, it is now essential that we back our stated commitment to this new role for UNAMA by ensuring that it actually has the resources to do so. We also echo the call made by several speakers for greater efforts to address the worsening humanitarian situation, in particular, the food crisis.

In the specific context of resources, India also supports the increasing streamlining of assistance through the Afghan national Budget. Sustainable progress depends on our ability to mentor capacity building in all sectors of governance, including the Budgetary process as much as other mechanisms of government. At the same time, we must also ensure that adequate resources are made available for such newly-trained government agencies. It is for this reason that capacity-building is a priority element in each of India's assistance projects in Afghanistan. I should in this context like to add that India has recently announced an increase in its commitment to Afghanistan, which will now amount to US \$ 1.2 billion. We are also

pleased to have completed the Zaranj-Delaram highway, which is one of three major infrastructure projects India is undertaking in Afghanistan.

Mr. President,

Regional cooperation is the third leg of the triad of elements that must be implemented in parallel to stabilize Afghanistan. This includes, but is not limited to, regional economic cooperation. Afghanistan's entry into the South Asian Association for Regional Cooperation, and its membership in other regional groups such as the Shanghai Cooperation Organization are aimed at revitalizing Afghanistan's historic linkages with the countries of its region. The central challenge that remains, however, is to ensure that programmes evolved in such regional processes are actually implemented. These include resolving impediments that hinder the expansion of commercial and economic linkages, including barriers to effective overland trade and transit, as well as to the operation of mechanisms to deal with the challenge posed by trafficking in drugs, cross-border terrorism and so on. Eventually, every challenge is an opportunity, but we need to make greater efforts to implement measures before we can benefit from the opportunities.

Mr. President,

In conclusion, I must reiterate the need to avoid excessive expectations. While it is tempting to attempt to replicate our own socio-economic models in a country that needs every form of assistance after decades of conflict, we cannot realistically resolve all of Afghanistan's problems at once. We must therefore accept that progress will continue to take place sectorally, partially and sometimes even episodically. Unless we display patience and perseverance, however, we cannot ensure that we truly follow a demand-driven approach on the ground, and without such an approach, our best efforts will not have the necessary legitimacy. It is for this reason that we reiterate the importance of an Afghan-led process of prioritization of tasks.

I thank you, Mr. President.

209. Statement of Member of Parliament and Member of the Indian Delegation to the United Nations K. Yerrannaidu on Agenda Item 17 – The Situation in Afghanistan at the UN General Assembly.

New York, November 10, 2008.

Please see Document No.753.

210. Press Release on the participation of Minister of State Anand Sharma in informal ministerial meeting on Afghanistan held in Paris.

New Delhi, December 15, 2008.

Shri Anand Sharma, Minister of State for External Affairs participated in an informal ministerial meeting on Afghanistan and its neighbours on 14 December in Paris. The meeting was hosted by the Foreign Minister of France H E Bernard Kouchner.

Participants at the Conference, besides Afghanistan and France, included Tajikistan, Turkmenistan, Uzbekistan, Pakistan, China, India, the United States, Russia, Germany, the United Kingdom, the Special Representative of the UN Secretary General for Afghanistan and representatives of the European Union and the European Commission.

The declaration issued in the name of the Minister of Foreign and European Affairs of France, the host of the meeting, stated that the participants at the Conference "expressed their strongest solidarity to the Indian authorities and the Indian people after the heinous acts of terrorism committed in Mumbai on November 26th." The declaration "underlined the regional character of terrorism and the need for visible, firm and coordinated action against terrorist groups."

The declaration also agreed that there could be no long-term security and peace in the region without a stable, secure, prosperous and democratic Afghanistan, which was in turn predicated on regional cooperation.

BANGLADESH

211. Statement by Official Spokesperson on extension of visa of Bangladesh writer Ms. Taslima Nasreen.

New Delhi, February 14, 2008.

The Government of India have decided to extend the visa of Ms. Taslima Nasreen. Throughout its history, India has a tradition of offering hospitality to those who seek it. It has also afforded protection to those who have come as our guests. Ms. Taslima Nasreen is our guest and, in keeping with our traditions, we have offered her the same privileges.

It is incumbent on those who are welcomed as guests in India that they remain sensitive to India's traditions and do not conduct themselves in a manner that either affects our relations with other countries or cause hurt to our secular ethos. We expect that they do not undertake actions that could hurt the sentiments of the many communities that make up our multi-religious and multi-ethnic nation. These are the same restraints which we in India follow. We expect nothing less from our guests.

212. Media Report on the visit of Bangladesh Chief of Army Staff General Moeen U. Ahmed.**New Delhi, February 25, 2008.**

It was the maiden visit of Bangladesh Chief of Army Staff General Moeen U. Ahmed to India as guest of the Chief of Army Staff General Deepak Kapoor. During the visit, according to reports in the media it was decided that Dhaka henceforth would honour the memory of Indian Army soldiers who were martyred in the war for liberation of Bangladesh. The remembrance will be officially on March 25 each year, the day when the Pakistan Army began 'Operation Searchlight,' a brutal campaign of genocide and rape against the people of East Pakistan and the Awami League responded by declaring Independence.

The Bangladesh Army Chief stated that his maiden visit was aimed at ushering "in a new era of close cooperation between the two armies." The decision to honour martyred Indian Army soldiers was expected to contribute greatly to the desire between both sides to enhance understanding between the two countries.

India signalled the importance it attached to the General's visit by gifting him two stallions and four mares. The six horses were handed over by General Kapoor. General Ahmed during his stay in New Delhi called on President Pratibha Patil, Prime Minister Manmohan Singh, Defence Minister A.K. Antony, External Affairs Minister Pranab Mukherjee and National Security Adviser M. K. Narayanan.

It is expected that the visit would contribute to a greater commitment from the Bangladesh side to clamp down on anti-India militants perceived to be camping on the Bangladeshi territory.

The need to reduce tensions on the Indo-Bangladesh border figured in the discussions as well as the question of illegal immigration. India was expected to operationalise External Affairs Minister Mr. Mukherjee's promise made last November to make a one-time exception and export five lakh tonnes of rice, the staple food of Bangladesh. (Bangladesh was affected by a shortage of the cereal, leading to an increase in prices and general disaffection after natural calamities struck last year.)

213. Press Release of the Ministry of Home Affairs providing clarification about illegal immigrants from Bangladesh.

New Delhi, May 21, 2008.

1. Reports have appeared in a section of the media on the subject of identification and deportation of illegal Bangladeshi immigrants. Reference has also been made in these reports to correspondence between the Central and the State Governments on this issue and, in this context, some directions said to have been issued by the Central Government to a particular State Government to round up immigrants and put them in transit camps have also been mentioned. Since such reports can lead to unnecessary confusion, it is clarified that the issue of identification and deportation of illegal immigrants is a continuing process and is dealt with as per the provisions of the Foreigners Act, 1946. This, inter alia, provides for detection of foreigners staying illegally in the country and, issue of directions to restrict their movements and for their detention and deportation. Powers under the Act, relating to these provisions, were delegated to the State Governments as far back as 1958. The State Governments are taking action as per the provisions of the law on a continuing basis. Instructions have also been reiterated, from time to time, to all State Governments/Union Territory Administrations in this respect.
2. In the context of a petition filed in the High Court of Delhi, regarding the detection and deportation of illegal Bangladeshi immigrants in the National Capital Territory of Delhi, and the orders of the Court thereon, a Nodal Authority under the Union Home Secretary had been constituted to monitor the action taken in this regard. With reference to these Court orders, meetings of the Nodal Authority have been held with the officials of the Government of Delhi, the States in the NCR region and the border States contiguous to Bangladesh. In this context, the need for systematic action for detection, detention and deportation of illegal immigrants has been emphasized. With reference to a particular letter said to have been written by the Government of Rajasthan in which certain problems had been mentioned, they had been advised to depute officers for consultations with the concerned authorities in Delhi by way of guidance, and no directions, as has been suggested in the reports, were issued.

3. Selective references have also been made to some alleged directions given in a meeting held on April 25, 2007 which, incidentally are factually incorrect. What had, however, been stressed in these meetings was not only to take systematic action for detection and deportation of illegal immigrants, but also to take multi-faceted measures to prevent illegal immigration into the country.
4. Further, in the context of these reports, mention has also been made about the need for the Prime Minister to immediately convene a meeting of the Chief Ministers on Internal Security. It is informed that over the last 4 years, regular meetings of Chief Ministers on Internal Security have been held, under the Chairmanship of the Prime Minister, the last of which was held on 20th December, 2007. On this occasion, separate meetings were also held with the Chief Ministers to specifically discuss issues relating to terrorism and Naxalite violence. Besides this, meetings of the Zonal Councils have been regularly held under the chairmanship of the Union Home Minister in a number of which the primary focus was on issues relating to internal security. The Central Government has, at all stages, sought to ensure close coordination with the State Governments/Union Territory Administrations in dealing with issues relating to internal security including terrorism, and has extended the fullest support and assistance to them from time to time. Simultaneously, emphasis has been laid on augmentation, capacity building and upgradation of the State Police Forces and the related infrastructure, and assistance has been provided for this through a variety of schemes and initiatives.

214. Statement by Official Spokesperson in response to a question on the release of former Bangladesh Prime Minister Sheikh Hasina.

New Delhi, June 11, 2008.

We are closely following evolving political situation in Bangladesh. The release of former Prime Minister Sheikh Hasina¹ for medical treatment is a positive step by the caretaker Government. It remains our hope that both the caretaker Government and the political parties would be able to achieve a constructive outcome from the political dialogue that is currently under way. We reiterate our expectation of due process of law, basic human rights and free, fair, credible elections leading to full restoration of democracy in Bangladesh. As a close and friendly neighbour, India remains committed to seeing a peaceful, stable, prosperous and a liberal democratic Bangladesh.

¹ Sheikh Hasina was released from the prison on June 11, after 11 months in jail. While the Government said she would be on parole for eight weeks, she maintained that her release was unconditional. Media reports said the sudden release - even if it was temporary - was the outcome of her party's stand that it would not join the ongoing government-sponsored dialogue or participate in the coming election unless Ms. Hasina was released. The next day she left for the USA for medical treatment.

215. Inaugural Address by External Affairs Minister Pranab Mukherjee at South Asian Free Media Association (SAFMA) Conference of Journalists from Bangladesh and West Bengal.

Kolkata, June 30, 2008

Shri Hashim Abdul Halim, Hon'ble Speaker, WBLA,

Shri Buddhadeb Bhattacharjee, Hon'ble Chief Minister,

Shri Zahiduzzaman Faruque, Leader of SAFMA,

Media Participants, Distinguished Guests,

Ladies and Gentlemen:

It gives me immense pleasure to be present here today on the occasion of the inauguration of the South Asian Free Media Association (SAFMA) Conference of Journalists from Bangladesh and West Bengal. The event organized by the SAFMA's India Chapter gives an opportunity to the media from both sides to promote mutual understanding and cooperation between the two countries. SAFMA has also played an important role in addressing the constraints and concerns of media, and look for solutions while pursuing its endeavour to foster peace, stability and cooperation in South Asia. I have been given to speak on "West Bengal-Bangladesh interaction on building trust and mutual confidence", a theme well-timed and opportune.

With Bangladesh, India shares not only enduring feelings of civilizational, fraternal, linguistic and cultural ties but also a common history of struggle and liberation. These close bonds are logically manifested in the common historical legacy and friendship which West Bengal shares with Bangladesh. It is, therefore, but natural that people from both sides of the border have aspirations to enhance connectivity for promoting trade, people to people contact and interaction.

Relations between India and Bangladesh especially over the last few years have seen much dynamism and closer interaction in all spheres. Building trust and mutual confidence in our relations is the acknowledgement of issues in our relations and to address them comprehensively with an open mind. Understanding can only be built on this determination to address issues of concern to both countries. Last year, I visited Bangladesh twice

in February and in December and held frank discussions with leaders of Bangladesh on the entire gamut of our bilateral relations. Governments of both countries are committed to try and resolve all issues in our relations with a mutually constructive approach.

The commencement of Kolkata-Dhaka Passenger Train Service in April fulfilled a long standing aspiration of the people of both countries to enhance connectivity. This comes as a welcome development to the people of West Bengal to enhance their fraternal links with Bangladesh. Equally important is the connectivity of ideas, minds and hearts. Recently, for the first time a delegation of Indian War Veterans of the 1971 war visited Bangladesh to participate in the Independence Day celebrations. A delegation from Muktiyodhas from Bangladesh now visits Kolkata annually to participate in the Vijay Divas celebrations.

It is also in this spirit of engagement that India has made several unilateral gestures in the recent past to Bangladesh. These gestures are precisely to build trust and mutual confidence in each other. They include allowing Bangladesh to export eight million pieces of readymade garments to India duty-free, lifting the ban on FDI from Bangladesh, providing duty-free access starting January this year. We are also undertaking several initiatives to improve the trade infrastructure including Land Customs Stations, Road, Rail and riverine routes which would help to facilitate trade.

India has provided Bangladesh aid and assistance to help it overcome the damage caused by some of the worst natural disasters last year. These included cash assistance of US \$ 10 million, supply of food aid consisting of essential items including rice and milk powder of a total value of nearly 100 crores is underway. In the aftermath of the cyclone in November 2007, India sent an emergency relief package of essential commodities and announced waiver of a ban of rice to Bangladesh for an additional 5 lakh tonnes of rice. We are also in the process of rehabilitating 11 severely cyclone affected villages. Needless to add, our hand of friendship always remains extended.

Distinguished participants,

One of the important vehicles for creation of trust and mutual cooperation between India and Bangladesh is through the means of regional

cooperation of SAARC. Following its inception 22 years ago, the geographic contours of SAARC have also changed. Afghanistan is the newest and eighth member of SAARC. SAARC has transformed from declaratory to implementation with the establishment of the SAARC Development Fund (SDF), the Project Office of the South Asian University (SAU), incorporation of services in the on-going negotiations in SAFTA and implementation of key projects in areas of tele-medicine, tele-education, solar rural electrification, rain water harvesting and seed testing laboratories.

SAARC is strengthening intra-regional connectivity through up-gradation of physical linkages that were identified at the 1st meeting of SAARC Transport Ministers in New Delhi in August 2007. These linkages would enable land-locked member states of SAARC to have access to sea via other SAARC member states. Discussions are on going for agreements for seamless travel between SAARC member states, on motor vehicles by rail etc.

Conscious of the adverse impact of climate change, SAARC adopted a Draft Declaration on Climate Change at the 29th Council of Ministers following up with a ministerial meeting hosted at Dhaka. As SAARC evolves further, strengthening its core mechanisms and engaging the outside world through observers and project-based cooperation, the vision of its founding fathers for a vibrant, dynamic regional economic entity is being realized. An area of concern for both countries is to combat the growing menace of extremism and terrorism in the region. Closer cooperation on security issues for building trust is the need of the hour. We should move to address such issues without rancour and with the understanding that both our countries will benefit in the long run. Keeping in mind that development can never take place in an atmosphere of insecurity, SAARC is also cooperating on an agreement to enable security agencies of SAARC member states, strengthen their cooperation to counter terrorism and bring criminals to book.

Distinguished Participants,

In the globalized world of today, it is important for both countries to enhance connectivity, linkages and boost our trade which would bring prosperity to the region. Initiatives like transit for Indian goods via Bangladesh can generate synergy and mutual dependence. Closer engagement has

emerged as the key to build mutual confidence between countries and I see no reason why our two countries cannot go the way numerous countries have done with India. In this the private sector of both countries has an important role to play.

In any civil society, journalists have a very important role in forming public opinion. All of you can contribute to highlight the issues as also the vast avenues of close cooperation which exists between our countries. I also assure you of our government's help in removing problems and difficulties that may be identified during your discussions. I convey my best wishes for the success of this SAFMA conference and hope it would help in disseminating information on issues and initiatives in the region which can promote understanding and bring people of both countries closer.

Thank you.

216. Joint Press Conference by Foreign Secretaries of India and Bangladesh after annual Foreign Office Consultations.

New Delhi, July 17, 2008.

Foreign Secretary (Shri Shivshankar Menon): Good afternoon, ladies and gentlemen. Thank you for coming. I am very happy to welcome Foreign Secretary of Bangladesh and his delegation to India for the annual Foreign Office Consultations between our two countries.

We have had very friendly, open, cordial and substantive discussion on our relationship this morning. We have covered all aspects of our relations. For us in India, as I informed the Foreign Secretary, relations with Bangladesh are a matter of the highest priority. We share a common cultural heritage and historical bonds. As a close and friendly neighbour we stand committed to strengthening our relationship with Bangladesh. We had a very good discussion today where we discussed our trade and economic relations, our political relations, common security issues, water issues and the other aspects where we would like to carry our relationship forward¹.

It has been a productive year for our relationship. In the last April we started the Maitri Express between Kolkata and Dhaka. We have also had the visit of the Chief of Army Staff of Bangladesh. Our Army Chief will be visiting Bangladesh soon. The Home Secretary will also be going to Bangladesh in the near future. Last year, our External Affairs Minister visited Bangladesh twice; and we tried to help Bangladesh to the extent that we could when she was hit by a series of natural disasters.

¹ In anticipation that the Indian would raise the question of transit facilities to Northeast through Bangladesh in the New Delhi talks, caretaker government's Foreign Affairs Adviser Iftekhhar Ahmed Chowdhury, according to media reports said in Dhaka on July 13 that 'his Ministry would never agree to any arrangement on the issue of transit to India which is contrary to Bangladesh's sovereign national interest. Mr. Chowdhury said: "We are prepared to negotiate with any country on any subject, but no solution can ever be imposed on us without our consent." "This is an axiomatic truth of our diplomacy." In another development ahead of the talks the political alliance led by Begum Khaleda Zia announced plans to observe an "anti-aggression day" on July 17 that marked the Foreign Secretary-level talks in New Delhi. The BNP and Jamaat-e-Islami, including their other partners, reportedly said that the present caretaker government was set to give transit facility to India bypassing national interests. However Indian High Commissioner Pinak Ranjan Chakrabarty, after a meeting with Mr. Chowdhury, reportedly said India was interested in transit through Bangladesh and would raise the issue in all the fora.

Today, we also discussed issues about connectivity between our two countries. From our point of view I think the discussions were very useful and have led to much greater understanding of each other's concerns and interests. We are convinced that our security is interlinked, and that terrorism will have to be tackled resolutely.

We both exchanged views on how to deal with some of the humanitarian aspects, water resources issues for instance; and we are trying to enhance cooperation in agriculture and in science and technology. I am confident that this round of Foreign Office Consultations helped build trust and understanding between our two countries, and we look forward to continuing this process.

Foreign Secretary of Bangladesh (Mr. Md. Touhid Hossain): I would first like to thank all of you for being here to cover the present round of Foreign Office Consultations between India and Bangladesh.

I know that for the media, both in Bangladesh and in India, there is a very keen interest to follow how the relations between our two countries are evolving. This is natural and this is also welcome for I believe that the media in both our countries can play a major positive role in creating the conditions that may help both our countries to remain on a positive trajectory to improve and strengthen their relations.

I thank Foreign Secretary Menon for inviting me over to Delhi for this round of Foreign Office Consultations between our two countries despite his extremely busy schedule and other important preoccupations. I am delighted to come here in response to his invitation; and we have had, as he has mentioned, very useful and constructive discussions on the entire range of issues in which we have shared interests.

The Foreign Secretary has indicated to you broadly the issues that we discussed. I can only add to what he has said by saying that we did not shy away from discussing all issues which we considered important for the present and the future of the robust, friendly relations between Bangladesh and India.

Our discussions have been candid, comprehensive and forward-looking. I have every reason to believe that ours has been a useful round of discussions which would enable us to continue to work constructively in the days and years ahead to enrich our already close bilateral relationship. I have invited Mr. Menon to visit Bangladesh at a time that he finds

convenient to carry forward the useful discussions that we have had in Delhi.

I would like to mention here one small thing which is that on the water issue we have agreed that the Technical Committee should sit very quickly to resolve one small issue that can be resolved quickly which is the embankment protection of the rivers which has been harming the people on both sides of our border. We hope that very soon they will sit and resolve this issue.

Thank you.

Question: This is addressed to both Foreign Secretaries. Recently in all the terror attacks that have taken place in India, fingers have pointed towards the HuJI which is supposed to have its base in Bangladesh. Was this discussed in the meeting between the two Foreign Secretaries?

Foreign Secretary of India: We discussed the issue of terrorism and how we both need to face it together. The details, of course, are dealt with in other fora. We have other places where we discuss these things, the Home Secretaries' talks and so on. And we look forward to working together against terrorism.

Foreign Secretary of Bangladesh: I fully agree with what he has said. I just have to add one thing that we think this is a global problem. We have a mechanism for cooperation in this sector and we will continue to do that.

Question: What is the status of BIPA?

Foreign Secretary of Bangladesh: This is in an advanced stage of finalization and we believe that in the near future we will be able to do something on that.

Foreign Secretary of India: I will ditto that.

217. Joint Statement issued after the conclusion of the 9th India - Bangladesh Home Secretary Level talks.

Dhaka, August 31, 2008

The 9th Home Secretary level Talks between Bangladesh and India was held in Dhaka during 29-31 August 2008 in a friendly and cordial atmosphere. Bangladesh delegation was led by Mr. Md. Abdul Karim, Home Secretary, Government of Bangladesh while the Indian delegation was led by Mr. Madhukar Gupta, Home Secretary, Government of India.

At the meeting both sides expressed their sincere desire to further expand, deepen and strengthen their bilateral cooperation. The two sides discussed, among other issues, matters related to Security, Border Management and enhanced bilateral cooperation.

On security related issues, both sides condemned terrorism in all its forms and manifestations and reaffirmed their commitment not to allow their territory to be used for any activity inimical to each other's interests.

Bangladesh and India expressed satisfaction at the successful reactivation of the Joint Working Group at the level of Joint Secretaries of both the countries and designation of nodal points to deal with the issues relating to security and human trafficking.

Both sides agreed to take action against militants, insurgent outfits and their leaders on the basis of real time and actionable information to be exchanged between the nodal points. Bangladesh side mentioned about the recently introduced legal regime that has been established to deal with anti-terrorism, prevent terrorist financing, money laundering etc. As regards criminals who have taken shelter in either country to evade the process of law, both sides agreed to continue efforts to find them out and send them back expeditiously.

Noting that smuggling of arms, ammunitions, explosives and fake currency notes is a serious threat to the peace and security of both countries, the two sides agreed to find out the elements engaged in such illegal activities and bring them to justice.

Bangladesh side sought India's cooperation to take preventive measures against anti-Bangladesh outfits based in India. The Indian side also sought Bangladesh's cooperation to trace the presence of Indian Insurgent groups allegedly based in Bangladesh.

Both sides agreed to ensure peace and tranquility along the border keeping in mind relevant provisions of the Joint Border Management Guidelines of 1975.

It was agreed by both sides to convene a meeting of the JBWG at an early date to discuss all outstanding boundary-related issues.

On the issue of construction of border fence within 150 yards of international border, Bangladesh side stated that matter will be further examined including joint visits to vulnerable sections of the border.

Both sides agreed that the verification process of released prisoners of one country held in the prisons of other country should be expedited and modalities in this regard will be worked out¹.

Both sides agreed that apart from sharing information between the two nodal-points and follow-up action, there is a strong need to identify the racketeers engaged in human trafficking especially women and children and bring the perpetrators of such acts to justice.

Both sides agreed that cooperation between the Narcotics Control Departments of the two countries needs to be further enhanced. In this respect, it was decided that a meeting of two Narcotic Departments will be held in October 2008 in New Delhi.

On the issue of enhancing cooperation towards capacity building including training of law enforcement agencies of both the countries, both sides noted

1 Asked whether some ULFA leaders reportedly in Bangladesh jails would come under this process, they said it was not about individual cases. The aim was to set up a mechanism to expedite the process of repatriation of prisoners who had completed their jail terms. It may be recalled that during the BSF-BDR talks in April, Bangladesh maintained that United Liberation Front of Asom (ULFA) chief Paresh Barua was "no longer staying" in that country and promised that it would not hesitate in handing over any Indian fugitive to New Delhi. "Paresh Burua is no longer staying in Bangladesh. We don't harbour any Indian terrorist or criminal in our territory," Director-General of Bangladesh Rifles (BDR), Major-General Shakil Ahmed said at a joint press conference with Border Security Force (BSF) Director-General A.K. Mitra on April 12, 2008. (Interpol had issued a red corner notice against Barua over a decade ago.) On ULFA general secretary Anup Chetia, the BDR chief said there was no extradition treaty between the two countries. Besides, Chetia was under trial for some cases registered in Bangladesh. "His case is still sub judice and unless and until the court takes a decision, we cannot hand him over to India," he said. "Under no circumstances do we want to support insurgency. Terrorists and insurgency in the northeast are a threat to Bangladesh. We don't want insurgency in the region because it spills over to Bangladesh. There is no question of any camp being set up and run in Bangladesh," said Gen. Ahmed. Asked to corroborate his assertion, the BSF chief said, "you can make your own conclusion." India submitted a list of 117 hideouts of Indian insurgent groups in Bangladesh. Mr. Mitra said India had handed over seven Bangladeshi criminals who had fled to India.

with satisfaction at the existing level of cooperation. Moreover they resolved to deepen it further.

Both sides agreed that the next meeting will be held in New Delhi and date for the same will be decided through diplomatic channels.

218. Extract from the Speech of Home Minister P. Chidambaram on Bangladesh cooperation to control terrorism while answering the debate on terrorism in the Lok Sabha.

New Delhi, December 15, 2008

* * * *

We continue to be concerned that the territory of our neighbour, Bangladesh is being used by Indian Insurgent Groups to plan and execute terrorist acts against India and the Indian people. The Government of Bangladesh has repeatedly assured that they would not allow their territory to be used by the Indian Insurgent Groups. However, the regrettable fact is that many leaders of the Indian Insurgent Groups continue to use Bangladesh as a safe haven. It is our expectation that Bangladesh will implement its commitments and assurances not to permit the use of its territory for such actions or allow sanctuary to such militant groups.

The activities of HUJI are also a matter of concern. HUJI has sponsored and supported terrorist activities in India. The Government of Bangladesh has a duty to control the activities of HUJI and to apprehend its leaders who are responsible for the terrorist activities. There are intelligence inputs to believe that HUJI is coordinating its activities with ULFA, NDFB and some other organizations¹.

v v v v v

1. The Home Minister made these remarks in the context of terrorist activities in North East part of India and the recent terrorist attacks in the States there. He particularly referred to the activities of the ULFA and the training camps in Bangladesh. The Minister said that there were inputs to suggest the involvement of the Bangladesh based terrorist outfit Harkat-ul-Jehad-Islami (HUJI) in the activities of the National Democratic Front of Bodoland and United Liberation Front of Asom. Similarly the Home Minister said the headquarters of the All Tripura Tiger Force (ATTF) were located in Satchari in Bangladesh.

219. Reaction of India to the Elections in Bangladesh.**Statement by the Prime Minister****New Delhi, December 30, 2008.**

"Please accept my heartiest congratulations on your electoral victory. The successful conduct of free, fair and peaceful elections is a reflection of the desire of the people of Bangladesh for democracy, development and progress. I am confident that under your leadership, Bangladesh will attain even greater heights.

India and Bangladesh share historically close and friendly relations. I wish to assure you of India's commitment to the further strengthening and deepening of our relations with Bangladesh. I look forward to working with you towards this end for the mutual benefit of our two peoples. I also take this opportunity to invite Your Excellency to visit India at your earliest possible convenience. I am asking my senior colleague, External Affairs Minister Pranab Mukherjee, to visit Bangladesh as soon as possible to personally convey our good wishes.

Please accept, Excellency, my best wishes for your good health and personal well being and for the continued progress and prosperity of the friendly people of Bangladesh."

Manmohan Singh

Statement by Government of India**New Delhi, December 30, 2008.**

India congratulates the people of Bangladesh on the fair, peaceful and free conduct of their general elections which mark the return to multi-party democratic politics in a close and friendly neighbour. The historic victory of the Awami League and the Grand Alliance led by Sheikh Hasina is a major landmark in democratic politics in South Asia. The large turnout of voters and the successful conduct of elections is a resounding victory for democracy. The people of Bangladesh have spoken with one voice to reiterate their faith in the democratic process and their desire for development and progress.

India and Bangladesh share common values, a commitment to democracy and a multi-faceted historical relationship, in every field of human endeavour. India looks forward to working closely with the newly elected Government in Bangladesh to further strengthen our bonds of friendship and cooperation in the quest for peace and development¹.

BHUTAN

220. Press Release issued by the Ministry of External Affairs on successful conduct of first ever elections to National Council in Bhutan.

New Delhi, January 1. 2008.

Government of India congratulates the Royal Government of Bhutan for the successful conduct of the first ever elections for National Council (Upper House) of Bhutan that were held on December 31, 2007 for 15 Dzongkhags.

2. This is indeed a great moment in Bhutan's history and an important step in Bhutan's transition into a new system of governance. India is committed to extending full support in the establishment of institutions required for the consolidation of Democratic Constitutional Monarchy in Bhutan².

1. In the elections held on December 29, after a hiatus of two years, Sheikh Hasina's Awami League swept the elections winning 230 seats out of 299 in the national parliament. Its allies won another 32 seats making a total of 262 for the alliance. The other alliance led by Begum Khaleda Zia of the Nationalist Party could get only 30 seats (BNP 27+ Jatiya Party 1+ Jamaat-i-Islami 2).

2. Bhutan on January 1 received its New Year gift - 15 elected representatives to its National Council or upper house following the first parliamentary elections as the country neared its aim of embracing democracy. Chief Election Commissioner Kunzang Wangdi termed the election as historic and a huge success. "We are pleased to say that the NC elections were a success. We are confident that our switchover to a democratic set up will be smooth and according to our plans," Wangdi said. International observers, including from India and the UN, monitored the polls. "Bhutanese people are still not fully aware of the small details of parliamentary elections. But they are soon learning. The response this time was much more than the previous rounds of mock elections (held in April and May last year)," he said. Bhutan's transition to democracy began in 2001 when former king Jigme Singye Wangchuk handed over the powers of daily governance to a council of ministers.

3. India and Bhutan share uniquely warm and cordial relations. These relations are characterized by close consultations, maturity, complete trust and mutual understanding and are based on the foundation of shared interests and mutually beneficial cooperation. They are an exemplary model of good-neighbourly relations.
4. India has been privileged to share its resources and experience with Bhutan during its period of transition to a democratic constitutional monarchy, and has reiterated its commitment to provide all possible assistance within its resources to the Royal Government of Bhutan. India is assisting Bhutan by supplying EVMs and deepening linkages between the Election Commissions of both the countries in conduct of elections. The Election Commission of India had deputed three election observers who witnessed the polling for National Council elections in Bhutan. Indian security agencies have been cooperating with their Bhutanese counterparts in maintaining law and order in the border areas.
5. Elections for the remaining 5 Dzongkhags will be held on January 29, 2008.

221. Statement by Official Spokesperson on the successful conduct of first ever elections to the National Assembly in Bhutan.

New Delhi, March 24, 2008.

Government of India congratulates the Royal Government of Bhutan for the successful conduct of the first-ever elections to the National Assembly (Lower House) of Bhutan that were held on March 24, 2008.

2. This is indeed a great moment in Bhutan's history. His Majesty's personal guidance, meticulous planning and constant support through out have contributed to the success of this historic enterprise. No less has been the determination of the people of Bhutan to fulfil His Majesty's vision of Bhutan's transition to a constitutional, democratic monarchy. Government and people of India join the Royal Government and the people of Bhutan in rejoicing this great achievement¹.
3. India remains committed to providing all possible assistance to the Royal Government of Bhutan during its period of transition.

¹ It will be recalled that the elections to the 15-member Upper House, the National Council were held on December 31, 2007.

222. Media Briefing by Foreign Secretary Shivshankar Menon on the visit of Prime Minister Dr. Manmohan Singh to Bhutan.

New Delhi, May 14, 2008.

Official Spokesperson (Shri Navtej Sarna): Good afternoon everybody and welcome to this briefing by the Foreign Secretary on Prime Minister's visit to Bhutan. I request FS to make his statement.

Foreign Secretary (Shri Shivshankar Menon): Good afternoon. We thought we would brief you about Prime Minister's visit to Bhutan on the 16th and 17th of May.

As you know, PM will be visiting Bhutan. He will arrive in Paro and go to Thimphu where he will be meeting both the Kings separately - the former King and the present King - of Bhutan. He would also be meeting the Prime Minister and will be addressing a joint session of the new Bhutanese Parliament on the 17th morning.

He will also be dedicating Tala, the new hydroelectric power plant which generates 1020 MW of electricity and laying the foundation stone of the new Punatsangchhu, the new hydroelectric plant that we will be constructing in the next few years in Bhutan.

This is a special year for India-Bhutan relations. For Bhutan itself it is the centenary of the Wangchuk dynasty. It is also the year of Coronation of the new King of Bhutan. It is the year when democracy has been ushered in; Parliament has been elected; and Bhutan is going through an internal transition; so also when Bhutan's Tenth Plan begins. For India and Bhutan it is also the fiftieth anniversary of Pandit Jawaharlal Nehru's visit to Bhutan in 1958, which in a sense laid the foundations of all that we have seen since in this relationship which is uniquely warm, close and friendly.

I think it is interesting that when Panditji went for a month to Bhutan he went on horseback and yakback. Now, Prime Minister flies into Paro. It shows how things have changed; how much development has taken place; and how connectivity is something that we have worked on; economic integration; and we have a steady tradition of high-level visits between the two countries and of high-level exchanges of views, which are characterized by deep trust and mutual understanding between us both.

During this visit once again you will be looking at the entire relationship; how to carry it forward at a time of transition within Bhutan and in the world; and at how we can enhance our relationship in various ways. As you know, we revised the India-Bhutan Friendship Treaty in February, 2007 when His Majesty, the present King of Bhutan visited India as Crown Prince. That, for the first time, reflects and articulates the desire of both sides to enhance our economic cooperation. Over time I think we have had an excellent identity of views and an engagement with Bhutan in the economic field which has borne results in various ways.

In hydro power for instance, Bhutan has an estimated capacity of 30,000 MW. We have so far tapped into a little over a 1400 MW. Our goal is to try and to do 5,000 MW together by 2020. That process continues. But more than that I think we have also been involved in other aspects of Bhutan's development, of roads, schools, education, health, etc. Our commitment to continuing this sort of relationship remains very firm and Prime Minister's visit will be one more chance to underscore that commitment, also at a time when Bhutan is undergoing her own transition.

We share an open border with Bhutan of about 700 kilometres. The understanding between both our countries is complete, and has enabled us to keep this border open as a link between us. We are both working on improving our connectivity at border infrastructure along the border. We have cooperated with each other very closely in keeping this area safe and secure.

I think I will stop there and maybe answer any questions that you might have.

Question: After the talks in Bhutan, are there going to be any agreements signed between India and Bhutan during this visit?

Foreign Secretary: I think not in this visit itself. I do not know if we will be signing agreements, no. But we have been signing steadily. As you know, that is an ongoing process.

Question: How much power are we getting from Bhutan right now? You said that we are tapping into about 1400 MW.

Foreign Secretary: It is the installed hydel capacity today in Chukha, Kurichu and Tala. Tala is actually the biggest project that has just started producing last year of a capacity of 1020 MW. Kurichu is 60 MW. The balance is Chukha which is the first hydel project that we did together.

Question: There was an operation conducted in 2003. What is the present situation there in Bhutan?

Foreign Secretary: Bhutan has cooperated with us steadily. In 2003-04, the operation that you have mentioned helped to clear some of the insurgent groups which had tried to establish camps on the Bhutanese side. We continue to work very closely with Bhutan; and Bhutan continues to ensure that that area remains clear and to the extent possible secure. We will continue to work together towards this end.

Question: Will there be any assistance for Bhutan's 10th Five-Year Plan?

Foreign Secretary: There will certainly be. We have been in discussions with the Government of Bhutan about the 10th Five-Year Plan and our involvement in it; what sort of engagement we will have. Certainly there will be a substantial Indian contribution to the 10th Five-Year Plan in Bhutan. PM will discuss developments generally - economic integration and also Bhutan's 10th Five-Year Plan when he is there.

Question: There have been some reports about Bhutan talking to China on some border issue. Is that something that we know about?

Foreign Secretary: Bhutan has had talks with China for quite some time, since 1984, about their boundary which is still unsettled. As far as we know, those talks are continuing. I think maybe you should ask the Bhutanese this question.

Question: Are you going to discuss the SAARC goals?

Foreign Secretary: Certainly. We will also talk about SAARC, SAARC's future and what SAARC can do. This we will do, certainly. But I do not want to prejudge what all is going to be discussed. So, let me tell you all that after the discussion.

Question: Can you give an idea of what India is doing to help with Bhutan's promotion of democracy?

Foreign Secretary: To an extent, our facilities have been available to Bhutan. For instance, the Parliamentary Training Institute. The Election Commission has also helped in setting up their counterpart in Bhutan and has supplied some Electronic Voting Machines. At various stages depending on what Bhutan feels they need, we have made available our experience. All that, including the mistakes that we have made, we have

told them honestly so that they can learn from our experience. As very close friends, I think that is the least we can do. We welcome Bhutan's decision to make this transition to democracy and we will support it in any way that they feel comfortable with and they require.

Question: Mr. Menon, there is an area where India, China and Bhutan's borders meet near Sikkim. Last December, the Chief of Army Staff announced that a division would be moved from Jammu and Kashmir area because of Chinese movement into Bhutan in the Chhumbi valley. What is the situation now?

Foreign Secretary: I think you will have to ask the Chief of Army Staff, I am sorry.

* * * *

Question: Will there be any discussion of the Bhutanese refugee issue?

Foreign Secretary: As I said, I will answer that after the discussion. I do not want to tell you now what will be discussed. That would be guessing. So, after the discussions I will tell you that.

* * * *

223. Speech of Prime Minister Dr. Manmohan Singh at the National Assembly of Bhutan.

Thimpu, May 17, 2008.

It is a great privilege for me to address the Joint Session of the National Assembly and the National Council of Bhutan. I bring to you the warmest greetings and felicitations of the Government and people of India.

I am delighted to be in your beautiful country at this historic time, and to celebrate with the people of Bhutan their towering achievements.

This is the centenary year of the Wangchuck Dynasty, the year of the coronation of His Majesty Jigme Khesar Namgyel Wangchuck as the King of Bhutan and of Bhutan's transition to a democratic constitutional monarchy.

It is a tribute to the enlightened leadership and statesmanship provided by His Majesty Jigme Singye Wangchuck that Bhutan has succeeded in reaching these milestones in an atmosphere of utmost peace and stability while steadily improving the welfare of her people. During His Majesty's reign, Bhutan has witnessed unprecedented social and economic development. He is the architect of Bhutan's constitution and polity. Today His Majesty's vision of vesting sovereignty in the people of Bhutan has borne fruit.

As Bhutan enters a new era in its history, you can continue to count on India, as a friend and - may I say - an admirer of Bhutan. India will stand by you as a factor of stability and support in your quest for greater prosperity and happiness.

As the first ever elected representatives of your people, you bear a special responsibility, and have a unique opportunity, to translate the aspirations of your people into reality.

While we in India have considerable experience in attempting to bring about socio-economic transformation within the framework of a democratic polity, we do not claim a monopoly of wisdom and knowledge.

But we do know that democracy is not merely about holding elections. Democracy requires sustained commitment to tolerance and the judicious exercise of power as a societal trust to be used for public good. It requires a deep commitment to the rule of law. It requires the building of strong institutions of governance and respect for the other's viewpoint.

I can assure you that you have our wholehearted support as you enter this new and exciting phase in your country's history. We will work with you to realize your full potential, in a manner and pace that suits your own chosen path of development and your priorities.

India is proud of its exemplary relations with Bhutan. Our bilateral relationship is no artificial political construct. It draws its strength from geography, from history, scholarship, religion and culture and ancient commercial and people-to-people contacts. The shared aspirations of our common destiny have been given expression by contemporary statesmanship.

Just as strands of many colours are woven together to make a beautiful kira, so the many and varied strands that constitute the tapestry of our relationship come together.

Guru Padmasambhava and many learned Buddhist thinkers carried Lord Buddha's wisdom and learning from the great universities of India to these mountains. But no less have the Himalayas been a source of inspiration for India over the centuries. Our sages and thinkers have sought enlightenment here.

In the modern era, the foundations of our relations were laid by the late King Jigme Dorji Wangchuck and Pandit Jawaharlal Nehru. 50 years ago Pandit Nehru travelled to Bhutan and witnessed the love and affection showered upon him by the men, women and children of Bhutan. Pandit Nehru's visit left an indelible impression on him and convinced him of the potential and richness of India-Bhutan relations. He said at that time, and I quote :

"Our only wish is that you should remain an independent country choosing your own way of life and taking the path of progress according to your will. At the same time, we two should live with mutual goodwill." (unquote).

Based on this vision, India and Bhutan have created a unique, unparalleled and time-tested partnership of peace and friendship.

Today our relations are a model of how two neighbouring countries, uneven in physical size and attributes, can coexist in perfect harmony and understanding. Both our countries have a vital stake in each other's well-being and prosperity.

We have evolved a comprehensive framework for economic, commercial and trade linkages. Our development cooperation encompasses varied areas such as health, education, infrastructure, culture, urban development, human resource development, media and telecommunications.

Time has, however, moved on, and so have our two countries. As we enter a new era in our ties and a new century, I come to seek and reinforce the same meeting of minds, the same depth of understanding and the same confluence of thoughts and aspirations that have characterized our relations thus far, to guide us in the future. As partners, confident in our friendship and mutual security, we will work together to make our friendship gain added strength with the passage of time.

The signing of the India-Bhutan Friendship Treaty in February 2007 was a watershed event. The Treaty enshrines the principles that continue to underpin our relations. It has laid the basis for a relationship that is responsive to each other's national interests, a relationship that is consultative, and a relationship that ensures mutually beneficial cooperation. The Treaty symbolizes our conviction that stability, peace and economic advancement are the most durable guarantors of peaceful co-existence and mutual respect for each other.

We applaud the vision for Bhutan that has been laid down by His Majesty Jigme Khesar Namgyel Wangchuck. His Majesty's deep concern for the people of Bhutan and determination to create a policy framework that maximizes their potential holds great promise for Bhutan.

In the coming years, the challenge before both Bhutan and India will be to evolve a model of sustainable, inclusive and equitable development. We would like you to know that we remain at your disposal to share our experiences, including in those areas where we have had some success.

Bhutan is a shining example of an industrious people blessed with a wise leadership. We have much to learn from you on how to pursue economic development that is neither at the expense of a fragile eco-system nor a country's social and cultural traditions. The concept of Gross National Happiness has particular resonance in today's world of unbridled materialism and consumerism.

An India-Bhutan partnership for the future must harness our mutual strengths and complementarities. Our desire is to create a framework that puts people at the heart of our cooperation. The young profile of our two

populations makes it incumbent upon us to meet their aspirations. Economic strategies would need to be employment friendly. We have to invest much more in the area of human resource development, skill generation and education.

The Indian market offers vast opportunities for Bhutan's agriculture, industry and services sectors. We will work towards the further improvement of connectivity between our two countries so that our borders become the gateways for mutually beneficial undertakings. There is vast scope for the further expansion of people-to-people contacts, exchange of scholars and experts.

We should evolve a development and economic cooperation strategy that complements our mutual resource endowments. We know we are on the right path when electricity generated in the mountains and valleys of Chukha, Kurichhu and Tala lights homes in Bihar, West Bengal and Delhi and generates wealth for Bhutan.

India and Bhutan are well placed to create a new paradigm for inter-governmental cooperation in the areas of water security and environmental integrity. The Himalayan glaciers are our common asset and we can do much more together to devise strategies to combat global warming.

Over the past four decades and more our two countries have worked closely in the process of Bhutan's planned development. We remain committed to working with Bhutan in support of the 10th Five-Year Plan. This period will lay the building blocks for Bhutan's development and support your vision for tomorrow. We will develop our cooperation during the 10th Plan with imagination and flexibility, in accordance with your priorities in human resource development, education, Information and Communication Technologies, health, infrastructure and numerous other fields.

We also look forward to strengthening institutional linkages with the Bhutanese judiciary, the Election Commission and other constitutional bodies. Our parliamentary resources and facilities remain available to you to draw upon.

In the area of hydropower development, we will work with Bhutan to develop two new mega hydropower projects, Punatsangchhu-II and Mangdechhu. We will commence the preparation of detailed project reports for four new projects. Implementation of these projects will help us achieve the target of export of at least 5000 megawatts of electricity from Bhutan to India by

2020, in a manner that is environmentally sustainable.

I am particularly happy to inform this august House that we will begin construction of the first ever rail link between India and Bhutan, connecting Hashimara to Phuentsholing, called the "Golden Jubilee Rail Line". This link will connect Bhutan to the entire railway network of India.

We will also institute a Nehru-Wangchuck Scholarship to encourage students from Bhutan to study in leading Indian universities and institutions.

As we draw all these threads together, our bilateral economic engagement with Bhutan over the next five years will be of the order of Rs. 100 billion. My audience with His Majesty the King and my discussions with His Excellency Prime Minister Lyonchhen Jigmi Thinley have convinced me that the future of our relationship is bright. In this great hall of democracy, I sense an air of optimism and self-confidence. You stand on the threshold of change, and you have our best wishes for your success.

India desires to see a South Asia which is at peace with itself. We wish to contribute to ever widening circles of security, peace and prosperity in our region.

It is with this objective that we look towards working further with Bhutan, in both the bilateral and regional context. A Bhutan that is sovereign, prosperous and secure is central to our vision for the future.

I thank you for your attention and Tashi Delek.

224. Media Briefing Points by Official Spokesperson on the visit of the Prime Minister of Bhutan.

New Delhi, July 16, 2008.

The Prime Minister of Bhutan, his excellency Lyonchen Jigmi Y. Thinley, is on a State visit to India from July 14-17, 2008. He is accompanied by Mrs. Thinley and a high-level delegation that includes H.E. Lyonpo Khandu Wangchuck, Minister for Economic Affairs, H.E. Lyonpo Ugyen Tshering, Minister for Foreign Affairs, H.E. Lyonpo Wangdi Norbu, Finance Minister, and other senior officials from the Royal Government of Bhutan. This is his first visit outside the country, after being elected Prime Minister of the first democratically elected Government in Bhutan.

Bhutanese Prime Minister called on President and Vice President and met Chairperson UPA, leader of the opposition, EAM, Home Minister, Minister for Power, Health Minister, Minister for Tourism and Culture and Deputy Chairman, Planning Commission. He also met NSA and Foreign Secretary. Ministers accompanying the prime minister have also held extremely useful meetings with their counterparts in diverse areas of mutual Interest and cooperation. All meetings were held in an extremely friendly, warm and cordial atmosphere, reflecting the spirit of, trust, cooperation and mutual understanding that marks our bilateral relations. The visit has provided a useful opportunity to continue the tradition of highest level exchanges and further the initiatives announced during Prime Minister visit to Bhutan in May 2008. Areas of mutual interest discussed during the visit included our exemplary cooperation in the hydropower sector and india's economic engagement in Bhutan's development programmes during its 10th Five year Plan period.

The main outcomes of the discussions include:

- (1) Gol has decided to revitalize the standby credit facility for Bhutan enhancing the amount to Rs 400 Crores. The credit would be drawn on favorable terms by RGoB, as and when necessary, to ensure stability of its currency reserves and to meet its obligations. An agreement to this effect will be finalized shortly.
- (2) Gol reiterated its commitment to assist RGoB in its socio-economic development programmes and reaffirmed its full support to Bhutan's 10th Five Year Plan(FYP). Gol has committed to double its 10th FYP assistance over the revised outlay assistance in the 9th Plan

period. Project-tied assistance of the Gol would be implemented as per the existing implementation mechanism. Small development projects in rural areas will be implemented according to mutually agreed modalities. Actual assistance would be determined by implementation of agreed programmes and priorities.

- (3) Gol is committed to enhancing its development assistance and cooperation. To this end, Gol and RGoB will undertake mid-term reviews on a rolling basis, of the plan to enhance the allocation of resources as required. Experts from both sides would examine and work on identify sectors of cooperation based on RGoB's priorities. These would include the establishment of a medical college in Bhutan and capacity building in health sector, education, rural development and agriculture. These projects would be taken up for execution with assistance from Gol outside Bhutan's 10th Five Year Plan.
- (4) Gol is committed to developing 10000 MW of hydropower in Bhutan for export to India by the year 2020. This would be done through direct assistance and in collaboration with Indian public sector undertakings. In the course of developing hydropower projects, Gol will also undertake capacity building and skill enhancement by establishing specialised Industrial Training Institutes in Bhutan, to generate employment opportunities for the local population.
- (5) Gol is committed to developing the human resource within Bhutan including through various scholarship schemes such as the Nehru-Wangchuck scholarship. In addition it is committed to developing infrastructure within Bhutan including roads and a rail line from Hashimara to Phuentsholing.
- (6) Gol has exempted Bhutan from the ban on export of essential commodities. Gol also agreed to positively consider RGoB's request for removal of export duty on the supply of industrial raw material including coal and steel billets to Bhutan.

**225. Statement of President Shrimati Pratibha Devisingh Patil
on her visit to Bhutan.**

New Delhi, November 7, 2008.

I am deeply privileged and honoured to be here to rejoice with the people of Bhutan on the Coronation. The enthusiasm with which the people of Bhutan have participated reflects their respect and reverence for the Monarchy. It is not often that a father has the opportunity to confer his blessings on a son in the manner I witnessed at the Coronation. It exalts both.

The Ceremonies at the Dzong were marked by solemnity, piety and grace and I was deeply touched. The ceremonies elsewhere were colourful and full of gaiety.

With democratic elections earlier this year, His Majesty the Fourth King has ushered in democracy in Bhutan, reposing his faith and trust in his people to continue Bhutan on its path of peace, progress and prosperity. A new youthful generation will now guide Bhutan towards a brilliant future under the able leadership of the young King. I see, at the same time, how deeply rooted the people are in the tradition and culture that quintessentially define Bhutan. I am deeply impressed.

This year has been an historic year with the Coronation of His Majesty, the celebration of the centenary of the Wangchuck Dynasty and the establishment of a democratically-elected Government. By a happy coincidence, it is also the golden jubilee of Pt. Jawaharlal Nehru's visit to Bhutan in 1958, a landmark year for our bilateral relations. We are delighted that this extraordinary convergence has been celebrated by the visits of the Prime Minister of India Dr. Manmohan Singh to Bhutan, and the Prime Minister of Bhutan H. E. Lyonchhen Jigme Y. Thinley, to India which have laid the foundation for taking our relations to a new high. I am confident that our bilateral ties will become deeper and even more fruitful over the coming years.

This is my first visit to Bhutan and I am delighted that it takes place on such an auspicious occasion. The warmth and spontaneity with which we have been received in this beautiful country is truly touching. It is an experience that I will cherish forever. I extend my warm felicitations to His Majesty the King and wish him a long, peaceful and bountiful reign. To the friendly people of Bhutan, I send my best wishes for their happiness and continued progress. I have extended an invitation to His Majesty the King to visit India at his earliest convenience. We look forward to welcoming him.

226. Statement by President Shrimati Pratibha Devisingh Patil on the conclusion of her visit to Bhutan to attend the Coronation of the fourth King of the Wangchuck Dynasty.

New Delhi, November 7, 2008.

"I am deeply privileged and honoured to be here to rejoice with the people of Bhutan on the Coronation. MALDIVES

227. Press Release of the Ministry of External Affairs on the State Visit of Maldivian President Maumoon Abdul Gayoom.

New Delhi, February 11, 2008.

H.E. Mr. Maumoon Abdul Gayoom, President of the Republic of Maldives accompanied by Madam Nasreena M.A. Gayoom paid a State visit to India from February 6-12, 2008. The Maldivian delegation included H.E. Mr. Abdulla Shahid, Minister of Foreign Affairs of Maldives and other senior officials.

India and Maldives have traditionally enjoyed close and friendly relations given the historical, ethnic and cultural ties. Over the years this relationship has blossomed into a multi-faceted one encompassing a range of areas. India is committed to enhancing these ties and assisting Maldives in its various developmental efforts.

President Gayoom was accorded a ceremonial reception at the Rashtrapati Bhavan on 11th February, 2008 where he inspected the Guard of Honour. Hon'ble President of India hosted a Banquet dinner in honour of the distinguished guest on 11th February, 2008. During President Gayoom's call on President, both leaders expressed satisfaction at the excellent state of relations between the two countries. They also expressed satisfaction at the conclusion of the Air Services Agreement between the two countries in December 2007 and the signing of the Agreement on Cooperation in Science & Technology during this visit. Hon'ble President congratulated Gayoom on the Sustainable Development Leadership Award conferred on him by TERI.

In his meeting with President Gayoom on 11 February, 2008, the Prime

Minister expressed happiness at the depth and multi-dimensional nature of our relations. He thanked Maldives for its consistent support to Indian candidature in the international fora. He welcomed the political and constitutional reform process currently underway in Maldives. President Gayoom thanked Prime Minister for India's consistent support to Maldives in its all-around development. Both leaders expressed concern at the increase in extremism and fundamentalism in the region and the need to combat them resolutely and jointly. They also emphasized the challenges facing developing countries, especially small island States, from climate change and agreed to cooperate further in addressing this issue.

Hon'ble Vice President, External Affairs Minister, Raksha Mantri, Leader of Opposition in the Lok Sabha and Smt. Sonia Gandhi, Chairperson, UPA also called on President Gayoom.

India and the Maldives signed an Agreement on Cooperation in Science & Technology on 11 February, 2008. The Agreement provides for identification of joint opportunities and projects and cooperation through exchanges of experts and information, workshops, training and joint projects. Further, the two countries agreed to conclude a new Memorandum of Understanding on the Indira Gandhi Memorial Hospital (IGMH), Male, established earlier in 1995 with the Indian assistance. It was also agreed to set up an India-Maldives Foundation.

**228. Speech by President Shrimati Pratibha Devisingh Patil
at a Banquet in honour of Maldivian President Maumoon
Abdul Gayoom.**

New Delhi, February 11, 2008.

Excellency President Gayoom,

Madam Nasreena Gayoom,

Distinguished Guests from Maldives,

Ladies and Gentlemen,

It is with great pleasure that I welcome you and Madam Nasreena Gayoom on your State Visit to India. We welcome you as a close friend of India, as the architect of India-Maldives relations, as a distinguished leader of SAARC and as a great statesman.

Allow me at the outset to felicitate you on the presentation of the Sustainable Development Leadership Award by TERI. You have indeed been an outstanding spokesman for sustainable development and have taken purposeful initiatives in pursuit of this goal. Your consistent campaign to highlight the dangers of global climate change has contributed to the awakening of people across the world to this danger. It is only fitting that your contribution is acknowledged by the conferment of this prestigious award.

Excellency, your presence amongst us today on a State visit is an affirmation of the close and lasting friendship that exists between our two countries. India and Maldives are inextricably linked by historical, ethnic, linguistic and cultural ties. As our countries develop economically, our relationship is increasingly becoming multi-dimensional and we are finding innovative ways of further cementing the ties between our two countries. The signing of the Agreement on Science and Technology earlier this morning is one such important linkage. The conclusion of the Air Services Agreement last December is another development providing for increased connectivity between our two nations. The dynamism in our relations bodes well for our future - a future where India and Maldives would be strong voices for peace and development in the region and, certainly, in the world¹.

Our relations in a range of areas are set to expand. India and Maldives have concrete and visible symbols of cooperation. The Indira Gandhi Memorial

¹ A few weeks earlier when Minister of State for Commerce Jairam Ramesh visited Male a fervent desire on the part of India to lift the traditional assistance and trade-driven

Hospital is the flagship of India-Maldives relations and we are happy that it continues to cater to the medical needs of the people of Maldives. We would be willing to continue to support its manpower requirements and be associated with its future. Another project of importance is the new Faculty of Hospitality and Tourism Studies being built by India. We hope that this institute will contribute to the thriving tourism industry of Maldives. Our cooperation in the areas of security has also grown steadily given the fresh challenges, especially maritime security, in the region. We value the strong support of Maldives to our candidatures in the international fora.

Your Excellency has indeed taken a sagacious and farsighted initiative in undertaking a political and constitutional reform process to change the Maldivian polity in line with changing times. The fact that this process is being done in an open, transparent and democratic manner speaks volumes for the maturity of your leaders and the people of Maldives, and the strong backing you have given them. We assure you of India's support in this endeavour. The Republic of Maldives has made great strides under your leadership and the conclusion of this reform process will be yet another milestone in your country's history.

Excellency,

We view with concern the rising tide of extremism and fundamentalism in our region. The attempt on your life came as a great shock to me, personally, and to all of us in India. The fact that you escaped unharmed is indeed providential and we pray for your long life. The recent bomb blasts in Male reinforce our belief that terrorism is unacceptable in whatever guise and whatever pretext. India and the Maldives will tackle this phenomenon jointly and resolutely.

Before I conclude, I would reiterate that India is committed to a relationship of abiding friendship with Maldives, founded on mutual trust, mutual respect

cooperation with Maldives to a comprehensive relationship structure comprising economic and academic cooperation and a healthy two-way trade regime was in evidence. Mr. Ramesh, on a three-day visit to Maldives as part of his drive to expand trade and investment ties within the SAARC countries, said on January 29 in Male that the time had come for India to take a hard look at its economic cooperation with Maldives and make it more proactive and even unilateral when it came to responding to the aspirations of a rich and young society that was trying to achieve its political and economic aspirations in a changing world. "We have to send a signal that India's perspective vis-a-vis SAARC countries was changing; that we were no longer prisoners of reciprocity and that we were sensitive to the concerns of our partners," Mr. Ramesh said. Pointing out that Maldives was one of the outstanding economic success stories of the past three decades with 7 per cent GDP growth and a per capita income in the region of \$3000, the minister said India had to see how it could go beyond trade to

and goodwill. We wish the Maldives well and we will continue to stand by you.

Distinguished Guests, may I request you join me in a toast to:-

- The good health and personal well being and safety of President Gayoom and Madam Nasreena Gayoom;
- The continued progress and prosperity of the people of Maldives; and
- The lasting friendship between the people of India and the Maldives.

229. Statement by External Affairs Minister Pranab Mukherjee on Presidential Elections in Maldives.

New Delhi, October 16, 2008.

We are heartened by the peaceful and fair manner in which the first round of multiparty Presidential elections in Maldives took place recently. The fact of the election under the new Constitution, and the manner of their conduct, are tribute to the sagacity and foresight of President Gayoom who had led the Maldives in its steady progress towards democratization and all round social development. The elections saw a high turn out of voters (85.5%). It is for the people of Maldives to take necessary decisions about their future in the next round of elections which will be held soon. India and Maldives have close and friendly relations and we stand ready to continue to assist the friendly people of the Maldives in their democratic transition and in their march towards prosperity.

investment and cooperation in diverse areas. The minister felt that the present level of trade and investment interaction between the two countries was not commensurate with the potential. He identified expansion of the list of items traded between the countries, making the annual assessment of Maldives' import requirements automatic, cooperation in the fisheries sector (particularly in tuna fishing), and greater Indian engagement in Maldives' higher education needs as some of the areas where the two countries could have fruitful joint initiatives. While India's exports to Maldives during 2006 were worth Rs. 384 crore, imports were worth less than Rs. 6 crore. "We must import more items and quantities from Maldives," he said. India has already announced major plans to develop its tuna resources, particularly on the Andaman and Nicobar Islands. Fisheries in Maldives faces a challenge as from 2011, the country will lose its duty-free benefits in Europe.

**230. Statement by External Affairs Minister Pranab Mukherjee
on Presidential elections in the Maldives.**

New Delhi, October 29, 2008.

We welcome the election of His Excellency Mr Mohamed Nasheed as the new President of the Republic of Maldives¹. This is an important milestone in the history of Maldives and marks the ushering in of a new era in democracy and political reform. We express our appreciation at the free and fair nature of the elections wherein the people of Maldives turned up in large numbers and made their choice.

India and Maldives have traditionally enjoyed excellent bonds of friendship and cooperation. We are confident that the new democratically elected government will strengthen these links and build on the close and multi-faceted engagement between the two countries.

¹ The elections resulted in the ouster of President Maumoon Abdul Gayoom who held the office of the President for a record 30 years. Mohammed "Anni" Nasheed of the Maldivian Democratic Party (MDP) won 54.25 per cent of the votes cast in the presidential run-off as against 45.75 per cent by 71-year-old Gayoom. Conceding defeat to Nasheed, a prominent face of the pro-democracy protests in the country who has been in and out of jail, the long-time President Gayoom said "I congratulate Anni". "I thank the people of the Maldives for allowing me to serve them for 30 years," Gayoom said. Nasheed said he would like to promote pluralism in Maldivian society and not be "vindictive". The 41-year-old new leader is a maritime engineer by profession. The victory of Nasheed marks a watershed in the history of Maldives where a ban on opposition parties was effective till 2004. Gayoom had won the six previous presidential elections but never before faced an opponent.

**231. Speech of President Shrimati Pratibha Devisingh Patil
at a Banquet in honour of the Maldivian President
Mohamed Nasheed.**

New Delhi, December 24, 2008.

Your Excellency President Mohamed Nasheed,

Madam Laila Ali,

Distinguished Guests,

Ladies and Gentlemen,

It is with immense pleasure that I welcome Your Excellency President Nasheed, Madam Laila Ali and the distinguished members of your delegation to India. We feel greatly privileged to have you amongst us today.

The dawn of democracy has broken over Maldives. As your country enters a new era of democratic change, political and constitutional reform, I remember what Mahatma Gandhi once said, "The spirit of democracy cannot be imposed from without. It has to come from within." In Maldives, the impetus for change has truly come from within. It has come from the desire of your people for greater openness and their yearning for a greater voice in governance. Your Excellency yourself have been the vanguard of hope and change.

Democracy is not just about holding elections, important as they are. It is about nurturing a democratic polity in the protective sheath of a vibrant Constitution, strong institutions of governance, rule of law and a polity designed to ensure development with social justice for the people. Your Parliamentarians have worked hard to adopt a new Constitution for the Maldives in August this year. The culmination was the holding of the first multi-party Presidential elections in October, which witnessed a large turnout of your citizens. Your victory attests to the fact that democracy has taken root in your country. The transition has been orderly and peaceful reflecting the sagacity of your leaders. We, in India, wish you all success in your country's purposeful strides towards democracy.

As your country charts out a new path, India will be with you, as a true and steadfast friend. As close neighbours, India and the Maldives share deep historical bonds of friendship, goodwill and mutual understanding. Our

destinies, prosperity, security and futures are linked. These bonds have become stronger over the last decades and our relations are now truly multi-faceted. Your Excellency's decision to make India as your first destination after assuming office is a reaffirmation of the lasting friendship that exists between our two countries.

India remains committed to the development of Maldives. Our countries have been cooperating in a range of areas, foremost amongst which have been public health, human resource development, training and tourism. We had, just recently in September this year, signed a new MOU to upgrade the Indira Gandhi Memorial Hospital - a hospital that has for more than thirteen years symbolized our strong bonds of friendship. The Faculty of Hospitality and Tourism Studies is an effort to contribute to the bustling tourism industry of Maldives.

New opportunities are opening up where our businessmen can gainfully collaborate. I welcome your decision to bring with you a business delegation and address our apex Chambers of Commerce and Industry. The signing of the Air Service Agreement earlier today bodes well for enhanced connectivity between our two nations. The setting up of the India-Maldives Foundation is another manifestation of our desire to enhance people-to-people contacts.

Given the close synergy of views, India and Maldives have also worked in close cooperation at the international and regional fora. Before I conclude, allow me to reiterate our strong and unqualified commitment to abiding friendship with Maldives.

Excellencies, Ladies and Gentlemen, may I request you to join me in a toast: -

- to the good health and personal well being of His Excellency Mohamed Nasheed and Madam Laila Ali;
- to the progress, prosperity and well-being of the people of Maldives; and
- to the ever growing cooperation and trust between India and Maldives.

232. Joint Statement issued at the end of the visit of the Maldivian President Mohamed Nasheed.

New Delhi, December 25, 2008.

1. His Excellency Mr Mohamed Nasheed, the President of the Republic of Maldives paid a State Visit to India from 23 to 25 December 2008 at the invitation of Smt. Pratibha Devisingh Patil, President of the Republic of India. He was accompanied by his wife Mrs. Laila Ali and a high-level delegation, including businessmen. This was His Excellency President Mohamed Nasheed's first visit to India after assuming the office of the President of the Republic of Maldives in November 2008.
2. His Excellency President Mohamed Nasheed called on President Smt. Pratibha Devisingh Patil, who also hosted a banquet in his honour. The Vice President of India Shri Mohammed Hamid Ansari, the External Affairs Minister Shri Pranab Mukherjee, the Chairperson of the United Progressive Alliance Smt. Sonia Gandhi and the Leader of Opposition Shri L. K. Advani called on H.E. President Nasheed. His Excellency President Mohamed Nasheed and Prime Minister Dr. Manmohan Singh held official level discussions.
3. The bilateral discussions were held in an atmosphere of friendship, warmth and close understanding. The two sides recalled the historic and traditionally close and friendly relations and expressed complete satisfaction at the excellent state of bilateral relations. They reaffirmed the importance attached by both countries to further strengthen bilateral cooperation in a wide range of areas.
4. The two sides agreed to work together for the further enhancement of their multifaceted relationship based on shared democratic values, commitment to economic development and social welfare, mutual understanding and cooperation and shared views on major international issues. The Indian side welcomed the establishment of the first multi-party democracy in the Maldives and the smooth transition of power.
5. The two sides discussed a wide range of issues of bilateral interest covering defence and security, trade and investment, health, tourism, information and communications technology, science and technology, transportation and air services, higher education, non-

conventional energy, fisheries, culture, education and training. The leaders also exchanged views on regional and international issues of mutual interest.

6. The following agreements were signed during the visit:
 - (i) Agreement on extending a Standby Credit Facility of US\$100 million to Maldives
 - (ii) Air Services Agreement
7. The two sides noted that there was great potential to increase trade and investment between the two countries. In this connection, they agreed to revive the Sub Group on Trade under the India-Maldives Joint Commission to recommend ways and means to enhance trade and investment. The two sides noted that the Joint Commission has proved to be a useful mechanism in giving direction to enhance India-Maldives cooperation in diverse areas.
8. The two sides identified a range of areas for enhancing investment cooperation, including information technology, higher education, fisheries, transport, tourism and infrastructure. They also agreed to expedite the construction of the Faculty of Hospitality and Tourism Studies, being set up in Male through Indian assistance.
9. The two sides welcomed the signing of the new MOU on the Indira Gandhi Memorial Hospital in Male in September 2008 and agreed to convene the Joint Committee envisaged under the MOU. The hospital stands as a shining symbol of India-Maldives cooperation in the health sector and both sides agreed to explore ways of strengthening health care services in Maldives, including through capacity building.
10. The two sides expressed their commitment to enhance their defence and security relations based on shared maritime threats and other security concerns. They expressed their satisfaction at the on-going DOSTI exercises between the Coast guards of both countries. They also agreed to strengthen cooperation in other areas as well, including police training. They agreed that drug transit and control are important issues, which require joint efforts of the two countries for effective prevention.

11. The two sides stressed that terrorism constitutes one of the gravest threats to international peace and security. They strongly condemned terrorism in all its forms and manifestations, and stressed that there can be no justification, whatsoever, for any acts of terrorism. The Maldives side condemned the recent terrorist attacks in Mumbai and expressed its deep sympathies for the affected people. The two sides emphasised the need for concerted and coordinated action by the international community both at regional and international levels to realise the objective of preventing, combating and eradicating terrorism in all its forms and manifestations.
12. His Excellency President Mohamed Nasheed addressed a meeting of Indian and Maldivian businessmen and industrialists organised jointly by Association of Chambers of Commerce and Industry (ASSOCHAM), the Federation of Indian Chambers of Commerce and Industry (FICCI) and the Confederation of Indian Industry (CII). He presented the economic policy and the privatisation programmes of the Government and invited the Indian entrepreneurs to participate in these programmes.
13. Both sides welcomed the signing in September 2008 of the MOU to set up the India-Maldives Foundation to foster India-Maldives relations through the enhancement of economic, scientific, educational, technical, and cultural cooperation between India and Maldives and the promotion of greater understanding between the peoples of the two countries.
14. The Maldives side conveyed its appreciation to India for the scholarships provided by the latter for short term and long term training as well as scholarships for higher education and professional courses for its nationals in various institutes and universities in India. The Indian side agreed to conduct a professional course for Maldivian diplomats in the Foreign Service Institute in New Delhi in 2009.
15. The Indian side thanked Maldives for its support to various Indian candidatures in international organisations. In particular, India expressed appreciation to the Maldives side for its support to India's candidature for a permanent seat in the expanded Security Council and for its candidature to the non permanent member seat of the UN Security Council for the year 2011-2012. Maldives also thanked

India for its supports for its candidature to the non-permanent seat of U.N Security Council for the year 2019-20. The two sides agree on the need for a comprehensive reform of the international financial and economic architecture and improved global economic governance to ensure that the adverse impact of the ongoing global financial crisis, especially on developing countries, is minimised.

16. Both leaders expressed satisfaction with the outcome of the State Visit and concluded that it had contributed positively to the strengthening of the existing friendly ties between the two countries.
17. The President of Republic of Maldives invited the President of India and the Prime Minister to pay a visit to the Maldives. The invitations were accepted.
18. His Excellency Mr Mohamed Nasheed, President of the Republic of Maldives expressed deep gratitude to President Smt. Pratibha Devisingh Patil and Prime Minister Dr. Manmohan Singh for the kind reception and warm hospitality extended to him and his delegation.

NEPAL

233. Statement by Official Spokesperson on recent developments in Nepal.

New Delhi, February 28, 2008.

We welcome the fact that the Seven Party Alliance Government of Nepal and the United Madhesi Democratic Front have reached an agreement paving the way for elections to the Constituent Assembly as scheduled. It was signed by PM Girija Prasad Koirala and Madhesi leaders in the presence of the leaders of the Seven Party Alliance¹.

It is our hope that all parties would honour and implement this agreement and their previous understandings. It is for the people of Nepal to choose their representatives, their future and the manner in which they wish to be governed. As always, India will continue to support Nepal in every way possible to achieve the goal of a democratic, stable and prosperous Nepal.

¹ On February 28 the Nepal government and the United Democratic Madhesi Front (UDMF) signed an eight-point agreement, ending the 16-day-long Madhesh movement and clearing the way for the April 10 Constituent Assembly (CA) elections. The people of Nepal's Terai were agitating for the formation of a state in the Terai for the people of Madhesh, who they said were discriminated in the past in every manner. The UDMF while withdrawing the Terai strike said it would take part in the Constituent Assembly poll. The agreement said autonomous Madhesh states, along with other autonomous states, will be formed after the CA election. It also recognised all the dead during the Madhesh movement as martyrs and pledges compensation. The agreement also ensured proportional representation for all ethnic and marginalised groups in state organs and entry in the national army. Addressing the agreement signing ceremony, Prime Minister Girija Prasad Koirala urged all to participate in the Constituent Assembly poll to make it a grand success.

234. Extract relevant to Nepal from External Affairs Minister Pranab Mukherjee's statement in the Lok Sabha on recent developments in India's foreign relations.

New Delhi, March 3, 2008.

Nepal is undergoing a critical transition. After two postponements, Constituent Assembly elections are scheduled to be held on April 10, 2008. The elections will offer all Nepalese, including those in the terai, a chance to have a say in their own future. Government is committed to assist in every possible way Nepal's transition to a democratic, stable, peaceful and prosperous State.

On March 19 replying to the Short Duration Discussion in the Rajya Sabha on his above Statement made on March 3, the External Affairs Minister said¹ :

However, Sir, at the end, I would like to clarify one more small point because the impression should not go that we are responsible for causing chaos in Nepal. Most respectfully, I would like to submit that not by intervention, not interference, but with our suggestions, with our advice to the political parties, it has been possible to bring a hardcore militant, believer in violence, organisation in the mainstream of the democratic politics of Nepal. They are participating today in the Constituent Assembly elections. The elections are going to be held under the supervision of the United Nations. The people are going to exercise their rights. They are going to constitute the Constituent Assembly, which will frame their Constitution. I do feel that this is the most important right, a democratic right of any people of any country to have their own Constitution and to have their own Government through the process of elections. All-party alliances have taken place, seven-party alliances, including, the Marxists. They have given up violence. Yes, there may be some problem here, some problem there; there may be some teething problems; but, we have not contributed in creating chaos in Nepal. We have tried to defuse the chaos and tension which was prevailing there by bringing the political parties together, not by -- I am repeating -- intervention or interference, but by our counsel and that is the approach which we are having. Our approach is, we neither believe in exporting our ideologies nor we have any territorial ambition. We are only interested in moving together for peace, prosperity and development and making our own contribution in that process.

1 For full text of the above two Statements of the External Affairs Minister Please see Document Nos.19 and 23.

235. Statement by Official Spokesperson on Constituent Assembly elections in Nepal.

New Delhi, April 10, 2008.

The successful Constituent Assembly elections in Nepal today are a welcome and historic step towards realizing the aspirations of the people of Nepal for a democratic future. This happy outcome is a product of the determination of the people of Nepal, with significant contributions by the political parties and the Election Commission of Nepal.

The Constituent Assembly provides a platform for the people of Nepal to determine the manner of their governance and their future. As always, India will stand by the people of Nepal in the major tasks of democratization and development that lie ahead while building a stable, prosperous and peaceful Nepal¹.

1 In the elections the Maoist emerged as the single largest party. India by extending its welcome sent a signal to the people of Nepal that India was not only satisfied at the peaceful and happy conclusions of the elections but indeed welcomed them. Observers noted that India's policy towards Nepal since the emergence of new forces was not only the strengthening of democracy but also mainstreaming the Maoists. As for democracy, the elections had finally brought into place a structure with greater legitimacy than the outgoing parliament which was elected nine years ago. Media quoted an unnamed official of the MEA to say that India rejected the view that the Maoist victory was the product of 'fear'. "You do not get a 67 per cent turnout with fear. The electorate has spoken clearly." India, he said, saw the elections as "a clear, solid vote for change, and, ultimately, this is also what we want." India perceived the results a "clean break" from the past and this offered India an opportunity to also re-examine the bilateral relationship to see how it could be taken forward, the official was quoted by the media to suggest. That India had played a positive role in promoting the new democratic order was acknowledged by no less a person, than Prachanda himself. The elections would make it easier for India to work with them, since the Maoists were now a "normal, legitimate party" democratically and legitimately swept into power. Denying India was a 'status quoist' power, the official said the "Old Nepal was not working for us either so why should we be attached to it?" On April 15 External Affairs Minister Pranab Mukherjee spoke to Maoist leader Prachanda over the phone and conveyed India's willingness to work with his party towards building a stable Nepal. He assured him of India's support and congratulated him on the victory. The call underlined India's willingness to abide by the democratic verdict and take the relationship forward so that the next important steps towards drawing up a constitution for Nepal could be achieved through consensus in the Constituent Assembly. India has played a key role in ensuring that the political consensus for elections to the Constituent Assembly was not broken and that polls were conducted despite occasions when the process seemed to be falling apart due to inter-party rivalries. Meanwhile on April 20th Maoist chief Prachanda met Indian

236. Inaugural Speech by Chief Minister of Bihar Nitish Kumar at a Seminar¹ on Emerging Trends in India - Nepal Relations.

Patna, April 26, 2008.

The Chairperson of the inaugural session of the seminar on Emerging Trends in India-Nepal Relations Mr. Deb Mukherjee, Hon'ble Minister of State for Commerce and Power Mr. Jairam Ramesh, Hon'ble Minister of Nepal Government, Smt. Hisila Yami, M.P., Mr. N.K. Singh, Special Envoy at the Prime Minister Mr. Shyam Saran and delegates from Nepal and India.

Let me first of all accord you all a very warm welcome to Patna and to this Seminar on 'Emerging Trends in India Nepal Relations'. I feel it a privilege to be amidst such distinguished and eminent persons as present here today.

2. To our friends from Nepal, I would like to accord a very warm and special welcome. I would also like to congratulate and compliment them, and to the friendly people of Nepal, on reaching an important landmark in the journey of their country to peace and prosperity, in the form of the Constituent Assembly elections and consolidating multiparty democracy. This is indeed a turning point in Nepal's history.
3. Nepal enters today a new era of empowering its people for growth and prosperity, of building a new nation on the principles of inclusive democracy. It provides, to my mind, a perfect backdrop for us to discuss the state of Nepal's relations with India, where we stand today, and where we shall arrive tomorrow.
4. India-Nepal relations flow from the logic of geography, the streams of history, the reality of economic ties and the sheer force of strong

Ambassador to Nepal Shiv Shanker Mukherjee apparently to discuss a "graceful exit" for King Gyanendra. Media reports said that during the meeting, Mr. Mukherjee assured India's continued support to Nepal after the Maoists stunning victory in the April 10 polls. A Kathmandu based paper *Kantipur* reported that Mr. Mukherjee and Mr. Prachanda discussed the "King's graceful exit for the implementation of republic declaration through the first sitting of the Constituent Assembly." Media quoted CPN-Maoist sources to say that Mr. Prachanda discussed with the Ambassador the emerging political situation in Nepal, including matters relating to government formation. It was their second meeting after the historic polls and the first since the Maoist leader and External Affairs Minister Pranab Mukherjee spoke over phone.

1. The Seminar was organised by the Public Diplomacy Division of the Ministry of External Affairs.

cultural links and people to people relations. Innumerable threads of myths and legends, cultures and customs, languages and literatures, opportunities and challenges, triumphs and tribulations, aspirations and goals- in short, threads weaving the entire tapestry of life- have tied our peoples together since time immemorial. The people of Bihar, in particular, share these close bonds even more strongly, given nearly 700 kms. of open, porous border with Nepal. These bonds have grown from strength to strength and acquired ever new dimensions in the past few decades, especially after India gained its independence. We are all aware of the contribution of Nepali leaders to India's National Movement and the support of India and its leaders to the democratic aspirations of the people of Nepal.

5. The people-centred interconnectedness has rendered Nepal not a land-locked country, but one which is land-linked to India through an open border. India, one of the world's largest and fastest growing economies, is Nepal's largest trade partner, source of foreign investments and tourist arrivals. As a close friend and neighbour, we remain committed to supporting the people of Nepal in their pursuit of achieving economic recovery, development and growth. In this we will be guided by Nepal's interests and priorities.
6. An important element of our support to Nepal is to make trade more efficient by developing trade- related infrastructure. Creation of Integrated Check Posts at the four border checkpoints on the Indo-Nepal border is an endeavour in this direction. In Bihar also, at Raxaul and Jogbani these check posts are coming up. It envisages world-class infrastructure at these points for smooth flow of people and goods across our border.
7. In addition, India is undertaking projects for development of over 1500 km. of road network that would provide easy access to the East-West. Highway from the border regions. Similarly, a project presently on anvil for cross-border rail links at five locations at the Indo-Nepal border will significantly boost cross border linkage and will be of immense value in promoting trade and commerce between the two countries.
8. An important area of India-Nepal cooperation is in the field of water resources, which offers multitude of benefits to the people of two countries. Two countries share immense water resources, which if properly harnessed could wipe out poverty, boost economic growth

and employment and even create a more egalitarian society. Indo-Nepal cooperation in the field of water resources would help create irrigation facilities, moderate floods, generate hydro- electricity, and provide all important navigation facilities to land locked Nepal. Indo-Nepal cooperation is of paramount importance for the optimum utilization of water and overall development of the region.

9. We see that there is some progress in jointly working at the government- level in extension of embankments on some of the rivers flowing from Nepal into India. Sapta kosi High Dam, Kamla Reservoir Project, and Bagmati Reservoir Project are three important Projects which need mutual cooperation.
10. For Water Resources Development Nepal needs India's investments, expertise, hydro-electric market. Nepal needs to increase its income and water is its prime resource. Long term cooperation between India and Nepal is highly desirable and has potential to change the economic profile of the region. Indo-Nepal agreements on Kosi and Gandak projects provide the precedence for future endeavours and joint ventures by the two countries.
11. There has been some forward movement in regard to the private sector involvement from India in the development of hydropower sector in Nepal, which is welcome. We are ready to further encourage Indian private and public sector institutions to be Nepal's partners in the process, firstly for Nepal's own domestic consumption and the huge surplus likely to be available, for revenue' generating exports to India, which can effectively address the problem of its trade deficit.
12. I would like to reiterate that the Construction of High dams to harness the irrigation and hydro electric potential of rivers emanating from Nepal has multiplier and complimentary mutuality of benefits. From Nepal's point of view- clear advantages are - first, credible management of the ecosystem and environmental management; second, harnessing the huge irrigation potential for improving agricultural potential and productivity; third, abundant availability of assured hydro electric energy at affordable prices with minimum maintenance will improve the competitiveness to attract investment in industry and also value added agriculture. The assured energy availability will give a momentum to the services sector, as well. The sale of vast quantity of surplus hydro electric energy to us after saturating its own energy needs will create huge revenue gains for Nepal.

13. Just as Oil producing countries have become rich by selling their 'black gold', Nepal too can experience a quick rise in its GDP and per capita income through sale of surplus energy. A long term contract embedded in a purchase agreement will make the project eminently suitable for financing and meeting commercial viability.
14. From our point of view, it will dramatically improve our agriculture and industry. The annual destruction of life and properties due to floods will be reversed. Surplus energy will contribute to all round development of industry, agriculture and services. There can be no better example of a win-win situation for all; a shining example of how cooperation between neighboring countries can transform lives, raise income and usher a better future.
15. India is also a major source for tourist arrivals to Nepal, but the share is gradually declining despite Indians travelling abroad in ever-increasing numbers. Nepal would perhaps need to be more creative to lure the growing Indian outbound tourists.
16. Another area, equally central to India-Nepal relations is the development cooperation between the two countries. Since the emergence of our two countries as new nations, India has contributed significantly towards the development of infrastructure and human resources in Nepal. India's economic assistance to Nepal has grown manifold in the past two-three years, particularly since the restoration of multiparty democracy in Nepal. Our development cooperation engagement with Nepal has emerged as a cornerstone of India-Nepal relations. The importance of this cooperation grows even more today as Nepal enters a historic phase of new nation-building based on inclusive democracy, peace and stability.
17. A strong, stable and peaceful Nepal is in India's interest. We will therefore, support everything that contributes to achieve this. After the signing of the Comprehensive Peace Agreement (CPA) in November 2006, India redoubled its commitment to assist Nepal's transition to peace, democracy and prosperity. With the dawn of a new era in Nepal's history, India remains steadfast in its commitment to assist Nepal's economic rehabilitation and political stabilization. We proceed from the conviction that while the process of political stabilization through the Constituent Assembly is of overreaching importance for Nepal, it is equally critical to ensure that economic deliverables, particularly in the areas of education, health and infrastructure; India's assistance programme in Nepal is guided by this vision.

18. India and Nepal share a destiny, in which our two peoples are tied together in addressing their developmental challenges, in seeking the realization of their aspirations for peace and prosperity, which, as we know are indivisible. It is to working together with the people and the Government of Nepal for continuing this legacy and discharging this responsibility for our future generations that we in India look forward to.
19. I would like to conclude by stressing that this interaction is an opportunity for us to discuss how best we could progress towards a new future by shaping the India-Nepal relationship in the best interests of those who are its prime movers- the people of our two countries. The partnership between India and Nepal will both gain from our complementarities and our cultural and civilisational affinities. We certainly hope and believe that the enduring friendship between India and Nepal, resting on the foundation of the interconnected lives of our peoples, will contribute to the prosperity of both the countries. We see in our vision a day, hopefully not too far in the future, when the rest of the world will take lessons in friendship and trust from our relationship.
20. I would like to thank the Ministry of External Affairs for this initiative, and also the participants for honouring and enriching this Seminar with their presence. I do hope that the eminent experts gathered here will have a most stimulating and useful deliberations over the next two days. The consensus which will emerge could be new pillars in reinforcing our historical relationship in the 21st century. I earnestly hope that this constructive dialogue, which in the new context has commenced in Bihar will be followed up at multiple levels. At the end, I wish all our guests a pleasant and memorable stay in Patna. With these words, I inaugurate this seminar.

Thank you.

237. Keynote address by Special Envoy of Prime Minister Shyam Saran on Nepal's Political Transformation and Future of India-Nepal Relations at the India - Nepal Seminar.

Patna, April 26, 2008.

Mr. Chairman, distinguished guests from both India and Nepal, friends, ladies and gentlemen. It is honour for me to be invited to give the keynote address at this political segment of the Indo-Nepal Seminar¹. It is appropriate that Patna is the venue for this seminar, since the region of Bihar has long-standing historical, cultural, religious, ethnic and kinship ties with Nepal. Even in contemporary times, several leaders of Nepal's democratic movement made Bihar their home and several generations of Nepali friends have graduated from Bihar's educational institutions. Thus, there is an easy familiarity which the people of Bihar enjoy with the people of Nepal and being from Bihar myself, I was deeply conscious of this valuable asset when I served as India's Ambassador to Nepal a few years back. It is against this backdrop that we gather here today to look at the dramatic political events that have recently taken place in Nepal and consider how we can take forward the already close and friendly relations between our two countries in the context of Nepal's political transformation.

Let me begin by saying that the people of Nepal deserve to be congratulated for having carried out a remarkably successful electoral exercise to re-establish democracy in their country. The political parties, irrespective of gains and losses they registered in the recent elections, also deserve to be commended. Against all odds and I must say, against the cynical expectations of most observers, they maintained the Seven-Party alliance as a united political and democratic force. They also worked together to keep the peace process on track - this is no mean achievement. This record encourages us to believe that in confronting the many ensuing challenges of political reform and restructuring, economic reconstructions and economic reform and in consolidating a truly inclusive and responsive democracy, Nepal's newly elected political leadership will not be found wanting. India is proud to have been a modest part of this historic transformation in a friendly neighbouring country and stands ready to assist in whatever manner it is called upon to assist the continuing process of political and economic transformation in Nepal.

¹ The Seminar was organized by the Public Diplomacy Division of the Ministry of External Affairs as part of its Outreach programme.

Several people in India have asked whether the government was not caught by surprise by the election results and whether these do not constitute a setback for India's Nepal policy. I am surprised by these comments, not because we were not surprised at the results but because people seem to think that our surprise was an unpleasant one. There seems to be an assumption that the Indian Government had a preferred electoral outcome and put its bets, much like a punter, on different horses. Let me make it clear. Throughout the peace process in Nepal, India has not played favourites with this or that political party. Our stand has been that it is for the people of Nepal to deliver, through free and fair elections, their verdict on who should govern them and in what manner. Our approach has been to engage with all key political actors in Nepal, with whom we have managed to establish, in my opinion, a relationship of trust and confidence. We are, therefore, comfortable with whatever, political permutation or combination which emerges from the exercise of democratic rights by the people of Nepal. This approach gives us the confidence that we can do business with the new political dispensation in Nepal.

It is my view that Nepal is in the midst of a major political transformation because of certain underlying factors. The country is witnessing a generational transition. If India has more than 50% of its population under 25, Nepal has an even higher percentage. This new, vibrant and young Nepal has a mindset very different from those representing an earlier generation. Their outlook is different, their aspirations are different. They are also exposed to what is happening in the world around them. After all, many of them have migrated in search of jobs and livelihood to neighbouring India and to many other countries beyond. They come back to Nepal with a very different perspective. No political structure will be enduring unless it is in tune with this generational change.

The new Nepal is also a very diverse Nepal. Even the more limited democracy of the 90s opening the space for the reassertion of ethnic identities and cultural particularities and a growing demand for a more inclusive and egalitarian political structure. These trends became much stronger as part of the Jan Andolan, in particular, with respect to the Madhesi and other ethnic groups in the Terai. The Nepal of the future will be a more diverse, more complex but also a more culturally enriching and enriched society. A plural democracy like India has learnt to celebrate its diversity and counts this as one of the pillars of its democracy. It is my hope that Nepal will do so, too, because only a more inclusive, a more accommodative approach is required for a stable and enduring democracy.

The economic challenge will be a daunting one. But I for one, have always believed that Nepal has the prospect for becoming the richest nation in South Asia. It has both tangible and intangible assets. Its hydro-power resources are estimated at over 85,000 MW of which only a miniscale percentage has been utilized. Even a modest utilization of these resources and the sale of power to energy-hungry India could quickly transform Nepal's economic prospects.

There are other assets. Nepal, with its natural beauty and pleasant climatic conditions can be transformed into a Health Centre as well as an Education Centre for our entire region. This has the added advantage of also helping meet the educational and health requirements of a growing Nepal's population.

Tourism, of course, is already Nepal's forte. However, the entire mid-hills region of the country could be home to several potential Simlas, Mussoories and Ranikhets, catering to several thousand tourists from the hot plains of India. All you need is good, cross border highways and why not, rail connections.

I hope that finally Nepal and its people will look upon India as an opportunity - you are not India-locked as you think. You are India-open - open to an India that is economically dynamic, a vast and growing market and a source of skills and technology that is not always so easy to access. Yet, you have an open border with India. You have free access to our market. Please make use of it, and we could establish a very mutually rewarding economic partnership between our two countries.

Let me conclude by welcoming our Nepali guests. Many are familiar faces. Many of you are close friends. I take this opportunity to congratulate you on your remarkable success and tell you that the transformation of Nepal is as much a reason for celebration in India as it is in Nepal.

Thank you.

238. Extract from the Press Conference¹ of Foreign Secretary Shivshankar Menon.

New Delhi, April 29, 2008.

Question: About Nepal, what is your comment about Communists' plan to abolish the 1950 treaty?

Foreign Secretary: We have said consistently for many years now that we would be quite happy to discuss with Nepal new arrangements to govern the relationship. We have held discussions with Nepal in the past with previous Governments. In 1994, I remember participating in discussions with Nepal on how to either modernize or upgrade or replace the 1950 treaty. We are quite happy to do that exercise. We like the fact that everybody who has spoken about it recently has spoken about replacing it or changing it in order to bring the relationship to a new and higher level. I think that is always a good ambition, and we will be happy to work with Nepal to that end.

¹ Foreign Secretary was briefing the media on the Iranian President's visit, when this question was asked. For full text of the Press Conference please see Document No.433.

239. Briefing points by Official Spokesperson on letters sent by President and Vice President to President and Vice President of Nepal on their election.

New Delhi, July 23, 2008.

- In a letter to H.E. Dr. Ram Baran Yadav, President of the Republic of Nepal, Hon'ble President Smt. Pratibha Devisingh Patil extended warm felicitations on his election as the first President of Nepal.
- The President said that the election represented a new chapter in Nepal's historic democratic transition and expressed confidence that Nepal would progress further on the path of peace, democracy and development. India attaches the highest priority to further developing closed and multi-faceted relationship with Nepal and she looked forward to working to further strengthening the understanding and cooperation between the two countries.
- In his letter to H.E. Mr. Parmanand Jha, Vice President of the Republic of Nepal, Hon'ble Vice President Shri M. Hamid Ansari conveyed warm felicitations on his historic elections. He expressed India's continued support and assistance in the transition to a democratic, inclusive, stable and prosperous Nepal and looked forward to working closely with his counterpart in further strengthening the bonds of friendship between the two countries.

240. Media Briefing by Foreign Secretary Shivshankar Menon on the official visit of Prime Minister of Nepal.

New Delhi, September 16, 2008.

Official Spokesperson (Shri Vishnu Prakash): A very good evening to you and welcome to Foreign Secretary's press conference. My name is Vishnu Prakash. I have just taken over as Joint Secretary (XP).

As you know, the Prime Minister of Nepal is currently visiting India. Foreign Secretary would brief you about the visit and then he would be happy to answer a few questions. Let me also introduce - you know them very well - Ambassador Rakesh Sood, our Ambassador in Kathmandu; and Joint Secretary (North) Preeti Saran.

Foreign Secretary (Shri Shivshankar Menon): Good evening ladies and gentlemen, I thought we would brief you about the visit of the Prime Minister of Nepal, Prime Minister Dahal, also known as Prachanda, who is in India. He arrived on Sunday evening, was in Delhi yesterday and today, will be going to Bangalore tomorrow before he returns to Nepal on the 18th of September.

While in Delhi he has had talks with the Prime Minister, who also gave him a banquet yesterday evening, and has met with the entire leadership. He called on the President, Vice-President, met with the Chairperson of UPA, Leader of the Opposition. The Ministry of External Affairs called on him, as did the Minister for Water Resources. He has had a full range of meetings also with several segments of Indian political opinion, leaders of various political parties. I think this is a reflection of the sort of close and unique relationship that we enjoy between India and Nepal.

The visit was particularly important because it is really the first visit of the elected Prime Minister of the Republic of Nepal. As you know, Nepal has gone through historic changes in the recent past and, therefore, this was an opportunity not only to discuss our bilateral relations and how we would take them forward in the new situation but also for Nepal to tell us how they see the future and to describe the changes that they see at home.

Naturally, in the talks with the Indian leadership they reviewed the new situation in Nepal and told us about their plans. But I think this is really for the Nepalese side to brief you about. I believe you will have an opportunity later this evening to ask about that.

On the bilateral relationship, as I said, we have a unique and a very close relationship with Nepal. We have an open boundary; we have a relationship where there are large numbers of Nepalese living and working in India. In most respects I think Nepalese enjoy national treatment, the same treatment that Indians do in Nepal. Because of, I think, Nepal's preoccupation with developments at home in the last few years, we thought this was - now that they have gone through the process of election, they have elected a Constituent Assembly; there is an elected government in place - a useful opportunity to look forward and to see where we take our relationship.

Both sides agreed that we would reactivate the bilateral mechanisms that we have for our relationship. So, we will now very rapidly, in the next month or so, be reactivating these mechanisms. Among these will be the Foreign Secretaries' talks, the Home Secretaries will meet, Water Resources Secretaries as well, and the Commerce Secretaries will also be meeting very soon. We will be covering various aspects of the relationship.

At the Foreign Secretaries' level we normally exchange views on the entire gamut of the relationship. The Nepalese side has been keen for many years that we look at the 1950 Treaty and update it. We have said, again for many years, that we are ready to do so, to review it and to update the Treaty. We hope to do that between the Foreign Secretaries.

In Water Resources, as you know, there are two aspects to this. One, of course, is the immediate problem that we both face because of the flooding in the Kosi. Flood control is an issue. Prime Minister extended his sympathy to the Nepalese side for the damage on their side and also promised Rs.20 crore as immediate flood relief to the Nepalese side for use to help the victims of the recent floods.

We also have larger issues of hydel power which we have been discussing for several years. We hope to rationalize the existing mechanisms and to hasten progress on the development of hydel power projects in Nepal. As you know, Nepal has a potential of something like 84000 MW of electricity of hydel power. There are several large projects which we have been discussing, which are in various stages of readiness. We hope to take those forward.

The Commerce Secretaries will also be meeting very soon to look at various trade, transit related issues, whether it is existing impediments to trade or whether it is ways of increasing the trade. Both sides I think feel the need to do so since it has been quite sometime since we have sat and done this.

As I said, many of these mechanisms are existing mechanisms, have not met for some time because, I think, of other preoccupations on their side.

There were also considerable discussions of the kind of economic support that India could give to the democratic transition and the peace process within Nepal, and this will continue. This is a commitment that we have maintained consistently which the Nepalese side was happy to recognize saying that they would not have come to this stage if it were not for the support that they had enjoyed. We indicated that we intend to continue to support the democratic transition and the peace process within Nepal which, as far as we can see, is really an unprecedented process when you see an insurgent movement moving into the political mainstream in a democratic fashion and being integrated into a democratic polity, at the same time as the country itself is developing an entirely new polity. It is something that we have supported, will continue to support in the years to come.

The Nepalese side also asked for a continuation of the kinds of commodity and other supports that we have offered in the past, whether it is POL supplies or wheat, rice, sugar; and we will be doing that. We will continue to help especially before the festive season. I think that is important.

All in all, it was a very successful and constructive visit. It is the first visit really in a long time where we sat down and concentrated on the bilateral relationship and how we could take it forward; and we are very satisfied with the results of the visit.

We have a lot of follow-up to do after this and we are looking forward to continuing to do that work with the Government of Nepal in the years to come.

I will be happy to answer questions on the visit.

Question: Now that India has agreed to review the Treaty, what areas is India exactly looking at in terms of change? Is it security or other issues?

Foreign Secretary: I think we have actually had discussions with Nepal in the past about the review of the Treaty. We did this in the early 90s, in mid 90s; we have discussed this at various stages. It has always been our position that the Treaty really reflects the nature of our relationship. Both Nepal and India have changed; so has the nature of the relationship over time so that it is necessary for us to look at the Treaty and see how we can update it. Our general approach is to see how we can actually build on and improve upon what we have and to see how much more we can do. But I cannot predict today where we will come

to at the end of a review where both of us sit and look at this and see. So, we will have to see what we agree; what we find necessary to change, Nepalese side and us. So, to give you a precise 'yes or no' answer to your question is very difficult right now.

Question: How would you characterize Indo-Nepal relations in the wake of Nepalese Prime Minister's recent visit to China? Nepal has been known to be playing (the) China card for decades. Secondly, have we raised the issue of raising the embankment of Kosi river in Nepal at our cost? If so, what is their response?

Foreign Secretary: I think India-Nepal relations, as I said before, are unique and special. They are so because of history, geography, culture, you name it. The nature of this relationship is unique because there is no other relationship like this. It is not a relationship which depends on or is determined by any third country or any external factor. This is intrinsic to the nature of where we are and what we are, both of us as countries. Quite frankly, whatever Nepal's relationships with other countries is Nepal's business. That is between Nepal and the other countries to sort out. Our relationship is certainly in our interest and has been in Nepal's interest also. That is what the Nepalese leaders have been telling us. For us it is hard to think of a prosperous South Asia, of our own prosperity and security, without thinking of the prosperity and security of our neighbours. I think we have discussed this before about how a peaceful periphery is in India's interest. I think that is the approach that really guides this relationship.

You asked about the Kosi embankment. We ourselves are still studying the issue technically. I believe there is work going on. Nepal is ready to cooperate with us in that effort to try and repair the embankment, get the river back in its bed. That is something that we will do together. But there will be technical discussions and once we have gone through the technical process we will then do this together. But both sides will work together to try and solve this problem.

Question: India had also proposed construction of a dam on Kosi river....

Foreign Secretary: That is a separate issue, the issue of the Kosi High dam. We hope that when we hold these meetings with this new mechanism for water resources discussions that is one of the issues that we will take up very quickly.

Question: They have not been willing?

Foreign Secretary: I think that question you should address to them.

Question: Just a clarification on Indo-Nepal Treaty. Are you insisting on only updating the Treaty or is it a complete, basic change of the structure of the Treaty?

Foreign Secretary: You want a thesaurus? Updating is a pretty big word. I mean it can include various things. I do not think we are closing options here. By saying updating what we are saying is we will both sit; review the Treaty; see how to bring it up to date to reflect today's reality and what we want to do in the future. And then what we choose to do thereafter frankly is up to us, between India and Nepal. So, by saying updating I am not trying to limit our options.

Question: Have they brought a draft treaty along with them?

Foreign Secretary: No. Not that I know of. I mean I have not seen it.

Question: A couple of quick questions, Sir. Whether the Prime Minister Dahal extended an invitation to Prime Minister Singh to visit Nepal? We have had Prime Minister Koirala visit India in 2006 and we have not had a reciprocal visit and we have had the Nepalese Foreign Minister also here. So, are there any visits planned from the Indian side? The second question is about the situation in Terai which has been seeing increasing lawlessness and the Nepali side has often complained that these Madhesi armed groups were operating from Bihar. Whether the Nepalese side raised this and whether there was any discussion? Whether there was any discussion on the issue of integration which is the big issue left in the peace process? The Indian Army has enjoyed fraternal links with the Nepal Army. Whether there was any discussion on the issue of integration?

Foreign Secretary: Yes, Prime Minister Dahal invited Prime Minister Manmohan Singh to visit Nepal; he accepted the invitation with pleasure. We will have to set dates through diplomatic channels for the visit. One of the reasons why we are holding the Home Secretaries' talks so soon is because we want to discuss issues such as security in that belt and criminal activity. Many of these issues affect both of us on both sides of the boundary. We have a common interest actually in making sure that that area is peaceful. So, that is one of the reasons why we will be holding the Home Secretaries' talks very soon and that is a subject that we will discuss. Army integration and so on was mentioned by the Nepalese side when they described their plans for the future and how they will proceed in their internal affairs.

Question: Hydropower generation has been a relatively untapped area in India-Nepal relations and I believe there are some issues that are holding it up. Are we looking at new projects? And what are these issues really?

Foreign Secretary: I think this was a visit where we were picking up the threads with a new government who have just come to power; where we are trying to bring the relationship back up to speed because for a long time I think on both sides there have been other preoccupations and other concerns and doing the normal business of the relationship. And that is why I think we have decided to have this new mechanism on water resources which will discuss hydropower; will discuss flood control; will discuss all these issues. Whether there is inundation issue, embankments, we will discuss all these issues and try and find a way forward. There are several projects which are on the table, have been discussed between the two countries. There are agreements that have been signed for some projects, for Pancheshwar, for instance. We will now see how we can move forward towards implementing them. Both the Nepalese side and our side expressed a very strong interest in moving very rapidly towards this. I believe that the Government of Nepal has announced a target of 10000 MW of hydropower by 2020 - they are on their own - and that this will largely be through very large dams on these rivers in Nepal and which would also involve the export of power to India. But I do not want to get into the details because this is not the occasion where we would have worked out all the details. That is what the mechanism is for.

Question: This is addressed mainly to the Ambassador. Do you think there is security for Indian investors in Nepal? Secondly, when Prime Minister Prachanda went to China, many commentators in Nepalese papers had written that China might invest in a big way in Nepal and then manufacture goods there for Indian market.

Foreign Secretary: He is the Ambassador of India, not the Ambassador of China, not the Ambassador of Nepal...

Question: I said that. I am asking as to what is the security for Indian investor? Do you find while in Nepal the Chinese and Indian businessmen will have competition in that market?

Ambassador of India to Nepal (Shri Rakesh Sood): As you know, yesterday Prime Minister Prachanda addressed an event which was hosted by CII, FICCI and ASSOCHAM. In addition, the Indian investors who are currently present in Nepal had a separate meeting with him to convey their

concerns on some of the issues, the problems that they are facing. That was a separate meeting. In his meeting organized by CII, FICCI he spoke at length to address some of the concerns that were raised by CII and FICCI and other business representatives. In the bilateral meetings certainly the issue of providing a conducive environment in which additional Indian investment could be attracted to Nepal was highlighted and emphasized in the official talks when the External Affairs Minister called on Prime Minister Prachanda and also in the talks between the two Prime Ministers themselves. So, it has been registered, he is sensitive to it, the Indian business community has taken it up, the Indian investors there have taken it up; and in his interaction with CII, FICCI also he has responded to it.

Question: In an interview to IBN7, Mr. Prachanda said that he would be willing to have some sort of a dialogue with the Maoists and Naxalites in India to engage them in the political mainstream. Would the Government of India like to engage him actively in any such negotiation? Is there a proposal? Also, he said that he would not like to propose a unilateral draft revision for the Indo-Nepal Treaty but that there should be a special task force or some sort of a review committee. Has any such proposal been made on the table?

Foreign Secretary: I think we deal with our own citizens as equals just as they deal with their own citizens. On the Treaty, the idea is to have a high-level committee headed by the Foreign Secretaries which will look into how we can update it, how we can revise it, review it.

Question: What did you say when you answered the question about the army integration?

Foreign Secretary: I said that they briefed us about their plans. As part of their description of their internal affairs, they told us what they plan to do.

Question: Mr. Menon, apart from the talk about the 1950 Treaty which they asked for review, was there any reference to Mahakali Treaty also because there is a demand for that review also?

Foreign Secretary: Not directly. But when we review cooperation in water resources, in the hydel projects, we will then see how we will deal with that issue. There was no direct mention saying this Treaty needs to be changed in this manner about the Mahakali Treaty.

Question: When the Kosi broke its embankments a few weeks ago the Indian Embassy in Nepal had issued a Press Release which said that Indian

engineers were not allowed to go to the site and carry out their work. What is the latest on that? Has anything happened on that? On the flooding itself, was the Chief Minister of Bihar, did you have a conversation where all parties had their points of view? Is there anything being done in immediate term on this issue?

Foreign Secretary: In terms of access, after that Press Release was issued there was access granted and there was work done together on the Nepalese side. Indian engineers did come in and do their work.

About the integrated approach, we do have an integrated approach to this. Ultimately, this is a problem that affects them, us, all of us in India. It is not a question of the Government of Bihar or the Central Government, or one Department or another Department. This is a question that affects Indians. So, I do not think it is a question of do you have any integrated approach. When we speak on these issues, we speak as India. And we spoke to the Nepalese side; the Nepalese side has the same interest as us in trying to minimize not just the immediate consequences for human beings in terms of relief, rehabilitation but also in terms of finding a long-term solution to this problem, which we will have to work out together, and we will do that. That is why it is so important that we both expressed this commitment and said we want to do so in this new mechanism.

Thank you.

241. Joint Press Statement issued on the official visit of Nepalese Prime Minister Pushpa Kamal Dahal 'Prachanda'.

New Delhi, September 17, 2008.

The Rt. Hon'ble Pushpa Kamal Dahal 'Prachanda', Prime Minister of Nepal, is on an official visit to India from September 14-18, 2008 at the invitation of H.E. Dr. Manmohan Singh, Prime Minister of India. The Prime Minister of Nepal is accompanied by Hon'ble Mr. Upendra Yadav, Minister for Foreign Affairs, Hon'ble Mr. Krishna Bahadur Mahara, Minister for Information and Communication, Hon'ble Mr. Bishnu Prasad Poudel, Minister for Water Resources and Hon'ble Mr. Rajendra Mahato, Minister for Commerce and Supplies. The delegation includes four members of the Constituent Assembly, senior officials of the Government of Nepal, a business delegation and a delegation of media representatives.

2. During his visit, the Prime Minister of Nepal called on H.E. Smt. Pratibha Devisingh Patil, the President of India, and on H.E. Shri Mohammad Hamid Ansari, the Vice President of India. The Prime Minister of Nepal had a meeting with the Prime Minister of India, which was followed by delegation level talks, led by the two Prime Ministers, on issues of mutual interest and concern. The Prime Minister of India hosted a banquet in honour of the Prime Minister of Nepal. Shri Pranab Mukherjee, Minister of External Affairs, Prof. Saif-u-Din-Soz, Minister of Water Resources and Shri L.K. Advani, Leader of Opposition in the Lok Sabha called on the Prime Minister of Nepal. The Prime Minister of Nepal had a meeting with Smt. Sonia Gandhi, Chairperson of the United Progressive Alliance (UPA) and the President of Indian National Congress. The Prime Minister of Nepal also visited Rajghat and paid homage to the memory of Mahatma Gandhi. An interaction with the Indian business community was jointly hosted by ASSOCHAM, CII and FICCI in honour of the visiting dignitary. During his stay in India, the Prime Minister is visiting Bangalore from September 17-18, 2008.
3. The Prime Minister of India extended a warm welcome to the Prime Minister of Nepal as the first Prime Minister of Federal Democratic Republic of Nepal. The two Prime Ministers expressed satisfaction at the age-old close, cordial and extensive relationships existing

between Nepal and India. Both Prime Ministers expressed their support and cooperation to further consolidate the relationship in the days ahead.

4. The talks were held in an atmosphere of utmost cordiality and warmth. They shared their views and assessment of the situation. The two Prime Ministers acclaimed the importance of peaceful, political, democratic transformation of historic significance in Nepal.
5. The Prime Minister of Nepal appreciated the positive support extended by the people and Government of India throughout the peaceful political democratic transformation in the country.
6. The Government of India expressed full support to the peaceful, political, democratic transition in Nepal.
7. Both leaders recognized the historic changes that have taken place in Nepal with the elections to the Constituent Assembly and the declaration of the Federal Democratic Republic of Nepal according to the wishes of the people of Nepal.
8. The Prime Minister of Nepal stressed that following the Constituent Assembly elections, bringing the peace process to a logical conclusion, writing a new Constitution and accelerating the pace of economic development are the main priorities of the Government of Nepal in the days ahead.
9. The two sides felt the need to inject new dynamism into the relations between the two countries for a forward looking change in tune with the realities of the time as well as the wishes and aspirations of the people of both the countries.
10. Both sides agreed to reactivate the existing bilateral mechanisms in the evolving context.
11. Both sides noted that the multi-faceted and deep-rooted relationships between the two countries needed further consolidation and expansion in a forward-looking manner to better reflect the current realities. It was in this broader context that the two Prime Ministers agreed to review, adjust and update the 1950 Treaty of Peace and Friendship and other agreements, while giving due recognition to the special features of the bilateral relationship. A High-Level Committee at the level of Foreign Secretaries will be set up for this purpose.

12. The Nepalese side informed that Government of Nepal will take further necessary measures for the promotion of investor friendly, enabling business environment to encourage Indian public and private sector investments in Nepal.
13. Both sides agreed to enhance cooperation in handling cross-border crime and security concerns. Home Secretaries will meet soon to implement this decision.
14. Government of India will continue to assist the Government and people of Nepal in its peaceful, democratic transition; its economic development and reconstruction. The areas of assistance would include infrastructure, human resource development, health and education.
15. Both sides expressed concern over the large-scale damage caused by the breach of embankment by the river in the Kosi barrage area and decided to launch relief and rehabilitation measures for the victims and the reconstruction of the damaged infrastructure, and other measures as per the agreements, immediately, and take up preventive measures to avoid the recurrence of such events in the long term. They decided to take up preventive measures for the Gandak and other barrages under existing bilateral arrangements. Likewise, the two sides also discussed the problem of inundation in the border areas between Nepal and India and agreed to take up necessary work for its effective prevention on the basis of bilateral consultation.
16. Government of India will provide Rs. 20 crores as immediate flood relief to the people in Nepal. Government of India will also rebuild the segments of the East-West Highway, damaged in the recent Kosi floods.
17. Both sides agreed that Government of India will set up a camp office in Biratnagar for facilitating movement of Nepali vehicular traffic through Bihar for improved access to other parts of Nepal till the Highway is repaired.
18. A three-tier mechanism at the level of Ministerial, Secretary and technical levels will be established to rationalize and raise the efficacy of the existing bilateral mechanisms in order to push forward discussions on the development of water resources in a

comprehensive manner, including hydro-power generation, irrigation, flood control and other water related cooperation. The Secretaries will meet in two weeks.

19. The two Prime Ministers directed the Inter-Governmental Committee (IGC) at the level of Commerce Secretaries to meet in one month to initiate a comprehensive review of the existing trade and transit arrangements with a view to promoting industrialization in Nepal, expanding complementarities of bilateral trade on a sustainable basis and removing the barriers to trade.
20. Both sides agreed to further enhance the pace of economic development between the two countries by extending support for the preparation and execution of mega projects, including infrastructure development such as road, rail and hydel-power projects. As a gesture of goodwill of the Government and people of India, Government of India agreed to implement the Naumure Hydro-electric Project on Rapti river.
21. In view of the shortages felt in Nepal for the essential commodities, Government of India will remove bans on the export of rice, wheat, maize, sugar and sucrose for quantities agreed with Nepal. Government of India will also provide a credit of up to Rs. 150 crores to Government of Nepal for the next three months to ensure uninterrupted POL supplies to Nepal.
22. The Prime Minister of Nepal extended an invitation to the Prime Minister of India to pay an official visit to Nepal at an early date. The Prime Minister of India accepted it with pleasure. The date of the visit will be decided through the diplomatic channel.

242. Keynote address by External Affairs Minister Pranab Mukherjee at a Seminar on 'India and Nepal: Partners for Democracy and Development'.

Varanasi, September 27, 2008.

Mr. Chairman,

Hon'ble Shri Dev Gurung, Minister of Law, Justice and Constituent Assembly of Nepal,

Hon'ble Shri Jay Prakash Prasad Gupta, Minister for Agriculture and Cooperative,

Excellencies,

Distinguished participants,

Ladies and Gentlemen,

Let me first of all warmly welcome you all, especially our friends from Nepal. Exactly five months ago, our Ministry of External Affairs had organised a seminar on 'Emerging Trends in India-Nepal Relations' in Patna. Much as I had wished to be present in that important interaction between senior leaders and experts of the two countries, due to other exigencies I could not. It is, therefore, a matter of great happiness for me to be amidst you all today at the inauguration of this Seminar, which dwells on the partnership between India and Nepal for democracy and development.

2. Today we meet here at another historic city on the banks of the sacred Ganges - Varanasi, which has cradled relations between the peoples of India and Nepal through centuries, and indeed millennia. This ancient, heritage city is the centre for learning, spirituality and knowledge since times immemorial. I understand yesterday Shri Kamal Mani Dixit made a scintillating presentation on the role of this city in nurturing the multi-dimensional ties between India and Nepal linking the land of Pashupatinath and Lumbini to the city of Vishwanath and Buddha. The presence here today of representatives of a thriving Nepali community and of experts from the Banaras Hindu University's Centre for Nepal Studies is a glowing tribute to the central place Varanasi continues to occupy in India-Nepal relations.

3. Our relationship with Nepal is unique and special. Our centuries old social-cultural, historical, geographic linkages and extensive people-to-people contacts permeate all aspects of our lives, particularly of those living closer to the border. Few other sovereign states in the world can take pride in a relationship as wide-ranging and multi-faceted as that shared between our two countries. It transcends borders and of course the governments. Our destinies are intertwined. Welfare of the people of our two countries is interlinked. Developments in one country invariably have an impact on the other.
4. The people-centred inter-connectedness has rendered Nepal not a land-locked country, but one, which is land linked to India through an open border. India is Nepal's largest trade partner, source of foreign investments and tourist arrivals and home to a significant Nepalese community.
5. The official visit of the first elected Prime Minister of the Democratic Federal Republic of Nepal Mr. Pushpa Kamal Dahal 'Prachanda' to India last week on September 14-18, 2008 was a reaffirmation of this unique and special relationship. It provided the leadership of both our countries the opportunity to have free and frank discussions and review our extensive bilateral cooperation. Several key decisions were taken to impart momentum and dynamism to our bilateral relations. We have decided to reactivate our bilateral mechanisms in all sectors - water resources, trade and transit, security issues etc. that have been lying dormant for some time. We have also agreed to review, adjust and update the 1950 Treaty of Peace and Friendship to align it with the changing times. As a gesture of goodwill, the Government of India has agreed to implement the Naumure Hydro-electric Project on Rapti river. For ensuring expeditious relief and rehabilitation to those adversely affected in Nepal by the Kosi floods, we are providing IRs. 20 crores of assistance and will repair the damaged segments of the East-West Highway. We are also extending credit of upto Rs. 150 crores to the Government of Nepal for ensuring uninterrupted POL supplies for the next three months during the festive season.
6. This visit of Prime Minister 'Prachanda' and the seminal political developments that have taken place in Nepal provides a perfect backdrop for this seminar. I am confident that the wide range of

issues being covered in this Seminar would spring up new ideas and engender new thoughts for deepening our bilateral relationship.

7. The democratic transition in Nepal has passed several key milestones. Against all odds and I must say, against the cynical expectations of many observers, the ongoing transition has come a long way. The elections to the Constituent Assembly, abolition of monarchy, declaration of Nepal a Federal Democratic Republic and formation of a new elected government are momentous developments. The courage and sacrifice of the people of Nepal and the foresight of its political leadership has made this happen.
8. This encourages us to believe that Nepal will be able to handle the several challenges it now faces in writing a new constitution, and thereby institutionalizing multiparty competitive democracy, inclusiveness, a federal structure, protection and promotion of human rights and fundamental freedoms and rule of law.
9. These challenges are essentially a confluence of three conditions of harmonious and dignified human existence equality, liberty and fraternity. Dr. Bhim Rao Ambedkar, among the chief architects of the Indian Constitution, had said, in his address on November 25, 1949 - the day of the adoption of the Constitution of India, and I quote, "These principles of liberty, equality and fraternity form a union of trinity. Without equality, liberty would produce the supremacy of few over many. Equality without liberty would kill individual initiative. Without fraternity, liberty and equality could not become a natural course of things." Unquote.
10. It is also important to note here that lasting democracy and true development are intrinsically interlinked. Democracy is not merely a form of government, but is a way of life. It is a framework for freedom: freedom to progress and prosper, freedom to do better. Our own experience demonstrates that democracy is not something which solves all problems for all times, but provides legitimate means and ways to address issues that plural societies like India and Nepal face.
11. As a close friend and neighbour, India remains strongly committed to the success of the peace process and the institutionalization of democracy in Nepal in a constitutional multi-party framework. As always, India stands ready to provide any assistance or support, if

required by the Government of Nepal. Nepal's political stability and economic progress is in India's interest. I am convinced that the successful culmination of the peace process would put Nepal firmly on path to peace, stability and development.

Ladies and Gentlemen,

12. The developmental challenges confronting Nepal, like India, are indeed daunting. The optimum and sustainable utilization of the bountiful natural resources that Nepal is bestowed with, has the potential for Nepal to emerge as the richest nation in South Asia. Development of Hydropower, Tourism, Health and Education are the key sectors that have the potential to transform the landscape of Nepal. This necessitates strengthening of cross-border infrastructure roads, rail-links and transmission highways.
13. We are acutely conscious of the need to bring about qualitative transformation in cross-border infrastructure between India and Nepal. A number of mega infrastructure projects amounting to IRs. 16 billion are under various stages of implementation. Creation of four Integrated Check Posts on the Indo-Nepal border envisages world class infrastructure at these border points for smooth flow of people and goods across the border. Government of India is also undertaking projects for development of over 1500 km of road network in Nepal's Terai region that would provide easy access between the Indo-Nepal border areas and Nepal's East-West Highway. Similarly, a project presently on the anvil for cross-border rail links at five locations at the Indo-Nepal border will significantly boost cross-border linkage and will be of immense value in promoting trade and commerce between the two countries.

Ladies and Gentlemen,

14. Every country has to evolve its own model of governance and development. No one model is perfect and fits everyone. Nor can it be transplanted into another matrix. That said, the Indian democracy and its socio-economic development processes may hold some significance for Nepal, especially given our very similar social, cultural and geographic conditions and developmental levels and challenges. In my view, this seminar would have served its purpose if its deliberations and discussions on aspects related to consolidation of Nepal's ongoing peace process and constitution making are able to

generate a constructive and useful dialogue. The Indian experience in Constitution drafting could be a valuable one for all.

15. I would like to end by stressing that this interaction is an opportunity for us to discuss how best we could progress towards a new future by shaping the India-Nepal relationship in the best interests of those who are its prime drivers and constituents - the people of our two countries, especially at this juncture when Nepal has crossed the threshold into another era of history.
16. I would like to thank the organisers, the Government of Uttar Pradesh for their support, and also the participants for honouring and enriching this Seminar with their presence. I do hope that the dignitaries and eminent experts gathered here will have a most stimulating and useful interaction over the next two days. I wish all our guests a pleasant and memorable stay. I also wish our Nepali and Indian friends a very enjoyable festival of *Dassain* or *Dussehra* and *Tihar* or *Deepawali*, which are round the corner.

Thank you.

243. Press Release issued by the Ministry of Commerce on the meeting of the Indo-Nepal Inter-Governmental Committee on Trade, Transit and Cooperation to Control Unauthorized Trade.

New Delhi, October 21, 2008.

India-Nepal Inter Governmental Committee on Trade, Transit and Cooperation to Control Unauthorized Trade, met here on 19-20 October, 2008. Shri G.K. Pillai, Commerce Secretary, and Mr. Purushottam Ojha, Secretary, Ministry of Commerce & Supplies, Government of Nepal, led the respective delegations. The two sides have agreed to work towards further strengthening of economic ties between the two countries and to help generate employment opportunities and enhance industrialization in Nepal. Reiterating India's commitment to continue to provide preferential access to Nepalese goods and products to the Indian market, Shri Pillai urged Nepal to work towards creating an investor-friendly and enabling business environment with a view to attract Indian investments. Towards this end, both sides agreed to conclude Bilateral Investment Promotion and Protection Agreement, Motor Vehicles Agreement and revised Double Taxation Avoidance Agreement at an early date.

India also agreed to support a project for technical capacity building of Nepalese labs so that they can conform to Indian standards and certification requirements, in respect to major products of their export interest. India also agreed to exempt Nepal from export restrictions up to 10000 Ton of wheat and 15000 Ton of non-basmati rice. Both sides made considerable progress on the modification and revision of the India-Nepal Treaty of Trade so as to make it a more effective instrument of bilateral trade between the two countries. The two sides will again meet at Joint Secretary level within three months to finalize the modifications. The meeting took place as a follow up to the decision taken during the visit of the Prime Minister of Nepal to India in September, 2008.

The visiting Nepalese Secretary for Commerce & Supplies also called on the Minister of State for Commerce and Power Shri Jairam Ramesh.

244. Press Release issued by the Ministry of Home Affairs on Home Secretary level talks with Nepal.**New Delhi, November 1, 2008.**

The two day Home Secretary level talks between India and Nepal concluded at New Delhi today. The 16-Member Nepalese delegation was led by Dr. Gobinda Prasad Kusum, Secretary, Ministry of Home, Government of Nepal while the Union Home Secretary, Shri Madhukar Gupta led the Indian team.

During the meeting, both sides reviewed the implementation of the decisions taken at the previous meeting and held focused discussion of the issues relating to (i) Security (ii) Border Management, and (iii) Training, Provisioning and Capacity Building.

The discussions on security related issues centered around effective cooperation in combating terrorist activities including activities of Insurgent Groups, circulation of Fake Currency Notes, and institutionalizing the mechanism for real-time exchange of security related information between the two countries. The Indian side also raised the issue of security of Indian aircrafts. The Nepal side conveyed its solidarity with India in the fight against terrorist/insurgent groups and also placed on record its condemnation of the recent bomb blasts in Assam as also its condolences for those bereaved/affected.

With reference to Border Management, discussions in the meeting covered issues relating to review of the Nepalganj-Rupaidiha Pilot Project; effective cooperation for combating trans-border crimes including arms smuggling, trafficking of narcotics & psychotropic substances and human trafficking; institutionalizing the mechanism for regular meetings of the Border District Coordination Committees; and coordination and exchange of ground level/operational information between SSB and its counterpart police and security agencies in Nepal. It was also decided that a meeting of the Joint Working Group on various other Border related issues would be convened in early 2009.

India further offered its support and cooperation in matters relating to training and strengthening of Nepal Police, Armed Police Force, other officials, etc., and in the setting up of a Nepal Police Academy. It also emphasized the need to expedite formalization of bi-lateral agreements initiated at official levels.

It was recalled that during the first visit of the newly elected Prime Minister of Nepal, Mr. Pushpa Kamal Dahal 'Prachanda' to India in September 2008, it had, inter alia, been specifically highlighted and mandated that mutual cooperation in respect of security and border related issues should be expeditiously and substantively addressed. Coming in this background, the Talks, which were held in a warm and cordial atmosphere, will provide further impetus to the existing mutual cooperation between India and Nepal, both at the Government to Government level, and at the ground/operational levels between the agencies of both countries. Following elections and formation of the new Government in Nepal, this was the first HS level talks, the previous having been held in Kathmandu in September 2007.

245. Statements by External Affairs Minister Pranab Mukherjee and Nepalese Foreign Minister Upendra Yadav at the Joint Press Conference.

Kathmandu, November 26, 2008.

My colleague Hon'ble Foreign Minister of Nepal,

Friends from media,

I am very happy to interact with you at the end of my visit to Nepal, a country close to my heart. I feel privileged to be the first Union Minister of India to visit Nepal after the elections to the Constituent Assembly. As you know, the purpose of my visit was to continue the process of regular high level exchanges between our two friendly countries, review the progress on bilateral cooperation, meet with political leaders of Nepal and take forward the process of strengthening our bilateral relations.

I called on the President, the Vice President and the Chairman of the Constituent Assembly and met with a wide section of leaders of Nepal. I also called on the Prime Minister and had discussions with Foreign Minister Upendra Yadav. In each of these meetings I found a strong mutual desire to carry forward the unique relationship that our two countries enjoy.

During my call on President Dr. Ram Baran Yadav, I conveyed to him invitation from our President to visit India at mutually convenient dates.

During my call on the Prime Minister, we reviewed the progress on the decisions taken during his visit to India in September this year and exchanged views on other important issues. As you know, since Prime Minister Prachanda's visit, bilateral mechanisms have been activated and Water Resources, Commerce and Home Secretary level talks have taken place. We intend to take the required follow up measures to ensure continued progress.

I also held detailed discussions with my colleague, the Foreign Minister of Nepal with whom this was my fifth meeting in the last three months.

I was also able to interact with a number of leaders from a cross section of political parties. One such occasion, a joint Interactive session with members of the Constituent Assembly, was an opportunity to understand their perspectives on the ongoing efforts to institutionalize multi-party democracy in Nepal. I conveyed to them our best wishes for the successful and timely

completion of the process to draft a new Constitution which will reflect the aspirations of all the people of Nepal. I reiterated India's commitment to support the government and the people of Nepal in their quest to build multi-party democracy.

I met with leaders from the Madhesi parties. I assured them of our support for the economic and social development of the Terai area, including through better infrastructure and connectivity with India.

We discussed security concerns and agreed to address these effectively by strengthening bilateral mechanisms in this area.

As you know the Government of Nepal has set a target of generating 10,000 MW of power over the next ten years. We discussed how to expedite mutually beneficial cooperation in this important sector.

All my discussions with dignitaries in Nepal have been marked by cordiality and warmth. We will continue our efforts to impart new dynamism to our close, friendly and long standing bilateral ties with Nepal and to further strengthen our wide-ranging cooperation for mutual benefit.

Representatives of the Indian business community in Nepal, who are contributing to Nepal's economic development, brought out some concerns. We have again taken these up with the Nepalese government which has assured action.

This morning I undertook an aerial survey of the Kosi area and paid a short visit to Birgunj. We are working closely with Nepal to ensure work on Kosi breach is completed by March, 2009. Progress is being monitored closely. During my visit to Birgunj, I was given a presentation on a project to provide world-class infrastructure to facilitate movement of goods and people across the border through a modern Integrated Check Post.

I leave Nepal satisfied with my visit. It was a timely opportunity to meet the leadership of Nepal, a country with which we have unique and close bonds of friendship and fraternity. I am deeply touched by the warmth and affection with which I was received.

I sincerely thank my distinguished colleague the Hon'ble Foreign Minister of Nepal and his colleagues for the warm and generous hospitality extended to me and my delegation. Thank you.

Statement of Nepalese Foreign Minister Upendra Yadav:

His Excellency the External Affairs Minister of India

Dear representatives of the media,

Minister of External Affairs of India, His Excellency Pranab Mukherjee is completing his official visit to Nepal, who arrived here at my invitation on November 24. There have been high level visits, and frequent high-level interactions between our two countries in the recent months. These interactions have given fresh momentum to our relations and many bilateral mechanisms have been reactivated. This visit provided, both to His Excellency Mukherjee and myself, an excellent opportunity to review the progress so far made in various aspects of our relationship. We discussed all these issues in a cordial atmosphere.

As we all know, Nepal and India enjoy strong bonds of friendship. Our friendship is based upon shared values, culture and common aspirations. We enjoy extensive and multi-dimensional relations with India. I would like to stress that our relationship has been further enriched by equally extensive interactions at people to people level. It is against this background, the visit of His Excellency Mukherjee will contribute to further enhancing this relationship so happily subsisting between our two countries. This is the first visit of its level from India after the elections to the Constituent Assembly in Nepal. During this visit, we held bilateral talks at the Ministry of Foreign Affairs yesterday. India has always expressed its support for peace process and democratic transition. His Excellency reaffirmed that during the talks.

During the bilateral talks, we looked into various issues taken up by the Commerce Secretaries, Home Secretaries and Water Resources Secretaries during their recent meetings. We are happy at the progress they have made in their respective areas. We discussed the ways to further consolidate the cooperation in those areas.

Both His Excellency Mukherjee and myself have stressed and agreed that Kosi embankment has to be reconstructed and Kosi River brought to its original alignment by March 2009. We also discussed issues related to inundation problem, and construction of 400 KV transmissions line. In view of our national vision of developing 10,000 megawatts of hydro-electricity in ten years and also implementing other mega-projects in Nepal, we agreed to further encourage investments in Nepal from Indian private and public sectors.

We shared our views on the issues of Nepal India border and cross border crimes.

It is a matter of great satisfaction to note that development projects like Terai road project, which includes our Hulaki Road, is ready for implementation. We stressed on their speedy implementation to improve connectivity and enhance economic opportunities of the people through this project. We also discussed the upgradation and extension of the Jayanagar-Janakpur railway and the study of the East-West Railway.

His Excellency Mukherjee also met senior political leaders. His Excellency Mukherjee also had an aerial overview of the breached section of Koshi embankment today.

In conclusion, I would like to reiterate that the present visit of His Excellency the Minister of External Affairs of India have contributed in further enhancing the multi-dimensional relationship between our two countries. I am confident that this process would continue in the days ahead.

Thank you!

246. Joint Press Statement issued at the end of the Official Visit of External Affairs Minister Pranab Mukherjee to Nepal.

Kathmandu, November 26, 2008.

1. The Minister of External Affairs of India His Excellency Mr. Pranab Mukherjee paid an official visit to Nepal from November 24-26, 2008 at the invitation of Hon. Mr. Upendra Yadav, Minister for Foreign Affairs of Nepal.
2. During his visit, the Minister of External Affairs of India called on Rt. Hon. Dr. Ram Baran Yadav, the President of Nepal, Rt. Hon. Mr. Parmananda Jha, the Vice President of Nepal, and Rt. Hon. Mr. Pushpa Kamal Dahal 'Prachanda', the Prime Minister of Nepal. The Minister of External Affairs of India also called on the Rt. Hon. Chairman of the Constituent Assembly, Mr. Subas Chandra Nembang and held an interactive session with leaders of parties in the Constituent Assembly. During his visit, the Minister of External Affairs of India held official talks with the Minister for Foreign Affairs of Nepal on all issues of mutual interest. The Minister for Foreign Affairs of Nepal hosted a dinner in honor of the Minister of External Affairs of India. The Minister of External Affairs of India undertook an aerial overview of the Kosi area and also visited Birgunj.
3. The Minister for Foreign Affairs of Nepal extended a warm welcome to the Minister of External Affairs of India. The two Foreign Ministers shared views on aspects of the bilateral relationship, which is characterized by close, cordial and extensive interactions at the government as well as at the people to people levels. They expressed their commitment to further consolidate the relationship in future.
4. The Minister of External Affairs of India noted that this was the first high level visit from India to Nepal after the elections to the Constituent Assembly of Nepal and expressed India's continued support to Nepal in its transition to multiparty democracy.
5. The two Foreign Ministers recalled the official visit by the Rt. Hon. Prime Minister of Nepal Mr. Pushpa Kamal Dahal 'Prachanda' to India in September 2008 as well as the bilateral meeting between the two Prime Ministers earlier this month on the margins of the BIMSTEC Summit in New Delhi. The two Foreign Ministers also noted with satisfaction that this was their fifth meeting after the assumption

of office by a new government in Nepal in August 2008. They recognized that bilateral interactions at high levels have imparted new dynamism to the relationship between the two countries in tune with the changing realities of the time as well as the wishes and aspirations of the peoples of both countries.

6. The Ministers reviewed implementation of actionable points in the Joint Press Statement on the official visit of the Rt. Hon. Prime Minister of Nepal to India from September 14-18, 2008. It was noted with satisfaction that several decisions had been implemented, such as:
 - (i) Meeting of Home Secretaries of the two countries in New Delhi on October 31-November 1, 2008 which agreed on further steps to enhance cooperation in dealing with cross-border crimes and addressing shared security concerns.
 - (ii) The Joint Committee on Water Resources at the level of Water Resources Secretaries of the two countries met in Kathmandu from 29 September- 1 October 2008 and reviewed all aspects of bilateral cooperation in the field of water resources in a forward looking and mutually beneficial framework.
 - (iii) The Inter-Governmental Committee (IGC) at the level of Commerce Secretaries met in Delhi on 19-20 October 2008 and discussed steps to bolster and develop bilateral trade and to conclude the revision of the Treaty of Trade at the earliest.
7. It was acknowledged that the recent high-level meetings of existing bilateral mechanisms have reactivated bilateral relations in key areas. The two Foreign Ministers stressed the need to continue this process and implement relevant decisions taken at these meetings.
8. Both Ministers discussed steps to promote cooperation in the hydro-power sector. With a view to work towards realisation of Government of Nepal's target of generating 10000 MW over the next 10 years, both Ministers agreed that existing and future projects in this area should be pursued expeditiously.
9. The two Ministers reviewed ongoing works to rehabilitate the breached portion of the Kosi embankment and stressed the need to expedite work so that it is concluded by March 2009.
10. The Nepalese side appreciated the removal of ban on the export of

some essential commodities to Nepal by the Government of India. The two sides agreed to review Nepal's requirements from time to time. While taking note of the removal of some of the barriers to trade, both Ministers agreed to hold regular discussions to further facilitate bilateral trade between the two countries.

11. The Minister of External Affairs of India pointed out that concerns remain about the business environment in Nepal affecting existing Indian investments and joint ventures. He requested that these issues be addressed urgently and effectively. The Nepalese side reiterated the commitment of the Government of Nepal to take necessary measures for the promotion of an investor-friendly business environment to encourage Indian public and private sector investments in Nepal.
12. The two Ministers discussed issues relating to management of the open border between the two countries. It was agreed that necessary steps would be taken to have effective institutional and other mechanisms to address cross-border crimes and shared security concerns based on agreements reached at the recent Home Secretary level talks.
13. The two Ministers noted that Joint Technical Committee on the boundary had completed scientific strip mapping of about 98% of Nepal-India border and agreed to take further necessary steps for signature of the agreed strip maps at an early date. They also directed the officials concerned to expeditiously resolve the outstanding issues relating to the boundary.
14. The Nepalese side expressed its sincere appreciation to the Government and people of India for the generous assistance that India has been providing over the years in various fields of development activities in Nepal. In continuation of this process, both sides would study the feasibility of railway projects in Nepal. The Nepalese side appreciated Government of India's support for Terai Roads Project. It was decided that necessary preparatory work for undertaking this project would be expedited.
15. The Indian side reiterated the commitment of the Government of India to continue assisting the Government and people of Nepal in its democratic transition and economic development.
16. The External Affairs Minister of India handed over a formal invitation

from the President of India Smt. Pratibha Devisingh Patil to Rt. Hon. President of Nepal Dr. Ram Baran Yadav to visit India at an early, mutually convenient date¹.

PAKISTAN

247. Press Release of the Ministry of External Affairs regarding exchange of lists of Nuclear Installations and Facilities between India and Pakistan.

New Delhi, January 1, 2008.

India and Pakistan today (1 January 2008), through diplomatic channels simultaneously at New Delhi and Islamabad, exchanged lists of nuclear installations and facilities covered under the Agreement on the Prohibition of Attack against Nuclear Installations and Facilities between India and Pakistan. This agreement was signed on 31 December 1988 and entered into force on 27 January 1991.

Under the Agreement, the two countries, on first January of every calendar year, are to inform each other of Nuclear Installations and Facilities to be covered by the Agreement. The first such exchange of lists took place on 1 January 1992. This is the seventeenth consecutive time that both countries have exchanged such a list.

¹ External Affairs Minister on November 26 "reiterated India's commitment to supporting the government and the people of Nepal in their quest to build multi-party democracy." Speaking in connection with an interactive discussion with members of the Nepalese Constituent Assembly, Mr. Mukherjee said political consensus was needed to achieve "the ultimate objective" of multi-party democracy and to draft a new constitution. He said his visit to the country was satisfying and timely. Before flying to New Delhi, Mr. Mukherjee undertook an aerial visit of the Kosi region. "We are working closely with Nepal to ensure work on the Kosi breach was completed by March, 2009," he told journalists at the Tribhuvan International Airport. Nepal's Foreign Minister Upendra Yadav said the Ministers also discussed the issues related to inundation problems and building of a transmission line. A day earlier on November 25, he handed over a formal invitation from the President of India to Nepal's President, Ram Baran Yadav, to visit India at an early date. Mr. Mukherjee said a new extradition treaty and the treaty on mutual legal assistance would be soon signed. The two countries were also undertaking a mechanism for "better border management." He noted that concerns remained about the business environment in Nepal.

248. Extract from the T. V. Interview of External Affairs Minister Pranab Mukherjee with Karan Thapar for CNN-IBN.

New Delhi, January 13, 2008.

(External Affairs Minister Pranab Mukherjee has "tremendous faith" in Pakistan's people that they would resolve the crisis in their country, but says India has to deal with whoever is in power there. In an interview to Karan Thapar on Devil's Advocate, he spoke about Chinese "incursions" in Indian territory and hinted that Sri Lanka was free to deal with the LTTE as it liked).

Karan Thapar: Foreign Minister, there is a widespread belief that Pakistan faces the gravest threat to its unity in 60 years, at a time when the government in Islamabad has lost all credibility with the people. How do you view the state of affairs in Pakistan?

Pranab Mukherjee: There is a problem, no doubt, but at the same time I am quite confident that the resilience of the system and the people of Pakistan-I do hope-will overcome this crisis. After all we shall have to keep in mind that in different phases there have been different kinds of problems in the history of Pakistan, but somehow or the other the people of Pakistan and the system there have managed the situation.

So let us hope, because in our interest we want a stable, peaceful and prosperous Pakistan. It is an important neighbour of ours, and in our neighbourhood we would like to have peace, stability and development.

Karan Thapar: You are talking about the resilience of Pakistan and its people, does that mean you don't share the fear-many experts have it-that Pakistan could be breaking up.

Pranab Mukherjee: I am not coming to any such conclusion. Experts have the liberty to pass their judgment, make analysis-that is the privilege of analysts and journalists. But as a representative of the Government, my job is to deal with the representative of Pakistan.

Karan Thapar: Let me quote to you what American scholar Stephen Cohen wrote on December 27, 2007, the day Benazir Bhutto was assassinated. He wrote, "I fear for Pakistan, its further decay will affect all its neighbours in unpredictable and unpleasant ways." Do you share that concern?

Pranab Mukherjee: Of course the problem is that whenever there is instability in the neighbourhood it has its impact on the other countries. It goes without saying.

Karan Thapar: So instability in Pakistan will have an impact on the neighbourhood?

Pranab Mukherjee: Instability in Pakistan will naturally have an adverse impact on us and other neighbours of Pakistan, but I am not coming to the definitive conclusion and let us hope that Pakistan would be able to address the problems in the way they want to. Let us hope stability will be brought back and peace, prosperity and development will take place.

Karan Thapar: Do you have a special committee or special monitors watching the situation for you carefully? Have you put in place mechanisms to watch what is happening carefully?

Pranab Mukherjee: There is a mechanism to share information...

Karan Thapar: To watch Pakistan for you?

Pranab Mukherjee: There is no group of experts as such to watch developments in Pakistan but we are watching, we are getting reports from our mission and also we are analysing the information coming from different sources and trying to share our perceptions.

Karan Thapar: You say that you are getting regular reports from your mission in Islamabad. Does your mission view General Pervez Musharraf as part of the problem or does it see him as part of the solution?

Pranab Mukherjee: Your question is like the leading question of a criminal lawyer. If I say yes there is one set of problems and if I say no there is another set of problems.

Karan Thapar: You have to grant it that it is better than a misleading question.

Pranab Mukherjee: First of all we are interested in the peace, stability and development of Pakistan. As I responded to an earlier question that we are to deal with whoever is in office in Pakistan. Therefore, we do not make any value judgment of any individual.

Karan Thapar: Don't make a value judgment, but the people of India look upon you as Foreign Minister for some sort of understanding, for some

sense of guidance on what is happening in Pakistan. In that light let me ask then that do you believe General Musharraf is stable at the moment or is he in danger of being removed, perhaps by the army or perhaps overtaken by political developments?

Pranab Mukherjee: Only future events will show what course of action will be taken by the establishment in Pakistan or the people of Pakistan. From the past history we have seen that developments have taken a particular turn at a particular point of time but it is not always predictable.

Karan Thapar: So unpredictability is the key word for Pakistan at the moment?

Pranab Mukherjee: I am not saying that unpredictability is there, but an element of unpredictability is there though I can't say that the situation will not turn around in a positive manner. As I started my observations by saying that I have tremendous faith in the resilience of the Pakistani people to manage their crisis.

Karan Thapar: Now it was reported in the Indian papers that the government wanted to send you as Foreign Minister to attend Benazir Bhutto's funeral but you were advised by the Pakistani government that it might be better if you were not to come. Is that correct?

Pranab Mukherjee: It is correct, because it is merely not respect of me but in respect of all other countries. Various countries showed interest but they were advised not to come because firstly it was not declared as some sort of state mourning-state mourning was there but it was not a state funeral as such and arrangements were not made to that extent.

Secondly, the law and order situation at the place where the burial took place was not conducive to receive representatives of foreign governments. Therefore, in this hour of difficulty, we did not want to embarrass the authorities and we listened to their advice.

Karan Thapar: As you assess Benazir Bhutto, do you see her as a friend of India?

Pranab Mukherjee: In fact when she was in government earlier, she was the Prime Minister and I was Foreign Minister. Several times at the margin of several international events outside India or Pakistan I had interacted with her and it appeared to me that she had a sincere desire to improve the relationship between India and Pakistan.

Karan Thapar: So her death is in a sense a setback to the improvement of Delhi-Islamabad relation?

Pranab Mukherjee: You know if a tall leader dies, particularly in our neighbourhood, we naturally feel sad because he or she might have contributed to the relationship between our two countries.

Karan Thapar: And in Benazir Bhutto's case that was a real prospect, the improvement.

Pranab Mukherjee: Her coming back to Pakistan after a long time had kindled hopes for the restoration of normal democratic process to a considerable extent in Pakistan.

Karan Thapar: Now 'The Hindu' on January 5, 2008 reports that as the turmoil in Pakistan gets worse groups such as the Lashkar have begun to replenish their cadre and rebuild their operational capability. Are you worried that you could see a sharp increase in infiltration as well as jihadi activity targeted at India?

Pranab Mukherjee: We shall have to wait till the snow melts and the paths are cleared, particularly in Jammu and Kashmir. But infiltration has never stopped completely, sometimes the number has increased and sometimes it has decreased, therefore our advice to the security forces has always been be on alert and maintain vigil.

Karan Thapar: But once again you are keeping yourself alert to the possibility that infiltration and jihadi activity could build up because of the turmoil in Pakistan.

Pranab Mukherjee: As I said that let us not link it with the turmoil in the country, because terrorist activities from the other side of the border have never completely stopped.

249. Extract from the Media Briefing of Official Spokesperson relevant to the India - Pakistan Civil Aviation Talks.

New Delhi, February 15, 2008.

Some of you may have already seen the Joint Press Statement¹ that has been issued in Rawalpindi on talks between India and Pakistan on civil aviation.

The delegations of India and Pakistan met in Rawalpindi on 14-15 February, 2008 for consultations on air services matters. The Pakistan delegation was headed by Major General Mir Haider Ali Khan, Additional Secretary, Ministry of Defence, and the Indian side was led by Mr. Kanu Gohain, Director General Civil Aviation. The consultations were held in a friendly and cordial atmosphere.

Both delegations recognized that in the wake of developments which have taken place in the aviation industry during the past few years, the existing Air Services Agreement needs to be reviewed and updated.

It was agreed that each country shall henceforth be entitled to designate three airlines each to operate the agreed services on the specified routes. Presently, as you know, only one airline each operates between India and Pakistan. It was also agreed to increase the frequency of flights per week from 12 to 28 for each side.

Against the two destinations presently available to the designated airlines in each other's territory, it was agreed to add Chennai for the designated airlines of Pakistan and Islamabad for the designated airlines of India, as third destination. This will enable direct air connectivity between the capitals of the two countries.

These elements were contained in an MOU that was signed by the leaders of the two delegations.

*

*

*

*

Question: On India-Pakistan civil aviation talks and the decision to add three carriers, by what time that becomes effective?

1 Please see Document No.250.

Official Spokesperson: There is no specific on which this becomes operational. It is contained in the joint press statement. Perhaps all it needs is working arrangements to be finalised. They have said that they will meet again within the year to review the capacity and frequency framework and additional destinations in each other's territory keeping in view the market demand. So, that is a review of the new arrangement. So, those would obviously be done faster. But we will try and see if there is a date in the MoU. I do not see it in the statement.

Question: The frequency of flights from 12 to 28, what airlines will use which routes?

Official Spokesperson: A decision has to be taken which are the airlines which want to use this route. The airlines have to get into the act. They have to decide when they want to go. These are commercial and technical details which are not done at this level.

Thank you.

250. Joint Press Statement issued after India-Pakistan meeting on air services.**Rawalpindi, February 15, 2008.**

The delegation representing the Government of the Islamic Republic of Pakistan and the Government of the Republic of India met in Rawalpindi on 14-15 February 2008 for consultation on air services matters. The Pakistan delegation was headed by Major General Mir Haider Ali Khan, Additional Secretary, Ministry of Defence, whereas the Indian side was led by Mr. Kanu Gohain, Director General Civil Aviation. The consultations were held in a friendly and cordial atmosphere.

2. Both delegations recognized that in the wake of developments which have taken place in the aviation industry during the past few years, the existing Air Services Agreement needs to be reviewed and updated.
3. It was agreed that each country shall henceforth be entitled to designate three airlines each to operate the agreed services on the specified routes. Presently only one airline each operates between India and Pakistan.
4. It was also agreed to increase the frequency of flights per week from 12 to 28 for each side.
5. Against the two destinations presently available to the designated airlines in each other's territory, it was agreed to add Chennai for the designated airlines of Pakistan and Islamabad for the designated airlines of India as third destination. This also enables direct air connectivity between the capitals of the two countries.
6. Both delegations also agreed to meet again at a mutually convenient date within one year to review the capacity/frequency framework and additional destinations in each others territory, keeping in view the market demand.
7. A Memorandum of Understanding (MoU) was signed by the leaders of the two delegations today containing the above agreed elements.
8. Both sides expressed satisfaction that the new arrangement would further the objective of facilitating people to people contact, business and trade activities between the two countries.

251. Response of Official Spokesperson to questions on the elections in Pakistan.**New Delhi, February 20, 2008.**

The recent elections¹ in Pakistan are Pakistan's internal affair. Since you have asked, the Government of India welcome the fact that the people of Pakistan have been able to express themselves clearly and in a democratic manner on their own future.

As ever, the Government of India stands ready to resume the composite dialogue process as soon as a duly constituted government is in place in Pakistan. It remains our hope that we will be able to resolve outstanding issues and build a mutually beneficial relationship with Pakistan in an atmosphere free of violence and terrorism.

India wishes to see Pakistan develop and prosper within a stable democratic order.

¹ The spokesman was responding to the election results in Pakistan which gave overwhelming victories to the opposition candidates of the PPP and Pakistan Muslim League (Nawaz).

252. Joint Statement issued on the conclusion of the first meeting of the India-Pakistan Standing Committee on Bus Services.

New Delhi, February 21, 2008.

The first meeting of the India-Pakistan Standing Committee on Delhi-Lahore, Amritsar-Lahore and Amritsar-Nankana Sahib Bus Services was held in New Delhi on February 21, 2008. The Indian delegation was led by Mr. Saroj Kumar Dash, Joint Secretary (Transport), Ministry of Shipping, Road Transport and Highways and the Pakistan delegation was led by Mr. Mohammad Abbas, Additional Secretary, Ministry of Communications.

2. Both sides noted with satisfaction the continuing operations of the bus services and discussed further measures for its improvement. It has been decided to increase the frequency of Delhi - Lahore bus service from two trips per week to three trips per week from each side. It was also decided to rationalise the bus fare. In addition, the quota for the return tickets would be increased from the existing 6 (six) seats to 10 (ten) seats.
3. The two sides agreed that enroute, the Amritsar - Nankana Sahib bus service would make a halt at Lahore to enable the passengers to disembark/embark whereas, Lahore-Amritsar bus service would continue to operate as per existing arrangement.
4. It was decided that the concerned financial officials of the two sides would meet every year, alternately in Delhi and Lahore, in July for reconciliation of accounts.
5. The new arrangements will come into effect from March 17, 2008.
6. The meeting was held in a friendly and cordial atmosphere.

253. Joint Press Statement issued after the first meeting of the India-Pakistan Joint Judicial Committee on Prisoners.

New Delhi, February 27, 2008.

The first meeting of the India-Pakistan Joint Judicial Committee on Prisoners was held in New Delhi on 26th February 2008. The Committee was formed in January 2007 by the External Affairs Minister of India and the Foreign Minister of Pakistan to recommend steps for humane treatment and expeditious release of prisoners of the respective countries in each other's jails.

The members of the Committee are Justice (Retd) Mr. Nagendra Rai, Justice (Retd) Mr. Amarjeet Choudhary, Justice (Retd) Mr. A.S. Gill and Justice (Retd) Mr. M.A. Khan from the Indian side and Justice (Retd) Mr. Abdul Qadeer Chaudhary, Justice (Retd) Mr. Fazal Karim, Justice (Retd) Mr. Nasir Aslam Zahid, and Justice (Retd) Mr. Mian Muhammad Ajmal from the Pakistan side.

The Committee recommended to the two Governments that:

- a) A consolidated list with full particulars and their present status of nationals in each others' jails be exchanged on 31st March 2008;
- b) Prisoners who have completed their sentences and whose national status has been verified be released forthwith;
- c) Special consideration, on compassionate and humanitarian basis, be accorded to women, juvenile and disabled prisoners for their repatriation;

1 The Committee which met second time in June in Pakistan after visiting the Pakistani prison in Karachi, Adialal Jail in Rawalpindi and Kot Lakhpat jail in Lahore from June 9 to 13, made recommendations for the humane treatment for the prisoners. Among the committee's wide-ranging recommendations was the institution of procedures by both governments to ensure that when a national of the other country died in custody, his or her High Commission was immediately informed and the body sent back at the earliest and not later than three weeks. The Committee said a copy of the inquest or inquiry report into the death, if any, and of the post mortem should be handed over to the respective High Commission. The Committee also asked the Pakistan government to immediately free all Indian fishermen in jails, recommending that their prosecution be withdrawn and they be granted remission of sentences. The judges recommended that on compassionate grounds, cases against visa violators - those caught for overstaying or going to places other than allowed by the visa - as well as women prisoners, juveniles, the terminally ill or ailing, physically or mentally disabled prisoners be

- d) As agreed between the two Governments, those fishermen in custody whose nationality status is confirmed be released forthwith and in remaining cases, Consular Access be provided by 31st March 2008;
- e) All efforts be made to arrange early release of all those prisoners, accused or convicted of minor offences, once their nationality status is confirmed; and
- f) Each country may immediately notify the other of the arrest of its nationals and provide Consular Access expeditiously.

The Committee also agreed to visit jails in Pakistan in April 2008 on dates agreed through diplomatic channels. This would be followed by a return visit to Indian jails.

withdrawn, to facilitate their release and repatriation at the "earliest." For those serving sentences, the judges recommended a remission. The committee also recommended that the benefit of remission be extended to "security" prisoners. Further, the committee wanted the two governments to identify prisoners from both sides who could be considered for early release and expedite their repatriation. It wanted all prisoners whose national identity had been verified to be released immediately, and asked the two governments to complete verification of the others before the committee met again in India in July. The committee recommended that in all cases, the governments must provide consular access to the other's nationals within a month, and the verification process to be expedited. The judges said they would tour Indian prisons from July 20-27 and asked both the governments to prepare full lists of each other's national presently in their custody, so that when the lists were exchanged on July 1 as scheduled, they would be complete. The Judges Committee which met again in August in India and visited Indian prisons in Amritsar, Delhi and Jaipur urged both countries to release by September 30 each other's prisoners with valid travel documents and who had completed their sentences. All others must be provided consular access by that date. The panel asked the two governments to ensure that courts speedily disposed of their cases. The committee particularly recommended early release of women, juvenile prisoners, terminally ill inmates, the mentally disabled and those accused of inadvertent border crossing, overstaying or visiting cities not covered by their visa.

254. Extract relevant to Pakistan from the Statement of External Affairs Minister Pranab Mukherjee in Parliament on "Foreign Policy Related Developments".

New Delhi, March 3, 2008.

The Minister of External Affairs (Shri Pranab Mukherjee):

* * * *

The hon. Members would also have followed the significant developments in Pakistan. India shared the anguish of the people of Pakistan at the tragic assassination of former Prime Minister, Mrs. Benazir Bhutto in a despicable terrorist act. We are gratified that, in the recent elections in Pakistan, the people of Pakistan were able to express their wishes clearly and in a democratic manner on their own future. India wishes to see Pakistan develop and prosper in a stable democratic order. The Government stands ready to resume the Composite Dialogue process as soon as a duly constituted Government is in place in Pakistan. It remains our hope that we would be able to resolve outstanding issues and build a mutually beneficial relationship with Pakistan in an atmosphere free of violence and terrorism.

On March 19, the External Affairs Minister replied to a Short Duration Discussion in the Rajya Sabha on the above statement made on March 3 and said:

Sir. In respect of liberalisation of visas, in respect of the Prisoners of War, in respect of certain other issues, yes, we have moved. We have moved forward. The composite dialogue began. Before the visit of the then Prime Minister, Shri Atal Bihari Vajpayeeji, in January, 2004 to Pakistan in connection with the SAARC, an assurance by the then President, President Musharaff was given to the then Prime Minister that land of Pakistan will not be allowed to be used by terrorists and we are keeping our faith on it. Please fulfil your commitment. Please don't allow your land to be used by the terrorists.

The composite dialogue process is going on. The next round of talks will be initiated. For obvious reasons, we have to be a little slow because of the unsettled situation there. When the tragic assassination of Benazir

Bhutto took place, I myself expressed my desire to go and pay my respect but we could not do so. Even the Congress President, Shrimati Sonia Gandhi, had also expressed her desire to visit that country to express her condolences to the family, but because of the situation the Pakistan Government advised us not to go; so, we adhered to that. We are now waiting. As soon as the new Government is in place, we shall begin our composite dialogue. We are all in favour of liberalising visas. We are all in favour of expanding trade and SAPTA is basically aimed at that.

For full text of the two statements please see Document Nos.19 and 23.

255. Extract relevant to Pakistan from the speech of Prime Minister Dr. Manmohan Singh while replying to the debate on Motion of Thanks to the President for her Address to the Parliament.

New Delhi, March 5, 2008.

* * * * *

Mr. Speaker, Sir, I should say a few words about our policies towards our neighbourhood. Our top priority remains our neighbourhood. We want peace, stability and prosperity in South Asia.

I want to begin by congratulating the people of Pakistan who have shown that, like us, they want to choose the democratic path. I am sure, the House will join me in conveying to them our warmest good wishes as they consolidate democracy in that country.

The great daughter of Pakistan had to sacrifice her life in the process. We mourn with profound sadness, the death of Benazir Bhutto. The people of Pakistan have paid their tribute to her memory in their own way.

Sir, I would like to assure the newly elected leadership in Pakistan that we seek good relations with Pakistan. India wants to live in peace with Pakistan. The destinies of our two nations, I have often said, are closely inter-linked. We need to put the past behind us; we need to think about our collective destiny, our collective security and our collective prosperity.

In their first pronouncements after the elections, the leaders of the main political parties in Pakistan have also spoken of their interest in developing close relations and working with us to bring about a durable peace. Indeed, the dialogue that we have resumed with the Government of Pakistan over the last few years was started when the late Benazir Bhutto and Shri Rajiv Gandhi were the Prime Ministers.

The most courageous steps to build peace were taken by Prime Ministers Nawaz Sharief and Atal Bihari Vajpayee. We have continued the process with President Musharraf. I have said before that I have a vision for the future of India and Pakistan. I believe that in both countries, there is a consensus that we must have close and cooperative relations and a framework for enduring peace.

I hope that the newly elected leaders in Pakistan can quickly move forward with us on this. I am sure that this House will want me to say that we would welcome this and meet them half-way.

256. Response of Official Spokesperson on comments relating to India in the documents of the OIC Summit held in Dakar

New Delhi, March 16, 2008.

We note with regret, that the OIC in the documents issued following the OIC Summit held in Dakar, Senegal on 13-14 March 2008 has once again chosen to comment upon Jammu & Kashmir and issues internal to India. The OIC has no locus standi in matters concerning India's internal affairs including Jammu & Kashmir which is an integral part of India. We strongly reject all such comments.

1 The OIC Contact Group on Jammu and Kashmir also met on the sidelines of the 11th OIC Summit held in Dakar, Senegal on 14 March 2008. The meeting was co-chaired by the OIC Secretary General, Mr. Ekmeleddin Ihsanoglu, and Mr. Inam-ul Haque Foreign Minister of Pakistan. Ali Babacan, the Foreign Minister of Turkey, Dr. Nizar Obeid Madani, Minister of State for Foreign Affairs of Saudi Arabia and representatives of Niger and Senegal attended the meeting. Mirwaiz Omar Farooq, Chairman, All Parties Hurriyet Conference also attended the meeting. Secretary General described the question of Jammu and Kashmir as one of the oldest unresolved issues on the agenda of the OIC. Interestingly the Foreign Minister of Turkey stressed the need to resolve the issue through peaceful dialogue between Pakistan, India and the Kashmiris. The Secretary General of the 57-member organisation, Ekmeleddin Ihsanoglu, described Kashmir as a pressing and burning political dispute. It was unfortunate that the OIC's observations come at a time when violence was at a lower level than five years ago and the State was gearing for Assembly polls. India was also displeased with a resolution that said New Delhi was "maligning" the "legitimate" Kashmiri freedom struggle by "denigrating" it as terrorism. A resolution at the summit, however, welcomed the composite dialogue between India and Pakistan as also the opening of the bus service between Srinagar and Muzaffarabad. It also welcomed the fact that leaders of both countries agreed to build on convergences and narrow down the divergences in the joint search for mutually acceptable options for a negotiated peaceful settlement of issues, including Jammu and Kashmir, in a sincere and purposeful manner.

257. Suo Motu Statement by External Affairs Minister in the Lok Sabha regarding Sarabjit Singh.**New Delhi, March 18, 2008.**

I rise to inform Hon'ble members of the issue of Sarabjit Singh, an Indian national in Pakistani custody facing a death sentence. The media have reported that his mercy petition has been turned down by the President of Pakistan. We have received no formal intimation of this from the Government of Pakistan. But according to press reports, the black warrant has been issued and the sentence will be carried out on 1st April 2008. Our High Commission in Islamabad has sought details from the Government of Pakistan.

2. The Supreme Court of Pakistan, in a judgement on 18 August 2005 had upheld award of death sentence to Sarabjit Singh for causing explosions at various places in Pakistan. At our instance, Consular access to Sarabjit Singh was provided by Government of Pakistan for the first time on August 30, 2005 to the Indian High Commission. Thereafter his national status was confirmed. A review petition against the death sentence was also filed in the Supreme Court of Pakistan. The petition was dismissed by the Supreme Court in March 2006. A mercy petition was thereafter filed with the President of Pakistan which now, according to news reports, has been turned down. Throughout this period, Government of India have continued to urge the Government of Pakistan to take a sympathetic and humanitarian view of this case.
3. Hon'ble Members are aware that since my January 2007 visit to Pakistan, both Governments have put in place certain institutional arrangements, including a new Agreement on Consular Access and a

1 When the Foreign Secretary later in May visited Islamabad when asked whether he discussed the case of Sarabjit Singh with the Pakistani authorities as part of the issue of prisoners, he replied: "We discussed the issue of all prisoners and of the release of all prisoners. We have already appreciated the fact that Pakistan has deferred action in Sarabjit case. Frankly, this is larger humanitarian problem and not one person. This one case has attracted attention. But we do feel that all these prisoners need to be dealt with humanitarian manner to the extent possible. We were informed that Pakistan is releasing our fishermen soon. We informed the Pakistani side that we have released all the Pakistani fishermen who were in our custody last week. They are now back in Pakistan. We discussed what the Judicial committee is doing. The judges will soon be visiting Pakistan. We need to try and move along with this issue and deal with it in a humanitarian way."

joint Judicial Committee, in order to facilitate the resolution of consular issues. A delegation of family members of missing Indian defence personnel was also able to visit Pakistan last year. These initiatives may lead to an improvement of the situation for our prisoners.

4. It is in this context and in the same spirit that we appeal to the Government of Pakistan to treat Sarabjit Singh's case with clemency on humanitarian grounds.

258. Letter of Prime Minister Dr. Manmohan Singh felicitating the newly appointed Prime Minister of Pakistan Syed Yousuf Raza Gilani.

New Delhi, March 25, 2008.

To

H.E. Syed Yousuf Raza Gilani

Prime Minister of the Islamic Republic of Pakistan

Islamabad

Excellency,

Please accept my warm felicitations¹ on your assumption of office as the Prime Minister of the Islamic Republic of Pakistan. On this occasion, I re-affirm the Government of India's commitment to strengthening friendship and cooperation with Pakistan. We see a stable, prosperous and democratic Pakistan as being in the interest of India and the region.

There is a strong public sentiment in both our countries in favour of accelerating the peace process and establishing a cooperative framework for our bilateral relations². There is a common desire to establish a

¹ Prime Minister Dr Manmohan Singh also telephoned Pakistan Prime Minister on the same day and personally greeted him on his assumption of office and expressed the hope that India-Pakistan relations can evolve to become the "best ever". He also hoped Mr Gilani would build on the initiatives taken by his predecessors, former Prime Ministers Benazir Bhutto and Nawaz Shariff and also that of President Pervez Musharaf to improve bilateral relations.

neighbourhood of peace and progress based on greater linkages between our two people, trust and mutual understanding. Leading personalities of the coalition that will form your government have been strong advocates of friendly ties between our two countries and have made important contributions to the peace process. I hope very much that we can build upon the progress already achieved and work expeditiously, through the dialogue process, towards agreed solutions of pending issues.

We have an opportunity to transform our relationship into the close, cooperative and mutually beneficial partnership that should be normal between neighbours like India and Pakistan. I look forward to working closely with you towards an objective that I am confident you share. Please accept, Excellency, the assurances of my highest consideration.

Manmohan Singh

Prime Minister of India

2 Responding to the Prime Minister's message Pakistan on March 26 said it welcomed India's "reiteration" that it wanted the "best ever" relations between the countries. Pakistan Foreign Ministry spokesman Mohammed Sadiq said Prime Minister Manmohan Singh's remarks were "noted." "We are happy that India has reiterated its position on bilateral relations," the spokesman said at a weekly Foreign Office media briefing. Mr. Sadiq said Islamabad and New Delhi were "already in the process of fixing dates for the next meetings" between the two countries.

259. Statement by Official Spokesperson on External Affairs Minister's tele-conversation with Foreign Minister of Pakistan.

New Delhi, April 3, 2008.

External Affairs Minister has spoken over the telephone to Mr. Shah Mehmood Qureshi, Foreign Minister of Pakistan to congratulate him on his election and appointment as Foreign Minister of the Islamic Republic of Pakistan. In their telephonic conversation last night, it was agreed that meetings under the Composite Dialogue framework would resume at an early date¹.

¹ A press release of the Pakistan Foreign Ministry issued on the same day said besides felicitating the Minister Mr. Mukherjee also expressed "condolences on the *shahadat* of *Mohtarama* Benazir Bhutto". He stressed to Mr. Mukherjee "the need and importance of peace and stability in the region for the common benefit of the peoples of the two countries," and noting the improvement in bilateral relations and confidence building, said that "Pakistan was proposing dates for holding the review meetings of the fourth round of the ongoing composite dialogue between the two countries. It may be recalled that the two sides concluded talks on respective eight issues under the fourth round of composite dialogue in August last year. However, the Foreign Secretary-level talks to wrap up the fourth round of talks and launch the fifth round could not take place due to political turmoil in Pakistan.

260. Question in the Lok Sabha: "Observation of OIC regarding Kashmir".**New Delhi, April 16, 2008.**

Will the Minister of External Affairs be pleased to state:

- (a) whether the Organisation of Islamic Conference (OIC) has made any observation regarding Kashmir issue as reported in "The Times of India" dated March 17, 2008;
- (b) if so, the details thereof along with the reaction of the Government thereto; and
- (c) the action taken/proposed to be taken by the Government in this regard?

The Minister of State in the Ministry of External Affairs (Shri E. Ahamed):

(a) & (b) Yes, OIC made observation on the issue of Jammu & Kashmir in its final communiqué and passed a resolution on the dispute at its 11th Summit held in Dakar, Senegal from March 13-14, 2008. The excerpts of the OIC communiqué are enclosed as an annexure.

The Government of India has issued rebuttal¹ (March 16, 2008) on the observation of OIC on Jammu & Kashmir, which states "We note with regret, that the OIC in the documents issued following the OIC Summit held in Dakar, Senegal on 13-14 March, 2008 has once again chosen to comment upon Jammu & Kashmir and issues internal to India. The OIC has no locus standi in matters concerning India's internal affairs including Jammu & Kashmir which is an integral part of India. We strongly reject all such comments."

- (c) India is neither a member nor an observer in the OIC. The Government of India has consistently maintained its stand that OIC has no locus standi in matters concerning India's internal affairs including Jammu & Kashmir and this has been taken up bilaterally with the member countries of the OIC.

ANNEXURE**Excerpts related to Jammu and Kashmir and India from the Final Communiqué of the Eleventh session of the Islamic Summit Conference****DAKAR - REPUBLIC OF SENEGAL****(13-14 MARCH 2008)**

56. The Summit Conference reaffirmed its support for the people of Jammu and Kashmir for their legitimate right to self-determination,

1. Please see Document No.256.

in accordance with the relevant UN resolutions. It called for the full implementation of the recommendations contained in the report of the OIC Mission led by the Secretary-General's Special Representative on Jammu and Kashmir to Pakistan and Azad Kashmir. It called for the respect of the human rights of the Kashmiri people and the withdrawal of security forces from Indian occupied Kashmir. It urged India to allow the visit of an OIC fact-finding mission to the Indian-occupied Jammu and Kashmir as well as other international human rights organizations in order to verify human rights conditions in Indian-occupied Kashmir.

57. The Conference endorsed the recommendations of the OIC Contact Group on Jammu and Kashmir. It took note of the Memorandum presented by the True Representatives of the Kashmiri people and reaffirmed the OIC's commitment to promote the just and peaceful solution of the Jammu and Kashmir dispute, in accordance with the wishes and aspirations of the Kashmiri people.
58. The Conference appreciated Pakistan's commitment to the ongoing Composite Dialogue with India and the flexibility shown by Pakistan in moving forward towards the resolution of Jammu and Kashmir dispute through sincerity, flexibility and courage. It called on India to positively reciprocate in order to arrive at a just and final settlement of the Jammu and Kashmir dispute as the core issue of their conflict. The Conference commended Pakistan for its continuing efforts to create and sustain an enabling environment for the Composite Dialogue with India.
59. The Conference expressed deep sympathy with the people of Jammu and Kashmir who have suffered great human, material, social, economic, and environmental losses as a result of the disastrous earthquake of October 8, 2005. It expressed gratitude for the contributions made by the international community, especially the OIC Member States, for relief and rehabilitation of the earthquake victims and encouraged them to continue to provide necessary assistance in future. It appealed to the Member States and Muslim institutions to grant scholarships to the Kashmiri students in different universities and institutions in OIC countries.

**261. Press Release of the Ministry of Petroleum and Natural Gas
on Turkmenistan-Afghan-Pakistan-India Gas pipeline.**

New Delhi, April 24, 2008.

Please see Document No.490.

**262. Joint Statement issued at the end of the meeting between
Pakistani and Indian Ministers of Petroleum and Natural
Gas for discussion on the Iran-Pakistan-India Gas
Pipeline Project.**

Islamabad, April 25, 2008.

The Ministers of Petroleum of the Government of Pakistan and the Government of India met today along with their delegations to discuss the bilateral issues pertaining to the Iran-Pakistan-India (IPI) Gas Pipeline Project. The meeting was held in an atmosphere of cordiality and mutual understanding. The Ministers acknowledged that this Project is of immense economic and strategic value for both countries, will add a new dimension to their bilateral relationship and go a long way in improving the quality of life of the peoples of the two countries.

¹ On April 27, soon after his return from Islamabad Petroleum Minister Murli Deora had indicated that the \$7.4 billion Iran-Pakistan-India (IPI) pipeline deal would be "clinched soon." Stating that India and Pakistan had almost worked out a general agreement on the "transit fee," he said that the visit of Iranian President Mahamoud Ahmedinejad would be utilised to pave way for trilateral talks on the deal. Giving a broad resume of his talks with the Pakistani leaders, Mr. Deora said "The talks with the Pakistan leadership were very cordial and assuring. I will be updating the Prime Minister on all the issues, including the IPI pipeline, and also the \$7.3 billion Turkmenistan-Afghanistan-Pakistan-India (TAPI) pipeline that India has formally joined this time," he said. "I am very optimistic about the IPI pipeline as it would go a long way in meeting India's energy requirements in the long run," Mr. Deora added. The 2,700-km-long pipeline is scheduled to be completed by 2011 and would initially carry 600 million cubic metres of gas per day. Mr. Deora said he had also met the political leadership of Pakistan, including the People's Party of Pakistan (PPP) Co-Chairman, Asif Ali Zardari, and Pakistan Muslim League (Nawaz) president Nawaz Sharif during his recent visit to Islamabad. He said Mr. Sharif had strongly favoured increasing people-to-people contacts and doing away with visa restrictions for travel between India and Pakistan.

Three bilateral issues pertaining to the Project were discussed:

- the structure of the Pipeline Company, which will execute and manage the Project,
- Transportation Tariff and
- Transit Fee

Consensus was arrived at on the principles on which the bilateral agreement will be concluded. The two Ministers agreed to consult with their respective Governments for an early conclusion of the agreement on the above issues.

263. Extract from the Remarks of Prime Minister Dr. Manmohan Singh at the inauguration of a bridge on the river Chenab in the Indian State of Jammu and Kashmir.

Akhnoor, April 25, 2008.

In the past few years, there has been a change in our relationship with Pakistan. There is a growing sentiment among the people in both countries that misunderstanding and problems between them should be resolved through dialogue. Taking advantage of this new climate, the people of the two countries can move forward to build a permanent friendship.

Last year we issued nearly 1,15,000 visas to Pakistanis wishing to visit India, nearly double the figure three years ago. Bilateral trade has also trebled during this period and will soon reach an annual figure of US\$ 2 billion. The people of J&K should also be part of this expansion in trade and travel.

When we launched the bus service from Srinagar to Muzaffarabad, those who did not favour peace and prosperity in this region tried to sabotage it. Despite the terrorist attack, the brave people of Srinagar came out in large numbers to welcome this initiative. Since then we have taken other steps to improve cross- LOC connectivity.

We hope to see the same kind of traffic and commerce in Srinagar-Muzaffarabad, Poonch-Rawalakot and elsewhere in the State as there is in Attari-Wagah or Khokrapar-Munabao.

We are, therefore planning to liberalize the system bringing in features like triple entry permits and completion of the verification process within six weeks. We have discussed early operationalisation of Kargil-Skardu and Jammu-Sialkot routes. We want to increase the frequency of the Srinagar-Muzaffarabad and Poonch-Rawalakot bus services to weekly from the present fortnightly. For convenience of travelers, applications for entry permit can be made at each District Passport Collection Centre.

These measures will expand travel across the LoC and also enable wider cultural, academic, students and other exchanges.

However, none of these steps will be effective unless there is a sustained climate of peace. We are pleased that there has been some improvement in the situation but full normalcy has not returned to this beautiful State.

We have had a friendly dialogue with Pakistan on all issues that affect the lives of the people of J&K. We were making progress but internal developments in Pakistan over the last one-year have prevented us from moving forward.

I hope that we can continue to deepen our dialogue with the democratically elected government in Pakistan. I have been heartened by the positive statements made by the new leaders.

We face common economic and social challenges of enormous magnitude. These days the whole world is grappling with the problem of rising prices which is affecting the common man. It makes so much sense to work together to face common challenges. After all, for all democratic governments, the highest responsibility is to meet the needs and aspirations of their people.

I compliment the Chief Minister, Ghulam Nabi Azad Saheb, and all his colleagues for the good work that they are doing in Jammu & Kashmir. I call upon the people of the State to come together to realise this shared dream of a Naya Jammu & Kashmir. Let us build new bridges across rivers and between communities and between regions, and between nations.

Jai Hind.

264. Extract relevant to Pakistan from the Media briefing by Foreign Secretary on Prime Minister's visit to Bhutan.

New Delhi, May 14, 2008.

Question: There has been a sudden spurt in terrorist activities. Will the blasts in Jaipur be featuring on the agenda with Pakistan?

Foreign Secretary: In the talks with Pakistan, the Composite Dialogue, what I will go for first is for the review of the fourth round. The Foreign Secretaries are tasked to discuss Peace and Security and Jammu and Kashmir, apart from the overall Composite Dialogue, all the other six subjects. So, under Peace and Security certainly this is very high on our agenda. As you know, we have always said that an absence of violence, that stopping cross-border terrorism is a very high priority; and it is necessary condition in many ways for what we are trying to achieve here in the relationship with Pakistan. So, certainly we will raise it and we look forward to discuss and then to dealing with it.

Question: Why are there all these terrorist attacks? Is it building up to something? What is your sense of it?

Foreign Secretary: I do not want to get into a hypothetical mind-reading exercise, quite frankly. I would rather deal with the facts as they are and then tell you after that where we are.

Question: Yesterday, the Defence Minister said he found a link between the increase in infiltration and the fact that we are going to have elections later this year. Also, Sir, now that the process has started, since there is an anti-terror mechanism, has that mechanism been activated since the blasts?

Foreign Secretary: There are two things here. One, as I said to her, I do not want to start speculating about motives and why there is infiltration, why now, why not day before yesterday, or why not day after tomorrow. I do not want to get into this. As I said, for us the fact of infiltration itself is the problem and we will deal with it on the ground but also bilaterally with Pakistan we will raise it with them. To the second question which you have raised, I think it is too early for me actually to respond. We will have to look at it, come to an assessment and then come back to you.

Question: Are we in talks with Bangladesh also because the name of

Bangladesh has come up in the case of blasts in Jaipur?

Foreign Secretary: I do not want to jump to conclusions here. All this happened yesterday. We are still in the process of investigating and then looking at it. Once we come to certain conclusions, then we will decide what we do, who we talk to, where we go; and we will tell you certainly.

Question: Just to clarify the nature of the anti-terror mechanism between India and Pakistan - do we share information? How does it work? Has it been activated since the Jaipur blasts?

Foreign Secretary: It has both functions. One is it is a mechanism through which you ask each other for things that you think might be helpful in combatting terrorism. The other is, when something occurs like this it is also an available channel which you can use to communicate information and so on. As I said, in this particular case, in the Jaipur case, we are still in the process of investigating. I do not want to start jumping to conclusions, saying all that at this stage. Let us look through it. When we come to some conclusions we will see where the sources are, where the roots are, where it has come from, how it has happened. Then we will decide what we do.

Question: The number of incidents which have taken place in the last one week has jumped up. First the firing at the border, then the Jammu incident, and then these blasts. The question is that were you taken by surprise by all this?

Foreign Secretary: Unfortunately, terrorism is a fact of life for us. We have lived with it for some time. So, it is not a question of surprise or not. It is a question of finding a way of dealing with it, combatting it, eliminating it. And we need to do that at every level. It is not just a question of doing it with somebody, with another country, with what we do at home. It is a complex problem.

Question: Any specific proposal that India is going to make to Pakistan?

Foreign Secretary: I will tell you when we get there because there is still a week to go. We are still doing our work.

265. Media Briefing by Foreign Secretary Shivshankar Menon.**Islamabad, May 20, 2008.**

Foreign Secretary: EAM has used the time after his arrival for meetings with political leaders. He called on the PML-N leader Nawaz Sharif. He just had a call on Asif Ali Zardari. He will be calling on Asfandiyar Wali Khan later. He will attend a dinner, which has very kindly been arranged by the High Commissioner to which he has also invited several leaders from Pakistan side. What has emerged so far and I will try sum up and then will answer a few questions. You must remember we are 24 hours into what is going to be 48 hours visit. So what I can tell you now is a work-in-progress. What has emerged so far very clearly is that both sides have the will and determination to carry forward the process of improving bilateral relations to move towards full normalization as rapidly as possible. When we reviewed the fourth round of composite dialogue with the Pakistani Foreign Secretary, we both expressed satisfaction at what we have achieved at various interactions during the fourth round. We feel the Composite Dialogue is very important for improving our relationship. I stress this because there has been a general impression that there was a hiatus in the dialogue process. I stress that determination has been very strong on both the sides, among the political leadership, among the governments and certainly there has been a popular support.

We both raised several issues that are of interest to us. The primary task of the Foreign Secretaries in the dialogue is to discuss Peace & Security and the Jammu & Kashmir and the look into the work of all the other six groups. So we did that. Both sides made proposals to see how we can proceed further in these areas. Several proposals were made by both the sides across the LOC CBMs, on making some of the CBMs already agreed in the past more effective. We also made other proposals for the economic and commercial relationship which also figured in some details in the conversations which Foreign Minister Shri Mukherjee had with the political leadership earlier this evening. There is great potential for improving commercial relations and we would like to take further steps into that direction. The reason I do not want to go further in listing all that is frankly, we are still working on all that. We will carry on our conversation during the rest of the day and tomorrow. Tomorrow, we are hoping that the Minister will call on the President and the Prime Minister. He will hold talks with his counterpart Mr. Qureshi and we hope that two have much more for you because both the ministers will meet you. I will leave it there.

Question: You discussed the issue of prisoners. Did you take up the clemency issue of Sarabjit Singh¹?

Foreign Secretary: We discussed the issue of all prisoners and of the release of all prisoners. We have already appreciated the fact that Pakistan has deferred action in Sarabjit case. Frankly, this is larger humanitarian problem and not one person. This one case has attracted attention. But we do feel that all these prisoners need to be dealt with humanitarian manner to the extent possible. We were informed that Pakistan is releasing our fishermen soon. We informed the Pakistani side that we have released all the Pakistani fishermen who were in our custody last week. They are now back in Pakistan. We discussed what the Judicial committee is doing. The judges will soon be visiting Pakistan. We need to try and move along with this issue and deal with it in a humanitarian way.

Question: What are the views of civilian leadership in Pakistan on Kashmir?

Foreign Secretary: I think both sides made several proposals on cross LOC measures to improve travel, to facilitate trade and even for the existing measures for some of the bus to increase the frequency, to make easier for the people to get permits. There is fair amount of overlap between our proposals and the Pakistani proposals. Both sides put proposals on the table.

Question: ...(inaudible).... Terrorism... and Dawood Ibrahim.

Foreign Secretary: Generally what we discussed is Peace and Security which includes both working against terrorism. It is a scourge for both of us. There is need for both of us to take effective actions. At this stage, it is not necessary for me to bring evidence against Dawood Ibrahim. I think there is an Interpol red corner notice, he is on UN Security Council list. I think everybody knows, who he is; what he has done and why he is wanted. But yes, we discussed how we can cooperate against terrorism effectively.

Question: Two questions. One on demilitarization of Kashmir and secondly, what about report of burning of Samjhauta Express.?

Foreign Secretary: We have an ongoing process of exchanging information on issues where we think either side has interest.. We have had two meetings of Joint Anti-Terror mechanism where this subject was discussed

1. Please see Document No.257.

at the larger extent. On the larger question on Jammu & Kashmir and various ideas on improving the situation, yes we discussed that. But we did not go into the level of details at this stage you are asking about.

Question: CBI Chief met Mr. Mukherjee and there was a list of 20 wanted people?

Foreign Secretary: There are a lists and lists. There was a list of 20, there was a list of 39 and so on. One of the people on the original list of 20 is dead. We need to deal with the issue. There are dangerous people out there who mean us harm and who have shown capacity to harm us.

Question: There are larger problems. You have responded to Kashmir issues but Siachen and Sir Creek are there. We were told that these two problems can be solved. What has been progress on these in the fourth round?

Foreign Secretary: You are right. All these problems are solvable. But the questions is have we found the solution which suits both the sides. As of now, I cannot confirm that we have. Both these two issues will continue to be discussed tomorrow and I do not want to prejudge what is going to happen tomorrow. But certainly we have made considerable progress in the three years of composite dialogue. We have narrowed down our differences in finding common grounds. On Sir Creek, we done a joint survey not only on the ground but also of the Creek. We have a common map and common understanding of what we are dealing here. We hope we are much much closer to settling it. On Siachen, we have two kinds of proposals on the table. One is to actually start dealing with the environmental consequences of the area together and to look at the possibility of allowing mountain climbing expeditions in the area. So that in a sense, there are environmental concerns which affect both of us in the area. The other is the issue of making it a mountain of peace. We still are looking for a way which works for both the sides. But we are both determined to do that.

Question: Issue of violation of ceasefire on LOC firing...

Foreign Secretary: We discussed the issues relevant to Peace and security which include the issue of cross border infiltration and every thing. The actual incidents that happened in the recent past have already been raised at other forums. There are direct conversations between DGMOs. There

are flag meetings when something happens. We have a way of dealing with that.

Question: Does India believe Jammu and Kashmir is unfinished agenda of partition. Secondly, whether India is a secure country for Pakistanis to visit?

Foreign Secretary: The answer to first question is no. Yes to the second question.

Question: Are you satisfied the ceasefire is holding well?

Foreign Secretary: Today in our discussion, both sides reiterated that they attach great value to the ceasefire that both sides want to ceasefire to hold. That is absolutely clear.

Question: Did the Pakistani side reiterated its visit for the Prime Minister Manmohan Singh to visit Pakistan?

Foreign Secretary: Ask me tomorrow.

Question: Whether some agreements are being signed tomorrow?

Foreign Secretary: We are close to several agreements. But after all we are meeting after some hiatus when there were no meetings. I am not sure whether we will be signing many agreements. What we will be doing is to bring them to a stage where they can be signed. There are several agreements. But at the end of this round, we will give you the details.

Question: Whether any discussion on India-Pakistan-Iran Gas pipeline?

Foreign Secretary: Yes, we discussed that. We are in serious need of natural gas. Both economies need that. We talked about how serious this project is. This conversation would continue.

Question: Tangible progress made on Kashmir?

Foreign Secretary: You have to take it over a longer tenure. From starting this round of dialogue from January 2004, there has been unparalleled discussion on J & K issue. That has certainly narrowed the difference and helped to produce the ways in which we can cooperate. Srinagar-Muzafarabad bus is an example. There are other things we have done so far. So at the end of tomorrow, we will tell you what we have achieved in this round.

Question: ...(inaudible)... internal affairs of Pakistan impact on talks between the two countries?

Foreign Secretary: Just to make it clear that Pakistan's internal affairs are Pakistan's internal affairs. But despite whatever you say, we conducted successful and productive fourth round of Composite Dialogue. That has been a useful round. Today what we heard from Pakistan's present political leadership was a commitment to carry forward the dialogue process and normalize relations. We have an interest in working together and solving the issues that divide us, and creating an atmosphere free of violence to do all that. We reiterated our commitment.

Question: ...(inaudible)..... Kashmir dispute to the next generation. Your comments?

Foreign Secretary: We also want that we should solve all disputes including the Kashmir issue. We are here for this purpose.

Question: Do you feel that you can solve the disputes?

Foreign Secretary: If we thought we could not do our jobs, we would not have been here.

Thank you.

266. Press Release of the High Commission of India in Islamabad on the meeting between Foreign Secretaries of India and Pakistan.

Islamabad, May 20, 2008.

The Foreign Secretaries of India and Pakistan met in Islamabad on 20 May 2008 to review the Fourth Round of Pakistan-India Composite Dialogue. Foreign Secretary of Pakistan, Mr. Salman Bashir, led the Pakistan delegation while the Indian delegation was led by Foreign Secretary of India, Mr. Shivshankar Menon.

2. They reviewed the progress made by the two sides in the Fourth Round on the eight segments of the Composite Dialogue: (i) Peace and Security including CBMs; (ii) Jammu and Kashmir; (iii) Siachen; (iv) Sir Creek; (v) Wullar Barrage/Tulbul Navigation Project; (vi) Terrorism and Drugs Trafficking; (vii) Economic and Commercial Cooperation; and (viii) Promotion of Friendly Exchanges in various fields.
3. The Foreign Secretaries expressed satisfaction at the progress made so far and exchanged views on carrying forward the Composite Dialogue process.
4. The talks were held in a friendly and constructive atmosphere.
5. The Foreign Minister level review of the Composite Dialogue will be conducted by the Foreign Minister of Pakistan, Makhdoom Shah Mahmood Qureshi, and External Affairs Minister of India, Mr. Pranab Mukherjee, in Islamabad on 21 May 2008¹.

1 A day earlier Pakistani Foreign Minister Shah Mahmood Qureshi told *The Hindu* in Islamabad that with a popularly elected government in place, "a great opportunity" had arisen for India and Pakistan to make rapid strides in their relations. He said that after studying the notes of the last four rounds of the composite dialogue process, his assessment was that the interaction had been "mutually beneficial" thus far. "Both sides came closer, both sides have developed a better understanding of each other's point of view, and in the process measures were taken that have improved [the lives of] Kashmiris, of divided families, it has improved confidence, and it has helped in promoting bilateral trade. These are all positives," Mr. Qureshi said. Describing Mr. Mukherjee as a "seasoned politician" who "represents a mature point of view", Mr. Qureshi said he looked forward to his first meeting with him. "Here we have a new government in place, a democratically elected government that has the mandate of the people. It is broad-based - all the major political forces of Pakistan are on board this government, so I feel this is a great opportunity as well to further improve our relations," the Minister said. An official press release in Islamabad said President Musharraf "has welcomed the resumption of the composite dialogue process" and "expressed optimism that the talks will lead to some positive conclusion on the outstanding issues between the two countries." He also "gave certain directives to the team about the outstanding issues between the two countries" according to the release.

**267. Statement by External Affairs Minister Pranab Mukherjee
on arrival in Islamabad.**

Islamabad, May 20, 2008.

I am happy to be here in Islamabad once again.

During my last visit, we had fruitful discussions with the Government of Pakistan and it had been our anticipation that the IVth Round of Composite Dialogue would be productive and fruitful. I am glad that our two countries indeed made considerable progress on various issues of mutual interest during the year 2007.

My present visit to Pakistan comes amidst a new democratic environment of great promise. We congratulate the people of Pakistan for successful conduct of the general election. The present environment, I am sure, will help us in addressing various issues related to peace, stability and economic development.

I am, therefore, looking forward to meeting the leadership of Pakistan. I am sure my meetings with the President, Prime Minister, my colleague the Foreign Minister and other leaders of Pakistan would be useful for furthering peace, stability, people-to-people contact and accelerated economic development of both our countries, as well as our entire region.

In my discussions with Foreign Minister Qureshi I hope to consolidate the progress made in our relationship, which provides a good basis for the 5th Round of the Composite Dialogue. Several proposals in the political, economic and regional fields are on the anvil for consideration and implementation. We approach the next round in a spirit of cooperation, trust and pragmatism. This predicated on an atmosphere free from terrorism, violence or the threat of it.

As we resume our high level dialogue, I cannot but reflect on the tragic assassination of *Mohtarma* Benazir Bhutto. Her loss is still a fresh wound. Not just Pakistan, but our entire region has lost a charismatic leader of great promise, foresight and capability. For the sake of our collective futures, we must work together to combat the menace of terrorism. That would be a fitting tribute to Mrs Bhutto's memory and her legacy.

268. Joint Statement issued on the conclusion of 4th round of review of Composite Dialogue between the Foreign Ministers of India and Pakistan.

Islamabad, May 21, 2008.

1. The Foreign Minister of Pakistan, Makhdoom Shah Mahmood Qureshi, and External Affairs Minister of India, Mr. Pranab Mukherjee, met in Islamabad on 21 May 2008 to review the progress made in the Fourth Round of Pakistan-India Composite Dialogue. This was preceded by a meeting between the Foreign Secretary of Pakistan, Mr. Salman Bashir and Foreign Secretary of India, Mr. Shivshankar Menon, on 20 May 2008.
2. The talks were held in a friendly and constructive atmosphere.
3. They reviewed the progress made in the Fourth Round of the Composite Dialogue encompassing (i) Peace and Security, including CBMs; (ii) Jammu and Kashmir; (iii) Siachen; (iv) Sir Creek; (v) Wullar Barrage/Tulbul Navigation Project; (vi) Terrorism and Drug Trafficking; (vii) Economic and Commercial Cooperation; and (viii) Promotion of Friendly Exchanges in Various Fields.
4. They noted the positive contribution to improvement of relations by the Composite Dialogue process since its resumption after the joint statement of 6 January 2004 and the subsequent Summit Statements of 25 September 2004, 18 April 2005, 14 September 2005 and 16 September 2006. The Ministers reaffirmed their determination not to let terrorism impede the peace process and take all necessary steps to eliminate this scourge against humanity. They further resolved to carry forward the peace process and to maintain its momentum.
5. The Ministers noted that in 2007 and over the course of the Fourth Round of Composite Dialogue there had been a number of important bilateral achievements, including:
 - MoU to increase the frequencies, designated airlines and points of call in either country.
 - Agreement for the trucks from one side to cross the border up to designated points on the other side at the Wagah-Attari border.

- Increase in frequency of Delhi- Lahore bus service from two to three trips per week.
 - Signing of Agreement on 'Reducing the Risk from Accidents relating to Nuclear Weapons'.
 - MoU between the Securities and Exchange Board of India (SEBI) and Securities and Exchange Commission of Pakistan (SECP) to facilitate the sharing of information between two agencies.
 - Completion of the Joint Survey of Sir Creek and adjoining areas.
 - Two meetings of the Joint Anti-Terrorism Mechanism.
6. The two sides signed the Agreement on Consular Access, which was finalised during the Fourth round of Composite Dialogue.
 7. They exchanged views on the issue of Jammu and Kashmir and agreed to continue discussions to build on convergences and narrow down divergences. They also agreed to continue with the implementation of Cross-LoC CBMs with a view to enhancing interaction and cooperation across the LoC. In this regard, they decided:
 - a) To increase the frequency of Muzaffarabad -Srinagar and Rawalkot-Poonch Bus service from a fortnightly to a weekly basis.
 - b) To finalize modalities for intra-Kashmir trade and truck service as early as possible.
 - c) To implement other measures to expand and facilitate travel a meeting of Working Group on Cross-LoC CBMs would be convened within two months.
 8. They reaffirmed the importance of ceasefire in place since November 2003 and the commitment of both sides to cooperate to safeguard it.
 9. They agreed that progress has been made under the Composite Dialogue process on promoting a stable environment of Peace and Security including CBMs. The Expert Groups on Nuclear and Conventional CBMs should consider existing and additional proposals by both sides with a view to developing further confidence building measures in the nuclear and conventional fields.

10. Both sides exchanged views on Siachen and reiterated their commitment to seeking an early amicable solution.
11. Both sides expressed satisfaction on the progress made on Sir Creek, with the completion of the joint survey, the exchange of maps, and the discussions thereafter. They agreed to further facilitate the process for an early resolution of this issue.
12. Both sides reiterated their commitment to fight terrorism in all its forms and manifestations, and re-emphasized the need for effective steps for the complete elimination of this menace. In this context, it was agreed to continue cooperation in the Joint Anti-Terrorism Mechanism whose next meeting would be held within two months. Both sides agreed to refrain from hostile propaganda.
13. Both sides emphasized the need for further strengthening cooperation to eliminate drug trafficking and welcomed the finalization of an MOU on Cooperation between Pakistan's Anti-Narcotics Force and Narcotics Control Board of India.
14. Both sides reiterated the importance of enhancing mutually beneficial economic and commercial cooperation¹ and agreed to discuss further steps for facilitating trade and redressing the trade imbalance. In this regard, Indian and Pakistan Railway officials would meet in June for resolving all technical issues to enable increase in to and fro freight movement. They also agreed to facilitate the process of early opening of bank branches in the two countries.

1 The impact of this decision was available when on July 18 Pakistan's Commerce Minister Chaudhary Ahmed Mukhtar announced country's trade policy for 2008-09. He announced that Pakistan had decided to import CNG buses from India besides, adding 135 new items to the Positive List that governs Pakistan's trade with India. With this, the number of items that the Pakistan permits for import from India went up to nearly 2,000. It was indicated that Pakistan had plans to import 8,000 CNG buses for public transport system in Karachi, Lahore and Islamabad. (Pakistan's official imports with India are based entirely on a restrictive positive list rather than the more conventional negative list that most trading countries use. No imports are allowed other than the items on the positive list.) Another notable development soon after the departure of External Affairs Minister was the visit to Pakistan of Ruia Brothers of the Essar Group who have worldwide investment of US \$ 40 million. They came exploring the possibilities of investment in Pakistan and met with the Pakistani Prime Minister Yusuf Raza Gilani on June 3. Though the visit did not lead to an immediate announcement of any investment decision by the Indian visitors, but their meeting with Prime Minister Gilani left the door open for future investments. For this, Pakistan would have to have a little more liberal approach to the Indian investors, even though Pakistan has a liberal and attractive package of incentives for foreign

15. Both sides appreciated the work being done by the Judicial Committee on Prisoners, which will meet in Pakistan shortly; welcomed the finalization of the Consular Access Agreement that will help addressing humanitarian aspects relating to persons under detention in each other's country and; agreed to provide on a regular basis updated and comprehensive list of prisoners in each other jails.
16. Both sides agreed to the need for promoting friendly exchanges between the two countries.
17. Both sides agreed to the early finalization of the Visa Agreement which will help liberalize the visa regime and facilitate people-to-people contacts.
18. The two Ministers reiterated their commitment to the Iran-Pakistan-India gas pipeline project and had a useful exchange of views in this regard.
19. The two Foreign Ministers also exchanged views on promoting the Pakistan-India peace process, reinvigoration of SAARC and agreed to work towards promoting regional cooperation for enabling South Asia to realize its full development potential. It was agreed to work for promoting sustainable development and food and energy security.
20. It was decided that the two Foreign Secretaries will launch the Fifth Round of the Composite Dialogue in New Delhi in July 2008.
21. The External Affairs Minister of India, Mr. Pranab Mukherjee, called on the President and the Prime Minister of Pakistan.

investor - as 100 percent equity is allowed and there are no restrictions on remittance of royalty, technical and franchise fee, capital, profits and dividends. The fact that Foreign Minister Qureshi was also present when Ruia Brothers met Prime Minister Gilani, was sufficient indication of Pakistani seriousness towards promoting investments from India. Officially, Pakistan has not announced any change to its economic policies with India, which are at the moment limited and restrictive. But the hope kindled by the Joint Statement is encouraging. According to media reports Mr. Mukherjee, devoted much of his meeting with the PPP leader Asif Ali Zardari to a discussion on possibilities of investment and joint ventures by industrialists and investors of both sides in each other's countries. One of the proposals they discussed was investment to develop the Thar coal power project.

269. Agreement between India and Pakistan on Consular Access.**Islamabad, May 21, 2008****The Government of India and the Government of Pakistan.**

Desirous of furthering the objective of humane treatment of nationals of either country arrested, detained or imprisoned in the other country.

Have agreed to reciprocal consular facilities as follows:

- (i) Each Government shall maintain a comprehensive list of the nationals of the other country under its arrest, detention or imprisonment. The lists shall be exchanged on 1 st January and 1st July each year.
- (ii) Immediate notification of any arrest, detention or imprisonment of any person of the other country shall be provided to the respective High Commission.
- (iii) Each Government undertakes to expeditiously inform the other of the sentences awarded to the convicted nationals of the other country.
- (iv) Each Government shall provide consular access within three months to nationals of one country, under arrest, detention or imprisonment in the other country.
- (v) Both Governments agree to release and repatriate persons within one month of confirmation of their national status and completion of sentences.
- (vi) In case of arrest, detention or sentence made on political or security grounds, each side may examine the case on its merits.
- (vii) In special cases, which call for or require compassionate and humanitarian considerations, each side may exercise its discretion subject to its laws and regulations to allow early release and repatriation of persons.

This agreement shall come into force on the date of its signing.

Done at Islamabad on 21 May, 2008 in two originals, In English language, each text being equally authentic.

270. Press Release of the Ministry of External Affairs on India-Pakistan Judicial Committee meeting.

New Delhi, June 10, 2008

The India-Pakistan Judicial Committee on Prisoners is meeting in Pakistan from the 9th to 14th June 2008. The Judges from India in the Committee are: Justice (Retd) Mr. Nagendra Rai; Justice (Retd) Mr. Amarjeet Chaudhary; Justice (Retd) Mr. A.S. Gill; and Justice (Retd) Mr. M.A. Khan. The Judicial Committee, you will recall, was formed following the visit of the External Affairs Minister Shri Pranab Mukherjee to Pakistan in January 2007. Its mandate is to recommend steps for humane treatment and expeditious release of prisoners of the respective countries in each other's jails. The first meeting of the Judicial Committee was held on the 26th of February 2008 in New Delhi.

271. Joint-Statement issued at the end of the Third Meeting of India-Pakistan Joint Anti-Terrorism Mechanism.

Islamabad, June 24, 2008.

The third meeting of Joint Anti-Terrorism Mechanism was held in Islamabad on 24 June, 2008. The Pakistan delegation was led by Mr. Masood Khalid, Additional Secretary (AP), Ministry of Foreign Affairs of Pakistan. The Indian delegation was headed by Mr. Vivek Katju, Additional Secretary (Political & International Organisations), Ministry of External Affairs of India.

2. The two sides reviewed the follow up step taken on the information shared during the earlier meeting of the Joint Anti-Terrorism Mechanism.
3. Both side shared fresh information on terrorist incidents. They agreed to continue to work to identify counter-terrorism measures, assist in investigations through exchange of specific information and for preventing violence and terrorist acts.
4. The Indian delegation also called on the Acting Foreign Secretary, Mr. Khalid Aziz Babar.

272. Press Release issued by the Ministry of External Affairs reacting to comments made by Council of Foreign Ministers of the Organisation of Islamic Conference.

New Delhi, June 26, 2008.

We note with regret that the OIC Council of Foreign Ministers has once again chosen to comment upon Jammu and Kashmir and India's internal affairs in the Declaration and Resolutions adopted by it at its 35th session held at Kampala during June 18-20, 2008. Jammu and Kashmir is an integral part of India and the OIC has no locus standi in this and other matters concerning India's internal affairs. We reject all such references/resolutions¹.

¹ The Spokesperson was referring to the OIC Contact Group meeting held on the sidelines of the 35th Council of Foreign Ministers meeting in Kampala on June 18, 2008 which was co-chaired by OIC Secretary General, Mr. Ekmeleddin Ihsanoglu, and Foreign Minister of Pakistan, Makhdoom Shah Mahmood Qureshi. It was attended by Ali Babacan, the Foreign Minister of Turkey, Dr. Nizar Obeid Madani, Minister of State for Foreign Affairs of Saudi Arabia, Sam Kutesa, Foreign Minister of Uganda and Ms. Aichatou Mindaoudou, Foreign Minister of Niger. The OIC Secretary General in his remarks had "reaffirmed OIC's commitment to the Kashmiri struggle and stressed the need to achieve a just and peaceful resolution of the long standing issue." In his address to the Contact Group, the Foreign Minister of Pakistan informed the meeting about the efforts of Pakistan for a "meaningful, constructive and result-oriented dialogue with India for the resolution of the Jammu and Kashmir dispute." He "emphasized that a final settlement of the Kashmir dispute must be acceptable to all parties -- Pakistan, India and the Kashmiri people."

273. Joint Press Conference of External Affairs Minister Pranab Mukherjee and Foreign Minister of Pakistan Makhdoom Shah Mehmood Qureshi.

New Delhi, June 27, 2008.

External Affairs Minister of India (Shri Pranab Mukherjee):

Good Afternoon:

I am glad to welcome Foreign Minister Qureshi on his first visit as Foreign Minister of Pakistan to India. Although this is his first visit as Foreign Minister, he is no stranger to India and has visited us many times in the past. I am glad that, during this visit, he will also be able to take the time to visit Jaipur, Ajmer and Chandigarh.

As you are aware, I visited Pakistan last month for meetings with the leadership of Pakistan and for consultations with my colleague, Foreign Minister Qureshi, on the Composite Dialogue. We had noted then that the Composite Dialogue process has substantial achievements to its credit. This process has proved to be a useful instrument for developing and enhancing our bilateral relations. It is our expectation that the 5th Round of this process, to be launched in July, will be even more fruitful than the earlier rounds.

Since my visit to Pakistan, we have had a visit by the Deputy Chairperson of the Pakistan Planning Commission to India for discussions with our Planning Commission. There was a very useful exchange of views and the realization that both countries can benefit from each other's experience substantially. Issues of energy security, food security, poverty alleviation, amongst others, are challenges which confront both our countries. Our cooperation in these areas fruitfully contributes to the ongoing process within SAARC. I am happy to note that certain ideas for cooperation are emerging in the areas of wind and thermal energy.

The Joint Anti-Terror Mechanism also met in Islamabad recently and the discussions in that meeting were constructive. Terrorism is a threat to the stability of our respective democratic frameworks. Whatever may be our political differences, we have to be unambiguous in addressing the terrorist threat. We hope that in its future meetings,

as well as through the Home Secretary level dialogue on terrorism, concrete results, including exchange of information on terrorists and terrorist incidents, will emerge. On our part, we are committed to peace, friendship and good neighbourly relations with Pakistan and to develop these relations in an atmosphere free of violence or the threat to use violence. Such an atmosphere has to be positively promoted.

We have had a useful exchange of views today, both as a follow up to our meeting in Islamabad in May and also to build on developments since then. Our discussions covered different aspects of our relationship, including economic and commercial cooperation, political issues, promoting people-to-people contact as also a very useful exchange of views on the regional situation. I believe we both have certain ideas on the table for detailed technical follow up in the Composite Dialogue once the Fifth Round begins at the Secretaries' level.

The resurgence of democracy and popular participation in Pakistan is a positive factor for our bilateral relationship and indeed for our whole region. The scope for cooperation is immense and covers all fields. We need to deepen the levels of our cooperation in the economic and commercial fields. What has been achieved is significant, but represents no more than a small fraction of our potential. We hope that in the Fifth Round of the Composite Dialogue, concrete achievements will continue and pave the way for a qualitative transformation of our bilateral relations.

I will now read the agreed outcomes of our meeting after which, I will invite the Foreign Minister of Pakistan to make his remarks:

AGREED OUTCOMES

1. The Vth Round of the Composite Dialogue would be launched on 21 22 July 2008 with discussions on:
 - (i) Peace and security including CBMs.
 - (ii) Jammu and Kashmir

The Foreign Secretary of Pakistan will visit New Delhi for this meeting.

2. The Technical Working Group on cross LoC Confidence Building Measures will meet in Islamabad on 10 July, 2008 to concretize decisions regarding bus services, trade and truck services across the LoC announced in May, 2008.

3. The Technical Working Groups of the India Pakistan Joint Economic Commission complete their meetings such that the Joint Commission could meet by the end of the year.
4. The respective Deputy Chairs of the Indian and Pakistan Planning Commission had felt that an institutional mechanism for regular dialogue and exchange of views between them would be useful. The modalities and framework can be evolved through mutual consultations.
5. We also noted the detailed discussions which took place on issues such as wind and thermal power and power supply arrangements and issues. The mutually beneficial cooperation in Rapid Mass Transport Systems – in particular the Metro – was also noted. We hope that these discussions will be followed up by concrete proposals for bilateral cooperation.
6. After completing their visit to jails in Pakistan, the India Pakistan Judicial Committee on Prisoners will now visit jails in India in the month of July to make further recommendations with regard to issues concerning prisoners and fishermen in custody. We agreed that the work of the Judicial Committee has proved to be an effective way to proceed with the issues arising from prisoners and fishermen in custody and hope that the implementation of the recommendations of the Committee would speedily address the humanitarian aspects of this issue.
7. We noted that the Railway authorities had agreed to increase interchange of rakes to five daily from current levels of two daily. The proposal of opening the Kokhrapar – Munabao route in freight was also discussed and will be examined.
8. We noted that the third meeting of the Anti-Terrorism Mechanism was held in Islamabad on 24th June. We decided that the meetings would henceforth be held regularly. I am very glad once again to welcome the Foreign Minister of Pakistan and his distinguished delegation to India. I look forward to our continued engagement and interaction.

Thank you

Foreign Minister of Pakistan (Mr. Makhdoom Shah Mehmood Qureshi):

Thank you, Mr. Mukherjee. Let me begin by thanking the Minister for External Affairs for the warm welcome and hospitality that I and my delegation have received.

I want to emphasize that the talks that took place between us were cordial and friendly and they were in continuation of the talks that we held in Islamabad. I am of the view that such interaction at this level will advance our relationship and will promote shared interest between the two countries.

We discussed a host of issues – bilateral issues. Obviously, as the Minister for External Affairs has said, the Foreign Secretaries will be meeting on the 21st and 22nd of July, that is very very soon. They will be discussing a number of issues. In Jammu and Kashmir, peace and security are issues that will be focused on in those talks. But we also, in our talks, exchanged the significance and importance of ceasefire on the Line of Control and the International Border. And we are both of the view that that has by and large been upheld by both sides, respected by both sides; and it is in our mutual interest to maintain that.

While acknowledging the progress that we have made in the four rounds of talks, I urged the Minister for External Affairs to give serious thought to outstanding disputes that need our consideration. I have come to India with a very positive agenda, with a very positive frame of mind; and I have come representing a democratically elected government; I have come representing a coalition of political parties that feels that a positive movement towards peace and stability and normalization is in our mutual interest. We both stand to gain if our bilateral relations improve on the political as well as the economic front.

As Foreign Minister has said, for the Fifth Round the dates have been announced. And I also want to share with you that the commitments made by the Government of Pakistan on the 21st of May in Islamabad have been honoured. We had said that the Joint Anti-Terrorism Mechanism Committee meeting will take place and it did take place on the 24th of June. And in our discussions we have concluded that a regular exchange will be mutually beneficial. We had agreed upon that the meeting of the Working Groups on Cross LoC CBMs is to take place and it will take place. Pakistan will host this on the 8th of July.

As I said earlier on, I have come with a very realistic agenda. I personally feel that people on both sides want movement. They want progress; they want peace; they want stability; because they realize that South Asia is lagging behind. South Asia is lagging behind because both of us have not been able to fully concentrate on our social sectors, on developing our infrastructures to the extent that we could have. This region has a huge

potential and we should optimally utilize that potential. And we can only do so if there is stability and there is peace.

I am of the view that the areas that we can very quickly move on, which will have a very positive impact on South Asia and the whole environment, are four in nature, and I discussed them in my talks with the Minister for External Affairs. I personally feel resolution of Sir Creek is doable. I am of the view that Siachen issue can be resolved. I am of the view that liberalization of visas is to our mutual advantage and will promote people-to-people contact. And the experience that we have had in people-to-people contact is that people when they visited each other have come back with fond memories and have developed friendships, and want to come back again and want to go back to each other's countries.

The fourth area I think is economic cooperation and trade. We have recognized the fact that there has been movement, there has been considerable progress, but we are nowhere near the vast potential that exists between the two countries.

We also discussed how to revitalize SAARC as a forum for regional cooperation and mutual benefit, and I have suggested that in the Summit that will take place in Colombo we will put forth certain ideas on a number of focused areas.

I also urged and laid emphasis on a decision, for a quick decision on the IPI gas pipeline which I feel is to our mutual benefit. Both sides stand to gain and this pipeline can be a pipeline of peace and a new bond.

On the issue of prisoners, I did bring to the notice of the Minister for External Affairs certain mishandling and unfortunately the coverage that was reported in the press. It is a humanitarian issue. We have agreed to a mechanism and the recommendations of the Judicial Committee on Prisoners and the Consular Access Agreement that we have signed in Islamabad should be followed in letter and spirit.

In conclusion, what I want to say is that the political environment to make the peace process result-oriented is right on both sides. And as I said earlier on, I am of the view that the people on both sides are ahead of the Governments. The Governments have to show the political will and they have to give leadership to this process which is to our mutual advantage.

I feel this is a unique opportunity because all the major political players, whether on this side of the border or that side of the border, are supportive

of this movement. Whether it is the Congress-led coalition in Delhi or it is the PPP-led coalition in Pakistan, major players whether it is the BJP, the Opposition here, or major opposition parties in Pakistan, there is a virtual consensus on movement and normalization. We must seize this opportunity, we have the right environment. And we must not miss this opportunity. It will be a great loss, if we fail and miss this opportunity.

I think a positive movement will give confidence and revitalize the faith of the people in the process. We are political parties; we are political leaders; and we have to carry our people along. And I think the people will support this positive movement.

I once again expressed our very keen desire that Prime Minister Manmohan Singh visits Pakistan. His visit is long overdue. We are looking forward to his visit to Islamabad. And we feel that that visit could be positive and add a new chapter in our relations.

Thank you.

Question (Mr. Khalid Ahmed, Express TV, Pakistan): My question is addressed to Mr. Mukherjee. What is the future of the IPI gas pipeline? Will India be committed to this project?

External Affairs Minister of India: We have discussed Iran-Pakistan-India gas pipeline during my visit and during this visit. We are hopeful that it would be possible to resolve this issue both on technical, commercial and all other aspects so that it contributes substantially to resolve the problem arising out of the high energy prices all over the world and also to resolve to some extent the energy crisis which many countries including ours are facing.

Foreign Minister of Pakistan: May I add to that? I am of the view, and I discussed it with the Minister for External Affairs, that the energy prices have gone berserk and both countries are suffering on account of that. You know, the subsidies both countries are providing on petroleum products are immense and really are contributing to our fiscal problems. This is a project that can help us mitigate our problems vis-à-vis energy shortages. Pakistan's requirements are growing at seven per cent per annum and so are India's. Indian economy is growing at a rapid pace. We need energy and this is a project which is a doable project. It so happens that I am holding the portfolio of Petroleum and Natural Resources as well, and later in the day I will be meeting the Minister for Petroleum Mr. Murli Deora and I will discuss in detail this project. Pakistan is keen to move ahead and I

would want to seek his input whether India is ready to fully engage with us or would they like to spend some more time thinking about it.

Question (Mr. Srinjoy Choudhuri, Times TV, India): Question for the Foreign Minister of Pakistan. Sir, you have spoken about the abolition of the death penalty. Where does that leave Sarabjit Singh? Is the Government of Pakistan actively considering commuting the sentence?

And question for External Affairs Minister. Sir, the Government of India has spoken about being determined to go to Vienna and signing the Safeguards Agreement. Can you give us a timeline? Also, is the Government talking with the Samajwadi Party?

Foreign Minister of Pakistan: My answer is a very brief one. Yes, Sarabjit Singh's case is under consideration.

External Affairs Minister of India: You are aware that we are currently engaged in resolving these issues and I do hope through the discussions of all the parties concerned it will be possible to arrive at an acceptable solution. Of course, I am aware about the constraints of time. But at the same time we shall have to keep in view the concerns expressed from different sections are to be addressed adequately.

Question (Geo TV, Pakistan): My question is addressed to Pranab Mukherjee. Prime Minister of India Manmohan Singh is visiting Pakistan, as we understand from media and Minister Qureshi already talked about the visit, do you think that the resolution of such kind of less complicated issues like Siachen and Sir Creek will be possible before his visit and during his visit to Pakistan? Is there any possibility?

External Affairs Minister of India: Prime Minister has accepted the invitation from Pakistan and he has agreed to visit Pakistan. We are working out on the date of his visit as per mutual convenience. I do hope shortly we will be able to finalize the date.

Question (Ranjit Kumar, Navbharat Times, India): My question is addressed to the Foreign Minister of Pakistan. It is related to the Siachen issue which has just been asked. You said that the Siachen issue can be resolved. I want to know as to why it has still not been possible to resolve. What are the areas of difference between the two countries?

Foreign Minister of Pakistan: Well, it is certainly not going to be resolved in front of the press in Delhi right now. But I think, as I said earlier on, we were close to a resolution. I think it is a resolvable issue. It is a doable

question. I think both sides stand to gain if this issue is resolved. There is a huge financial and human loss being incurred on both sides. There are environmental issues that need to be considered. But there is a forum to discuss that and this is not the forum.

Question (Pak Media): My question is about the CBMs across the LoC. Do you think that during your discussion today, both in the delegation-level talks and your one-to-one meeting, some new initiatives were discussed? What about the implementation of those which have been pending for two-three years?

External Affairs Minister of India: Yes, confidence-building measures on the cross-LoC issues are being considered and we have taken certain steps. As you are fully aware, certain positive and concrete steps have been taken to ease the problem, particularly to facilitate the people-to-people contacts across the LoC. We have peace and tranquility on the border all along the LoC since November, 2003. Of course, in the recent weeks there have been some aberrations. But we do hope it would be possible for us as both countries are trying to restore the normalcy and to maintain peace and tranquility on the border, and to address these issues at the expert level; and thereafter of course the final solution will be taken at the political level.

Foreign Minister of Pakistan: May I just add to what the External Minister has said on the cross LoC CBMs?

We are of the view, Pakistan is of the view, that they have been useful, and they have been beneficial, and there is need for more such CBMs; and we will look into other CBMs that will promote this kind of environment. We also need to examine the status of implementation of the CBMs that are already in place and I am sure the Working Group constituted for this purpose will certainly look into this.

Question (D'Souza, Headlines Today, India) : My question is to Pakistan Foreign Minister. Sir, you speak of speeding up decision on the gas pipeline. But as far as India is concerned there have been two areas of concern that of the short supply and security. Could you tell me what assurances have you given the Indian Government on these two fronts? My second question is, can you give us some clarity on the situation in Peshawar? What is the security situation as of today?

Foreign Minister of Pakistan: Let me address the pipeline first. You see, we are not trying to reinvent the wheel here. There are many such

international experiences in front of us, and international securities can be built into. The will is there, the desire should be there, and the need is there. Given that, I think we can do it. There are mechanisms in the past that have worked well. They have worked well under testing conditions. And let me add, the mechanism of resolution of the water dispute that we have had, the Indus Waters Treaty, has withstood the test of time. If we can work out issues as complicated as water, then the gas pipeline is chicken feed according to that.

Responding to the second part of the question, yes, Pakistan is dealing with this menace of terrorism and we are dealing with it in a very effective manner. We have evolved a new strategy, a three-pronged strategy. And that is: we will engage politically with the positive element that does not believe in violence, that does not believe in taking up arms, we would concentrate on socioeconomic development of that area, tribal belt and the border area; and if required, we will use force when required. As far as Peshawar is concerned, Peshawar is secure and we will defend our integrity and our borders; and we know how to do that.

274. Press Release of the Ministry of Petroleum and Natural Gas on the discussions between Minister of Petroleum and Natural Gas Murli Deora and Pakistani Foreign Minister Shah Mohmood Quershi on the Iran-Pakistan-India Gas Pipeline Project.

New Delhi, June 27, 2008.

The Minister of Petroleum and Natural Gas Shri Murli Deora called on Pakistani Foreign Minister Shah Mahmood Qureshi here today to discuss the issues pertaining to the Iran-Pakistan-India (IPI) Gas Pipeline Project. The meeting was held in an atmosphere of cordiality and mutual understanding. The Ministers acknowledged that this Project is of immense economic and strategic value for both countries.

1 Media reports described the meeting as a significant development that could give a push to the Iran-Pakistan-India (IPI) gas pipeline project. Immediately after the talks between the two ministers, the Pakistan's Foreign Minister who also holds charge of Petroleum, said: "I am happy to announce that as far as Pakistan and India are concerned, we have resolved all bilateral issues. There is no issue whatsoever that needs to be addressed now." Mr. Deora on his part said "Transit fee is a small issue. We have reached an agreement on the principles of charging transit fee. India remains fully committed to the project." Mr. Qureshi also clarified that his country had no issues with India's demand that Iran hand over custody of gas on the India-Pakistan border and not on Iran-Pakistan border as suggested by Tehran to cut a transit risk through Pakistan. On the security of the pipeline, which has been of prime concern to New Delhi, Mr. Qureshi said: "Pakistan will address the security issue and provide foolproof security. This is a project which is mutually beneficial as Pakistan gains, India gains and obviously Iran gains." Mr. Deora said India's commitment to the project was articulated in Prime Minister Manmohan Singh's comments that it was a "peace pipeline" between the three countries. "Last week, I met Iranian Oil Minister Gholam Hosein Nozari in Jeddah and a trilateral meeting will soon be held to work out the remaining issues," Mr. Deora said. Replying to a question on the possibility of China joining the project, Quershi said China also faced energy deficit in western parts and was keen on tapping all sources. "They are keen to look into this project. As far as Pakistan is concerned, we see no harm in that. I think we (Pakistan, India and Iran) have spent too much time on talking. We should take a decision now."

In July the External Affairs Minister Pranab Mukherjee visited Iran to attend the Nonaligned Ministerial meeting. He made use of this opportunity to call on the Iranian President when the IPI gas pipeline was one of the issues that were discussed. A Senior Iranian Foreign Office Official told the media that both sides reaffirmed that "they would purposefully move forward on energy related matters," including the IPI gas pipeline. During the Iranian President's brief visit to New Delhi in April, India had given him a non-paper on the project. When asked if the Indian non-paper was discussed during EAM's meeting, the official said specific of the project did not feature during the meeting.

Shri Deora re-iterated India's commitment to the IPI gas pipeline project. He informed that India has requested Iran to convene a trilateral Ministerial meeting on the project.

275. Report of Indian High Commission lodging a complaint with the Pakistan Ministry of Foreign Affairs that police allowed a group of protestors to gather outside its gates for a demonstration over Kashmir.

Islamabad, July 7, 2008.

In a note verbale to the Pakistan Ministry of Foreign Affairs the Indian High Commission in Islamabad lodged a complaint that police allowed a group of protestors to gather outside its gates for a demonstration over Kashmir on July 7 without informing it in advance. (The Indian High Commission is located in the high security Diplomatic Enclave of Islamabad where also are located other diplomatic missions like those of the British and the United States.) The fact that the demonstrators were accompanied by a large group of policemen in riot gear and several television crews indicated that the authorities did have prior information about the rally.

The protestors staged a sit-in on the road outside the Indian High Commission, demanding an end to Indian "occupation" of Kashmir.

The spokesperson of the Indian High Commission Sanjay Mathur pointed out that the demonstration was contrary to the normal practice when in the past the police informed in advance the Indian High Commission about such protests to enable it to take sufficient security precautions.

276. Response of Official Spokesperson to media questions regarding the Press Release of the Pakistan's Ministry of Foreign Affairs on a demonstration in Srinagar.

New Delhi, July 11, 2008.

"We have seen the Press Release¹ of the Ministry of Foreign Affairs of the Government of Pakistan on July 5, 2008 commenting gratuitously on a demonstration in Srinagar in the Indian State of Jammu and Kashmir.

The statement constitutes gross interference in the internal affairs of India. Government of Pakistan spokesmen should refrain from vitiating the atmosphere by such remarks."

1

The Spokesperson of the Ministry of External Affairs was referring to the Pakistan's Foreign Office Spokesman's expression of "deep regret" over demonstrations in Srinagar the previous day and his expression of concern over so-called human rights violations in the State. The Pakistani Spokesman stressed the need to create an enabling environment for the success of peace process between Pakistan and India and for the resolution of Kashmir dispute. The demonstrators were demanding revocation of the order for the allotment of some forest land to the Sri Amarnath Shrine Yatra Board for creating facilities for the annual pilgrimage to the shrine. Please see Document No.275.

277. Joint Statement issued after the meeting of India-Pakistan Working Group on Cross-LOC Confidence Building Measures.

Islamabad, July 18, 2008.

1. The meeting of India-Pakistan Working Group on cross-LoC CBMs was held in Islamabad on 18 July 2008. Indian delegation was led by Mr. T.C.A Raghvan, Joint Secretary (PAI), Ministry of External Affairs while the Pakistan side was headed by Mr. Aizaz Ahmed Chaudhry, Director General (South Asia & SAARC).
2. The meeting was held in a cordial and constructive atmosphere.
3. The two sides discussed modalities for implementation of the decisions taken by the Ministerial meeting of 21 May 2008 on cross-LoC travel and trade¹. They also reviewed measures to ensure effective implementation of the existing cross-LoC measures².
4. Joint Secretary (PAI) also called on the Foreign Secretary of Pakistan.

1 To show its keenness to increase trade with India Pakistan allowed the import of compressed natural gas (CNG) buses from India under its trade policy for 2008-09. The import of CNG buses has been allowed along with that of 135 other items that have been added to the positive list for imports from India in the policy announced on July 18 by Commerce Minister Chaudhary Ahmed Mukhtar. With this, the number of items that the government permits for import from India goes up to nearly 2,000. Pakistan reportedly has plans to import 8,000 CNG buses for public transport in Karachi, Lahore and Islamabad. Pakistan's official trade with India was based entirely on a restrictive positive list rather than the more conventional negative list that most trading countries use. The trade in any other item not mentioned in the Positive List was allowed.

2 Media reports indicated that during the talks Indian and Pakistani officials were said to have arrived at a "number of decisions" on new and existing Kashmir-specific confidence building measures, including a proposed triple-entry permit for cross-Line of Control travel. The report quoted an official to suggest that these related to "the modalities for implementing what was decided by the [Indian and Pakistani] Foreign Ministers at their May 21 meeting." The two sides were reported to have discussed the introduction of a triple-entry permit for cross-LoC travel, simplification of the procedures for getting the permit which at present took at least two years, and an increase in the frequency of the two bus services across the LoC. External Affairs Minister Pranab Mukherjee and Pakistan Foreign Minister Shah Mahmood Qureshi had decided at their talks that the frequency of the two cross-LoC bus services-Srinagar-Muzaffarabad, and Poonch-Rawalakot - should be weekly instead of fortnightly, and that other steps should be taken to increase and improve intra-Kashmir travel. They had also agreed that the modalities for a cross-LoC trade and truck service should be finalised at the earliest. It is to be noted that the meeting took place in the backdrop of the recent bombing of the Indian Embassy in Kabul and Indian charge of Pakistan's ISI involvement in it.

278. Media Briefing by Foreign Secretary Shivshankar Menon on his discussions with Pakistan Foreign Secretary.

New Delhi, July 21, 2008.

Official Spokesperson (Shri Navtej Sarna): Good evening. We have the Foreign Secretary here to brief you on today's discussions. He is, of course, accompanied by High Commissioner of India to Islamabad.

Foreign Secretary (Shri Shivshankar Menon): Good afternoon and welcome. I thought I would brief you about the discussions today in my meeting with the Pakistani Foreign Secretary.

As you know we had scheduled this meeting to launch the Fifth Round of Composite Dialogue. This is the meeting also that discusses issues of peace and security, and Jammu and Kashmir. This particular meeting was particularly important because it is happening at a difficult time in our relationship with Pakistan.

You know the background. Following the return of democracy in Pakistan we have been hopeful, the External Affairs Minister has visited Pakistan in May, and both sides were publicly committed to carrying on the Composite Dialogue process, and the process of improving relations, and of addressing all the outstanding issues that there are between us.

The process itself, as you know, rests on three pillars. One is the absence of violence, the commitment which Pakistan had made in the January 6, 2004 Joint Press Statement not to permit terrorism in any manner from territory under Pakistani control against India; second was an attempt to negotiate and settle and find peaceful solutions to outstanding issues including Jammu and Kashmir; and thirdly to build a cooperative relationship between the two countries.

Unfortunately, in the recent past several events have vitiated the atmosphere between India and Pakistan; and the Composite Dialogue process itself has been under stress. There have been incidents on the Line of Control. There has been cross-border terrorism and incitement to violence in the Indian State of Jammu and Kashmir. There have been public statements by leaders in Pakistan reverting to the old polemics. And this sequence of events culminated in the suicide bomb blast outside our Embassy in Kabul on the 7th of July. Our information so far in the ongoing investigation, which still has to continue, points to elements in Pakistan being behind the blast.

Today's meeting was an opportunity for both of us to have a frank discussion on the Composite Dialogue process; on the situation in which we find ourselves; and on how we can deal with this. We have come to a point as a result of the Composite Dialogue process where we are able to discuss these issues frankly and in detail; and we did so today. We, India, expect our concerns to be addressed. This is the basis of the dialogue process that we are engaged in.

We also discussed Jammu and Kashmir. Our Directors-General, the Joint Secretaries, have met in Islamabad on the 18th and agreed on a set of cross-LoC measures facilitating and making it easier to travel across the LoC; and doubling the frequency of both the buses - the Srinagar-Muzaffarabad bus and the Poonch-Rawalpindi bus. The Chambers of Commerce are to meet very soon to discuss cross-LoC trade and to finalize arrangements. We hope to do that very soon as well.

On the broader issues, both sides were agreed that the ceasefire which has been under stress in the recent past must be maintained and continued; and that we would strengthen and use all existing mechanisms to do so.

We have exchanged dates for the Fifth Round, which we launched formally today, for the various meetings under the Fifth Round. We will now reconcile them, coordinate them and do this through diplomatic channels to finalize the dates for the various meetings. We consider it important that the dialogue continue in order to be able to address the concerns that exist.

One other point that I thought I would mention at this stage is that the Pakistani Foreign Minister telephoned the External Affairs Minister yesterday, the 20th evening, and at that stage they discussed the state of the relationship. EAM mentioned some of these points to him about the need to address these concerns. They agreed that they would be meeting in Colombo during the SAARC Summit at the end of the month when they will carry their dialogue forward.

I think I will leave it there and answer any questions that you might have.

Question: Sir, you said that you have raised concerns over the Kabul blast and everything and that so far the investigations reveal elements in Pakistan. This is not the first time that elements in Pakistan have been responsible for acts of violence against Indians or in Indian Territory. Pakistan's response always comes back with a negative on the evidence that India provides. Why should this time be any different?

Foreign Secretary: Why do not you ask Pakistani Foreign Secretary in an hour?

Question: I will but ...

Foreign Secretary: Ask him. He will speak for Pakistan. I do not want to speak for Pakistan. I am telling you what we think.

Question: What is the change now?

Foreign Secretary: As I said, I am not speaking for Pakistan. Please ask the Pakistan Foreign Secretary. He is briefing you in an hour.

Question: What is your response?

Foreign Secretary: Why are you asking me their response? I will tell you what we feel; he will tell you what they think.

Question: Did you share any intelligence with your counterpart today? What have they said as far as concerns about elements in Pakistan in Kabul? What was Pakistan's official response to you today?

Foreign Secretary: He described what had happened as condemnable. He repeated the Pakistani stand that this kind of events should not take place. As for the rest, we have told him quite clearly what we know, what we think. As I said, it is our expectation that these concerns will be met.

Question: Did you share intelligence?

Foreign Secretary: I am not in the intelligence business.

Question: Did you give them any evidence to investigate on their end?

Question: Sir, if I may just rephrase my question, basically we have had this dialogue process going with Pakistan but the acts of violence have not stopped. Does India see a point in continuing this dialogue process as it is or do you think that there should be some changes made in our approach to Pakistan?

Foreign Secretary: As I said, we see the value of the dialogue process in giving us a place to discuss these issues frankly, openly, and in seeing that our concerns are addressed. That is the value of the dialogue process. We have a dialogue process because we have problems.

Question: What makes you think that their response will be different this time? You have been pointing to Pakistan time and again that you have hard evidence against what they are doing in India and against our interests abroad. What is different this time?

Foreign Secretary: I think we are here in a process where many things have changed over time. The nature of our relationship, the nature of the leadership in Pakistan, many things have changed. So, I think, from our point of view, it is our purpose and function here to make it quite clear to them what we know, what we expect. Rest is for Pakistan to do.

Question: Mr. Menon, are any out-of-the-box ideas under consideration like a trilateral mini summit between the Prime Ministers of India and Pakistan and the President of Afghanistan to sort out these problems between the three countries?

Foreign Secretary: Not at this moment.

Question: You talked of incitement of violence inside Indian Territory. Can you elaborate what you were referring to? Was it the Amarnath violence?

Foreign Secretary: I think we have seen a series of statements from various people in Pakistan, including terrorist leaders but also some Government officials, which have amounted to incitement of violence. We drew their attention to those statements.

Question: Mr. Menon, when you say elements in Pakistan, are you hinting at the Inter Services Intelligence Directorate?

Foreign Secretary: I am saying, 'elements in Pakistan'.

Question: Will Prime Minister Manmohan Singh be meeting his Pakistani counterpart on the sidelines of the SAARC Summit should it be held?

Foreign Secretary: We have not scheduled anything yet. We have not scheduled any of the Prime Minister's bilateral meetings in Colombo yet because I think we are still working on the calendar.

Question: Would you say with the Kabul episode India's tolerance threshold has been crossed?

Foreign Secretary: I would say that the dialogue process is under stress and that it has certainly affected the prospects of our relationship with Pakistan unless we are able to show results and deal with this.

Question: Mr. Menon, Pakistan has struck an upbeat note about expanding trade and economic relations. This has been for some time. In fact, just before their Foreign Secretary came, they spoke about expanding import list including CNG buses and other things. Do you think, with all this happening this process of economic engagement would be affected? Was there any specific discussion on specific economic initiatives?

Foreign Secretary: No, we did not discuss the economic side of the relationship. The Commerce Secretaries normally meet in the course of the Dialogue. They will probably do the details then.

Question: Sir, even a few months ago violation of the ceasefire at the LoC was very rare. Recently, there have been three violations on one day. Have these things been brought to the notice of the Foreign Secretary of Pakistan; and what has been their reaction?

Foreign Secretary: They were. In fact, we discussed this in some detail about the fact of ceasefire violations. Both of us were agreed, the Foreign Secretary of Pakistan himself said, that the ceasefire has tremendous value; it needs to be maintained; we need to work to strengthen it; and to use existing mechanisms to make sure that there are no further violations.

Question: Who are these elements in Pakistan and why do you think this is happening now?

Foreign Secretary: We are still talking about an ongoing investigation. So, please do not expect me to give you the conclusions, the end results today. As of now what I will say is there are elements in Pakistan which are behind this.

Question: Why do you think it is happening now?

Foreign Secretary: I do not answer for them.

Question: Why do you think it is happening now?

Foreign Secretary: I do not answer for them.

Question: Mr. Menon, today your tone is quite different from earlier day when you had begun saying that Pakistan too is a victim of terror.

Foreign Secretary: Never.

Question: You said the PM has also said.

Foreign Secretary: Never. Show me an instance.

Question: Okay, maybe. Today you are striking quite a different tone.

Foreign Secretary: I tell you the situation as I see it. I tell you what has happened in the last few months. I tell you how it has affected the dialogue process and our relationship.

Question: ...(Inaudible)...

Foreign Secretary: I will tell you. I called on the DG of the IAEA; I called on the Chairman of the Board of Governors; I met with Permanent Representatives or the representatives of the members of the Board of Governors and the NSG member states. In each of these cases I answered questions; also spoke to them about the importance of the civil nuclear initiative and the resumption of civil nuclear cooperation between India and the other countries in the world both to meet our energy needs but also as a clean source of energy. If we want sustainable development as a contribution of the environment it makes sense for us to do so. There were some questions about the safeguards agreement and we answered I think most of those because the negotiators of that agreement were with me - Dr. Grover from the DAE, Venkatesh Verma from our Mission in Geneva. We answered their questions. Came away with the impression that, as I have said to you before, that the support for the initiative is increasing. There are clearly some countries who will still have doubts, worries, misgivings. We will talk to them and work that out with them.

Question: On the first of August if the Board of Governors clears the Safeguards Agreement, what is the timeframe for the subsequent developments? When are you going to ask the Germans to call a meeting of the NSG? Do we get into the act? How does it unfold?

Foreign Secretary: Frankly, I do not know. We are not members of the NSG and it is not for us to either ask for a meeting or call it. This is something they will do. Under the July 18, 2005 Joint Statement with the US, the US will approach the NSG and do this. In the meantime we are in touch with the members of the NSG. Part of the briefing was for the NSG members, and we answered their question, and we pointed out to them how a resumption of civil nuclear cooperation with India is in our interest and in theirs. The precise timetable, when they will call the meeting, how they will consider it, that we did not get into quite frankly. We will leave that to those who do these things.

Question: The members already have a draft agreement circulated among the NSG members. Do we know if they have already circulated it?

Foreign Secretary: I think what is doing the rounds is the draft exemption. But there are several drafts, I think, in play because this is the first time ever there will be such an exemption. So, different people have different ideas. Now they have to now sit and work it out and see. We have made it clear that from our point of view what we expect is a clean and unconditional exemption which permits nuclear trade with India under IAEA safeguards but otherwise permits nuclear trade with India. This is important that it be clean and unconditional because by its very nature nuclear trade is something that demands decisions, investments for forty, sixty years. Those kinds of decisions, investments, and commitments require a clean, unconditional view of the future.

Question: ...(Inaudible)...coming here?

Foreign Secretary: We are looking at possible dates in August but we have not yet fixed it.

Question: Sir, would you please brief us about the EAM's telephonic conversation with US Secretary of State?

Foreign Secretary: I do not think I have anything for you on that yet.

Question: When you walked out of the IAEA meeting, you looked very pleased. What was the cause for your pleasure?

Foreign Secretary: First you tell me I look different and she says I look pleased. You guys tell me what do I look like?

Question: You are speaking differently.

Foreign Secretary: I am speaking differently?

Question: Just to rephrase the question, would it be correct to say that when it comes to your tone just before initiating the Joint Terror Mechanism, you have actually done a u-turn? You sounded much more pessimistic.

Foreign Secretary: It is not bad actually. I think it is a good idea to shift the debate from the issues to tone, to attitude, to smile, to body language. Yes, we can fill a whole press conference on this stuff. Very good!

Question: ...(Inaudible)...cordial and friendly.

Foreign Secretary: This is not cordial and friendly?

Official Spokesperson: I think you have run out of questions.

Foreign Secretary: Obviously, if you are down to this.

Question: Are you going to brief the EU as well on the Safeguards Agreement or is it the IAEA Secretariat?

Foreign Secretary: On the 25th the IAEA Secretariat is briefing all member states of the IAEA. Maybe they do something separately for the EU.

Question: But you are not going back to Vienna.

Foreign Secretary: I am not going back to Vienna. But they are doing a briefing for all member states on the 25th on the technical aspects of the Safeguards Agreement.

Question: ...(Inaudible)... ninety day period for which the Bill has to lie on the floor. Have they told you anything about it? Are they willing to waive it? Is there a way around?

Foreign Secretary: Frankly, what happens in American internal procedures is for the US to handle. So, we do not want to get into this about when does the clock start; how many days; which clock; where, etc. Frankly, that is their business and I think we will leave it to them.

Question: What is your sense? Will it get past this Congress?

Foreign Secretary: I have never got into timelines. For the last two years you have asked me this question in different forms and I have consistently avoided timelines because every timeline you have heard or mentioned has shifted. So, I do not want to get into this of yes, it will happen on this day or that day. We will make our best effort and we will do it as quickly as we can. I think it is best to leave it at that.

Question: Mr. Menon, Mr. Boucher has today said that even if the Indian Government becomes a minority government, the US will go ahead with the deal. How do you respond to that?

Foreign Secretary: I think it is hypothetical.

Question: Are the dates set for the Joint Anti Terror Mechanism?

Foreign Secretary: No, not yet.

279. Media Briefing by Official Spokesperson on Prime Minister's visit to Colombo to attend 15th SAARC Summit.

New Delhi, July 31, 2008.

Please see Document No.187.

280. Response of Official Spokesperson to questions on reports regarding Pakistan Senate resolution.

New Delhi, August 7, 2008.

In response to questions on reports regarding Pakistan Senate resolution, the Official Spokesperson said:

"We have seen reports in the Pakistani media that the Senate of Pakistan has passed a resolution about the situation in J & K. Such a resolution amounts to gross interference in our internal affairs. The Senate should attend to issues where it has a locus standi."

(Please see Document Nos.281)

281. Response by Official Spokesperson to questions on statements by authorities in Pakistan on the situation in Jammu & Kashmir.

New Delhi, August 12, 2008.

We have seen the statement¹ by the Foreign Minister of Pakistan on the situation in the Indian State of Jammu and Kashmir and remarks attributed to the spokesperson of the Pakistan Foreign Office yesterday. These statements constitute clear interference in the internal affairs of an integral part of India. Government of India and the State Government are taking all steps necessary to restore law and order in this part of the country. Such statements by leaders of a foreign country do not help the situation. Nor do they contribute to creating the atmosphere necessary for the dialogue process between India and Pakistan to move forward.

Statement by Official Spokesperson on remarks by the official spokesman and leaders in Pakistan on recent events in the Indian state of Jammu and Kashmir.

New Delhi, August 13, 2008.

The Government of India finds deeply objectionable the series of remarks by the official spokesman and leaders in Pakistan on recent events in the Indian state of Jammu and Kashmir. We are witnessing a recurrence of Pakistani rhetoric and allegations that are factually wrong and that bear no relationship to reality. To call for international involvement in the sovereign internal affairs of India is gratuitous, illegal and only reflects reversion to a mindset that has led to no good consequences for Pakistan in the past.

It is not too late for Pakistani leaders and spokesmen to desist from the course of action that they have recently embarked upon, and we would urge them to do so forthwith.

1 The Pakistan Foreign Minister had in a statement on August 11 while referring to the death of Shaikh Abdul Aziz said that Pakistan was "deeply concerned over the deteriorating situation" in Kashmir and called for immediate end to "violence against the Kashmiris". The following is the text of the statement made by the Pakistani Foreign Minister on August 11. "I have learnt with great sorrow and grief the news about the martyrdom of Shaikh Abdul Aziz, a prominent APHC leader in the Indian occupied Kashmir, today. May Allah rest his soul in peace. We condole with the family of the deceased leader and the people of Kashmir. The Government of Pakistan condemns the excessive and unwarranted use of force against the people of Indian Occupied Kashmir. We are deeply concerned over the deteriorating situation in J&K which is resulting in loss of life and property of the Kashmiri people. We call for immediate steps to end violence against innocent Kashmiris. It is important that an enabling environment, free of violence, is created to sustain the peace process and address the long standing dispute of Jammu and Kashmir."

282. Response by Official Spokesperson to a query on the statement made by the OIC Secretary General on Jammu & Kashmir.

New Delhi, August 14, 2008.

We note with regret the statement made by the OIC Secretary General¹ on the situation in the Indian state of Jammu & Kashmir. OIC has once again chosen to comment upon Jammu & Kashmir and India's internal affairs on which it has no locus standi. We reject such comments.

1

In August there was some law and order problem in Kashmir arising out of the agitation on the allotment of a piece of land for providing facilities for the pilgrimage to the Amarnath Shrine in the State. Taking undue advantage of an internal problem between some factions, the Secretary General of the OIC issued a statement expressing undue concern at the developments in the State and calling upon the Government of India " to take urgent steps for the protection of the minorities, which the Government in any case being seized of the situation was taking to defuse the trouble and indeed succeeded in finding an amicable solution of the problem and resolving the issue to the satisfaction of all sections of the people of the State. Please See Document Nos.256, 260 and 272.

283. Press Release of the Ministry of Home Affairs on the delay in starting trade across the Line of Control in Kashmir.

New Delhi, August 16, 2008.

For the last several days there have been reports in the media, and statements attributed to various people, particularly in J&K that on account of the alleged "economic blockade" of the Kashmir Valley, the route to Muzaffarabad, across the Line of Control (LoC), should be opened for trade. Particular emphasis has been given in this context to the transportation of fruits from the Kashmir Valley to the rest of the country, and to alleged shortages of essential commodities in the State. In the process elements who have been opposed to normalisation of the situation in the sensitive State, have also got an opportunity to misguide the people.

In the wake of the recent agitation pertaining to the controversy around land for facilities for Amarnath Yatris, there had been some disruptions of movement along the national highway. Not only have these disruptions been cleared, but it has also been categorically stated that free movement along the national highway will be ensured. In fact there have been no bottlenecks ever since some initial disruptions were there for 3-4 days. Unfortunately, due to calls for bandhs and other protests in the Kashmir Valley, despite the fact that the highway is through, there have been difficulties in the full and free movement of goods and traffic. At the same time the situation is being exploited to raise demands and slogans for opening the cross LoC route for trade and movement of goods.

It is already in the public knowledge, that as a part of the Composite Dialogue with Pakistan, and Confidence Building Measures, inter alia, the Government of India has taken the initiative to facilitate travel of persons across the LoC along the Srinagar-Muzaffarabad and Poonch-Rawalakot routes and in recent discussions with Pakistan, efforts are also being made to increase the frequency of the bus travel. To build further on these initiatives, as early as on 15 April 2005 it had been agreed with Pakistan that truck services across the LoC would also be initiated to promote trade.

In May 2006 in the Working Group on Cross LOC CBMs both sides

exchanged indicative lists of goods for trade. It was agreed that the delegations from Chambers of Commerce from either side of the LOC would undertake visits at the earliest to discuss various aspects of the trade. It was also agreed to start the Srinagar-Muzaffarabad truck service to facilitate cross-LOC trade in the first half of July 2006. Our list of 80 businessmen to visit was given to Pakistan in May 2006. However, visits by Chambers of Commerce have still not occurred in the absence of Pakistani clearance.

During the meeting of the working group on cross-LOC CBMs in July 2008 a number of decisions were taken to simplify cross-LOC movements such as simplifying procedures for issue of travel permits, and making the two cross-LOC bus services weekly. To begin cross-LOC trade as soon as possible India proposed that trade begin immediately on the basis of the lists of items proposed by each side for import and export. Pakistan, however, presented a fresh list, common for both imports and exports and certain other conditions. When pressed, the Pakistan delegation agreed to reconsider so that trade could proceed on the basis of the earlier agreement on the basis of agreed lists for import and export of both sides.

It was also agreed that respective chambers would visit each other to finalise modalities and firm up commercial contracts at the earliest. We had emphasised to Pakistan that they should not insist on procedural issues raised by them as that would tie up the whole issue in a morass of red tape and further delay the initiation of cross-LOC trade. India is ready to commence cross-LOC trade, but awaits Pakistani willingness to implement the agreement reached in April 2005.

Keeping the above background in view, a team of senior officers also visited Jammu & Kashmir last month to look at the status and requirements of infrastructure for trade on both the Srinagar-Muzaffarabad and Poonch-Rawalakot routes, and further action to put in place the required infrastructure is underway.

An effort has been made by some elements to try and project that there have been delays on the part of the Government of India in the process of commencement of cross LoC trade. The facts are otherwise, and Government of India has been assiduously pursuing the matter as would be seen from the position brought out earlier and has, in fact, suggested further cross LoC Confidence Building Measures which will continue to be pursued with Pakistan. It is hoped that the people in Jammu & Kashmir,

and particularly the Kashmir Valley, do not allow themselves to be influenced by misleading propaganda, and in that context, allow themselves to get involved in activities which have disrupted the peace and normalcy of the State, the daily lives of the people including the education of the children, supplies of basic day to day commodities, normal business and other activities, particularly, tourism which is one of the mainstays of the economy of the State.

284. Response by Official Spokesperson to queries regarding resignation of President Musharraf.

New Delhi, August 18, 2008.

We have no comments to make on the resignation¹ of President Musharraf of Pakistan. This is an internal matter of Pakistan.

¹ The spokesperson was referring to the resignation of President Musharraf from the Pakistani Presidency, while the Parliament was preparing for impeachment proceedings against him. He announced his resignation in a surprised televised speech on August 18.

285. Response by Official Spokesperson to questions on the statement issued by Office of the High Commissioner for Human Rights on the situation in J&K.

New Delhi, August 28, 2008.

We regret that the Office of the UN High Commissioner for Human Rights (OHCHR) has issued a statement on the situation in J&K. This is uncalled for and irresponsible; India does not need any advice in respect of the protection and promotion of the human rights of its citizens.

OHCHR should be aware that the State of Jammu & Kashmir has been a victim of terrorist violence for almost two decades and all through this period, the authorities have acted within the law and with restraint. Terrorist groups have targetted innocent civilians. They have not refrained from taking women and children as hostages as in the recent incident in Jammu. In all their actions against terrorists, personnel of the security forces have sought to ensure that no innocent lives are lost and for this objective have on many occasions laid down their lives.

1 The Spokesperson was referring to the statement issued by the Geneva-based United Nations Office of the High Commissioner for Human Rights (OHCHR) that "it was concerned about recent violent protests in Indian-administered Kashmir that have reportedly led to civilian casualties as well as restrictions to the right to freedom of assembly and expression". "The Acting High Commissioner calls for thorough and independent investigations into all killings that have occurred so far," Michele Montas, spokesperson for UN Secretary General Ban Ki-moon told reporters in New York on August 27. The fact that the OHCHR also asked demonstrators to use peaceful means of protest only and urged political actors to take "all necessary protection measures to avoid exposing people under 18, including young children, to violence and to manipulation for political ends" indicates that the demonstrators were indulging in violence while staging their protests and using the younger children as shield.

286. Extract relevant to Pakistan from Press Briefing by Foreign Secretary Shivshankar Menon on Prime Minister's visit to the United States and France.

New Delhi, September 19, 2008.

* * * *

Question: Is the Prime Minister going to be meeting Asif Zardari? Also, is he going to be meeting Chinese President in the US? There were some reports that has Pakistan come out with any new idea on ...(inaudible)...?

Foreign Secretary: We are working on the bilateral meetings. Yes, we are working on the meeting with the President of Pakistan; we are also working on a meeting with the Premier of China. The precise dates and times, we have to tell you a little later because still they are being worked out. It is a very tight programme. But we are working on both those meetings.

Question: Mr. Menon, I just heard what you said about working on the dates. It would be nice if you could give us a sense of what India's message would be when they meet President Zardari. Secondly, there were some reports that perhaps there are delays in starting cross-border trade. Are these reports correct? Are we concerned about some delays from the Pakistani end?

Foreign Secretary: On the first question, our agenda with Pakistan is fairly well-known. It is out in the open. We feel that for our dialogue process to move forward, ideally we should be in an atmosphere free of violence and terror but we need to move that dialogue forward in our mutual interest but we need to demonstrate a commitment to the various promises that we made before and our ability therefore, for instance, to prevent ceasefire violations or cross-border terrorism for that matter. So, our agenda is well-known and I think that is what we hope will be advanced as a result of the meeting.

On cross-LoC trade, we have agreed with Pakistan that we will hold a meeting of the cross-LoC trade Expert Group in Delhi on the 22nd. So, they will be coming here to discuss that. We have been keen since April 2005 actually when we first suggested that we open up the LoC to trade both Srinagar-Muzaffarabad, also Poonch-Rawalakot, and ideally also Skardu-Kargil in the North. We had exchanged with the Pakistani side a list of commodities that we will be ready to receive and they have given us a list of what they could. But those details would now need to be worked out when this Group meets again on the 22nd. Actually about two years ago we had invited a delegation of businessmen from the other side to come to Jammu, to Srinagar, and then

thereafter for us to send delegations from our Chambers on our side to their side. Unfortunately, so far Pakistan has not yet agreed to that. We are hoping to do that as quickly as possible because that will really make the trade meaningful. We would like it to start as soon as possible. We have said before that we will be ready from the beginning of October to carry on the trade.

Question: Why has not Pakistan agreed?

Foreign Secretary: You have to ask them.

Question: Mr. Menon, how do you react to the allegation by International Science and International Security that India divulged sensitive nuclear technology for unscrupulous elements?

Foreign Secretary: I think it is rubbish. It is an allegation that we have seen before. We saw it I think two years ago, in 2006 I remember when they trotted the same thing out and we made it quite clear that it was rubbish then. It is still rubbish today.

Question: When the Prime Minister meets President Sarkozy, are we seeing signing of the India-French nuclear agreement irrespective of the outcome in Washington? **Foreign Secretary:** We are working on the being able to sign the agreement during the visit. We are still working out the details. I think both sides are doing their own procedures and are working on that.

Question: Yesterday Mr. Qureshi said that there are some hiccups in the Indo-Pak relationship. Do you agree with that statement? If you do, can you tell us what the hiccups are?

Foreign Secretary: I do not want to start characterizing what is under stress, what is hiccups etc. I think we all know that this relationship has gone through a difficult time in the recent past and we all know the reasons why. I do not think it is now here a question of describing whether it is 10 per cent, 20 per cent, 90 per cent. I do not think that is the issue. The issue really is, are we able to deal with the basic questions that stand in the way of these relations realizing their potential, that stand in the way of our normalizing relations with Pakistan, especially in the last few months, the kinds of incidents we have had, whether we are able to deal with them. If we are, then one can see this process working to the advantage of both sides of the border.

287. Joint Press release issued after the meeting of the Indian Pakistan Joint Working Group on Cross LOC CBMs.

New Delhi, September 22, 2008.

The Joint Working Group on Cross LOC CBMs met in New Delhi on 22nd September, 2008. The Indian delegation was led by Mr T C A Raghavan, Joint Secretary (PAI) Ministry of External Affairs and Mr Aizaz Ahmed Choudhary, Additional Secretary (South Asia), Ministry of Foreign Affairs, led the Pakistan delegation.

The meeting was held in a cordial atmosphere.

The modalities of Cross LoC trade were finalised.¹

1. Media reports said that the two countries finalised the modalities of the cross-Line of Control trade but the announcement of the details was withheld so that it could be made during the meeting between Prime Minister Manmohan Singh and Pakistan President Asif Ali Zardari in New York. (The meeting of the two leaders took place on September 24 in New York and some details were then announced. Please see Document No.289.) The media speculated that there would be zero trade tariff on items produced in the regions along the Srinagar-Muzaffarabad and Poonch-Rawalpota routes. The officials too finalised a short list of items that would be traded but declined to give details. "We have finalised the modalities and will submit it to our principals, our bosses. Hopefully, it will work out," Pakistan's Additional Secretary in the Foreign Ministry, Aijaz Ahmed Chowdhury, told journalists after the meeting. It may be recalled that India suggested cross-LoC trade in 2005 when the Srinagar-Muzaffarabad bus service was launched and a year later followed up the proposal by suggesting a meeting between businesspersons of the two sides. Things got moving in July this year when the Foreign Secretaries exchanged lists of commodities with zero-tariff regime and indicated the items either side was willing to receive. (In this connection please also see Document No.278.)

288. Extract from the Interview of External Affairs Minister Pranab Mukherjee with Ms. Kalyani Shankar for the All India Radio.

New Delhi, September 22, 2008.

* * * *

Q: I will come to our neighbour, Pakistan. There is domestic turbulence right now and that Presidential elections are scheduled on 5th of September. Is there hope for peace talks resuming after the presidential elections and the new government is settles down?

A: The composite dialogue between India and Pakistan has resumed. We have completed four rounds of talks. Fifth round has begun with the Foreign Secretary's visit. Prior to that I visited Pakistan. Pakistan Foreign Minister visited India. I do hope the fifth round of composite dialogue will also be concluded successfully. I do not comment on the internal matters of Pakistan. We want peace, stability and development in all our neighbours, including Pakistan.

Q: There is some diplomatic talks going on with Pakistan about opening of the LOC for the trade. Where is it going now?

A: Several round of talks have taken place between our two countries and our proposal for opening the LOC, trade from 1st of October has been forwarded to Pakistan and we are awaiting their response. Other necessary steps will be followed up as soon as we receive their response.

Q: If the trade route is opened, is that going to have any impact on the valley right now after the Amarnath Yatra row? I think after that accord?

A: We are going to have these talks going on for quite some time, various confidence building measures including the services, transport services operating between Srinagar and Muzafarabad. We are also thinking of the new routes. So these talks are going on for quite some time. It has nothing to do with the contemporary event.

Q: You are said to be the main person to have brought about the deal on the Amarnath Shrine Board and the other side. How do you propose to deal with the valley now?

A: The question is that this is a matter which is dealt by the Home Minister. It is neither within the purview of the Home Ministry nor within the purview

of the Foreign Ministry. This point is to be understood very clearly. So far the Jammu and Kashmir issues are concerned, I hate a political committee and whenever government takes a decisions, naturally as a member of the government I participate in it. But for the present formula on which the agitation in Jammu has been withdrawn, that is the outcome of negotiations between the representatives of Governor of Jammu and Kashmir and the representatives of the Sangarsh Samiti. They have worked out this formula.

Q: But how to you deal with valley? Jammu, yes, there is no problem, right now. But the valley is not peaceful ?

A: Through negotiations and through talks.

Q: Will you call the Hurriyat and the other separatists for talks?

A: Who will come and who will not come that I cannot decide. As I told you, this is an area where Home Ministry is dealing with it and it is essentially between the political parties of Jammu and Kashmir, Governor of Jammu and Kashmir and if they require the support from the central government, central government provides that support and assistance.

Q: Well, you talking of elections. The Election Commission has convened a meeting on September 8th of all the political parties to discuss about the assembly elections in Jammu and Kashmir. When do you think the elections could take place?

A: That is for Election Commission to make an assessment. Political parties will have to give their views. It is not at the level of the national political parties. Those political parties who are participating in the election of the state of Jammu and Kashmir, they are to decide and our PCC President will respond to it.

Q: But is there any situation right now.? It is conducive?

A: I would not make any valued judgement because it is essentially the domain the Election Commission. Government of India's role in this area is to provide the necessary support and assistance to the Election Commission to conduct the election freely and fairly, in any part of the country. Government of India will discharge their job. But Election Commission is to make an assessment by talking to the people concerned whether there is a situation conducive to hold election or not. Let them do their job first,.

289. Joint Press Statement issued at the end of the meeting between Prime Minister Dr. Manmohan Singh and Pakistani President Asif Ali Zardari on the sidelines of the UNGA session.

New York, September 24, 2008.

The President of Pakistan and the Prime Minister of India met during the 63rd UNGA session in New York.

Prime Minister Singh congratulated President Zardari on his election and the victory of democracy in Pakistan. He expressed the hope that this would pave the way for a profound transformation of the bilateral relationship, so that India and Pakistan could work together on their shared objectives of peace, prosperity and security.

Both leaders welcomed the several positive outcomes of the four rounds of the Composite Dialogue, which have brought their people, businesses and institutions closer, while permitting sustained efforts to be made to resolve all outstanding issues; these gains need to be consolidated. They agreed to work for an early and full normalization of relations between India and Pakistan, on the basis of mutual respect, peaceful coexistence and non-interference.

Both leaders acknowledged that the peace process has been under strain in recent months. They agreed that violence, hostility and terrorism have no place in the vision they share of the bilateral relationship, and must be visibly and verifiably prevented. Severe action would be taken against any elements directing or involved in terrorist acts. President Zardari reassured Prime Minister Singh that the Government of Pakistan stands by its commitments of January 6, 2004.

Both leaders agreed that the forces that have tried to derail the peace process must be defeated. This would allow the continuation and deepening of a constructive dialogue for the peaceful resolution and satisfactory settlement of all bilateral issues, including Jammu and Kashmir.

The two leaders agreed that:

- The Foreign Secretaries of both countries will schedule meetings of the Fifth round of the Composite Dialogue in the next three months which will focus on deliverables and concrete achievements.

- The ceasefire should be stabilized. To this end, the DGMOs and Sector Commanders will stay in regular contact.
- A special meeting of the Joint Anti-Terror Mechanism will be held in October 2008 to address mutual concerns including the bombing of the Indian Embassy in Kabul.
- The expansion of people to people contacts, trade, commerce and economic cooperation provides an effective platform to develop and strengthen bilateral relations. Towards this end it was decided to:
- Open the Wagah-Attari road link to all permissible items of trade
- Open the Khokrapar-Munabao rail route to all permissible items of trade.
- Continue interaction between the Planning Commissions of both countries to develop mutually beneficial cooperation including the energy sector.
- Commence cross-LoC trade on the Srinagar-Muzaffarabad and Poonch-Rawalakot roads on October 21, 2008.
- Modalities for the opening of the Skardu-Kargil route will be discussed soon.

290. Statement by Prime Minister Dr. Manmohan Singh to the media during his visit to Kashmir.

Srinagar, October 10, 2008.

It is always a pleasure to come to Kashmir and meet you. But there is a tinge of sadness this time because of the recent incidents of violence in J&K which have caused concern to all of us. The Amarnath pilgrimage is a matter of pride for us. It is a shining example of religious harmony. It represents one of the finest examples of our composite culture where Hindu pilgrims have been looked after by their Muslim brothers for hundreds of years. It is regrettable that there was violence because of differences on a piece of land that was transferred to the Amarnath Shrine Board. I had expressed this concern in my Independence Day speech also. I express my sympathy with the friends and relatives of those who lost their lives in the violence. I also feel sad that curfew had to be imposed on many occasions causing a lot of problems to the people. But it was necessary to do so to prevent violence and loss of life and property.

The recent incidents in J&K show that there is some resentment towards the Government among a section of the youth here on certain issues. It has always been our belief that even the most difficult issues can be resolved through dialogue. This is the reason why we started a series of round table conferences. The Government will welcome dialogue with all sections of people. This also includes those who have so far opted to stay out of the political process. I urge that whoever has complaints and grievances should come forward for a dialogue. At an appropriate stage, I would also be happy to meet such people.

Our intention is that the future of Kashmir should be socially, economically and politically bright. I want to assure the people of J&K that we will honour all our commitments to the State as we have been doing in the past. We will ensure that the special identity of this state and its people is kept intact.

In the last four and a half years of our government, we have consistently sought to restore normalcy and peace in Jammu and Kashmir so that the tasks of development could be accelerated. It is a matter of satisfaction that the reconstruction programme of Rs 24,000 crore of 67 projects is well under way with 19 projects being completed one of which has been the Baglihar project that I inaugurated today.

Our effort has been to build the socio-economic infrastructure of the state to make Jammu and Kashmir realize its economic potential. Infrastructure has been considerably improved with investments in roads, railways and airline connectivity. The hydropower potential of the state is being harnessed through major projects. Two national institutions of academic excellence, an Indian Institute of Management and a Central University will be set up in the state in the 11th plan. Srinagar and Jammu medical colleges are to be upgraded to the level of All India Institute of Medical Sciences. Steps have also been taken to promote tourism which has great potential in the state.

Good relations with Pakistan, our very important neighbour to the North are an essential part of our policy. My vision of India-Pakistan relations is that both countries situate their bilateral relations in a cooperative framework of mutual understanding. We seek the normalization of our relations with Pakistan, a solution of all issues that cause estrangement, including Jammu and Kashmir through dialogue and peaceful negotiations in an atmosphere free of violence. While we cannot change borders, we can make them irrelevant. When I met President Zardari in New York recently, I invited Pakistan to work with us to usher in a new era of sub-continental cooperation.

When I inaugurated the Srinagar-Muzaffarabad bus service in April 2005, I had said that this is the first step on a long road of peace. The road ahead is difficult but if we persevere and remain committed we will find solutions to all issues in a spirit of friendship and cooperation. Notwithstanding the many difficulties which have come, we have taken several steps. The start of trade on the Srinagar-Muzaffarabad and Poonch-Rawalakot roads on 21st October is a major initiative that has been taken. History will judge how big these steps were. The fact is that they have taken place after many lost decades of mutual recrimination, violence and war.

There are real winds of change in the subcontinent today. Economics, technology and travel are altering older mindsets of suspicion, fear and hostility. It is undeniable that much has changed between India and Pakistan in the past few years. Trade, people to people contact, cultural exchanges and most of all the desire to move on are altering the landscape of our relationship. I would like the entire state of Jammu and Kashmir to be part of this wider process. If both India and Pakistan approach issues with a view to establishing a cooperative framework and with an open and friendly mind, we will be able to put the past behind us. It is this that will lay the

basis for enduring peace and prosperity in the future. Within this framework, borders become doors to cooperation as we shun violence, condemn terrorism and embrace the spirit of a new approach to bilateral relations.

291. Statement by Official Spokesperson on the visit of Pakistan National Security Advisor Mahmud Ali Durrani.

New Delhi, October 14, 2008.

National Security Advisor to the Prime Minister of Pakistan, Mr Mahmud Ali Durrani visited India from 13-14 October, 2008 at the invitation of Shri M. K. Narayanan, National Security Advisor.

The two National Security Advisors reviewed the status of bilateral relations against the backdrop of recent summit level meetings between the leadership of both countries. The discussions which were held in very cordial atmosphere covered all issues of mutual concern and interest, including the regional situation. The discussions were most productive. The two National Security Advisors affirmed the utility of a dialogue of this nature and regarded their discussions as providing an important channel of communication between the highest level in the two governments¹.

The National Security Advisor of Pakistan called on the Prime Minister, the External Affairs Minister and also met with the Foreign Secretary. He also interacted with the National Security Council Secretariat and members of the National Security Advisory Board.

1. Media report said that Pakistan keen to placate India's concerns on the bomb blast on the Indian Embassy in Kabul in July in which India suspected Pakistani involvement Mr. Durrani attempted to assure the Indian leadership that "no Pakistani agency" was involved in the incident. He reportedly told New Delhi that all security agencies, including the ISI, were "firmly under the control of Pakistan's political leadership". It may be recalled that when the Pakistani Prime Minister Gilani had met Prime Minister Dr. Manmohan Singh in Colombo on the sidelines of the SAARC Summit, he had assured India of an internal probe in the possible role of ISI in the Kabul bombing. The present assurance was perhaps as a result of that meeting. Mr. Durrani also "assured" the Government of India that Pakistan was committed to upholding the ceasefire and that there was a "need to strengthen the mechanism", in which the concerns of both sides were fairly met. This assurance too tried to meet Indian concerns on the repeated ceasefire violations. The Indian Army reported over 50 ceasefire violations this year. Media reports said while the Indian Embassy bombing and ceasefire violations dominated

The National Security Advisor of Pakistan extended an invitation to the National Security Advisor of India to visit Pakistan, which was accepted with pleasure.

the discussions between Durrani and the Indian top leaders, the Pakistani NSA raised the issue of reduced flow in the Chenab river but was assured that India would abide by the provisions of Indus Water Treaty. The visiting NSA had a 40-minute meeting with BJP President Rajnath Singh also, when the issue of terror figured prominently. "India and Pakistan both have witnessed a series of blasts in recent days in which hundreds of innocent people lost their lives," said Rajnath Singh, to which Durrani replied that the Government of Pakistan was "trying hard" to control terrorism and that "Pakistan, too, had been a victim of terror". Rajnath Singh also said that incidents of "rampant violation of ceasefire" by Pakistani Army at the LoC were creating an "atmosphere of distrust". On the eve of the visit of Mr. Durrani, the Spokesman of the Pakistan Foreign Ministry Mohammed Sadiq reiterated Pakistan's commitment to a "serious, sustained and constructive" engagement between the two countries for "full and early normalisation of relations on the basis of mutual respect, peaceful co-existence and non-interference." The spokesman said Pakistan was to expand bilateral trade with India and was also ready for a liberalisation of the visa regime. But Mr. Sadiq also said Pakistan was "seriously concerned" about the reduction of the flow of water into Pakistan in the Chenab river as it caused "extensive damage" to crops on this side. As a result of Pakistan's complaints on the issue, India had invited the Pakistani Indus Waters Commissioner to inspect the Baglihar Dam. "We were assured the Indian government will take steps necessary to rectify the situation. Our efforts, however, will continue and intensify till the issue is resolved," he said. Asked to comment on Mr. Zardari's remarks in an interview to The Wall Street Journal, describing militants in Jammu and Kashmir as "terrorists" and that India was never a threat to Pakistan, the spokesman said the "sound bytes" had been "wrongly attributed" to the Pakistan President in the "paraphrased interview."

292. Joint Press Statement issued after the Special Meeting of the Joint Anti-Terrorism Mechanism.

New Delhi, October 24, 2008.

A Special Meeting of the Joint Anti-Terrorism Mechanism, as directed by the Prime Minister of India and the President of Pakistan in New York on 24th September 2008, was held in New Delhi on 24th October 2008. The Indian delegation was led by Shri Vivek Katju, Special Secretary, Ministry of External Affairs and the Pakistan delegation by Mr. Aizaz Ahmad Chaudhry, Additional Secretary, Ministry of Foreign Affairs.

Information on issues of mutual concern including the bombing of the Indian Embassy in Kabul was exchanged. The Meeting was held in a positive, constructive and forward looking atmosphere¹.

¹ Media report on the meeting of the joint anti-terrorism mechanism said that India raised with Pakistan the issue of Inter Services Intelligence's alleged involvement in acts of violence against its personnel and assets, manifest recently in the bombing of its Kabul embassy. India was worried and consistently drawn attention to the perceived gap between Islamabad's profession for a non-violent option to mend fences and actual acts of terror whose inspiration was Pakistan. Meanwhile when Prime Minister Dr. Singh met the Pakistani counterpart Gilani in Beijing on the sidelines of the ASEM Summit on October 25, he again raised with him the question of terrorism but was assured by Mr. Gilani that Pakistan did not support terrorism and in fact, it too was a victim of the same malice. Perhaps that assurance led the two prime ministers to tell the media after their meeting that Terrorism was the common enemy of both India and Pakistan. The meeting was a one-on-one affair with no aides present. "We expressed happiness at the resumption of trade" across the Line of Control in Jammu and Kashmir, Dr. Singh said. "We also discussed possibilities of increase trade between our two countries." Asked about the problem of terrorism, the Prime Minister said Mr. Gilani had assured him that Islamabad was seriously committed to working with New Delhi to control terror. "Terror is the common enemy of both India and Pakistan," he added. Mr. Gilani described terrorism as a "menace" which his government condemned in all its manifestations. "There is only one stand on terrorism, it is dangerous for both countries ... We are poor countries, we can't afford terrorism and therefore we should fight [it] jointly." he said. Asked about Islamabad's apprehensions over India violating the terms of the Indus Water Treaty, Prime Minister Singh said, "The implementation of the Indus Water Treaty in letter and substance is a commitment which we take seriously." He also said India would honour all of its commitments as far as the Baglihar project was concerned.

293. Response by Official Spokesperson to comments¹ made by the Pakistan Foreign Office Spokesperson on the ongoing elections in J&K.

New Delhi, November 21, 2008.

"We have seen certain comments made by the Pakistan Foreign Office spokesperson on the ongoing elections in J&K. It is most unfortunate that Pakistan has commented on an internal matter of India. We strongly object to these remarks. It is in Pakistan's own interest to play a responsible role in the region. Comments such as these hardly suggest that it is prepared to do so."

1. The Spokesperson was referring to the observation of the Spokesperson of the Pakistan Foreign Office on November 21 in Islamabad that ""The elections in Indian occupied Kashmir have been boycotted by the All Parties Hurriyet Conference. The top APHC leadership has been either arrested or detained. Mirwaiz Umer Farooq is under detention. Syed Ali Geelani was not allowed to travel to Srinager. Similarly Jammu and Kashmir Liberation Front leader Yasin Malik is under arrest. Pakistan has always upheld the inalienable right of the Kashmiri people to realize their legitimate aspirations in accordance with relevant UN resolutions. Pakistan has always underscored the need for associating the true representation of the Kashmir people with the Pakistan-India process on Jammu and Kashmir. The ongoing elections cannot be construed as authentic expression of the real aspirations of the Kashmiri people."

294. Joint Press Conference by External Affairs Minister Pranab Mukherjee and Foreign Minister of Pakistan Makhdoom Shah Mehmood Qureshi.

New Delhi, November 26, 2008.

Official Spokesperson (Shri Vishnu Prakash): A very good evening to all of you and welcome to the Joint Press Conference.

External Affairs Minister would be making an opening statement. Next, His Excellency the Foreign Minister of Pakistan would be making a statement. Sir, the floor is yours.

Minister of External Affairs (Shri Pranab Mukherjee): Thank you. Good evening, friends in the media.

I am glad to welcome you Excellency once again, my colleague the distinguished Foreign Minister of Pakistan Makhdoom Shah Mehmood Qureshi. Your last visit in June was unfortunately truncated and I am very glad that you have found time to visit India again to complete the programme drawn up during the earlier visit.

As you are aware, during his stay in India His Excellency Mr. Qureshi will be visiting Chandigarh, Jaipur and Ajmer. In fact, we travel to Chandigarh tomorrow to participate in a seminar on regional security and development. His Excellency Mr. Qureshi's visit to Delhi at this time, however, is an opportunity in that it enabled us to review bilateral relations and also progress in the Fifth Round of the Composite Dialogue. As you are aware, some of the meetings of the Composite Dialogue have already been completed and the others are scheduled to take place in December and January. We expect this round to be a productive and fruitful process.

In our review today we noted the substantial achievements already have been made in the Fifth Round. To list some of them, the opening of cross LoC trade, the agreement in principle to open the Wagah-Attari route for all permissible items of trade, the opening of Kokhrapar-Munabao rail link for trade in cargo, discussion on modalities of the Kargil-Skardu link, etc. We had agreed also that there should be quick and effective steps to implement on the ground all the decisions that have been taken. Insofar as cross LoC trade is concerned, both Governments are aware that certain teething problems and bottlenecks had to be addressed and these will be attended in the near future.

His Excellency Mr. Qureshi and I also discussed the need for effective steps to address the menace of terrorism which threatens societal and state stability in our region. The institutions which we have set up within the Dialogue framework such as Home Secretary level talks and the Joint Anti Terror Mechanism have been meeting regularly. In fact the Union Home Secretary had a meeting yesterday in Islamabad with his Pakistan counterpart, and the Joint Anti Terror Mechanism had met in a special session to discuss the terrorist attack on our Embassy in Kabul a few weeks ago. We agreed that it is important that these institutions should show concrete results.

During our meeting the Pakistani Foreign Minister and I also agreed that India-Pakistan Joint Commission and its eight Technical Level Working Group should also complete their work for this year. As you are aware, the Joint Commission encompasses areas such as environment, education, communication, science and technology; and its meeting help in broad-basing our bilateral relationship.

Once again I take this opportunity to welcome His Excellency Makhdoom Shah Mehmood Qureshi and his distinguished delegation to India and wish him a present and productive stay in India.

Thank you.

Official Spokesperson: Thank you, Sir. Mr. Foreign Minister, Sir, the floor is yours.

Foreign Minister of Pakistan (Mr. Makhdoom Shah Mehmood Qureshi): Thank you Mr. Mukherjee, thank you for having me over, thank you for your hospitality towards me and my delegation. It is indeed a pleasure to be in Delhi again. Unfortunately last time when I was here I had to abort my trip for reasons known to you. I have come to pick the thread from where I left things.

I came with a positive agenda then and I have come with a positive agenda now. In one sentence, what I want is friendly relations with India, period. We spent six decades in hostility, acrimony. The region has suffered. People have suffered. We must add a new leaf, and we must give people of South Asia hope, we must provide leadership, and we must show them the way forward.

In Pakistan today you have a democratic government. And I expect the largest democracy in the world to be supportive to a democratic dispensation

in Pakistan. The political environment of Pakistan today is very positive towards India. Not just the political parties in Government but the main opposition party is also positively inclined towards friendly relations and normalization towards India. I think we have this window of opportunity and we must avail and we must not let it pass us.

If the 21st century is going to be the century for the Asian subcontinent, we have to see, are we ready for that? And what sort of environment, what sort of enabling environment are we creating to take advantage of that opportunity? In my view, we have challenges and I am not underplaying the challenges we have. But I am confident that we can convert those challenges into opportunities, and let us do so.

I think the interaction that we have had today has been very constructive, very positive, and very forward looking. We have discussed a host of issues starting from trade and how we can enhance trade and how we mutually benefit from enhanced trade and how environment within Pakistan has changed vis-à-vis trade with India.

We have discussed liberalization of the visa regime and I pointed out the various statements made by the President of Pakistan and the Prime Minister of Pakistan. We also discussed how religious pilgrimage must be encouraged. There is a great demand for it and that would support, I would say, a great demand at the people's level as well as promote better understanding amongst people, will promote inter-faith dialogue, will promote tolerance, and would also promote tourism.

I have also discussed with the Foreign Minister, prisoners, and the condition of prisoners on both sides, and what we can do to ameliorate their condition. We have had discussion on the cultural exchanges and what needs to be done on that score. We have both recognized that the cross LoC trade is a landmark and we should build on the initiative that was started on the 21st of October. There are operational difficulties and we need to address them and address them very quickly.

The issue of terrorism obviously, as the Foreign Minister has mentioned, came under discussion and we are aware of the challenge. And we also recognize that both of us are victims of terrorism. India and Pakistan have had a number of incidents that are serious and we have to jointly combat this menace and common threat.

We also recognize that the Joint Anti Terrorism Mechanism which is in place is an important institutional mechanism and the Interior Secretary-

Home Secretary talks that have taken place in Islamabad today and yesterday were positive and meaningful progress has been made in them.

I did touch upon the water issue, the Chenab water issue. I have pleased and I am pretty sure that the Indian leadership is conscious of respecting the Indus Water Treaty in letter and spirit. I think a quick resolution is in order and we should see a mechanism is available and we should avail that mechanism to address this issue.

I have also highlighted the issue of Sir Creek and Siachen. I think we need to make progress and they are in my view solvable issues. And by making movement on these scores I think we can change the atmosphere that exists in South Asia for the betterment of our people. I feel our people deserve better.

Official Spokesperson: Thank you, Sir. Can I request you all once again to please put your phones on the silent mode. The Ministers will now take two questions from each side. When you ask a question please introduce yourself and your organization. Also indicate whom the question is addressed to. As a courtesy to our visitors the first question will go to the Pakistani side. May I request Ms Iman?

Question (Ms. Iman Hassan. Geo TV): My question is addressed to Indian Foreign Minister Mr. Pranab Mukherjee. This water issue has been raised many times before. Is India ready to address Pakistan's concern now and also compensate for the lost water, that is 22,000 cubics which has of course affected our crops badly?

External Affairs Minister of India: This issue has been discussed. First of all I would like to clarify one point. Indus Water Treaty was signed sometime in early 1960s. And even at the highest of our conflict and divergence of views between our two countries we did never stop flow of water as per the agreement. Sometimes it happened and not only with Pakistan but with many countries who share transnational water courses, if availability of water at the discharging point is not adequate, both sides suffer. What has happened in the current case was (that) water was not available. Water Commissioners are meeting, technical experts are meeting to find out a mechanism through which by sharing the data and information no misunderstanding is being created. I can assure you whatever water would be available as per the agreement would be distributed and the agreement in letter and spirit will be adhered to. But, at the same time, water at the discharging point must be made available. Thank you.

Question (Ms. Maya Mirchandani, NDTV): The question is for Mr. Qureshi. Sir, the Indian cricket team has expressed some reservations about coming to Pakistan under the current security climate on their tour. What is your reaction to that? Mr. Mukherjee, Sir, if I could ask you, the Thai Government has sent India a Note Verbale saying that the Indian Navy had sunk a Thai trawler in the Gulf of Aden. Does the Indian Government accept these claims and will you be offering any compensation?

Foreign Minister of Pakistan: Madam, the people of India and Pakistan love cricket. And what a thriller when Pakistan and India are competing in a cricket stadium! Let the people of the subcontinent enjoy the game. We welcome you to Pakistan. We will address all your security concerns. You will be our guests. We assure you of all the security that is required. We will address all issues that are raised by the experts. So, come to Pakistan. The people of Pakistan are keen to receive you and are keen to watch your team perform in Pakistan. And let me also point out, the security concern that has been raised right now there are Indian tennis players in Pakistan playing in Pakistan and they are secure and they are safe. There is also the India shooting team is right now in Pakistan and they are enjoying their stay in Pakistan. We were sorry to have missed the Indian hockey team coming to Pakistan because we were looking forward to a very healthy hockey tournament in Pakistan. So, you are welcome. And we assure of addressing all your concerns.

External Affairs Minister of India: So far as the question of action against Thai trawler is concerned, first of all I would like to express my deep condolence for the loss of lives of the crew. But at the same time it is to be kept in mind that the trawler was under the command of the pirates. As per international law and practice followed in every country in the high sea, if the pirates do not surrender and if the ship or vessel is sunk, it is perfectly within the right as for international law. But again I express my deep condolence for the loss of lives. Here the ship was under the control of the pirates and off late the capturing ship demanding compensation, putting the crew on board through immense suffering has become a regular practice in some parts of the sea lanes. Therefore, the international community will have to assert to take action against these pirates.

Question (Mr Fakhar ur Rehman. Aaj TV): My first question is addressed to His Excellency Mukherjee. Since your Pakistani counterpart has expressed that the trade should be enhanced at the benefit of mutuality, how does India intend to correct the balance which is heavily tilted towards

India and of course on sustainable balance? The second is to both of you. You have identified many issues that you have reviewed and discussed but Kashmir was left. There have been reports that Bill Clinton is going to be appointed as special representative for the resolution of Kashmir issue. How do India and Pakistan see this move?

External Affairs Minister of India: So far as the question of expansion of trade is concerned, in fact trade is expanding. Currently the bilateral trade is at around two billion US dollar. With the opening of the new routes which I have identified, one specially dedicated rail link for cargo trade and Wagah-Attari road for the passengers and other type of commodities, we do hope that the volume of trade will further increase. In respect of the balance of trade, it is not possible for every country to have balance of trade but we should try to as far as possible reduce the trade gap. That has been the practice everywhere. And if we can enhance the volume of trade, and the hon'ble Minister of Pakistan has also explained in details when we were discussing we have exchanged our views that a number of items have been added. And perhaps now we are going to realize what was agreed while finalizing SAFTA in 2003-04 that instead of having a positive list there will be the concept of the negative list. That means there will be no items which can be tradable between India and Pakistan to a considerable extent that will improve the export from Pakistan to India. As and when it happens, definitely the trade imbalance will be reduced. So, we are working on that.

Foreign Minister of Pakistan: To your question vis-à-vis Jammu and Kashmir I want to assure, Sir, that it has not been forgotten and not been left. You know that it is an important segment in the Composite Dialogue. And as you will recall that the Fifth Round of the Composite Dialogue has commenced. So, when the segment of Jammu and Kashmir comes under discussion it will be discussed and taken up in a meaningful manner. Coming down to the point of trade, you must be aware of the fact, since you are from Pakistan, that in the new trade policy that is announced this year we have added 139 new items which were not on the positive list and now are tradable and have been put on the positive list. We have also identified a number of items which Pakistan can trade with India which will correct the trade distortion and the trade balance. I am also of the view that if India could look into a reduction of certain non-tariff barriers, then trade between the two countries can be more balanced and enhanced.

External Affairs Minister of India: I would just like to respond to that because I did not mention that was also addressed to me. So far as Jammu

and Kashmir is concerned, it is essentially a bilateral issue between India and Pakistan which we have agreed, and on various forums starting from Shimla Agreement to Lahore Declaration that this issue is to be resolved through dialogue between our two countries. And this is also a part of the Composite Dialogue. Therefore, there is no question of having any intervention by any third party.

Official Spokesperson: Last question, Srinjoy. And kindly restrict yourself to one question.

Question (Mr Srinjoy Choudhary): A question for the Foreign Minister of Pakistan. Sir, can you give us something about the fate of Sarabjeet Singh? There seems to be some talk about his being released. And also, Sir, as far as cricket is concerned, question for both of you, if the tour does not come through, will Indo-Pak ties be affected?

Foreign Minister of Pakistan: Why be negative? I have come with positive foot forward. So, I do not want to be negative at all. Why should not the tour come through? It can come through. Hopefully, it will come through. Let us look at it positively. And we are willing to do whatever we can to make it possible.

On Sarabjeet Singh's case, yes, we are cognizant of your concern and the family's concern. As you know, Pakistan has taken steps to address that. And we are examining the case and, hopefully, something positive will come out of it.

External Affairs Minister of India: And I hope the cricket team also will go and they will play and people will enjoy. Thank you.

Foreign Minister of Pakistan: So, create a positive pitch, you see. We want to play! Give us a positive pitch. I have come to roll for the positive pitch. Thank you.

Official Spokesperson: Thank you. That draws the event to a close. Thank you very much.

295. Joint Statement issued at the end of India - Pakistan Home/Interior Secretary level talks.

Islamabad, November 26, 2008.

1. The fifth round of Interior/Home Secretary Level Talks between Pakistan and India on Terrorism and Drugs Trafficking was held in Islamabad on 25th and 26th November 2008 as a part of the Composite Dialogue. The Pakistan delegation was led by Syed Kamal Shah, Secretary, Ministry of Interior, while the Indian delegation was headed by Mr. Madhukar Gupta, Home Secretary of India.
2. The meeting was held in a cordial and friendly atmosphere.
3. Both sides discussed the issues related to terrorism and drug trafficking and reviewed the implementation of decisions taken during the last round. Both sides noted with satisfaction the progress made and identified ways to further promote cooperation in a number of areas¹.
4. Both sides condemned terrorism in all its forms and manifestations and affirmed their resolve to cooperate with each other to combat the menace of terrorism. It was agreed that terrorism must be

1 Media report said that on the first day of talks the Indian side reiterated its request for release of the death-row prisoner Sarabjit Singh, who was languishing in Lahore's Kot Lakhpat jail for 18 years. The report quoting a knowledgeable Indian official said that "the request was made keeping in view the public sentiment on this issue in India," but added, the Pakistan side "did not give any direct responses." The official was quoted as having said that Pakistan did not bring up any matter relating to the ongoing investigation by India into the Samjhauta Express firebombing. The issue of the January 2009 cricket tour of Pakistan by India also reportedly did not come up at the meeting. But separately, Pakistan Cricket Board chairman Ejaz Butt met Indian High Commissioner Satyabrata Pal and the two discussed the tour, whose fate appears uncertain on account of security fears particularly in the wake of latest terrorist attack in Mumbai. Mr. Butt was said to have given the assurance that Pakistan would provide fool-proof security for the visitors. The *Dawn* of Karachi quoted officials of the Pakistan's Interior Ministry to say that the decisions were taken during the composite dialogue, which reviewed proposals by President Asif Ali Zardari for a treaty to make South Asia a non-nuclear region and an economic hub. The paper quoted Interior Secretary Syed Kamal Shah to suggest that the FIA and the CBI would formulate a joint strategy to control influx of fake currency and curb human smuggling. *Dawn* also said that Pakistan expressed its concern over the way some of the recently released Pakistani prisoners had been treated. While the Indian side claimed that Daud Ibrahim, one of the most-wanted persons in India, was in Pakistan the claim was denied by Pakistani side, which said India should provide more evidence in this behalf.

prevented and as directed by the leadership of the two countries at the meeting in New York on 24 September 2008, severe action be taken against any elements involved in terrorist acts.

5. Both sides welcomed the release of prisoners and fishermen by each other on the eve of these talks as a gesture of goodwill and on humane considerations. It was agreed to exchange by 31st December 2008, names of those civil prisoners, who have completed their sentence and whose national status has been confirmed, with a view to facilitating their release in January. It was further agreed that, henceforth, verification of nationality status would be completed within six weeks of provision of consular access. It was also agreed to facilitate the expeditious release of fishermen and boats.
6. Both sides welcomed the signing of Agreement on Consular Access during the review of the Fourth Round of Pakistan-India Composite Dialogue, and affirmed full implementation of the Agreement.
7. Both sides commended the work done by the Judicial Committee on Prisoners for the release, repatriation and humane treatment of prisoners and agreed on the need for the continuation of the work of the Committee.
8. Both sides underscored the need for visa liberalization. In this context, useful discussions were held on draft Visa Agreement. The Indian side would propose a draft Visa Agreement within four weeks, based on parameters discussed.
9. Both sides agreed that the issue of inadvertent crossers be viewed from a humanitarian dimension and recommended early finalization of the draft agreement regarding inadvertent crossings by the expert group on Conventional CBMs which is due to meet soon.
10. Both sides noted that Protocol of 1974 on visits to religious shrines was due for revision along with lists of religious shrines in both countries. The subject will be discussed under the segment of Secretary Culture level talks on Promotion of Friendly Exchanges which is likely to take place soon. It was recommended that a revised Protocol and the list of shrines should be finalized as early as possible and the Pakistan side agreed to furnish its comments on the lists before the talks on Friendly Exchanges.

11. Both sides assessed as positive the existing cooperation and information sharing between the Anti Narcotics Force of Pakistan and the Narcotics Control Bureau of India and agreed that both Agencies would enhance mutual cooperation in terms of effective and sustained steps to control drugs trafficking.
12. The MoU on Drug Demand Reduction and Prevention of Illicit Trafficking in Narcotics Drugs/Psychotropic Substances and Precursor Chemicals and Related Matters, was initialed. Both sides welcomed this development and agreed that the MoU will further promote bilateral cooperation in this field. It was agreed that Director General ANF of Pakistan and Director General of NCB of India will meet as early as possible to discuss ways of furthering cooperation.
13. It was decided that the Federal Investigation Agency of Pakistan and the Central Bureau of Investigation of India will schedule a meeting at an early date to discuss ways of cooperation in addressing the issues of human trafficking, illegal immigration, and counterfeit currency, along with Red Corner Notices (RCN) subjects.
14. The Home Secretary of India also called on the Advisor to the Prime Minister on Interior/Minister and discussed issues of mutual interest.
15. It was agreed to continue the discussions within the framework of the Composite Dialogue.

296. Address of Prime Minister Dr. Manmohan Singh to the Nation on terrorist attack on Mumbai.

New Delhi, November 27, 2008.

Dear Citizens,

The dastardly terror attacks that took place in Mumbai last night and today leading to the loss of many precious lives and injuries to many others have deeply shocked the nation. I strongly condemn these acts of senseless violence against innocent people, including guests from foreign countries. I offer my deepest condolences to the bereaved families and sympathies to those injured. The Government will take all necessary measures to look after the wellbeing of the affected families, including medical treatment of injured.

The well-planned and well-orchestrated attacks, probably with external linkages, were intended to create a sense of panic, by choosing high profile targets and indiscriminately killing foreigners.

I salute the courage and patriotism of the police officers, including the Chief of the Anti-Terror Squad, Shri Hemant Karkare and men who have laid down their lives in fighting these terrorists. I assure the country that we will attend in an urgent and serious manner to police reform so that the law and order authorities can work unitedly, effectively and in a determined manner to tackle such threats to national integrity.

We are not prepared to countenance a situation in which the safety and security of our citizens can be violated with impunity by terrorists. It is evident that the group which carried out these attacks, based outside the country, had come with single-minded determination to create havoc in the commercial capital of the country.

We will take the strongest possible measures to ensure that there is no repetition of such terrorist acts. We are determined to take whatever measures are necessary to ensure the safety and security of our citizens.

Instruments like the National Security Act will be employed to deal with situations of this kind. Existing laws will be tightened to ensure that there are no loopholes available to terrorists to escape the clutches of the law. Most importantly, it is essential to immediately set up a Federal Investigation Agency to go into terrorist crimes of this kind and ensure that the guilty are brought to book.

We will take up strongly with our neighbours* that the use of their territory for launching attacks on us will not be tolerated, and that there would be a cost if suitable measures are not taken by them. We will take a number of measures to strengthen the hands of our police and intelligence authorities. We will curb the flow of funds to suspect organizations. We will restrict the entry of suspects into the country. We will go after these individuals and organizations and make sure that every perpetrator, organizer and supporter of terror, whatever his affiliation or religion may be, pays a heavy price for these cowardly and horrific acts against our people.

In this hour of tragedy, I appeal to the people to maintain peace and harmony so that the enemies of our country do not succeed in their nefarious designs. All concerned authorities are on alert and will deal sternly with any attempts to disturb public order.

I am confident that the people of India will rise unitedly to face this grave challenge to the nation's security and integrity.

Jai Hind !

1 The reference in the statement to the "neighbours" as a source of terror had a ominous ring for the future of India-Pakistan relations. Pakistan felt jittery since the footprints of the terrorists pointed clearly to that country. In a preemptive move and to assure India that its hands were clean, President Asif Ali Zardari telephoned Congress president Sonia Gandhi on November 27 evening and said that militancy and extremism in all their forms and manifestations had to be eliminated and all countries needed to cooperate with each other in this regard, the spokesman for President Zardari, Farahtullah Babar said. He termed the killings of innocent people "a detestable act" and condemned the attacks "in the strongest possible terms," the spokesman said. Hinting that "militants and extremists wanted to destabilize the peace and the peace process between the two countries," Mr. Babar said it should not be allowed to happen. Earlier, in separate messages, both Mr. Zardari and Prime Minister Yousuf Raza Gilani condemned the attack. The Pakistan president called for "strict measures" to eliminate terrorism and extremism, while Mr. Gilani urged "concerted efforts to make the region a peaceful place." Foreign Minister Shah Mahmood Qureshi told Dawn News from Chandigarh, where he happened to be on the fateful day, that he would meet Prime Minister Manmohan Singh on November 28 and express condolences on behalf of the government and people of Pakistan. He would also offer all support, assistance and co-operation from Pakistan in tackling the "common enemy" of extremism and terrorism that faced the two countries. "We need to be calm, we need to be composed and supportive of each other," Mr. Qureshi said.

Mr. Qureshi on reaching Islamabad issued another statement which strongly condemned the terrorist attacks the previous night. He said that terrorism was a menace threatening humanity and humanity should join hands in fighting this scourge. "Pakistan condemns terrorism in all its forms and manifestations. Pakistan itself has suffered because of terrorism and sacrificed much in fighting this threat", he said. Both the President Zardari and Prime Minister Gilani sent separate messages of condolences to their counterparts.

297. Press Release of the Ministry of External Affairs on External Affairs Minister's conversation with Foreign Minister of Pakistan.

New Delhi, November 28, 2008.

The External Affairs Minister spoke this evening to the Foreign Minister of Pakistan Makhdoom Shah Mahmood Qureshi to convey the hope that the Government of Pakistan will take immediate action with regard to the terrorist attacks on Mumbai. He conveyed that while the Government of Pakistan has said that it wants a leap forward in our bilateral relations, outrages like the attack on our Embassy in Kabul and now the attack on Mumbai are intended to make this impossible. The groups responsible and their supporters are, therefore, also acting against the direct interests of the Government of Pakistan. We expect Pakistan to honour its solemn commitments not to permit the use of its territory for terrorism against India.

v v v v v

298. Press Release of the Ministry of External Affairs on the calls by world leaders to External Affairs Minister.

New Delhi, November 28, 2008.

Several world leaders have spoken¹ to the External Affairs Minister, Shri Pranab Mukherjee in the last 48 hours, conveying their condolences to the victims of the barbaric terrorist attack in Mumbai, and offering sympathy, help and support. Among these leaders were the President of Sri Lanka Mr. Mahinda Rajapaksa, Foreign Minister of Oman Mr. Yousuf Bin Abdullah, US Secretary of State Ms. Condoleezza Rice, Foreign Minister of Australia Mr. Stephen Smith, Foreign Minister of Israel Ms. Tzipi Livni, Foreign Minister of Canada Mr. Lawrence Cannon, Foreign Minister of Pakistan Mr. Makhdoom Shah Mahmood Qureshi, Foreign Minister of France Mr. Bernard Kouchner and Arab League General Secretary Mr. Amre Moussa.

❖ ❖ ❖ ❖ ❖

¹ These calls came in the wake of terrorist attack on Mumbai in which more than 200 people, including American, British and Israeli nationals were killed, and hundreds were injured.

299. Prime Minister Dr. Manmohan Singh's remarks at the All-Party Meeting to discuss the terrorist attack on Mumbai.

New Delhi, November 30, 2008.

Esteemed Chairperson UPA, respected colleagues and friends. I thank you all for being here at such short notice.

The ordeal at Mumbai, which occupied the attention of the entire nation, has finally come to an end. All of us share the grief of those who have lost their loved ones in this dastardly and brutal attack and also the pain and anguish of those grievously wounded. We cannot lessen their grief. But we will do all we can to alleviate their suffering. I give you my solemn assurance that we will look after the needs of those who survive this horrible tragedy¹.

We salute the bravery of our security forces who fought the terrorists in exceptionally difficult circumstances. They tried their utmost to save innocent lives at great personal risk. Twenty officers and men made the ultimate sacrifice by laying down their lives. The entire nation owes a debt of gratitude to these men that we can never repay.

1. Meanwhile India privately insisted that it had proof of the involvement of Pakistan's Inter-Services Intelligence agency in terrorist attacks in Mumbai but avoided public accusation of Pakistan to cool down the ensuing tension in bilateral relations which could be used by those responsible for the attack. According to media reports official sources said investigators had "the names of the handlers and trainers, the locations where the training was held, and some of their communication through Voice over Internet Protocol, have addresses that have been used by known ISI people before." It was further clarified that contrary to media reports in India and Pakistan, the demarche which was handed over to the Pakistani side earlier in the week did not contain the list of 20 most wanted terrorists that had first been given to Islamabad in 2000. Once the media started saying India was demanding the immediate handing over of the 20 fugitives, New Delhi could hardly contradict those reports since their return was a long-standing Indian demand. The present demarche made only a pro forma reference to the return of unnamed fugitives but was otherwise exclusively focused on the Lashkar-e-Taiba and its leader Hafiz Saeed, whom New Delhi regards as the perpetrators of the Mumbai terror strikes. The media stories scrupulously avoided blaming the Pakistani civilian government but added it would be surprising if the ISI were able to operate without the military leadership's knowledge. Media believed Pakistan had a fragmented power structure hence the complexity. In pretending its earnestness to act against terrorist elements, Pakistan half-heartedly mounted an "intelligence-led operation" against the banned militant outfits in Pakistan-occupied Kashmir and made several arrests. Military spokesman Major-General Athar Abbas did not specify that the target of the operation or the names of those arrested. He also declined to divulge the exact number of those arrested. Media quoted some independent sources to say that security forces raided a "centre" of the Jammāt-ud-Dawah, a LeT front organisation, 5 km from the POK capital

We have had terrorist attacks before also. But this attack was different. It was an attack by highly trained and well-armed terrorists targeting our largest city. They came with the explicit aim of killing large numbers of innocent civilians, including foreign visitors. They sought to destroy some of the best known symbols of our commercial capital.

We share the hurt of the people and their sense of anger and outrage. Several measures are already in place to deal with the situation. But clearly much more needs to be done and we are determined to take all necessary measures to overhaul the system.

We are further strengthening maritime and air security for which measures have been initiated. This will involve the Navy, the Coast Guard and the coastal police, as well as the Air Force and the Civil Aviation Ministry.

The anti-terrorist forces of the country will be further strengthened and streamlined. The National Security Guard, which is the principal anti-terrorist force of the country, will be given additional facilities and the size of the force is being augmented. Steps have also been initiated to establish another 4 NSG hubs in different parts of the country. Additionally, the special forces at the disposal of the Centre would be appropriately utilized in counter insurgency operations.

Muzaffarabad, and that Lakhvi was among those taken into custody. The Dawn newspaper reported he was among those arrested after the operation began on December 8 afternoon. Pakistani media estimated that the arrests ranged from nine to 20. In order to cool New Delhi's temper, Pakistan Foreign Secretary Salman Bashir had a meeting the next day (December 9) with the Indian envoy, Satyabrata Pal, and suggested that a "high-level delegation" from Pakistan should visit New Delhi "as soon as possible" as that would help to carry forward investigations that it had initiated "on its own" into the alleged involvement of "any individual or entity in Pakistan" in the Mumbai attacks. He reiterated Islamabad's offer of a joint investigation of which India continued to be wary. The Pakistani Cabinet Committee on Defence, after its meeting on December 9, clarified "that all actions taken will be within the ambit of Pakistani law." The Defence Committee reiterated its tall claim that Pakistan would not allow its soil to be used for any kind of terrorist activity anywhere in the region or the world, and the offer of "full cooperation with India, including intelligence sharing and assistance in investigation as well as setting up of a joint investigative commission. The Lashkar and Jamat-ud-Dawah instead of being repentant or feeling remorse reacted angrily to the military action and said the raids on their outfits would "crush Azad Jammu and Kashmir" and described the action as under "Indian pressure" and therefore "unwarranted".

Maulana Fazlur Rehman of the Jamiat-e-Ulema Islami hit out at the government for acting under "external pressure," saying that if Pakistan had acted on its own initiative it was another thing. Qazi Hussein Ahmed, leader of the hardline Jamat-e-Islami, was also critical of the government for coming under pressure from India and the US. "It is a sign of the government's weakness," he said.

We have finalized a set of legal measures based on the recommendations of the Administrative Reforms Commission which includes the setting up of a Federal Investigating Agency.

In the face of this national threat and in the aftermath of this national tragedy, all of us from different political parties must rise above narrow political considerations and stand united. We should work together in the interest of the country at this critical juncture.

We should build a consensus on what needs to be done to strengthen the ability of our system to meet these threats. The terrorists and enemies of our nation must know that their actions unite rather than divide us.

I do hope that at the end of our discussions today we will be able to give our collective assurance to the nation that, across the political spectrum, we stand together at this hour. I look forward to hearing the views of each one of you."

The Prime Minister then requested his cabinet colleague Shri P. Chidambaram to open the discussions.

The actions of the Pakistan government were to be seen in the background of the visit of US Secretary of State who visited Islamabad. She left the Pakistani leaders in no doubt what the Washington made of these developments and what the international community expected of Pakistan. Dr. Rice on return to Washington said that there was evidence of involvement of elements "somehow" operating from Pakistan soil in the Mumbai terror attacks and pressed Islamabad to act quickly to arrest suspects to ensure there was no "follow-on attacks." She also advised an "outraged" India to exercise restraint. "I think we do believe that there was - there is evidence of involvement somehow of Pakistani soil...even if these were non-state actors, which I believe they were - non-state actors operating on Pakistani soil. It is still Pakistan's responsibility to respond," she told Fox News.

She said she had stressed during her visit to Pakistan last week how important it was for Islamabad to act quickly but denied there was a 48-hour deadline to take action, as reported in the media. Ms. Rice was asked to comment on a report that she had asked Pakistan government to arrest a former head of Pakistani intelligence outfit, ISI. "Well, I don't want to get into the details of this. This is counter-terrorism work. And obviously, I don't want to tip their hand or ours. But this is a time when Pakistan must act. They must act in concert with India, with the United States. Great Britain is helping," she said. "I was absolutely convinced that President Zardari, Prime Minister Gilani and other officials understand this that it is also Pakistan's fight, because it is trying to root out terrorism and terrorists within that country. So, I did feel that there was a good, strong commitment there. But now we have to see follow-through," she said. Dr. Rice added for good measure that though she could understand the frustration and anger of India, New Delhi should restrict itself from any action that could make the situation worse.

300. Press Release of the Ministry of External Affairs on the calling in of the High Commissioner of Pakistan.

New Delhi, December 1, 2008.

1. The High Commissioner of Pakistan¹ was called to the Ministry of External Affairs this evening. He was informed that the recent terrorist attack on Mumbai was carried out by elements from Pakistan. Government expects that strong action would be taken against those elements, whosoever they may be, responsible for this outrage.
2. It was conveyed to the Pakistan High Commissioner that Pakistan's actions needed to match the sentiments expressed by its leadership that it wishes to have a qualitatively new relationship with India.

¹ Pakistani High Commissioner Shahid Malik was summoned by T. C. A. Raghavan, Joint Secretary and Head of the Pakistan, Afghanistan, and Iran Division in the MEA. With evidence pointing to involvement of Pakistani terrorists in the Mumbai terrorist attacks, he conveyed India's "outrage" to him which it was said had dealt a "serious setback" to ties. Separately Minister of State Anand Sharma said the attacks in Mumbai has dealt a "serious setback to the ongoing process of improving environment in the region and normalisation of relations (with Pakistan)." The decision to summon the Pakistani envoy was taken at the all-party meeting convened by the Prime Minister the previous day and the sentiments expressed in the demarche were more or less on the lines of the observations made at that meeting and by External Affairs Minister Pranab Mukherjee. "Mumbai was a serious development. The response has to be measured and calibrated and in keeping with the status of India as a responsible power, We have decided that we will collate all the information and piece together the picture and then act," media quoted informed official sources while pointing out that Prime Minister Manmohan Singh had not named Pakistan for the attacks while Mr. Mukherjee had said "certain elements" in Pakistan appeared to have backed the terror strikes. Media reports said that the Government had no immediate plans to augment troops strength on the borders with Pakistan.

On December 2, speaking after an Indo-Arab function in New Delhi, Mr. Mukherjee said India had called for handing over several persons suspected of having committed acts of terror on its territory and New Delhi would wait for Pakistan's response. "Now, we have in our demarche asked [for] the arrest and handover of those persons who are settled in Pakistan and who are fugitives of Indian law... there are lists of about 20 persons. [These] lists are sometimes altered and this exercise is going on and we have renewed it in our demarche," he said. On the same day on December 2 in a policy statement telecast over Pakistan TV Pakistani Foreign Minister Shah Mahmood Qureshi made the offer of joint investigation by a mechanism headed by the National Security Advisors of the two countries, which India did not accept in view of the earlier experience since it did not produce any results in the past.

There were strong indications that Pakistan tour of the Indian cricket team in January 2009 may be cancelled. But it was clarified by official sources that no final decision had been taken. The Sports Minister Dr. M. S. Gill later said that the Indian team should not tour Pakistan. Later, on the advice of the Government of India, the Board of Control for Cricket in India cancelled the Indian team's tour of Pakistan scheduled for January 2009.

301. Press Release of the Ministry of External Affairs on the briefing for Foreign Heads of Mission.

New Delhi, December 2, 2008.

A briefing was held in the Ministry of External Affairs today to convey the deepest condolences of the Government of India to those countries whose nationals were killed in the terrorist attack in Mumbai. Heads of Mission from these countries were present in the briefing. They were also informed of details of the terrorist attack and the investigation so far¹.

1 Reacting to the remarks by the US President-elect Obama that every sovereign nation has the right to protect its territory, External Affairs Minister Pranab Mukherjee said the same day (December 2) "time will show" what action India will take in response to the Mumbai terror attacks. Every sovereign nation has the right to protect its territorial integrity and take action as it saw fit, Mukherjee told journalists. He, however, cautioned against misinterpreting his observation to mean military action. "What will be done, time will show and you will come to know," EAM said when asked about U.S. President-elect Barack Obama's suggestion that India had the "right to protect itself." Mr. Mukherjee's remark came even as three influential United States Senators, including John McCain "struck by the emotions" expressed by Prime Minister Manmohan Singh and Mr. Mukherjee, urged India not to consider the option of war. Media said that highly placed official sources also dismissed the talk of India mobilising troops on the border, suspending air and rail links and putting a halt to the peace process as "motivated propaganda," aimed at diverting the attention from the Mumbai attacks. Meanwhile speaking after an Indo-Arab function in New Delhi, Mr. Mukherjee said India had called for handing over several persons suspected of having committed acts of terror on its territory and New Delhi would wait for Pakistan's response. "Now, we have in our demarche asked [for] the arrest and handover of those persons who are settled in Pakistan and who are fugitives of Indian law... there are lists of about 20 persons. [These] lists are sometimes altered and this exercise is going on and we have renewed it in our demarche," he said. India was so much anguished by the complicity of Pakistani elements in the Mumbai attack that it did not accept Pakistan's offer of a "joint investigating mechanism" to probe the attacks. Pakistani Foreign Minister Shah Mahmood Qureshi made the offer in a "policy statement" telecast over the state-owned Pakistan Television. President Asif Ali Zardari rejection of India's demand to hand over Lashkar-e-Taiba (LeT) chief Hafiz Mohd. Sayeed and other fugitives in the wake of the Mumbai terror attacks, and his expression of doubt whether the arrested terrorist was a Pakistani, anguished India further and confirmed New Delhi in its view that Pakistan offer of cooperation was only half-hearted at best. But he conceded the possibility that the terrorists could be non-state actors, who were operating throughout the region. It did not take long for Pakistan to show its real intention of non-cooperation when in a US television show 'Larry King Live' on CNN, Pakistan President Asif Ali Zardari rejected India's demand to hand over Lashkar-e-Taiba (LeT) chief Hafiz Mohd. Sayeed and other fugitives in the wake of the Mumbai terror attacks, and once again expressed his doubt on India's claim that the captured gunman was a Pakistani national. "We have not been given any tangible proof to say that he is definitely a Pakistani. I very much doubt that he's a Pakistani." Denying Pakistan's involvement in the attacks, he said the terror strikes were executed by "stateless actors," who wanted to hold the "entire

302. Press Release of the Ministry of External Affairs on the visit of US Secretary of State Dr. Condoleezza Rice to offer the condolences of the U. S. Government on the killings of innocent citizens in a terrorist attack in Mumbai.

New Delhi, December 2, 2008.

The US Secretary of State, Dr. Condoleezza Rice is visiting New Delhi on December 3, 2008. Her visit is in the context of the terrorist attack in Mumbai that had targeted innocent civilians including tourists from all parts of the world.

Both President Bush and Secretary Rice have been in telephonic contact with PM and EAM since November 27, 2008 and have offered any assistance that India may need.

On November 30, 2008 President Bush had spoken with PM and, reiterating the commitment of the United States to stand in solidarity with the people of India in working together against such Extremism, indicated that he would be asking Secretary Rice to visit India.

Secretary Rice will be meeting Prime Minister, External Affairs Minister and is likely to meet Home Minister and NSA.

world hostage." "These [terrorists] are stateless actors, who have been operating throughout the region. They include gunmen and the planners and are holding the entire world hostage. The State of Pakistan is not responsible for the attacks in Mumbai... even the White House and the CIA have said so," he said.

Giving some essential details of the proof in its hands the Indian media quoting the sources said investigators had "the names of the handlers and trainers, the locations where the training was held, and some of their communication through Voice over Internet. Police have addresses that have been used by known ISI people before." The sources said that India did not believe the civilian government in Pakistan was involved in the incidents. Asked about the Pakistani Army chief's potential role, they said it would be surprising if the ISI were able to operate without the military leadership's knowledge. Describing Pakistan as a country with a fragmented power structure, the sources said India's response to what has happened in Mumbai could not be the same as in December 2001, when a terrorist attack on Parliament triggered the offensive deployment of troops on the border and the suspension or downgrading of transport and diplomatic links. "Then, we were dealing with one Pakistan. There was Musharraf and that was it. Today, the situation is different."

In a move to ward off the accusations for its inaction from Western world the Pakistan Foreign Secretary in a meeting with the Indian High Commissioner in Islamabad on December 8 told him that the Government of Pakistan had initiated investigations on its own into the allegations that have surfaced concerning involvement of any individual or entity in Pakistan in the Mumbai attacks. He however added for good measure that "to carry forward these investigations, we require detailed information/evidence." In this context, while reiterating Pakistani suggestion for joint investigations, the Foreign Secretary proposed that a high level delegation from Pakistan may visit New Delhi as soon as possible.

303. Press Release of the Ministry of External Affairs on the message on Specter of terrorism issued by the Conference on Financing for Development.

Doha, December 2, 2008.

The United Nations Conference on Financing for Development closed in Doha today. Among its key message was that the spectre of terrorism is on the rise and has serious implications for economic development and social cohesion, apart from its horrific human misery. The international community resolved to act together stronger than ever to address terrorism in all its forms and manifestations. This was piloted by the Indian delegation.

The Conference had opened on Saturday, November 29, 2008 observing a minutes silence in memory of the victims of the terrorist attacks in Mumbai. Heads of State / Government and Ministers who addressed the plenary of the Conference spoke in near unanimity in condemning the attacks, and expressing sympathy and solidarity with India. The United Nations Secretary General also echoed a similar sentiment in his opening remarks.

The Conference resolved that the United Nations will hold a conference at the highest level on the world financial and economic crisis and its impact on development.

304. Interview of External Affairs Minister Pranab Mukherjee on NDTV: 'Tonight Programme'.

New Delhi, December 2, 2008.

Interviewer (Ms Nidhi Razdan): Well, as the country grapples with the aftermath of the terror strikes in Mumbai, tensions are rising between India and Pakistan. The question is, has the peace process been severely affected and could these tensions escalate further. Joining us on NDTV Tonight, the External Affairs Minister, Mr. Pranab Mukherjee.

Mr. Mukherjee, thank you for speaking to us. Is the Mumbai attack in your opinion, a big setback to the peace process?

External Affairs Minister (Shri Pranab Mukherjee): It has vitiated the atmosphere, no doubt. First, in the attack on our Mission in Kabul, two of our diplomats and certain other staff, apart from a large number of innocent persons, including school-going children, were killed. Then this attack. Naturally it has vitiated the peace process. While we have no intention of not carrying on with peace process, but definitely when peoples' sentiments are affected, it creates an atmosphere which is not conducive to carrying on business as usual, it has some impact. Therefore, these incidents, and if these are not adequately addressed by the other (Pakistani) side, create an atmosphere in which it becomes difficult to carry on normal business including the peace process.

Interviewer: Are you saying, Sir, that it is possible that India could rethink the peace process; that we could perhaps suspend the Composite Dialogue process?

External Affairs Minister: We have sent a demarche. We are expecting to receive a reply. Moreover, we expect Pakistan to take certain concrete action because they themselves have committed not to allow Pakistani territories to be used to carry on terrorist activities against India.

Interviewer: So, the Composite Dialogue, Sir, could be affected, if you are not satisfied with their reply?

External Affairs Minister of India: What we expect is not only a reply. Much more important than reply or response is action. We have suggested to them to take action against the terrorist organizations located in Pakistan, against the persons to whom the needle of suspicion points. If they take appropriate action, definitely the process would be invigorated.

Interviewer: But it could also be suspended, if they do not?

External Affairs Minister: Conclusion is yours. I have given the reply.

Interviewer: Sir, you have said that elements in Pakistan are behind the attack. Would you say that these are non-state elements or do you believe there could be sections of the military or the intelligence agencies also involved?

External Affairs Minister: Investigations are still going on. I mentioned about preliminary information available out of the investigation. And when full investigations would be completed, then all further details will be available to us.

Interviewer: Sir, today there were comments that we saw in the newspapers of Barack Obama saying that sovereign nations have a right to defend themselves. Is a military option on the cards at all for us at this point?

Interviewer: As and when it takes place, then people will come to know. Nobody publicises it or advertises it.

Interviewer: So, it is not ruled out?

External Affairs Minister: I am not making any comment on military option. What I am saying is that, every sovereign country has the right to protect its territorial integrity and take appropriate action as and when it feels necessary.

Interviewer: Sir, your colleague Mr. Veerappa Moily, the Spokesperson of the Party, actually said today that if necessary we will liquidate the terror camps in PoK.

External Affairs Minister: I have not seen it. But sometimes political leaders express their views.

Interviewer: What are your expectations though from the Pakistani Government? I ask you this question because President Zardari in an interview said that even if it is found that Pakistan-based terror groups are responsible for what happened in Mumbai, do not blame the Pakistani Government; and that we are fighting the same enemy. What would you say to him?

External Affairs Minister: It is not a question of blaming anybody. It is a question of taking action on the basis of information available. It is a question of fulfilling the commitment. It is a question of fulfilling the commitment which has been given to us not once but twice. When the Pakistan Foreign

Minister or Pakistani leaders say that in the fight against terrorism we are with you, does it mean merely words or is it an expression of intention? To me it means concrete action to fight against terrorism wherever possible. Therefore, in this instant case we have given them some information and we expect them to act on that information, not merely give an expression of intention or say some words.

Interviewer: Sir, that information that we have given them, is that in the form of the preliminary evidence that we have with regard to Mumbai? Have we been able to share any evidence with them so far?

External Affairs Minister: We are not providing information in a court to be tried and to be legally explaining on it. They expressed their intention that we will cooperate with you in the fight against terrorism. Earlier, before Mumbai serial blasts, a Joint Anti Terror Mechanism was established. In the Composite Dialogue, particularly in the dialogue at the level of the Home Secretary, this is an important element, i.e. both sides to cooperate, to strengthen the anti-terror mechanism. Therefore, these are commitments for action. But if the commitment is confined only to the expression of intention or remains limited to words, it leads us nowhere. That is the point I am trying to drive at. We want action.

Interviewer: There is a view, Sir, that India should share whatever evidence it gets with regard to Mumbai with the international community and with the world because even if you present Pakistan with evidence, they may not necessarily act on that evidence which is what you want to see, you want to see action. Are you thinking along those lines of sharing this evidence with America, with other countries, especially those whose nationals have died in these attacks?

External Affairs Minister: It is not a question of a subject between India and Pakistan. It is a matter of fight against terrorism. In this heinous crime, barbarous attack in Mumbai, about 200 persons were killed; about 300 persons were injured. These are the hard facts. And about 26 foreign citizens were killed and 22 injured. Therefore, whatever information we have up to now, we have shared with the representatives or Heads of Missions of those countries to which these foreign citizens belong. But at the same time I would like to point out that it is not a question of building up a campaign or anything like that. India is committed to fight against terrorism. We are determined. Whoever would like to cooperate with us, we would be glad to cooperate with them. This is an act which country is determined to fight against.

Interviewer: Sir, US Secretary of State Condoleezza Rice will be here tomorrow. What is the message that you would convey to her? And what is the role that you would like to see the United States play in this situation?

External Affairs Minister: Let me talk to them. Let me talk to her. Let her come.

Interviewer: What role do you think America could play?

External Affairs Minister: Before I talk to them, how could I presume what they are going to tell me or what they are going to convey to me?

Interviewer: Would you convey to them to put more pressure on Pakistan to act?

External Affairs Minister: I am not going to suggest anything suo motu. Let us have a discussion.

Interviewer: Sir, just one or two final questions. There has been a lot of speculation about whether the Indian cricket team would tour Pakistan even before this attack happened because of security concerns. Now there is speculation that the tour may be called off because of what happened. What is the position of that, Sir? Do you think that the two countries should be playing cricket right now?

External Affairs Minister: Any team, particularly cricket team, or a team for any other important event like that, we review the security situation prevailing there. Therefore, that was the exercise done. And in this situation I would not like to make any comment or what will be the future course of action. It is not possible to indicate right now.

Interviewer: But there are some reports in the press today that the part of the Composite Dialogue has been put on hold. For example, on Siachen and other issues because of the Mumbai attack. Is that the case? Are we suspending, informally suspending this dialogue?

External Affairs Minister: There is no question of formal or informal suspension. The question is that we must have the appropriate atmosphere conducive to carry on the dialogue. Unfortunately, that atmosphere has been vitiated. That is all.

305. Joint Press Conference by External Affairs Minister Pranab Mukherjee and US Secretary of State Dr. Condoleezza Rice.

New Delhi, December 3. 2008.

External Affairs Minister of India (Shri Pranab Mukherjee): Good evening, friends in the media, and Your Excellency Dr. Condoleezza Rice, US Secretary of State.

This evening I have just concluded discussions with Her Excellency Dr. Condoleezza Rice, US Secretary of State. She has specially come to express the solidarity of the United States of America with India in the wake of the heinous attack by terrorists who struck in several locations in Mumbai last week. We greatly appreciate this gesture, Madam Secretary, and I welcome it.

I informed Dr. Rice that there is no doubt that the terrorist attacks in Mumbai were perpetrated by individuals who came from Pakistan and whose controllers are in Pakistan. This is an assessment that is widely shared by the international community. I briefed Dr. Rice on the discussion we have had with the Government of Pakistan following the Mumbai terrorist attack and our expectation of cooperation from them to ensure that the terrorists and organizations who perpetrated these attacks are arrested and brought to justice. We expect all friendly governments and the international community to ensure that this happens.

I have also conveyed to Secretary Rice the feeling of anger and deep outrage in India following the terrorist attacks in Mumbai, which were preceded by similar terrorist attacks in other major cities of India earlier this year - in Jaipur, Bangalore, Ahmedabad, Delhi - and now in Mumbai. Almost 350 innocent lives have been lost in these attacks, and more than 733 people injured, of course, in the six incidents.

Government of India is determined to act decisively to protect India's territorial integrity and the right of our citizens to a peaceful life with all the means at our disposal. We look forward to the international community's cooperation in our longstanding struggle against terrorism.

I would now like to invite Secretary Rice to make her observations.

Thank you.

US Secretary of State (Dr. Condoleezza Rice): Thank you very much, and thank you Minister. I have not expected to return to India as Secretary

of State following my visit here just a couple of months ago. But I come because the President of the United States, the American people want India to know that the United States stands in solidarity with the people of India. I come with condolences for those who have lost their lives, for those who have been maimed, for their families, for the people of Mumbai for the ordeal through which they have just been, and for the people of India.

I think that Americans, perhaps as well as any, understand the feelings that run so deep at a time like this, having experienced the attacks of September 11. We certainly understand that there is a strong demand for bringing the perpetrators of such a crime to justice, and a deep desire to prevent any further attacks from taking place.

Minister, I came also to pledge the cooperation of the United States in both those tasks. We are going to work very closely with you in any way that we can to try and to get to the bottom of what happened and then to help you to act on that, but also recognizing that in matters of terrorism it is not just a matter of the punishment of the crime that has taken place, it is also a matter of preventing these terrorists who continue to plot and plan from perpetrating further crimes and further attacks.

I know too how difficult it is to take information and to make it into knowledge and then to be able to act on it. I have said that the United States also has a good deal of experience in the kind of terrorism fight and how one has to organize differently for that kind of terrorism fight. I know, Minister, and I have spoken with the Home Minister, that you are looking at reforms here in India as well. I applaud, for instance, the Prime Minister's emphasis on terrorist-financing and other ways to trap these killers.

I also want you to know that the United States believes strongly that having lost our own citizens in this attack...this is a matter of concern not just because of our relationship with India but because American lives were also lost. And so it is a matter of deep concern. And in that we have made very clear that we expect all responsible nations to participate and cooperate in bringing these perpetrators to justice, and that Pakistan has a special responsibility to do so and to do so transparently, fully, urgently; and that is a message that we have delivered. I have noted that President Zardari has pledged the cooperation of the Pakistani Government. It is a new civilian Government and we fully expect that those pledges of cooperation are going to be carried out and carried out fully.

Minister, I know that this is a very difficult time for the people of India, people of Mumbai. But I hope that it is a time also when you can feel the sense of solidarity and support that is there in the international community, from your friends. I was just in Great Britain. I know that the British are helping too. I hope that you know more than anything that you are not alone in this fight. There are many of us who have experienced this terror, and we stand united in our determination to defeat them.

Thank you.

Official Spokesperson: Thank you, Madam Secretary. Two questions will be taken from each side. Kindly introduce yourself and your organization and indicate whom the question is addressed to.

Question (Ms Parul Malhotra, CNN/IBN): Good evening. I have a question to each of the Ministers. Mr. Mukherjee, Sir, your Government has made it very clear, has in fact warned Pakistan of a pause in the bilateral relationship if Pakistan does not deliver on your demands. Today we have heard President Zardari actually rule out the deportation of twenty or twenty-one most wanted Indians and Pakistanis. How do you respond to that? Will you actually take action after this snub?

Ms Rice, do you see this statement from the President as evidence of cooperation? There are two parts of this question. My second question would be, you say you extend support and solidarity to the Indian Government. Would your Government be willing to support any Indian military strikes into Pakistan on those terror camps in self defence?

External Affairs Minister of India: So far as Government of India is concerned, what action will be taken by the Government will depend on the response which we have from the Pakistan authorities. We have given demarche. I am expecting the response. After obtaining the response, whatever Government will consider necessary to protect its territorial integrity, safety and security of its citizens, Government will do that. Thank you.

US Secretary of State: The response of the Pakistani Government should be one of cooperation and of action, and that is what we expect¹. We have been sending that message. In all responses, whether they are responses of Governments around the world or the response of the Indian Government,

¹ The next day (December 4) Condoleezza Rice was in Pakistan and in her meetings with the Pakistani leadership she asked the Pakistan government to provide "unequivocal assistance" to India in investigating the Mumbai attacks and to act "sincerely and quickly." A statement from the Office of the Pakistani Prime Minister

the goal should be to make certain that the investigation gets to the bottom of what happened; that the perpetrators are brought to justice; and that there is enough information and a depth of understanding so that an effort can be made to prevent further attacks.

The hard thing about terrorism is that it is not simple law enforcement. It is not a matter of waiting until a crime is committed and then you punish the perpetrators. The long pole in the tent, the effort has to be to prevent. And that is what we are going to help India, and others are going to help India. And we believe Pakistan has an essential role to play in this to make certain that these terrorists cannot continue to operate and operate in this fashion.

Any response needs to be judged by its effectiveness in prevention, and also by not creating other unintended consequences or difficulty. But we are going to work very closely over this time and, as I said, we are focused with India on both bringing the perpetrators to justice, and on preventing further attacks. I just want to underscore again, Americans were killed in this attack as well. It is a special concern to the United States.

Official Spokesperson: I solicit your cooperation. Kindly restrict yourself to one question.

said: "[Ms Rice] urged the Government of Pakistan to provide unequivocal assistance to India. Pakistan should be seen acting sincerely and quickly, she emphasised. Pakistan should also take the necessary steps to prevent any non-state actors from indulging in such activities against any country from its soil, she added." "This was a terrible attack. It was a sophisticated attack at a level of sophistication that we haven't seen here on the subcontinent before. That means there's urgency to getting to the bottom of it," Dr. Rice said. "There's an urgency to bringing the perpetrators to justice and there is an urgency to use the information to disrupt and prevent further attacks."

Media reports said as Ms. Rice sought to defuse the mounting tensions, Pakistani troops conducted exercises in an area close to the Indian border while the Army chief Gen. Ashfaq Parvez Kayani told his corps commanders that the Pakistan Army stood for "peace and security." A military press release said Gen. Kayani, who chaired the monthly corps commanders' meeting at the Rawalpindi General Headquarters, "hoped that peace and stability in the region will be maintained." The press release said the meeting discussed the security environment, and Gen. Kayani "expressed satisfaction on the operational preparedness of the Army." Media reported that troops of the Lahore division, meanwhile, conducted exercises at the Tilla firing ranges near Jhelum in Punjab province. Another military statement said the troops conducted "field firing and battle inoculation exercise" codenamed Battle Axe-52 "close to the operational environment." "This was the high point of a year-long intensive training exercise. The exercise encompassed application of firepower from aerial and ground platforms in synchronisation with tactical manoeuvres, involving fighting and supporting arms," the military said. The Pakistan Air Force also participated in the exercise, and a contingent of officers from the Nave War College witnessed the exercise.

Question (Ms Ann, Associated Press): A question to each of you. Madam Secretary, can you be more specific when you say that this attack was different and you are asking for a different kind of response from India and Pakistan? What specifically about it tells you that it is distinct from previous terror attacks? And, do you see the hand of Al Qaeda anywhere in it?

And Mr. Minister, I understand that just today some explosives were found in the train station in Mumbai. They had apparently been there for a week. What confidence can the Indian people have that you have found all that there is to find and that they are safe?

US Secretary of State: I did not mean to suggest that there have not been other attacks; there have been. My point was concerning the sophistication of this attack, the way in which it was carried out, the targets that were obviously simultaneously attacked. And that in itself I think is somewhat different than attacks that have been seen in the past. But the response has to be the same which is, the perpetrators have to be caught, they have to be brought to justice, and there has to be a maximal effort on preventing further attacks.

As to Al Qaeda, let me be very clear, we are not saying that Al Qaeda is the perpetrator here, and I want that to be very much understood. All of it suggests the sophistication of it which reminds us that these extremists – and there are no good terrorists, they are all extremist and they all have to be dealt with – are perhaps learning from each other; they move in the same circles. But clearly the sophistication of the attack was really what I was addressing.

External Affairs Minister of India: Of course, in intensity and modality there is a difference. But essentially it is the continuation of the series of attacks which India received just this year. I mentioned in my statement the number of cases where the attacks have taken place. And I believe there is a design. The targets of the attack were either the important tourist centres like Jaipur, national capital Delhi, financial capital Mumbai, if not capital but a very important place from the point of view of science and technology, Bangalore. Therefore, there is a design to strike at the developmental, scientific, and economic ability of the country. And these are just not sporadic or accidental. Thank you.

Question (Mr. Manish Chand, IANS): This question is addressed to Madam Secretary of State. Madam, you are traveling to Islamabad

tomorrow. Pakistan President Asif Ali Zardari has blamed non-state actors for terrorist activities in the region. India believes that some of these elements continue to be patronized by sections of the Pakistani establishment and could be responsible for the Mumbai mayhem. In such a situation, how should India and the United States cooperate in dealing with terrorism flowing from Pakistan? And also, did the Indian side present some evidence, solid evidence, to you linking Pakistan-based elements to Mumbai blasts? Thank you.

US Secretary of State: Well, I am not going to speculate on what might be found when investigations are complete. I do know that the Pakistani Government under President Zardari has pledged its complete cooperation, and that it needs to be transparent in that cooperation. The fact is that non-state actors sometimes operate within the confines of the state, on the territory of the state. When that is the case, then there has to be very direct and tough action against them. So, that is really the issue here. I think we need to let the facts lead where they may. The investigation is still under way. It can be done with as much forensic help as is needed from international parties. I know that Britain has expressed the desire to help. We have expressed the desire to help. But what we really need to do is to let the leads go where they may without premature speculation of how this might have actually taken place. But non-state actors, that is still a matter of responsibility, if in fact it somehow relates to your territory.

Question (Ms. Sylvia, AFP): Madam Secretary, how are you going to improve the intelligence sharing between India and Pakistan? Do you have any special step in mind or a regional mechanism? And, Mr. Minister, what would you think about such a mechanism with the US as a partner?

US Secretary of State: Well I think the key here is that we have to think very less about what mechanisms there may be and more about just getting the job done. I think that there is a lot of information that various parties have concerning what happened on this attack. As the forensics go forward to look at what happened in the actual attack on the scene and people are interviewed more information will become available. I do not think we need to worry so much about a specific mechanism. I do think we need to make certain that there is proper coordination. And this can be done, you know, through regular channels of the various parties. So, I do think the United States and others have a lot to add.

Let me just make a point. Everybody needs help. The United States has needed help in intelligence sharing, in cooperation. This is not a matter that any country handles on its own. The very nature of this terrorist threat is that it crosses borders. The very nature of this terrorist threat is that it locates different elements in different parts of the world. So, when we talk about cooperation, we are talking about something that is inherent in the nature of dealing with a terrorist threat that is global, not confined to a particular area. And so, there is not really anything new in that sense. India and the United States have been cooperating. We have been cooperating with Great Britain when there have been threats against Britain or against the United States. We are ...(inaudible)... that sometimes required cooperation with India. So, we have developed contacts for doing this. That we are going to do it in a more intensive and urgent manner because again I want to emphasize that yes, it is extremely important to bring these people to justice, but it is really important that we remember that when you are dealing with terrorists your goal is to also have prevention very much in mind.

External Affairs Minister of India: We have a mechanism in which we share the intelligence with the USA and also with other countries. The importance of sharing this mechanism is more now because terrorism is to be fought collectively by the international community. It is not confined to one country. Terrorism has no limit, either geographical or otherwise. It is the biggest menace to the world peace and tranquility in the post-cold war era. Therefore, it requires united action by the entire international community. And for that, intelligence sharing is an important input. Thank you.

Official Spokesperson: Thank you. This brings the event to a close. Thank you for coming.

306. Statement by External Affairs Minister Pranab Mukherjee on the hoax telephone call to President Zardari of Pakistan.

New Delhi, December 7, 2008.

I have seen several misleading stories about a hoax telephone call¹ from me to President Zardari of Pakistan. The facts are as follows.

We were informed by friends from third countries that Pakistan President Zardari believed that he had received a threatening telephone call from me on 28 November, after the attack on Mumbai. We immediately clarified to those friends, and we also made it clear to the Pakistan authorities, that I had made no such telephone call. My last and only conversation with President Zardari was in Islamabad during my May 2008 visit to Pakistan. The only telephone conversation that I have had with a Pakistani leader since the attack on Mumbai was on the evening of November 28 when I spoke to the Pakistan Foreign Minister Shah Mahmood Qureshi who was then in New Delhi.

It is, however, worrying that a neighbouring state might even consider acting on the basis of such a hoax call, try to give it credibility with other states, and confuse the public by releasing the story in part. I can only ascribe this series of events to those in Pakistan, who wish to divert attention from the fact that a terrorist group operating from the Pakistani territory, planned and launched a ghastly attack on Mumbai.

1 The External Affairs Minister was reacting to news reports from Pakistan claiming that the President Asif Ali Zardari apparently received a telephone call from Mr. Mukherjee threatening military action against Pakistan and hence there was panic in Islamabad. Both the Ministries of External Affairs and Defence dismissed claims that additional Indian troops were being moved to the western borders. Media quoted official sources that the MEA thought that this disinformation could only mean that the Inter-Services Intelligence's dirty tricks department was working overtime to create panic in Pakistan to try to divert internal and external attention from their complicity in Mumbai terror and thereby clawing their way into public acceptability in Pakistan. India felt strongly that there was attempt to muddy the waters of India – Pakistan normality. The government decided not to react to such disinformation after acquiring much diplomatic capital in impressing the world that there was no move to amass troops on the border. The Indian Establishment both in the MEA and Defence Ministry underlined the fact that there was no move to send additional troops to the borders and any extra activity in the area was usual for this time of the year, when small unit level exercises are staged. New Delhi was not unaware that the ISI continued to make attempts to sow misinformation to bring about a situation in which western countries would lose sight of the main issue at hand.

307. Presidential Statement¹ issued at the end of the debate on terrorism in the UN Security Council.

New York, December 9, 2008.

"The Security Council, underlining that peace and security in the world are indivisible and taking into account the interconnection and interdependence of the world, reaffirms that terrorism in all its forms and manifestations constitutes one of the most serious threats to international peace and security and that any acts of terrorism are criminal and unjustifiable regardless of their motivations, whenever and by whomsoever committed. It further reaffirms its determination to combat threats to international peace and security caused by acts of terrorism by all possible means in accordance with the Charter of the United Nations.

"The Security Council welcomes recent statements by intergovernmental organizations condemning all forms of terrorism, including suicide bombing and hostage taking, which build upon the universal condemnation by the international community of unlawful acts of terrorism, including against civilians, that cannot be justified or excused under any circumstances or pursuant to any political, philosophical, ideological, racial, ethnic, religious or other consideration and reaffirms the need for Member States to work together urgently to prevent and suppress such acts.

"The Security Council emphasizes the central role of the United Nations in the global struggle against terrorism.

"The Security Council reaffirms the importance of all its resolutions and statements on terrorism, in particular resolutions 1373 (2001) and 1624 (2005), and stresses the need for their full implementation.

"The Security Council renews its call on States to become parties as soon as possible to all relevant international conventions and protocols relating to terrorism and to implement those they are party to.

"The Security Council believes that terrorist safe havens continue to be a significant concern and reaffirms the need for States to strengthen cooperation in order to find, deny safe haven and bring to justice, on the basis of the principle of extradite or prosecute, any person who supports,

¹ The Statement by the President came after members expressed deep concern over "continuous terrorist attacks around the world", during which some speakers warned that the Mumbai carnage of 26 to 29 November could mark a new stage in the violence.

facilitates, participates or attempts to participate in the financing, planning, preparation or commission of terrorist acts or provides safe havens.

"The Security Council reaffirms the importance of the work of the committees established pursuant to resolutions 1267 (1999), 1373 (2001) and 1540 (2004) and continues its support and guidance to the committees.

"The Security Council particularly expresses its support for, and commitment to contributing to the implementation of, the United Nations Global Counter-Terrorism Strategy (A/60/288) of 8 September 2006 and welcomes the adoption by the General Assembly of resolution 62/272 which reaffirmed this strategy and its four pillars and called for its implementation in an integrated manner and in all its aspects.

"The Security Council emphasizes that enhancing dialogue and broadening the understanding among civilizations, in an effort to prevent the indiscriminate targeting of different religions and cultures, and addressing unresolved regional conflicts and the full range of global issues, including development issues, will contribute to international cooperation, which by itself is necessary to sustain the broadest possible fight against terrorism.

"The Security Council condemns in the strongest terms the incitement of terrorist acts and repudiates attempts at the justification or glorification of terrorist acts that may incite further terrorist acts. It reaffirms the importance of countering radicalization and extremism that may lead to terrorism and preventing exploitation of young people by violent extremists.

"The Security Council, reaffirming that the promotion and protection of human rights for all and the rule of law is essential to an effective counter-terrorism strategy and that effective counter-terrorism measures and the protection of human rights are complementary and mutually reinforcing, reminds States that they must ensure that any measures taken to combat terrorism comply with all their obligations under international law, in particular international human rights, refugee and humanitarian law.

"The Security Council emphasizes the importance of technical assistance aimed at increasing the capabilities of Member States in the fight against terrorism by addressing their counter-terrorism needs.

"The Security Council believes that the strengthening of mutual trust among Member States of the United Nations will facilitate the creation of conditions

for a successful fight against terrorism, and that success in that fight will positively reinforce peace and security in the world.

"The Security Council, deeply concerned with the continuous terrorist attacks around the world, calls on all Member States of the United Nations to renew the degree of solidarity manifested immediately after the tragic event of 11 September 2001, and to redouble efforts to tackle global terrorism, dedicating significant attention to bringing to justice the perpetrators, facilitators and masterminds of terrorist acts while expressing deep compassion with all victims of terrorism.

"The Security Council will continue to follow developments in order to organize as efficiently as possible its efforts in combating terrorism."

308. Excerpts from the Intervention of Prime Minister Dr. Manmohan Singh in Lok Sabha during discussion on the Recent Terrorist Attack in Mumbai.

New Delhi, December 11, 2008.

Mr. Speaker Sir, As I rise, I am acutely conscious of the fact that acts of terror are on the increase and we have lost lives of many citizens in these dastardly acts. I am conscious that our systems and procedures need review. On behalf of the Government, I would like to apologise to our people for the fact that these dastardly acts could not be prevented.

As far as Mumbai is concerned, it was a very calculated and sinister attack, intended to cause widespread terror and damage to the image of India. The forces behind these attacks wanted to destabilize our secular polity, create communal discord and undermine our country's economic and social progress.

Each one of us has condemned this horrible incident and also extended our deepest condolences to the bereaved families and sympathies to those who have suffered injuries. We have all saluted the courage and patriotism of the Police and security forces, including the special forces, like the NSG and the Naval Commandos. This nation is proud of them. I also note with great sorrow the number of foreign nationals who have been victims of this onslaught. I have personally spoken and written to leaders of countries apologizing for the loss of their nationals.

Nothing that we can say or do will compensate for the lives that have been lost. But it is important to ensure that the memory of their sacrifice does not get dimmed with the passage of time. Parliament must resolutely reinforce our nation's determination to defeat terrorism and destroy it root and branch. The scourge of terrorism has to be, and will be, fought with determination. All means and measures needed for this purpose will be utilized.

Our immediate priority is to restore a sense of security to the people of India. We will not countenance a situation in which the safety and security of our citizens are violated with impunity by terrorists or other militant forces.

I believe that we have to work at three levels. Firstly, we have to galvanize the international community into dealing sternly and effectively with the epicentre of terrorism, which is located in Pakistan. The infrastructure of terrorism has to be dismantled permanently. This is for the good of the

entire world community, including the well being of the people of Pakistan themselves.

Several Heads of State and Government have spoken to me in the wake of the terrorist attacks in Mumbai. Each one of them praised India for demonstrating restraint. They agreed that strong action should be taken against those responsible for these acts. I conveyed to them that we could not be satisfied with mere assurances. The political will of the international community must be translated into concrete and sustained action on the ground. It is time for the international community to squarely confront the challenge of terrorism. The use of terrorism as an instrument of state policy is no longer acceptable. There should be no double standards in the global fight against terrorism. There are no good or bad terrorists. There is no cause that justifies the massacre and killing of innocent people.

We need effective steps not only to bring those responsible for the Mumbai attacks to justice, but also to ensure that such acts of terrorism do not recur.

I am happy that the United Nations has taken the step today to put sanctions on four individuals of the LeT, including Hafiz Muhammad Saeed, and on the front organizations under which the LeT was operating such as the Jamaat-ud-Daawa. This is the kind of purposeful action that we believe should be pursued in a sustained manner by the world community to ensure that the entire infrastructure of terror is dismantled.

Secondly, we have taken up strongly with the Government of Pakistan the use of their territory for launching an attack of this kind and the need for the strongest possible action against the perpetrators of such ghastly acts. The world community must be convinced that action by Pakistan against the brutal perpetrators of these crimes against humanity will be effective and will be sustained over time.

We have so far acted with utmost restraint. But let not our commitment to civilized norms be misconstrued as a sign of weakness. Every perpetrator, organizer and supporter of terror, whatever his affiliation or religion or location, must pay the price for such cowardly and horrific acts against our people. We have noted the reported steps that have been taken by Pakistan. But clearly much more needs to be done and the actions should be pursued to their logical conclusion.

Thirdly, we need to recognize as a nation that we cannot depend on either of these two approaches for obtaining the outcomes that we desire. The Mumbai incident has highlighted gaps in our preparedness to deal with these kinds of assaults. We need to equip ourselves more effectively to deal with this unprecedented threat and challenge to our country's integrity and unity.

The Home Minister has already outlined a number of steps that are being taken. The Administrative Reforms Commission report has taken a comprehensive look at the problem of terrorism and the course of action that the Commission has indicated is under the active examination of the Government.

The need for stronger measures to protect our coastline has been highlighted before, but the progress on ground in this regard has obviously been tardy and too slow. We are strengthening maritime security against asymmetric threats from the sea. Since there are currently multiple agencies tasked with coastal security, it has been decided that the sole responsibility of guarding the coastline would be entrusted to the Coast Guard. The Indian Navy would provide the necessary back-up support to the Coast Guard for this purpose. This would come into effect immediately. Special security and protective arrangements are being put in place for all major ports. Similar steps have been initiated for guarding sensitive installations in the vicinity of our shore line.

Arrangements for securing our air space taking into account conventional as well as non-conventional threats have been streamlined. Real time monitoring of aircraft movement jointly by the Air Force and the civil authorities has begun. Air defence measures to prevent intrusion of rogue / unidentified aircraft are in place.

The attacks highlighted the need to be able to act in response to such incidents with much greater speed. We have worked out a mechanism for a comprehensive crisis management response. It has already been decided that the National Security Guard should be decentralized and dispersed and should be located in major metropolitan areas. At the same time, arrangements must be put in place such that rapid response units can reach other locations without loss of time. Till such time as the strength of the NSG is increased, and new units are trained, the Special Forces available with the Army, the Air Force and the Navy and other civilian agencies will be used. Commando units would be created by each State.

We have already decided to strengthen the legal framework to deal with terror and also to set up a national investigation agency. As promised by the Home Minister these Bills would be brought to the House at the earliest.

As has been indicated, mechanisms have already been put in place to provide more timely intelligence to pre-empt future terrorist attacks. Daily meetings at the level of the Home Minister are being taken. The Multi Agency Centre of the Intelligence Bureau will be concentrating exclusively on collecting, collating and disseminating information relating to terrorist threats. Integration and coordination among the various intelligence agencies is being improved. The States have been requested to energize intelligence collection at the district level to produce more actionable intelligence.

While we will be taking a number of short-term and long-term measures, there is a general consensus that the long-term strengthening of our security will only take place by strengthening the police establishment, particularly at the local level. We are committed to police modernization and will spare no effort and no resource to undertake this task within a definite timeframe. We must provide our security forces with the modern and sophisticated equipment they require to tackle the increasing sophistication of terrorist crimes. The morale of our security forces is of utmost concern and importance and if there are any deficiencies these will be made good. The country needs a modern and efficient police force to deal with the twin challenges of security and development in this day and in this age.

The terrorist attacks in India have tried to sow communal divide in the country and weaken our polity and our social fabric. We have emerged stronger with every challenge, and will do so again. I have no doubt that the Mumbai attacks will also fail in their nefarious designs. All political parties have an obligation to unite against communal hatred and discord. We cannot fight and win this war against terrorism if we are a divided house.

In conclusion, I wish to say that it is in times of adversity that the true mettle of a nation is tested. We must remain calm and be resolute. We should stand firm as one nation and one people to meet this challenge posed by terrorism. We will give a fitting rebuff to our enemies. The idea of India as a functioning democracy and a pluralistic society is at stake. This is a time for national unity and I seek your cooperation. Truth and righteousness are on our side and together we shall prevail.

309. Intervention of External Affairs Minister Pranab Mukherjee in the Lok Sabha during the debate on terrorist attack in Mumbai.

New Delhi, December 11, 2008

Thank you, Mr. Speaker, Sir. First of all, I would like to express my thanks to all the three hon. Members who have made their contributions up to now, and many more who would be participating.

While making his Statement my colleague the hon. Home Minister pointed out that I would intervene to point out certain external factors and elements associated with this attack. Had it been merely confined to a law and order situation arising out of the violent attack, perhaps there would have been no need of my intervention as the External Affairs Minister. But all of us are fully aware, and it has been pointed out now that the epicenter of this attack and not only this one, but also the series of attacks prior to this attack – is located in a neighbouring country.

Mr. Speaker, Sir before I proceed I would through you like to make an appeal. Perhaps, this is one of those debates of this House, which will draw maximum international attention: we are meeting immediately after the attack. Its international dimension have been noticed since the 26th of November and is still continuing. Concerns have been expressed by a large number of leaders from international community. More than 16 Heads of the States and Governments have spoken to Prime Minister over telephone and expressed their concern. Almost every Head of the State or Government have sent written messages. I have received a very large number of calls from my counterparts all over the world, and most of them not only expressed their solidarity with us but they have also expressed their confidence that India would be able to overcome this problem.

Mr. Speaker: I want to also inform that I have got messages from the Presiding Officers of the National Assemblies of many, many countries, to share our agony.

Shri Pranab Mukherjee: Thank you, Sir.

So, this is the atmosphere in which we are discussing this issue. Democracy is always accompanied by dissension but at the same time there are occasions when keeping aside dissension on minor issues, we unite on major issues, and we express our views in a united manner. Therefore,

this is one such occasion I would like to suggest to hon. colleagues that all of us should rise to this occasion.

Sir, 164 precious lives were lost. More unfortunately is that of these 164—every death is unfortunate but this is much more—more than 26 persons who lost their lives belong to other countries. They were our guests. When I expressed my condolences to the Foreign Ministers of those countries, the first thing I did was that I conveyed my apology, my regret to the 13 Foreign Ministers whose citizens were killed, including the Foreign Minister of Israel. I said that they were our guests and we could not protect them, I sincerely apologize to you. Of course, most of them pointed out that it is not our fault because terrorism has assumed a dimension which is not confined to any individual country and not confined within the territorial boundary of any State. It has really become cross-border. It has really become an international phenomenon.

We have all expressed our sense of outrage and the anger which the Indian people have felt. Had it been a single occasion, perhaps, it would not have happened to this extent and would not have assumed that level of anger and sense of outrage which we have witnessed this time.

When this event was taking place, when the attacks were going on, just a couple of hours before that, I was in bilateral talks with the Foreign Minister of Pakistan who was in India as my guest and who had come to India on my invitation. The next day we were to attend a joint seminar at Chandigarh essentially to discuss how to further improve people-to-people contact and improve the relationship between our two countries. This attack took place just then. Of course, after that, it was not possible for me to go to Chandigarh. The Pakistan FM returned after two days. I will come to this aspect a little later.

But, with reference to the depth of anger and the sense of outrage in the country, our people expect us, the people expect this country to rise to the occasion and to come to a resolute action which will convey the message that the territorial sovereignty, the territorial integrity of this country cannot be played with, it cannot be ignored and nobody should dare to attack us. This message must be conveyed.

Look at the series of events which have taken place and the location of recent bomb attacks. Jaipur is a most important tourist centre, Bangalore is the hub of Indian intellectuals and of science and technology, Ahmedabad is one of our most important industrial centres and Mumbai is our financial

capital, the commercial capital of India. Are these mere coincidences? Are these only accidental? Or, is there a design? There is a method behind these. This is not the time to dissect the entire framework because that will take some time. Most respectfully I would like to submit that whatever be the depth of our anger, we shall also have to keep in mind that this is a phenomenon which cannot be easily switched off or switched on. We shall have to patiently confront it. Those who have propagated the thesis of inflicting thousand cuts upon us after failing to win a battle or to defeat this country in open armed conflict, they have done so as a deliberate exercise to cause great harm to this country but this country has grown from strength to strength.

We are not provoked. We have no intention to be provoked. All sorts of propaganda have been built up. That we have mobilised our Armed forces, that we have suspended air links, stopped every other activity, etc. Nothing in fact has happened. Yes, we have conveyed our sense of outrage and have conveyed the depth of our feeling. I talked to the Pakistan Foreign Minister over the phone on the 28th of November and every word of it was from a written text as per diplomatic norms and every word of this conversation is on record

A canard was spread simply depending on a hoax call that India is going to attack Pakistan; that our Armed Forces are mobilized; and that the Indian Foreign Minister has threatened the Pakistan President over the telephone. Most respectfully, I would like to submit that I have great respect for Mr. Asif Ali Zardari, the President of the Republic of Pakistan. But I have had a conversation with him only once and that was when I visited Pakistan in May 2008 and called on him. This was before he became the President and he was the Leader of his Party. It was the first and the last conversation that I have had with him.

Nobody would believe, and particularly in the case the establishment of a duly constituted Government as to how can the Foreign Minister of one country simply pick-up the phone and talk to the President of another country? These things cannot be done. These calls are fixed in advance. Even if the Foreign Minister speaks to another Foreign Minister, the time is fixed, the call is fixed, and all these things are routed through the foreign office. This type of thing does not happen. But what is worrying us is that if the establishment of a duly constituted Government believes in these types of things and tries to act on it, then it may sometimes cause major problems.

Various issues have been raised from the Foreign Ministry angle, and I would like to respond to some of them. Mr. Advani has suggested that we should go to the United Nations Security Council (UNSC). Mr. Salim has suggested that we should build-up an international campaign. I agree with both. Yes, we should build-up an international campaign against terrorism, and we should talk to all the countries concerned that this is not an India-Pakistan issue. This is not an issue related to the Jammu and Kashmir. This is an issue which is part of the whole issue of global terrorism. In almost every Annual Session of the UN General Assembly we, from India, have been tabling a Resolution that it is high time that there should be a Comprehensive Convention to deal with the problem of cross-border terrorism, it is the biggest menace to world peace and tranquillity in the post cold-war era. Unfortunately, it has not been possible to achieve this yet, but we are trying and will continue to do so.

We must keep in view that international relations depend on very delicate relations, and we should not try to distort a situation. We have our own domestic problems, and the Government of the day will have to deal with that. But this is an issue where adequate pressure has to be built-up and adequate pressure is being built-up.

This is an assurance that I can give you. I have spoken to more than two dozen Foreign Ministers and all of them agree – this is just not our view, this view has been shared by a large number of countries with whom we had interactions and with whom we had discussions – that they came from Pakistan and the whole exercise required long-term planning. It is just not that somebody comes with AK-47 rifle and indiscriminately fires and kills people and then tries to run away, or is killed. It was not like that at all in this case.

A most important dimension of this terrorist attack is that for the first time a terrorist attack in India has targeted foreigners – the targets were the Jews and other foreigners present. I have talked to my counterparts and informed them of the steps we have taken. Formally, I spoke to the Pakistan Foreign Minister on the 28th evening around 7-7.30 p.m. which was followed up by what is described in the diplomatic language as a 'speaking note'. Thereafter, on the 1st of December, we lodged a formal demarche. There we urged that they must take action against certain organizations which are indulging in terrorist activities and against a number of fugitives who have committed crimes in India and who have violated the Indian laws and are taking shelter there. We said please arrest them and hand them over to us.

The Leader of the Opposition wanted to know whether we have taken up the extradition and return of Dawood Ibrahim. This has been done in every meeting with Pakistan at the level of the Home Secretary, at the level of the Foreign Secretary and at the four meetings of the Joint Anti-Terror Mechanism. We have given them a list of 42 persons – not one; not 20, but a list of 42 persons. We have also pointed out that mere denial is not going to resolve the issue. We said that you may deny their existence, but how are you going to convince your own people when these faces appear on the television screen?”

I have been asked or suggestions have been made to me as to why I am not responding when some arrests have taken place in Pakistan. As per newspaper reports, some camps have also been closed. My response is very simple. I was waiting for the Parliament to commence its sittings. I will respond here. Please follow it up seriously as exactly the same scene was played after the attack on Parliament in 2001. Therefore, action has to be carried to its logical conclusion by banning the organizations and by complete dismantling of the infrastructural facilities available on that side to facilitate the terrorist infiltration and terrorist attacks in India. Lashkar-e-Toiba is a banned organization in Pakistan. But by simply changing names and changing signboards, its activities have continued. How does that help us? The headquarters are the same, the ideologies are the same and activities are the same.

I am glad to inform you that this morning the UN Security Council has declared Jamat-ud-Dawa, the latest outfit of Lashkar-e-Tayyiba, as a banned organisation. Four people, including those who we had suggested, are listed as terrorists by the UNSC. We are told that in the names included is that of Hafiz Sayed. We were told by an international interlocutor that there was information that this man was arrested. However, within twenty minutes I heard from our Mission that this man was appearing on the television screen in an interview!

Masood Azhar has been house-arrested. What does ‘house arrest’ mean? The law in Pakistan is the same as the Indian Penal Code. The criminal laws are the same. In criminal cases there are two kinds of custody that could be contemplated - one is judicial custody and the other is police custody. Is this a convincing step?

I have no quarrel with the democratic Government of Pakistan. We welcome the return of democracy to Pakistan. Perhaps I was amongst the first Foreign Ministers to visit Pakistan after the new Government was installed. On

behalf of the Government of India I conveyed our sincere desire to take steps to move forward and to build up our cooperation. I invited the Foreign Minister of Pakistan to come and also to participate in a seminar in Chandigarh jointly to explore the possibilities of enhancing people-to-people contacts.

On the question of the non-state actors, are the non-state actors coming from heaven? Are they coming from a different planet? These non-state actors are located in the territory of a particular country. The non-state actors are operating from within a particular country. What we are most respectfully suggesting to the Government of Pakistan is that please act. Mere expression of intention is not adequate.

We have been assured by Pakistan in this regard, not once but twice. On the 6th of January, 2004 – Shri Advani was the Deputy Prime Minister and Shri Atal Bihari Vajpayee was the Prime Minister then – President Musharraf in his joint statement with Prime Minister Vajpayee gave the solemn assurance that Pakistan's territory will not be allowed to be used by terrorists. This was reiterated on 24th September, 2008 by another President of Pakistan, President Asif Ali Zardari. But, you find that terrorists are still coming from Pakistan.

The Home Minister has more information. It appeared in some newspapers that the controllers of these attacks, of those who were conducting the attack, when the action was underway, were instructing them to do this and do that, are in Pakistan. We do feel sometimes, and I do agree with Mr. Salim in this, that we have to draw many lessons from this. In their anxiety to beat the other channels in publicity, some channels were showing crowds of people on the screen. Instructions then came to the terrorists to throw a grenade at the crowd.

Some lives were lost because of the anxiety to get publicity. If the camera was not focused there and if the crowd was not seen there by those who were monitoring from outside, perhaps these things would not have happened. So, we have to draw the lessons of where to stop and where to pause.

Our brave soldiers have sacrificed their lives, a graphic picture of which has been given by the Home Minister: the way the Maharashtra ASI took bullets in his body to facilitate the capture of the terrorist by other police personnel, we, ordinary mortals, cannot even think of such sacrifices. Hats off to him. I salute our security people. When they were sacrificing their

lives, from a safe distance if somebody thinks, that he will defeat his competitors by getting larger viewers by giving updated news, he may serve the interests of the company but surely he or she will not serve the interest of the nation. Most respectfully, I would like to submit that is the lesson we have to draw of where to stop and where we have not to go.

Mr. Speaker, Sir, I read the article of President, Asif Zardari in the New York Times. I have full sympathy for him when he says that events of Mumbai reminded him of the time when Benazir was assassinated. There is a book written by Mrs. Benazir Bhutto and published in Great Britain Schuster Limited in 2008. I am just quoting one point that will reflect the internal situation. I quote:

“But in Pakistan things are almost never as they seem. There are always circles within circles, rarely straight lines. This was meant to look like the work of Al-Qaeda and the Taliban and I do not doubt that they were involved. Elements from within the Pakistani Intelligence Services had actually created the Taliban in the 1980s and certain elements sympathised with Al-Queda ideologically and theologically. Some had recruited for and worked with it. I had identified those I suspect in my letter to the General.....”

(‘General’ means President Pervez).

“.... before my return.”

This is written by whom? If she was alive, she would have become the Prime Minister of Pakistan today or the President.

Now, that may be the internal situation. This is exactly what I told my interlocutors that you have to appreciate it and do not try to have a general straightjacket formula that this is a dispute between India and Pakistan, Kashmir is the bone of contention, solve the problem of Kashmir and everything will be in place.

Mr. Speaker, Sir, most respectfully I would like to submit, I do not believe in this straitjacket simple formula. It is a complex situation. I have no doubt of that. We want to encourage democratic institutions and the democratic system in Pakistan but it is not for us to decide how. We cannot deliver this. It is for the people of Pakistan, it is for the institutions of Pakistan and it is for the civil society of Pakistan to undertake this job. And most respectfully I would like to submit that simply by raising hysteria that a big power is going to attack Pakistan and trying to divert attention, taking the plea of a hoax call from the Indian Foreign Minister to the Pakistan President

is not going to yield results.

We expect some positive steps from Pakistan. Of course, it is for them to decide. Most respectfully I say that we have suggested several times, in all international and in all bilateral fora, in our dialogue and in our communication with them that please deny them sanctuary, accept the facts and try to resolve the situation, and that we are ready to help. While having discussions with the Prime Minister over phone, it was offered that Pakistan DG, ISI would be coming to India. But within hours, this was denied. That may be the internal problems of Pakistan, but how is it going to help India? If they are not able to resolve their internal problems, they will have to find a way out. The international community can only help them.

But we cannot completely ignore history. In the name of preventing the advance of communism, they are armed to the teeth, resulting in the rise of the Taliban. I remember a conversation between two former Prime Ministers sometime in the early 1980s. I can mention the names of the former Prime Ministers. It was Mrs. Indira Gandhi and Mrs. Thatcher. I was the eye witness and it was a breakfast meeting. In reply to a question Smt. Gandhi asked, "Tell me, is there a single shot from Pakistan that had been fired in any direction, other than India?" There was no answer.

We are fully aware of the situation; I am not indulging in jingoism or in any such sort of thing. But I am simply expressing my anger. This is the feeling of the Indian people. We have to deal with them – I know that I cannot change my neighbour and I cannot live with my neighbour in perpetual tension. That is the policy that we have been following. But we expect that the issues will be addressed, the issues cannot be ducked; and issues cannot be sidelined.

Mr. Speaker, Sir, with these words, I conclude.

Sir, I most respectfully submit that I have circulated a draft of a Resolution to the hon. Leaders. After this, we can sit with them, if they want to have some sort of a discussion. But as the very nature of the debate, the rule under which it is being discussed, it does not end in the adoption of a Resolution. So, it cannot be the outcome of the discussions, because if I understand correctly, you are allowing this discussion under rule 193; and normally the Parliament expresses its sense through a substantive motion, either under rule 184 or something like that. But they are technical issues. It does not matter, and so, at the end of the debate, we can adopt the Resolution.

Mr. Speaker: You may leave the issue of rules to me.

Shri Pranab Mukherjee: I am leaving it to you, Sir. You are the master and you will look into it. We express our views on this.

Shri Mohan Rawale: How long we are going to talk to Pakistan? You said there is evidence against Pakistan. Then why don't you attack Pakistan?(original in Hindi))

Shri Pranab Mukherjee: That is not the point. That is not the issue. I am making it quite clear that that is not the solution. Let us be very clear and frank that that is no solution. Thank you.

310. Intervention of External Affairs Minister Pranab Mukherjee during discussion in Rajya Sabha on the Terrorist Attack in Mumbai.

New Delhi, December 11, 2008.

Mr. CHAIRMAN: The hon. Minister for External Affairs wishes to intervene in the discussion.

The Minister of External Affairs (Shri Pranab Mukherjee): Mr. Chairman, Sir, while making the statement in the morning to the House, hon. Home Minister indicated that I would intervene in the debate from certain Foreign and External Affairs Ministry angle. Sir, had it been merely a question of violent action by some individuals or some groups on a property or on individuals, there would have been no necessity for my participation in the debate or in the discussion. That was perfectly within the domain of the Home Ministry.

But, there are certain external angles which are to be looked into and which are really a matter of concern. The point which we shall have to keep in mind is, perhaps, this is for the first time that in a terrorist attack a large number of foreigners belonging to 13 countries were the target. Sir, 26 foreigners lost their lives, about 22 injured and all of them belong to 13 different countries. I deeply mourn the loss of their lives. And, of course,

the loss of life of every individual who became the victim of this senseless violence is a matter of deep concern. The hon. Home Minister has, in his elaborate statement, pointed out and recognized that there were certain omissions and certain gaps. He was candid enough to admit it. And there is no hesitation to admit it. On his first visit to Mumbai after assuming the office, he tendered his apology and rightly so.

Sir, all the evidence available, unfortunately, point that the epicentre of this terrorist activity is in our neighbouring country. I do not blame the Government of Pakistan or the people of Pakistan. But, at the same time, I cannot ignore the fact that the elements who perpetrated this attack and even the controller of this entire operation were located in Pakistan. That is the evidence which is available, and this has been shared not only by a couple of countries, but a large number of countries shared this perception.

Sir, Mr. Yechury, while speaking, mentioned about mobilisation of international opinion. One feature which I have noticed after this attack is the overwhelming support, sympathy and expression of solidarity that we have received from the international community. Sir, more than 16 Heads of the States and Governments spoke to the hon. Prime Minister. Almost every Head of the State and Government sent message. A very large number of Foreign Ministers, almost everyday, since 27th November, have talked to me over telephone expressing their solidarity with us, extending their support, if we need, in this hour of difficulty. So, there is no lack of mobilisation of international support, because the message which we have conveyed and we have conveyed very clearly in my conversations as well as in the conversations with the Prime Minister is that this is not an India-Pakistan issue, this is a part of global terrorism. The terrorist activities are spreading, cutting across the territorial borders. Terrorists are no respecters of any geographical territory; it is an international phenomenon. Therefore, it has to be looked into from that perspective. And, the international community will have to fight against this terror.

When I talk of the international opinion, it includes the international opinion coming from our neighbourhood also. The Foreign Ministers, the Heads of States, the Heads of Government of every country, which you have referred to, have talked to us. I myself had discussions with the President of Sri Lanka, with the Foreign Minister of Nepal, with the Foreign Minister of Pakistan also. Therefore, please have some patience. And, I do not subscribe to the view that all our neighbouring countries are not friends of India. Each and every one of them is a close friend of India. If somebody

believes that all of them are subscribing to terrorism, he may have that belief but I do not subscribe to the belief that every neighbouring country is indulging in terrorist activities against India. It is not that. Therefore, we shall have to keep in mind that when we are expressing our views on the floor of this House, we shall have to be a little careful. Mr. Chairman, Sir, this debate is being watched by the entire international community, including our neighbours, to see how, after this incident, the Members of Parliament, representing all cross-sections, are responding to a situation that is considered an attack on India's sovereignty. So, everybody is watching how India is going to respond to it; how the leaderships of the political establishments, represented in both the Houses, are going to react to it. Keeping that in view, I would most respectfully, as one of your ex-colleagues and -- if I claim, I may not be wrong -- perhaps, as the longest serving Member of this House, like to submit that we shall have to keep that in the back of our mind while making our observations.

'Yes', we may have different views and different perceptions. On more than one occasion and more often than not, they will manifest themselves. After all, what is democracy? Democracy is the co-existence of dissensions. Without dissensions, there cannot be proper democracy. There will be divergence. There will be dissensions. But, there will be also occasions when the two Houses, political parties and political establishments will stand united and talk collectively. This is a menace on which we shall have to fight collectively. 'Yes', we can find fault. There is no harm in discussing and analysing it. But at the end of it, this menace has to be fought. There is no denying this fact. I was talking of the international dimension of the problem. It required detailed planning. I was not aware and I don't know how many hon. colleagues sitting here were aware that Nariman House; a particular place known as Nariman House was the hub of Jewish activities. Somebody coming from outside had detailed information. Why was it fixed as a target?

It is not that just some terrorists are coming and throwing grenades or suicide bombers are coming and just activating the explosives, killing their targets. The entire nature, as the hon. Home Minister has elaborately explained in his statement, was totally different. Its enormity, its ferocity, its dimension, the strength of its operations speaks of how much time, how much energy, how much training, how much planning was necessary for this operation. The point which I am trying to drive at is, the needle of suspicion points to Pakistan. Therefore, I sent my demarche to the Pakistani authorities. I spoke to the Foreign Minister. He was very much in India. He

was my honoured guest. I had invited him to discuss how to improve Indo-Pak relationship, not only at the Governmental level but at people-to-people level. On 27th of last month both of us were to address a seminar at Chandigarh where participants, apart from the Government officials, included a cross-section of people representing the general public. He came for that and it was also a part of his unfinished bilateral visit because when he came in response to my visit in May 2008, he had to rush back and cut short his visit because of a bereavement in his family. So, he wanted to fulfil these two objectives. In between, these things happened. When it happened, on 28th I talked to him. I spoke to him over phone. Shri Janeshwar Mishraji was a senior Minister in the Government, surely, he knows and many of you know that we do not make these types of conversations casually.

These conversations are recorded and they are called Speaking Notes in diplomatic language. I conveyed that diplomatic Speaking Note; every word of it was recorded and it was from the written text. I suggested three things to him. I suggested that we would expect Pakistan to act; to act to fulfil its own commitments made, not once, but twice, commitments made by the highest authorities in the Governments. On 6th January, 2004, in a joint statement issued by the then Prime Minister, Shri Atal Bihari Vajpayee and the then President, Shri Parvez Musharaff, the President committed that the territory of Pakistan would not be allowed to be used by terrorists.

This was reiterated on 24th September, 2008, in a joint statement issued by the President Shri Asif Ali Zardari and the Prime Minister, Dr. Manmohan Singh -- the same assurance -- that the territory of Pakistan would not be allowed to be used by terrorists. What I said in the demarche was to call on Pakistan to fulfil this commitment. The banned organisation, Lashkar-e-Taiba, has been declared as a banned organisation, but is operating under another name -- Jamat-ud-Dawah. It is just the change of name, or, the change of sign-board. Persons are the same, leaders are the same and objectives are the same. Please take action against it. Please take action against those persons who have taken shelter in your country, who have violated Indian laws. Kindly hand them over to us. And, not merely words, please act. Words are no consolation. Not only to Pakistan but also to every interlocutor with whom I have had a conversation, I have pointed out Indian people's sense of outrage and their feeling of anger. Please recognise that. And, it is required that words must be followed by action. Merely flat denial is not going to help. It has to be acted upon.

And you fulfil your own commitments. What you have asked us, we have given the names, not of one or two persons but of 42 persons. Meetings at the level of the Home Secretaries of India and Pakistan, at the level of the Foreign Secretaries have been held, and four meetings of the joint anti-terror mechanism have also been held. This mechanism was established in November 2006. March 2007 onwards, in every meeting--four meetings have taken place -- we give these names but the response which we get is a flat denial. That is why we had to point out and we pointed out that unless these issues are addressed, business, as usual, cannot go on. This aspect has to be kept in view. Somebody might have come out with a thesis that it is not possible to defeat this country through open war; therefore, inflict thousand cuts. Let them die bleeding. Somebody may have this fancy idea but our people are not going to die bleeding. India is emerging and India will rise. India has emerged as an strong economic power, more than a trillion dollars economy. Despite the worldwide melt down, in most of the ratings of our economic growth, the minimum growth which has been projected by the World Bank is more than six per cent, even in today's newspapers, it is 7.5 - 8 per cent which is the envy of the world.

But that is a different story. The Finance Minister will be dealing with it at the appropriate time. The short point which I am trying to drive at is that if you want to cause harm to the others, if you create a Frankenstein, a monster, ultimately it is the lesson of history and civilisation, that the monster destroys its creators. Umpteen examples could be cited. Therefore, I do appreciate the complexity of the internal arrangement of Pakistan. But I cannot help it. I cannot interfere in it. I cannot make any comment on it. It is for them to address that issue. We have to deal only with the incumbent Government. Now, whether the incumbent Government is in a position to deliver or not is not my look-out. I cannot look into it. With whom shall I have to interact? I have to interact with Foreign Minister, with President, with Prime Minister, with the established Government, not with somebody, the so-called real power behind the scene. That may be practical politics. But that is not the domain of diplomacy, and, in the international arena, I shall have to deal with established Government. Therefore, I shall have to convey to the Foreign Minister. Unfortunately, a canard was spread that I telephoned the Pakistan President. Later on, it was discovered that it was a hoax call. Most respectfully, I would like to submit, Sir, that only once in my life I had a discussion, not telephonic, but face-to-face, oral discussion, with the President when I visited Pakistan in May, 2008. I called on him because I knew his wife when she was the Prime Minister of Pakistan in the first half of the nineties. On several occasions I had interactions with

her. I knew her for quite some time. In fact, I was very keen to go and pay homage when she was killed but because of the prevailing situation in Pakistan, I could not go there.

Therefore, when the new democratic Government came, perhaps, India was the first country to send its Foreign Minister to have interaction with the newly elected Government. You have noticed that during the entire period, I have never commented a word, uttered a word, about the internal situation of Pakistan because when I was confronted by the foreign journalists, my response was 'I have great belief in the resilience of Pakistan's system, they will address their own problems. They will find a solution. Therefore, when the democratic Government came to power, was in place, I went there, started discussions, began the 5th round of composite dialogue, invited Foreign Minister. But after that, Kabul happened. On the 7th of July, there was an attack on our Embassy in Kabul. As per international law, attack on an Embassy is an attack on sovereignty, attack on the country. In the height of war, as per Vienna Convention, Embassies and Missions ought to be honoured. Afghan investigations pointed out the involvement of some elements in Pakistan. When we drew attention of the Pakistani Prime Minister and Foreign Minister to that, we got the response, 'we don't believe that evidence, we will investigate ourselves and we will let you know.' We are still waiting for the outcome of their own investigation into the Kabul incident.

If, after Kabul, Mumbai follows, can it be taken as business as usual? Can these incidents be erased or kept aside? I told my interlocutors in the international community that these issues ought to be addressed; you persuade them, you prevail upon them and you help them overcome their internal problem if there be any. I have no comment on it. I would not like to make any comment on their internal situation, internal mechanism and method of functioning. It is for them to address that. When there was the military government, we cooperated with them, but not at the dictats of somebody. That has been our practice. Whoever comes and gets recognised as the incumbent government, we recognise them. We are not to decide whether there will be a democratic government, whether there will be a military government or whether there will be an oligarchical government. It is for the people of the country to decide, not us. We recognised them. And, in our Foreign Policy, I must emphatically point out, that we do not believe in export of ideology. We believe that we cannot alter our neighbours. Neighbours are going to stay there and we have to live in peace with the neighbours. The question is whether we would live in

peace or in perpetual tension. During the entire period that we have been in office, even earlier, our efforts have been to live in peace. Therefore, there will be no lack of peace initiative. But, at the same time, these issues ought to be addressed; and addressed adequately.

A point has been raised that we should move international institutions like the United Nations Security Council¹. Yes, we have moved where it was found necessary that we should move. As per the Resolution of the UN Security Council, a committee was set up, it was the Al Qaida and Taliban Sanctions Committee. When we pointed out that evidence is available that the outfit in Pakistan, Jamat-ud-Dawah, was an extension of Lashkar-e-Toiba under a different name, and asked them to take action against them, I am happy to inform the House, they have taken action against them; it has been put in the banned list. I read the speech of the representative of Pakistan in the UN Security Council. He said that if the UN Security Council bans it, we shall ban it in Pakistan. We said, 'fine, you ban it'. What we suggested in the demarche was -- don't do it at our request; do it on your own, but please do it. You carry out investigations under your own law but please make efforts to do it seriously. Don't repeat what you did after the attack on Parliament. The same persons were arrested; the same organisations were declared banned when international pressure mounted. And we have seen what happened after that.

Somebody has been put under house arrest. What does house arrest mean in a criminal case? We understand that somebody is on bail given by the court or if somebody is in judicial custody or police custody. But these persons were openly making speeches and statements, indulging anti-Indian activities. Therefore, we demanded dismantling of the infrastructure, training camps and logistic facilities, which were being made available to these terrorist outfits.

We are not lacking in co-operation. On October 21st, we initiated cross

1 The Foreign Minister of Pakistan in a statement issued on December 12 following the adoption of the Statement of the Chairman of the UNSC took the position that while it was obligatory for Pakistan to take action against the Lashkar-e-Taiba and Jamaat-ue-Daawa and certain other trusts, as far as certain other individuals said to be of Pakistani origin in Mumbai terrorist attacks are concerned the Government of Pakistan had already initiated investigations on its own and but it was difficult to complete investigations and take action against them unless credible information and evidence was furnished by India." He added that New Delhi had not yet furnished those details. "As far as Pakistan's own investigations are concerned, these will be pursued in accordance with our own laws. Pakistan is committed to internationally respected concept of "due process," said Pakistan Foreign Minister Mr. Qureshi.

LOC trade between our two countries. We opened the bus routes starting from Lahore, and till today, there have been umpteen instances where we have extended our hand of co-operation. But, if somebody takes the hand and tries to twist it and expect that I will accept it without protest, I am afraid, that is too much. It cannot be allowed. The time has come when words must be followed by action and that is the simple request which we are making. Surely, we would not like to make Kashmir an international issue. We told our international interlocutors that this is an issue to be dealt with as per Shimla Agreement, as per Lahore Agreement.

It will have to be resolved bilaterally, however difficult, however strenuous, however time consuming it may be. There is no scope of any third-party intervention and we stick to that. Therefore, we would not like to internationalise it. It is as simple as that. Whatever arrangements, gaps in the security apparatus and other areas are - I am not competent to respond. The Home Minister and the Prime Minister are the competent persons. They will respond and reply. But, from the international point of view, certain facts have to be shared. Another point, which we have very respectfully pointed out to the Pakistani authorities, is that you are saying that the Government is not responsible. I have never claimed, I have never accused that Pakistan Government is responsible. Very carefully, I have used the words 'elements in Pakistan'. If they come from Pakistan, if the controller operates from Pakistan, if the satellite phone available on the ship records the conversation with the persons located in Pakistan, what does it mean? These things cannot be completely ignored – that is simply not possible. This is the short point which we have conveyed very clearly, unmistakably and we expect that they will act. And, if they do not act, then, it cannot be expected that there will be business as usual. There will be some sort of a situation which we do not want because we strongly believe that our development is linked together. But, there must be arrangements in place within the system prevailing in Pakistan to control these elements. And, they themselves are suffering because of it. Therefore, instead of shielding them or protecting them, please take action against them. They have suggested a high-level delegation. What would be the impact of the high-level delegation?

What will it mean? There is no dearth of talks. There is no dearth of mechanisms. Joint anti-terror mechanism is there; Framework of Composite Dialogue is there; eight subjects have been identified, and where we want, we can have talks; we have had talks. Till now the Indus – Water Treaty Pact is working well. Despite open declaration of war, nobody violated the conditions of that Treaty. But in the area of taking concerted actions, strong

actions against terrorism, I am afraid that there is something lacking which is to be addressed. This is the message we have conveyed clearly to them and to all other international interlocutors with whom we have had discussions. Surely, we are in touch with everybody, and we are strongly against internationalising, or making any effort to internationalise, India-Pakistan relationship, or Kashmir issue. Those are not issues under discussions at all.

These attacks as a part of global terrorism have to be addressed but it has to be addressed with patience, with courage and with conviction. There is no need to unnecessarily become too strong in formulations, in our approaches. I do not believe in it. If somebody suggests that there should be an eye for an eye, I do not subscribe to that because Gandhiji once said, in that case, the whole world will be blind. I believe in that. Many years ago, Moses, perhaps, brought out this philosophy of "An eye for an eye, and, a tooth for a tooth" but today the civilization has made more advancement. We would like to resolve the issues coolly, and, we do hope that good sense will prevail.

I remember having read the article of Mr. Zardari, I appreciated it. I felt the anguish of the man who lost his wife in the senseless terrorist attack, and, the letter which she wrote to the then President was really revealing. It was published by a publishing house of London. I quoted a few lines from that book in the other House. I would not like to quote it again. But the message is that a complex system had been created in Pakistan, and, she said that everything is a circle within a circle, there was no straight line. Perhaps time has come when there should be straight lines. Sir, it would help them, and, it would help us. Thank you, Mr. Chairman,

311. Resolution passed by the Parliament on the terrorist attack in Mumbai.**New Delhi, December 12, 2008.**

THIS HOUSE

expresses its unequivocal condemnation of the heinous terrorist attacks in Mumbai by terrorist elements from Pakistan, destroying hundreds of innocent lives and seeking to destroy the values that India stands for;

Notes that this outrage follows acts of terror committed since the beginning of this year in various places across India and on the Indian Embassy in Kabul;

Notes with deep concern the fact that Lashkar-e-Toiba, a terrorist organization that is listed in the UN Security Council Resolution 1267 and is banned in Pakistan, has continued to operate and launch terrorist attacks against India;

Notes the Government's firm intention to review circumstances leading up to the attacks on Mumbai and to take further measures as may be necessary to safeguard national security;

ON BEHALF OF THE PEOPLE OF INDIA, FIRMLY RESOLVES THAT

- India shall not cease her efforts until the terrorists and those who have trained, funded and abetted them are exposed and brought to justice;
- India shall firmly counter all evil designs against its unity, sovereignty and territorial integrity;
- India will remain resolute and will be victorious in its fight against the barbaric menace of terrorism; and
- That the ideal of a secular and democratic India shall prevail.

312. Interview of External Affairs Minister Pranab Mukherjee with Karan Thapar in the TV programme: 'Devil's Advocate'.

New Delhi, December 14, 2008.

Interviewer (Mr. Karan Thapar): Hello and welcome to Devil's Advocate.

How should we assess Pakistan's response to the terror strike on Mumbai? That is the big issue I shall explore today with the Foreign Minister Pranab Mukherjee.

Foreign Minister, let us start with the responses from Pakistan so far. Reports say that LeT offices have been raided; Jamat-ud-Dawa offices have been sealed; newspapers claim that perhaps as many as seventy people have been either arrested or detained including Masood Azhar, Hafiz Mohammad Sayeed, Zaki-ur-Rahman Lakhvi; and they say that the action is continuing. Does this begin to look like a meaningful first step?

External Affairs Minister (Shri Pranab Mukherjee): Let us wait and see whether these actions are taken to their logical conclusion. You know what happened after the attack on Parliament in 2001. Almost similar type of action was taken at the initial stage when the international pressure was mounting. But after that it was let off. Therefore, we will have to see whether these are taken to their logical conclusion. So far as JuD is concerned, I understand that the Security Council Committee has declared it as an outfit of the banned Lashkar-e-Toiba. The response which we have received through the media - of course there is no official communication from Pakistani to us - is that the Foreign Minister and other Pakistan authorities reacted that they will fulfill their obligations as per the international requirement.

Interviewer: Are you now waiting to see that they keep that word?

External Affairs Minister: I am not waiting only for that; I am waiting to see whether these steps are pursued seriously; followed up to their logical conclusion; the infrastructure facilities available there for the terrorists are totally dismantled; and the outlawed or banned organizations do not reappear with a new name, with a new signboard but with the same old faces.

Interviewer: I understand that. But I also note that Admiral Mullen, the American Chairman of the Joint Chiefs of Staff, has described the steps

Pakistan has taken as very positive; he has called them great steps. Now today you met the American Deputy Secretary of State John Negroponte. What impression did he give you about America? Do they think Pakistan has taken effective steps or are they prepared to wait like you for full measures to happen?

External Affairs Minister: I would not like to disclose what transpired between me and Negroponte fully because I understand he is going to have an interaction with the media. But he shared his perception and we conveyed our perceptions to him. We clearly pointed out that we would like to see that these steps are taken to their logical conclusion; words must be followed by action.

Interviewer: Pakistan has proposed a high-level political delegation which they want to send to India. And they said that this is different from their original idea of a joint commission. How do you respond to that?

External Affairs Minister: I would like to have the official communication first. That is because in response to my demarche, in the first sentence itself it was stated that they were considering various aspects (of our demarche). As to what would be the composition, what would be the nature, what would be the task; we do not know anything. I must (first) know what is this high-level delegation which will come, what is the purpose.

Interviewer: So this has not been officially communicated to India as yet.

External Affairs Minister: No.

Interviewer: It has only been mentioned in the press by Pakistan.

External Affairs Minister: In their response they have said that they would like to send it but no details have been available to us.

Interviewer: So, you are awaiting clarification.

External Affairs Minister: Yes.

Interviewer: One of the proposals Pakistan has made earlier, which your Government has indicated you are not impressed by, is their suggestion of a joint investigative mechanism under a Joint Commission headed by the two NSAs to look at the evidence. Why is that not a step forward?

External Affairs Minister: From our past experience we have seen that various mechanisms are already in place. Take the case of the Joint Anti

Terror Mechanism. What was the purpose of Joint Anti Terror Mechanism? It was to share information, intelligence, and thereafter to follow it up. In four meetings which have taken place since its establishment, nothing has been produced. It has yielded no results. It was an exchange of views, and thereafter it was not followed up.

Interviewer: So, in fact, your experience leads you to believe that the investigative mechanism they are suggesting would be equally ...

External Affairs Minister: I am not coming to any conclusion but we think that whatever they committed, whatever they are to do, let them do it first.

Interviewer: Now, late last night the Pakistan Foreign Minister Shah Mehmood Qureshi went on television to say that the steps they have so far taken are on the basis of investigations they have done on their own, but now they need evidence from India to go further. Do you think that evidence from India can be made available since he is publicly asking for it?

External Affairs Minister: Whatever evidence we have we can make it available. But you know this is a case we are also investigating. We have not come to a definite conclusion. Therefore, at this juncture perhaps it would be premature to share the evidence.

Interviewer: But at the right time you are prepared to do so.

External Affairs Minister: We have shared the evidence in the past. The point I am repeating is that it has not been followed up and it has not been taken to its logical conclusion.

Interviewer: Absolutely. In the past they have, in a sense, not taken it further. But you are also saying that when you reach your conclusions you will be prepared to share evidence this time round.

External Affairs Minister: If it is needed, surely I would like to share it with them.

Interviewer: The Pakistan Ambassador at the UN has gone public on television to say that they would like access to the terrorist in India's custody Ajmal Kasab so that they can be satisfied that he is genuinely a Pakistani.

External Affairs Minister: I do not think I have received any formal communication from the Pakistan Embassy.

Interviewer: So, once again they are communicating through the media, not doing it officially.

External Affairs Minister: I do not know. At least to my knowledge it has not yet reached me. I do not know whether it has reached at a lower level. I will find it out.

Interviewer: But is this something that could be possible?

External Affairs Minister: How can I say it right now? Are they claiming that this man is a Pakistani citizen? I do not know! Have they claimed the dead bodies? I do not know!

Interviewer: In fact, their newspaper Dawn has done an interview with Ajmal Kasab's father who has recognized the picture and accepted it is his son.

External Affairs Minister: Everything is appearing in the media. But the fact of the matter is that there is a way of communication between two Governments.

Interviewer: And that is not happening.

External Affairs Minister: Up to now it has not happened.

Interviewer: From everything you know about what happened in Mumbai, do you believe that this was primarily the work of non-state actors, or is there any truth to a report put out by PTI late last week that the Government has evidence that suggests that ISI is officially involved as well?

External Affairs Minister: Look, I am not interested in having trial by media. These are the areas of investigation. After investigation it is taken to the court, the due process of law and procedure established by law should follow. Therefore, I am not in a position to share any of this information. It is due to the media inquisitiveness that people may be interested in it, but being in the Government I am not interested in it. The second point which I would like to suggest is that non-state actors are not coming from heaven, as I told Parliament yesterday. They do not come from a different planet. They live and function from and within the territory of a particular country.

Interviewer: In this case Pakistan.

External Affairs Minister: In this case Pakistan. That is why repeatedly I said, "elements from Pakistan". That is the phrase I have used meticulously.

Interviewer: And that is the phrase you prefer to use at this moment. You do not want to be more specific.

External Affairs Minister: I would not like to be more specific unless a definitive conclusion is arrived at by the investigating agencies and they prosecute the person. There is a legal system in our country, which will take care of it. Till then we will have to keep (retain) whatever information we have, in the interest of the prosecution and a fair trial.

Interviewer: I understand. Let us come briefly to the demarche you have given to the Pakistan Government. There has been a lot of speculation about it in the press. Am I right in saying that the truth is you have given Pakistan three or four names but you have not specifically asked for extradition; what you have asked for is that you would like them to take action; and you are happy if that action happens without ascribing it to India? Am I correct in characterizing it like that?

External Affairs Minister: No. What I have told them is that there are two categories of people involved. There are some people who have committed crimes in India, have left India and have taken shelter in Pakistan, like Dawood Ibrahim. We are asking the Pakistan authorities to hand over persons like these to Indian authorities so that there can be trials as per Indian laws here. There are persons who are Pakistan citizens, who are indulging in terrorist activities. Let them be arrested, let them be tried as per Pakistan laws. One person I am particularly mentioning is Masood Azhar. He was in Indian custody. We had to hand him over to the hijackers of the Indian plane in Kandahar. He is available in Pakistan. Very often he appears on the television screen in Pakistan. I do not understand what difficulty Pakistan Government has in handing him over to us? Pakistan Government did not demand his return. The hijackers demanded that they would release our passengers in the hijacked plane if we handed over the man who was in our custody. So, why can't the Pakistan Government hand over that man to us? And what is the point of keeping him under house arrest?

Interviewer: I understand. This is in a sense a critical test of their sincerity and their genuine cooperation.

External Affairs Minister: I am not making a value judgment. I am asking them to do what I wanted them to act upon. I am telling them that twice at the highest level they had given assurances that Pakistani territories would not be allowed to be used by terrorists to carry on activities against India. Please dismantle them, and please prove that it (Pakistani territory) is not being so used!

Interviewer: In these circumstances, as Foreign Minister, would it be proper and fitting for the Indian cricket team's tour of Pakistan to go ahead? Or do you think it should be reconsidered?

External Affairs Minister: Do not mix politics with cricket. Of course, I do not think that a conducive atmosphere prevails right now. But the authorities (who decide) are different. Taking into account all circumstances they will decide.

Interviewer: But as you say, do not mix politics with cricket.

External Affairs Minister: Yes.

Interviewer: How do you respond to Asif Ali Zardari's article in The New York Times? Do you see it as an expression of political sentiments that are genuine and warm?

External Affairs Minister: The article speaks of the agony of a person who himself is the victim of a terrorist attack. Therefore, everybody who has read that article will have sympathy and will be in agreement with him. Therefore, it is not a question of persons or individuals. When you discharge some public functions, how are you discharging that public function is important. What role he plays as President of Pakistan to fulfill the commitment which he gave to our Prime Minister is important here.

Interviewer: In other words, his words may be reassuring, but they must be matched by proper action.

External Affairs Minister: Proper action. Words must be followed by proper action.

Interviewer: So, when Asif Zardari writes in his article that reconciliation and rapprochement is the best revenge against the dark forces that are trying to provoke a confrontation between Pakistan and India. You say, "As a sentiment that is fine, but if you do not have action, then it does not work."

External Affairs Minister: It will remain merely a sentiment. It will produce nothing.

Interviewer: So, at this moment, Asif Zardari has to prove he means what he says, he means what he writes.

External Affairs Minister: Not only that, it is not a question of an individual. It is a question of the holder of the high Constitutional executive office.

Interviewer: Does he, as you analyse his position, actually have power to do and implement what he says; or is he checked by the Army and checked by the ISI?

External Affairs Minister: How can I comment on the internal mechanism of Pakistan? It is not for me, it is for the authorities of Pakistan, people of

Pakistan, to decide who will function as per their own Constitution; in what manner, in what way. I am not sitting in judgment on that.

Interviewer: Mr. Mukherjee, let me start this part by putting to you something that Veerappa Moily, the Congress Spokesman and General Secretary, has said on television about a week ago. He says that if Pakistan does not shut down terrorist camps, India will step in and act on its own. Is that your Government's position, or is that just a statement Mr. Moily has made?

External Affairs Minister: Government's position, which I have already stated, is that every sovereign Government would like to take all steps necessary to protect its citizens and to protect the territorial integrity of the country and its sovereignty. So far as Congress Spokesperson Veerappa Moily's observations are concerned, it is the reflection of the sense of outrage and sense of anger among the Indian people, at this attack on Mumbai by terrorist elements from Pakistan.

Interviewer: On Thursday in Parliament, I believe in response to a question that was asked, you ruled out the option of war. But Yashwant Sinha, one of your predecessors, went public that night and said that India must not rule out the military option.

External Affairs Minister: Every individual is entitled to hold his view. So, I cannot gag Mr. Yashwant Sinha or anybody else. What I can say is what I believe and what the position of the Government of India is that war is not the solution to the problem.

Interviewer: In which case, how much time are you prepared to give Pakistan before you come to the conclusion that they simply are not taking effective action?

External Affairs Minister: It depends on how fast, how quickly Pakistan responds; or whether they respond at all or not. Therefore, it is not possible for me to indicate any timeframe right now.

Interviewer: Are you worried that at the moment anger and passion in India is at a high pitch, and may be people will become impatient if you give Pakistan too much time; and yet if you do not give Pakistan enough time to act, there is pressure on you internationally? In a sense you seem to be caught in between.

External Affairs Minister: No, this is not a question of being caught between

two. This is a question of getting things done the way one should feel it should be done. We have demanded certain things from Pakistan. We hope and expect that the new dispensation - which has come in Pakistan through the democratic process, with the restoration of democratic system there - would fulfill its commitments. That is our hope and expectation, though we know from our past experiences that these assurances are observed more by breach than by compliance.

Interviewer: A lot of your hopes and expectations centre around the new civilian regime and Asif Zardari has only been President for less than three months. Are you a little perturbed by this hoax call controversy that the system in Pakistan and perhaps the President himself were a little gullible and got taken in by a hoax call?

External Affairs Minister: I am a little concerned about the type of hysteria which developed as a result of this hoax call. If the Government is guided or takes certain actions on receiving a hoax call, then surely it is a matter of concern to everybody. But factual position is that, as I explained earlier, there was no question of me calling the President of another country. Normal diplomatic courtesy demands that the President should be spoken to by the Prime Minister and I can have a conversation with my counterpart which ...

Interviewer: And Asif Zardari should have known this?

External Affairs Minister: ... which I actually had with the Pakistani Foreign Minister Mr. Qureshi. But that was not in Islamabad. He was very much here in Delhi at that point of time on 28th evening. And every word of it was recorded as per our system - (there is) no question of calling up President Zardari. Why should I call him?

Interviewer: Pakistan has multiple centers of power and no one is certain who is the absolute authority. There is the army, there is the civilian President, there is the ISI. How difficult is it to deal with a country where you are not quite sure where power lies?

External Affairs Minister: It may be difficult but we have no option. I cannot change the internal mechanism of functioning in Pakistan. That is for the Pakistan authorities and rulers to decide.

Interviewer: Mr. Mukherjee, a pleasure talking to you on Devil's Advocate.

313. Response of Official Spokesperson to question about protest from Jamiat-i-Hind to the Ministry of External Affairs at the reference made by the Pakistan's Permanent Representative to the United Nations at the UNSC debate.

New Delhi, December 16, 2008.

"The Jamiat-Ulama-i-Hind has complained¹ to the Ministry of External Affairs protesting at the language used and aspersions cast in the statement by the Pakistani Permanent Representative at the UN Security Council during the open debate on Threats to International Peace and Security on 9th December, 2008. In the protest, it was pointed out that this was a shameful attempt to deflect attention from the real culprits. It is understood that the Jamiat-Ulama-i-Hind has sent protest letters to the Pakistani High Commissioner in New Delhi as well as to the United Nations Secretary General.

Statements such as the above by the Pakistani Permanent Representative are indeed regrettable. The Darul Uloom Deoband is one of our highly respected institutions of Islamic learning."

1. It may be recalled that during the UNSC debate in New York on December 9 on the question of terrorism, the Pakistani Representative Abdullah Haroon had made a gratuitous suggestion that the respected clerics at Deobandi school in Deoband in the Indian State of Uttar Pradesh issue a fatwa (religious edict) appealing to Pakistani terrorist organizations to give up the path of terrorism, implying perhaps that this highly venerated organization, dedicated to propagating the finer points of the holy Quran, and its universal message of brotherhood, had links with the Pakistani terrorist outfits. It was natural for them to protest to the Government of India at this uncalled for and unwarranted remarks.

314. Response by Official Spokesperson to a question on alleged Pakistani air space violations.

New Delhi, December 18, 2008.

"Today morning the Pakistani Foreign Office handed to our Mission in Islamabad a Note Verbale alleging air space violations by Indian aircraft five days ago. These same allegations were first reported in the Pakistani and international media for several days and are a part of Pakistani disinformation campaign¹.

It had been made clear by Gol when we saw the reports that no violations of Pakistani air space by Indian aircraft have taken place. This was also conveyed to the Pakistani side when the Pak DGMO raised it verbally with our DGMO on the evening of 16th December 2008, three days after the alleged violations.

The Note Verbale given by the Pakistani Foreign Office today will be examined and responded to appropriately by the Government of India."

1. It is noteworthy that the alleged violations, denied by the Indian Air Force, said to have taken place a week earlier when Pakistan had taken hardly any note describing them as "technical" and "inadvertent" and not an unusual occurrence when planes fly at a height of 40,000 to 50,000 feet. Now suddenly Islamabad chose to express concern about the incidents. The demarche made to the Indian Deputy High Commissioner, Manpreet Vohra, listed four 'violations' by IAF aircraft on December 12 and 13. Under the agreement between the two governments, the two air forces must not cross into a 10-km zone from the border on their own side. Pakistan now alleged that in two incidents, the aircraft crossed this 10-km limit. Two other alleged incidents, in which the IAF planes were alleged to have crossed into Pakistan, fell into the category of "airspace violations." While the IAF denied these intrusions ever happened, President Asif Ali Zardari said earlier this week that the planes had committed a "technical" incursion. Pakistan's Information Minister Sherry Rehman said the violations were "inadvertent." What was interesting about the demarche at this time, was that it came in the backdrop of the media reports of heightened activity of Pakistani air force along the India-Pakistan border, and this disinformation was intended to justify it.

315. Press Release issued by the Ministry of External Affairs on the handing over of a letter to Pakistan Acting High Commissioner from Kasab.

New Delhi, December 22, 2008.

The Acting High Commissioner of Pakistan was called to MEA this evening and handed over a letter written by the Pakistani national in our custody, Mohammed Ajmal Mohammed Amir Kasab, who was involved in the terrorist attack on Mumbai on 26-28 November 2008. In his letter addressed to the Pakistan High Commission, Kasab has stated that he and the other terrorists killed in the attack were from Pakistan and has sought a meeting with the Pakistan High Commission¹.

316. Response of Official Spokesperson to a question on Pakistan's statements about defending their borders.

New Delhi, December 23, 2008.

"The talk of war or creating war hysteria is diversionary. The issue is not defense of Pakistan but a terrorist attack¹ on India from Pakistan."

1. In the three-page letter written by the lone surviving Lashkar-e-Taiba terrorist Mohammad Ajmal Amir Kasab involved in the attacks in Mumbai on November 26, claimed his Pakistani identity and asked the High Commission to extend to him legal aid etc. He also insisted that the other killed terrorists were also Pakistani nationals. The Acting High Commissioner of Pakistan Afrasiab was handed over the letter. The terrorist claimed his entitlement to legal help from his country to fight his case in Indian courts. Media quoted senior Mumbai police officials to say that the letter contained minute details of each of his nine accomplices. It mentions not only their addresses but also the names of their handlers, including four important Lashkar-e-Taiba figures: Hafeez Saeed, Zakir-ur-Rehman Lakhvi, Kahafa and Abu Hamza.

1. In order to obfuscate the issue of Mumbai terror attacks, the Pakistani leadership issued bellicose statements and media picking up the cue also whipped up hysteria in the wake of reports of Pakistani troops movement and its fighter aircraft making maneuvers on major Pakistani cities.

317. Response of Official Spokesperson to a question about arrest of alleged Indian nationals in Pakistan.

New Delhi, December 26, 2008.

"There have been reports in the Pakistani media that several Indian nationals have been arrested over the last two days in Lahore and Multan, and are being accused of being terrorists¹.

Since it has also been reported in the Pakistani media yesterday that the senior police officer in Lahore was unaware of the arrest in his city, it seems that this is the work of other agencies in Pakistan that operate outside the law and civilian control.

Indian citizens are therefore advised that it would be unsafe for them to travel or be in Pakistan."

¹ To obfuscate the issue of terror attacks on Mumbai by Pakistani nationals, Islamabad perhaps created an incident and arrested a person which it was claimed was an Indian national. No details were provided to establish the identity of the arrested man. The Lahore police said they were not aware of any incident of this nature in the city on that date. The Government of India thought it prudent to advise its citizens not to travel to Pakistan for the time being lest they should be framed in such fictitious and dubious cases by the Pakistani authorities to get even with India.

SRILANKA

318. Statement of Official Spokesperson in response to questions about Sri Lankan Government's abrogation of Ceasefire Agreement¹.

New Delhi, January 4, 2008.

For India, any step that leads to a reduction in levels of violence and human suffering in Sri Lanka is welcome. Unfortunately, what we have seen recently has been an increase in violence, tension and conflict in Sri Lanka. At the same time, we are acutely conscious that what is required in Sri Lanka is a settlement of political, constitutional and other issues within the framework of united Sri Lanka with which all communities in Sri Lanka are comfortable. It is only through such a settlement that a lasting peace can return to that troubled country. We strongly believe that there is no military solution to the issue.

1 On January 3 Sri Lanka Foreign Minister Rohitha Bogollagama informed the Indian High Commissioner in Colombo that Sri Lanka had decided to abrogate the 2002 Cease Fire Agreement with the LTTE. On his part the High Commissioner told the Sri Lanka Foreign Minister that New Delhi was concerned about the current situation in the island and would like to see faster progress on a political package for the resolution of the ethnic conflict. On January 4 Mr. Bogollagama said the role of Norway in the peace process would be "re-defined" following the abrogation of the 2002 Cease Fire Agreement (CFA). At a news conference he said Norway had been engaged in the peace process since 2000 though he was not in a position to give an outline of its new role. He said the government was yet to approach Norway in this regard. A day earlier Sri Lanka had formally notified Oslo of its decision to terminate the CFA. "This notification was in terms of Article 4:4 of this Agreement and will take effect 14 days from the date of this notice i.e. 16th January 2008." Accordingly, Mr. Bogollagama said, the Status of Mission Agreement (SOMA) on the Establishment and the Management of the Sri Lanka Monitoring Mission (SLMM) dated 18th March 2002 between the Royal Norwegian Government and the Government of the Democratic Socialist Republic of Sri Lanka would also stand terminated with effect from January 16. The Minister said the CFA was executed by the then Ranil Wickremesinghe government without proper consultation with even the Cabinet. He said its original copy was not available with the government. Maintaining that the termination decision had been taken after careful consideration, he said the Agreement was "seriously flawed from the very inception". "It was entered into without proper consultation by the government of the day, with even the Cabinet Ministers not being privy to its contents. Legitimate concerns of the security forces had not even been taken into account. It had the effect of alienating the democratic Tamil political forces and focused solely on the LTTE. "However, notwithstanding these shortcomings evidently made in the hope that sustainable peace could be achieved, at no stage in its six rounds of talks from Sept 2002- March 2003 with the then government

**319. Extract from the T. V. Interview of External Affairs Minister
Pranab Mukherjee with Karan Thapar for the CNN - IBN.**

New Delhi, January 13, 2008.

*

Karan Thapar: Last week the Sri Lankan government announced that with effect from January 15 it intends to abrogate the ceasefire agreement with the LTTE. In your eyes is this a mistake or this given the spate of LTTE attacks in recent months both understandable and perhaps also inevitable?

Pranab Mukherjee: We shall have to see what impact it has. Of late clashes between Sri Lankan forces and the LTTE terrorists have increased. So far as terrorism is concerned India's position is quite clear: zero tolerance. Therefore, any country that takes action against terrorists is free to do so within their legal system.

Karan Thapar: But you are not criticising Sri Lanka for abrogating the ceasefire accord?

Pranab Mukherjee: Because we are not party to it, please remember that. We were never a party to it; attempts were made to drag us to be a party to it but we scrupulously avoided it for obvious reasons.

Karan Thapar: I understand so you have no comment to make on the abrogation either.

Pranab Mukherjee: What I have stated is that so far as the fight against terrorists is concerned, it is one issue. But so far the solution to the problems of ethnic minority, including the Tamilians, so that their legitimate aspirations

did the LTTE seek to engage in any substantive political discussion aimed at moving towards a political settlement," said the Minister. He said the LTTE spurned all offers of discussing issues for a political settlement and continued its "duplicious action" of escalating CFA violations. He said the government while dealing militarily to eliminate the scourge of terrorism would spare no effort in its bid to arrive at a practical and sustainable political settlement. On January 4 itself Sri Lanka also announced that the Indian Prime Minister Manmohan Singh would not participate in the 60th Independence Day celebrations of Sri Lanka on February 4. Mr. Bogollagama clarified that though Sri Lanka had extended an invitation to Dr. Singh, the dates of his visit were yet to be worked out. Earlier the Minister had told Parliament that Sri Lanka had invited Dr. Singh to be the chief guest of the function on February 4 marking the 60th Independence Day. It would have been the first bilateral visit by an Indian Prime Minister in two decades.

are fulfilled within the system of Sri Lanka, that effort must not go lax and should continue to arrive at a solution.

Karan Thapar: It is well known that the Prime Minister has been invited to Sri Lanka to be the chief guest at their 60th anniversary celebrations, which are on February 4. Clearly this is a significant honour for the Prime Minister; the question is will he accept.

Pranab Mukherjee: It has not yet been decided.

Karan Thapar: But isn't it getting a bit rude and discourteous to Sri Lanka not to make up your mind, one way or the other?

Pranab Mukherjee: No, because we require time. As and when it is decided we will let you know, but no decision has been taken.

Karan Thapar: Are you hostage to Indian Tamil politics?

Pranab Mukherjee: No, that has nothing to do with it. Sri Lanka is going to host the SAARC summit this year, naturally we will be going there.

Karan Thapar: That is a commitment?

Pranab Mukherjee: Of course! That is a SAARC commitment, if it takes place. But if they don't hold this summit, then how would I go.

Karan Thapar: Then you are sure about the SAARC summit but you are not sure about February 4?

Pranab Mukherjee: Listen, if they hold the summit we would surely be going but so far to participate in their Independence Day no decision has yet been taken.

Question: I have a question on the Sri Lanka devolution package...

Official Spokesperson: Government of Sri Lanka has been good enough to share with us the interim steps which have been recommended by the All Party Representative Conference of Sri Lanka or the APRC for implementation of the devolution provisions and official language provisions of the Sri Lankan Constitution.

As you know, it has been consistently our view that a settlement of the issues in Sri Lanka is to be done by the Sri Lankan people themselves in a manner that is acceptable to all communities within the framework of a united Sri Lanka. The Government of India will continue to work with Sri Lanka and its people to bring about such a settlement of the issues in Sri Lanka. To the extent that the All Party Representative Conference's proposals contribute to such a settlement, they are a welcome first step.

Question: You welcome it. So, you are happy with it. Are you saying that?

Official Spokesperson: I just gave you a very detailed response. You will have to think and analyze it.

Question: Have they communicated any features of the devolution package?

Official Spokesperson: They have shared with us the interim steps that have been proposed by the APRC.

Question: What are those?

Official Spokesperson: It is not for me to share those with you.

321. Extract relevant to Sri Lanka from the Statement of External Affairs Minister Pranab Mukherjee in the Lok Sabha on Foreign Policy Related Developments.

New Delhi, March 3, 2008.

India is closely monitoring developments in Sri Lanka and is concerned about the recent upsurge in the violence and conflict in that country. As hon. Members are aware, our policy towards Sri Lanka is based on the conviction that there is no military solution to the conflict. The way forward lies in a peacefully negotiated political settlement within the framework of a united Sri Lanka acceptable to all communities, including the Tamils. The interests of the Tamil community in Sri Lanka are a matter of particular significance to us in our dealings with Sri Lanka. With this in mind, we have welcomed as a first step the declared intention of the Sri Lankan Government to fully implement the 13th Amendment. We are also fully conscious of the need to provide for the safety of our fishermen. While it is important for our fishermen to respect the International Maritime Boundary Line (IMBL), especially keeping in mind the on-going operations in Sri Lanka, we have impressed on the Sri Lankan Navy to act with restraint and for our fishermen to be treated in a humane manner.

On March 19 the External Affairs Minister replied to a Short Duration Discussion in the Rajya Sabha on his above Statement made on March 3 and said¹ :

Sir, as far as the issues relating to Sri Lanka are concerned, we are addressing these issues. So far as laying of mines is concerned, there is an international convention and every country is signatory to it. Therefore, that will be taken up as per international norms and practice. In regard to the problems of fishermen, we are currently engaged and perhaps we will be able to arrive at a solution which would be acceptable to both countries and the fishermen will be benefited to a considerable extent. So far as training and other facilities are concerned, Sri Lanka is one of the countries which sends the largest number of trainees to our different Defence institutions, not today, but for quite some time. In regard to

1. For full text of the two statements of the External Affairs Minister Please see Document Nos.19 and 23.

political solution, I have already stated that we are encouraging them, we are advocating them and we want them to have this political solution which they have agreed to by the 13th Amendment of their Constitution by devolution of power so that the large ethnic minority feel assured that their legitimate aspirations are fulfilled within the constitutional framework of Sri Lanka.

322. Press Release of the Ministry of Home Affairs extending the ban on the LTTE.

New Delhi, May 15, 2008.

The Central Government has extended the ban¹ on the Liberation Tigers of Tamil Eelam (LTTE) as an unlawful association by two years. The notification to this effect was issued yesterday.

1. The ban was first placed on LTTE for a period of two years under Section 3 (I) of the Unlawful Activities (Prevention) Act, 1967 vide Notification dated May 14, 1992 and has been renewed every two years thereafter. The ban came in the wake of involvement of LTTE in the assassination of former Prime Minister Rajiv Gandhi. India's request for the extradition of its leader V. Prabhakaran is still pending with the Sri Lankan Government. In announcing the ban in the Parliament on May 14, 1992 the then Home Minister S. B. Chavan had said: "...Keeping in view the threat that the continued presence of LTTE in India poses to the security, sovereignty and Integrity of India, the Government of India has taken the decision to declare the LTTE as an unlawful association with immediate effect."

323. Briefing points by Official Spokesperson on the visit of Sri Lanka Foreign Minister Rohitha Bogollagama.

New Delhi, June 16, 2008.

- Foreign Minister of Sri Lanka H.E. Mr. Rohitha Bogollagama is currently paying a visit to India to convey invitations for the 15th SAARC Summit to the Indian Leadership. The SAARC Summit is to be held in Colombo in the beginning of August 2008.
- Mr. Bogollagama met the External Affairs Minister Shri Pranab Mukherjee and personally conveyed the invitation. He also briefed the EAM on the preparations for the forthcoming Summit particularly the need to continue the theme of connectivity which was the focus of the 14th SAARC Summit in Delhi last year. The two Ministers also discussed other SAARC related issues, such as the SAARC Development Fund, SAARC Standards Organization, South-Asia University and the SAARC Food Bank.
- The EAM also hosted a working lunch for the Sri Lankan Foreign Minister. Discussions over lunch covered developments in Sri Lanka, India ;V Sri Lanka bilateral relations and regional issues.
- Mr. Bogollagama is scheduled to call on the PM this evening.

324. Media Report on the visit of a High-level Indian delegation to Colombo.**Colombo, June 22, 2008.**

A high-level Indian team represented by the National Security Adviser M.K. Narayanan, Foreign Secretary Shiv Shankar Menon and Defence Secretary Vijay Singh made a two-day visit to Colombo. No announcement about the visit of the team was made officially either during the visit or at its end. Ostensible purpose of the visit was said to be consultations between the Indian and Sri Lankan officials on matters of mutual interest and as a precursor to Prime Minister Manmohan Singh's visit to attend the SAARC Summit scheduled in Colombo for the first week of August.

The visit aroused keen interest in the media in view of Indian anxiety to find a solution to the ethnic conflict in Sri Lanka acceptable to all stakeholders, the endeavours of the Rajapaksa government for a consensus within the country, the ongoing war in the north between the security forces and the LTTE. On June 21 media reports quoting sources in the Indian delegation expressed the hope that Colombo would find a peaceful solution to the ethnic conflict within the framework of a united Sri Lanka and reiterated its position that there was no military solution to the strife. The Indian viewpoint was articulated by the Indian team represented by National Security Adviser M.K. Narayanan, Foreign Secretary Shiv Shankar Menon and Defence Secretary Vijay Singh in a meeting with President Mahinda Rajapaksa.

A senior Indian official briefing the media informally said that the team held in-depth discussions with senior Sri Lanka government officials on issues of bilateral interest including the current security situation in the country against the backdrop of the war in the north between the security forces and the LTTE as well as matters related to the SAARC Summit scheduled in Colombo in August. "It is a very successful visit. The nature of discussions was constructive and useful," was how the Indian official summed up the outcome of series of meetings between the Indian team and its Sri Lankan counterparts.

The report said that the Indian side held extensive talks with Lalith Weeraratunga, Secretary to the Sri Lankan President, Defence Secretary Gothabhaya Rajapaksa, Basil Rajapaksa, Senior Adviser to the President, and the service commanders. The Indian team also met with representatives

of three Tamil parties, the Ceylon Workers Congress (CWC) leader and Minister, Arumugam Thondaman, PLOTE leader Dharmalingam Siddarthan and Tamil National Alliance Parliamentary Leader, R. Sampanthan. (The Tamil National Alliance is the parliamentary face of the LTTE.)

The perennial problem of fishermen of the two sides straying into each others waters and their subsequent treatment were also discussed.

The Sri Lankan side gave a detailed briefing to the Indian side on the efforts being made by the Sri Lanka President to forge a consensus within the country on a solution to the ethnic conflict acceptable to all sides, the commitment on the part of the regime for full implementation of the 13th Amendment to the Constitution pertaining to devolution of powers to provinces and the recent election to the Eastern Provincial Council.

A senior Sri Lanka official told the media: "The visit is part of the regular exchange of contacts at the highest official level between the two countries." It would be recalled that a three-member Sri Lankan official team had visited India in September 2007 and the present visit could be stated to be a return visit. (The Sri Lankan team had comprised Secretary to the President Lalith Weeraratunga, Defence Secretary Gothabhaya Rajapaksa and Senior Advisor to the President Basil Rajapaksa.)

Though there was no official briefing or word on the talks, a senior official of the Sri Lanka government termed the talks as 'free, frank and fruitful' covering the whole gamut of India-Sri Lanka relations. "India is not just our immediate neighbour but a close friend and major player in the region. This spirit was reflected at the talks," said the official.

325. Media Report on the meeting between Prime Minister Dr. Manmohan Singh and Sri Lanka President Mahinda Rajapaksa on the sidelines of the SAARC Summit.

Colombo, August 1, 2008.

Sri Lanka President during his meeting with the Indian Prime Minister told him that his regime was committed to implementing 'comprehensively' the provisions of the 13th Amendment to the Constitution on power devolution. Besides discussing situation in Sri Lanka, the two leaders also exchanged views on wide range of issues of bilateral and regional concern.

The plight of fisher folk straying into each other's waters figured prominently in the course of the talks. Both agreed on the need to deal with fishermen apprehended in Sri Lankan waters in a 'humanitarian manner.' A statement issued by the President's Secretariat after the talks said: Colombo urged India "to continue to discourage Indian fishermen from crossing the International Line of Demarcation, as their presence is used by the LTTE as cover for its activities." Mr. Rajapaksa told Dr. Singh that the All Parties Representative Conference (APRC) was expected to submit recommendations to forge a further political consensus of solution to the current crisis.

The Sri Lankan President said the security operations in the North were progressing and the security forces had been told to exercise utmost caution against casualties among civilians.

Prime Minister Dr. Singh conveyed to Mr. Rajapaksa that one cannot envisage a prosperous India without strong links with her neighbours, and the present SAARC Summit in Colombo provided an opportunity for such a partnership.

Sri Lanka was equally reassuring and President Rajapaksa told the Prime Minister that Sri Lanka valued the economic benefits Sri Lanka derived from the investments of Indian entrepreneurs. He took the opportunity to thank the Indian government for the development cooperation to Sri Lanka, including the rehabilitation of the tsunami-affected Southern Railway, for which a Memorandum of Understanding was due to be signed.

(During his stay in Colombo Dr. Singh also met the former Prime Minister, Ranil Wickremesinghe, the Tamil National Alliance (TNA) parliamentary leader R. Sampanthan and other political representatives.)

326. Press Release of the Ministry of External Affairs on the summoning of the Sri Lankan Deputy High Commissioner by the National Security Adviser.

New Delhi, October 6, 2008.

The Sri Lankan Deputy High Commissioner was summoned by the National Security Adviser today to express India's grave concern and unhappiness at the growing casualties of unarmed Tamil civilians as a result of military action¹. The escalation of hostilities in the North and the resultant fall out was leading to a great deal of concern in India. It was pointed out that there was need for the Sri Lankan Government to act with greater restraint and address the growing feeling of insecurity among the minority community. To stem the deteriorating humanitarian situation, the need to

¹ As the military operations in the Northern province of Sri Lanka against the LTTE led to displacement of a large body of Tamils in the North, thereby causing a major humanitarian problem, the Tamils in India particularly in the State of Tamilnadu expressed grave concern for the welfare of the Tamils in Sri Lanka. The political parties in Tamilnadu also equally felt concerned and articulated their concern to the Government of India to take necessary steps with the Government of Sri Lanka for the amelioration of the sufferings of the Tamils in the island. New Delhi naturally felt obliged to voice its concern to Colombo on the plight of the people there. New Delhi in doing so certainly did not have in mind any intention to interfere in the internal affairs of the neighbour but to draw its attention to the humanitarian problem and impress upon the Sri Lankan Government its oft repeated policy that there could not be a military solution to the ethnic problem which required a political solution. Colombo too was not unmindful of the humanitarian angle to the military operations and was deferential to New Delhi's concerns.

The Sri Lanka Foreign Minister Bogollagama in a statement in Parliament on October 7 said "LTTE does not represent the Tamil community in Sri Lanka. Therefore, military action against the LTTE should never be perceived as action against our brethren, the Tamil community. We are concerned about them and will work with them to ensure their welfare, security, and aspirations since they are our fellow citizens." Reminding members about reports of Mr. Narayanan expressing concern on the situation, the Minister reiterated Sri Lanka's policy of maintaining a close dialogue with India, with whom it has a 'time-tested relationship based on mutual goodwill and trust.' There was a clear recognition in the statement of the Foreign Minister that the problem was essentially a political one and therefore needed a political solution. Sri Lanka Government was at pains to impress on New Delhi and the international community that while looking for a political solution, its military operations were only directed against the terrorist organization, the LTTE which too was a proscribed organization in India for its involvement in the assassination of former Indian Prime Minister Rajiv Gandhi. To that extent there was convergence in the views of both India and Sri Lanka. The Senior Advisor to the President Basil Rajapaksa, who also is the brother of President said on October 12 that India's main concern was about the civilians in the North and the issues faced by the fisherfolk. "We have already taken serious note of addressing these issues and if there are some shortcomings we will address them soon".

revive the political process was highlighted. It was essential that vital supplies to the affected population were not disrupted in any manner.

Serious concern was also expressed at the continuing attacks on Indian fishermen, including the recent incident on September 27-28. This was not in keeping with the spirit of the understanding reached between India and Sri Lanka and recently reiterated in meetings held at the highest levels. The Sri Lankan Navy should cease such attacks and not lose sight of the humanitarian and livelihood dimensions of this issue.

327. Remarks of Prime Minister Dr. Manmohan Singh to journalists on the situation in Sri Lanka.

New Delhi, October 15, 2008.

On October 15, the Prime Minister Dr. Manmohan Singh told journalists in New Delhi that Sri Lanka must respect the human rights of ethnic Tamils. India already conveyed its views to Colombo, including when National Security Adviser M.K. Narayanan summoned Sri Lankan Deputy High Commissioner G.G.A.D. Palithagenegoda last week. Dr. Singh said the Centre was concerned at the escalating hostilities, losses suffered by civilians and increasing number of displaced persons. "We always believe that the situation in Sri Lanka does not call for military victory. It calls for a negotiated, political settlement which respects the unity and integrity of Sri Lanka and at the same time respects the essential human rights of minorities, particularly Tamil minorities." Dr. Singh expressed concern over harassment and killing of Indian fishermen by Sri Lankan Navy personnel. "We have made representations to the Sri Lankan government," he said and referred to Mr. Narayanan summoning Mr. Palithagenegoda last week to "let [him] know of India's intentions."

328. Statement by External Affairs Minister Pranab Mukherjee on the situation in Sri Lanka.

New Delhi, October 16, 2008.

The situation in Sri Lanka remains a matter of grave concern to us in India. We are particularly worried about the humanitarian¹ effect of

1 The official statement from the External Affairs Minister came on the heels of Prime Minister speaking to journalists the previous day expressing "serious concern" over the developments in Sri Lanka and urged Colombo to find a negotiated settlement rather than look for a "military victory". These concerns emanated from New Delhi as the LTTE in Northern Island came under heavy pressure from the Island's security forces and the Tamil politicians in Tamilnadu urging the Government of India to intervene to save the Tamils in Sri Lanka. Sri Lanka must respect the human rights of ethnic Tamils, Dr. Singh told journalists on October 15. (India had already conveyed its views to Colombo, when the National Security Adviser M.K. Narayanan summoned Sri Lankan Deputy High Commissioner G.G.A.D. Palithagenegoda last week.) Dr. Singh said the Centre was concerned at the escalating hostilities, losses suffered by civilians and increasing number of displaced persons. "We always believe that the situation in Sri Lanka does not call for military victory. It calls for a negotiated, political settlement which respects the unity and integrity of Sri Lanka and at the same time respects the essential human rights of minorities, particularly Tamil minorities." The Prime Minister also expressed concern over harassment and killing of Indian fishermen by Sri Lankan Navy personnel. "We have made representations to the Sri Lankan government," he said and referred to Mr. Narayanan summoning Mr. Palithagenegoda last week to "let [him] know of India's intentions."

Earlier on the 15th October itself Union Shipping Minister and DMK parliamentary party leader T.R. Baalu had apprised Prime Minister and External Affairs Minister of the situation in Sri Lanka. He handed over to Dr. Singh a letter written by Tamil Nadu Chief Minister M. Karunanidhi detailing an all-party resolution and action to be taken by the Centre to restore peace and protect the lives and livelihoods of Tamils in Sri Lanka. National Security Adviser M.K. Narayanan was present at the meeting between Mr. Baalu and the Prime Minister. Meanwhile Congress spokesman Manish Tewari said the United Progressive Alliance government had taken various steps at the highest level in Sri Lanka in the last few weeks. "We will continue to remain engaged with the Sri Lankan government and ensure that India's concerns get reflected." At the same time, he said, the Centre would ensure that its actions did not amount to interference in the sovereignty of the island nation.

In Colombo a senior Foreign Ministry official, however, said the government was "alive to the political sensitivities of various constituencies" in India and had been "engaged on a continuous basis in addressing the legitimate concerns" of New Delhi. "Indian High Commissioner too had a few meetings in Colombo including with President Mahinda Rajapaksa, reiterating the Indian concerns articulated in the demarche on October 6 when the Deputy High Commissioner was summoned by the NSA. Assurances have been conveyed at the highest level to New Delhi that Sri Lanka would take measures to address its legitimate concerns and the government does not believe in a military solution to the ethnic strife," the official told *The Hindu* in Colombo. Subsequently, senior adviser to President, Basil Rajapaksa, said on record that the government would take "some measures" to address New Delhi's concerns over humanitarian issues triggered by the ongoing war.

the continuing conflict on civilians who have been caught up in circumstances not of their making. It is essential that their rights be respected, that they be immune from attacks, and that food and other essential supplies be allowed to reach them. We have consistently made it clear that a return to normalcy cannot be brought about by military means or battle field victories. What is required in Sri Lanka is a peacefully negotiated political settlement which allows each community to realize its own potential within the framework of a united Sri Lanka.

2. Government of India will do all in its power to achieve this goal, to ameliorate the humanitarian conditions in Sri Lanka and has been making representations to the Government of Sri Lanka at several levels.
3. The other issue which is engaging Government's effort is the harassment and killing of Indian fishermen in neighbouring areas which must cease forthwith. Government will be taking steps to ensure this.

Mr. Rajapaksa emphasized that humanitarian issues related to the internally displaced in the north had been addressed. The main concern of India was about the civilians in the north and the problems faced by its fisher folk. "We have already taken serious note of addressing these issues and if there are some shortcomings we will address them soon," he said. Tamil Nadu Chief Minister M. Karunanidhi said on October 24 that the confidence reposed in the Union government that it would take appropriate steps on the Sri Lankan Tamils issue had not gone in vain. He told a public meeting in Chennai that the Prime Minister had spoken to him and assured him of prompt action. He also referred to Mr. Mukherjee's statement in Parliament on October 23 and said that all these had shown their concern for the welfare of the Tamils.

On October 16 in a telephonic interview to the Chief Editor of *The Hindu* Sri Lankan President Mahinda Rajapaksa said: "I am firmly committed to a just and enduring political solution" to the Tamil question in Sri Lanka and "am clear that there are no military solutions to political questions. Addressing the humanitarian situation of displaced people and civilians affected by the military conflict in the Wanni, he reiterated that his government was doing its utmost to meet their essential needs: "We are sending them food. We are feeding the LTTE, in fact, we know that 70 per cent of the food sent by the government goes to them."

The first reaction from Sri Lanka to New Delhi's expression of concern was a little disappointing in that the Foreign Minister Rohitha Bogollagama said he was surprised as to why those who are "screaming of a non-existing humanitarian catastrophe in Wanni" were silent about the plight of over 1 lakh Muslims forcibly evicted by the LTTE

329. Press Release of the Ministry of External Affairs on the telephone conversation between President of Sri Lanka and Prime Minister Dr. Manmohan Singh.

New Delhi, October 18, 2008.

President of Sri Lanka His Excellency Mahinda Rajapaksa telephoned Prime Minister Dr. Manmohan Singh today to discuss the recent developments in Sri Lanka.

During the telephone conversation, the Prime Minister expressed his deep concern on the deteriorating humanitarian situation in the North of Sri Lanka, especially on the plight of the civilians caught in the hostilities. He emphasised that the safety and the security of these civilians must be safeguarded at all costs. The Prime Minister also said that, in order to address the humanitarian situation, continued and uninterrupted relief

from the north in 1990. Mr. Bogollagama, who was on a visit to Australia, called on the UN Working Group under the Security Council's Counter Terrorism Committee to list the LTTE as an international terrorist group, while addressing the Australian Strategic Policy Institute. There was a further disappointment when the Sri Lanka Radio broadcast a 'misleading' news that President Mahinda Rajapaksa conveyed to New Delhi that his government would not halt the military operations in the north as demanded by some political parties in Tamil Nadu. But soon Colombo made it known that it was investigating as to from where the report emanated. The government ordered withdrawal of the item. "The question of the President conveying any message to India in the light of latest developments in Tamil Nadu simply does not arise as Colombo views it as an internal matter of India. Yes, on October 6 the government of India served a demarche on our Deputy High Commissioner in Delhi, articulating some concerns on the situation in the island and assurances at the highest level have been conveyed that Sri Lanka would do all it can to address the problems of the Tamils," the Secretariat told *The Hindu*.

When the Indian High Commissioner to Sri Lanka called on the Foreign Minister on October 17 and conveyed the 'grave concern' of India about the humanitarian crisis triggered by the ongoing war between the government forces and the LTTE, a statement issued by the Sri Lanka Foreign Ministry said, "The discussion centered on current issues pertaining to Indo-Lanka bilateral relations in the context of developments in the North and the East of Sri Lanka." Concerns being expressed in this regard in India were conveyed to Minister Bogollagama by the High Commissioner. "Foreign Minister Bogollagama stated that Sri Lanka is fully conscious of the concerns being expressed and understands the context in which these matters are being raised. The Minister assured that in the spirit of existing excellent bilateral relations, Sri Lanka intends to further discuss these issues bilaterally to address those concerns. It was indicated that bilateral consultation process in this regard could continue at appropriate levels," said a statement issued by the Sri Lanka Foreign Ministry. Senior political and official representatives of the Rajapaksa government were at pains to emphasise that Colombo was "alive and sensitive" to the "legitimate concerns" of New Delhi on various aspects related to the ongoing "operation liberation from LTTE terror" and its fall-out on the civilians caught in the cross fire.

supplies be ensured for the Internally Displaced Persons. President Rajapaksha assured the Prime Minister that all necessary measures are being taken to ensure the safety and wellbeing of the Tamil community in Sri Lanka.

Prime Minister Dr. Manmohan Singh further mentioned that the rights and the welfare of the Tamil community of Sri Lanka should not get enmeshed in the on-going hostilities against the LTTE. He reiterated that there was no military solution to the conflict and urged the President to start a political process for a peacefully negotiated political settlement within the framework of a united Sri Lanka. He also emphasised the need to nurture the democratic process in the Eastern Province.

The Prime Minister asked President Rajapaksa to instruct the Sri Lankan Navy to desist from firing on Indian fishermen and reiterated that killing of fishermen is unacceptable. They agreed to work on practical arrangements to prevent such incidents.

330. Suo Motu Statement by External Affairs Minister Pranab Mukherjee in Parliament on "Sri Lanka".**New Delhi, October 22, 2008.**

I rise to apprise this august House of the recent developments in Sri Lanka.

The situation in Sri Lanka is of serious concern to the Government, in particular the deteriorating humanitarian situation in the northern part of Sri Lanka. We are concerned about the plight of the civilians caught in the hostilities and the growing number of internally displaced persons. We have emphasised to the Sri Lankan Government that the safety and the security of the civilians must be safeguarded at all costs and that food and essential supplies be allowed to reach them unhindered. We have been assured that the safety and wellbeing of the Tamil community in Sri Lanka will be taken care of. In this connection, Member of Parliament and Senior Adviser to the President of Sri Lanka, Hon'ble Basil Rajapaksa is due to visit India shortly.

Let me reiterate our conviction that there is no military solution to the ethnic conflict. What is required in Sri Lanka is a peacefully negotiated political settlement within the framework of a united Sri Lanka respecting the legitimate rights of the minorities including the Tamil community. The rights and the welfare of the Tamil community of Sri Lanka should not get enmeshed in the on-going hostilities against the LTTE. We encourage the government of Sri Lanka to continue to nurture the democratic process in the Eastern Province as well.

The government has also taken up with the Sri Lankan Government the need to ensure the safety of our fishermen. While it is important for our fishermen to respect the International Maritime Boundary Line, we have impressed on the Sri Lankan Navy to desist from firing on Indian fishermen. Our two governments have agreed to work towards concluding practical arrangements to prevent such incidents.

On October 23, External Affairs Minister provided certain clarifications sought by the members in the Rajya Sabha.

The Minister of External Affairs (Shri Pranab Mukherjee): Mr. Deputy Chairman, Sir, I express my gratitude to the hon. Members who have participated in this discussion seeking clarifications. The Hon. Leader of the Opposition, to my mind, -- he described the statement as non-statement

-- unfortunately, mixed up the entire gamut of the strategic interest with the present concern of the civil Tamilians in Sri Lanka. Sir, these are two different issues.

First of all, it is not that we have made the statement simply because of the House. The House met on 17th. Even what was the condition of the House how the Statements could be made or not made is well known. Even yesterday, I could not make the statement in the other House, not because of any other thing, but simply because the Members were not interested. In this House also, another important statement we could not make, and, most humbly, I will request through you, Sir, it is courtesy which is being extended by the Executive to the House by making a statement to keep the House informed about what major developments have taken place in the intervening period. But, unfortunately, a new culture has developed nowadays, that is, the larger interest of the Parliamentary propriety is being completely ignored. I am not going to explain the strategic interest which we have in the Indian Ocean region, in our backyard.

It is too well known to the Leader of the Opposition who was also the Defence Minister, the Finance Minister and the External Affairs Minister. And, personally, he has extensive knowledge in these areas because this is not the occasion. On 18th, the Sri Lankan President talked to the Prime Minister over telephone. Prior to that, I myself issued a statement even before the Parliament Session began when the situation accentuated there. Two issues are to be made quite clear in this regard. These are different issues. We are primarily concerned with the plight of the civilians. We are primarily concerned with a negotiated settlement and somebody has asked whether we have given up the 1987 Accord. That is the basis on which it was agreed upon that within the framework of the Sri Lankan Constitution and integrity, the legitimate aspirations of the minorities, civilian minorities, would be protected. All minorities including Tamilians would be protected. And we should encourage them, as the election to the provincial council had taken place; we are telling them that military solution is no solution and that there should be a devolution of powers which has been recommended by the high powered political representative committee appointed by the Sri Lankan President himself; please implement that; the ultimate solution lies there.

The Leader of the Opposition has been talking about it for four-and-a-half years. I would like to most respectfully remind him that the Ceasefire was abrogated by the President of Sri Lanka in January this year. Ceasefire

prevailed earlier, prior to that, but things started heating up after this. Questions have been raised about military training provided to the officers in our academy. Our defence academies, our military academies are well-known all over the world. Trainees come in from various parts of the world. We have a very comprehensive relationship with Sri Lanka, which includes the relationship on security. It is necessary. Therefore, these are nothing new, but we have repeatedly impressed upon them, and in my whole statement there is one thing constant, that military solution is not the solution and that the ultimate solution lies in having peaceful negotiations where the legitimate aspirations of the minorities, including the Tamil minorities are protected. As for the question on information, we have to get it from them. Some of the international organisations, mainly the International Red Cross, are operating there.

The information that we have received is that food convoys accompanied by six to seven UN personnel have been despatched to areas where there are a large number of displaced persons. It is true. As a result of this conflict, more than 200,000 persons have been displaced and we are impressing upon them that it is their responsibility, and we would not like to have a situation where there would be an influx of refugees into Tamil Nadu because of a situation arising over which we have no control. Therefore, please ensure that that doesn't happen, and it is your responsibility to provide food, shelter and medicine to your displaced persons. It is difficult, but, at the same time, it is well-known to the Leader of the Opposition that even in the midst of war, as per the various conventions, there are certain rules in the rule of war that arrangement for a certain amount of protection for the civilian population is made. That is nothing new to the laws of international treaty and war.

Therefore, what we are impressing upon them is that they would have to ensure that people are not subjected to sufferings. Their fight is against the terrorists. This is another unfortunate incident which has made the problem more complex. A section of the civilian population is being used as human shield by these terrorist organisations. Therefore, the problem has become complicated but whatever complication there may be, it will have to be ensured that they are not subjected to sufferings. So far as the question of providing aid and other things is concerned, we are ready to provide it. We are constantly in touch with international organisations and if they require aid, we shall provide it.

And we are encouraging them that you deploy International Red Cross Organisation, you ensure that the process of political dialogue begins, and if the process of political dialogue begins it would be possible to resolve the issues. In our country, whenever there are divergences of views, conflicts of interests, we try to resolve it through the dialogue, through the debate and through the discussion and that is the only way through which we can resolve these issues. Questions have been raised about some Indian citizens being injured. Yes, we gave them some equipment. Somebody wanted to know what is a non-lethal weapon. If I give a transport, if I give a truck, it is not a lethal weapon. Therefore, there are some distinctions. An aircraft or a cargo aircraft is not a military aircraft or a fighter aircraft. Therefore, we have, as I mentioned in my observations earlier, a very comprehensive relationship with one of our very close neighbours. In our anxiety, we should not forget the strategic importance of that island and it is not only their security, it is closely connected with our security. Keeping that in view, we are engaged with them. The Leader of the Opposition wanted to know what these three senior Civil Servants did. Yes, exactly they discussed. They discussed the cooperation. We told them that we can meet their security requirement provided you do not look around. What type of security arrangements should be made, what type of assistance they will require and what is their security requirement, there should be some common assessment because it is so close to us. Surely, we would not like to have the playground of international players at our backyard. These aspects are to be kept in view while making an assessment of the situation. Now, what has happened after that talk between the Prime Minister and President Rajapaksa? It has been agreed upon that he is sending his Political Advisor, Member of Parliament, Mr. Basil. He is expected to be here by this week-end. There will be some discussions and we will provide whatever assistance they require for the rehabilitation, relief and providing succour to the distressed persons. But the final solution will arrive through the implementation of the recommendations of their high-powered committee, devolution of power, giving the autonomy in certain areas in certain respects which they have been recommending in the broad framework of reserving the issue and maintaining the territorial integrity and unity of Sri Lanka.

In respect of fishermen, I myself have taken it up; the Prime Minister has taken it up at the margin of our meeting at Colombo. We made it quite clear that there is no justification by Sri Lankan Navy shooting the Indian fishermen. If somebody has crossed the international border, you can arrest

them and some persons sometimes have been arrested. With Pakistan, it is happening more often. They are also confiscating their boats, and the dispute is that they are not returning their boats.

And, their argument is that they do not retard the boats because again, fishermen will use the boats to come to their territorial water. That is a different issue. We are taking it up. But, there is no reason why the Sri Lankan Navy will fire upon the Indian fishermen. Fishermen are not carrying arms. So, they have agreed to work out a mechanism through which it will be possible to have a practical solution to resolve this issue. Mr. Raja himself has replied to his own query about right of Indian fishermen on Katchateevu. In 1976, the position was clarified by the same Government, which was in Office in 1974, and that position was, "Yes, there is a right for resting, for drying the nets, but not for fishing", and that is the contention of the Sri Lankan authority. We are discussing with them and one of the objectives of these visits is that we will try to resolve the issue of Indian fishermen also. We are making certain other arrangements making adequate propaganda and we would like to ensure that they are adequately worked. Sometimes, it happens. This is an abnormal situation. We cannot deny the facts. I am not taking you back to the memories of 20 years ago, but we are fully aware of what has happened and, therefore, keeping that in view, this is really a very sensitive issue, and let us not politicise it. We try to politicize everything. It does not help us either. Therefore, these are the grave issues. People are suffering and we shall have to do whatever we can do. By simply showing temper here and using strong languages, Mr. Deputy Chairman, Sir, I do not feel, that these issues can be resolved. For that, we shall have to patiently work out, talk and negotiate with the parties concerned. Thank you, Sir.

331. India-Sri Lanka Joint Statement on Fishing Arrangements.**New Delhi, October 26, 2008.**

Keeping in mind the humanitarian and livelihood dimensions of the fishermen issue, India and Sri Lanka have agreed to put in place practical arrangements to deal with bonafide Indian and Sri Lankan fishermen crossing the International Maritime Boundary Line (IMBL). This was agreed to during the visit to New Delhi on 26th October 2008 of Honourable Basil Rajapaksa, Member of Parliament and Senior Adviser to the President of Sri Lanka.

As part of these practical arrangements, following the designation by the Government of Sri Lanka of sensitive areas along the Sri Lankan coastline and their intimation to the Government of India, Indian fishing vessels will not venture into these identified sensitive areas. Further, there will be no firing on Indian fishing vessels.

It was agreed that Indian fishing vessels would carry valid registration/permit and the fishermen would have on person valid identity cards issued by the Government of Tamil Nadu.

India and Sri Lanka have agreed to continue with their discussions, initiated in 2005, on the proposed Memorandum of Understanding on development and cooperation in the field of fisheries.

332. Joint Press Release issued after the discussions between the Sri Lankan President's Special Envoy Basil Rajapaksa and the External Affairs Minister Pranab Mukherjee and other Senior Officials.

New Delhi, October 26, 2008.

Keeping in mind the close bilateral relations between India and Sri Lanka, President of Sri Lanka Mahinda Rajapaksa sent as his Special Envoy Honourable Basil Rajapaksa, Member of Parliament and Senior Advisor to the President of Sri Lanka to visit New Delhi, on 26th October 2008. During his visit, the Sri Lankan Special Envoy held discussions with External Affairs Minister, National Security Advisor and Foreign Secretary.

The Indian side appreciated deeply the initiative of President Mahinda Rajapaksa to send his Special Envoy. The discussions were positive and constructive and centered around a range of issues.

India conveyed its concern at the humanitarian situation in the northern part of Sri Lanka, especially of the civilians and internally displaced persons caught in the hostilities and emphasised the need for unhindered essential relief supplies¹. Mr. Rajapaksa briefed the Indian authorities of the efforts by the Sri Lanka Government to afford relief and ensure the welfare of the

¹ Speaking to journalists after his meetings in New Delhi, Rajapaksa said "Every assurance we have given (to) look after the human behaviour needs and whichever way we can." (Incidentally Basil Rajapaksa besides being Special Advisor to Sri Lanka President is also his brother). Asked about the medical aid from India, he said "yes, that issue was brought up and we will take a positive look on it." He also replied in affirmative when asked whether the Sri Lankan Government would allow Indian medical aid to Sri Lanka. He did not confirm any possible visit by Mr. Mukherjee to Colombo in the near future. In a parallel development LTTE leader Prabhakaran in an email interview to a Tamil Magazine Nakkeeran asked India to lift the ban on his outfit in order to "fulfil the aspirations of the Tamil people" while admitting that Sri Lankan Security forces were knocking at the doorstep of key town Kilinochchi. He was of course, in full praise for Tamil Nadu Chief Minister. "Tamil Nadu Chief Minister, Kalaignar is a Tamil nationalist. He has not only voiced his concern against the Sinhala state terrorism in Tamil Eelam, but has also showed it in action," he said. Armed with the joint Statement and assurances of Sri Lanka, the External Affairs Minister met the Tamil Nadu Chief Minister in Chennai on October 26, when the latter expressed his satisfaction at the action taken by the Government of India to protect the Tamil civilians in Sri Lanka affected by the on-going conflict.

That Government of India's efforts did bring about some fruitful results was evident from the interview given by Sri Lankan President Mahinda Rajapaksa to Senior Editor of *The Hindu* N. Ram in Colombo on October 27. He told N. Ram: "Let me reiterate that my government is firmly committed to a negotiated political solution - based on devolution of power and ensuring the democratic, political, including linguistic, rights of all our Tamil brethren within an undivided Sri Lanka." He went on to add:

civilian population in the North. He assured that the safety and wellbeing of the Tamil community in Sri Lanka is being taken care of.

As a gesture of goodwill, India has decided to send around 800 tonnes of relief material to Sri Lanka for the affected civilians in the North. The Government of Sri Lanka will facilitate the delivery. Both sides agreed to consult and cooperate with each other in addressing these humanitarian issues.

Both sides discussed the need to move towards a peacefully negotiated political settlement in the island including in the North. Both sides agreed that terrorism should be countered with resolve. The Indian side called for implementation of the 13th Amendment and greater devolution of powers to the provinces. Mr. Basil Rajapaksa emphasized that the President of Sri Lanka and his Government were firmly committed to a political process that would lead to a sustainable solution.

Both sides agreed to further nurture the democratic process in the Eastern Province. Mr. Rajapaksa briefed the Indian side of the large development effort underway in the Eastern Province.

With regard to issues relating to fishermen, in view of the humanitarian and livelihood dimensions involved, both sides agreed to put in place

"As President of Sri Lanka, I am absolutely clear that there is, and can be, no military solution to political questions. I have always maintained this. A military solution is for the terrorists; a political solution is for the people living in this country." Noting the tardiness of the All Party Representative Committee (APRC) in coming up with its final proposals, he asserted: "I myself will take charge of the political process and see it through politically." He again emphasising said that "our military operations are directed exclusively at the Liberation Tigers of Tamil Eelam" - a terrorist and secessionist organisation banned or designated as terrorist in more than 30 countries, including India - he renewed his call to the LTTE even at this late stage to "lay down its arms, surrender, and enter the democratic political process." Mr. Rajapaksa said that "the military operations directed against the LTTE are not intended to harass Tamil civilians or cause any harm or hardship to them." His government was doing, and would do, everything in its power "to mitigate and resolve the plight of the civilians displaced or affected by the conflict." In addition to ensuring that food, medicines, and other essential commodities were "within the reach of every one of our Tamil brethren affected by the conflict," it would rehabilitate "every civilian affected by the conflict in a fair and transparent manner." He expressed happiness over "the positive and constructive outcome" of the discussions his Special Envoy, Basil Rajapaksa, had in New Delhi with External Affairs Minister Pranab Mukherjee and senior Indian officials. He welcomed India's decision to contribute, as a gesture of goodwill, 800 tonnes of relief material for the affected civilians in the North. He appreciated Tamil Nadu's offer to make an additional contribution to this humanitarian endeavour.

practical arrangements to deal with bona fide Indian and Sri Lankan fishermen crossing the International Maritime Boundary Line and to continue discussions on the proposed MOU on development and cooperation in the field of fisheries.

Discussions in New Delhi during Mr. Rajapaksa's visit were characterized by a spirit of constructive engagement on both sides. Both Governments will remain in close touch.

333. Media Report on the meeting between Prime Minister Dr. Manmohan Singh and Sri Lankan President Mahinda Rajapaksa on the sidelines of the BIMSTEC Summit.

New Delhi, November 13, 2008.

Prime Minister Manmohan Singh during his meeting with Sri Lankan President Mahinda Rajapaksa stressed the need to "ensure at all costs" the safety and welfare of the Tamil community. Conveying the concerns of the Tamil Nadu Legislative Assembly as contained in the unanimous resolution passed by it on November 12 Prime Minister emphasised the need for a negotiated settlement to the conflict within the framework of a united Sri Lanka.

He also mentioned the need to adhere to the joint statement on fishing arrangements agreed upon by both sides during the recent visit of Sri Lankan President's special envoy, Basil Rajapaksa, to ensure that no Indian fisherman was killed.

Mr. Rajapaksa on his part gave an assurance that his Navy was exercising the utmost restraint and that Sri Lanka was committed to the joint statement.

The Prime Minister referred to the 2,000 tonnes of food and other relief material being sent by the State Government of Tamil Nadu and being coordinated by the Government of India, for distribution to the internally displaced persons.

External Affairs Minister Pranab Mukherjee, who was present, also stressed the need for a negotiated settlement and desired regular supply of food

and other items to civilians and those affected by the conflict. He underlined the need for further devolution of power to the provinces and full implementation of the 13th Amendment.

Mr. Rajapaksa said he was committed to a negotiated settlement and urged the Liberation Tigers of Tamil Eelam (LTTE) to lay down arms before talks could be held. He assured the Prime Minister that all efforts were being made to ensure the safety of civilians and internally displaced persons in conflict areas and food supply to the affected Tamil population was continuing uninterrupted. Mr. Rajapaksa acknowledged India's concern for the well-being of Tamil civilians caught in the battle between the armed forces and the LTTE, but said Colombo wanted to finish off the militant outfit before initiating political talks.

"We must eradicate terrorism first. We can't pass this on to the next generation," Mr. Rajapaksa observed. At the same time. "We assure you. We assured the Prime Minister and the entire world that we will look after the Tamils. Nothing will happen to them. We are looking after our people. It is my duty," Mr. Rajapaksa told the media after his meeting with Dr. Singh.

Meanwhile the Tamil Nadu Government continued to remain concerned about the welfare of the Tamils in Sri Lanka. On November 21, Tamil Nadu Chief Minister desired the Prime Minister to remind Sri Lanka that 'nations do not bomb their own people merely because there were some terrorists in their midst'. He said no country was immune from terrorism and every country had its share of terrorists.

334. Press Release of the Ministry of External Affairs on India's humanitarian assistance for the internally displaced and affected civilians in Northern Sri Lanka.

New Delhi, November 17, 2008.

In keeping with the commitment of India to provide humanitarian assistance¹ for the internally displaced and affected civilians in Northern Sri Lanka, the Government of India on 13th November 2008 dispatched nearly 1,700 metric tonnes of relief material mobilised by the State Government of Tamil Nadu. The humanitarian aid comprises of 80,000 ready-to-use family packs of rice, dal, sugar and other food items as well as clothing. The ship carrying 100 containers of relief material reached Colombo on 15th November. The High Commission of India in Colombo is facilitating the distribution to the affected population in Northern Sri Lanka through the International Committee of the Red Cross in Sri Lanka.

1 It may be recalled that during the visit to New Delhi on October 26 of Sri Lankan President Mahinda Rajapaksa's brother Basil Rajapaksa as his Special Envoy it was agreed that India would send humanitarian assistance for the Internally Displaced Persons for distribution through the ICRC. When Prime Minister met President Rajapaksa in New Delhi on the sidelines of the BIMSTEC Summit on November 13 he too had referred to Tamil Nadu sending 2,000 tonnes of food and other materials for IDPs in north Sri Lanka. "This is the first time that India has provided humanitarian aid to conflict-affected people in Sri Lanka through the ICRC. We have seen the relief items and they do indeed correspond to the needs of the displaced people we see in Wanni. We look forward to receiving this relief consignment here in Colombo in the coming days," said Paul Castella, ICRC's head of delegation in Sri Lanka. "Security and stability are a pressing concern for the displaced people in Wanni. Many of them have had to flee several times since hostilities escalated in July," said Hicham Mandoudi, head of ICRC's operations in Wanni. "What these displaced people want is a place where they can stabilise their lives. They're exhausted after moving from one place to another, each time leaving behind more of their belongings."

335. Response by Official Spokesperson to a question about media reports pertaining to a derogatory comment made by the Sri Lanka Army Chief about Tamil Nadu politicians¹.

New Delhi, December 9, 2008.

Our High Commissioner in Colombo took up the issue strongly with the Sri Lankan Defence Secretary. The Defence Secretary of Sri Lanka promised to look into the matter and conveyed regrets should any such comment have been made.

1 Gen. Fonseka was reacting to the perceived pressure of Tamilnadu politicians on the Government of India wanting to call upon Colombo to call for an immediate ceasefire in Northern Sri Lanka since the security operations against the LTTE were causing a lot of suffering for the civilian Tamil population in the region. General Fonseka reportedly said in an interview with the *Sunday Observer*: "It [New Delhi] would not listen to the political jokers of Tamilnadu whose survival depends on the LTTE ... If the LTTE is wiped out, those political jokers like [Tamil Nationalist Movement leader) P. Nedumaran, Vaiko and whoever who were sympathising with the LTTE will most probably lose their income from the LTTE." The Lake House Group, publishers of the *Sunday Observer*, immediately announced the replacement of its Editor-in-Chief presumably for carrying the interview.

It may be recalled in this connection that on December 3 a group of Tamilnadu politicians including the Chief Minister of the State had called on Prime Minister Manmohan Singh to express their concern at the suffering of the Tamils in the ongoing security operations in the Northern Province of Sri Lanka. He had then told them that External Affairs Minister Pranab Mukherjee would visit Sri Lanka "as early as possible" to hold talks with Colombo on the issue of Tamils living there. They had demanded India's intervention for bringing an immediate ceasefire in Lanka; monitoring of relief and rehabilitation measures for the affected Sri Lankan Tamils and taking measures for recommencing peace talks for a political solution. The Tamilnadu Chief Minister later told the media that they also met UPA chairperson Sonia Gandhi and sought her intervention and assistance on the issue. On reports that the Indian government was still supplying arms and ammunition to Sri Lanka, he said he had taken up the issue with the Centre earlier too. "Even today I raised the issue with the Prime Minister. But they are denying it." Mr. Karunanidhi clarified that they only wanted India's intervention to protect the civilian Tamils who were getting killed or injured in the war.

**(ii) SOUTHEAST - EAST ASIA
AND PACIFIC**

AUSTRALIA

336. Press Release of the Ministry of External Affairs announcing the visit of External Affairs Minister Pranab Mukherjee to Australia for the 2nd. Foreign Minister's Framework Dialogue.

New Delhi, June 20, 2008.

Hon'ble External Affairs Minister is visiting Australia on 22 and 23 June 2008 to hold the Second Foreign Minister's Framework Dialogue, with his Australian counterpart Hon'ble Mr. Stephen Smith¹, MP. The previous round was held in 2005 in New Delhi.

1 The Australian Foreign Minister Stephen Smith on the same day said in Perth that his country was "determined" to elevate its ties with India to "a new economic and strategic level" by shaping "practical initiatives" and by going "far beyond" the sensitive issue of Canberra's uranium export norms. Praising India's "strong record on non-proliferation," he however, gave no indication of exempting India from "the Australian policy not to supply uranium to non-Nuclear Non-Proliferation Treaty countries." He said the Kevin Rudd government's policy "is long standing and well known". "The important point, however, is that Australia's relationship with India goes far beyond this single issue." He spoke of Australia's proposal of forming "a new Asia-Pacific Community" for "greater strategic stability in our rapidly-developing part of the world," which he said he proposed to discuss with Mr. Mukherjee, and desired New Delhi to become a member of the existing Asia-Pacific Economic Cooperation (APEC) forum when its "membership moratorium ends in 2010." Hailing India as a "positive force in Asia's future," he said Canberra "strongly believes" that New Delhi "should have a permanent seat on a reformed United Nations Security Council." On the nuclear cooperation he said "India shares our ultimate objective of nuclear disarmament. ... Indian participation in the International Commission on Nuclear Non-Proliferation and Disarmament would of course be of great assistance. Australia is developing a mature and broad-ranging relationship with India, one that can and does accommodate differences of opinion on particular issues, and one that still moves forward constructively and positively," he added.

On June 22, however, External Affairs Minister said in Canberra on arrival from New Delhi that he would raise the issue of uranium sale with Australia to carry forward the momentum in bilateral ties. "We are going to discuss all issues of our expanding cooperation. We are going to review the international situation on uranium. Keeping that in view, whatever will be relevant will be discussed..." Mukherjee, said on his maiden two-day visit to Australia. Ahead of the visit, the Rudd Government, which is pushing for closer political and economic ties with India, had played down its decision not to sell uranium to New Delhi in the wake of its opposition to NPT. It may be recalled that the previous John Howard Government had in principle approved the sale of yellow cake to India. The Australian Foreign Minister on the eve of the talks said: "This century Australia and India can cooperate on a scale and partnership not seen before between the two," adding that the countries could look forward to unprecedented cooperation in the coming years. He added he was looking forward to holding wide-ranging talks with the Indian minister covering key bilateral, regional and international issues. (This was the fifth such (framework) dialogue and the first since 2005.)

India-Australia relations have been expanding rapidly in the last few years. There is immense scope for expanding trade, and cooperation in areas such as science & technology, information & communication technology, energy, education, agro-industries and tourism. Partnership with Australia in the resources sector encompassing mutual investments and joint projects, and also a growing engagement in advanced technological areas and renewable energy, will be focused upon during the forthcoming dialogue. Keeping in view the demands of our rapidly growing relationship, India opened a Consulate General in Melbourne in 2006.

The resources sector is an important element of our economic engagement. The demand for resources in India is expected to grow substantially as we work towards faster economic growth. Australia is an important supplier of coking coal to India. We are now increasingly engaging in the oil and natural gas sector and we expect sourcing of LNG from Australia to India to commence in the near future.

India Australia trade has been growing at about 30% a year, and was A\$10.75 bn in 2007. Mutual investments and presence of our companies in each other's country have been growing. An Indian company recently took over closed coalmines in Australia and turned them around. One such closed mine, which has started production in New South Wales recently, is now employing about a hundred people.

Our trade in services sector has also been growing. An interesting feature here is that Australia is one of the few countries with which we have a deficit in our trade in services. Information technology is an important component of our services exports to Australia. The presence of IT companies in Australia has been expanding. They operate 13 development centres in Australia; have invested over A\$ 98 mn. (including acquisitions); and employ over 1300 Australians.

Education and tourism are the main components of Australian export of services to India. The growing number of Indian students has contributed to Australian services exports, both in terms of their studies, as well as travel of the students and their family members to Australia. The number of Indian students in Australia has indeed been growing rapidly. In 2007, there were over 63,000 Indian students enrolled in Australian institutions, compared to 37,000 the previous year.

The Indian community has been making useful contribution to the social and economic life here. While integrating well with their adopted country, they have also maintained their family and cultural linkages with India. They should act as a bridge for future generations to understand each other better.

India-Australia relations go back to the 18th century. Trade started as early as 1792 with the supply of food items and spices from Kolkata to Australia. The first exports of coal from Australia to India were in 1799. A Trade office was opened in 1941 in Sydney, which later became our Consulate General, and the first High Commissioner arrived in Canberra in 1946.

337. Media Briefing by Official Spokesperson on the visit of External Affairs Minister Pranab Mukherjee to Australia.

New Delhi, June 20, 2008.

External Affairs Minister Shri Pranab Mukherjee will be visiting Australia on 22nd and 23rd June for the Second Foreign Ministers' Framework Dialogue. His counterpart will, of course, be the Australian Foreign Minister, hon'ble Mr. Stephen Smith. The Previous such round of dialogue was held in 2005 in New Delhi.

India-Australia relations actually date back to the 18th century. Trade started as early as 1792 with the supply of food items and spices from Kolkata to Australia. The first exports of coal from Australia to India were recorded in 1799. A Trade Office was opened in Sydney in 1941 and later it became our Consulate General.

Over the last few years there has been considerable expansion in the bilateral relationship. The areas for further expansion are trade, science and technology, information and communication technology, energy, education, agro industries, and tourism. Advanced technological areas such as renewable energy are also areas of interest and will be part of the focus of the dialogue in the forthcoming round. In view of all this expansion we actually opened a Consulate General in Melbourne recently in 2006.

Our economic engagement is also substantially based on the resources sector here. The demand for resources is expected to grow substantially as we work towards faster economic growth. Australia is already an important supplier of coking coal. We are increasingly engaging in the oil and natural gas sector. We also expect to source energy from Australia in the near future. Trade, which has been growing at 30 per cent a year, is Australian dollars 10.75 billion. Mutual investments have also been growing and the presence of companies in each other's country is also growing.

Services sector has been growing particularly well. Incidentally, Australia is one of the few countries with which we have a deficit in our trade in services. Information technology is an important component of our services exports. Thirteen development centers in IT operate in Australia employing over 1300 Australians.

Education and tourism are likely to be particularly interesting growth areas. Number of Indian students going to Australia is increasing. There were 63,000 Indian students last year in Australian institutes compared to 37,000 in the previous year. The Indian community which is present there is making useful contributions, and would naturally be continuing to act as a bridge to the further enhancement of this relationship.

External Affairs Minister is expected to leave tomorrow for this dialogue. We will keep you briefed after the discussions.

These are the two issues I have from my side.

Question: There is an Indian community, including taxi drivers in Australia. Will issues pertaining to the Indian community be taken up during the talks?

Official Spokesperson: It is difficult to predict how the discussions would go. So, I think we would rather wait till the discussions are over to give you specific elements. I have given you the broad areas. Yes, Indian students in Australia is our area. Indian community plays an important role. I am sure that the hon'ble Minister will have an opportunity to meet the Indian community. Naturally, if this issue of concern comes up, we will see in what format it comes up and where it comes up. We will let you know.

Question: Anything on nuclear cooperation with Australia?

Official Spokesperson: Energy security certainly is a possible discussion.

Question: Australia has expressed reservations about selling uranium.

Official Spokesperson: Yes, they have a position on that issue.

Question: Are we going to ... ideas to ...

Official Spokesperson: The hon'ble Minister is going for wide-ranging foreign office dialogue. I have just informed you of the entire gamut of the subjects that would be discussed. I do not think he would be going there with one specific agenda item.

* * * *

Question: What about the Australian role in the NSG?

Official Spokesperson: They are members of NSG.

Question: Will there be any effort to try and see what role Australia can play in helping India win support within NSG?

Official Spokesperson: I think we have all gone down this road before. So, everybody is aware of the position, where things stand. So, we will let it be at that.

338. Joint Statement issued at the end of India-Australia Foreign Ministers Framework Dialogue.

Canberra, June 23, 2008.

At the Australia-India Foreign Ministers Framework Dialogue in Canberra on 23 June, the Australian Minister for Foreign Affairs, Stephen Smith, and the Indian Minister for External Affairs, Pranab Mukherjee, underlined the strong bonds and enduring shared interests which underpin the Australia-India relationship. They affirmed that the two governments were committed to taking bilateral links to a new, higher level. They noted that existing and new forms of cooperation in a wide range of areas exemplified the growing depth and breadth of the Australia-India partnership¹.

1 Addressing a joint press conference on June 23 after holding talks the two ministers reaffirmed their "strong support" for non-proliferation, while Canberra expressed its willingness to "consider," if and when needed, New Delhi's civil nuclear energy accord with the United States. Mr. Smith said: "If and when the 123 Agreement comes before either the Nuclear Suppliers Group or the International Atomic Energy Agency, we will give consideration to it at that point in time." At the same time, Mr. Mukherjee said, "Australia's commitment to non-proliferation is firm, and we respect that." EAM called on Prime Minister Kevin Rudd, and was, in a rare goodwill gesture, escorted to the floor of Parliament during question time. And, in Mr. Mukherjee's presence, Mr. Smith answered a question on Australia-India ties. (Visiting dignitaries are usually received at the Parliament gallery and not the floor itself.) As part of the framework dialogue, India and Australia signed an extradition treaty and a mutual legal assistance pact to "address criminal matters" in a practical and collaborative fashion. They announced the decision to commence dialogue at the level of the chiefs of defence forces from the two sides. The first session of the high-level defence dialogue will be held in Australia later in the year. Mr. Mukherjee remarked, during the press conference, that his visit to Australia now was "very short, almost like a 20-20 encounter" in cricket. And, Mr. Smith replied that "we need to make sure we apply ourselves to the Indian relationship, as if it were a test match day in, day out." Meanwhile Mr. Mukherjee responding to a question from *the Hindu* correspondent based in Singapore, P. S. Suryanarayan, whether he felt confident that the NSG would amend its guidelines in favour of India for its Civil Nuclear Energy programme said: "The test of pudding is in [the] eating." He said "it is not a question of doing enough or not doing enough" to woo the members of the NSG. (He was on his way back home from Australia) On the issue of whether the Manmohan Singh government had mobilised sufficient international support before pressing for domestic political backing for India's civil nuclear energy deal, Mr. Mukherjee said: "Unless we reach that stage ... The 123 Agreement has been signed. The text has been agreed and initialled. But, the IAEA India-specific safeguards agreements, amendment of the NSG guidelines, and the further ratification are yet to be done." On the nuclear issue as it figured in his talks with Australian leaders, Mr. Mukherjee told Suryanarayan : "Prime Minister [Rudd] explained his scheme of a nuclear-weapons-free world. And, it was a happy coincidence that 20 years ago Rajiv Gandhi gave his plan for creating a nuclear-weapons-free world. But, to us mere disarmament is not the ultimate objective. The ultimate objective is, as Rajiv Gandhi pointed out in his Action Plan: over a specific

The Ministers welcomed the diversification and strengthening of political links between Australia and India, two democracies committed to the rule of law, pluralism and respect for human rights. They emphasised that regular high-level political contact would continue to underpin bilateral relations. Mr. Smith said he looked forward to visiting India in September. Mr. Mukherjee welcomed the visit and said this would provide another opportunity for continuing the dialogue.

International and regional cooperation

The Ministers had an in-depth and wide-ranging discussion about international and regional issues. They underlined the significant capacity for enhanced regional cooperation between Australia and India, including in the context of the East Asia Summit. They also confirmed the need for effective multilateralism and more representative international institutions which reflect the realities of the 21st century. Mr. Smith reiterated Australia's strong support for a permanent seat for India on the United Nations Security Council (UNSC). He also highlighted Australia's firm support for India's membership of the Asia Pacific Economic Cooperation grouping when the membership moratorium ends in 2010.

Mr. Mukherjee welcomed Australia's bid for a non-permanent UNSC seat for the 2013-14 term. He noted India would follow with interest Australia's initiative in appointing an envoy to explore how an Asia-Pacific Community might evolve over time to respond to emerging opportunities. He further said India supported Australia's application for observer status at meetings of the South Asian Association for Regional Cooperation.

Mr. Smith and Mr. Mukherjee discussed the current food security and energy security challenges facing the world and underlined the capacity of Australia

timeframe, there must be the elimination of all nuclear weapons and a prevention of both horizontal and vertical proliferations. And, these obligations lie particularly with the nuclear-weapon states." Mr. Rudd was also briefed that India's 1998 nuclear tests had not diluted its commitment to total nuclear disarmament. "Voluntarily, we accepted a moratorium on further [nuclear] tests, [and] no first-use and no-use against non-nuclear-weapon states [as principles]. And, before the international community made noise, we announced these immediately after the second Pokhran test. Keeping all these in view, I do feel that we should try to create a world which will be free of nuclear weapons." The world should also be free of clandestine proliferation groups such as the A.Q. Khan network. To a further question whether Mr. Rudd had suggested that India join his proposed non-proliferation and disarmament commission, either as a member or co-chair, Mr. Mukherjee said: "No. It was not offered as such. This is an idea which is unfolding itself. First, it should be non-official. He explained his idea. We also made a general response. But, who will be co-chair, who will not be: we have not reached that

and India to work together, including at ministerial level, to address these issues in a mutually beneficial manner. They noted Australia's capacity to cooperate actively in these areas as India's economy continues to expand.

The Ministers reiterated their strong support for nuclear disarmament and non-proliferation. They noted that Australia and India have stepped up their dialogue on strategic issues. They welcomed the decision to establish regular chief of defence force level talks. The inaugural talks are scheduled to take place in Australia in the near future.

Recalling the recent bombings in Jaipur, Mr. Smith and Mr. Mukherjee stressed that Australia and India were united in the fight against terrorism. Looking forward to the next meeting of the bilateral Joint Working Group on Counter-Terrorism and Immigration in New Delhi later this year, they noted the need for practical cooperation in areas such as intelligence, law enforcement, border security and counter-terrorist financing and money laundering. The ministers underlined the desire of both countries to strengthen intelligence cooperation, including on counter-terrorism issues.

Mr. Smith and Mr. Mukherjee stressed the importance of an effective and comprehensive global response to climate change and reaffirmed the UN Framework Convention on Climate Change. They noted the positive contribution being made by joint Australian-Indian projects under the Asia-Pacific Partnership on Clean Development and Climate, including in relation to deploying clean technology. They announced the creation of a new bilateral water dialogue to share ideas about the best way to handle scarce water resources.

stage." On India's response to Mr. Rudd's proposal of a new Asia Pacific Community, Mr. Mukherjee said: "We are watching with interest, and ... we are interested. A mere proliferation of organisations is not the answer. But it's a good idea. We are not averse to Earlier on June 10 during his visit to Japan, Mr. Rudd while ruling out sale of uranium to India until it signed the Nonproliferation Treaty (NPT), on June 9 announced setting up of a global body for nuclear disarmament, hoping to rope in "like-minded" countries. He announced creation of the Nuclear Non-proliferations and Disarmament Commission after laying a wreath in Hiroshima, the site of first atomic bombings in 1945. The commission, to be co-chaired by former foreign minister Gareth Evans, would examine the work of two similar earlier panels - the Australian-led Canberra Commission and Japan's Tokyo Forum - to develop a plan of action for the next (NPT) review conference in 2010. The first task of the panel was to report to a major international conference of experts in Australia late next year. "Australia has the largest known uranium reserves in the world. We can, therefore, understand the different concerns that different countries bring to this debate," he said, denying that the plan was a way to allow Australia

Political links

Mr. Smith and Mr. Mukherjee announced that the two countries had decided to extend the political partnership which binds the two countries together by establishing a new forum, the Australia-India Roundtable. Convened by the Lowy Institute and the Indian Council for World Affairs, the Roundtable will bring together leading individuals from both countries every year to discuss the opportunities and challenges facing Australia and India in the twenty-first century. Details regarding the holding of the Roundtable are being determined.

The Ministers welcomed Australia's decision to allocate up to \$10 million under its development assistance program for targeted technical assistance to build public sector linkages between the two countries. Projects funded under the scheme will address pressing public policy issues in various areas, including potentially on agriculture, climate change, water and resource management.

The Ministers announced the formation of a new joint working group on visas, passports and consular issues to facilitate greater practical cooperation in these areas. Mr. Smith said the Australian Government would continue to address concerns about the safety and well-being of Indian students in Australia in an active way. He stressed that Australia authorities would also continue to follow up any incidents involving Indian students quickly and efficiently.

Legal cooperation

Legal cooperation, especially in relation to law enforcement, is another key and expanding area of the Australia-India relationship. Mr. Smith and

to sell uranium to India, which was not a signatory to the NPT. Rudd said he understood the Indian arguments, and added the US administration had also put India's case to him, but the Labor Party was firmly behind the NPT. India would not be able to circumvent the NPT by joining the commission as "the commission that I proposed was a non-government body," he said. Rudd said the NPT was under great pressure with some countries developing nuclear weapons outside its framework and others like North Korea defying the international community and leaving the treaty altogether. "There are two courses of action available to the community of nations to allow the NPT to continue to fragment, or to exert every global effort to restore and defend the treaty," he said.

Going still back a little, in May the Australian Department of Foreign Affairs and Trade had sponsored a trip by some Indian journalists and during their visit, Australian Foreign Minister Steve Smith told them: "The Labor Party has a strong policy of not exporting uranium to any country that has not signed the nuclear non-proliferation treaty (NPT). We have made this clear to Indian officials that we are bound by the party policy. But

Mr. Mukherjee signed an extradition treaty and a mutual legal assistance treaty, underscoring the willingness of the two countries to collaborate and address criminal matters in a practical way.

Economic links

Mr. Smith and Mr. Mukherjee underlined the strength of the bilateral economic relationship, especially in the resources and energy sector, and welcomed the positive outcomes of the 11th Joint Ministerial Commission, co-chaired by the Australian Minister for Trade, Simon Crean, and the Indian Minister for Commerce and Industry, Kamal Nath, in Melbourne on 20 May. They noted that the base of the economic relationship was expanding into new areas such as information technology and biotechnology. They highlighted the proposal to create an Australia-India CEOs Forum to enhance business links, ensuring that the expanding economic relationship was underpinned by closer business links at the highest level. They reiterated that the two governments looked forward to receiving a report on the feasibility of a comprehensive FTA from the joint FTA study group by the end of 2008. They welcomed the proposal to enhance resources cooperation between the two countries by finalising the terms of a bilateral resources strategy.

Scientific and education cooperation

Recognising that science and education constitute one of the most dynamic parts of the Australia-India relationship, the Ministers underlined the capacity for scientific cooperation, including via the bilateral strategic research fund.

Australia's and India's premier science organisations, the Commonwealth Scientific and Industrial Research Organisation (CSIRO) and the Council of Scientific and Industrial Research (CSIR), will sign a Memorandum of

if the 123 agreement is passed by Indian Parliament we could consider joining a consensus of the NSG and IAEA." Mr. Smith making another interesting observation said: "We see our party policy and India not being a signatory of NPT as two separate issues. We have made this clear to the U.S. and Indian authorities. We don't see our party policy automatically preventing us from joining the consensus of NSG and IAEA." Adding he said, "We will wait for the 123 agreement between India and the U.S. to emerge and then make a judgement." "Both the nations have differences over the issue of supply of uranium. But it is not disturbing the fundamental relations between us," Mr. Smith said, adding that Australia was in favour of India being given a permanent seat in the United Nations Security Council. "We support India in getting a permanent seat in the U.N. Security Council. We are for reforms of various multi-lateral bodies, including the U.N. Council. The Security Council reflects the 1950s," Mr. Smith said. "If India is made a permanent member of the Council, it would be a good development."

Understanding in July to further their scientific collaboration. This MOU will build on the recent signing of a research partnership between CSIRO and CSIR that focuses on research related to water, energy and sustainable agriculture. The Ministers noted the advantages of hosting the Square Kilometre Array, the world's largest radio telescope, in Australia.

Education is a cornerstone of the relationship, with more than 52,000 Indian students currently enrolled in Australian educational institutions. Ministers noted the positive role being played by Australia's Endeavour Scholarship Awards in strengthening knowledge links between the two countries.

People-to-people links

The Australia-India relationship is underpinned by diverse and expanding people-to-people links. The Indian diaspora in Australia is making a tangible contribution to enhancing bilateral links. Mr. Smith and Mr. Mukherjee called for more youth exchanges in various fields, including between young professionals, to build up connections and take the Australia-India relationship forward over the coming decades. Australia agreed to forward a proposal for sending a group of Australian Youth Ambassadors to India in the near future.

Sport has long been a strong bond between Australia and India. Taking our well-established cricket relationship in a new direction, ministers welcomed the decision of the Australia India Council to fund training programs for some of India's rising young women cricketers. They also acknowledged the good work of the Australian Sports Outreach Program (ASOP), which provides funding for sports projects in disadvantaged communities. ASOP will fund up to three projects in India over the next 12 months.

339. Extradition Treaty Between the Republic of India and Australia.

Canberra, June 23, 2008.

The Republic of India and **Australia** (hereinafter referred to as the 'Contracting States')

DESIRING to make more effective the co-operation of the two countries in the suppression of crime, including offences related to terrorism, by concluding a treaty on extradition

Have Agreed as follows:

ARTICLE 1

OBLIGATION TO EXTRADITE

Each Contracting State agrees to extradite to the other, in accordance with the provisions of this Treaty, any persons who are wanted for trial, or the imposition or enforcement of a sentence, in the Requesting State for an extraditable offence.

ARTICLE 2

EXTRADITABLE OFFENCES

1. For the purposes of this Treaty, extraditable offences are offences, however described, which are punishable under the laws of both Contracting States by imprisonment for a maximum period of at least one year or by a more severe penalty. Where the request for extradition relates to a person convicted of such an offence who is wanted for the enforcement of a sentence of imprisonment, extradition shall be granted only if a period of at least six months of such penalty remains to be served.
2. For the purpose of this Article, in determining whether an offence is an offence against the law of both Contracting States:
 - a. it shall not matter whether the laws of the Contracting States place the acts or omissions constituting the offence within the same category of offence or denominate the offence by the same terminology; and

- b. the totality of the acts or omissions alleged against the person whose extradition is sought shall be taken into account and it shall not matter whether, under the laws of the Contracting States, the constituent elements of the offence differ.
- 3. An offence may be an extraditable offence notwithstanding that it relates to taxation, customs duties, foreign exchange control or other revenue matters, or is one of a purely fiscal character. Extradition may not be refused on the ground that the law of the Requested State does not impose the same kind of tax or duty or does not contain a tax, duty, customs, or exchange regulation of the same kind as the law of the Requesting State.
- 4. Where the offence has been committed outside the territory of the Requesting State, extradition shall be granted if the law of the Requested State provides for the punishment of an offence committed outside its territory in similar circumstances. Where the law of the Requested State does not so provide the Requested State may, in its discretion, grant extradition.
- 5. Extradition shall be granted pursuant to the provisions of this Treaty irrespective of whether the offence for which extradition is sought was committed before or after entry into force of this Treaty, provided in all cases that:
 - a. it was an offence in the Requesting State at the time of the acts or omissions constituting the offence are alleged to have occurred; and
 - b. the acts or omissions alleged would, if they had taken place in the territory of the Requested State at the time of the making of the request for extradition, have constituted an offence against the law in force in that State.

ARTICLE 3

COMPOSITE OFFENCES

Extradition shall also be available in accordance with this Treaty for an extraditable offence, notwithstanding that the conduct of the person sought occurred wholly or in part in the Requested State, if under the law of that State this conduct and its effects, or its intended effects, taken as a whole, would be regarded as constituting the commission of an extraditable offence in the territory of the Requesting State.

ARTICLE 4
GROUND OF REFUSAL

1. Extradition shall not be granted if:
 - a. the offence of which a person is accused or convicted is a military offence which is not also an offence under the general criminal law;
 - b. if the person whose extradition is sought has, according to the law of the Requesting State, become immune from prosecution or punishment by reason of lapse of time;
 - c. if the offence with which the person sought is accused or convicted, or any other offence for which that person may be detained or tried in accordance with this Treaty, carries the death penalty under the law of the Requesting State, unless the extradition request includes an undertaking that the death penalty will not be imposed or, if imposed, will not be carried out.
2. Extradition may be refused if the offence of which it is requested is an offence of a political character. For the purposes of this Treaty the following offences shall not be regarded as offences of a political character:
 - a. an offence in respect of which the Contracting States have an obligation to extradite or submit the case to their competent authorities for prosecution, under a multilateral/international treaty or convention to which both Contracting States are parties;
 - b. an offence in respect of the taking or attempted taking of the life of a Head of State, Head of Government, or a member of that person's family;
 - c. murder, culpable homicide or manslaughter;
 - d. an offence, involving firearms, explosives, incendiaries, destructive devices or substances, causing death, grievous bodily harm or serious damage to property;
 - e. any other offence related to terrorism which at the time of the request is, under the law of the Requested State, not to be regarded as an offence of a political character; or

- f. conspiracy or attempt to commit, or participation in, or abetment of, any of the foregoing offences.
- 3. Extradition may be refused in any of the following circumstances:
 - a. if the person has been tried and finally dealt with in respect of the offence for which extradition is sought;
 - b. if the Requested State has substantial grounds to believe that the request for extradition has been made for the purpose of prosecuting or punishing a person on account of that person's race, sex, religion, nationality or political opinion or that that person's position may be prejudiced for any of those reasons;
 - c. if the person whose extradition is requested has been sentenced or would be liable to be tried or sentenced in the Requesting State by an extraordinary or ad hoc court or tribunal;
 - d. if the Requested State believes that the surrender is likely to have exceptionally serious consequences for the person whose extradition is sought, including because of the person's age or state of health.

ARTICLE 5

EXTRADITION OF NATIONALS

The nationals of one Contracting State may be extradited to the other Contracting State. If extradition is not granted, the Requested State shall, on the request of the Requesting State, submit the case to its competent authorities for prosecution in accordance with the provisions of this Treaty and the laws of the Requested State.

ARTICLE 6

EXTRADITION AND PROSECUTION

1. The request for extradition may be refused by the Requested State if the person whose extradition is sought may be tried for the extradition offence in the courts of that State.
2. Where the Requested State refuses a request for extradition for the reason set out in paragraph 1 of this Article, it shall submit the case to

its competent authorities so that prosecution may be considered. Those authorities shall take their decision in the same manner as in the case of any offence of a serious nature under the law of that State.

3. If the competent authorities decide not to prosecute the request for extradition shall be reconsidered in accordance with this Treaty.

ARTICLE 7

EXTRADITION PROCEDURES

1. The request for extradition under this Treaty shall be made in writing and communicated through diplomatic channels.
2. All documents submitted in support of a request for extradition shall be authenticated in accordance with paragraph 2 of Article 9. Three copies of the request and supporting documents shall also be provided. However, the copies need not be authenticated.
3. The request shall be accompanied by:
 - a. the details necessary to establish the identity and nationality of the person sought including, where possible, photographs and fingerprints;
 - b. a statement of the current location of the person, if known;
 - c. a statement of each offence for which extradition is sought;
 - d. a statement of the acts and omissions which are alleged against the person in respect of each offence for which extradition is sought;
 - e. the text of the laws creating each offence and describing the penalty which may be imposed; and
 - f. a statement as to whether there is any limitation in respect of proceedings or punishment.
4. If the request relates to an accused person, it must also be accompanied by a warrant of arrest, or a copy thereof, issued by a Judge, Magistrate, or other competent authority in the territory of the Requesting State and such documents or other information required by the Requested State as would reasonably establish that the person sought has committed the offence for which extradition

is requested and to establish that the person requested is the person to whom the warrant refers.

5. If the request relates to a person already convicted and sentenced, it shall also be accompanied by:
 - a. a certificate of conviction and sentence; and
 - b. a statement that the sentence is enforceable and how much of the sentence remains to be served.
6. If the Requested State considers that the documents or other information supplied for the purposes of this Treaty are not sufficient in order to enable a decision to be taken as to the request, additional documents or other information shall be submitted within such time as the Requested State may require.
7. If in any particular case the Requested State so requires, the Requesting State shall supply a translation of any document submitted in accordance with the provisions of this Treaty.

ARTICLE 8

CONSENT TO SURRENDER

If the person sought consents to surrender to the Requesting State, the Requested State may, subject to its laws, surrender the person as expeditiously as possible without further proceedings.

ARTICLE 9

EVIDENCE/ AUTHENTICATION

1. A document that, in accordance with Article 7, accompanies a request for extradition shall be admitted in evidence, if authenticated, in any extradition proceedings in the territory of the Requested State.
2. A document is authenticated for the purposes of this Treaty if:
 - a. it purports to be signed or certified by a Judge, Magistrate or an official in or of the Requesting State; and
 - b. it purports to be authenticated by the official seal of a Minister of Government, or of a Department or official of the Requesting State; or

- c. it has been authenticated in such other manner as may be permitted by the law of the Requested State.
- 3. Documents described in paragraph 1 of this Article shall be admitted in evidence whether they originated in the Requesting State or in a third State.

ARTICLE 10

PROVISIONAL ARREST

- 1. In case of urgency, a Contracting State may request the provisional arrest of the person sought, pending presentation of the request for extradition. A request for provisional arrest may be transmitted through diplomatic channels. The facilities of the International Criminal Police Organisation (Interpol) may be used to transmit such a request.
- 2. The application for provisional arrest shall contain:
 - a. a description of the person sought;
 - b. the location of the person sought, if known;
 - c. a brief statement of the facts of the case, including, if possible, the time and location of the offence;
 - d. a description of the laws violated;
 - e. a statement of the existence of a warrant of arrest, or a finding of guilt or judgment of conviction against the person sought; and
 - f. a statement that a request for extradition for the person sought will follow.
- 3. The Requesting State shall be notified without delay of the action taken on its application and the reasons for any denial.
- 4. A person who is provisionally arrested may be released from custody on the expiration of sixty (60) days from the date of provisional arrest pursuant to this Treaty if the executive authority of the Requested State has not received the formal request for extradition and the supporting documents required in Article 7.

5. The fact that the person sought has been released from custody pursuant to paragraph 4 of this Article shall not prejudice the subsequent re-arrest and extradition of that person, if the extradition request and supporting documents are delivered at a later date.

ARTICLE 11

CONCURRENT REQUESTS

1. Where requests are received from two or more States for the extradition of the same person, the Requested State shall determine to which of those States the person is to be extradited and shall notify the Requesting States of its decision.
2. In determining to which State a person is to be extradited, the Requested State shall have regard to all relevant circumstances and, in particular, to:
 - a. if the requests relate to different offences - the relative seriousness of the offences;
 - b. the existence of an extradition treaty with the other State or States;
 - c. the time and place of commission of each offence;
 - d. the respective dates of the requests;
 - e. the nationality of the person; and
 - f. the ordinary place of residence of the person.

ARTICLE 12

SURRENDER

1. The Requested State shall, as soon as a decision on the request for extradition has been made, communicate that decision to the Requesting State.
2. Where extradition is granted, the Requested State shall surrender the person at a time, and from a point of departure in its territory as may be decided in consultation with the Requesting State.
3. The Requesting State shall remove the person from the territory of the Requested State within such reasonable period as the Requested State

may specify and, if the person is not removed within that period, the Requested State may refuse to extradite that person for the same offence.

4. If circumstances beyond its control prevent a Contracting State from surrendering or removing the person to be extradited it shall notify the other Contracting State. The two Contracting States shall agree upon a new date of surrender, and the provisions of paragraph 3 of this Article shall apply.

ARTICLE 13

SURRENDER OF PROPERTY

1. To the extent permitted under the law of the Requested State all property found in the Requested State that has been acquired as a result of the offence or may be required as evidence shall be surrendered if extradition is granted and the Requesting State so requests.
2. Subject to paragraph 1 of this Article, the abovementioned property shall, if the Requesting State so requests, be surrendered to the Requesting State even if the extradition cannot be carried out.
3. Where the law of the Requested State or the rights of third parties so require, any articles so surrendered shall be returned to the Requested State free of charge if that State so requests.

ARTICLE 14

POSTPONEMENT OF EXTRADITION AND TEMPORARY SURRENDER

1. The Requested State may postpone the surrender of a person in order to proceed against that person, or so that the person may serve a sentence, for an offence other than the offence for which extradition is sought. In such a case the Requested State shall advise the Requesting State accordingly.
2. When the person is serving a sentence in the territory of the Requested State for an offence other than the offence for which extradition is sought, the Requested State may temporarily surrender the person to the Requesting State to be prosecuted for an offence for which extradition is sought. The person so surrendered shall be kept in custody in the Requesting State and shall be returned to the Requested State after proceedings against the person have

concluded, in accordance with written conditions to be mutually determined by the Contracting States.

ARTICLE 15

RULE OF SPECIALITY

1. Any person who is returned to the territory of the Requesting State under this Treaty shall not be detained or tried or subjected to any other restriction of her or his personal liberty, within the territory of the Requesting State for or in respect of any offence committed before he was returned to that territory other than:
 - a. the offence in respect of which the person was returned;
 - b. any other extraditable offence disclosed by the facts upon which the request for extradition was based, provided that the offence does not carry a penalty which is more severe than that which could be imposed for the offence in respect of which the person was returned; or
 - c. any other extraditable offence in respect of which the Requested State may consent to the person being dealt with.
2. A person extradited under this Treaty may not be extradited to a third State for an offence committed prior to his extradition unless the Requested State consents.
3. Paragraphs 1 and 2 of the present Article shall not apply if the person has had an opportunity to leave the Requesting State and has not done so within 45 days of final discharge in respect of the offence for which that person was extradited or if the person has voluntarily returned to the territory of the Requesting State after leaving it.
4. A request for the consent of the Requested State under the present Article shall be accompanied by such of the documents as mentioned in Article 7 of the present Treaty as may be sought by the Requested State.

ARTICLE 16

TRANSIT

1. Where a person is to be extradited to a Contracting State from a third State through the territory of the other State, the State to which the person is to be extradited shall request the other State to permit

the transit of that person through its territory. This does not apply where air transport is used and no landing in the territory of the other State is scheduled. A person in transit may be held in custody during the period of transit.

2. Upon receipt of such a request, which shall contain relevant information, the Requested State shall deal with this request expeditiously pursuant to procedures provided by its own law.
3. In the event of an unscheduled landing, the State to be requested to permit transit may, at the request of the escorting officer, hold the person in custody, subject to its law, pending receipt of the transit request to be made in accordance with paragraph 1 of the present Article.

ARTICLE 17

EXPENSES

1. The Requested State shall make all necessary arrangements for and meet the cost of any proceedings arising out of a request for extradition and shall otherwise represent the interests of the Requesting State.
2. The Requested State shall bear the expenses incurred in its territory in relation to the arrest and detention of the person whose extradition is sought until that person is surrendered to the Requesting State.
3. The Requesting State shall bear the expenses incurred in conveying the person from the territory of the Requested State.

ARTICLE 18

CONSULTATION

1. The Contracting States shall, at the request of either, consult concerning the interpretation and application of this Treaty.
2. The competent authorities of the Contracting States may consult each other directly in connection with the processing of individual cases and in furtherance of maintaining and improving procedures for the implementation of this Treaty.

ARTICLE 19**OBLIGATIONS UNDER INTERNATIONAL CONVENTIONS/TREATIES**

The present Treaty shall not affect the rights and obligations of the Contracting States arising from International Conventions/Treaties to which they are parties.

ARTICLE 20**ENTRY INTO FORCE**

1. The Contracting States shall inform each other in writing of the completion of their internal procedures required for entry into force of this Treaty. The Treaty shall enter into force thirty days after the date of the later communication.
2. Either of the Contracting States may terminate this Treaty at any time by giving notice to the other through diplomatic channels, and if such notice is given the Treaty shall cease to have effect six months after the receipt of the notice.

In witness whereof, the undersigned being duly authorised thereto by their respective Governments, have signed this Treaty.

Done in duplicate at Canberra this the twenty third day of June, two thousand and eight, in English and Hindi both languages being equally authentic. In case of any divergence of interpretation, the English text shall prevail.

340. Treaty Between the Republic of India and Australia on Mutual Legal Assistance in Criminal Matters.

Canberra, June 23, 2008.

The Republic of India and Australia (hereinafter referred to as the 'Contracting States')

Desiring to make more effective the cooperation between the two countries in combating crimes, including offences related to terrorism, through mutual legal assistance;

Have agreed as follows:

ARTICLE I

SCOPE OF APPLICATION

1. The Contracting States shall, in accordance with this Treaty, provide each other with the widest measure of mutual legal assistance in criminal matters.
2. Mutual legal assistance is any assistance given by the Requested State in respect of investigations, prosecutions or other proceedings in criminal matters in the Requesting State, irrespective of whether the assistance is sought or is to be provided by a court or some other authority.

ARTICLE 2

DEFINITIONS

For the purpose of this Treaty-

1. Criminal matters means investigations, inquiries, trials or other, proceedings relating to statutory or common law offences, including those relating to forfeiture, confiscation and restraint of property and imposition of pecuniary penalties, in respect of such an offence.
2. Criminal matters shall include investigations, prosecutions or proceedings relating to offences concerning taxation, duties, customs, foreign exchange and other revenue matters.
3. Mutual legal assistance includes:-

- (a) taking of evidence and obtaining of statements of persons including execution of letters rogatory;
 - (b) provision of information, documents and other records;
 - (c) location and identification of persons and objects;
 - (d) execution of requests for search and seizure;
 - (e) measures to locate, restrain and forfeit the proceeds and instruments of crime;
 - (f) seeking the consent of persons to be available to give evidence or to ass in investigations in the Requesting State and, where such persons are custody, arranging for their temporary transfer to that State;
 - (g) service of documents, including judicial documents; and
 - (h) other assistance consistent with the objects of this Treaty which is inconsistent with the laws of the Requested State.
4. Mutual legal assistance shall not include:-
- (a) the extradition of any person;
 - (b) the execution in the Requested State of criminal judgments imposed in the Requesting State except to the extent permitted by the law of the Requested State and this Treaty; and
 - (c) the transfer of persons in custody to serve sentences.

ARTICLE 3

COMPATIBILITY WITH OTHER TREATIES

This Treaty shall not derogate from obligations subsisting between the Contracting States whether pursuant to other Treaties or arrangement otherwise nor prevent the Contracting States providing assistance to each other pursuant to other treaties or arrangements or otherwise.

ARTICLE 4

CENTRAL AUTHORITIES

1. The Central Authorities shall transmit and receive all requests for the purposes of this Treaty.

2. The Central Authority of Australia is the Attorney-General's Department and for the Republic of India is the Ministry of Home Affairs. Either Contracting State shall notify the other of any change of its Central Authority.
3. The Central Authorities shall arrange for the prompt execution of such requests. The Central Authorities may communicate with one another for the purposes of this Treaty.

ARTICLE 5

REFUSAL OR POSTPONEMENT OF ASSISTANCE

1. Assistance shall be refused if the request relates to the prosecution of a person for a military offence, which is not also an offence under the general criminal law.
2. Assistance may be refused if the request relates to the prosecution of a person for an offence that is regarded by the Requested State as an offence of a political character. For the purposes of this Treaty the following offences shall not be regarded as offences of a political character:
 - (a) an offence in respect of which the Contracting States have an obligation to provide mutual legal assistance under a multilateral/international treaty or convention to which both Contracting States are parties;
 - (b) an offence in respect of the taking or attempted taking of the life of a Head of State, Head of Government, or a member of that person's family;
 - (c) murder, culpable homicide or manslaughter;
 - (d) an offence involving firearms, explosives, incendiaries, destructive devices or substances, causing death, grievous bodily harm or serious damage to property;
 - (e) any other offence related to terrorism which at the time of the request is, under the law of the Requested State, not to be regarded as an offence of a political character; or
 - (f) conspiracy or attempt to commit, or participation in any of the foregoing offences.

3. Assistance may be refused if:
 - (a) the request relates to the prosecution of a person for an offence in respect of which the person has been tried and finally dealt with or pardoned;
 - (b) the Requested State has substantial grounds to believe that the request for assistance has been made for the purpose of prosecuting a person on account of that person's race, sex, religion, nationality or political opinion or that person's position may be prejudiced for any of those reasons;
 - (c) in the opinion of the Requested State, the execution of the request would impair its sovereignty, security, public order, essential public interest or prejudice the safety of any person; or
 - (d) the request relates to the prosecution of a person for an offence in respect of which the punishment which might be imposed on the person may prevent the Requested State from complying under its domestic laws.
4. The Requested State may consider granting assistance in the absence of dual criminality.
5. Assistance may be postponed by the Requested State if execution of the request would interfere with an ongoing investigation, prosecution or other proceedings in the Requested State.
6. Before refusing a request for assistance or before postponing the execution of a request, the Requested State shall consider whether assistance may be provided subject to such conditions as it deems necessary. If the Requesting State accepts assistance subject to those conditions, it shall comply with them.

ARTICLE 6

CONTENTS OF REQUESTS

1. Requests for assistance shall include:
 - (a) the purpose of the request and a description of the assistance sought;
 - (b) the name of the competent authority conducting the investigation or proceeding to which the request relates;

- (c) a description of the nature of the investigation, prosecution or proceedings, a summary of the facts and a copy of the applicable laws;
 - (d) the degree of confidentiality required and the reasons therefore;
 - (f) details of any particular procedure or requirement that the Requesting State wishes to be followed, including a statement as to whether sworn or affirmed evidence or statements are required and a description of the subject matter of the evidence or statements sought; and
 - (g) the court order, if any, sought to be enforced and a statement to the effect that it is a final order,
2. Requests for assistance, to the extent necessary and insofar as possible, shall also include;
- (a) the identity, nationality and location of the person or persons who are the subject of, or who may have information relevant to, the investigation, prosecution or other proceeding;
 - (b) in the case of requests for the taking of evidence, search and seizure, or the location, restraint or forfeiture of proceeds or instruments of crime, a statement indicating the basis for belief that evidence or proceeds may be found in the Requested State;
 - (c) in the case of lending of exhibits, the current location of the exhibits in the Requested State and an indication of the person or class of persons who will have custody of the exhibits in the Requesting State, the place to which the exhibit is to be removed, any tests to be conducted and the date by which the exhibit will be returned;
 - (d) information as to the allowances and expenses to which a person appearing in the Requesting State will be entitled;
 - (e) in the case of making detained persons available, an indication of the, person or class of persons who will have custody during the transfer, the place to which the detained person is to be transferred and the probable date of that person's return; and

- (f) in the case of requests in respect of proceeds of crime or search and seizure, a statement describing the basis of belief that the money or property are the proceeds of crime or are liable for search and seizure.
- 3. If the Requested State considers that the information is not sufficient to enable the request to be executed, it may request additional information to enable the request to be dealt with.

ARTICLE 7

LANGUAGE

- 1. Requests shall be submitted in the English language.
- 2. Supporting documents, if not in the English language, shall be accompanied by an English translation.

ARTICLE 8

EXECUTION OF REQUESTS

- 1. A request for assistance may be in writing. However in urgent circumstances a request may be made by any means capable of producing written record under conditions allowing the Requested State to establish authenticity. In such cases the Requesting State shall confirm the request in writing promptly thereafter unless the Requested State agrees otherwise
- 2. Requests for assistance shall be executed promptly in accordance with the law of the Requested State and, insofar as not prohibited by that law in the manner specified by the Requesting State.
- 3. The Requested State may, upon request, inform the Requesting State of the date and place of execution of the request for assistance.
- 4. The Requested State shall not refuse to execute a request on the ground of bank secrecy.
- 5. The Requested State shall promptly inform the Requesting State of its decision not to comply in whole or in part with a request for assistance, or to postpone execution and shall give reasons for that decision.

6. The Requested State may postpone the delivery of material requested if such material is required for proceedings in respect of criminal or civil matters in that State. The Requested State shall, upon request, provide certified copies of documents,
7. The Requested State shall promptly inform the Requesting State of circumstances, when they become known to the Requested State, which are likely to cause a significant delay in responding to the request.

ARTICLE 9

RETURN OF MATERIAL TO REQUESTED STATE

The Central Authority of the Requested State may require that the Central Authority of the Requesting State return any items, including documents and records, furnished to it in execution of a request under this Treaty.

ARTICLE 10

CONFIDENTIALITY

1. The Requesting State may require that the request, its contents, supporting documents and any action taken pursuant to the request be kept confidential. If the request cannot be executed without breaching the confidentiality requirement, the Requested State shall so inform the Requesting State prior to executing the request and the latter shall then determine whether the request should nevertheless be executed.
2. The Requesting State, if so requested, shall keep the information and evidence provided by the Requested State confidential, except to the extent that the evidence and information is needed for the investigation and proceeding described in the request.
3. The Requesting State shall not disclose or use information or evidence furnished for purposes other than those stated in the request, without the prior consent of the Requested State.

ARTICLE 11

SERVICE OF DOCUMENTS

1. The Requested State shall serve any document transmitted to it for the purpose of service.

2. A request to effect service of a document requiring the appearance of a person shall be made to the Requested State not less than forty five (45) days before the date on which the appearance is required. In urgent cases, the Requested State may waive this requirement.
3. The Requested State may effect service of any document by mail or, if the Requesting State so requests, in any other manner required by the law of the Requesting State which is not inconsistent with the law of the Requested State.
4. The Requested State shall return a proof of service in the manner required by the Requesting State. . If service cannot be effected, the Requesting State shall be so informed and advised of the reasons.

ARTICLE 12

TAKING OF EVIDENCE

1. Where a request is made for the purpose of a proceeding in relation to a criminal matter in the Requesting State, the Requested State shall, upon request, take the evidence of witnesses, including from persons in custody, for transmission to the Requesting State. The Requesting State shall specify the subject matter about which the person is to be examined, including any questions to be asked.
2. For the purposes of this Treaty, the giving or taking of evidence shall include the production of documents, records or other material.
3. Subject to the law of the Requested State, officials of the Requesting State and persons concerned in the proceedings in the Requesting State may be permitted to be present when evidence is taken in the Requested State and to participate in the taking of such evidence in the manner as may be specified by the Requested State.
4. Persons permitted to participate in the taking of evidence may suggest questions to be put to the person whose evidence is to be taken. The Requested State will endeavour, subject to its laws and procedures, to arrange for the production of a transcript or recording of the proceedings, using any technical means.
5. A person who is required to give evidence in the Requested State under this Article may decline to give evidence where either:

- (a) the law of the Requested State permits that witness to decline to give evidence in similar circumstances in proceedings originating in the Requested State; or
 - (b) the law of the Requesting State permits that witness to decline to give evidence in such, proceedings in the Requesting State.
- 6. If any person claims that there is a right to decline to give evidence under the law of the Requesting State, the Central Authority of that State shall, upon request, provide a certificate to the Central Authority of the Requested State as to the existence of that right. In the absence of evidence to the contrary, the certificate shall provide sufficient evidence as to the existence of that right.

ARTICLE 13

OBTAINING OF STATEMENTS OF PERSONS

- 1. The Requested State shall, upon request, endeavour to obtain statements of persons for the purpose of an investigation or proceeding in relation to a criminal matter in the Requesting State.
- 2. For the purposes of requests under this Article, the Requesting State shall specify the subject matter about which it seeks statements from persons including any questions which it seeks to put to the person.

ARTICLE 14

AVAILABILITY OF PERSONS IN CUSTODY TO GIVE EVIDENCE OR ASSIST IN INVESTIGATIONS

- 1. Upon request, a person serving a sentence or otherwise held in custody in the Requested State may be temporarily transferred to the Requesting State to assist investigations or to give evidence, provided that the person consents.
- 2. When the person transferred is required to be kept in custody under the law of the Requested State, the Requesting State shall hold that person in custody and shall return the person in custody at the conclusion of the execution of the request.
- 3. Where the Requested State advises the Requesting State that the transferred person is no longer required to be held in custody, that person shall be set at liberty and be treated as a person present in

the Requesting State pursuant to a request seeking that person's attendance under Article 15.

ARTICLE 15

AVAILABILITY OF OTHER PERSONS TO GIVE EVIDENCE OR ASSIST INVESTIGATIONS

1. The Requesting State may request the assistance of the Requested State in inviting a person to :
 - (a) appear as a witness in proceedings in relation to a criminal matter in the Requesting State unless that person is the person charged; or
 - (b) assist investigations in relation to a criminal matter in the Requesting State.
2. The Requested State shall, if satisfied that satisfactory arrangements for that person's security will be made by the Requesting State, invite the person to consent to appear as a witness in proceedings or to assist in the investigations. That person shall be informed of any expenses and allowances payable.

ARTICLE 16

SAFE CONDUCT

1. Subject to paragraph 2 where a person is in the Requesting State pursuant to a request made under Articles 14 or 15:-
 - (a) that person shall not be detained, prosecuted or punished in the Requesting State for any offence, nor be subject to any civil suit, being a civil suit to which the person could not be subjected if the person were not in the Requesting State, in respect of any act or omission which preceded the person's departure from the Requested State; and
 - (b) that person shall not, without that person's consent, be required to give evidence in any proceeding or to assist any investigation other than the proceeding or investigation to which the request relates.
2. Paragraph 1 of this Article shall cease to apply if a person, being free to leave the Requesting State, has not left within thirty (30) days

after receiving official notification that the person's attendance is no longer required or, having left, has voluntarily returned.

3. A person appearing in the Requesting State pursuant to a request made under Articles 14 or 15 shall be subject to the law of that State relating to contempt, perjury and the making of false declarations.
4. Any person who fails to appear in the Requesting State may not be subjected to any sanction or compulsory measure in the Requested State.

ARTICLE 17

PROVISION OF PUBLICLY AVAILABLE DOCUMENTS AND RECORDS

1. The Requested State shall provide copies of publicly available documents and records of Government departments and agencies.
2. The Requested State may provide copies of any official document or record in the same manner and under the same conditions as such document or record may be provided to its own law enforcement and judicial authorities.

ARTICLE 18

CERTIFICATION AND AUTHENTICATION

1. Documents, records or objects transmitted pursuant to this Treaty shall not require any form of authentication, except as required by the Requesting State.
2. Insofar as not prohibited by the law of the Requested State, documents, records or objects shall be provided in a form or accompanied by such certification as may be specified by the Requesting State in order to make them admissible according to the law of the Requesting State.

ARTICLE 19

SEARCH AND SEIZURE

1. The Requested State shall, in so far as its law permits, execute a request for search and seizure and delivery of material to the Requesting State.

2. Search and seizure shall be conducted by the Requested State to the same extent and under the same conditions as would apply to its own law enforcement and judicial authorities in accordance with its laws.
3. The Requested State shall provide such information as may be required to the Requesting State concerning, but not limited to, the identity, condition integrity and continuity of possession of the documents, records or object seized and the circumstances of the seizure.
4. The Requesting State shall observe any conditions imposed by the Requested State in relation to any seized material which is delivered to the Requesting State. Before imposing any such conditions, the Requested State shall consult the Requesting State.

ARTICLE 20

PROCEEDS AND INSTRUMENTS OF CRIME

1. The Requested State shall, upon request, endeavour to ascertain whether any proceeds or instruments of crime are located within its jurisdiction and shall notify the Requesting State of the results of its inquiries.
2. Where pursuant to paragraph 1 suspected proceeds or instruments of crime are found, the Requested State shall take such measures as are permitted by its law to prevent any dealing in, transfer or disposal of, those suspected proceeds or instruments of crime, pending a final determination in respect of those proceeds by a court of the Requesting State.
3. The Requested State shall, to the extent permitted by its law, give effect to a final order forfeiting or confiscating the proceeds or instruments of crime made by a court of the Requesting State.
4. In the application of this Article, the rights of bona fide third parties shall be respected under the law of the Requested State.
5. Proceeds or instruments forfeited or confiscated pursuant to this Treaty shall accrue to the Requested State, unless otherwise agreed.

ARTICLE 21**REPRESENTATION AND EXPENSES**

1. Unless otherwise provided in this Treaty the Requested State shall make all necessary arrangements for the representation of the Requesting State in any proceedings arising out of a request for assistance and shall otherwise represent the interests of the Requesting State.
2. The Requested State shall meet the cost of executing the request for assistance, except that the Requesting State shall bear:-
 - (a) the expenses associated with conveying any person to or from the territory of the Requested State, and any fees, allowances or expenses payable to that person whilst in the Requesting State pursuant to a request under Articles 14 or 15;
 - (b) the expenses associated with escorting officers conveying a person including a person in custody; and
 - (c) the expenses associated with the taking of evidence from the Requested State via video, satellite or other technological means.
3. If it becomes apparent that the execution of the request requires expenses of an exceptional nature, the Contracting States shall consult to determine the terms and conditions under which the requested assistance can be provided.

ARTICLE 22**CONSULTATION**

The Contracting States shall consult promptly, at the request of either, concerning the interpretation, the application or the carrying out of this Treaty either generally or in relation to a particular case. The Central Authorities may also agree on such practical measures as may be necessary to facilitate the implementation of this Treaty.

ARTICLE 23**ENTRY INTO FORCE AND TERMINATION**

1. The Contracting States shall inform each other in writing of completion of their internal procedures required for entry into force of the Treaty.

The Treaty shall enter into force thirty (30) days after the date of latter communication.

2. This Treaty shall apply to requests whether or not the relevant acts of omissions occurred prior to this Treaty entering into force.
3. Either of the Contracting States may terminate this Treaty at any time giving notice to the other through diplomatic channels; and if such notice given the Treaty shall cease to have effect six (6) months after the receipt of notice.

In witness whereof, the undersigned being duly authorized thereto by the respective Governments, have signed this Treaty.

Done in duplicate at Canberra this the twenty third day of June, two thousand eight, in English and Hindi, both texts being equally authentic. In case any divergence of interpretation, the English text shall prevail.

341. Press Release of the Ministry of External Affairs on the visit of Australian Foreign Minister Stephen Smith.**New Delhi, September 11, 2008.**

Australian Minister for Foreign Affairs, H.E. Stephen Smith is currently visiting India from Sept. 8-12, 2008. His official visit to India is at the invitation of External Affairs Minister. Mr. Smith became the Minister for Foreign Affairs in the new Labour Government in Australia which came to power in Dec. 2007. Mr. Smith along with his delegation is visiting Chennai, (Sept 8-9) Hyderabad (Sept. 9-10) and New Delhi (Sept. 11-12). His visit is intended to diversify and consolidate the traditionally warm and friendly relations between India and Australia.

This is Mr. Smith's first visit to India, and a stand-alone visit, that follows External Affairs Minister's visit to Canberra in June, 2008 for the fourth meeting of the Foreign Ministers' Framework Dialogue. (The last visit by an Australian Foreign Minister to India was in June 2005 by Mr. Alexander Downer).

During the visit Mr. Smith has already met the Governor and the Chief Minister of Tamil Nadu in Chennai and in Hyderabad the Chief Minister of Andhra Pradesh and other Ministers of the Andhra Government. In New Delhi, Mr. Smith will be calling on Prime Minister and hold wide ranging talks on issues of mutual interest with External Affairs Minister who will be hosting an official lunch for him. In addition, Mr. Smith will be calling on the Vice President and meeting Finance Minister, MOS (AS) for External Affairs and the National Security Adviser. He will be delivering a lecture on India-Australia relations at ICWA¹. Mr. Smith's visit underlines

¹ In his lecture at the Indian Council of World Affairs on September 11, Mr. Smith said Australia backed India's case for a permanent seat in the United Nations Security Council and saw the end of a period when successive governments in Canberra had not approached India "diligently enough." He said that his country's refusal to supply uranium to India should not be allowed to come in the way of the attempt to take the bilateral ties to an entirely new level. "That period of fits and starts is over. Australia's past approach to India has been like a 20/20 cricket match: short bursts of enthusiasm followed by lengthy periods of inactivity. We need, rather, to treat our relationship with India like a test match. We should work with diligence, dedication, application and perseverance day in and day out to extend the partnership. This approach also acknowledges India's rise as a great power in the international community," he said. Growing ties with India, Mr. Smith said, would not and should not be at the expense of ties with other countries. Australia would

the desire of both sides to raise the level of bilateral relations to a significantly higher level.

India and Australia have several commonalities which serve as a basis for closer cooperation and multifaceted interaction in various fields. Bilateral trade has increased three-fold since 2002 to USD 10.2 bn (A\$ 10.8 bn) in 2007. Australia is India's 10th largest while India is Australia's 9th largest trading partner. In the context of India's 'Look East Policy', Australia-India cooperation is an important and growing element, contributing to the evolution of the regional architecture under the East Asia Summit process.

continue to pursue closer links with China and members of the Association of South East Asian Nations as well preserve its close strategic linkages with the U.S. and Japan. Australia also wished that India had close ties with Japan, China and the U.S. "This is not a zero sum game. The benefits from better bilateral relationships add to closer regional and multilateral relationships."

342. Joint Statement issued on the visit of Australian Foreign Minister Stephen Smith.**New Delhi, September 12, 2008.**

The Indian External Affairs Minister, Hon'ble Pranab Mukherjee, and Australian Minister for Foreign Affairs, the Hon'ble Stephen Smith met in New Delhi today and discussed bilateral, regional and international issues of mutual interest and importance. The discussions covered a wide-range of subjects, reflecting the increasingly close ties between India and Australia.

India-Australia relations have significantly grown in the recent years encompassing greater political, economic, defence and scientific fields, and people-to-people cooperation. Recognising the importance of close and mutually beneficial relations between the two important countries in their respective regions, both Ministers agreed to take the level of relations to a "strategic partnership" and work towards the objective.

The two Ministers welcomed the increasing dynamism of the economic partnership, and noted in particular the growing diversification of trade and investment linkages. The complementarity of the two economies pointed to further scope for creating business opportunities in both countries. They noted the progress on the feasibility study on Free Trade Agreement (FTA), and reaffirmed the importance of concluding the study on schedule by the end of the year so that both the Governments could consider recommendations and determine next steps. They also reaffirmed their strong commitment to the successful conclusion of the WTO Doha Round.

The Ministers noted the importance of two-way resources engagement between India and Australia. The Ministers welcomed the ongoing work to develop strategy papers under the Joint Working Group on Energy and Resources, to further enhance Australia-India cooperation. The Ministers also welcomed the Chief Executive Officers' Forum initiative, which is being established. The Ministers noted that the Australia-India Roundtable would be held in November in Sydney with the Lowy Institute and the Indian Council of World Affairs as the conveners.

Building on the initiatives announced at the Foreign Ministers' Framework Dialogue in Canberra on 23 June, 2008, the Ministers expressed satisfaction at the conclusion of Memorandum of Understanding on Cooperation in the Field of Water Management, and establishment of Joint Working Group on Passports, Visas and Consular Matters.

The Ministers welcomed the continuing strong relationship between India and Australia in science and technology. In particular they noted the success of the Australia-India Strategic Research Fund in attracting high-tech projects, including in innovative fields such as biotechnology, which could have significant commercial spin-offs. The Ministers also welcomed the recent signing of an MOU between CSIR, India and CSIRO, Australia to carry out joint research activities through exchange of scientists/researchers. The Ministers noted that important people-to-people links were being underpinned by education. In the first seven months of 2008, over 77,000 Indian students have enrolled in Australian institutions - making Australia the second most popular destination for Indian students seeking education overseas.

Welcoming the increase in cooperation between the Armed Forces of India and Australia across an expanding front, the Ministers took note of the scheduling of the inaugural bilateral talks between Chairman, COSC and CNS of India and Chief of Defence Forces of Australia to be held in November 2008.

The Ministers highlighted their respective Governments' long-standing commitment to strengthening regional and multilateral fora. They noted that India and Australia were cooperating in regional and multilateral fora at a significantly higher level than ever before. India and Australia accorded high priority to the East Asia Summit and the ASEAN Regional Forum, and were committed to working closely together in both fora.

Mr. Mukherjee noted Australia's initiative on Asia Pacific Community (APC). Mr. Smith mentioned that Australian Prime Minister's Envoy, Mr. Woolcott, would visit India later in 2008 as part of his regional consultations on APC.

Mr. Mukherjee welcomed the South Asian Association Regional Cooperation's decision to accord Observer Status to Australia. Mr. Smith thanked India for its support, and noted that Australia's interest in Observer Status reflected Australia's enhanced commitment to South Asia.

Mr. Smith reiterated Australia's support for India's membership of APEC.

Mr. Smith reiterated Australia's support for India's inclusion as a permanent member of the United Nations Security Council (UNSC) in keeping with the current political and economic realities of the century.

The Ministers noted that Australia and India both had proud histories of positive engagement in the United Nations and, if successful in their current

bids for non-permanent seats on the UNSC, each country would bring significant benefits to the deliberations of that body. They agreed to continue to work together closely in the United Nations.

The Ministers stated their respective Governments' longstanding commitment to nuclear non-proliferation. Mr. Mukherjee noted the establishment at the initiative of the Governments of Australia and Japan of the International Commission on Nuclear Non-proliferation and Disarmament and the recent visit to India by Mr. Gareth Evans, Australia's Co-chair of the Commission. The Ministers agreed to advance efforts to strengthen the global non-proliferation and disarmament system. Mr. Mukherjee appreciated the constructive and positive role played by Australia in the recent meetings of the Nuclear Suppliers Group.

The Ministers noted that India and Australia had a strong commitment to countering the scourge of global terrorism and that cooperative links between the two countries continued to grow steadily in this area. Mr. Smith condemned the recent attacks on Indian Embassy in Kabul as well as terrorist attacks in Ahmedabad and Bangalore, and conveyed Australia's condolences to the victims.

Mr. Smith conveyed Australia's condolences to the Government and people of India on the tragic loss of life and widespread hardship resulting from the devastating floods which affected the state of Bihar.

The Ministers noted the close cooperation between India and Australia in the areas of environment, water and climate change issues. They stressed the need for an effective global response to climate change and reaffirmed their commitment to the UN Framework Convention on Climate Change. The Ministers noted the ongoing cooperation between India and Australia in the Asia-Pacific Partnership on Clean Development and Climate (APP).

The two Ministers concluded that the relationship was being fostered and transformed by the constructive efforts by governments, business, and the communities of both India and Australia. They reiterated their resolve to continue to drive a renewed relationship based on economic, political and strategic convergence, a similar legal, political and multicultural heritage, and a strong commitment to regional and multilateral fora.

BRUNEI DARUSSALAM

343. Speech by President Smt. Pratibha Devisingh Patil at the Banquet in honour of the Sultan of Brunei Darussalam Sultan Haji Hassanal Bolkiah.

New Delhi, May 21, 2008.

Your Majesty,

Distinguished Guests,

Ladies and Gentlemen,

On behalf of the Government of India, the people of India and on my own behalf, I warmly welcome Your Majesty and your delegation to India.

The nation of Brunei Darussalam - 'the Abode of Peace' - has made great progress under your leadership. Brunei's fame as an abode of peace and tranquility is also matched by its fame as a tolerant society.

Your visit to India is an expression of the bond of friendship between our two countries and of the mutual desire to enhance our bilateral cooperation for the benefit of our two peoples.

The historical, cultural and linguistic linkages between India and Brunei, with roots dating back to the 3rd century, are deep and lasting. Indeed, 'Sri Paduka' is a word used both in Bahasa Melayu and Sanskrit.

Our economic and commercial links began with the discovery of oil in your country in 1929. A large number of Indians took employment in Brunei Darussalam. Today, the Indian community of professionals like doctors, engineers, entrepreneurs, teachers and skilled personnel are contributing to the economy of Brunei. We are grateful to Your Majesty for the support extended to the expatriate Indian community in Brunei.

India has undergone significant socio-economic transformation in recent years. The sustained economic growth of about 8 percent in the past decade has propelled India to be one of the major economies of the world. This has opened up opportunities for increased trade and investment. India is an attractive destination for foreign investment. We welcome investment from Brunei in infrastructure, telecommunications and other sectors.

Brunei has emerged as one of the sources of supply of crude oil to India, which has also enhanced our trade relations. India is also ready for cooperation in upstream, midstream and downstream projects in the oil sector.

We are grateful for the assistance and cooperation that has been extended by Brunei in our journey to the Telemetry Tracking and Telecommand Station of ISRO in Brunei. We are also happy at the interest shown by Brunei in sharing our experience and expertise in the field of Information Technology. Your Majesty, India stands ready to extend whatever assistance it can to strengthen our cooperation in areas of mutual benefit. Both countries have scope for extensive cooperation in defence, training of personnel in different courses, the health sector, and capacity building, among others.

Food security is engaging the attention of the world. 90 percent of the rice produced in the world, is consumed in Asian countries. India and Brunei, as rice producing and consuming countries, could collaborate in the field of rice research. We could begin with the exchange of rice experts and thereafter, explore the possibilities of further collaboration, including the setting up of an India-Brunei Rice Research Institute.

We value the support extended by Brunei in making India a full dialogue partner of ASEAN and in the ongoing India-ASEAN FTA negotiations. It reflects Brunei's understanding of the "Look East" policy of India, which is aimed at integrating India's multifaceted relations with ASEAN and beyond. Similarly, the decision at the 3rd East Asian Summit at Singapore last November on the Nalanda University initiative is deeply appreciated.

India and Brunei cooperate closely on several issues in international bodies, including in the UN and the Commonwealth. We appreciate the understanding of Brunei in India's enhanced role at the United Nations, particularly its candidature for permanent membership of the United Nations Security Council. We hope that Brunei would continue to support India on this issue.

The contemporary world is confronted with global challenges ranging from terrorism to climate change. Both our countries share similar views on these issues. We would continue to work together to tackle these challenges in the bilateral, regional and global context.

I wish Your Majesty and your delegation a comfortable stay in India.

Ladies and Gentlemen, may I invite you to join me, in a toast:

- to the health and well-being of Your Majesty,
- to the happiness and prosperity of the friendly people of Brunei and,
- to lasting friendship between India and Brunei.

Thank you.

344. Briefing points by Official Spokesperson on the visit of the Sultan of Brunei.**New Delhi, May 22, 2008.**

- During the visit, His Majesty the Sultan and Yang Di-Pertuan of Brunei Darussalam called on President Smt. Pratibha Devisingh Patil and met Vice President Mohammad Hamid Ansari. President Smt. Pratibha Devisingh Patil hosted a banquet in honour of His Majesty. His Majesty also called upon the Prime Minister Dr. Manmohan Singh and met Chairperson of the United Progressive Alliance Smt. Sonia Gandhi, Minister of Finance P. Chidambaram, Minister of Defence A.K. Antony and the Minister of State of External Affairs E. Ahamed. Prime Minister Dr. Manmohan Singh hosted a luncheon in honour of His Majesty.
- The bilateral discussions were held in an atmosphere of traditional friendship, warmth and deep understanding. The two sides expressed satisfaction at the mutually beneficial cooperation and partnership existing between India and Brunei Darussalam. A wide range of subjects covering economic, trade and investment, defence, information and communication technology, space, shipping & ports, health, culture, arts & sports, and consular areas were discussed during the meetings. The leaders also exchanged views on regional and international issues of mutual interest.
- During the visit, the following MOUs/Agreements were signed:
 - a) Agreement on Reciprocal Promotion and Protection of Investments
 - b) MOU of Cooperation in Information and Communication Technology
 - c) MOU on Cooperation in the fields of Culture, Arts and Sports.
 - d) MOU on the Establishment of Joint Trade Committee
 - e) MOU on Cooperation in the Operation of the Telemetry Tracking and Telecommand Station for Satellite and Launch Vehicles and for Cooperation in the field of Space Research Science and Applications

- The leaders highlighted the importance of enhancing the frequency of exchange of high-level bilateral visits, including at the level of Head of State and Head of Government. They also reiterated their resolve to continue the bilateral dialogue and cooperation within regional frameworks and at various international fora.
- The Indian side expressed its appreciation to His Majesty's Government for facilitating the Indian community to work and live in Brunei Darussalam in a harmonious environment. The Indian community in Brunei Darussalam consisting of professionals like doctors, engineers, IT experts, teachers, the business community and both skilled and unskilled workers has contributed to the economic development of Brunei Darussalam. The Bruneian side responded by acknowledging the contribution rendered by the Indian community in Brunei Darussalam. The Indian side underlined the need for an MOU on Labour to facilitate future manpower supply to Brunei Darussalam.
- Both sides noted that bilateral trade between the two countries had gone up in 2006-07 and agreed to take steps to increase the level of bilateral trade. They also welcomed the interest for mutual investment in each other's country, taking advantage of business climate and the opportunities.
- The two sides stressed that terrorism constitutes one of the most serious threats to international peace and security. They strongly condemned terrorism in all its forms and manifestations, and stressed that there can be no justification, whatsoever, for any acts of terrorism. They emphasized the need for concerted and coordinated action by the international community, in accordance with international law, to realize the objectives of eradicating terrorism in all its forms and manifestations.

345. Press Note issued by the Ministry of Finance on the Signing of the India-Brunei Bilateral Investment Promotion and Protection Agreement.

New Delhi, May 22, 2008.

India has signed a Bilateral Investment Promotion and Protection Agreement (BIPA) with Brunei Darussalam, here today. While Union Finance Minister, Shri P. Chidambaram signed on behalf of the India, Mr. Pehin Dato Rahman Ibrahim, Minister of Finance, Brunei signed on behalf of Brunei Darussalam.

Signing the Agreement, Shri P. Chidambaram said that Brunei becomes the 70th country with whom India has so far signed BIP A. Observing that Brunei is the third largest producer of oil in South East Asia and the fourth largest producer of Liquefied Natural Gas (LNG), Shri Chidambaram hoped that the Agreement would serve as a catalyst in boosting investment flows between the two countries.

Mr.Pehin Dato Rahman Ibrahim, Minister of Finance, Brunei reciprocating the views of the Indian Finance Minister noted that the Agreement marked a new beginning in the relationship between both the countries.

The BIPA seeks to protect and promote investments from either country in the territory of the other country with the ultimate objective of increasing bilateral investment flow. It requires each country to encourage and create favourable conditions for investors of the other country to make investments in its territory and to admit investments in accordance with its laws.

The Agreement also stipulates principles of Most Favoured Nation Treatment and National Treatment grant of compensation in specified circumstances and provides for elaborate dispute resolution mechanism. BIPA is for a period of ten years. Thereafter, it shall continue to remain in force until the expiration of twelve months from the date on which either party gives a written termination notice. With respect to investments made prior to the date of termination of the Agreement, the provisions of the Agreement shall continue to be effective for a further period of fifteen years from the date of its termination.

The Agreement was signed in the presence of Permanent Secretary of Brunei Darussalam, High Commissioner of Brunei Darussalam, Indian High Commissioner to Brunei Darussalam and senior officers of Government of India.

346. Joint Statement issued on the occasion of the State Visit of Sultan Haji Hassanal Bolkiah Mu'izzaddin Waddaulah, the Sultan and Yang Di-Pertuan of Brunei Darussalam.

New Delhi, May 22, 2008.

1. At the invitation of the President of the Republic of India, His Majesty Sultan Haji Hassanal Bolkiah Mu'izzaddin Waddaulah, the Sultan and Yang Di-Pertuan of Brunei Darussalam paid a State Visit to India from 20-23 May 2008
2. During the visit, His Majesty the Sultan and Yang Di-Pertuan of Brunei Darussalam called on President Smt. Pratibha Devisingh Patil and met Vice President Mohammad Hamid Ansari. President Smt. Pratibha Devisingh Patil hosted a banquet in honour of His Majesty. His Majesty also called upon the Prime Minister Dr. Manmohan Singh and met Chairperson of the United Progressive Alliance Smt. Sonia Gandhi, Minister of Finance P. Chidambaram, Minister of Defence A.K. Antony and the Minister of State of External Affairs E. Ahamed. Prime Minister Dr. Manmohan Singh hosted a luncheon in honour of His Majesty.
3. The bilateral discussions were held in an atmosphere of traditional friendship, warmth and deep understanding. The two sides expressed satisfaction at the mutually beneficial cooperation and partnership existing between India and Brunei Darussalam. A wide range of subjects covering economic, trade and investment, defence, information and communication technology, space, shipping & ports, health, culture, arts & sports, and consular areas were discussed during the meetings. The leaders also exchanged views on regional and international issues of mutual interest.
4. During the visit, the following MOUs/Agreements were signed:
 - (i) Agreement on Reciprocal Promotion and Protection of Investments
 - (ii) MOU of Cooperation in Information and Communication Technology
 - (iii) MOU on Cooperation in the fields of Culture, Arts and Sports.
 - (iv) MOU on the Establishment of Joint Trade Committee
 - (v) MOU on Cooperation in the Operation of the Telemetry Tracking and Telecommand Station for Satellite and Launch

Vehicles and for Cooperation in the field of Space Research
Science and Applications

5. The leaders highlighted the importance of enhancing the frequency of exchange of high-level bilateral visits, including at the level of Head of State and Head of Government. They also reiterated their resolve to continue the bilateral dialogue and cooperation within regional frameworks and at various international fora.
6. The Indian side expressed its appreciation to His Majesty's Government for facilitating the Indian community to work and live in Brunei Darussalam in a harmonious environment. The Indian community in Brunei Darussalam consisting of professionals like doctors, engineers, IT experts, teachers, the business community and both skilled and unskilled workers has contributed to the economic development of Brunei Darussalam. The Bruneian side responded by acknowledging the contribution rendered by the Indian community in Brunei Darussalam. The Indian side underlined the need for an MOU on Labour to facilitate future manpower supply to Brunei Darussalam.
7. Both sides noted that bilateral trade between the two countries had gone up in 2006-07 and agreed to take steps to increase the level of bilateral trade. They also welcomed the interest for mutual investment in each other's country, taking advantage of business climate and the opportunities.
8. Both sides emphasized the importance of energy security for their economic growth and development. The Indian side expressed interest to continue importing crude oil from Brunei Darussalam on mutually beneficial terms. To meet the increasing energy requirements, the Indian side expressed interest to import Liquefied Natural Gas (LNG) from Brunei Darussalam.
9. Both sides identified the need for cooperation in the defence sector, and agreed to explore specific areas of cooperation.
10. The two sides agreed that cooperation in ICT is important to both countries. To further enhance and strengthen cooperation in this sector, the Indian side agreed to share its experience with Brunei Darussalam in e-governance and the setting up of knowledge based industries in both countries.

11. The two sides welcomed the signing of the MOU on Cooperation in the fields of Culture, Arts and Sports, which would increase cultural exchanges between the two countries. The Indian side expressed appreciation to the support extended by Brunei Darussalam to the Commonwealth Youth Programme (CYP) Asia Centre at Chandigarh, which will be transformed into a Centre of Excellence as agreed at the 2006 Commonwealth Youth Ministers' Meeting in Bahamas.
12. Both sides welcomed the signing of the MOU on Cooperation in the Operation of the Telemetry Tracking and Telecommand Station for Satellite and Launch Vehicles and for Cooperation in the field of Space Research Science and Applications. The Indian side expressed appreciation to the Bruneian side for all the cooperation and assistance rendered to the Indian Space Research Organisation (ISRO) over the last decade.
13. The Indian side highlighted the importance of Brunei Darussalam within ASEAN and the understanding expressed by Brunei Darussalam on India's "Look East" policy. The two sides look forward to an early conclusion of the negotiations in the ASEAN-India FTA and to realize the target of India - ASEAN trade reaching US \$ 50 billion by the year 2010.
14. The Indian side expressed its appreciation to the support extended by Brunei Darussalam to the candidature of India for the post of Secretary General of the Commonwealth during the elections in November 2007. Both sides also agreed to deepen cooperation in other regional and international fora like ARF, ASEM, WTO and the UN.
15. The two sides reaffirmed their commitment to the United Nations and stressed the need for urgent reforms so that the world body can truly reflect the political, economic and social realities of the 21st century. They underlined the importance of early reform of the United Nations Security Council, including its expansion in both permanent and non-permanent categories, with a view to enhancing its transparency and effectiveness. In this context, Brunei Darussalam supports India's intention to be one of the candidates for permanent membership of the expanded UN Security Council.
16. The two sides stressed that terrorism constitutes one of the most serious threats to international peace and security. They strongly condemned terrorism in all its forms and manifestations, and stressed that there can be no justification, whatsoever, for any acts of terrorism. They emphasized the need for concerted and coordinated action by the international community, in accordance with international law,

to realize the objectives of eradicating terrorism in all its forms and manifestations.

17. Both sides stressed the importance of an expeditious conclusion of negotiations and the adoption of the Comprehensive Convention on International Terrorism. They agreed to further expand the bilateral dialogue and cooperation in combating terrorism, organized crime and trafficking.
18. The two sides underlined that climate change is a global challenge with strong economic, environmental and social dimensions that impacted all countries and especially the developing countries; it required a concerted international response based on the principle of equity, common but differentiated responsibilities and respective capabilities. The two sides agreed that stronger international cooperation within the UN framework is needed to take steps to cope with and adapt to the adverse effects of climate change especially in the areas of adaptation, mitigation, capacity building, technology transfer, and adequate financing facilities. Both leaders shared the view that a future strategy designed to combat climate change should at the same time support sustainable development, economic growth and poverty reduction which are vital for developing countries.
19. The two sides discussed a range of other international issues, and agreed to cooperate and work together to promote international peace and development.
20. Both leaders expressed satisfaction with the results of the State Visit and concluded that it had contributed positively to the strengthening of the friendly ties between the two countries.
21. His Majesty invited the President of India and the Prime Minister to pay an official visit to Brunei Darussalam. The invitation was accepted and the dates for the visits would be settled through diplomatic channels.
22. His Majesty Sultan Haji Hassanal Bolkiah Mu'izzaddin Waddaulah, the Sultan and Yang Di-Pertuan of Brunei Darussalam expressed deep gratitude to President Smt. Pratibha Devisingh Patil and His Excellency Dr. Manmohan Singh, Prime Minister of the Republic of India for the kind reception and warm hospitality extended to him and his delegation.

346-A. Memorandum of Understanding on the Establishment of Joint Trade Committee between the Government of the Republic of India and the Government of His Majesty the Sultan and Yang Di-Pertuan of Brunei Darussalam.

New Delhi, May 22, 2008.

The Government of **The Republic of India** and the government of His Majesty the Sultan and Yang Di-Pertuan of **Brunei Darussalam** herein referred to singularly as the "Party" and collectively as the "Parties")

Wishing to promote and facilitate direct trade relations between the two countries:

Intending to establish a Joint Trade Committee (JTC) between the two countries:

Have reached the following understanding:

**SECTION - I
OBJECTIVE**

The Parties will establish a Joint Trade Committee for facilitating expansion of bilateral trade and economic cooperation between the two countries and expansion of cooperation in the areas of environment protection and management, transport, tourism, communications and training of personnel and other identified areas as mutually agreed upon by the Parties

**SECTION - II
COMPOSITION**

The Joint Trade Committee will be composed of the delegations of both Parties. The delegation for each Party will comprise of officials and other members as designated by the respective Parties.

**SECTION - III
TERMS OF REFERENCE**

The Joint Trade Committee will undertake measures to facilitate the expansion of trade which, inter-alia, include the following:

- a) Hold consultations and exchange information on trade, and other trade related matters:

- b) Review the development of existing trade and other trade related matters as well as identify new areas to trade for further cooperation;
- c) Recommend measures to their respective Governments aimed at the expansion and diversification of trade between the two countries: and
- d) Set up working groups where necessary to carry out activities falling under its competence.

SECTION - IV PROCEDURES

The Joint Trade Committee will hold its session as and when necessary alternatively in India and Brunei Darussalam on dates to be mutually agreed upon. The host country will provide the Secretariat for the meeting and each Party will fund its own participation including transportation costs and accommodation.

SECTION - V CONFIDENTIALITY

- 1. The Parties shall keep confidential, and not without prior written consent of the other disclose to any third party, documents, information or Data acquired as a result of or pursuant to this Memorandum of Understanding.
- 2. The provisions of this Section shall continue to apply even after the termination of or withdrawal from this Memorandum of Understanding.

SECTION - VI SETTLEMENT OF DISPUTES

Any disputes arising from the interpretation or implementation of this Memorandum of Understanding will be settled amicably by consultation or negotiation between the Parties through diplomatic channels.

SECTION - VII AMENDMENT AND REVIEW

This Memorandum of Understanding may be amended or reviewed at any time by mutual decision of the Parties. Amendments will be in writing by an exchange of notes through diplomatic channels and will be effected on a mutually agreed date.

SECTION - VIII
ENTRY INTO FORCE, DURATION AND TERMINATION

1. This Memorandum of Understanding shall enter into force on the date of its signature and shall remain in force for a period of five (5) years. Thereafter, it may automatically be extended for another five (5) years, unless either Party gives to the other three (3) months written notice in advance of its intention to terminate the Memorandum.
2. In the event of such termination, it will not affect any on going projects and activities unless both Parties mutually agree otherwise.

Done at New Delhi on May 22, 2008 in two originals, in English language.

CHINA

347. Special Media Briefing by Foreign Secretary Shivshankar Menon on Prime Minister's visit to China.

New Delhi, January 11, 2008.

Official Spokesperson (Shri Navtej Sarna): Good afternoon everybody and welcome to this special briefing on Prime Minister's visit to China. We have requested Foreign Secretary to be here and brief you. After that there will be a few questions.

Foreign Secretary (Shri Shivshankar Menon): Good afternoon ladies and gentlemen. I thought I would brief you about Prime Minister's visit to China from the 13th to the 15th. He leaves here 13th morning, will be there on 13th, 14th and 15th, and returns here that night.

PM will be, as you know, the fifth Indian Prime Minister to visit China after Pandit Jawaharlal Nehru, Shri Rajiv Gandhi in 1998, Shri P.V. Narasimha Rao in 1993 and then Shri Atal Bihari Vajpayee in 2003. We, over the last few years, have brought our relationship to the level of a strategic cooperative partnership for peace and development which we announced during Premier Wen Jiabao's 2005 visit to New Delhi. As part of that partnership we now have regular annual exchanges at the Summit level between our two countries. In 2006, President Hu Jintao of China came to India and we had agreed on a 10-point strategy to implement the Strategic Cooperative Partnership that we have between our two countries.

Last year in October, the Chairperson of the UPA Shrimati Sonia Gandhi had visited China as well; Prime Minister is visiting now. These regular high-level meetings are testimony to the importance that both sides attach to this relationship. For us China is our largest neighbour, a neighbour with whom relations developed rapidly since the path-breaking visit by Prime Minister Rajiv Gandhi in 1988 when we addressed the difficult issues and also laid out path for the future development of the relationship.

While in China this time Prime Minister will be holding talks with Premier Wen Jiabao; will also be calling on President Hu Jintao; will be meeting with the Chairman of the NPC Wu Bangguo as well. He will be accompanied by Commerce and Industry Minister and a very senior business delegation. There will be a major business event on the 14th itself. On the 15th he will be addressing the Chinese Academy of Social Sciences and will be

speaking to them on India and China in the 21st century. So, as you can see, it will be a full and substantive programme.

In terms of bilateral relations, this visit is important because it comes after a series of events which have implemented and actually realized the strategic and cooperative partnership that we have. There have been several visits over the last year, since President Hu Jintao's visit, several Ministerial and other visits. Chinese Foreign Minister was here last February. Thereafter the two Foreign Ministers have met on at least three occasions - in Hamburg, in Manila and in Harbin at the trilateral meeting of India, China, Russia which the Foreign Ministers hold every year.

We have also established Consulates in Guangzhou and Kolkata during the last year; held the first ever defence dialogue between India and China and the first ever joint military exercises which were completed in December 2007 in Kunming in China. We have also activated over the last year a fifth border personnel meeting point at Lipulekh Pass in Uttarakhand. The other border personnel meeting points which have been operationalised before are at Spangur in J&K, Bomla and Dichu Damai in Arunachal, and Nathu La in Sikkim.

On the economic side our trade has registered impressive growth, much faster perhaps than anticipated. Last year, according to Chinese statistics, total two way trade exceeded 37 billion dollars. This is a very rapid increase. In the first six months, it was growing by something like 51 per cent which is quite impressive. China is now our second largest trading partner in the world. Both sides have ratified a Bilateral Investment Protection and Promotion Agreement. We have also concluded a joint study of the benefits of a regional trading agreement which would address not just tariff issues but also non-tariff issues and other trade facilitation issues which we feel are important to allow the trade to not just grow but to diversify into new sectors and to realize its potential.

In the last year, we have also had the first expert level mechanism on trans-boundary rivers and cooperation in exchange of hydrological data which is a subject which, as you know, attracts considerable public attention in India and a subject to which we attach a great deal of importance. We have both agreed to establish tourist offices in Delhi and in Beijing and to encourage travel. The numbers for people travelling between the two countries continue to grow.

We have a fairly elaborate architecture of dialogue mechanisms at various levels where we exchange views on regional, international and the bilateral

issues which are continuing. On the bilateral issues, as you know, we have regular foreign office consultations at various levels; we have a policy planning dialogue; we also have specific dialogues on multilateral issues in the UN. We have the Special Representatives for the boundary question which in our case is the NSA, Mr. Narayanan. On the Chinese side it is the first Vice Foreign Minister Dai Bingguo. We have over the last year had separate consultations on energy security, climate change, on issues as they come up and we found these very useful.

During Prime Minister's visit it is our expectation that his discussions would cover the entire range of bilateral issues and to see ways forward in these relations, how we can build further, and, of course, regional and global issues. We would expect them to discuss all the issues that today concern us, concern China as well. Do not ask me about outcomes. You need to wait for the visit for the outcomes. I am open to answer any questions.

Question: During the visit, will the Special Representatives also meet and talk on the boundary issue?

Foreign Secretary: I do not think they will have a formal meeting, but yes they will be meeting. Certainly, they will both be there.

Question: Mr. Menon, yesterday after the Cabinet meeting Mr. Dasmuni stated that amongst the five agreements that are to be signed one relates to land resource management. Can you tell us what that agreement is about? Does it have anything to do with the border talks process at all?

Foreign Secretary: No, it is not related to the border at all. Frankly, we are both in a sense countries with very large populations and limited arable land. We have a problem as we industrialise and develop where not only is population moving from rural areas into the cities but also land itself is being changed in its use from agricultural use. Food security is a big issue for both of us. So, this is actually land use in the larger sense, in the larger economic sense, where I think we both face similar problems. It is an example of how these two large, developing, rapidly-growing countries, have experiences which actually are of interest to the other and where it is useful for both of us to learn from each other. This I think is an example of this sort of deepening of the relationship that you can have exchanges like this.

Question: *Are there any prospects of resolving the boundary question that exists between us and China?*

Foreign Secretary: I do not want to prejudge what is going to happen because the discussions will take place. But we have made progress, steady progress, in our discussions on the boundary question over the years. If you remember, during Premier Wen Jiabao's visit in 2005, we had issued the Guiding Principles and Political Parameters for boundary settlement which both Premiers had agreed to. Thereafter the two Special Representatives had several sessions of talks where essentially they are trying to arrive at an agreed framework for a boundary settlement which reflects those guiding principles. We are happy at the progress that they have made so far. They have made progress but they will still have to meet again and continue their discussions¹.

Question: You have said that this visit is going to be a major business event because a large business delegation is going. Are we expecting any deal in bilateral trade?

Foreign Secretary: I do not think we are looking at individual business deals as such. I am sure there will be because many major Indian companies are doing business with China and vice versa when you look at the sheer trade volumes, you look at contracts that both countries' companies have in the other countries. What we do expect though is a useful and productive discussion between the businessmen. These are some of the most respected and most influential businessmen on both sides. Thereafter, I think Prime Minister will be meeting with the businessmen from both sides. So, there will be a major business event during the visit.

Question: Mr. Menon, there have been reports of hectic construction and defence activity by China near the Dolam Plateau close to India-Bhutan-China tri-junction. What is the present status of that? Are we alarmed by the activities there? What about the infrastructure development near China border from the Indian side?

1 Ahead of Prime Minister Manmohan Singh's visit to China, the External Affairs Minister Pranab Mukherjee speaking to Press Trust of India Editors on January 4 had sounded a note of caution on the outcome of the visit. He said "the visit is expected to be successful. But if you are expecting that there would be any dramatic turnaround on certain issues, which are long-pending, then it would perhaps be too much." On the boundary question particularly he said "But we are working in the right direction. In some areas we are moving very fast and in some we are slow but steady." Both countries made an institutional arrangement to address the dispute at the level of Special Representatives. "I am quite hopeful that the Prime Minister's visit will be very successful and he will have wide-ranging discussions with the new Chinese leadership after the Communist Party Congress."

Foreign Secretary: I think if you look at our record over the last several years and several decades actually, we have a remarkable record of both sides not just wanting to but actually maintaining peace and tranquility along the entire border. It is normal for both sides to do what they need to in terms of developing infrastructure on their side of the border. But both sides have expressed their determination in writing as a Treaty obligation since 1993, since the Border Peace and Tranquility Agreement, to maintain the status quo pending a settlement of the boundary question. That is what we both work to maintain. We have several CBMs in place in order to establish that and to make sure that it remained so. We have been very successful in doing so together over all these years. Both sides work on infrastructure on their own side. But as far as we are concerned, both countries have the will and the ability demonstrated to maintain peace and stability along the border.

Question: What is your response to Chinese activities near Dolam Plateau?

Foreign Secretary: I do not respond to individual acts that somebody might do in one place or another.

Question: Cabinet yesterday approved an agreement in the field of geosciences. Does it have anything to do with the border delineation? What does it involve specifically?

Foreign Secretary: It is between the Geophysical Survey of China and the Geological Survey of India. It is more for an exchange of information and knowledge. It is really science and technology in the geological sphere. It is not about boundary delineation. Boundary settlement is for the SRs to do and the SRs are making steady progress on that.

Question: Could you tell us about our approach to the increasing trade deficit? Is there any move for a cooperative approach to energy security in the third countries?

Foreign Secretary: We would like to sell much more to China. In fact, that is one reason why both Governments had set up the joint study group to look at the FTA. We both think that what has come out as a report is useful; it gives us several indications of what we might do to increase the overall trade. Over the last few years the balance of trade has shifted in China's favour. We would like to diversify our exports to improve our market access to China. What we are hoping is that through various discussions - including the businessmen who will be coming this time, the Joint Economic Group

which is headed by Commerce Minister on our side and his equivalent on the Chinese side which will meet later in the year, and through various means like this - we will find ways of actually increasing our exports. We think that is really the answer to the trade deficit. Energy security is the subject that affects both of us. We are both, as I said, rapidly growing economies and net energy importers, in fact among the largest energy-importers in the world. It is a subject that we have been discussing for some time; we will certainly discuss it again during the visit.

Question: Is there any possibility of India and China working out some sort of an arrangement so that those countries could be joint bidders in the third countries' oil or gas fields?

Foreign Secretary: I think we already cooperate in third countries. In fact, there are third countries where we jointly operate oil fields. There are other instances - three that I know of certainly - where we actually co-own or have joint rights in terms of exploration and oil production. I think this is going on between our companies. Between ONGC Videsh and Sinotech for instance, there are understandings and they are looking at several possibilities in third countries.

Question: There have been some reports about us facing stumbling blocks as far as the negotiations with IAEA are concerned. Could you throw some light on that aspect? Would our Prime Minister be talking to the Chinese Premier about the next steps on the deal - support from Chennai at NSG?

Foreign Secretary: As far as the IAEA is concerned, we had three rounds of discussions. We finished one round last week and we hope to do another round in the middle of January in Vienna where we hope to wrap it up. The discussions are proceeding smoothly and they will continue, we hope, to a rapid and satisfactory conclusion. On the subject of civil nuclear cooperation between India and China, we have worked together in the past in this area. In fact, China at one stage had supplied some low enriched uranium fuel for Tarapur as well in the early 1990s. We have worked together and we would hope to work together with China, like we would with other friendly countries, when the way is clear. Now we have raised the subject before with China during previous visits, as you know. I think you were the one who actually asked the question when President Hu Jintao was here in November, 2006. We will certainly raise the subject again. We have been in touch with them in between as well and we have explained to them what we see as the potential and the importance of civil nuclear energy cooperation between us and the rest of the world.

Question: What can we get from China in this?

Foreign Secretary: I think that is something that the experts will have to sit and work out.

Question: Is there any forward movement on the issue of water resources? Has anything happened on that? Is something likely to happen?

Foreign Secretary: We started several years ago exchanging the hydrological data on the Sutlej. During President Hu Jintao's visit in 2006 November, we had agreed that we would set up an expert level mechanism to look at the eastern rivers and to see about that as well. They have had their first meeting. Like any first meeting, obviously they first discussed what they will discuss and got acquainted. They have a good idea of the kinds of subjects that they would like to discuss and they plan to continue. We think it was a good beginning but it is only a first step and we would like to take that forward. So, water and hydrological data, trans-boundary rivers, these are subjects which now are a regular part of the dialogue between the two countries.

Question: There is a sense that the Chinese may be stepping back from this Agreement on political parameters and guiding principles because of the whole controversy of the settled populations. What is your reaction?

Foreign Secretary: I do not have that sense.

Question: Just a follow-up on the NSG question. Has China at all made a statement or made it clear that they are going to support India-specific changes to NSG guidelines?

Foreign Secretary: I do not think that we have actually come to that point. We have not asked anybody, "Please stand up now and say where you stand on this and will you support this change and that change". We have not actually come to that point. When it comes to the NSG we will then go and ask all our friends to do so, to support an unconditional NSG exemption for civil nuclear energy cooperation with India by NSG members.

Question: Which are the new elements of strategic partnership which will come up in this visit?

Foreign Secretary: Ask me on the 15th. They have to talk first. I cannot tell you now what is going to happen.

Question: Generally if you read whatever is in print, we get the idea that it is more about business and economy...

Foreign Secretary: You ask me the same question on the 15th and I will give you an answer.

Question: Mr. Menon, the Member of Parliament from Arunachal Pradesh on several occasions had raised in Parliament the fact that ingressions had taken place in the border areas. Will that be a topic of discussion?

Foreign Secretary: As I said, we have worked together to maintain peace and stability along this border on the basis of what there is today, on the basis of the status quo. We do have areas where we have different perceptions of where the Line of Actual Control lies and these we know. We do not see a change in the situation. The boundary or the border actually, is peaceful and has remained peaceful. There are individual areas where both sides might have different perceptions and might think that the other side is crossing. We have ways of dealing with this and these ways have been successful so far.

Question: There are some reports that a political will is required to further take forward the process of negotiation.

Foreign Secretary: I think the political will, not just to maintain peace and tranquility but also to settle the boundary, is clear and evident. Both sides have expressed it repeatedly and this is why we have appointed Special Representatives.

Question: Are we even feeling concerned about the fact that the railway has come to Lhasa now? Reports say that they can move their troops to there in four to five days while earlier it used to take about two to three months. Are we even feeling concerned about this development that they would be able to move troops to Lhasa and they would be just on the border of India?

Foreign Secretary: I think you have to accept that the world keeps changing. Naturally we look at whatever happens around us and we do whatever we need to. But we are also changing and the situation around us keeps developing. As of now we are comfortable with our relationship with China. We think it has made good progress. We think both sides are determined to settle the boundary question. We are both successful in maintaining peace and tranquility along the border. That to my mind is the frame within which you have to look at individual events, individual shifts, individual changes.

Question: Is there going to be a MoU between the Chinese Reforms Commission and the Indian Planning Commission?

Foreign Secretary: Again I have to tell you, ask me about outcomes on the 15th.

Question: Are there strong commonalities in the Indian and Chinese position on climate change?

Foreign Secretary: I think there are many elements of congruence between our two positions. There will be differences as well because our national situations are slightly different. If you look at GHG emissions, for instance, the emissions levels is much lower here. The proportion of new and renewable energy in our total energy mix, our primary energy mix, is much higher. That is really the structure of the economy. But in terms of our international position on issues we both support the Bali roadmap and I think we both have very similar ideas on how it should be realized over the next few years. So, there is considerable congruence in our previous discussions. Whenever we have discussed this issue - which is quite often over the last year - we found that we have very similar approaches.

Question: Are you confident that China will not stand in the way of India's nuclear ambitions?

Foreign Secretary: I will let the Chinese speak for themselves.

(Text in italics is a translation of Hindi original)

348. Statement by Prime Minister Dr. Manmohan Singh prior to his departure for Beijing.

New Delhi, January 12, 2008.

I will be paying an official visit to China at the invitation of Premier Wen Jiabao from January 13 to 15, 2008. During my visit, I look forward to calling on His Excellency Mr. Hu Jintao, President of the People's Republic of China, and meeting with His Excellency Mr. Wu Bangguo, Chairman of the National People's Congress. I will hold bilateral discussions with Premier Wen Jiabao on matters of mutual interest.

China is our largest neighbour and also a focal point of our "Look East" policy. We attach high priority to strengthening our relations with China. We established a Strategic and Cooperative Partnership for Peace and Prosperity when Premier Wen Jiabao visited India in April 2005. During President Hu Jintao's visit in November 2006 we laid down a ten-pronged strategy to qualitatively upgrade our bilateral ties.

Our bilateral relations are now poised to enter a vibrant and dynamic phase, based on a common recognition that the growth and development of both India and China will make positive and long term contributions to regional and global peace, security and stability. We share a desire to enhance our relationship both bilaterally and at the global level.

I look forward to my discussions with the Chinese leadership on the entire gamut of our relationship. We are engaged in the process of giving substantive content to our partnership through comprehensive economic engagement and developing mutually beneficial cooperation in the areas of science and technology, culture, education, defence and security, and increasing people-to-people contacts. Issues relating to the boundary and cooperation with regard to trans-boundary rivers will be discussed. I will be discussing how we can work more closely with China on regional, multilateral and global issues.

I look forward to my visit. It is my belief that regular Summit level interaction with China contributes to strengthening our cooperative engagement and enhancing mutual trust and understanding.

349. Extract relevant to India - China relations from the interview of External Affairs Minister Pranab Mukherjee with Karan Thapar for the CNN-IBN TV channel.

New Delhi, January 13, 2008

* * * *

Karan Thapar: The Prime Minister on Sunday goes to China- it is a visit that is taking place after months of reports in the papers of alleged Chinese incursions across the Line of Actual Control and even into Bhutan. Are these reports of frequent Chinese incursions, both in number and in scale and scope, accurate?

Pranab Mukherjee: Sometimes incursions take place. We immediately take it up. There is a regular channel through which we exchange information. There is an institutional mechanism in the border. You know when we signed the treaty of peace and tranquility in the border in 1993 and again in 1996, thereafter certain mechanisms were established through which we address these types of problems.

Karan Thapar: But has the number and frequency of incursions increased?

Pranab Mukherjee: It is not unusual (but) it has suddenly not increased.

Karan Thapar: So there is nothing worrying about this?

Pranab Mukherjee: There is nothing to be worried about at this point of time, and the mechanisms which we have are doing well.

Karan Thapar: The reason I asked this is that the 'Hindustan Times' claims that the head of the Indo-Tibetan Border Police (ITBP) has said that in the year ending October 2007 there were over a 140 incursions. 'India Today' claims there a few of them in September that went as far as five km into the Indian territory.

Pranab Mukherjee: Sometimes the incursions take place, as I mentioned to you. Every incursion is taken care of; it is being addressed through the established mechanism and the same practice is continued.

Karan Thapar: 'The Indian Express' had a report a couple of days ago that says Chinese infrastructure in terms of road and railway around the border area of Arunachal Pradesh has increased and improved so

significantly that they can now move two divisions, which is 10,000 troops, in just 20-25 days. Apparently, it earlier took anywhere between three and six months.

Pranab Mukherjee: As far as the development of infrastructure on the other side of the Indo-China border is concerned, their infrastructure in terms of roads, electricity availability of other facilities is much superior to that of infrastructural facilities available on our side of the border. It is a known fact and that is why we have recently decided that we should also build up roads and other types of infrastructural facility.

Karan Thapar: Speaking privately, generals in the Indian army don't deny that the difference in infrastructure between the two sides give the Chinese troops a significant advantage over Indian troops. As someone who was the Defence Minister just 16 months ago, are they right to be concerned?

Pranab Mukherjee: With the situation that is prevailing right now at the border, there is no need of pressing any panic button. Peace and tranquility are being retained there and various confidence-building measures are being regularly taken up-for instance participation of troops of both sides on different occasions, national days and festivals.

Karan Thapar: But the important thing is that there is no need to press the panic button.

Pranab Mukherjee: As I told you one should remain absolutely alert, vigilant but need not be panicky.

350. Press Release of the Embassy of India in Beijing on Prime Minister's engagements in Beijing.**Beijing, January 13, 2008.**

Shortly after his arrival in Beijing, Prime Minister Dr. Manmohan Singh met representatives of Indian business accompanying the Prime Minister on his visit to China. Led by the two business associates, CII and FICCI, the delegation of business leaders appraised the Prime Minister on recent trends in bilateral trade and investment flows. They drew attention both to the opportunities and to challenges faced by Indian business in China.

After listening to their statements and observations, the Prime Minister called for increased economic engagement between India and China. He urged Indian business leaders to study China and to identify opportunities for business and greater engagement. Dr. Singh observed that a large part of the thinking in India about China is shaped by western views of China, and that there is need for greater investment in India in a better understanding of the processes of change in China.

The Prime Minister said, "The rise of China and India should be viewed as an 'international public good' by the global community, since it offers new opportunities to sustain global growth. At a time when there are concerns about a global economic slowdown, China and India can sustain global growth through their own development."

Dr. Singh added, "It is a historic necessity for the two great neighbours to work together. There will be areas of competition, and there will be areas for cooperation. There is enough space in the world for both countries to continue to grow and address the developmental aspirations of their peoples."

Urging Indian business to "think big", the Prime Minister said, "Indian business is ready to face the brave new world of globalization. China is an important part of that brave new world. We must engage China and learn to both compete and cooperate."

351. Remarks of Prime Minister in the Visitors' Book at the Beijing Olympic Site during his visit to Beijing.

Beijing, January 13, 2008.

On behalf of the Government and people of India, I extend my best wishes for the success of the Olympic Games in Beijing. I hope that the Olympic spirit and the traditional hospitality and warmth of the great city of Beijing will promote friendship, peace and understanding among all the participants, and the countries they represent.

352. Statement by Prime Minister Dr. Manmohan Singh to the Press during his visit to China.

Beijing, January 14, 2008.

.....It is a pleasure and honour for me to be in Beijing. I have always looked forward to my meetings with Premier Wen, and to benefit from his great wisdom and experience. I would like to express my heartfelt thanks to the Government and people of China for the courtesy and warmth of their hospitality.

Our talks were held in an atmosphere of sincerity, warmth and friendship. They were constructive and forward looking. This gives me cause for optimism for the future of our ties.

India-China relations are of regional and global significance. The profound changes taking place in the world today present both our countries with a historic opportunity to work together towards a 21st century that is conducive to peace and development.

The Shared Vision of the 21st Century that Premier Wen and I have just signed is an important milestone in the evolution of our relations. It reflects not only our common perceptions but also our desire to purposefully cooperate in the future.

We have agreed to continue deepening the mutual understanding and trust between our armed forces. We welcomed the successful conclusion of our first joint military training exercise, and agreed to hold a second exercise in India this year.

We recognized that our strategic and cooperative partnership should be based on strong, diversified and mutually beneficial economic ties. We have decided to increase our bilateral trade target from 40 billion US dollars by the year 2010 to 60 billion US dollars.

We have mandated our Ministers of Commerce to examine the Feasibility Study on the benefits of a Regional Trading Arrangement and make recommendations at an early date.

We have decided to establish a high level Business Leaders Forum to advise us on the future of our economic ties.

We had useful discussions on the outstanding issue of the Boundary Question. We welcomed the progress made by our Special Representatives in seeking a framework for settlement of the boundary question that is fair, reasonable, mutually acceptable, and based on the Agreement on Guiding Principles and Political Parameters signed in April 2005.

While the Special Representatives continue their efforts, both sides reiterated their mutual commitment to maintaining peace and tranquility in the border areas.

I conveyed India's appreciation for China's assistance in providing flood season data for some of our trans-border rivers. Premier Wen and I agreed that we will continue to expand our cooperation in this area through the Expert Level Mechanism.

Science & Technology is another priority area and we have identified earthquake engineering, disaster management, climate change, biotechnology and nano sciences as areas for further cooperation.

We have decided to intensify high-level exchanges between our two countries. I have invited Premier Wen to visit India at his convenience. Thank you.

**353. Address of Prime Minister Dr. Manmohan Singh at the
India-China Economic, Trade and Investment Summit.**

Beijing, January 14, 2008.

His Excellency Vice-Premier Hui Liangyu,

**Mr. Yu Ping, Vice-Chairman of the China Council for the Promotion
of International Trade,**

Shri Kamal Nath, Minister for Commerce & Industry

Business Representatives from China and India

Ladies and Gentlemen.

I am delighted to have this opportunity to meet you today.

The India-China Economic Trade and Investment Summit is a unique gathering of businesspersons representing the two most populous countries of the world. You have grown competitive by starting from continent - sized markets and graduating to world markets. You are the symbols of the growth stories in India and China. We salute your dynamism and entrepreneurship.

Your meeting today is an expression of your confidence in the potential for economic cooperation between India and China. It is equally a testimony to the progress that business communities from both sides have made in working with each other.

Ladies and Gentlemen,

India and China are today the fastest growing large economies in the world. We should remember that China, India and Europe had almost equal shares of world income in the early 18th century. As the 21st century unfolds, both India and China stand poised to regain their weight in the global economy.

Our two countries will need to work together to ensure that we contribute to, even as we benefit from, the economic resurgence and integration of Asia. Our two economies are becoming engines of economic growth and must use our natural and human resources, technology and capital for the common benefit of the region.

The Indian economy has witnessed growth rates of close to 9% per year in the last three years. Our macro-economic fundamentals are strong. We have undertaken a series of economic reform measures to facilitate investment and growth. Our savings and investment rates have increased to 35% of our GDP and are rising. With a predominantly young population, there is potential for further increase in these rates.

Although India is more integrated with the global economy than ever before, the growth has been largely fuelled by an expanding domestic market. All these factors give us confidence that we will be able to step up our annual growth rate to 10% within the next five years.

Our bilateral trade with China has doubled in the last two years. Our trade target of 20 billion US dollars by 2008 was reached two years ahead of schedule. The revised target of 40 billion US dollars by 2010 is also likely to be achieved two years ahead of schedule.

This makes me wonder whether our two Governments have been underestimating the capabilities of our respective industries and their strong urge to do business with each other. We therefore propose to set more ambitious targets.

In the area of trade, the challenge before us is to diversify our export basket to China. I would urge Indian business to vigorously pursue opportunities for expanding non-traditional items of export. Such efforts, when matched by greater market access for Indian goods in China, will help to bridge the rising trade deficit between us.

In addition to our competitive manufacturing industries, India has a diversified agricultural production base. Our food processing industry is also growing rapidly and we can supply quality agricultural and marine products to the Chinese market. A conducive environment should be created for this trade to expand.

The services sector accounts for more than 50% of India's GDP and more than 40% of China's GDP. India has had considerable success in positioning itself in hi-tech services in world markets. There are enormous opportunities for both India and China to expand trade in services, particularly in construction and engineering, education, entertainment, financial services, IT and IT enabled services, transport, tourism, and health. We will work together with the Chinese government to remove administrative barriers and simplify regulatory regimes in order to move forward in these areas.

Chinese companies have been actively engaged in the Indian market. I understand that Chinese firms have contracted projects in India worth over 12 billion US dollars. Indian majors have set up a number of joint ventures or subsidiaries in China in the pharmaceuticals and software sectors, among others.

We must strengthen the base of our economic cooperation through business alliances and collaboration in technology transfer and development. We seek to promote bilateral investments in traditional sectors such as petrochemicals, steel, healthcare, IT and automobiles. Equally, our entrepreneurs should explore opportunities in new areas such as biotechnology, advanced materials, renewable energy and low carbon technologies.

I would suggest a three-pronged strategy for the chambers of industry and commerce of both countries to achieve these objectives. Firstly, you should jointly develop a strategic plan for the future so that you have a vision of our economic cooperation and a road map for its implementation. This will ensure that a long-term strategic perspective that looks ahead to future challenges and opportunities guides our ties.

Secondly, you could develop profitable business models that factor in our complementarities and competitive strengths and the special needs of large markets like ours. The opportunities are many and innovation is the key to exploiting them.

Lastly but equally importantly, you need to acquire insights into each other's markets, business customs and management styles. In the final analysis, doing business is about developing understanding and trust in your partners. Additionally, the business communities of our two countries should develop a deeper understanding of the macro-economic outlook, the regulatory regimes and of factors that have a bearing on the competitiveness of enterprises.

I am glad to know that the number of visitors exchanged between our two countries approached the half million mark last year and direct flight connections have risen to 22 a week. We need to encourage this growing interaction, including through easier grant of visas.

I would like to assure this gathering that both governments will work together to put in place an enabling environment for greater trade, investment and economic interaction. This has to include creating a level playing field by

addressing such issues as non-tariff barriers, IPR protection and market-related exchange rates.

Ladies and Gentlemen,

All countries must compete in global markets and such competition is not inconsistent with co-operation nor is it adversarial. The industrialised countries constantly compete with each other and they see this competition as constructive and mutually beneficial.

Economic cooperation between us has become a principal driver of our strategic and cooperative partnership for peace and prosperity. Several bilateral understandings and agreements are already in place to address different sectoral aspects which impact on our economic cooperation. India and China working together should develop a habit of mutually advantageous cooperation.

In 2003, our two Governments had established a Joint Study Group to examine the potential for economic engagement. Pursuant to this, a Joint Task Force has finalized its report on the feasibility of a India-China Regional Trading Arrangement. During my visit, I look forward to discussing further steps in this regard with the leadership of China.

In conclusion, I would like to congratulate the dedicated and hard-working people of China for the rapid economic progress that they have made. I would also like to thank the China Council for the Promotion of International Trade for organizing this event, and making this partnership of the business communities of our two countries possible.

354. "A Shared Vision for the 21 st Century of the Republic of India and the People's Republic of China" Issue at the end of the visit of Prime Minister Dr. Manmohan Singh to China.

Beijing, January 14, 2008.

H.E. Dr. Manmohan Singh, Prime Minister of the Republic of India and **H.E. Mr. Wen Jiabao**, Premier of the State Council of the People's Republic of China, meeting in Beijing on 14 January 2008, resolve to promote the building of a harmonious world of durable peace and common prosperity through developing the Strategic and Cooperative Partnership for Peace and Prosperity between the two countries.

India and China (hereinafter referred to as the "two sides") are the two largest developing nations on earth representing more than one-third of humanity. The two sides recognize that both India and China bear a significant historical responsibility to ensure comprehensive, balanced and sustainable economic and social development of the two countries and to promote peace and development in Asia and the world as a whole.

The two sides are convinced that it is time to look to the future in building a relationship of friendship and trust, based on equality, in which each is sensitive to the concerns and aspirations of the other. The two sides reiterate that India-China friendship and common development will have a positive influence on the future of the international system. India-China relations are not targeted at any country, nor will it affect their friendship with other countries.

The two sides believe that in the new century, Panchsheel, the Five Principles of Peaceful Co-existence, should continue to constitute the basic guiding principles for good relations between all countries and for creating the conditions for realizing peace and progress of humankind. An international system founded on these principles will be fair, rational, equal and mutually beneficial, will promote durable peace and common prosperity, create equal opportunities and eliminate poverty and discrimination.

The two sides hold that the right of each country to choose its own path of social, economic and political development in which fundamental human rights and the rule of law are given their due place, should be respected. An international system founded in tolerance and respect for diversity will promote the cause of peace and reduce the use, or threat of use, of force. The two sides favour an open and inclusive international system and believe

that drawing lines on the ground of ideologies and values, or on geographical criteria, is not conducive to peaceful and harmonious coexistence.

The two sides believe that the continuous democratisation of international relations and multilateralism are an important objective in the new century. The central role of the United Nations in promoting international peace, security and development should be recognized and promoted. The two sides support comprehensive reform of the United Nations, including giving priority to increasing the representation of developing countries in the Security Council. The Indian side reiterates its aspirations for permanent membership of the UN Security Council. The Chinese side attaches great importance to India's position as a major developing country in international affairs. The Chinese side understands and supports India's aspirations to play a greater role in the United Nations, including in the Security Council.

The two sides support and encourage the processes of regional integration that provide mutually beneficial opportunities for growth, as an important feature of the emerging international economic system. The two sides positively view each others' participation in regional processes and agree to strengthen their coordination and consultation within regional cooperation mechanisms including the East Asia Summit, to explore together and with other countries a new architecture for closer regional cooperation in Asia, and to make joint efforts for further regional integration of Asia. The two sides will strengthen their coordination under the framework of Asia-Europe Meeting, and are committed to strengthening and deepening Asia-Europe comprehensive partnership.

The two sides take a positive view on each other's participation in sub-regional multilateral cooperation processes between like-minded countries, including South Asian Association for Regional Cooperation, Bay of Bengal Initiative for Multi-Sectoral Technical and Economic Cooperation and Shanghai Cooperation Organization. The two sides hold that this does not affect either country's existing friendly relations or cooperation with other countries.

The two sides welcome the positive facets of economic globalization, and are ready to face and meet its challenges, and will work with other countries towards balanced and mutually beneficial economic globalization. The two sides believe that the establishment of an open, fair, equitable, transparent and rule-based multilateral trading system is the common aspiration of all

countries. The two sides favour the early conclusion of the Doha Development Round, placing the issues that affect the poorest of the poor at its core. The two sides are determined to strengthen their coordination with other developing countries in order to secure their shared objectives.

The two sides are convinced that it is in the common interest of the international community to establish an international energy order that is fair, equitable, secure and stable, and to the benefit of the entire international community. The two sides are committed to making joint efforts to diversify the global energy mix and enhance the share of clean and renewable energy, so as to meet the energy requirements of all countries.

The two sides welcome the opportunity for their outstanding scientists to work together in the International Thermonuclear Experimental Reactor (ITER) project, which is of great potential significance in meeting the global energy challenge in an environmentally sustainable manner. As two countries with advanced scientific capabilities, the two sides pledge to promote bilateral cooperation in civil nuclear energy, consistent with their respective international commitments, which will contribute to energy security and to dealing with risks associated with climate change.

The two sides recognize the challenge that humankind faces from climate change. The two sides take the issue of climate change seriously and reiterate their readiness to join the international community in the efforts to address climate change. The two sides also stand ready to enhance technological cooperation between the two countries. The two sides welcome the outcome of the United Nations Framework Convention on Climate Change (UNFCCC) meeting in Bali in December 2007 and agree to work closely during the negotiation process laid out in the Bali Road Map for long term cooperative action under the Convention. The two sides emphasize the importance of addressing climate change in accordance with principles and provisions of the UNFCCC and its Kyoto Protocol, in particular the principle of common but differentiated responsibilities.

The two sides appeal to the international community to move forward the processes of multilateral arms control, disarmament and non-proliferation. Outer space is the common heritage of humankind. It is the responsibility of all space faring nations to commit to the peaceful uses of outer space. The two sides express their categorical opposition to the weaponisation and arms race in outer space.

The two sides strongly condemn the scourge of terrorism in all its forms and manifestations, and in all regions of the world. The two sides pledge to work together and with the international community to strengthen the global framework against terrorism in a long-term, sustained and comprehensive manner.

The two sides believe that cultural and religious tolerance and dialogue between civilizations and peoples will contribute to overall peace and stability of our world. The two sides endorse all efforts to promote inter-civilizational and inter-faith dialogues.

The two sides believe that their bilateral relationship in this century will be of significant regional and global influence. The two sides will therefore continue to build their Strategic and Cooperative Partnership in a positive way. As major economies in their region, the two sides believe that the strong growth in their trade and economic relations is mutually beneficial, and welcome the conclusion of a Feasibility Study on a Regional Trading Arrangement (RTA) between the two countries. According to the report of the Feasibility Study, an India - China RTA will be mutually advantageous. Against the backdrop of accelerating regional economic integration in Asia, the two sides, agree to explore the possibility of commencing discussions on a mutually beneficial and high - quality RTA that meets the common aspirations of both countries, and will also benefit the region.

The two sides will continuously promote confidence building measures through steadily enhanced contacts in the field of defence. The two sides therefore welcome the commencement of the India-China Defence Dialogue and express their satisfaction at the successful conclusion of the first joint anti terrorism training between their armed forces in December 2007. The two sides also welcome their efforts to set an example on trans-border rivers by commencing cooperation since 2002. The Indian side highly appreciates the assistance extended by China on the provision of flood season hydrological data which has assisted India in ensuring the safety and security of its population in the regions along these rivers. The two sides agree that this has contributed positively to building mutual understanding and trust.

The two sides remain firmly committed to resolving outstanding differences, including on the boundary question, through peaceful negotiations, while ensuring that such differences are not allowed to affect the positive development of bilateral relations. The two sides reiterate

their determination to seek a fair, reasonable and mutually acceptable solution to the boundary question and to build a boundary of peace and friendship on the basis of the Agreement on Political Parameters and Guiding Principles for the Settlement of the India-China Boundary Question concluded in April 2005. The Special Representatives shall complete at an early date the task of arriving at an agreed framework of settlement on the basis of this Agreement.

The Indian side recalls that India was among the first countries to recognize that there is one China and that its one China policy has remained unaltered. The Indian side states that it would continue to abide by its one China policy, and oppose any activity that is against the one China principle. The Chinese side expresses its appreciation for the Indian position.

The two sides recognize the responsibilities and obligations of the two countries to the international community. The two sides are determined to enhance mutual understanding and friendship between the peoples of India and China, for the betterment of both countries and to bring about a brighter future for humanity.

(Dr. Manmohan Singh)

Prime Minister of
Republic of India

(Wen Jiabao)

Premier of the State Council of
the People's Republic of China

Beijing

January 14, 2004

355. Inscription by Prime Minister in Visitors' Book at the CCPIT Function during his visit to China.

Beijing, January 14, 2008.

The dynamic growth in India-China trade and economic relations is capturing global attention. CCPIT, as China's leading trade organization, has played an important role in promoting these ties. I hope that the CCPIT will further strengthen its links with India and facilitate greater exchanges among the trade and industry of the two countries.

356. List of Documents Signed between India and China during the visit of Prime Minister Manmohan Singh to China.

Beijing, January 14, 2008.

- 1. A Shared Vision for the 21st Century of the Republic of India and the People's Republic of China. (Please see Document No.354)**
- 2. Memorandum of Understanding for Cooperation between the Planning Commission of India and National Development and Reform Commission of the Peoples Republic of China.**

Provides for cooperation between the planning bodies of the two countries including strengthening information exchange and consultations in the field of macroeconomic management, operation of the economy, and medium and long term development planning. The two sides agreed to hold Vice Ministerial (Secretary) level dialogue by turn in each country, according to requirement, on important topics of common concern.

- 3. Memorandum of Understanding on Cooperation between Ministry of Railways, India and Ministry of Railways, PRC**

Provides for enlargement of cooperation in matters related to the railways. It provides for activities such as the exchange of information on policies, laws and regulations, exchange programmes for experts and trainees, and joint organization of symposiums, seminars and conferences on themes

of common interest. The specific areas of cooperation include cover telecommunication technologies, electrical traction supply, reliability of signalling systems, high axle load operations, cooperation in R&D pertaining to the railway sector, track machines, etc

4. Memorandum of Understanding between Ministry of Housing and Urban Development and Poverty Alleviation of India and Ministry of Construction, PRC

This MOU provides a basic framework for cooperation in the area of housing. The overall goal of the MOU is to promote exchange of information related to housing policies, standard specifications and technologies between the two countries and increase cooperation to enhance residential construction standards, especially housing for middle and low income families. The MoU also seeks to promote cooperation and communication in the area of urban poverty alleviation efforts.

5. Memorandum of Understanding between the Ministry of Rural Development of the Republic of India and the Ministry of Land Resources of the PRC for Cooperation in Land Resource Management, Land Administration and Resettlement and Rehabilitation

Provides for cooperation in areas of common interest including development, conservation, management and utilization of land resources, land information management and updation of land records; land registration, statistics, valuation, land survey and adoption of modern technology in these areas; land use planning; land markets, land distribution and relevant laws and regulations; land acquisition, and resettlement and rehabilitation of affected persons on account of industrialization and natural calamities.

6. Memorandum of Understanding between Indian Council for Cultural Relations and Chinese People's Association for Friendship with Foreign Countries on India-China Joint Medical Mission.

On the 70th Anniversary of the arrival in China of the Indian Medical Mission, this MoU enables ICCR and CPAFFC to organise an India-China Joint Medical Mission. This would consist of 10 young doctors each from Indian and China who would jointly provide medical consultations / treatment both in India and China in 2008.

7. Memorandum of Understanding between the Indian Council for Cultural Relations and Chinese People's Association for Friendship with Foreign Countries on Cooperation in Culture.

This MoU enables ICCR and CPAFFC to cooperate in diverse fields of culture, including film and performing arts, exhibitions, publications, seminars, etc., to add momentum to the growing cultural relations between the peoples of the two countries.

8. Memorandum of Understanding on Cooperation between Geological Survey of India and China Geological Survey in Geosciences

The two sides agreed to extend mutual cooperation in carrying out research and development projects in areas including palaeo-climatic and palaeo-environmental changes in the Asian Continent, dating of Indian khondalites for provenance characterization and technology exchange on mineral prognostication.

9. Memorandum of Understanding between Department of AYUSH, Ministry of Health and Family Welfare and State Administration of Traditional Chinese Medicine (SATCM), PRC Covering Cooperation in Traditional Medicine

Provides for promotion of cooperation in traditional medicine. It covers areas such as medical services, education, scientific research, and promotes the development of traditional medicine in the healthcare systems of the two countries. The two sides will support initiatives for conducting collaborative research studies in traditional medicine in identified universities and scientific institutions, including research on usage, safety and efficacy of traditional medicines and for harmonizing the pharmacopoeia standards in India and China.

10. Memorandum of Understanding between NABARD and Agricultural Development Bank of China on Mutual Cooperation

The MoU between NABARD and ADBC will facilitate cooperation on the sustainable development of agriculture and rural areas in both China and India. The two sides agreed to share business experiences, expertise, training facilities, modern technology skills and business development practices. NABARD and ADBC also agreed to share appropriate information on innovation in banking instruments, impact of climate change and global warming and possible risk management tools for farmers, and share

experiences in areas like rural finance and agricultural development strategies and operation practices.

11. Protocol of Phytosanitary Requirements for the Export of Tobacco Leaves from India to China between the General Administration of Quality Supervision, Inspection and Quarantine of the People's Republic of China and the Ministry of Agriculture of the Republic of India

The two sides agreed on a protocol of phytosanitary requirements for the export of tobacco leaves from India to China.

357. Speech by Prime Minister Dr. Manmohan Singh at the Chinese Academy of Social Sciences.

Beijing, January 15, 2008.

"India and China in the 21st Century"

Mr. Chen Kuiyuan, President of the Chinese Academy of Social Sciences,

Dr. Chen Jiagui, Vice-President of the Academy,

Distinguished Scholars,

Ladies and gentlemen,

I am greatly honoured to address this distinguished gathering at the prestigious Chinese Academy of Social Sciences. Yours is a premier institution, which has been at China's intellectual vanguard over the last three decades and has contributed to China's reform and development.

I am delighted to be in this great country. We in India admire the remarkable economic progress that China has made. The rise of China is among the most important developments of our times. As China's largest neighbour, and a friend, we cannot remain untouched by this momentous process.

The great Chinese scholar and one of the foremost Indologists of our times, Professor Ji Xianlin, has rightly said and I quote : The two great cultural circles - China and India - have always learned from and influenced each

other, and this process greatly speeded the development of the two cultures, which is both history and reality, unquote.

Today, both India and China are in the midst of rapid transformation. The development agenda has taken centre-stage in both our societies. Our systems are different, but people in both countries are united in their aspiration for a better future. When countries of the size of China and India, together accounting for 2.5 billion people begin to unshackle their creative energies, it impacts on the whole world. The world knows it and is watching with interest.

I therefore would like to use this opportunity to speak to you on India's development experience and on what I see as a special opportunity for India and China to work together in the twenty-first century.

Ladies and Gentlemen,

Premier Wen Jiabao recently spoke in Singapore about how it was only with openness and inclusiveness that a country can become strong and prosperous. In the past few decades, China has benefited from opening its economy to the rest of the world, and so has India.

India is changing and I would like to acknowledge that the success of China has been a stimulus to change. This process began in the 1980s and was intensified in 1991. In our system change can only be brought about through public debate and it takes time to build a political consensus. However, I am happy to say that in the 16 years that have elapsed since 1991, successive governments in India have carried forward the reform process, with the result that today India is on a high growth path.

Our economic growth during the last five years has averaged over 8.5% per year. This is unprecedented, and has created confidence that we can do better. We are aiming to raise it to 10% per year in the near future. There is a palpable sense of confidence in the country and optimism about the future.

The Indian economy has demonstrated resilience in meeting the challenges posed by globalization. In the last two decades, our industry -especially large and medium industry- has restructured to become globally competitive. This process is continuing.

We have, over the past few years, been able to create an environment conducive to creativity and enterprise. This is symbolized by the success

of our information technology sector in world markets. There are other sectors that are also emerging. Pharmaceuticals and auto-components are both highly competitive. Indian multinationals have emerged that are investing abroad. I am happy to say that many of these companies are investing in China.

A few weeks ago, our National Development Council, which includes the Central Government together with our States and Union Territories, approved India's Eleventh Five Year Plan covering the period 2007-2012. The Plan seeks to build further on the growth momentum already created to reach 10% growth by 2012. But it also recognises that growth alone cannot be the goal of a planning process.

We also need to ensure that growth is inclusive and equitable. We have to address the problems of inter-regional disparity and specifically, urban-rural disparity, revival of the agriculture sector, limited availability of land, and the lack of mobility of those employed in agriculture to productive jobs in industry. This is what we mean by inclusive growth. It is somewhat similar to what is called harmonious growth in China.

We have decided to make important structural shifts in the Plan to address the critical constraints that hold us back from achieving our objective of faster and more inclusive growth. As far as growth is concerned, the biggest priority must be the development of infrastructure, including infrastructure in rural areas. We propose to increase investment in infrastructure from 5% of GDP in 2006 to 9% by 2012 relying on both public and private investment.

Education, including skill development, is another major priority. We propose to triple the share of Central government spending on education and skill development from less than 8 per cent of total plan expenditure in the Tenth Plan to over 19 per cent in the Eleventh Plan. In fact, more than half of total government budgetary spending has been earmarked for agriculture, education, health and rural development, reflecting our emphasis on inclusive growth.

Sustainability of development for a country of India's size is another key concern. We need to address critical challenges relating to energy, food and water security, and climate change. These are challenges that China faces as well.

Ladies and Gentlemen,

India's domestic and foreign policy priorities are closely linked. The primary task of our foreign policy is to create an external environment that is conducive

for our rapid development. Our policy seeks to widen our development choices and give us strategic autonomy in the world. The independence of our foreign policy enables us to pursue mutually beneficial cooperation with all major countries of the world.

The establishment of peaceful and cooperative relationships in our neighbourhood is an intrinsic element of our foreign policy. We realise that our destinies are linked by geography and history. Both India and China seek tranquillity and stability in our immediate neighbourhood and extended region.

We recognise that the world is evolving and developing features of multipolarity. It is natural that major powers, bound together by economic interdependence, will seek to cooperate with each other to mutual benefit. India and China must be part of this cooperative framework.

I look forward with optimism to the future and the role which India and China are destined to play in the transformation of Asia and the world. This optimism is based on my conviction that there is enough space for both India and China to grow and prosper while strengthening our cooperative engagement. History shows that our two great civilizations, flourished for centuries, side by side, interacting and influencing each other.

The Strategic and Cooperative Partnership for Peace and Prosperity that we established in 2005 seeks purposeful engagement covering a wide range of areas. At the same time, we recognise the obligation we have to put behind us disputes and problems that have troubled our relations in the past.

The boundary between us is peaceful. We are both determined to keep it so while our Special Representatives seek a settlement of the boundary question. In April 2005, during the visit of Premier Wen Jiabao to India, we agreed on a set of Political Parameters and Guiding Principles for the settlement of the boundary question. We are confident that those Principles will guide us to a mutually satisfactory solution of this issue. We have also agreed to set up a mechanism to look at trans-boundary rivers, and will make a success of its work.

We are satisfied with the results of our efforts so far and are convinced that the potential for India-China relations is great and will be realised.

Where do we go from here and what is our vision for the 21st century? Yesterday, Premier Wen Jiabao and I have agreed upon our Shared Vision for the 21st Century.

The starting point is the recognition that India-China relations impinge not only on the welfare of the people of the two countries, but also influence regional and global trends.

We are at an exciting point in history when the centre of gravity of the world economy is moving towards Asia. Just as the world economy was largely about western nations in the twentieth century, it could be largely about Asia in the 21st century. By the mid-21st century, Asia may well account for more than 50 percent of trade, income, saving, investment and financial transactions of the world.

We must ensure that India and China cooperate in creating a world of positive externalities and mutual prosperity, rather than one based on balance of power calculations and animosity. This involves India and China working together closely to ensure a global order in which our simultaneous development will have a positive influence not only on our own economies but also on the rest of the world.

I would like to highlight some key focus areas for the future.

First, we must bridge the "knowledge gap" between India and China. We need to make much more sustained effort to ensure proper awareness of each other. This not only applies to our culture and history but also to contemporary developments. We need to have more people to people contacts to remove misconceptions and prejudices. We need a broad based comprehensive dialogue at the level of intelligentsia, media, non-governmental professionals and the worlds of culture and the arts.

Second, we need to expand our cooperation in a broad range of functional sectors. This could include learning from each other's national developmental experiences. We would like to learn from China's success in the creation of physical infrastructure, strategies to provide productive employment outside the agriculture sector, and poverty alleviation. Other areas for potential cooperation are science and technology, public health, education, institution building, water resource management and disaster management.

Third, we should harness our complementarities and synergies in the areas of trade and business. India's growing consumer market, skilled human resources, and software excellence together with China's own large market, its manufacturing prowess and cost competitiveness provide the platform for exponential growth in our economic ties. China is already the second

largest trading partner of India. Yesterday, we agreed to set a bilateral trade target of 60 billion US dollars by the year 2010.

Asia is today more integrated than ever before in terms of trade in goods and services and investment of capital and knowledge. In the East Asian Summit and other fora, we are discussing several constructive ideas for an open inclusive economic architecture from the Indian Ocean to the Pacific. We look forward to working with China in this pursuit. I have spoken before of an Asian Economic Community and am glad that progress is being made in that direction.

In pursuing these initiatives we will do it the Asian way - avoiding confrontation and building trust, confidence and consensus. It is only in an environment of peace that prosperity in Asia can be sustained. India and China have an important role to play in building peace, security and stability in the region.

At the global level, our two countries should be at the forefront of the emergence of a more democratic global order and of multilateral approaches to resolving global issues. Today's international institutions, like the UN Security Council, no longer reflect reality and must be democratised.

We have had useful experience of cooperating in the effort to bring about a successful conclusion of the Doha Development Round of the WTO negotiations, placing the development dimension at its heart. This experience enables us to intensify our efforts to create a more open and equitable trading and financial architecture.

The environment is humanity's common heritage. The rights of our people to a fair chance to improve their lot cannot be abandoned because of environmental damage caused by others who followed a path which has squandered the earth's resources.

Burden sharing has to be fair and must take into account historical emissions. The recently concluded Bali Conference provides a framework for future cooperation on this basis. India and China should continue to work together to strengthen international cooperation on this basis.

The rapid growth of India and China will lead to expanding demand for energy. We have no choice but to widen our options for energy availability and develop viable strategies for energy security. We can do much more to jointly develop clean and energy efficient technologies through

collaborative research and development. India seeks international cooperation in the field of civilian nuclear energy, including with China.

Another area which merits our attention is food security. Global trends in food production and prices, and changing patterns of consumption are going to put increasing pressure on the availability and prices of basic food items. These trends pose major challenges for how we manage our food economy in the years ahead. Our interests are common and we can learn from each other in the strategies we follow.

Perhaps the greatest danger to our development comes from extremism of all types, whether in the garb of religion or on the pretext of righting historical wrongs. Recent developments in our neighbourhood have brought home to us again the imperative need to collectively fight terrorism and extremism in all its forms. As large and diverse societies, we are well placed to demonstrate the benefits of moderation and peaceful co-existence. The rise of non-state actors, often based on intolerance, and narrow conceptions of identity, is a threat to all civilized nations.

Ladies and Gentlemen,

The responsibility for the further development of India-China relations is a shared one. Our governments have an important role to play. But we must also look to you, the intellectuals, thinkers and scholars of China to lead the way by working closely with your Indian counterparts. It is through a free flow of ideas and sharing of different perspectives that our two societies can build upon the edifice of our civilisational links.

I thank you for your attention.

358. Speech of Prime Minister's Special Envoy Shyam Saran at the Rajaratnam School of International Studies: "India and China - Partners or Rivals".

Singapore, January 17, 2008.

1. The Prime Minister of India has just concluded a very successful visit to China, a visit during which the leaders of the two countries declared themselves to be partners and not rivals. They shared the view that there was enough space for India and China to grow together and their simultaneous rise would contribute to both peace and prosperity in Asia and beyond. In a sense, therefore, the question that we seek to explore today, has been answered by the two countries themselves. What does perhaps need to be explored further, is whether there is a substantive basis to this assertion and whether this eminently favourable state of affairs is likely to endure amidst a rapidly transforming global landscape. Shyam Saran The Prime Minister of India has just concluded a very successful visit to China, a visit during which the leaders of the two countries declared themselves to be partners and not rivals. They shared the view
2. Can the history of India-China relations tell us something in this regard? Both India and China are unique in the sense, that unlike other major powers, such as the United States or Russia for example, the two countries did enjoy several centuries of parallel ascendancy before the advent of colonialism and imperialism. They were both the major economies of the world, accounting for more than 50% of the global economy by some estimates, until their secular decline began with the advent of the industrial revolution in Europe in the 18th century. Therefore, in a sense, both India and China share a deep-rooted sense of themselves as great and flourishing civilisations, which are only now beginning to regain their historical space in the Asian and global order. The two civilisations co-existed together for a very long time in history. There was considerable interaction between them. The spread of Buddhism to China from India is one example. The fishermen of the Malabar Coast still use fishing nets that came from China, which are called "Chinese nets." There was a significant volume of trade between the two countries, and remains of ancient Hindu temples in the port city of Quanzhou, built by Tamil merchants, is testimony to that.

3. It is a fact that, for many centuries, the whole of South East Asia was criss-crossed by trade and shipping links that followed the monsoon winds. Indian and Chinese cultures influenced the countries of the region and were in turn enriched by the diverse and colourful cultures of the region. There is no hint of any clash of cultures or trade wars between India and China in this region. On the contrary, a virtuous circle of exchange of goods, ideas and cultures was sustained over many centuries, even though wars and conflict and internal dissension affected our region as much as they did other parts of the world. Therefore, there is historical precedent for Asia playing home to two major civilisations and economic powerhouses, without confrontation and clash of interests being inevitable. There is also a historical precedent for our region benefiting rather than being adversely impacted by the looming presence of the two countries.
4. One can go further and look at more recent history. While we speak of the simultaneous rise of India and China today as representing a new experience for the existing world order, this is not entirely accurate. One should recall the independence of India in 1947 and the liberation of China in 1949 which also constituted a major development both in Asia and the world. The almost coincidental re-emergence of India and China from the backwaters of history was a significant development and its impact was considerable. There is no doubt that the accelerated phase of decolonisation, the movement towards third world solidarity, and the search of a new Asian identity were all catalysed and encouraged by the emergence of the two countries. There was an early promise of the two countries working together to transform the landscape of Asia and the world. Certainly, Nehru and Chou En-lai did attempt to forge a partnership that would enable them to work together in restructuring a global order then increasingly being riven by ideological and great power rivalry, finding space for newly independent countries. The Asian Relations Conference in 1947 and the subsequent Bandung Conference in 1955, represented a concerted effort in that direction. The 5 principles of Peaceful Co-existence were jointly advocated by India and China as the basis for a more equitable world order and also as a code of conduct among all nations. However, this positive phase was short-lived, partly because it was overlaid by the pressures generated by the Cold War, and partly because it was overwhelmed by the

compulsions of national consolidation within modern conceptions of national boundaries in place of what had remained for centuries, more loosely defined zones of overlapping cultures. Furthermore, unlike today, India and China did not have a substantial economic and trade relationship, which could engender a sense of interdependence. In fact, their respective economic strategies tended to be inward-oriented and emphasising self-reliance. When the controversy over Dalai Lama's entry into India in 1959 and the subsequent armed conflict in 1962 came, these developments quite predictably overwhelmed the short-lived phase of goodwill and shared vision that the leaders of the two countries had tried to fashion together, with a strong sense of idealism and of historic responsibility born out of their long history of benign coexistence.

5. Which brings me to the current phase of India-China relations. Can India and China remain as partners as they have declared today, or is a clash of interests inevitable? History would indicate that the simultaneity of the rise of India and China does not suggest inevitability of conflict. In fact, the historical record appears to suggest that the two countries, as ascendant powers, may be quite comfortable in their co-existence. And this is, of course, good news for this region as well as for the world at large. However, the failed promise of Panchsheel and Bandung, and the souring of the Hindi-Chini bhai-bhai phase, is also salutary. It suggests that history can be trumped by suspicion and mistrust born out of differing perceptions, particularly if a substantial foundation of economic interdependence is missing. There is also a role for political leadership to play. Relationships have to be nurtured; they need to be managed with skill. There is also a role that people-to-people relations can play. Societies insulated from each other rarely develop enduring relationships and in this context, memories of historical contacts may not be enough to counteract stereotyped images of the other. Are India and China doing enough to address these lessons of the recent history of their relationship? What is today different in our relations, and the context of our relations, which may suggest greater promise than in the past?
6. There is no doubt both India and China share the view that the management of their relations is of the highest priority for both countries. There is recognition that how India and China manage their relations as both countries emerge as major powers, would not

only have an impact on their own interests but also on Asia and the world as a whole. Following from this recognition is the tradition now fully established for frequent and regular engagement between the two countries at several different levels. Indian and Chinese leaders have met regularly not only in their own capitals but also at regional and international fora. Senior officials of the two countries have been holding regular consultations on a range of regional and international issues in the annual Strategic Dialogue which commenced in 2005. We have a security dialogue focusing on counter-terrorism and a defence dialogue between our defence establishments. Exchange of visits by naval vessels and, more recently, friendly exercises between our naval and land forces, have provided valuable opportunities for confidence building. Both sides are committed to expanding such exchanges.

7. The dramatic new feature of India-China relations, of course, is their rapidly expanding economic and trade relations. The volume of trade today stands at US \$ 38 billion and the target of US \$ 40 billion by 2010 is likely to be surpassed in 2008 itself. If the current rate of increase in trade is maintained, then China could well emerge as India's largest trading partner. Furthermore, there is considerable cross-investment taking place between the two countries as well. Chinese companies, it is reported, have contracted over US \$ 12 billion worth of projects in India, and there are more than 200 Indian companies now represented in China, including in the software and pharmaceutical sectors. It is true that India's private sector does have some reservations on establishing a full-fledged free trade agreement with China. Some concerns have also been expressed over non-tariff barriers which Indian business confronts in the Chinese market. However, the trend is towards a more liberal trade and investment regime between the two continental sized economies and this can only deepen the economic interdependence between them.
8. We recognise that in the economic and commercial field, there will be areas of competition between the two countries. But this is something to be welcomed. There is little doubt that India's own economic reform and liberalisation process has been spurred by China's remarkable success and will continue to be. As long as the two countries match their respective mettle on an even playing field, their economies will gain as will the regional and global economy.

9. What are the possible points of uncertainty as we take this relationship forward?

Firstly, there is the long-standing boundary issue between the two countries, which has so far defied a satisfactory solution. The good news is that the two countries have managed to maintain peace and tranquillity along our borders, pending a final settlement. There is also a mutual agreement that in seeking a settlement, we must keep in mind the strategic perspective of India-China relations. What this really means is that once the two countries come to the conclusion that not resolving the border issue is becoming a constraint in taking toward collaboration on larger global issues, and the price being paid for the latter is greater than the price which they need to pay for not resolving the former, then a settlement will become possible. I have a sense that we are moving in that direction, but as of now the lingering dispute does create a sense of uncertainty over the relations.

Secondly, how will China conduct itself in India's own South Asian and Indian Ocean periphery ? For example, India has had legitimate concerns about China's military relationship with Pakistan, including in the nuclear and missile fields. Chinese activities in our immediate neighbourhood would be watched very carefully to determine whether China has truly abandoned its longstanding strategy of seeking to contain India through its smaller neighbours. In Nepal recently, China has generally adopted a constructive posture from India's point of view. Whether this constitutes a more abiding trend remains to be seen.

Thirdly, from the Indian perspective, there is a careful watch over how China will treat issues of sensitivity for India. Does China support India's entry into the UN Security Council as a permanent member? Will China, as a member of the Nuclear Suppliers' Group join a consensus in allowing its members to engage in international commerce in nuclear energy with India? Would China display the same commitment to the East Asia Summit process, where India is a partner, as it does to the ASEAN+3 process? Our Prime Minister's recent visit and the formulations in the Joint Statement, give us cause for optimism on all these issues.

Fourthly, India has concerns about the impact of climate change and other human interactions on the several cross border rivers between China's Tibet autonomous region and northern India. The ecology of Himalayan glaciers is under threat and could adversely affect the livelihood and safety of millions of both Indian and Chinese citizens. We expect that our Chinese

friends will fully cooperate with us, through regular consultations and joint investigation, in managing this risk. We are encouraged by the assistance extended so far by China in the provision of flood season hydrological data but we need an appropriate bilateral mechanism to place such cooperation on a regular footing.

Finally, as our Prime Minister observed in his speech to the Chinese Academy of Social Sciences, there continues to exist a "knowledge gap" between India and China. The Prime Minister said, and I quote:

"We need to make much more sustained effort to ensure proper awareness of each other. This not only applies to our culture and history but also to contemporary developments. We need to have more people to people contacts to remove misconceptions and prejudices. We need a broad based comprehensive dialogue at the level of intelligentsia, media, non-governmental professionals and the worlds of culture and the arts."

India and China, today, are leading the shift in the centre of gravity of the world economy from the West towards Asia. Furthermore, as the world confronts a number of global and cross-cutting challenges such as the establishment and maintenance of a multilateral, non-discriminatory and rule-based trading system, dealing with the energy challenge but in an environmentally sustainable manner within a multilateral regime that is based on the principle of common and differentiated responsibility, the risk of global pandemics and many other similar challenges, India and China will have shared interests to safeguard and, in the process, also champion the cause of the developing world. Such cooperation is still evolving, but the trend appears to be in a positive direction.

10. The above analysis permits us to arrive at the following broad conclusions:

- i. Historical experience suggests that the simultaneous emergence of India and China as major powers, far from resulting inevitably in a conflict of interest, may in fact create opportunities for mutually beneficial interaction. PM Dr. Manmohan Singh said in Beijing, and I quote:

"I look forward with optimism to the future and the role which India and China are destined to play in the transformation of Asia and the world as well. This optimism is based on my

conviction that there is enough space for both India and China to grow and prosper while strengthening our cooperative engagement. History shows that our two civilisations, flourished for centuries, side by side, interacting and influencing each other."

- ii. The energies of the two countries are focused on economic development, for raising the living standards of our billion plus populations. This is likely to be our preoccupation for a long time to come, and for this both our countries need a peaceful regional and global environment. There is now a recognition that both India and China can, in fact, leverage their new-found economic dynamism to contribute to precisely such a peaceful and prosperous periphery. This, I believe, is good news for Asia.
- iii. In a sense, Asia's rich civilizational history, full of dramatic and creative encounters among the cultures of this region, is beginning to re-emerge. It is our hope that India and China will, together, once again lead the way in the re-emergence of our continent as a crucible of human endeavour.

359. Remarks of External Affairs Minister Pranab Mukherjee about Arunachal Pradesh.**Mumbai, February 8, 2008.**

External Affairs Minister speaking on the sidelines of a private function said: "Arunachal Pradesh is an integral part of our country. We are having regular representation in our Parliament elected by people of Arunachal Pradesh."

1 The External Affairs Minister was reacting to the media reports that China had expressed concern to India over Prime Minister Manmohan Singh's recent visit to Arunachal Pradesh. The Press Trust of India quoted from Beijing the Spokesperson of the Chinese Foreign Ministry Liu Jianchao to say: "Regarding Mr. Singh's visit to that area (Arunachal Pradesh), we have expressed our concern. Our position (on the issue) is clear." Mr. Liu, however, added "we hope that China and India will continue with consultations and negotiations which is good for peace and stability of the region. I believe both China and India are aware of this." It may be recalled that the Prime Minister had visited Arunachal Pradesh last month soon after his return from his visit to Beijing. The question of Chinese claim on Arunachal Pradesh also figured in the Lok Sabha on February 27 and the External Affairs re-emphasized that "Arunachal Pradesh is an integral part of India and the Government have conveyed this fact to the Chinese side".

360. Extract relevant to China from the Statement of External Affairs Minister Pranab Mukherjee in both Houses of Parliament on recent developments in India's foreign relations.

New Delhi, March 3, 2008.

The Prime Minister paid an official visit to the People's Republic of China, our largest neighbour, from 13 to 15 January, 2008. He was received with great warmth. The Prime Minister and Premier, Wen Jiabao signed a joint document on "A Shared Vision for the 21st Century between the Republic of India and the People's Republic of China", that reflects the congruence of interests that we share on regional and international issues, and our willingness to work together in those areas. The Prime Minister also took up the issue of trans-border rivers. The first meeting of the Expert Level Mechanism was held in September, 2007. We have proposed to the Chinese side that we expand our cooperation in this area. We have also agreed to intensify high level exchanges with China. I will be visiting China this year and the Chinese Foreign Minister will also visit India. We will be holding the second annual defence dialogue as well as the second joint military exercise this year in an effort to continue deepening mutual understanding and trust between our Armed Forces. Our bilateral trade continues to show strong growth and both governments have revised the trade target to 60 billion dollars by 2010. Our Commerce Minister will visit China in April for the 8th meeting of the Joint Economic Group.

On the boundary question, during Prime Minister's visit, both sides positively appraised the work of the Special Representatives in seeking a mutually acceptable framework for a settlement that will be based on the Agreement on Guiding Principles and Political Parameters signed in April 2005. Both sides have also agreed to maintain peace and tranquility in the border areas.

The hon. Members are aware that Chinese officials have expressed regret at Prime Minister's visit to Arunachal Pradesh in end January, 2008. The Prime Minister's visit to Arunachal Pradesh was to assure our citizens that Government is mindful of their developmental needs, and is ready and willing to assist them through concrete projects. The fact that Arunachal Pradesh is an integral part of India has been clearly conveyed to the Chinese

side by the Government.

On March 19, replying to a Short Duration Discussion on his above statement, the External Affairs Minister said:

That does not mean that there will be no problem of problem areas, there will be no area of divergence of opinion, there will be no area of differences of approach. There will be and it will be our endeavour to sort out those differences, to convert the divergences of the views into convergence of the views. To my mind, Mr. Deputy Chairman, Sir, most respectfully I would like to submit, that is the job of those who are conducting the Foreign Policy of this country, to convert the divergences into convergence. Yes, we have differences of opinion in respect of Arunachal Pradesh and the Prime Minister's visit.

The Leader of the Opposition has quoted very extensively from some expert's opinion. I am not disputing that. Yes, they have their own perceptions. They have their own views. We have our own perceptions. When they -- not formally, but informally -- placed a demarche to our Embassy about the visit of our Prime Minister to Arunachal Pradesh, immediately I responded by saying that Arunachal Pradesh is an integral part of our country, we are having representatives of the people of that area in our Parliament and it is quite natural that if there had not been development, particularly, infrastructural facilities were not built up on this side of the border of an important international border, if Prime Minister visits and assures the people of Arunachal Pradesh that the Government of India is fully aware of their developmental requirement and the package is being declared, it is quite natural and quite consistent with the policies. That is the policy we have stated. Therefore, I do not feel that there is any inherent contradiction in these approaches.

It has been stated, hon. Leader of the Opposition also mentioned about Sikkim. I am aware of the problem of Sikkim. But unlike the Macmohan line, boundary between Sikkim and China has been settled in Anglo-Sikkim Convention of 1890. Physically, it has not been delineated but both sides have agreed and accepted their position. There have been some occasions where some bunkers have been destroyed and some activities have taken place, but, it has been agreed that neither side will take any unilateral action to change this status quo and through dialogue we would like to settle the issue which will be sorted out, I do hope, in course of time. Sir, in

respect of the recent developments in Tibet, hon. Members are fully aware of the history. If I remember correctly, His Holiness Dalai Lama entered into India sometime in 1959. On 23rd March, 1959, the then Prime Minister, Pandit Jawaharlal Nehru made a statement on the happenings of Tibet and when his Holiness Dalai Lama entered India, naturally, India extended shelter to him and to his followers. Again Panditji made a statement. The first statement was made on 23rd March and another statement was made perhaps on 29th March, 1959 after Dalai Lama entered, addressed the place at Tejpur and he was given shelter.

The conditions are well known. He is considered as a religious and spiritual leader. He is allowed to have all religious and spiritual activities to continue. His followers are provided with shelter and all sorts of facilities which they require. But, at the same time, they are advised not to indulge in any political activities or any sort of activity which can jeopardise our relationship with any friendly country. And, this is fully appreciated by His Holiness Dalai Lama. Very recently, he had made a statement from Dharmashala on 10th March. His Holiness said and I quote, "I would like to take this opportunity to thank the Government and people of India, in particular, for their continuing and unparallel support for Tibetan refugees and the cause of Tibet." He expressed these sentiments in respect of his State on an occasion which was organised to honour him. It has been stated that it is some sort of patronage. It is not patronage. It is appreciation. If Chinese authorities feel that India's conduct in this matter is reassuring of continuing friendly relationship, good neighbourly relationship and if they appreciate in words, one need not take it as if it is some sort of patronage. This is what I would like to submit most respectfully.

For full text of the two statements please see Document Nos.19 and 23.

361. Statement by Official Spokesperson in response to questions on the recent protest by Tibetans¹ in New Delhi.

New Delhi, March 13, 2008.

Government of India does not permit Tibetans to engage in anti-China political activities in India.

Any person whether an Indian national or a foreigner is required to possess valid travel documents to cross the international border. Without possessing such travel documents, it is illegal to attempt to cross the international border.

Government of India has the responsibility to maintain public order. Any activity which causes disruption would be dealt with in accordance with the laws of India.

When the protest demonstrations continued, the Spokesperson made two more statements on March 15. These were:

One— "Tibetan refugees are our guests in India. All those in India, whether Indian citizens or foreigners, are subject to the law of the land regarding the crossing of our borders, marches or demonstrations. Like our other guests, Tibetan refugees, while they are in India, are expected to refrain from political activities and those activities that affect our relations with other friendly countries."

¹ The spokesman was referring to the demonstrations by the Tibetan refugees in New Delhi on the occasion of the 'Tibetan Uprising Day' observed by the Tibetan refugees every year to mark their 'revolt' against the Chinese in 1959. The refugees also threatened to cross the border into Tibet from across the Himalayas to carry their protest to Tibet itself. An added reason for the protests this year was the disturbances in Tibet particularly in Lhasa, where there were large scale protests against the Chinese Government, leading to arson and death of some demonstrators and the Chinese Government adopting stern measures to control the reportedly peaceful demonstrations. The Dalai Lama in India also appealed to the Tibetans to eschew violence and remain peaceful in their protest and not do anything to disturb the Olympic games scheduled to be held in Beijing later in the year. To a question on developments in Lhasa, the Foreign Office said: "We are distressed by reports of the unsettled situation and violence in Lhasa, and by the deaths of innocent people. We would hope that all those involved will work to improve the situation and remove the causes of such trouble in Tibet, which is an autonomous region of China, through dialogue and non-violent means." The External Affairs Minister Pranab Mukherjee meanwhile on March 15, on the sidelines of a conference in Chandigarh, said that India was "watching the situation." As Prime Minister Manmohan Singh was out of New Delhi on March 15, the issue could not be discussed, Mr. Mukherjee said. However China has accused the followers of Tibet's

and Two– "We are distressed by reports of the unsettled situation and violence in Lhasa, and by the deaths of innocent people. We would hope that all those involved will work to improve the situation and remove the causes of such trouble in Tibet, which is an autonomous region of China, through dialogue and non-violent means."

exiled spiritual leader, the Dalai Lama, of engineering the unrest in the run-up to the Beijing Olympics, while Dalai Lama maintained the unrest was spontaneous.

The media reports, quoting highly placed sources in New Delhi said that India had told China that 'it will not stop protests by Tibetans on its soil as long as they remain peaceful. At the same time, it has assured full security to the Olympic torch when it arrives here next week'. "Our approach on Tibet is fairly clear. It is an autonomous region of China and we don't see this changing despite demonstrations." *The Hindu* daily of Chennai had the following report to make on the demonstration and the media reports that the Indian Ambassador in Beijing was summoned late in the night to the Foreign Office to register its protest: "The sources refuted media reports of Indian envoy in Beijing Nirupama Rao being summoned to the Chinese Foreign Office at 2 a.m. Chinese Ambassador to India Zhang Yan had also made similar observations, but declined to give details. Giving the sequence of events for the first time, the sources revealed that Beijing was rattled the day Tibetan protesters broke into the Chinese embassy here because there had been attacks on six of its missions in other countries. After receiving the report from the New Delhi mission, the Chinese Foreign Office called up Ms. Rao at 9 p.m. for consultations. As she was busy with other engagements, Ms. Rao drove down to the Foreign Office after 11 p.m. The Nepalese envoy was also summoned because these two countries hosted the highest number of Tibetans." On Dalai Lama particularly, New Delhi noted that he is a "respected guest" and pointed to Prime Minister Manmohan Singh's recent remark, describing him as the "greatest living Gandhian". At the same time, New Delhi conveyed to Beijing that ensuring security for the Olympic torch during its relay here was its "responsibility and it will carry it out", sources said. As the government assured, the march of the Olympic torch through New Delhi passed off peacefully. When Chairperson of the ruling United Progressive Alliance, Mrs. Sonia Gandhi visited Beijing for the opening of the Olympic Games in August, the Chinese Vice-President Xi Jinping thanked her for taking "effective" steps to ensure the smooth run of the Olympic torch in New Delhi and for backing Beijing efforts to stage a "unique and "well-run" Games. Thanking India for that, Mr. Xi said "we express our deep gratitude."

The happenings in Tibet figured in Parliament on March 17 during zero hour when members of the National Democratic Alliance walked out of the Lok Sabha protesting "violation of human rights" in that country. Vijay Kumar Malhotra (BJP) described the Lhasa incidents as "ethnic genocide" and wanted the government to condemn the happenings. He said Tibet, besides being a neighbour, shared cultural ties with India. Responding to the members' concern, External Affairs Minister Pranab Mukherjee expressed distress over the "unsettled situation and violence" in Tibet and wanted the causes of trouble in the autonomous region of China resolved through dialogue and non-violent means. Ramjilal Suman (Samajwadi Party) said India should join the global community in ending "human rights violation in Tibet." The issue also figured in the upper House when former External Affairs Minister Yashwant Sinha said while everybody wanted good relations with China, it did not mean surrendering India's national interest. "India should not remain a mute spectator to what was going on there," he said, demanding

362. Statement by Official Spokesperson on External Affairs Minister's telephone conversation with Chinese Foreign Minister.

New Delhi, April 3, 2008.

External Affairs Minister had a telephone conversation with Chinese Foreign Minister Yang Jiechi on 2nd April 2008. The call was at the request of the Chinese side. External Affairs Minister recalled Prime Minister's landmark visit to China in January 2008. He said that he looked forward to working together with the Chinese Foreign Minister to implement the main elements of the document on the Shared Vision between the two countries signed by the two Prime Ministers. The Chinese Foreign Minister said that bilateral relations were enjoying good momentum. Prime Minister's visit to China had been very successful. Foreign Minister Yang said that he would work with External Affairs Minister to further substantiate our bilateral relationship.

The Chinese Foreign Minister also took this opportunity to brief External Affairs Minister on the situation in Tibet. He said that the Chinese Government appreciates the steps taken by the Indian side to ensure safety and security of Chinese diplomatic and consular establishments and Chinese citizens in India. The Chinese Foreign Minister also expressed his confidence that the passage of the Olympic Torch through India would take place smoothly. External Affairs Minister conveyed that Government of India will take the necessary measures to ensure that the passage of the Olympic Torch is a success. He also reiterated Government's position that the Tibet Autonomous Region is part of the territory of the People's Republic of China. External Affairs Minister conveyed that the Dalai Lama is a religious and spiritual leader. Government does not allow Tibetans to engage in anti-China political activities in India. The Chinese Foreign Minister expressed his appreciation for Government's position.

that the government make a statement. Congress spokesperson Abhishek Singhvi told reporters that the party "expresses its concern about the violence and unsettled situation in the entire region and the deaths of innocent persons." There was "the dire necessity to take recourse by non-violent means to bring peace and security in that autonomous region." He hoped that a stable situation would prevail there at the earliest. The Indian policy towards the Dalai Lama was re-emphasized by the External Affairs Minister on April 1 in his remarks to a TV channel. He said "Dalai Lama is a religious leader. India will render all hospitality to him as he is a respectable guest, he will have full freedom to preach religion in India but he can't conduct any political activity in this country that harms India-China ties."

363. Media Report on the visit of Foreign Secretary Shivshankar Menon to China.

Beijing, April 22, 2008

Media reports said that China raised its concern over the Tibet situation with the visiting Foreign Secretary Shiv Shankar Menon during his brief visit to Beijing. A range of bilateral issues was also discussed during his meetings with State Councillor Dai Bingguo, Assistant Foreign Minister Ha Yafei and Vice-Foreign Minister Wang Yi. The Foreign Secretary said the Chinese side appreciated India's handling of the Olympic torch relay.

"They also brought up the larger issue of Tibet and told us how they see it," he said, adding India's approach to the matter was clear. "We will neither allow anyone to break the laws of our country nor allow attacks on a friendly country from our soil." Asked whether Beijing was satisfied with New Delhi's position, he said: "They [the Chinese] have already seen how it works in practice."

Mr. Menon was referring to the Indian leg of the Olympic torch relay in which the presence of some 15,000 police personnel ensured that there were no serious disruptions.

The proposed visit of External Affairs Minister Pranab Mukherjee to China in June was also discussed.

Mr. Menon said overall both sides expressed satisfaction at the "steady" development in ties and the focus of his talks was on translating the vision of strategic and cooperative partnership into practice through a series of dialogue mechanisms.

On April 21, Mr. Menon met representatives of G-8 "outreach countries"--China, Mexico, Brazil and South Africa. The discussions centered around developing a coordinated approach to the annual summit of G-8 leaders in Japan which was scheduled in July. Climate change, in particular, featured on the agenda.

364. Press Release of the Ministry of External Affairs on External Affairs Minister's condolence message on loss of life in the earthquake in Sichuan Province

New Delhi, May 14, 2008.

The External Affairs Minister (EAM), Shri Pranab Mukherjee, has written to his counterpart, Mr. Yang Jiechi, Minister of Foreign Affairs of the People's Republic of China, and has expressed his deep shock at the news of the devastating earthquake that has hit the Sichuan province of China.

EAM conveyed his heartfelt condolences over the tragedy and indicated India's readiness to provide any assistance that China may require.

365. Press Release of the Ministry of External Affairs on arrival of the first Indian flight in Chengdu with relief supplies for earthquake victims.

New Delhi, May 17, 2008.

As an expression of sympathy and support of the people of India for those affected by the devastating Wenchuan earthquake in Sichuan, China, the Government of India had on May 15 announced an assistance of US\$ 5 million. The offer was conveyed by the External Affairs Minister of India Mr. Pranab Mukherjee to the Minister of Foreign Affairs of China Mr. Yang Jiechi during their meeting in Yekaterinberg on May 15. The Chinese Foreign Minister welcomed the offer.

The first Indian Airforce aircraft carrying tents, blankets and other relief material arrived at Chengdu, the capital of Sichuan Province which is close to the epicenter of the earthquake at 1745 hours today. The Ambassador of India Mrs. Nirupama Rao, Consul General of India, Guangzhou, Mr. Gautam Bambawale, along with officials of the Sichuan Government were present at the airport. While receiving the consignment Mr. Ran Jinjun, a senior official of the Civil Affairs Bureau of the Sichuan Provincial People's Government, said that they were deeply grateful to the friendly people of India and the Government of India for their timely assistance which had arrived so soon following the earthquake. The consignment was immediately transferred to the affected areas.

The second Indian Air Force relief aircraft is expected to reach Chengdu on Monday May 19 and would carry additional relief supplies including medicines, tents and sleeping bags. Further relief flights will follow thereafter¹.

366. Speech of External Affairs Minister Pranab Mukherjee at the inauguration of the Consulate General of India in Guangzhou.

Guangzhou (China), June 5, 2008.

Excellency Governor Huang,

Excellency Vice Mayor Chen,

Distinguished Guests,

Ladies and Gentlemen:

I am very pleased to be with all of you this morning for the inauguration of the Consulate General of India in Guangzhou².

India and China are ancient civilizations with historical links to each other for centuries. These linkages also connect us to Guangdong province. Damo - as you know him - or Bodhidharma, as he is known in India, travelled to China in the 6th Century A.D. carrying the message of the Buddha. I am told he also visited this part of southern China and is well known in Guangdong Province to this day.

1. During his visit to China in June the External Affairs Minister in a special gesture flew to quake-shattered Sichuan province of China and handed over a consignment of relief supplies to the local administration. The supplies, part of the \$5 million aid announced by India, were presented by the External Affairs Minister to Huang Xiaoxiang, the Vice Governor of the south western province. Relief supplies, including tents, ready-to-eat meal packets and medicines, have been dispatched through several IAF flights following the deadliest earthquake in three decades to hit China. Mr. Huang said the provincial government and the people were grateful to India for offering help, state-run Xinhua news agency reported. India's Ambassador to China Nirupama Rao was also present in the ceremony.
2. It may be recalled that the decision to set up an Indian Consulate General in Guangzhou and a Chinese Consulate General in Kolkata was arrived at during the visit of the Chinese President Hu Jintao to India in November 2006. The Chinese inaugurated their Consulate General in Kolkata on September 8, 2008 during the Chinese Foreign Minister's visit to India.

Today, we are among the fastest growing economies in the world. Our economic development is providing the momentum for growth and prosperity in the Asia-Pacific region. The trajectory of growth in our mutual trade and investment continues to astonish our citizens. The trade target of US\$ 60 billion by 2010 set by our two Prime Ministers is very likely to be surpassed before 2010. China is now our largest trading partner. If India and China are to grow together, as your President His Excellency Mr. Hu Jintao said during his visit to India, our economic and commercial relationship must become the firm foundation for such growth.

Guangdong has always been at the forefront of China's economic reform and opening to the outside world. There is tremendous interest in India to learn from your experiences, including your remarkable success in developing your Special Economic Zones. Guangdong Province accounts for one-third of China's total foreign trade. Indian firms have invested in China including in the Pearl River Delta, and this trend is likely to escalate in the coming years. I understand that Chinese companies from this province are also interested in the Indian market. The commencement of direct flights from your city to India is an encouraging sign that both sides want to build more economic, trade, scientific, cultural and people-to-people contacts.

For all these reasons we are convinced that Guangzhou is the best choice for the opening of our second Consulate General in China. I am, therefore, delighted to officially inaugurate the Consulate General of India in Guangzhou. Our new Consulate General will strive to enhance trade and investment ties, to encourage more tourism and business travel to and from India and to introduce our culture and civilization to the people of southern China. I assure you that we will make every effort to see that our Consulate contributes in a positive and proactive way in building friendship and partnership between Indians and Chinese.

I wish to thank Your Excellency for your gracious presence on this occasion. I am confident that with Your Excellency's guidance, and with the support of the Government of Guangdong, our Consul General and his team will carry out their tasks in a successful manner.

367. Press Release of the Ministry of External Affairs on the inauguration of the Consulate General of India in Guangzhou, China by External Affairs Minister Pranab Mukherjee.

Guangzhou (China), June 5, 2008.

The Consulate General of India, Guangzhou was formally inaugurated this morning by India's External Affairs Minister Mr. Pranab Mukherjee. The inauguration function was attended by the Governor of Guangdong Province H.E. Mr. Huang Huahua, Ambassador of India to China Mrs. Nirupama Rao and Vice Mayor of Guangzhou city Mr. Chen Mingde and 250 invited Indian and Chinese guests and members of the Consular Corps.

2. Recalling that Guangdong has always been at the forefront of China's economic reform and opening to the outside world, Mr. Mukherjee stressed that India is interested to learn from Guangdong's experience, including its remarkable success in developing Special Economic Zones. He added that Economic and commercial relations must become the firm foundation for the future growth of India - China ties. Many Indian firms have invested in the Pearl River Delta and this is likely to increase in the coming years. Similarly companies from Guangdong have shown interest in the Indian market. The commencement of direct flights from Guangzhou to India has also encouraged more links between the Province and India. For all these reasons, India is convinced that Guangzhou is the best choice for opening our second Consulate General in China.
3. Guangdong Governor Huang Huahua stated that the inauguration of the Consulate General of India will open a new chapter of friendly cooperation between Guangdong and India. Trade between the Province and India amounted to US \$ 5.9 billion in 2007, an increase of 55% over the previous year.
4. It will be recalled that India and China had signed a Memorandum of Understanding for the opening of new Consulates General in Guangzhou and Kolkata during the visit of Chinese President H.E. Mr. Hu Jintao to India in November, 2006. With the inauguration of the Consulate General of India, Guangzhou the Memorandum of Understanding stands fully implemented. The newly inaugurated Consulate General will focus on expanding trade, investment, tourism as well as Cultural and educational contacts between India and South China.

**368. Speech of External Affairs Minister Pranab Mukherjee
on "India's Foreign Policy Today" at Peking University.**

Beijing, June 6, 2008.

President Xu,

Distinguished scholars and students of Peking University,

Ladies and Gentlemen:

I am honoured to have this opportunity to speak at Peking University. My joy at being here today has several reasons. This University is no doubt one of China's most prestigious educational institutions. It is also at the forefront of promoting India studies in China. The work pioneered by renowned scholars like Professor Ji Xianlin and Professor P.C. Bagchi in the beginning of the last century is being carried on by scholars in this University's Centre for India Studies. The University is also celebrating the 110th anniversary of its founding. On this occasion, I offer my felicitations to the students and faculty of Peking University.

Friends,

India and China are among the world's great civilizations. We have made seminal contributions to humanity's past and stand today at the cusp of remoulding its future. Throughout history, we have had deep respect and regard for each other. Even though our particular conditions were different, our two countries have learnt from and given to each other freely. This exchange has resulted in an enrichment of our peoples' lives.

It is this wisdom that we will need to harness as we emerge in the 21st century. I foresee this as a century of great opportunities. Some are new or newly recognized - the challenge of climate change, for instance. Other challenges, like food and energy security, have been faced by our forefathers. How we work together and with others may determine whether humanity can collectively overcome these challenges so that this century becomes better for us all. I believe that India - China relations will be one of the more significant factors that will determine the course of human history in the 21st century. Let me therefore outline the contours of how India sees the world around it.

No country's foreign policy can be divorced from the imperatives of national interests and priorities. For India, our foremost strategic objective is to

develop our country and to bring the fruits of development to our people. This objective requires an enabling external environment and enhanced engagement with the rest of the world. This, in turn, can only be done effectively in a stable and peaceful external environment. India has a long-standing and deeply ingrained conviction that the world is one large family - "vasudhaiva kutumbakam" - as our classical texts call it.

India's engagement with the world is not only to preserve peace and stability. It is also to contribute to a world order in which peace and progress can be sustained. We believe that India is a factor of stability and a voice of moderation in the world. We remain anchored to the principles of "Panchsheel, which were jointly articulated by India and China. The precepts of "non-violence" and "tolerance" have deeply infused our civilization. The great philosophical traditions that emerged from India, including Buddhism, preached these basic truths as essential for mankind's progress. It is not surprising therefore that our foreign policy reflects these ideas and ideals.

We have an independent foreign policy based on the principles of non-alignment laid down by our first Prime Minister. All successive governments of all political shades have adhered to these principles. We guard our strategic autonomy and stand by the principles of independence and freedom of action in external relations. This has, however, not prevented us from developing friendships and good relations with all the major countries. We believe this is the strength of our foreign policy. Friendship between India and any one strategic partner is not at the expense of relations with any third country or another strategic partner. Our ties are not a product of strategic expediency, but of a long term vision.

India actively pursues cooperative arrangements. We recently held the India-China-Russia trilateral meeting. Also, for the first time, the Foreign Ministers of India, China, Russia and Brazil had a stand-alone meeting to discuss issues of common interest. Our participation in ASEAN and ARF, our presence as an observer in the Shanghai Cooperation Organization and our engagement with the ASEM and the East Asia Summit are positive and forward looking. India's political and economic ties with the Asia-Pacific region are growing. Through our "Look East" policy, we are making further strides in strengthening our relations with the countries of this region.

Our foreign policy aims to strengthen our relationships not only with all the major powers, but with emerging economies in Asia, Latin America and Africa as well. We also give great importance to restoring and strengthening

the traditional linkages in our extended neighbourhood. India has had historical and civilizational affinities to peoples of East and South East Asia, Central Asia, East Africa and the Indian Ocean region for more than two millennia. We are restoring connectivity and building economic interdependence with them again.

Our immediate neighbourhood is naturally of great importance to us. We are tied to it by geography as much as by historical, cultural and other affinities. Through the South Asian Association for Regional Cooperation, we are working with all our neighbours to build a South Asian economic community and restore traditional cross-border linkages. We are conscious of the fact that our destinies are linked with those of our neighbours. It is, therefore, natural that we seek a peaceful periphery, within which to concentrate on the transformation and development of India.

It is in this overall context that I want to talk of our relations with China. There is no doubt that we have steadily improved our relations. In 2005, we established a Strategic & Cooperative Partnership for Peace and Prosperity. Our trade and economic relations are rapidly becoming the bedrock for a more intensive engagement. We are likely to cross the target of 60 billion dollars in bilateral trade by 2010. We are building mutual trust and confidence between our militaries. Last year, we successfully held the first joint military exercises. This will be followed by another exercise this year. Both our countries recognize that we are in an era of dynamic change. More Indians and Chinese are traveling abroad than ever before, as technology compresses time and distance. There is growing engagement among our business communities, students, academics and media. Globalization has made available to us the technology, connectivity and information that promise new opportunities for progress.

While these positive signs of change hold great promise for the future, both our countries are also mature enough to realize and address the difficult issues in our relationship. Our boundary is peaceful and we are determined to keep it so. We have evolved mechanisms and have gained experience to maintain peace and tranquility in our border areas. In 2005, we agreed on a set of Political Parameters and Guiding Principles to guide us in our task of finding a mutually satisfactory solution. We will need to resolve these differences through negotiations in a constructive and forward looking manner. We will have to be patient and realistic. While we may have our differences, we will not let them become obstacles to the broadening and deepening of our relationship.

Friends,

India and China are the beneficiaries of globalization and we have a stake in how it shapes our world. The Internet is beginning to empower Indians and Chinese, even in small towns and villages, in ways that gives them competitive advantages that might have otherwise taken generations. There is the hope and the possibility of a better life for our future generations. In an interdependent world, the prosperity and growth of both India and China is linked intimately with that of the world. It follows, therefore, that both of us have stakes in the development of a global order that is conducive to our developmental aspirations. We need to work together to evolve such an order. It is also in our common interest to work together so that the proper conditions are created for global inter-dependence to be preserved and sustained.

I noted earlier that only an environment of peace and stability is conducive for us to work towards the prosperity of our peoples. Today, both our countries require a peaceful external environment. Therefore, we should work together towards peace, security and stability in Asia and beyond. For this, we will need to evolve a security architecture which takes into account the conditions prevailing in Asia. We cannot transplant ideas from other parts of the world. Nor should we seek to create such sub-regional security arrangements that are narrow and ultimately ineffective. An open and inclusive architecture, which is flexible enough to accommodate the great diversity which exists in Asia, is needed. We already have some dialogue forums in place, such as the ARF, the CICA and the SCO, where we are discussing security issues. As two major countries in Asia, India and China should try to work together to evolve a new framework from these basic building blocks. I have no doubt that they will help us address our common concerns, such as the security of the sea lanes of communication, which are critical to trade and energy flows in our region and on which the future of our two countries will depend.

We also need to work together and with other countries towards mutually beneficial economic globalization that will draw on the dynamism and potential of India and China. When President Hu Jintao visited India in 2006, Prime Minister Manmohan Singh had said that there is enough space for the two countries to develop together in a mutually supportive manner for mutual benefit. As two large Asian states and as two of the fastest growing emerging economies of the world, cooperation between India and China transcends the bilateral sphere. Indeed, it has global significance.

In this context, we must ensure that regional integration processes are inclusive so that they can contribute towards building an Asian Economic Community that is open, transparent and inclusive, and that provides a platform to create ever widening economic opportunity. I firmly believe that such a path will be in our mutual interest.

During Prime Minister Manmohan Singh's visit to China in January this year, India and China outlined a Shared Vision for the 21st Century and agreed that there should be continuous democratization of international relations and the world order. It is now widely recognized that the centre of gravity of international relations is shifting towards Asia. However, global governance structures - be they in the political domain, such as the UN, or the economic domain, such as the IMF and World Bank - are still based on a world order that is a sixty year old relic from the middle of the last century. There is an urgent need to restructure and democratize these global institutions, so that they are more attuned to the realities of the day. It is important for India and China to work together to achieve this objective and give substance to the idea that both of us have a common responsibility and a common interest in shaping our world in the future. At a global level, India's engagement is geared towards playing a positive role in world affairs. When both of us define our interactions with each other and with the rest of the world in global terms, we will be fulfilling the promise in our relationship and resume our historical role of contributing to humanity's future.

Friends,

I began my remarks by listing the reasons for my joy at being here today. I believe that I did not complete the list. We in India are committed to further strengthening our relations with China. I believe that China reciprocates this sentiment. China and India, between them, have the wisdom and the capacity to seek fair and equitable global solutions that will involve us all. In this task, the youth, both in India and China, who will provide the future generation of leaders, have an important role to play to further an environment of peace, friendship and opportunity. My visit here today has afforded me an opportunity of sharing some of my thoughts with those that will go on to guide the destiny of this great nation and its relations with other countries. This, then, is the most joyful reason for my being here today. And for this, I thank you once again. I am deeply grateful for your patience.

Thank you.

369. Media Briefing by Foreign Secretary Shivshankar Menon on the meeting between Prime Minister Dr. Manmohan Singh and the Chinese President Hu Jintao on the sidelines of the G-8 Outreach Summit.

Sapporo (Hokkaido), July 8, 2008.

On July 8, Prime Minister Manmohan Singh met the Chinese President Hu Jintao in Sapporo, the Capital city of the province of Hokkaido, Japan, on the sidelines of the G-8 Summit, which is being attended both by India and China as the Outreach participants at the Summit.

During the meeting he expressed his country's willingness to cooperate with India in developing civil nuclear energy¹.

Briefing the Indian media about the bilateral talks, Foreign Secretary Shiv Shankar Menon noted that Dr. Singh mentioned the civil nuclear cooperation deal which had been discussed earlier with President Hu Jintao. He said that as the Prime Minister mentioned on Monday at his news conference en route to Japan: "We do not anticipate there will be any difficulty about it."

(China is an important member of the Nuclear Suppliers Group whose approval is needed for India to secure international cooperation for its nuclear electricity programme.) Mr. Menon said the two leaders spoke about the very rapid development of the economic relationship, the two-way trade in the first five months of this year having exceeded \$24 billion, a 74 per cent increase over the same period the previous year.

"All in all, it was a positive and constructive meeting that covered the full gamut of bilateral relations," he said.

(At the outset of the meeting the Chinese President mentioned the blast in Kabul, expressing China's strong views on terrorism and offered his condolences to the families of those who lost their lives.)

1

However, a report on the meeting put out by China's official news agency, Xinhua, did not specifically mention "nuclear energy" having been discussed, but quoted Mr. Hu as saying, "China is willing to work with the Indian side to promote cooperation and exchanges in various fields, continuously substantialise the China-India strategic partnership, and advance the stable, sound and long-term development of bilateral relations."

370. Response by Official Spokesperson to media reports on the visit of Chinese Foreign Minister.

New Delhi, September 10, 2008.

In response to questions¹ on news reports about delay in fixing a call by Chinese Foreign Minister on Chairperson, UPA, the Official Spokesperson said: "We have seen these reports. These are unfounded as there was no meeting scheduled to be held between the Chinese Foreign Minister and Chairperson, UPA".

1. The Spokesperson was reacting to reports in a section of the media that Mrs. Sonia Gandhi had not accepted the request of the Chinese Embassy for a meeting with the Chinese Foreign Minister who was in town to express her displeasure at the Chinese attitude at the NSG meeting in Geneva.
A Spokesperson of the Congress Party Shakeel Ahmed reacting to reports said the attempt to connect the meeting that was not scheduled with the proceedings of the Nuclear Suppliers Group was "unwarranted and unfortunate." Mr. Ahmed asserted that the Indian National Congress and the Communist Party of China (CPC) shared a longstanding relationship that had grown from strength to strength as evident from Ms. Gandhi's visit to Beijing during Olympics. The Congress and the CPC had signed a memorandum of understanding for exchange of leadership development programme as part of party-to-party contacts. Asked whether Mr. Yang sought an appointment with Ms. Gandhi, the spokesman said such request should come through the Ministry of External Affairs.

**371. Extract from the Interview of External Affairs Minister
Pranab Mukherjee with the Chennai based daily the
Hindu.**

September 22, 2008.

* * * *

**Do you see a reworking of the India-China relationship in the context
of what happened at NSG?**

We should concentrate on the end result. How you proceed to arrive at a particular decision is not primarily a concern to us. If China had not wanted to be a party to consensus, it would not have been there. But as the consensus is there and China has gone in with the consensus along with other 44 countries, why should we object? What is our expectation, what type of behaviour we expect from countries, we can have our own view. But we should take into account the end result. China had all along committed to us that they will not be obstructive. In my interaction with their Foreign Minister and of the Prime Minister with their leadership, China maintained that position. And when I had discussion with the Chinese Foreign Minister when he was here, he explained their position and explained it to the media as well. Actions speak more clearly than words.

**In our domestic politics, there is a certain perception about China.
How do we dissolve that kind of perception about Chinese intentions?**

I don't think there is any visible manifestation about lack of trust. We have problems and we are trying to resolve through dialogue, for instance the border dispute. Right now the Special Representatives are meeting.

372. Extract from the Interview of External Affairs Minister Pranab Mukherjee with Ms. Kalyani Shankar for the All India Radio.

New Delhi, September 22, 2008.

* * * *

Q : Prime Minister is likely to go to China in October and the Chinese Foreign Minister is coming here next week, I think. Are you getting positive signals from China, particularly on this NSG? And then the second one is that what will be the focus of the Sino-Indian relations in the coming months?

EAM : We are having strategic partnership on the basis of shared values between India and China. Recently we have very high level visits, President Hu Jintao from the Peoples Republic of China visited India last year. Our Prime Minister visited China this year. I myself visited China and in response to that Chinese Foreign Minister Yang Jiechi is coming to visit India next week. Chairperson of UPA, Mrs. Sonia Gandhi also visited Beijing during the Olympics. There has been high level contacts. Our trade relationship is expanding very fast. Shortly we will be reaching the target which we have fixed by 2010 to the level of 60 billion US dollar. In other areas of economic cooperation, we are proceeding smoothly. Of course, there are problems in the area of border settlement but the special representatives of both the Prime Ministers, they are meeting regularly and I am told the next meeting is scheduled to be held shortly, where we are trying to resolve this issue also. Therefore, our relationship between India and China is moving forward.

Q : But what will be focus of the Prime Minister's visit to China now?

EAM : The Prime Minister's visit is not a bilateral one. It is in connection with the East Asia summit. That will be discussed.

* * * *

373. Media Report on the briefing by Foreign Secretary Shivshankar Menon on the meeting between Prime Minister Dr. Manmohan Singh and Chinese Premier Wen Jiaba.

New York. September 24, 2008.

Foreign Secretary Shivshankar Menon briefing the media on the meeting between Prime Minister Dr. Manmohan Singh and the Chinese Premier Wen Jiabao said that the two countries expressed their desire to expand their cooperation in the civilian uses of nuclear energy. Mr. Menon made it clear that the Indian side did not raise the question of China's presumed unhelpful role at the recent Nuclear Suppliers Group (NSG).

Mr. Menon reiterated that "China was part of the consensus at the NSG" and this consensus could not have come about without the Chinese acquiescence. "We are happy it is behind us," he said.

Dr. Singh and Mr. Wen struck a "personal rapport" and the interaction was marked by warmth and friendliness, Mr. Menon said.

(He pointed out that the two leaders have a similar approach to global economic issues. The Chinese premier brought along for Dr. Singh a copy of a book, published by Cambridge University Press. The book reproduces Dr. Singh's address at Cambridge University on 'international inclusive growth' and Mr. Wen 's call for "inclusive international development.")

In the context of the current global financial crisis, the two leaders felt the need for greater and open management of international economic institutions. They also shared views on regional and world developments. There was also satisfaction over the expanding trade ties before the two nations; the target of \$60 billion trade, set for 2010, within reach.

The two leaders also reviewed the India - China boundary talks which concluded recently in Beijing and expressed "satisfaction" at the progress made by their respective designated special representatives on the boundary question. Acknowledging that the boundary dispute was a "complicated" issue, the two prime ministers reportedly encouraged the special representatives to continue their labours.

374. Question in the Rajya Sabha: "Border Talks with China".**New Delhi, October 23, 2008.****Will the Minister of External Affairs be pleased to state:**

- (a) whether an Indian delegation led by National Security Adviser has recently, visited China and held discussions to maintain peace and tranquility along the border to help a speedy resolution of the protracted problem;
- (b) if so, the details of discussion held and outcome thereof;
- (c) whether to strengthen relation with China any discussion was held; and
- (d) if so, the details thereof?

The Minister of External Affairs (Shri Pranab Mukherjee):

(a) to (d) The twelfth round of Special Representatives Talks on the India-China boundary question was held in Beijing from 18 to 19 September 2008. The Special Representatives of the two countries, Mr. M K Narayanan, National Security Adviser and Mr. Dai Bingguo, State Councillor held useful and positive discussions on the framework for the settlement of the India-China boundary question on the basis of the Agreement on the Political Parameters and Guiding Principles for the Settlement of the India-China Boundary Question signed on April 11, 2005. The two Special Representatives reaffirmed the consensus to seek a fair, reasonable and mutually acceptable solution to the boundary question through consultations on an equal footing, proceeding from the political perspective of overall bilateral relations. The two sides agreed that the next round of talks would be held in Delhi. The specific dates would be decided through diplomatic channels¹.

¹ It may be recalled that in 2007 there were three rounds of talks between the Special Representatives on the Boundary Question, the third one taking place on September 28, 2007. It was therefore after a full year that the 12th round of talks took place. While no customary official statement was issued after the talks, the Chinese news agency Xinhua made a brief announcement: "They (the two delegations) agreed that both

375. Question in the Rajya Sabha: "Chinese Incursions Across Line of Control".**New Delhi, October 23, 2008.****Will the Minister of External Affairs be pleased to state:**

- (a) whether Government is aware of Chinese incursions across LAC into the Indian side;
- (b) if so, the facts and details thereof;
- (c) whether Government has taken up the matter with the Chinese Government;
- (d) if so, the details thereof; and
- (e) the steps taken by Government to prevent such Chinese incursions?

The Minister of External Affairs (Shri Pranab Mukherjee):

- (a)-(e) China disputes the international boundary between India and China. Since 1993, the two Governments have agreed to maintain peace and tranquillity along the Line of Actual Control in the India-China border areas, without prejudice to their respective positions on the alignment of the line of actual control as well as on the boundary question. Government regularly take up any violation along the LAC

countries would carry out the guidelines of their leaders, maintain negotiations and seek a fair and reasonable solution acceptable to both sides."

When the National Security Advisor Mr. Narayanan called on the Chinese Vice President Xi Jinping, the latter told him that "both sides should maintain peace and tranquility in the border area before the boundary issue is resolved." He also hoped that the solution of the boundary question would be "fair and reasonable". In reply Mr. Narayanan, according to media reports, said that India attached importance to ties with China, and was committed to developing strategic and cooperative partnership of peace and prosperity with China. Later in the month when Prime Minister Manmohan Singh and Chinese Premier Wen Jiabao met in New York, on the sidelines of the UNGA session, Dr. Singh expressed his "satisfaction" at the progress made by the Special Representatives. Acknowledging that the boundary dispute was a "complicated" issue, the two Prime Ministers reportedly encouraged them to continue their labour.

with the Chinese side through established mechanisms including the Joint Working Group, the Expert Group, border personnel meetings, flag meetings and diplomatic channels¹.

Supplementaries:

Shrimati Shobhana Bhartia: Mr. Chairman, Sir, one of the main reasons for these incursions and intrusions is the non-demarcation of the Line of Actual Control along the border. Whereas China has resolved its boundary issues with all the other neighbours, it has not yet done so with India.

Sir, my question to the hon. Minister is: What is the progress that has been made in the meetings that he has held with China for demarcation of the boundary? Sir, in the absence of demarcation, does the Minister feel that China is pursuing an aggressive border-management policy to lay claims on disputed areas along the LAC.

Shri Pranab Mukherjee: Sir, there are disputed areas in the claim of each side. For instance, India thinks that 38,000 sq. kms. of areas are under illegal occupation of China. In addition to that, 5,000+ kilometres which Pakistan ceded to China from the Pak occupied Jammu and Kashmir area. Similarly, they think that the entire Arunachal is their territory which we are not agreeing upon. Nobody agrees. Therefore, there are different perceptions why these transgressions are taking place.

It was decided in 1993 that we will establish a mechanism and through that mechanism we will try to resolve boundary issues, but pending that, without prejudice to the respective rights, we will try to maintain peace and tranquility in the border areas. It was done in 1993, and 1996. It was taken to further stages. In 2003, when the then Prime Minister Atal Bihari Vajpayee visited China, at that point of time, it was decided that both sides should appoint two special representatives of both the Prime Ministers to discuss these issues and they will arrive at a final stage. There are three stages. The first stage is over where the political parameters and guiding principles have been agreed upon after holding five meetings.

1. On the same day the External Affairs Minister replied to another question on the same subject and said since there is no commonly delineated LAC between India and China, situations (of border violations) have arisen on the ground that could have been avoided if we had a common perception of the LAC. Government takes up perceived violations through established mechanisms including the Joint Working Group, the Expert Group, border personnel meetings, flag meetings and diplomatic channels.

Up to now, there have been 12 meetings between the two special representatives; the last one was in September, 2008, in Beijing. This is going on. It is taking time. As the hon. Member wanted to know why it is happening, there are different perceptions about the entire area, the Middle Sector, Eastern Sector, Western Sector. We consider that these are our areas and they consider that these are their areas. Therefore, in 2000, my distinguished predecessor,

Shri Jaswant Singh, suggested that let us exchange maps delineating our perceptions in the map itself. Progress is not very bright, but there has been some improvement in the Middle Sector. Maps have been exchanged and the areas of dispute have been identified. In the Eastern Sector and in the Western Sector, these exchanges are yet to take place. As has been mentioned in the text of my reply that whenever these transgressions take place, there is an established mechanism where we take up these issues and we try to rectify.

Shrimati Shobhana Bhartia: Sir, according to reports, China can now mobilise forces on the Tibetan borders within weeks. That is because of huge overhaul in terms of infrastructure on the Chinese side. But, unfortunately, Sir, the same has not happened and India has not kept pace. In fact, when the Prime Minister visited Arunachal, he also made a commitment of improving the highways and having an airport. Sir, the lack of border infrastructure can hamper any future troop mobility. I would like to ask from the hon. Minister what specific plans do we have on these projects which are aimed at improving the infrastructure and connectivity along the Sino-Indian border?

Shri Pranab Mukherjee: Sir, it is true that the infrastructural facilities available on that side of the border are much improved compared to that of ours. To rectify it, it has been decided that 13 operational roads will be constructed on a priority basis. These are expected to be completed by 2012. In addition to that, from Tai Wang onwards, trans-Arunachal highway will be constructed. In respect of the airports, a number of places, including some places which are closer to border -- the entire area is the border, but closer to border-- including, Pasighat and certain other places, have been identified and the progress is going on. In addition to those certain operational roads, the Ministry of Home, the Department of Surface Transport and also the Border Roads Organisation and the Ministry of Defence are also engaged in construction of some roads, and we are giving priority to it.

376. Press Release of the Ministry of Defence on the visit of Chief of Air Staff Air Marshal Fali Homi Major to Beijing.

New Delhi, November 3, 2008.

Air Chief Marshal FH Major, the Chief of Air Staff of the Indian Air Force has arrived in China for week-long visit till 06 Nov 08, for strengthening Air Force to Air Force cooperation.

Air Chief Marshal Fali Major arrived in Beijing, at the invitation of General Xu Qiliang, Commander of the Chinese Peoples Liberation Army Air Force (PLA AF), for a visit to China from 02nd to 06th Nov 2008. The visit is an important milestone in bilateral defence exchanges as it is the second ever visit of the Chief of Air Staff of the Indian Air Force to China, coming seven years after Air Chief Marshal Tipnis visited China in May 2001.

Air Chief Marshal FH Major was welcomed by a guard of Honour at the PLA AF Headquarters in Beijing. He met General Xu Qiliang, Commander of the PLA AF and held discussions on bilateral issues. He will also be meeting the Chinese Defence Minister General Liang Guanglie during his visit and visit military units in Hangzhou and also witness the Zhuhai Airshow in which the Indian Air Forces' Aerobatic Team, the Surya Kirans will be

1 Even as Air Chief was visiting China, Navy chief Admiral Suresh Mehta hosted his Chinese counterpart Admiral Wu Shengli in New Delhi to promote bilateral defence cooperation. "The aim is to steadily expand bilateral military-to-military ties and strengthen mutual confidence between the two armed forces," a top official told the media. In keeping with this policy to "constructively engage" China in the military arena, the first-ever Sino-Indian military combat exercise on Indian soil - with counter-terrorism as its primary thrust area - took place in Belgaum in December. (please see Document No....) It may be recalled the Indian and Chinese armed forces have been incrementally building up their military ties, which in December 2007 led to the first-ever joint counter-terrorism exercise between the two armies at Kunming, with the return exercise being held in India in December. Air Chief Marshal Major's China visit was the second by an Indian Air Force chief to that country. He met Commander of PLA Air Force, General Xu Qiliang, and called on Chinese Defence Minister General Liang Guanglie during his visit. He visited the military units in Hangzhou and witnessed the air-show in which the IAF acrobatic team participated. The Chinese Naval chief while in India visited the Army's Special Forces Headquarters at Agra, interacted with the top military hierarchy and met Defence Minister A. K. Antony. He too visited India's latest and most modern naval base at Karwar in Karnataka. While on a visit to Mumbai the Naval Chief General Shengli was taken to the Navy's aircraft carrier INS Viraat and given a tour of Mazgaon Dockyards. Air Chief Marshal Major said in New Delhi on November 17 that following his fruitful visit to China the possibility of a joint air exercise with Chinese air force has become stronger. "We are hoping to have them within two years...this will lead to more Air Force to Air Force exchanges between the two countries," he said on the sidelines of the Air Force Commanders Conference.

participating. The Chief of Air Staff would be visiting the capital Air Defence Centre of PLAAF, and 28 Air Division.

There has been a steady expansion and consolidation of India-China relations in diverse spheres in recent years. Military to Military contacts have also expanded. The Commander Peoples Liberation Army Navy (PLAN), Admiral Wu Shengli is visiting India concurrently, in a continuing exchange of high level contacts between the two countries.

In May 2006, during the visit of Mr Pranab Mukherjee, the then Defence Minister, a MoU on Exchanges and Cooperation between India and China in the field of Defence was signed. The MoU laid a solid foundation and institutionalized the frame work for further development of defence cooperation between the two countries. The first ever Annual Defence Dialogue between India and China was held last year in Nov 2007. India and China also held their first Joint Training Exercise in Kunming in Dec 2007.

The visit by the Indian Chief of Air Staff is expected to deepen understanding and strengthen mutual confidence between the two armed forces.

377. Extract from the Speech of External Affairs Minister Pranab Mukherjee delivered in Tawang on the occasion of the 8th Buddha Mahotsava.

Tawang (Arunachal Pradesh), November 9, 2008.

*

*

*

*

Buddhism is an important and integral part of life and tradition in Arunachal Pradesh. We rejoice in this diversity of our country's spiritual and cultural traditions. Our Government has given the highest priority to the development of the north-eastern region, including the state of Arunachal Pradesh. Although you are geographically further from Delhi than some other regions, you are close to our heart. We have a clear strategy for the development of this great state, and when our Prime Minister visited you in January this year, he announced several steps that we would be taking to ensure that there is more development here, and that the people of Arunachal can enjoy better economic and social conditions as quickly as possible. We recognize that the state needs good connectivity and good infrastructure, as well as more opportunities for all round economic development. Government is making special efforts to fast-track the development of road and other infrastructure projects, so that economic and tourism opportunities will benefit the citizens here. The mighty Brahmaputra, that has brought life to millions of Indians through centuries of our recorded history, flows through this beautiful state. Its mere presence offers immense opportunities for development, and it is time for us to realize this hidden potential. I would like to assure the Hon'ble Chief Minister and all of you present here on this occasion that we will give priority to all those projects that the Hon'ble Prime Minister announced during his visit here earlier this year.

Ladies & Gentlemen,

It has also been my effort, as External Affairs Minister, to enhance the external linkages of our north-eastern region with our neighbours. Arunachal Pradesh shares its border with three countries - China, Myanmar and Bhutan. We enjoy cordial relations with China, our great neighbour to the north. I visited China earlier this year and it was also my privilege to host the Foreign Minister of that country. Our Prime Minister has also visited China twice this year. Although we have not yet settled the boundary question with China, the Special Representatives of our two countries are working together to find a fair, reasonable and mutually acceptable settlement which will create a boundary of peace and friendship between us. The Chinese side is fully aware that Arunachal Pradesh is an integral

part of India. At the same time it has been my constant endeavour to develop friendly and cooperative ties with China, and to explore all possibilities for economic and other cooperation between China and our border states. We will continue to work with our Chinese friends to persuade them to open border trade with Arunachal Pradesh and to create other economic opportunities for communities on both sides of the border¹.

I also want to say how pleased I am at the opportunity afforded me to visit the beautiful town of Tawang. Tawang has had a long and illustrious association with Buddhism. Arunachal was a home to Buddhists from the first millennium AD when Guru Padmasambhava came here with Lord Buddha's message, and it is in these high mountains that some of the earliest Buddhist temples are found. Tawang's great monastery, which I will be visiting later in the day, continues to flourish today and the gentle traditions of Buddhism are carried into the new century by the people of Tawang district. I sincerely congratulate all the people of Tawang for making renewed efforts to build the economy and to improve life in this high altitude part of the state. With its great natural beauty, rich cultural and spiritual heritage and vast resources, Tawang and all of Arunachal Pradesh will be able to develop its economy and tourism and we will fully support and assist you in this endeavour. Your progress will strengthen the nation.

In conclusion, I express my gratitude to the Chief Minister and the people of Arunachal for their warm welcome and hospitality, and extend my best wishes to the organizers of the 8th Buddha Mahotsava and to all the participants who are gathered here today on this auspicious occasion.

Thank you.

(For full text of the speech please see Document No.53.)

1. China on the next day reacting to EAM's statement did not accept Indian contention that Arunachal is an integral part of India saying that Beijing never recognized the "illegal" McMahon Line. Rejecting India's assertion that Arunachal Pradesh is its integral part, he insisted that Beijing never recognised the "illegal" McMahon Line and that the status of the border State was "never officially demarcated." The Chinese Foreign Ministry spokesman Qin Gang said New Delhi had not taken the "historical facts" into account and "We deeply regret the Indian side's remarks that take no regard of the historical facts." He went on to assert that "China and India have never officially settled demarcation of borders, and China's stance on the eastern section of China-India borders is consistent and clear-cut." Please also see Document No.359

378. Press Release issued by the Ministry of Defence on Sino – Indian Training Exercises code named “Hand-in- Hand - 2008”.

New Delhi, December 4, 2008.

In continuation of the ongoing Army to Army cooperation, as part of the Annual Defence Dialogue (ADD) which commenced between China and in India, in 2006, the 137 member strong Chinese Army contingent arrived in their service aircraft at the Southern Indian city of Pune this morning. Pune, besides being an industrial hub, is also a centre for higher learning. The city which has a concentration of a large number of institutions of higher learning, also boasts of many prestigious military institutions including the premier National Defence Academy (NDA), the cradle of learning and development of India's military leadership.

The current joint Army training and exercise marks the growing military cooperation between the two countries. Earlier, India and China had held the first joint naval exercise in November 2003 off Shanghai on China's Eastern seaboard. Subsequently, two ships of the Indian Navy also made port calls at Qingdao and participated in a joint exercise with the PLA Navy earlier in 2007.

After a brief formal reception by the Indian contingent commander at the Pune airfield, the Chinese army personnel and stores were transported by six IAF aircrafts to Belgaum, the venue of the Ex Hand-in-Hand 2008. This joint training exercise is the second in the series, the previous one having been conducted in Kunming, China in Oct 2007.

The Ex Hand-in-Hand 2008 is aimed at expanding and strengthening military-to-military ties between the two armed forces. During the course of joint training, the Chinese troops from the 1st Company of Infantry Battalion of Chengdu Military Area Command and the Indian Army troops from 8 Maratha Light Infantry Battalion, are expected to undergo joint tactical maneuvers and drills; interoperability training; and joint command post procedures, finally culminating in a joint counter-terrorist operational exercise with simulated enemy. The exercise is planned at mixed company group level with command and control elements from the respective battalions' headquarters. The training and maneuvers are to be supervised by a joint Directing Panel comprising of army officials of both the Armys. The helicopter assets of the Indian Air Force will also be incorporated for conduct of special heliborne maneuvers and assault operations.

A 13-member Chinese delegation led by a Senior Colonel (equivalent to a Brigadier of the India Army) was in India from Oct 21 to 23 to attend the initial planning conference and discuss details of the exercise. The detailed planning and coordination for conduct of the exercise were finalized during the visit of eight member Indian Army delegation led by a Brigadier to Chengdu from Nov 20 to Nov 23.

A high ranking PLA delegation as well as senior Indian Army officials are expected to visit the exercise venue as 'Observers' to view the proceedings of the joint training exercise.¹

1 Speaking at the opening ceremony of the exercises on December 6, Brigadier S.K. Patiyal said the prime goal of the training was to acquaint the armies with each other's operating procedures and ensuring better compatibility. Stating that terrorism had become a global menace, Brigadier Patiyal called on all peace loving countries to join hands to root out the evil. "The exercise is also part of the ongoing efforts of both nations to share their experiences and technological knowhow in curbing terrorism," he said. The participating contingents on the Indian side was 8 Maratha Light Infantry and on the Chinese side the 137-member No.1 Infantry Battalion of the People's Liberation Army. "We would like to gain and share the expertise and practical knowledge and try to infuse the same in our training programme," Brigadier Patiyal added. The Chinese counterpart, Senior Colonel Qin Xiang You, said the training could comprise both basic combat exercises and civil and legal issues pertaining to counter-terrorism. "The training is aimed at enhancing mutual understanding and trust." The training programme included battle obstacles and assault courses, counter-terror tactics by the Chinese Army and a slithering down Mi-8 helicopter exercise. The Chinese contingent spokesperson Huang Xue Ping said the exercise was focused on enhancing military cooperation and fighting extremism and terrorism to ensure peace and stability in the region. Pointing out that the training was meant to strengthen the ties between the two countries at the military and political levels, he said the Chinese Army had undertaken similar exercises with 10 countries. "All countries should come together to fight terrorism. There should be no double standards. While fighting terrorism, our target should be clear and in doing so, we should not target any particular religion and ethnic group. We should identify the root causes of terrorism to resolve the issue. The causes vary in different countries. They can be poverty, imbalance of social wealth or discontent with the government," said Senior Colonel Huang, adding that China was also facing the problems of extremism, terrorism and secessionism. The opening ceremony was followed by a display of weapons and military equipment of the two armies. Both the contingents displayed their combat and physical endurance skills, besides a demonstration of counter-insurgency and counter terrorism operations. A day earlier the Indian Army had organised a familiarisation programme during which both contingents interacted with each other over the *Bara Khana* (Big Dinner).

INDONESIA

379. Briefing by Secretary (East), Ministry of External Affairs N. Ravi on President's State visit to Vietnam and Indonesia¹.

New Delhi, November 21, 2008.

Official Spokesperson (Shri Vishnu Prakash): A very good evening to all of you and thank you for joining us today. First of all, can I make a housekeeping request? Can I request all of you to please put your mobiles in silent mode?

Secretary (East) is here to brief you about the President's forthcoming visit to Vietnam and Indonesia. We also have with us Joint Secretary (South) from MEA, who is to Secretary's right, Mr. Arun Goyal; and Ms. Archana Datta, OSD (PR) to President. After Secretary's opening remarks he will also be happy to take some questions.

Thank you.

Secretary (East) (Shri N. Ravi): Thank you Vishnu.

Good evening to all of you. As most of you are aware, the State visit of the Hon'ble President of India to Vietnam and Indonesia is at hand. The President would be leaving Delhi on the 24th of November, i.e., Monday; and would be reaching Ho Chi Minh City the same evening. After staying two nights and a day in Ho Chi Minh city, the President and the Delegation would proceed to Hanoi, the capital, where again there would be programme for three days till the 28th.

On 28th afternoon the President would be leaving Hanoi directly for Bali. That will begin the Indonesian leg of the visit. After two days in Bali, on the 30th the President would reach Jakarta. After the completion of the programme there, would be leaving for Delhi on the 3rd of December, reaching in the afternoon.

This visit essentially reaffirms India's commitment to enhance our engagement with these two countries. Our close friends within the ASEAN fraternity, it is part of our look-east policy initiative. Both countries, Vietnam and Indonesia, are important developing countries which have had impressive growth rates in their economies just like India. Vietnam on an average has grown by well

1. The Indonesian leg of the tour was curtailed due to terrorist attack in Mumbai.

over six per cent over the last decade, and so has Indonesia in the last few years despite, I am now talking about Indonesia, despite Indonesia going through its very traumatic experience of the tsunami of 2004 and then the two earthquakes that followed in 2005 and one in 2006.

The economic resilience of these two countries is there for every one to see. Our engagement with these two countries is very old. This visit would give us an opportunity to assess the present state of relations in all its facets - political, economic, commercial, culture - and it would also help us to look at a future that will help us grow closer on a basis that would be of benefit to both the countries whether it be trade or investment or any other area.

To come to some specifics, in Ho Chi Minh city, the first stop of the President in the trip, the President would attend a Business Meeting on the 25th of November organized by the FICCI and the Vietnam Chamber of Commerce and Industry. In Hanoi, after receiving the ceremonial welcome, it will be followed by official level talks between the two sides and our President would have separate talks with the Vietnamese President and there is also a meeting with the Vietnamese Prime Minister who, some of you may recall, had visited India on a State visit in July, 2007.

In the visit to Indonesia, this visit is actually in return for the State visit of President Yudhoyono who had visited India exactly three years back in November 2005. The meeting between the two Presidents will take place in Jakarta on the 1st of December. Apart from being close geographical neighbours, just a bit of statistical detail, the southernmost island of the Andaman Nicobar group and the northwestern most tip of Sumatra, the separation is just 80 kilometers. So, we do have a maritime boundary with Indonesia. They are very very close.

We have a long history of close ties. Indonesia is a key economic partner of India among the ASEAN countries. Our President's visit to Bali and Jakarta will provide us an opportunity to reaffirm and strengthen our bilateral ties particularly commercial and cultural ties because some of the cultural aspects of India and Indonesia overlap quite extensively.

The visit to these two important countries will reaffirm our pursuit of a closer and enduring partnership not only with these two countries in the ASEAN region but as part of our look-east policy it will be yet another milestone in ensuring that our engagement remains strong and beneficial to all concerned.

Thank you.

Question: Will be there some agreements between the tow countries?

Secretary (East): Some are under consideration. If they are ready for signature by then, I am sure they will be signed at that time.

Question: Are we expecting coal from Indonesia?

Secretary (East): Indonesia is already exporting coal to India. Many private sector Indian companies are investing and have invested in the coal sector in Indonesia by taking out partnership agreements with firms that have leases on these coalmines. This is an ongoing process. Some of them may come to fruition say in the next year or so after the discussions are complete.

Question: My question is regarding the growing piracy in the Somalian region. There is another ship which has been captured on Wednesday. So, we are all concerned about what and how we are allowed inside. Has the UN allowed us inside the Somalian waters, the Indian warships to be there? Have we entered into any agreement with them? How do you approach this?

Secretary (East): There are two Resolutions of the United Nations Security Council - 1816 and 1838. Under 1816, countries that are desirous of fighting piracy have this channel of writing to the Permanent Representative of Somalia in the UN and then through the Security Council we get an acknowledgement saying that the Permanent Representative of Somalia has received a country's request, say in India in a particular case; and that the transitional Federal Government of Somalia which under the UN Security Council Resolution 1816 has allowed such countries which convey an interest to enter Somalian waters so that they can fight piracy. So far India's encounter with the pirates has been in international waters. But our desire to fight piracy through this UN route has been conveyed and confirmed through the UN Security Council via the Permanent Representative of Somalia in the UN.

Question: Is the Indian Navy now sending more ships there?

Secretary (East): I am afraid you will have to ask a pointed question to somebody else. I would not have any idea on that.

Official Spokesperson: No other questions? All right. Thank you very much.

380. Statement of President Smt. Pratibha Devisingh Patil, on board her special aircraft on her departure from New Delhi to Ho Chi Minh City, at the start of her State Visits to Vietnam and Indonesia¹.

November 24, 2008.

I am happy to be undertaking a State visit to Vietnam and Indonesia, countries with whom India has historical association and bonds of understanding over a long period. Both countries are important partners in the bilateral and in the framework of India's 'Look East Policy'.

I look forward to my discussions with President Triet and other leaders of Vietnam on ways to further strengthen our political and economic links which is a pivotal part of our Strategic Partnership. The solid foundation of our relationship was laid by Prime Minister Nehru and President Ho Chi Minh, more than five decades ago. Our friendship has been nurtured continuously since then, and is deeply valued and cherished by our two countries. We maintain a process of regular dialogue with the leadership of Vietnam on matters of mutual interest. During my visit, I will reiterate our close relations with Vietnam and, seek new avenues of cooperation, to make our ties even stronger.

After Vietnam, during my visit to Indonesia, I would be emphasizing the strength and diversity of our new strategic partnership in my discussions with President Yudhoyono.

My visit to Indonesia, a friendly country with which we have had people to people exchanges for more than two millennia, have a historical character of their own, as seen through the strands of our shared cultural traditions. Ever since we attained independence, our cooperation bilaterally and in the multilateral context has been highly significant. We attach great importance to our relationship with Indonesia and will look forward to building partnerships across multiple sectors in a mutually beneficial manner. My visit to Indonesia, signals our commitment to have relations that befits two large nations who are neighbours, sharing a maritime boundary. The distance between the southern most island of the Andaman group and the north western tip of Indonesia is only 80 kilometers.

1. The Indonesian leg of the tour was curtailed due to terrorist attack in Mumbai.

Vietnam and Indonesia, as well as India, have been developing at an impressive rate in the past decade, according to their respective economic policies. This has enabled higher interaction not only in the traditional areas of cooperation like trade and investment but also in specific areas like capacity building, entrepreneurship development, science & technology among others. I hope to have discussions on identifying additional areas of co-operation with these countries as well as exchange views on matters of regional and global interest including terrorism, energy security, food security, reform of the international organization, among others, in the current backdrop of the international financial crisis.

As a part of India's 'Look East Policy', it has been our endeavour to forge close relations with countries of ASEAN, of which Vietnam and Indonesia are important members. My visit seeks to emphasize this engagement in all its aspects. The India-ASEAN Trade in Goods agreement, which has been concluded recently, will open new possibilities of regional inter-linkages in commerce. A Business delegation accompanies me on this visit to explore avenues for intensification of our economic ties with Vietnam and Indonesia.

During the visit I will also convey the warm greetings and the message of friendship of the people of India to the people of Vietnam and of Indonesia.

Thank You.

381. Speech by President Smt. Pratibha Devisingh Patil at the meeting with the Prominent Citizens of Bali.

Bali, November 29, 2008.

Distinguished friends from Bali,

India and Indonesia ties span two millennia of trade and cultural contacts. Bali was at the heart of this historical exchange. It gives me great pleasure to meet you today because you have always been and will always remain close to us. There is deep understanding and empathy between us.

India and Indonesia have both known the suffering and the pain caused by terrorism as have many other parts of the world. The recent incidents in India are most reprehensible and there are, no words strong enough, to condemn those who have targeted innocent people. I express my deepest condolences to those who have lost their loved ones and those who are injured in this horrific incident. India will determinedly take all measures to fight this menace. International community, including the Government of Indonesia, has expressed solidarity with India.

During my meeting with President Susilo Bambang Yudhoyono, I will be discussing with him the issue of terrorism which requires all nations to work jointly and relentlessly to fight this global threat. This is necessary if we are to have peace in the world, if we want the progress and prosperity of our people and, indeed, if we are to preserve our heritage.

We are aware of the rich cultural heritage of Bali. Your arts and crafts, your performing arts and your social and cultural traditions are alive and well preserved. The Balinese are an outstandingly artistic and talented people. They give a unique character and flavour to Balinese society, adding to the natural beauty of the island. It is for these reasons it is said: Bali *Dwipa Jaya* - "Glorious Bali Island".

We share common elements and themes in our cultural traditions, the result of our long historical association. Even today, in the State of Orissa in Eastern India, the local people celebrate a festival called "The Bali Yatra" in the months of October or November to commemorate the departure of traders from Orissa to Bali. We would like to strengthen our cultural exchanges with the people of Bali.

The Indian Cultural Centre in Bali is at the centre of our efforts to build closer cultural bonds with Balinese people. It has been instrumental in encouraging visits by cultural troupes to and from Bali. We were pleased to receive earlier this year a Ramayana troupe which performed in the Ramayana Festival in India. An Indian cultural troupe performed the "Bali Yatra" in the Bali Arts Festival in June this year. I am confident that the Centre will continue with its good work in building linkages.

I end with the traditional Balinese salutation, which again is common to our two cultures - *OM Shanti Shanti Shanti OM*. May peace pervade in the world and those who are pursuing the destructive path, return to the path of peace.

Thank you

Jai Hind

382. Statement to the Press by President Shrimati Pratibha Devisingh Patil following her meeting with the Indonesian President.

Jakarta, December 1, 2008.

Excellency Dr. Susilo Bambang Yudhoyono,

Ladies and Gentlemen of the Press,

Good Morning

I and my delegation are deeply touched by the warmth and friendship we received here.

Indonesia is a country with whom we have had a long historical and cultural association. Our leaders, President Sukarno and Prime Minister Nehru cooperated closely during our respective struggles for independence and laid the foundation of an enduring friendship between the two countries.

My visit to your beautiful country is to emphasise the strong ties that exist between our two countries who share a maritime boundary and the largest pluralistic democracies of Asia.

The Joint Declaration on the Establishment of a New Strategic Partnership between India and Indonesia concluded during the visit of President Yudhoyono to India in November 2005 underlines the importance that we attach to our bilateral relations. My present visit is in pursuance of this Partnership.

I have had extended discussions with President Yudhoyono on the state of our bilateral relations and our cooperation in multilateral fora. On both accounts while we are satisfied with the level of engagement, we seek to further intensify our collaboration. Our points of view, objectives and approaches are similar on many issues.

As two vibrant democracies which embody the concept of unity in diversity, we face similar situations and challenges. Indonesia and India have both been the targets of terrorists. The recent brutal attacks in India are the handiwork of those who have no regard for human life and whose designs are to disrupt the progress of nations and peace in societies.

The incident has reinforced the determination of India to fight resolutely against the threats of terrorism. India will take all steps necessary to deal with the menace and will also work jointly with the international community.

I would like to thank the Government of Indonesia for their strong condemnation of the incident and for the solidarity expressed with India.

Our two countries are committed to give substance and content to the New Strategic Partnership and in this context, impart higher political and strategic dimensions to our bilateral relations. The trade and economic aspect of our partnership provide a critical underpinning to the edifice of our relations.

During our meeting today, we resolved to work for increasing bilateral trade and investment. We are pleased that our trade is growing at a healthy rate and has reached US\$ 6.5 billion in 2007. We are well on our way to realizing the target of US\$ 10 billion in trade turnover by 2010.

It is also heartening to note that a number of companies from both countries are establishing new joint ventures covering the textiles, steel, banking, automotive and resources sectors.

I am confident that as a consequence of the discussions that President Yudhoyono and I have had today, relations between India and Indonesia will in the coming period develop and diversify into new areas. Regular interaction at the highest political level is an important component of our evolving Strategic Partnership. I have invited President Yudhoyono to India and we look forward to his visit.

Before I conclude, I would like to thank President Yudhoyono, the Government and people of Indonesia for the friendship and warm hospitality that my delegation has received since our arrival here. I would also like to take this opportunity to convey greetings and best wishes from the people of India to the people of Indonesia.

Thank You.

383. Press Statement of President Smt. Ptatibha Devisingh Patil on board the Special Aircraft on her way back to New Delhi after her visit to Vietnam and Indonesia.

December 1, 2008.

We had departed from Delhi on 24th November to visit Vietnam and Indonesia.

Earlier in the day, I held bilateral talks with President Sushilo Yudhoyono covering bilateral and other subjects of regional and international importance. We agreed on the need to give substance and content to the Joint Declaration on the Establishment of a Strategic Partnership between the two countries. We expressed satisfaction at the growth of institutional linkages between India and Indonesia, the rapid expansion in bilateral trade and investment and the development of closer linkages in science & technology and culture.

In response to the expression of sympathy and support, in the aftermath of the recent terror attacks in Mumbai, I conveyed India's determination to face the challenges squarely and root it out completely. I indicated that India and Indonesia should cooperate actively in dealing with this menace to which President Yudhoyono responded positively.

I also had separate meetings with the Chairmen of the three Houses of Parliament of Indonesia. During these meetings I had the occasion to reiterate the willingness of India to receive more parliamentary delegations from Indonesia. As the two largest democracies in Asia, this would enable the democratic institutions in both countries to grow strong for diversified cooperation in the coming years and decades.

An MOU on Agriculture and allied sectors as well as an MOU on Exchange in Youth Affairs and Sports were signed today after the bilateral talks.

I visited Bali, a region with which we have had more than two millennia of cultural contacts. Bali has been very successful in preserving its cultural traditions. During my stay there, I met with the Governor of Bali and with eminent Balinese personalities from various fields. We discussed ways of enhancing our linkages with Bali. The Governor of Bali expressed condolences at the loss of lives in the acts of terrorism in Mumbai. While in Bali, I visited the Taman Ayun Temple where I participated in a traditional prayer ceremony. At the temple, I planted a Mangosteen fruit tree which is

regarded as a symbol of peace, serenity and harmony. I, along with others present, prayed for peace in India and all over the world.

During my visit to Vietnam earlier, I was able to meet with the entire leadership of Vietnam and a cross section of the Vietnamese society in the field of economic, commercial and social spheres. This was the first high level visit to Vietnam after the declaration of the establishment of a Strategic Partnership between India and Vietnam made in July 2007. The leadership congratulated India on its great economic achievements through the advancement of science & technology posted over the last couple of decades. They expressed the desire to work closely with India to strengthen the Strategic Partnership. While condemning the terrorist attacks in Mumbai the Vietnamese leadership expressed full support to India.

In my discussions with the leadership we laid emphasis on increased contacts through tourism, trade and commerce, assisted by direct air links between India and Vietnam. There was a keenness on the side of Vietnamese leaders and business organisations, to invite more investment from India, and thus to diversify our economic partnership. An MoU was concluded between the Chambers of Commerce and Industry of the two countries. At the social-cultural level, I look forward to the exchange of women's delegations between India and Vietnam, and increased cooperation in the field of education and modern science & technology, in the coming months and years. We have decided to open a Cultural Centre in Hanoi.

As I look back at the visit, I see the significance of India's 'Look East' policy with two members of ASEAN, Vietnam at its northern periphery and Indonesia at its southern rim. During my discussions, I was able to sense the feeling of genuine friendship that exists in both countries. I am, therefore, satisfied that the objective of further deepening and strengthening relations with these countries have been achieved. My visit was a step in the 21st century, which offers us many opportunities and yet equally complex challenges. I am confident that with the experience, maturity and wisdom that all countries possess, we can work towards a bright future.

As you are aware, due to the sad demise of former Prime Minister V.P. Singh, a number of events during the visit had to be cancelled on account of the State mourning declared in India. I also limited the State Visit to Indonesia to the events on the main day of engagements on 1st December and decided to return to India after undertaking all scheduled engagements, in view of the situation in Mumbai.

The incidents in Mumbai were an act of terrorism committed by those who have no respect for human life. The armed and trained terrorists deliberately targeted innocent lives to cause panic, to disrupt normal life, to inflict damage and hamper the progress of the country. Many innocent lives were lost and many more injured. I would once again like to convey my deepest condolences to the bereaved families and my heartfelt sympathies to those who are injured. I am returning directly to Mumbai today.

Those brave men of my defence forces, the security personnel of NSG and the Maharashtra police who fought valiantly and those among them who lost their lives deserve the nation's gratitude. The consensus of the nation is that terrorism is unacceptable. The need of the hour is for the whole nation to stand unitedly and to support all measures to deal effectively with the situation. The Government is looking at strengthening the laws as well as the security systems. With this in mind, the Government had convened an All Party meeting also.

Countries across the globe have condemned the horrendous act and expressed their solidarity with India. The Governments of Vietnam and Indonesia have been unequivocal in extending their full support and co-operation to India on this issue.

The safety and the security of citizens is of the utmost importance. I call upon all fellow citizens to work together in the fight against terrorism. This is important for the nation's security. It is only when we are united, that the nation will continue to progress.

Thank you.

JAPAN

384. Press Release of the Ministry of Finance regarding Japanese assistance for infrastructure projects in India.

New Delhi, May 9, 2008.

India-Japan economic relationship received a big momentum in the year 2007-08. Government of Japan committed to provide 225 billion Japanese Yen (Rs. 8582 crores) to India for undertaking nine new infrastructure projects in various parts of the country. New projects approved with Japanese assistance and signed recently include Kolkata Metro Project, Hyderabad Outer Ring Road Project, Hogennakal Water Supply Project, Tamil Nadu Urban Infrastructure Project, Haryana Transmission System Project and UP Forestry and Poverty Alleviation Project. In addition, Government of Japan also committed to fund Phase-II of Delhi Metro Project, which is seen as a shining example of India-Japan relationship. Earlier the year, Government of Japan also committed to fund Goa Water Supply and Sewerage Project and Maharashtra Transmission System Project.

This is the highest ever Official Development Assistance (ODA) committed by Government of Japan to India, an increase of 22% over previous year. India continues to be the highest recipient of ODA from Japan.

All the loan agreements concluded in March 2008 have been effectuated in a record time - within two weeks of signing of the agreements. Further, the actual disbursements on ongoing projects reached a new high of 95 billion Japanese Yen (Rs. 3500 crores approx.) during the year which is a hike of 70% over the previous year.

Both Governments have already started negotiations to undertake several key infrastructure projects like Dedicated Freight Corridor, Delhi Mumbai Industrial Corridor, Chennai Metro besides several other infrastructure and social sector projects in the year 2008-09. Both Governments are also negotiating to set up an IIT in the country with involvement of Government of Japan.

India and Japan during the year have also agreed to have a Bilateral Currency Swap Agreement to meet any short term liquidity crisis. Though, given the foreign exchange reserves of either country, such a situation is

unlikely to happen, however, this agreement marks a major step in deepening the economic relations between two countries.

Both countries also set up two important forums namely, High Level Policy Dialogue on Economic Development and India-Japan Strategic Dialogue on Economic Issues to discuss all important economic issues. These two dialogues will be held annually now.

In the last few years, the relations between two countries have steadily progressed based on India-Japan global partnership. The visit of Prime Minister to Japan in 2006 and the visit of Japanese Prime Minister to India in 2007 have strengthened the relationship between the two countries. During last couple of years, exchange of visits at various levels have also increased substantially.

385. Joint Statement between the Planning Commission of India and the Ministry of Economy, Trade and Industry of Japan issued on the Occasion of the Third Meeting of the Japan-India Energy Dialogue.

Tokyo, September 17, 2008.

H.E. Montek Singh Ahluwalia, Deputy Chairman of the Planning Commission of India and H.E. Toshihiro Nikai, Minister of Economy, Trade and Industry of Japan, met in Tokyo on 17 September, 2008 for the third Ministerial- Level Energy Policy Dialogue between Japan and India.

The two Ministers reiterated the importance of the ministerial dialogue between Japan and India, and endorsed the common recognition reached by the Prime Ministers of Japan and India in their Joint Statement of 22 August 2007 that the issues of energy security and the environment are important priorities that require sustained and effective action, and that meaningful progress in these areas should be made through individual and collective efforts in a manner that does not foreclose the possibilities of accelerated social and economic development.

The Japanese side welcomed India's recent formulation of the "National Action Plan on Climate Change". The Indian side reaffirmed that it has positioned "enhanced energy efficiency" as one of the eight priority missions of the plan

as an effective course of action against climate change. The Indian side expressed its intent to step up efforts to improve energy efficiency.

In order to improve energy efficiency, the two Ministers agreed that focusing on key energy consuming sectors could enhance the effectiveness of respective national energy efficiency policies. The Ministers also recognized that a cooperative approach for enhancing energy efficiency through sectoral approaches as described in the joint statement by Energy Ministers of G-8, the People's Republic of China, India and the Republic of Korea, could be a useful method for improving energy efficiency, and agreed to work collectively with the other countries on their practical development. The Ministers also agreed that the Asia-Pacific Partnership on Clean Development and Climate (APP) and the International Partnership for Energy Efficiency Cooperation (IPEEC) could be useful for enhancing energy efficiency.

The two Ministers consider that setting individual, and where possible, sector specific energy efficiency goals and formulating action plans on a voluntary basis as worked at the EAS will facilitate their efforts to improve energy efficiency.

The two Ministers recognized that, in order to enhance energy efficiency and increase investment in alternative sources of energy, it is essential to move energy prices closer to market-based prices.

In the meeting, the two Ministers reached a conclusion on the following cooperation outlined below from (1) to (4) in order to concretize the common recognition and to build cooperative relationships in the environment and energy sectors between the two countries.

1. Cooperation in Energy Efficiency and Conservation Sector

- (i) The Indian side expressed its intention to establish Energy Efficiency Centres to promote energy efficiency on a national basis. The Japanese side welcomed India's initiative and, as a first step, offered to provide assistance in the concept formulation by inviting to Japan a delegation of Indian officials who will be involved in their planning and operation. Next steps such as the training of trainers, dispatch of specialists and possible provision of equipment will be considered further in the Working Group(WG).
- (ii) The two Ministers welcomed the completion of the feasibility study by the New Energy and Industrial Technology Development Organization (NEDO) for a commercial-scale Model Project for Sinter Cooler Waste Heat Recovery. They look forward to NEDO's reaching a decision on the prospects for implementing the project, as it has the potential to

lead to energy savings of 39,000toe/year by itself with greater reductions if deployed on a wide basis. The two Ministers also welcomed the ongoing implementation of two of NEDO's commercial-scale model projects for a Coke Dry Quenching System and Conversion of a Diesel Generator to Dual-Fuel Operation. The two Ministers agreed to ask the WG to consider ways to promote wider deployment of these energy-efficient technologies.

- (iii) The two Ministers welcomed the continuation of NEDO's "energy conservation diagnoses" programme in the steel and cement sectors, part of an APP project, as important steps to identify possible areas to improve energy efficiency in these sectors. The Indian side expressed its appreciation of NEDO's decision to conduct a study regarding the potential for applying heat pump technology to urban buildings, which could contribute to improved energy efficiency in the commercial sector.
- (iv) The Indian side expressed its appreciation for the capacity building cooperation provided by the Ministry of Economy, Trade and Industry of Japan (METI) (cf. 154 trainees received and 7 experts dispatched from Fiscal Year 2006), and stated that such cooperation was bearing fruit, for example, in the development of a Top Runner style labeling programme for vehicles, which is a direct result of the Top Runner Workshop organized by METI.
- (v) The Japanese side welcomed these developments and expressed its commitment to provide continued cooperation, through: (1) acceptance of trainees from India's state-designated agencies for energy conservation through the Energy Conservation Center, Japan (ECCJ), (2) dispatch of experts on Small Group Activity (SGA) and Total Energy Management (TEM) on a short-term basis, in order to support energy conservation by small- and medium-sized enterprises in India, and (3) invitation of Indian Energy Service Companies to an ECCJ workshop in Japan to provide an opportunity for the Japan Association of Energy Service Companies (JAESCO) and its counterpart to share experiences. The WG will discuss ways to promote energy conservation in SME clusters through SGA.
- (vi) The two Ministers agreed that the technical training programme provided by the Japan International Cooperation Agency (JICA) to foster Indian energy managers has been extremely useful and hoped that it will continue to play an important role.

- (vii) The Japan External Trade Organization (JETRO) will participate in the International Engineering & Technology Fair (IETF), an Indian exhibition for energy conservation technologies. Taking this opportunity, the Indian side will consider the holding of a workshop to provide increased opportunities for business matching with a view to enhancing business-based technology transfer between Japan and India.

2. Cooperation in the Power and Coal Sectors

- (i) The two Ministers will promote technology transfer efforts to help reduce the ash content of coal used in India, including the implementation of a commercial-scale model project for high-efficiency coal preparation. The two Ministers welcome that the Memorandum of Understanding concerning the Model Project for Highly Efficient Coal Preparation Technology will be signed by NEDO and its Indian counterpart this autumn. The two Ministers agreed that the WG should discuss the possibility of developing a Feasibility Study on a similar project in other areas in the coal sector.
- (ii) In order to improve the thermal efficiency of existing conventional coal-fired thermal power plants and reduce their environmental impact, the two Ministers welcomed the Japanese proposal to study the renovation of coal –fired power plants in India, such as by dispatching experts to examine the condition of several facilities, providing advice regarding possible modifications and holding seminars to promote the benefits of energy efficiency improvement. The two Ministers directed the WG to discuss possible support for upgrading existing thermal power plants.
- (iii) The two Ministers welcomed the training programme executed by NEDO that accepted a total of 51 Indian trainees between fiscal 2001 and 2007 for training regarding Clean Coal Technology (CCT) transfer. Furthermore, they also welcome that, in fiscal 2008, NEDO will accept a total of 20 trainees in the fields of power generation and coal preparation.
- (iv) In the area of electricity generation, the two Ministers welcomed the commencement of the training programme on thermal power engineering by JICA. They also welcomed the finalization of the Scope of Work between JICA and the Ministry of Power (MOP), NTPC limited (NTPC) to conduct a Study on Enhancing Efficiency of Operating Thermal Power Plants in NTPC-India. In accordance with

the afore-mentioned Scope of Work, the JICA team will examine efficiency deterioration of plant equipment and assess measures for improvement of operation and maintenance procedures.

- (v) The two Ministers welcomed the proposed joint ventures between Japanese and Indian companies in the area of high-efficiency super critical power generation equipment. They directed the WG to begin discussions on possible ways to promote the further use of energy efficient super critical technologies, and the training of experts such as in the operation and maintenance of super critical power plants.

3. Cooperation in the Renewable Energy Sector

- (i) The two Ministers welcomed the implementation of a cooperative research and development project offered by NEDO regarding technology for evaluating the operating life of solar cells, as one of the activities of the APP's Renewable Energy and Distributed Generation Task Force.
- (ii) The WG will begin discussions on possible cooperation in various renewable energy sectors including solar energy and biofuels.

4. Cooperation in the Oil and Natural Gas Sectors

- (i) In accordance with their memorandum of understanding, the Japan Oil, Gas and Metals National Corporation (JOGMEC) and the Oil and Natural Gas Corporation (ONGC) Videsh have made steady progress in their cooperation, for example, in their third meeting that was held in Tokyo on 11 April this year.
- (ii) In accordance with their memorandum of understanding, JOGMEC and the Directorate General of Hydrocarbons (DGH) of India have made steady progress in their cooperation, as represented by their second meeting on methane hydrate that is scheduled to be held in Tokyo in late October.
- (iii) Through JOGMEC, METI has proposed support for India in oil stockpiling, such as by dispatching experts on oil stockpiling and inviting Indian officials to visit a stockpiling base in Japan. METI welcomed the holding in October 2007 of a seminar regarding technologies related to stockpiling. It would be glad to accept Indian officials for a visit to a stockpiling base as soon as the Indian side is ready. METI and JOGMEC expect further mutual cooperation with

the Ministry of Petroleum and Natural Gas (MOPNG) and the Indian Strategic Petroleum Reserve Ltd. (ISPRL) in the area of oil stockpiling.

- (iv) The two Ministers highly valued the results of the "Joint Study Between Japan & India for Natural Gas Market in Asia: Measures for Stabilization," conducted by the Institute of Energy Economics, Japan (IEEJ) and the Petroleum Planning and Analysis Cell (PAAC) of MOPNG. Meanwhile, a new joint research project is planned by Japanese and Indian research organizations.
- (v) The two Ministers welcomed the renewal of a memorandum of understanding signed by the Petroleum Conservation Research Association of India and ECCJ.

The two Ministers will promote cooperation between the two countries' industries in order to expand bilateral energy cooperation on a commercial basis.

The two Ministers noted that the Nuclear Suppliers Group adopted by consensus the Statement on Civil Nuclear Cooperation with India. They confirmed that they will exchange views and information on their respective nuclear energy policy.

The two Ministers agreed that on the earliest possible date for both sides, the relevant working groups will meet to further deepen the cooperation between Japan and India in specific sectors, and where applicable discussions will focus on further advancing specific projects of mutual interest such as the Regional Energy Efficiency Center, the Joint Study for a Model Compact Layout of Thermal Power Plants, and the Model Project on Coal Washing.

The two Ministers emphasized that bilateral cooperation based on the Japan-India Energy Dialogue will not be limited to what has been identified above and that they will continue to further deepen their bilateral cooperation. They agreed that the 4th Ministerial Meeting will be held in New Delhi at a mutually convenient time in 2009.

For the Planning Commission
of India

[Montek Singh Ahluwalia]
[Deputy Chairman,
Planning Commission]

[Minister of Economy,
Trade & Industry]

386. Statement by Prime Minister Dr. Manmohan Singh on his departure to Japan and 7th ASEM Beijing Summit.

New Delhi, October 21, 2008.

Please see Document No.140.

387. Prime Minister Dr. Manmohan Singh's Remarks at the Joint Press Conference with Prime Minister of Japan.

Tokyo, October 22, 2008.

I have just held very productive and fruitful talks with Prime Minister Aso. He is an old and highly respected friend of India. I would like to thank the Prime Minister and the government and people of Japan for the very warm welcome they have given to me and to the members of my delegation.

This is my second bilateral visit to Japan as Prime Minister in less than two years. This in itself reflects the great importance that India attaches to its relationship with Japan. Frequent high level visits reflect the importance we attach to our relations with Japan.

In the past four years there has been a qualitative upgradation in our bilateral relationship. The Joint Statement that Prime Minister Aso and I have signed today reflects the significant progress we have made since the establishment of our Strategic and Global Partnership in December 2006.

Japan is a major economic partner of India. We are grateful for the economic assistance that we have got from Japan. India today happens to be the largest recipient of Japanese ODA. Prime Minister Aso and I agreed that our economic engagement must be widened and deepened.

I told the Prime Minister that the sky is the limit for Japanese investment into India, and requested him to encourage Japanese industry to come to India. On our part we will do all that is necessary to create a congenial investment climate.

I look forward to an early conclusion of a high quality and mutually beneficial Comprehensive Economic Partnership Engagement. Our joint collaboration

on the Dedicated Freight Corridor Project will shortly begin. This will transform the scale and magnitude of our economic partnership.

We have also signed a Joint Declaration on Security Cooperation. This reflects our shared desire to contribute to peace, prosperity and stability in Asia and in the world. We also agreed that there should be collaboration between our two countries in the operationalization of the Delhi-Mumbai industrial corridor for which a memorandum of understanding has been reached for the Project Development Facility for this very ambitious project.

Our discussions also covered regional and global issues, particularly the international financial crisis. We agreed that we will work together and coordinate our thinking on this important issue of today. India and Japan I believe can serve as a new Zone of Growth to counter the global economic slowdown.

We agreed to cooperate in key areas of common interest such as energy security and climate change, East Asia Summit, United Nations reforms and other multilateral issues such as the WTO. We also had a very useful exchange of views in encouraging and promoting people to people contact. I heartily welcome Prime Minister Aso's programme of youth cooperation and I promise him all help in realizing this very ambitious goal that the Prime Minister has set for people to people contact. I greatly appreciate what Prime Minister has told me with regard to the Japanese interest for the development of IIT Hyderabad and the development of the Indian Institute of Information Technology at Jabalpur.

I have invited Prime Minister Aso to visit India at a mutually convenient time next year to continue our dialogue.

Altogether this has been a most satisfying visit for me and I thank His Excellency the Prime Minister for having made a very important contribution to successful outcome of this important meeting.

388. Joint Statement issued at the end of India – Japan Summit level talks on the Advancement of Strategic and Global Partnership between the two countries.

Tokyo, October 22, 2008.

1. The Prime Ministers of India and Japan met in Tokyo on 22 October, 2008 for the India-Japan Annual Summit. They shared the view that India and Japan, as major countries in Asia that share common values and interests, must advance bilateral cooperation as well as cooperation in regional and multilateral areas with the objective of promoting peace, stability and prosperity in Asia and the world. They reaffirmed the importance of the Strategic and Global Partnership established in 2006 for this purpose and for harnessing the full potential of India-Japan relations.
2. The two Prime Ministers reviewed the implementation of the Roadmap for New Dimensions to the Strategic and Global Partnership and expressed satisfaction with the sustained progress that has been made through joint efforts between the two sides. They also recognized that there is still immense untapped potential for the further expansion of bilateral relations. The two Prime Ministers pledged to continue their efforts to broaden and deepen the relationship on the basis of the shared congruence of interests in order to develop it as an essential pillar for the future architecture of the region.
3. The two Prime Ministers welcomed the study on the future course of cooperation in the security field between the two countries and issued the Joint Declaration on Security Cooperation between India and Japan drawing on this study. They recognized that further cooperation on the basis of the Joint Declaration on Security Cooperation will be beneficial to peace and prosperity in Asia and the World. They instructed their respective Ministries to develop an Action Plan with specific measures to advance security cooperation based on this Declaration at an early date.
4. The two Prime Ministers expressed their satisfaction at the deepening of the Annual Strategic Dialogue between the Foreign Ministers as well as the other policy dialogues at respective levels. They also welcomed the steady upgradation of defence exchanges and

cooperation and decided to encourage their Defence Ministries to enhance their dialogue and collaboration further based on the Joint Statement of May, 2006. They also welcomed the contribution of established bilateral dialogue mechanisms and urged them to continue their valuable work.

5. The two Prime Ministers expressed satisfaction at the growth of bilateral trade which is expected to reach \$20 billion by 2010. They welcomed the substantive progress achieved on the Economic Partnership Agreement / Comprehensive Economic Partnership Agreement and expressed the hope that the negotiations would be concluded at the earliest possible time. The two Prime Ministers expressed their belief that this EPA / CEPA would be mutually beneficial and would fully harness the true potential of economic partnership.
6. The two Prime Ministers expressed happiness over the long lasting investment relationship between the two countries which has grown over a period of time, especially the large presence of Japanese multi-nationals in India. This interest has been robust in recent years with Japanese direct investments rising substantially. The pipeline of investments already planned was also noted to be impressive. In this regard, the two leaders welcomed the efforts of JETRO and other organizations to support investment by the Japanese small and medium enterprises to India. Further the Prime Ministers expressed the hope that the upward trend would be sustained in the coming years.
7. The two Prime Ministers shared the view that the Japanese Official Development Assistance (ODA) has contributed to India's economic development and has generated goodwill among the Indian people for Japan. They shared the view that the Japanese ODA should continue to play an increasing role in India's poverty reduction, economic and social infrastructure development, tackling environmental issues and human resource development. The Prime Minister of India expressed his appreciation to the Japanese people for their generous role in India's development.
8. The two Prime Ministers were satisfied that the Special Economic Partnership Initiative launched in December 2006 is beginning to give a strong stimulus to bilateral economic and commercial ties and create new opportunities for business.

9. The two Prime Ministers reaffirmed their commitment to the realization of the Western Corridor of the Dedicated Freight Corridor (DFC) project, as the flagship project of India-Japan cooperation, with Japanese ODA Loan utilizing Japan's Special Terms of Economic Partnership (STEP) Scheme and confirmed their readiness to jointly initiate the first phase (Rewari-Vadodara sector) of the project. In this regard, the Japanese side welcomed India's decision to commission the Western Corridor of DFC with electric traction system. The assistance will commence through an ODA loan for Engineering Services and the total volume of the loan for the first phase is currently estimated to be approximately 450 billion Yen, based on the provisional project design. The two Prime Ministers also expressed their commitment to work together for early finalization of the assistance for the entire Western Corridor.
10. The two Prime Ministers expressed the view that the Delhi-Mumbai Industrial Corridor Project (DMIC), which is linked to the Western Corridor of DFC Project, has the potential to transform the dynamics of the India-Japan economic engagement, and decided to pursue this further. They welcomed the Memorandum of Understanding signed between Japan Bank for International Cooperation (JBIC) and India Infrastructure Finance Company Ltd. (IIFCL)/ Delhi Mumbai Industrial Corridor Development Corporation (DMICDC) and confirmed that they would continue to work together closely for the joint establishment of a Project Development Fund. Both sides also welcomed the active participation by the Japanese companies in the 5 Early Bird Projects in the DMIC region in the areas of logistics, human resource development, power generation and enclave development. Both sides also welcomed the initiative of the DMICDC to take up select projects for early implementation in the Project States alongside the master planning exercise. They expressed their desire to further discuss overall cooperation on DMIC in order to spur mutually beneficial business relations that serve the long term interests of both countries.
11. The two Prime Ministers welcomed the progress made in bilateral consultations on high technology trade and noted the great potential in this area for collaboration. The two Prime Ministers recognized the importance of continuing bilateral consultations to facilitate two way high technology trade while addressing matters relating to respective export control systems.

12. The two leaders recalled the Joint Statement on Enhancement of Cooperation on Environmental Protection and Energy Security signed in August 2007 and stressed the need for accelerating bilateral cooperation in these vital areas. They welcomed progress achieved under the India-Japan Ministerial-level Energy Dialogue which confirmed the strengthening of cooperation in energy efficiency and conservation sector particularly through cooperation in establishing Regional Energy Efficiency Centres in India, and the development of a comprehensive cooperation in the coal and power sectors. They also noted that under this Dialogue the Energy Ministers confirmed that they will exchange views and information on their respective nuclear energy policies. They also welcomed progress achieved under the India-Japan Energy Forum held by the New Energy and Industrial Technology Development Organization (NEDO) of Japan and The Energy and Resources Institute (TERI) of India, and recognized the importance of promoting cooperation between the two countries' industries in order to expand bilateral energy cooperation on a commercial basis.
13. The two Prime Ministers expressed satisfaction on the achievement at the Second Meeting of the India-Japan Joint Working Group on Urban Development in June 2008 and reaffirmed their intention to continue to hold the Working Group meetings regularly.
14. The two Prime Ministers shared the view that they will enhance cooperation in the field of Information and Communication Technology including the research collaboration and the introduction of wide-band wireless technology.
15. The two Prime Ministers welcomed the report submitted to them following the second meeting of the high-level Business Leaders' Forum (BLF). They recognized the crucial role played by business and industry of both countries in intensifying trade, investment and economic relations. They urged their concerned officials to speedily examine and implement the BLF's recommendations.
16. The two Prime Ministers emphasize the importance of exchanges at the cultural, academic, youth and people-to-people levels. They noted with satisfaction the enhanced people-to-people exchange between the two countries under the Aso Programme, including through the Japan-East Asia Network of Exchange for Students and Youth (JENESYS) Programme, and shared their renewed commitment to maintain the upward trend.

17. The two Prime Ministers positively appraised the work of the India-Japan Working Group set up to explore possible collaboration in establishing a new Indian Institute of Technology (IIT) with Japanese assistance and welcomed the report submitted to them by the Working Group. The two Prime Ministers confirmed their commitment to collaborate in the establishment of a new IIT in Hyderabad that will become a symbol of joint efforts in promoting educational excellence in India, through various contributions from Japan. The two Prime Ministers also recognized that such collaboration will require the joint work of the relevant parties of both sides including academic experts to identify the specific areas that can be mutually beneficial.
18. The Prime Ministers acknowledged the need to make all efforts to take forward the collaboration for the development of the Indian Institute of Information Technology, Design and Manufacturing at Jabalpur in accordance with the Memorandum signed in December 2006 on this subject.
19. The two Prime Ministers shared the view that nuclear energy can play an important role as a safe, sustainable and non-polluting source of energy in meeting the rising global energy demands. The two Prime Ministers shared the view that international nuclear disarmament and non-proliferation efforts should be reinforced. The two Prime Ministers also reiterated the importance of strengthening their efforts towards the shared goal of achieving a world free of nuclear weapons.
20. The two Prime Ministers reaffirmed their support for the East Asia Summit as an open, inclusive, transparent and Leaders' led forum to promote cooperation on issues of common interest and to deepen regional economic integration towards the progressive realization of an East Asia Community. They decided to work jointly and with other countries of the region to promote this objective at the forthcoming East Asia Summit. They also welcomed the establishment of the Economic Research Institute for ASEAN and East Asia (ERIA) and referred to the report of the study on the Comprehensive Economic Partnership in East Asia (CEPEA) to be submitted in December this year.
21. The two Prime Ministers reaffirmed the importance of maintaining close cooperation between the two countries in various international fora. They shared the view that the reform and expansion of the United

Nations (UN) Security Council, in both the permanent and non-permanent categories, is central to the process of a comprehensive reform of the United Nations. They welcomed the decision of the UN General Assembly to commence intergovernmental negotiations not later than February 28, 2009. They decided to continue their close cooperation to achieve expeditious forward movement towards a genuine reform of the Security Council, so as to make it more representative, credible and effective. In this context, they stressed the important role of G-4, bilateral consultations as well as their engagement with the larger UN membership.

22. The two Prime Ministers condemned terrorism in all its forms and manifestations, reaffirmed that terrorism constitutes a serious threat to international peace and security, and welcomed efforts undertaken by both countries to combat this menace. They underlined their determination to strengthen bilateral cooperation in combating terrorism through the Joint Working Group on Counter-Terrorism as well as UN mechanisms. They reaffirmed their desire for expeditious conclusion of negotiations of the Comprehensive Convention against International Terrorism at the United Nations.
23. The two Prime Ministers shared the view that the present world economy is facing uncertainty, including financial difficulties, and that it is important for the two countries to continue discussion for the stability and growth in the region and the world. They recognized the need for joint efforts by all consuming and producing countries to mitigate the impact of high and volatile oil prices, which hamper global growth and development. They also expressed concerns that global food prices remain at high level, and called for greater collaborative efforts to address the challenge of the global food security. They also discussed the current state of the negotiations of the WTO Doha Development Agenda and reaffirmed their will to continue their cooperation towards an early and successful conclusion of the negotiations with a balanced and comprehensive outcome.
24. The two Prime Ministers expressed their support for the Bali Action Plan, and reaffirmed their determination for a flexible, fair and effective agreed outcome for now, up to and beyond 2012, in which all countries participate. The Japanese side welcomed India's recent announcement of the "National Action Plan on Climate Change", and the Indian side welcomed the various initiatives taken by Japan on this issue. The two Prime Ministers shared the view that the actions of all countries should be taken based on national circumstances

and various criteria in accordance with the principle of common but differentiated responsibilities and respective capabilities. They reaffirmed the desirability for the UNFCCC Parties to adopt in the negotiations a long-term global goal for reducing global emissions and pledged to cooperate closely in this regard toward the COP 15 next year.

In this regard, they noted the desire of the G8 nations to share with all the parties of the UNFCCC the vision of reducing global emissions by at least 50% by 2050. They also noted that equitable burden sharing for sustainable development should guide the negotiations on a shared vision. In order to secure energy efficiency and address climate change, they reaffirmed to promote energy efficiency and conservation by implementing individual, and where possible, sector specific goals and action plans. Recognizing that actions in various sectors could be a useful tool for global emission reduction through measures such as improving energy efficiency, they decided to move forward on the practical development of cooperative sectoral approaches and sector-specific actions, also in cooperation with other countries, as confirmed in the 3rd meeting of the India-Japan Ministerial-level Energy Dialogue. They highlighted the importance of promoting synergy between development and environmental protection, and recognized the need to devote scaled up resources to adaptation measures in developing countries. They shared the view that India and Japan must work closely together on Climate Change issues in relevant international fora.

25. The Prime Minister of India conveyed his sincere appreciation for the hospitality extended to him and his delegation by the Government of Japan. He invited the Prime Minister of Japan to visit New Delhi in 2009 for their next Annual Bilateral Summit, at mutually convenient dates to be decided through diplomatic channels.

Tokyo, 22 October, 2008

Dr. Manmohan Singh
Prime Minister of the Republic of India

Mr. Taro Aso
Prime Minister of Japan

389. Press Release of the Ministry of External Affairs on the finalization of the Japanese Overseas Development Aid for the 'Dedicated Freight Corridor'.

New Delhi, October 22, 2008.

The Dedicated Freight Corridor (DFC) Project of the Indian Railways was conceived by the Prime Minister of India as an important infrastructure ramp-up project for India. Connecting the raw material production areas with the consumption centres, and linking both to major ports, DFC will positively impact overall growth rates and efficiency in the Indian industrial sector.

The DFC comprises of two railway corridors, Western (1483 Kms) and Eastern (1805 Kms), for a total length of 3288 Kms. The cost of the Western corridor is estimated at Rs 30000 crores, and Eastern Corridor at Rs 20000 crores. The Project is targeted for completion within a five year schedule. The detailed project report (DPR) for the 920 kms Rewari – Vadodara stretch has already been finalised.

Government of Japan have committed to ODA loan of Rs 17045 crores, for the first phase. This amounts to 62% of the total cost of Rewari – Vadodara. Government of Japan is also committed to providing a similar loan for the balance stretch of the Western corridor

Indian Railways has reached an advanced stage for discussions with World Bank and ADB, for financing the Eastern corridor of DFC. While approximate estimate of loan from World Bank is \$ 2.5 to 3 billion, technical assistance for project is under consideration with ADB.

Work on both corridors of the DFC is to commence within the current financial year. The first works to be taken up are 54 important bridges over 200 kms on the Western corridor, and a 105 Km section on the eastern Corridor. Bids for project management consultancy and turnkey contracts in these sub-projects have already been received, and are under evaluation.

390. Address by Prime Minister Dr. Manmohan Singh at the Reception by Japan - India Association and Japan - India Parliamentary Friendship League.

Tokyo, October 23, 2008.

Thank you for your gracious words of welcome. I am truly honoured by the generous hospitality of so many friends of India. I am also happy to be in the midst of my fellow citizens and people of Indian origin.

I deeply appreciate the presence of PM Mori and PM Fukuda. That reflects the depth of India Japan relations.

I greatly appreciate the warm sentiments that have been expressed towards India and towards me personally. Let me assure you that the people of India deeply value Japan's friendship.

The Japan-India Association has been in the forefront of promoting closer cultural and economic ties between our two countries for over a century.

The visionary elder statesmen who established the Association in 1903 were convinced that India and Japan would emerge as two major pillars of the new Asia. It was thanks to their efforts that partnership between India and Japan grew in the early years, particularly in the economic field.

Some of the greatest sons of India, the philosopher Vivekananda, the renowned poet Rabindranath Tagore and the industrial pioneer Jamshedji Tata, among others, renewed our ancient ties with Japan in the modern era.

India's first Prime Minister, Pandit Jawaharlal Nehru, visited Japan in the late 1950s and laid the foundation of a new era of abiding friendship between the two Asian democracies.

We are very grateful to Japan for the development assistance provided to India, particularly for our industrial modernisation. In the past sixty years, we have broadened and deepened this relationship into a durable productive partnership.

In the next phase of our relationship, we seek to exploit the opportunities offered by globalisation and by the synergies in our economies to expand flows of trade, technology, investment and people-to-people contacts.

Under the visionary leadership of former Prime Minister Yoshiro Mori, a new chapter was opened in our ties following his landmark visit to India in

the year 2000. We are very grateful and appreciative of the personal attention that he has devoted to the rejuvenation and deepening of our bilateral engagement.

I thank the Japan-India Parliamentary Friendship League, and its President Mr. Taro Nakayama, for their important role in building the broad based political consensus that exists in both countries on strengthening India-Japan ties.

The world is facing multiple challenges. The spectre of recession in the global economy, coming as it does in the wake of the steep rises of energy and food prices, threatens to disrupt the rhythm of economic development in many developing countries. Terrorism is a danger to our peace-loving societies. Climate change and environmental degradation also threaten our beautiful planet.

We look to the wise counsel and leadership of Japan in rising to meet these challenges. We wish to draw upon Japan's vast developmental experience and her traditional emphasis on consensus, harmony and balance in solving these problems that threaten global peace and prosperity.

I have been a frequent visitor to this beautiful country since 1971. It has been my earnest desire, for the past several decades, to see this relationship prosper and grow. I am very happy to witness today the transformation of India-Japan relations. It is truly developing into a global and strategic partnership as envisaged when PM Mori visited India in 2000.

On the strength of our strong bilateral relationship, we stand as two major powers ready to play a commensurate global role. India believes that a strong and dynamic Japan is a powerful factor of peace and stability in Asia and the world.

I commend the contribution of the Indian community in Japan. They have built bridges of friendship and understanding between our two people. Their achievements have made India proud and we wish them well in their adopted home.

I am confident that all of us gathered here today will redouble our efforts to strengthen our bilateral relationship, which is important for our two countries, for Asia and for the world.

REPUBLIC OF KOREA

391. Press Release issued by the Ministry of Commerce on the conclusion of the 12th round of Korea - India Comprehensive Economic Partnership Agreement.

New Delhi, September 26, 2008.

At the conclusion of the 12th round of the Korea-India Comprehensive Economic Partnership Agreement (CEPA) held in Seoul from September 22-25, India and Korea have announced today that all outstanding issues in the negotiations have been resolved successfully. The CEPA Agreement is expected to further accelerate the growth of the flows of bilateral trade and investment between Korea and India. The Indian side was led by Shri G.K. Pillai, Commerce Secretary, and the Korean side was led by Mr. Hye-min Lee, Deputy Minister.

Both sides expect that they will be able to finalise the formal text of the Agreement including the schedules for liberalization of goods, services and investment by the end of October. Major elements of the Agreement will be made public at that time. Both sides aim to sign the Agreement by the end of this year after completing all domestic procedures and the Agreement will come into effect from the first half of next year on a mutually agreed date.

The Korea-India CEPA negotiations started in March 2006 and a total of 12 rounds of negotiations have been held.

India and Korea are 12th and 13th largest economies in the world respectively. The bilateral trade has been growing by an average rate of around 27% over the last 3 years and amounted to US \$ 11.2 billion in 2007.

392. Response of Official Spokesperson to questions on the decision of the Court in the Republic of Korea to sentence two Indians.

New Delhi, December 15, 2008.

"Government of India is aware of the decision of the Court in the Republic of Korea to sentence two Indians - Captain J. S. Chawla and Chief Officer Chetan Syam - to prison sentences in connection with an accident¹ involving the ship "Hebei Spirit" off the Korean coast last year.

This matter was taken up by Secretary (East), Ministry of External Affairs today with the Ambassador of the Republic of Korea. At this meeting Government's disappointment about the decision of the Court to reverse the earlier decision in which the two merchant marine officers were exonerated, as well as Government's distress at the harsh prison sentences, was conveyed to the Ambassador of the Republic of Korea. Secretary (East) also conveyed our expectation that the Government of the Republic of Korea would ensure humane treatment to Captain Chawla and Chief Officer Syam in keeping with their professional status, and that due sensitivity will be shown to cater for their personal requirements. The Ambassador of the Republic of Korea has assured the Ministry of External Affairs that Government's concerns will be communicated to the Korean authorities.

Government of India has earlier taken up this matter at all levels in the Government of the Republic of Korea in the past few months. The Ministry of External Affairs raised this issue with the Korean side at the Foreign Office Consultations on 25th November 2008. The Ministry of External Affairs also raised it again with the Ambassador of the Republic of Korea in New Delhi on 4th December 2008 as well as with the Korean Foreign Ministry through the Indian Ambassador in Seoul on 5th December 2008. Our High Commission in London, which is our representative at the International Maritime Organization, has also raised this matter in that forum. Moreover, our Minister of Shipping, Road Transport & Highways, during his visit to the Republic of Korea in October 2008, had also drawn the attention of the Korean Minister for Maritime Affairs to this matter.

1 These sentiments were expressed by senior Ministry of External Affairs (MEA) official N. Ravi, Secretary (East), when he met the South Korean Ambassador in New Delhi. The two Indians were given prison sentences in connection with an accident involving their ship 'Hebei Spirit' off the Korean coast in 2007. They had maintained that their crude carrier was safely anchored when a crane barge being towed by another ship broke free in the rough waters and rammed their ship, leading to one of the worst oil spills off South Korea's coast.

Ministry of External Affairs understands that the lawyers of the two Indian nationals intend to file an appeal against the judgement shortly. We have conveyed to the Korean Government our hope that the two officers will be given bail pending the hearing of the appeal. We also hope that a fair hearing will be held on the appeal, and that the Court will take into account the full circumstances including the cause of the accident, the payment of compensation by the IOPCF and the likely impact that the judgement will have on the maritime community.

The Korean Government is fully aware of the high attention that this matter is receiving in India. Government of India intends to continue to pursue this matter with the Korean side, in the backdrop of the close and cordial relations that exist between the two countries."

On December 19, the Spokesperson made another statement:

- "Government of India continues to be in touch with the Government of the Republic of Korea about the detention of two Indian nationals - Captain J.S. Chawla and Chief Officer Chetan Syam in the Republic Korea in connection with the accident involving the ship "Hebei Spirit" off the Korean coast in December last year.
2. In this connection the Ministry of External Affairs has contacted the Embassy of the Republic of Korea in New Delhi on 18th December 2008 and the Ambassador of India in Seoul has also met the Deputy Foreign Minister of Korea on 19th December 2008. On both these occasions the Korean Government has been urged to ensure humane treatment of the two Indian nationals.
 3. The Korean Government has conveyed that the detainees will be given better treatment and that due sensitivity will be shown to their personal requirements. Consular Officers of the Embassy of India have met the two Indian nationals on more than one occasion and the Mission will continue to be in touch with the Korean authorities. The Korean Government is fully aware of our concerns with regard to this matter.
 4. The Ministry of External Affairs has also had meetings with the Ministry of Shipping and with other concerned organization apart from the members of the families of Capt. Chawla and Chief Officer Syam to resolve this matter."

LAOS

393. Speech of President Shrimati Pratibha Devisingh Patil at Banquet in honour of the Laotian President Choummaly Sayasone.

New Delhi, August 27, 2008.

Your Excellency, Choummaly Sayasone,

Madame Sayasone,

Distinguished Guests,

Ladies and Gentlemen,

On behalf of the Government of India, the people of India and on my own behalf, I warmly welcome Your Excellency and Madame Sayasone on your first State visit to India. I also welcome the distinguished members of your delegation.

We fondly recall the visit, to India of the first President of the Lao People's Democratic Republic, Prince Souphanouvong. Your visit is an expression of the unbroken close and strong bonds of friendship that exist between our two countries. Your presence will further reinforce our mutual desire, to enhance bilateral cooperation, for the benefit of our two peoples.

The ancient land of Lan Xang - 'a million elephants' - has always had close ties with India and its people. Our spiritual and cultural ties date back a few millennia. The prevalence of Buddhism and Hinduism in Lao society is an eloquent testimony to these contacts. THAT LUANG Stupa that hosts one of the most precious Buddhist relics and WAT PHOU, the pre Angkorian Hindu Temple, reflect our intense mutual exchanges in the Indo-China region in the earlier times.

The deep understanding that developed in history lasts to this day. Our modern ties are characterized with the emergence of the cooperation in diverse fields. We have projects covering Information Technology, entrepreneurship development, power, defence, training and other sectors. India's friendship with Laos has always been motivated by the common concern for peace, so that economic development could be pursued with greater vigour. Over the years, this approach found a new anchor in the "Look East Policy" of India in which Laos has played a central part. We value the support provided to us within ASEAN, during the period from 2004 to 2006, when Laos played a crucial role as the Country-Coordinator for India. It was during this period that India joined the East Asia Summit, after signing the Treaty of Amity and Cooperation.

Laos has an important role in the global community of nations. Your Government's focus on regional integration is reflected in many fora in addition to the ASEAN and the East Asia Summit. The activities under the Greater Mekong Sub-region, Ganga-Mekong Cooperation, NAM, UN and others speak for themselves. We acknowledge and admire the dexterity with which Laos has transformed the disadvantage of being a land-locked country into a land-linked one providing connectivity through road and railway links in all directions.

India is keen to work with Laos in developing this connectivity. The historic Car Rally from India to Indonesia via Laos, on the occasion of the ASEAN Summit in Vientiane in 2004, was a demonstration of new possibilities. My Government stands ready to work with your Government in road and railway networks for the benefit of the region and our two countries.

We have also followed with great interest the continuing economic progress of your country, which creates numerous opportunities for bilateral economic cooperation both at the level of our Governments and the private sectors. Many Indian companies are interested in entering the Lao economy on a commercial basis with investments into hydro-power, agriculture, mining, transportation and construction and in the small and medium industry sector. Your Excellency's support would help in diversifying commercial ties between our two countries.

At the Government level, we have partnered Laos in the human resource development sector, capacity building, establishment of IT and e-governance structures, power, irrigation and various other social-sector projects. Our unstinted support to the Lao Government in these areas will continue. We will be particularly interested in working with Laos in its e-governance plans.

Excellency, our friendship is time tested. We are grateful for the unstinting support of Laos to our proposal for UN Security Council reforms including the permanent membership for India in an expanded Security Council, our nuclear policies and the strategic role that India can play in Asia in the economic sector.

Ladies and Gentlemen, may I invite you to join me, in a toast to:-

- the health and well-being of Your Excellency and Madame Sayasone;
- the happiness and prosperity of the friendly people of Lao People's Democratic Republic; and
- lasting friendship between India and the Lao People's Democratic Republic.

394. Joint Statement issued on the occasion of the State Visit of Laotian President Choummaly Sayasone.

New Delhi, August 30, 2008.

His Excellency Mr. Choummaly Sayasone, the President of Lao PDR paid a State Visit to India from 26-30 August, 2008 at the invitation of the President of the Republic of India. He was accompanied by his wife Madame Keosaychay Sayasone. The accompanying delegation comprised Deputy Prime Minister & Foreign Minister Dr. Thongloun Sisoulith, Minister in the Presidency and Chairman of Lao National Commission for Drug Control and Supervision, Mr. Soubanh Srithirath, Minister of Planning and Investment, Mr. Soulivong Daravong, Minister of Finance Mr. Somdy Douangdy and other senior officials.

2. His Excellency Mr. Choummaly Sayasone called on President Smt. Pratibha Devisingh Patil and met Vice-President Mohd. Hamid Ansari. President Smt. Pratibha Devisingh Patil hosted a banquet in honour of the President. His Excellency Mr. Choummaly Sayasone and Prime Minister Dr. Manmohan Singh held official level discussions. The Lao President met the Chairperson of the United Progressive Alliance Smt. Sonia Gandhi, Minister of External Affairs Shri Pranab Mukherjee, Leader of Opposition Shri L.K. Advani and other members of the Government of India.
3. The Bilateral discussions were held in an atmosphere of traditional friendship, warmth and close understanding. The two sides expressed complete satisfaction at the state of bilateral relations, and the mutually beneficial cooperation and partnership that was developing rapidly between the two countries. The two sides discussed a wide range of subjects of bilateral interest covering economy, trade and investment, defence, information and communications technology, space, transportation, air services, health, mining, hydro-power, lines of credit, archaeological restoration, railways, culture, arts and sports. The leaders also exchanged views on regional and international issues of mutual interest. The following MoUs/agreements were signed during the visit :
 - i) Agreement on Line of Credit of \$ 33 million for:

- Paksong S/S - Jiangxay 115 KV, double circuit Transmission Line project;
 - Nam Song 7.5 MW hydropower project; and
 - Equipment for Rural electrification Phase-2 Project
4. The two sides also announced that Laos has signed the Letter of Intent for Duty Free Tariff Preference (DFTP) Scheme for LDCs in accordance with the scheme announced by the Prime Minister of India earlier this year and in implementation of the consensus at WTO's Hong Kong Ministerial Declaration of December 2005.
 5. India also announced assistance for construction of a Buddhist College at Champassak and visit of a team from Archaeological Survey of India to Lao PDR to commence restoration of Wat Phou temple for which the two countries have already signed an enabling Memorandum of Understanding.
 6. The two sides noted that the 6th session of the Joint Ministerial Commission of India and Lao PDR had met in Vientiane in 2006 and agreed that the 7th meeting of the Commission will be held in New Delhi in early 2009. They noted that the Joint Commission has proved to be an effective mechanism in monitoring the activities of cooperation between the two countries in diverse areas and in giving concrete direction to such cooperation in future.
 7. The two leaders highlighted the importance of high level bilateral visits, including at the levels of Heads of State and Government. They also decided to promote other high level Ministerial visits. They reiterated their resolve to continue their bilateral dialogue and cooperation within regional framework and at various international fora.
 8. The two sides also considered parliamentary exchanges to be an important instrument to promote bilateral understanding at the level of parliamentarians. The Lao delegation expressed keenness to study the Indian parliamentary practices and system to benefit the developing parliamentary system in Lao PDR.
 9. The two countries recalled the historical relationship between the two peoples on the basis of Buddhism and Hinduism dating back to more than two millennia. They resolved to further promote this

historical relationship through all means including culture, youth exchange and sports.

10. The two sides noted that the bilateral trade volume was small and resolved to take all possible measures to enhance the trade to match the actual potential.
11. The Indian side noted that the Lao economy has grown rapidly over the past several years in the wake of the economic reform programme undertaken by the Government of Lao PDR. They also noted the success achieved by the National Growth and Poverty Eradication strategy adopted in 2001 for a period of 20 years and the 10 year Socio-Economic Development Strategy for the period 2001-10, which has resulted in near 8% GDP growth rate leading to social stability at all levels in Lao PDR. The Indian side complimented the Lao Government on the success it had achieved in raising the economic status of Lao PDR.
12. The Lao side noted that the economic reform in India starting from 1991 onwards marked the turning point in India's economic history, laying the foundation for robust economic growth. With this result, the real GDP growth of the India averaged 9.3% over the past four years. The Lao side praised the Indian Government for the progress in their 11th Five Plan that has improved enormously India's economic fundamentals, paving the way for India to capture its place on the world stage.
13. The two sides agreed that there is considerable potential for Indian companies to enter the Lao economy through investments. The Lao side agreed that hydro-power, mining, agriculture, construction, road and railway network, transportation, information technology and e-governance, steel making, small and medium enterprises offer considerable opportunities to Indian investors and agreed to make every effort to encourage Indian investors to enter into these areas of economic activity. In this connection, they welcomed the initiative of Indian Chambers of Commerce and Industry to organize the first ever exclusive Indian Exhibition in Vientiane in November 2008 to showcase Indian technological capabilities and industries.
14. The Indian side noted with interest the initiatives taken by Lao PDR in developing transportation infrastructure to promote regional connectivity through roads and railway networks. The Indian side

also noted the success of Lao PDR in transforming itself from land-locked to a land-linked country, and conveyed Indian interest in extending suitable support in building road and railway network in Lao PDR.

15. The Indian side recalled with appreciation the helpful role played by Lao PDR as Country Coordinator for India in the ASEAN from 2004 to 2006 during which period, India joined the East Asia Summit after signing the Treaty on Amity and Cooperation. The cooperation existing between India and Lao PDR under Ganga-Mekong Cooperation, was also appreciated by both sides.
16. The Lao delegation also welcomed the initiative taken by India to hold the first Suryakiran Air Show in Lao PDR on 15 November, 2008. The two sides expressed confidence that this will further promote friendship and defence ties between the two countries. The Indian side conveyed its readiness to establish the Air Force Academy in Lao PDR. The Lao side thanked the Indian side for the project. Both sides agreed that the project will strengthen the capability of Lao Air Force. The Indian side also announced its readiness to gift 50 parachutes to the Lao Air Force for the 60th Anniversary of Lao Defence Forces in 2009.
17. The two sides noted the emerging importance of space technology and remote sensing for mapping of resources and as an effective instrument in agriculture, water resources etc., and decided to promote bilateral cooperation in this area through their respective agencies.
18. The Lao delegation expressed appreciation for the offer of the Line of Credit of \$ 33 million from the Government of India for developing three power related projects viz. - Paksong S/S - Jiangxay 115 KV, double circuit Transmission Line project; Namsong 7.5 MW hydropower project; and Equipment for Rural electrification Phase-2 Project. They hoped that the project implementation could start at an early date.
19. The Indian side conveyed its readiness to undertake the construction of neurological hospital in Lao PDR. The Lao side conveyed their happiness on progress in the project and expressed confidence that the hospital would contribute to medicare in Lao PDR particularly for trauma patients.

20. The two sides also expressed satisfaction at the meeting of the officials of the two Governments to implement the Bilateral Agreement on Drug Demand Reduction and Prevention of Illicit Trafficking in Narcotic Drug and Psychotropic Substances and Related Matters, which was signed in 2002. They agreed that drug transit and control are important issues which must be handled by joint efforts of the two countries. The Indian side also expressed its readiness to work with Lao PDR in rehabilitation process of the drug addicts and opium growers.
21. The Lao side expressed its appreciation and gratitude for assistance received from India in IT sector and entrepreneurship development. The Indian side conveyed its readiness to continue its cooperation with Lao side in the area of information technology through training for Lao personnel in IT sector as well as entrepreneurship development programme which would train the trainers and develop scheme for accreditation of training programs in Lao PDR.
22. The Lao side conveyed its appreciation to India for the scholarships provided by the latter for short-term and long-term training of Lao personnel in various professional areas in India and requested the Indian side to increase the number of these scholarships. The Indian side agreed to increase the number from 60 at present to 80.
23. The Lao side also thanked the Indian side for the scholarships provided to Lao nationals for bachelors, masters and doctoral programs in India and requested for increase in the number of scholarships. The Indian side agreed to increase the number from 14 at present to 20.
24. The two sides stressed that terrorism constitutes one of the most serious threats to international peace and security. They strongly condemned terrorism in all its forms and manifestations, and stressed that there can be no justification, whatsoever, for any acts of terrorism. They emphasized the need for concerted and coordinated action by the international community, in accordance with international law to realize the objectives of eradicating terrorism in all its forms and manifestations. Both sides stressed the importance of an expeditious conclusion of negotiations and the adoption of the Comprehensive Convention on International Terrorism. They agreed to further expand the bilateral dialogue and cooperation in combating terrorism, organized crime and trafficking.

25. The Indian side also thanked Lao PDR for its support to various Indian candidatures in international organizations, and agreed to assist Lao PDR in its accession to WTO, through capacity building.
26. The Indian side expressed appreciation to the Lao side for its support to India for a permanent seat in the expanded Security Council as well as for India's program of development and use of civilian nuclear power. The two sides agreed that the creation of a harmonious and prosperous community of nations in East Asia is a long-term goal. They underlined the importance of the emergence of the Asian economic community and need for regional security in this context. They agreed to work together in realizing these strategic goals to promote regional peace and stability.
27. Both leaders expressed satisfaction with the results of the State Visit and concluded that it had contributed positively to the strengthening of the friendly ties between the two countries.
28. The President of Lao PDR invited the President of India and the Prime Minister to pay an official visit to Lao PDR. The invitations were accepted with pleasure and the dates for the visits would be settled through diplomatic channels.
29. His Excellency Mr. Choummaly Sayasone, President of Lao PDR expressed deep gratitude to President Smt. Pratibha Devisingh Patil and His Excellency Dr. Manmohan Singh, Prime Minister of the Republic of India for the kind reception and warm hospitality extended to him and his delegation.

MALAYSIA

395. Report on the visit of Defence Minister A.K Antony to Malaysia.

New Delhi, January 9, 2008.

Defence Minister A.K. Antony paid a three-day (5-7 January) "a very sensitive goodwill visit" to Malaysia aimed at raising the "new momentum" in military-to-military cooperation. Mr. Antony said, "Malaysia is a cornerstone" of India's Look East diplomacy in the defence sector. And, this should be seen in the larger political context that all aspects of the Look East policy, including the defence dimension, were "not [aimed] against China" at all, he said, responding to a question.

He however made it clear that "we are not entering into any kind of military alliance with anybody" as part of the defence outreach of the Look East policy." India's improving defence ties with neighbours in South East Asia should be seen as a response to the emerging geopolitical scenario across the world. India and the United States, too, "need each other in this new geopolitical situation." However, he emphasised, any new line of defence cooperation with emerging partners would not be pursued at the expense of old friends such as Russia.

On the growing defence links with Malaysia, he said the focus was on the air forces and navies. The defence production units in India and Malaysia would also be key players. His talks with Malaysian Deputy Prime Minister and Defence Minister Najib were aimed at "further consolidating" these ties in the present global milieu of "interdependence."

Parrying questions about the political agenda of his discussions, especially in the context of developments concerning the ethnic Indian population here, Mr. Antony said his portfolio centred on defence-related matters alone.

A press release issued by the Ministry of Defence prior to the visit said "Malaysia is celebrating the 50th Anniversary of its Independence and the current year also marks the 50th Anniversary of the establishment of diplomatic relations between the two countries. Over the years, India and Malaysia have developed strong bilateral relationship encompassing political, economic, education, cultural and defence fields. The Defence Cooperation between the two countries was formalized by signing a MoU in 1993 and

396. Extract relevant to Malaysia from the Statement of External Affairs Minister Pranab Mukherjee in the Lok Sabha on Foreign Policy Related Issues.

New Delhi, March 3, 2008.

Hon. Members are aware that in a suo motu statement made on 30th November, 2007, I had referred to the concerns expressed by hon. Members regarding the alleged harassment of participants of the rally organised by the Hindu Rights Action Force (HINDRAF) in Kuala Lumpur on 25 November, 2007 and subsequent related matters. As conveyed to hon. Members on that occasion, Government remains deeply solicitous for the welfare of people of Indian origin living abroad. There is a large community of people of Indian origin in Malaysia who are citizens of that country. We have friendly relations with Malaysia and we are in touch with the Malaysian authorities in the matter. During our interactions with them, concerns expressed in India, including in Parliament, regarding developments pertaining to the Indian community in Malaysia have been suitably conveyed¹.

it has been expanding steadily since then. The primary area of cooperation has been in training to Malaysian Defence personnel at various levels including at the National Defence College and Staff College. The Defence Cooperation between the two countries is also characterized by high-level exchange of visits, visit of ships of the two navies, India's regular participation in Langkawi International Maritime and Aerospace (LIMA) exhibition including the one which was held from 04 - 08 December 2007. Both the countries have participated in bilateral exercises such as PASSEX and MILAN. Last month the Sixth Malaysia-India Defence Cooperation Meeting (MIDCOM) was held in New Delhi when both sides had meaningful discussions on strengthening defence cooperation as well as to explore new areas of cooperation. The two countries last month signed a Protocol on training of Royal Malaysian Air Force (RMAF) Pilots by Indian Air Force on SU-30 MKM aircraft. Earlier in May 2007, a MoU was signed by Hindustan Aeronautics Limited with the Malaysian Ministry of Defence for the technical training of RMAF personnel on SU-30 MKM aircraft."

When the Chief of Army Staff Deepak Kapoor visited Malaysia next month he had held talks with his Malaysian counterpart Mohammed Ismail in Kuala Lumpur on 6th February. They discussed issues ranging from counter terrorism to border management, peace keeping operations and disaster management. They discussed many other forms of army-to-army cooperation. Media quoted official sources to say that the army-to-army dialogue, sequel to a similar mechanism that was launched last year between the navies of Malaysia and India, would be followed by a framework for closer cooperation between their air forces later in the year.

1. Media reports said that India and Malaysia had finalised a draft memorandum of understanding on the recruitment and welfare of each other's workers. The accord would be signed after some procedural formalities were completed. During Defence Minister A.K. Antony's visit in early January to Kuala Lumpur, India was understood to

MONGOLIA

397. Press Release of the Ministry of External Affairs on Humanitarian Assistance to Mongolia.

New Delhi, April 15, 2008.

India and Mongolia enjoy traditionally friendly relations based on historical and civilizational links between our two peoples. In modern times the two countries have continued to build and expand bilateral relations based on shared historical and cultural legacy.

2. To further strengthen the friendly relations and sentiments, the Government of India is pleased to give 5000 MT of Rice and 5000 MT of Sugar as assistance to the people of Mongolia. The consignment is likely to reach Mongolia in the month of May 2008.

have raised the issue of expediting the process. Malaysia hosts about 2.1 million workers from 11 "source countries," including India. This figure, according to authorities, was well above the 1.8 million mark that is considered optimal for now. According to some estimates there were nearly 150,000 Indian nationals working in Malaysia. As for the Indian priests, officiating in the Hindu temples, the government affirmed that there would be no ban on new recruitments. Also, there would be no move to curtail the period of renewals. There are over 5,000 temple priests from India, some of whom have completed 10 years of stay in Malaysia. Normally, annual visas are granted to them on a renewable basis, up to a total period of five years. Temple musicians from India have been given similar visas, for up to three years, while sculptors were given monthly visas, subject to a maximum of six months. According to some political observers the issue of Indian priests acquired sensitive overtones in recent months. Hindraf was last year leading a campaign against the alleged "marginalisation" of this community.

MYANMAR

398. Media Briefing by Official Spokesperson on the visit of Foreign Minister of Myanmar.

New Delhi, January 2, 2008.

Spokesperson: Good afternoon. The Foreign Minister of Myanmar, H.E. U Nyan Win, is visiting India on the invitation of the Hon'ble Minister for External Affairs.

During the visit, H.E. U. Nyan Win called on the Prime Minister today. The Foreign Minister briefed Prime Minister on the recent internal developments in Myanmar. Emphasizing the importance of our multi-faceted relations with Myanmar, Prime Minister expressed his satisfaction at the growing bilateral relations between the two countries. He stressed the need for greater urgency in bringing about political reforms and national reconciliation in Myanmar. This process had to be broad based to include all sections of society, including Daw Aung San Suu Kyi and the various ethnic groups in Myanmar.

In his meeting with EAM, the Foreign Minister of Myanmar conveyed the recent initiatives taken by the Government of Myanmar on their political reform and national reconciliation process. EAM stressed the importance of expediting the implementation of this process and making it inclusive and broad-based. He reiterated India's support to the efforts of UN Special Envoy, Prof. Ibrahim Gambari.

The discussions also covered all areas of mutual interest. EAM expressed his satisfaction at the recent conclusion of discussions relating to the Kaladan Multi Modal Transit Transport Project and hoped for an early signing and implementation of this mutually beneficial project. Both sides noted the current state of bilateral trade at nearly US\$ 1 billion and discussed measures to enhance trade, especially through border trade points. The importance of strengthening cooperation in the Hydrocarbon sector was reiterated. Both sides noted with satisfaction at the growing cooperation at the regional and multilateral level, especially keeping in mind India's Look East Policy and its special focus on CLMV countries.

Myanmar is a close and friendly neighbour, with whom India shares a border of more than 1,600 kms. Myanmar also serves as a gateway to South East Asia. This visit comes in the aftermath of the recent India-Myanmar Foreign Office Consultations in December 2007, and our continuing engagement with Myanmar on the bilateral front.

The Foreign Minister met the Hon'ble Vice President. EAM hosted a luncheon in honour of the visiting dignitary. The programme of the Foreign Minister will also include a visit to Gaya and Kolkata.

399. Report on the visit of Foreign Secretary Shivshankar Menon to Myanmar.

New Delhi, February 11, 2008.

India has reiterated its request to the Myanmar Government to accelerate moves towards a more inclusive democracy.

Foreign Secretary Shiv Shankar Menon, during his two-day visit to Myanmar which ended on February 10, conveyed New Delhi's concern over the detained political activists including pro-democracy leader Aung San Suu Kyi and the need to involve her more intimately in promoting political reconciliation.

The Myanmar Government has unveiled plans to hold a referendum on a new Constitution, which it assured, form the basis for elections. But the political stalemate continued as Ms. Suu Kyi's National League for Democracy slammed the move to hold a referendum without holding consultations. Mr. Menon pointed to the need for broad-based political reforms. In a departure from the position taken by the West, India opposed sanctions as it believed they would hit most the marginal and the destitute.

India felt the desire for sanctions was directly proportional to the distance from Myanmar of the country demanding it. India shared over 1,400 km of porous but strategic border with Myanmar, which was also a staging post for insurgencies. India noted the movement towards reconciliation by Myanmar including four rounds of talks between a Government representative and Ms. Suu Kyi since the thaw in the military regime's attitude about four months ago. Myanmar had also signalled its readiness for a discourse with multilateral institutions by permitting United Nations official Paulo Sergio Pinheiro to assess the human rights situation. Four years earlier it was not possible. But now the military regime led by Senior General Than Shwe has entered into sporadic contacts with U.N. officials. New Delhi's stand operated within the parameters defined by External Affairs Minister Pranab Mukherjee: "We want political reforms and the process of reconciliation to start immediately and it has to be inclusive. As far as possible, important political prisoners should be released."

400. Extract relevant to Myanmar from the Statement of External Affairs Minister Pranab Mukherjee in the Lok Sabha on Foreign Policy Related Issues.

New Delhi, March 3, 2008.

* * * *

The Foreign Minister of Myanmar visited India in early January 2008 and briefed us on initiatives taken by the Myanmar Government for political reform and national reconciliation. Foreign Secretary also visited Myanmar in February 2008. Myanmar is India's close neighbour and a gateway to the ASEAN. We have emphasized to Myanmar that the process of national reconciliation should be broad-based to include all sections of society including Aung San Suu Kyi and the various ethnic groups. India fully supports the United Nation Secretary-General's good offices and his Special Envoy Mr. Ibrahim Gambari's mission to initiate a process of dialogue. At the bilateral level, co-operation in cross border infrastructure development projects, for providing better connectivity to the landlocked North-Eastern region of India is an important area of our relationship with Myanmar. Considering our common ethnic linkages and security considerations, it is essential for India to ensure that there is peace and stability in Myanmar during the period of its political reforms.¹

❖ ❖ ❖ ❖ ❖

1. For full text of the statement, pl. see Document No. 19.

401. Press Release of the Ministry of Home Affairs on India - Myanmar consultations for an institutional mechanism to strengthen Security Cooperation between the two countries.

New Delhi, March 10, 2008.

India and Myanmar have expressed strong desire that the common border between the two countries should be a region and symbol of peace and harmony so that the benefits out of various infrastructure projects and economic cooperation between the two countries can be fully realized. Both sides have agreed to work closely for achieving these objectives and, in this context, discussed various institutional mechanisms to strengthen security cooperation¹. The understanding was reached at the 14th National Level Meeting between India and Myanmar which began here last Friday (March 7) and concluded today (March 10). The Indian delegation was led by the Union Home Secretary, Shri Madhukar Gupta, and the Myanmar delegation by their Deputy Minister for Home Affairs, Brig. General Phone Swe. At this meeting, various issues of mutual concern including those related to security, drug trafficking and border management were discussed.

Later, the leader of the Myanmar delegation called on the Home Minister, Shri Shivraj Patil. The Home Minister recalled the strong and close bonds between the two countries and emphasized the importance of strengthening cooperation in the areas of security and border management as well as in the context of India's 'Look East' policy.

Myanmar is a close and friendly neighbour with whom India shares a border of around 1650 kms. India-Myanmar bilateral relations are reflective of the multi- dimensional and traditional linkages between the two countries.

¹ A beginning is expected to be made in the form of police- to-police interaction between northeastern states along the border and their counterparts in Myanmar. The existing arrangements are related to Army-level contacts between the two countries. Effective control of the border continued to be a matter of concern for India, which has been calling for steps to rein in militants operating from bases in Myanmar. India shares a 1640-km border with Myanmar, mostly along Arunachal Pradesh, and Mizoram. With large stretches being "porous", there are frequent instances of militants operating in these states, including members of the NSCN (K) and ULFA, crossing over into Myanmar. With a slew of infrastructure projects on, including the India-Myanmar-Thailand highway and the Kaladan multi-modal transit transport project, improving the security atmosphere in the region was considered a high priority.

402. Press Release of the Ministry of External Affairs on the visit of Myanmar's Vice Senior General Maung Aye.

New Delhi, April 2, 2008.

His Excellency Vice Senior General Maung Aye, Vice Chairman of the State Peace and Development Council, Union of Myanmar, is currently visiting India between 2-6 April 2008 on the invitation of the Hon'ble Vice President of India, leading a high level delegation, including members of the business community. Apart from Delhi, he will also be visiting places of economic, scientific, historical and religious interest.

H.E. Vice Senior General Maung Aye called on the Hon'ble President, Hon'ble Vice President and Prime Minister today soon after his arrival in Delhi. He also met the External Affairs Minister and the Chief of Army Staff. He will be meeting the Hon'ble Leader of Opposition tomorrow.

During his call on the Hon'ble President, the two leaders expressed satisfaction at the fast growing multifaceted relations between the neighbours. The relationship encompassed a wide range of areas including cross-border developmental projects, trade, IT, Telecommunication, hydrocarbon, etc. In particular, Hon'ble President expressed happiness at the conclusion of the Kaladan Multi modal Transit Transport project. This project will greatly enhance connectivity between Myanmar and India, in particular with India's North East States¹. Both leaders noted with satisfaction

¹ Called the Kaladan multimodal transit transport project, it involves developing an alternative trade route between India and Myanmar to provide access to India's North East region, along the river Kaladan in Myanmar at a cost of over Rs. 550 crores. The agreement was signed by External Affairs Minister Pranab Mukherjee and Vice Senior General Maung Aye, the number two in Myanmar's ruling hierarchy. Termed a project of strategic significance, it would not only provide an alternative access route from any part of the country to the land-locked north-eastern states but also skirt Bangladesh. The development of this route became necessary since Bangladesh had reservations on providing transit facilities for access to the North East through its territory. The importance of this route lies in the fact that the existing route to North East is a long one. On the new route Indian vessels would enter Sittwe port from the Bay of Bengal. From Sittwe, the Kaladan river will be made navigable for 225 km up to a place called Kaletwa. From there, a 62-km highway will take the traffic to the India-Myanmar border in Mizoram. A road from the border will then link the project to National Highway-54. It may be recalled that the Union Cabinet on March 27 had sanctioned of funds for upgrading Myanmar's Sittwe port and Kaladan waterway as well as construction of a road up to the India-Myanmar border. The allocation of Rs. 535.91 crore under the 'aid to Myanmar' route included the construction and improvement of a 117-km road from the Myanmar border to National Highway 54. It is also hoped that if the Indian companies bag oil blocks in Myanmar, a pipeline could be built along the route if shipment to the eastern coast is economically unviable.

the growing cooperation at the regional and multilateral level, especially keeping in mind India's Look East Policy and its special focus on CLMV countries in the ASEAN.

During the call on Prime Minister, PM recalled his meeting with the Prime Minister of Myanmar in November 2007. Expressing his happiness at the signing of the Kaladan Multi Modal Transit Transport project and other agreements during the visit, PM stressed the importance of pursuing various cross-border projects to promote greater connectivity and economic engagement between the two countries. Both leaders noted that more needed to be done to enhance trade between the two countries and, towards this end, agreed to take steps to open up the existing border points in the North East States for regular trade. Both leaders recognized the need to cooperate closely in the hydrocarbon sector. PM reiterated India's commitment to support Myanmar in the Telecommunication and the IT sectors. H.E. Vice Senior General Maung Aye thanked India for its generous assistance inter alia for cross-border infrastructure projects, construction of roads, lines of credit and establishment of IT Centre at Yangon. Cooperation in security matters on the India-Myanmar border was also discussed.

Noting the positive steps being taken by the Myanmar Government towards national reconciliation and political reforms, including the announcement of elections in 2010, Prime Minister underlined the need for Myanmar to expedite the process and make it broad-based to include all sections of society, including Daw Aung San Suu Kyi and the various ethnic groups in Myanmar. PM expressed support for the UN Secretary General's good offices and his satisfaction at the facilitation of the visit of UN Special Envoy, Prof. Ibrahim Gambari by the Government of Myanmar.

Later in the evening, during his call on Hon'ble Vice President, H.E. Vice Senior General Maung Aye conveyed the recent initiatives taken by the Government of Myanmar on their political reform and national reconciliation process and the announcement of referendum in May 2008 and elections in 2010. The Hon'ble Vice President reiterated India's support to the efforts of UN Secretary General's Special Envoy, Mr. Gambari and conveyed that India did not believe that sanctions were helpful and that it may well prove to be counterproductive. The discussions covered all areas of mutual bilateral interest and the growing cooperation between India and the ASEAN. In his speech at the dinner banquet hosted in honour of the

visiting dignitary, the Hon'ble Vice President recalled the historical and cultural bonds between the two countries. Calling Myanmar as a natural bridge between ASEAN and SAARC, he reiterated the mutual desire of India and Myanmar to build on the commonalities and synergies between the two countries.

Several agreements were signed in the presence of the Hon'ble Vice President and H.E. Vice Senior General Maung Aye, including the Agreement and two Protocols of the Kaladan Multi Modal Transit Transport project and Double Taxation Avoidance Agreement.

Myanmar is a close and friendly neighbour, with whom India shares a border of more than 1,600 kms. Myanmar also serves as a gateway to South East Asia and ASEAN. External Affairs Minister had visited Myanmar in January 2007. The Foreign Minister of Myanmar H.E. U Nyan Win had visited India in January this year and Foreign Secretary visited Myanmar in February 2008.

403. Speech by Vice- President M. Hamid Ansari at a Banquet in Honour of Vice Senior General Maung Aye, Vice-Chairman of the State Peace and Development Council of the Union of Myanmar.

New Delhi, April 2, 2008.

Your Excellency Vice Senior General Maung Aye, Vice-Chairman of the State Peace and Development Council of the Union of Myanmar.

Madame Daw Mya Mya San,

Distinguished guests from Myanmar,

Ladies and Gentlemen,

It gives me great pleasure to extend to Your Excellency and Madame Daw Mya Mya San and your distinguished delegation a very warm and cordial welcome. It is always a matter of joy and satisfaction when friends come calling. The fact that you have returned to India after nearly eight years makes this a very special occasion.

Excellency

India and Myanmar are bound by historical, cultural, religious and above all emotional bonds. The common cause we forged during the colonial era was the natural culmination of the common heritage we both share right from the dawn of history. Lord Buddha's life, his teachings and his rich legacy brought India and Myanmar closer, as indeed it did India and the rest of Asia. It is an irony that Emperor Bahadur Shah Zafar was exiled to Myanmar and King Thebaw was exiled to India. Mahatma Gandhi himself visited Myanmar several times before independence.

Even while facing the challenges of nation-building and development in a post-independence era, neither of our Governments has given up our sovereign space or our capacity to act independently in foreign policy.

Excellency

Your visit in 2000 proved to be a path-breaking one. Over the last decade, our bilateral relations have grown from strength to strength. Underpinning our relations has been our mutual desire to build on our commonalities and synergies, to enhance sustained economic development of our peoples,

to promote peace and tranquility along our border, to undertake developmental projects and to foster people-to-people interaction.

We appreciate your continuing support for expanding our bilateral ties into a truly multi-faceted one. Our cooperation now encompasses a range of areas including telecommunications, roads, cross-border projects, Information Technology, oil and gas, science and technology and culture.

Since your last visit, we had two very successful visits of His Excellency Senior General Than Shwe to India in 2004 and of the Hon'ble President of India Dr. Abdul Kalam to Myanmar in 2006.

Excellency

This visit would be remembered as one that has significantly transformed our bilateral relations. The Agreement and Protocols for the Kaladan Multi Modal Transit and Transport Project by both countries will be a milestone in our mutually beneficial cross-border cooperation. This project will considerably enhance connectivity to our North East States. Both our countries are exploring more innovative ways of enhancing our trade, including opening up our border to regular trade. The accelerated development of our border areas will be to our mutual benefit and, towards this end, we should continue our joint endeavour to ensure peace, stability and security on our borders.

Excellency

Myanmar's location makes it a natural bridge between the member countries of the ASEAN on the one hand and SAARC on the other. In many ways, Myanmar is our gateway to ASEAN and occupies a central place in our 'Look East' policy. We are both partners in BIMSTEC and the Mekong-Ganga cooperation process. It is evident that our bilateral relationship has an important bearing on regional cooperation initiatives.

As a close and friendly neighbour, we appreciate the recent initiatives taken by your Government to take forward the process of national reconciliation and political reform and wish you well in your efforts to broad-base this process.

We are confident and optimistic that your visit will open a new and dynamic chapter in our bilateral ties. Our vision is of a long-term bilateral partnership with Myanmar, a partnership based on mutually beneficial cooperation, trust, friendship and understanding.

Excellencies, Ladies and Gentlemen, may I now request you to join me in a toast:

- to the health and happiness of His Excellency Vice Senior General Maung Aye and Madame Daw Mya Mya San,
- to the continuing friendship and cooperation between India and Myanmar,
- and, to the progress and prosperity of our two peoples and countries.

404. Protocol on Maintenance and Administration of Kaladan Multi-modal Transit Transport Facility Between the Government of the Republic of India and the Government of the Union of Myanmar.

New Delhi, April 2, 2008.

The Government of the Republic of India and the Government of the Union of Myanmar (hereinafter referred to as the contracting parties);

Desiring to jointly maintain and administer the Kaladan multimodal transit transport facility for mutual benefit.

Respectful of the principles of sovereignty, equality and mutual benefit;

Have agreed as follows:

ARTICLE 1

The Kaladan multimodal transit transport facility consists of the following:

- (a) Sittwe Sea port constructed under this facility and transshipment to river vessels and vice-versa in Myanmar;
- (b) River navigation in Kaladan river and transshipment facility at Setpyitpyin (Kaletwa) in Myanmar; and
- (c) Road link from Setpyitpyin (Kaletwa) to India-Myanmar border

Upon completion of construction of the Kaladan Multimodal Transit Transport facility, the Government of the Union of Myanmar shall carry out

operation, maintenance and administration of the said facility to ensure that the facility is available to both Contracting Parties.

ARTICLE 2

The maintenance of the facilities shall cover the following system components:

- (i) Waterway
- (ii) Port and Inland water terminals
- (iii) Inland Vessels
- (iv) Highway

The maintenance of waterway shall cover dredging and desiltation, repair and upkeep of navigational marks, hydrographic surveys, issue of river notices, data generation through water level gauges and discharge measurements, channel patrol for security of navigational aids/buoys.

The maintenance of Sittwe port terminal and Inland waterway terminals shall cover. port jetty, IWT jetties and approaches, bank protection, internal access roads, handling and transportation equipment and other associated utilities at terminals such as electrical system, water supply, bunkering, fire fighting etc.

The maintenance of highways shall cover ordinary repairs of routine nature, periodic renewals, special repairs and emergency repairs. The ordinary repairs cover maintenance of culverts and drains, pavement patch works, sealing of cracks, road signage etc. The periodical renewal would involve provision of wearing course at a predetermined frequency to safeguard the road and ensure better riding quality. The special repairs would involve improvement of curves and visibility, repair of culverts, bridges etc. The emergency repair would cover the damage caused by heavy rains, cyclones, landslides etc. to restore traffic.

ARTICLE 3

All expenditure related to the operation and maintenance of the facility such as routine repair and maintenance, conservancy of port and river navigation channels, manpower and establishment costs including fuel and power costs, shall be met out of the earnings. In case of exigencies, the

issues shall be resolved by mutual consultation between the Contracting Parties, with a view to ensuring the smooth operation of the facility.

ARTICLE 4

The tariff and dues such as port dues, berthing charges, stevedoring charges, conservancy charges and charges for handling and storage facilities at Sittwe Port shall be according to the rates established by the Myanmar Port Authority. Road-toll charges and other miscellaneous charges, related to generation of resources for the facility shall be discussed and mutually agreed upon. The handling facilities installed at the port jetties of Sittwe and Setpyitpyin (Kaletwa) and the storage facilities in the back up area of the terminals shall be available to vessels and vehicles of both the contracting parties. Charges of any other kind on the cargo/ operators/ vessels/ vehicles/ equipment etc. for handling, storage, transit or any other operation during the course of transit transport other than mutually agreed and determined by the Contracting Parties, shall not be imposed.

ARTICLE 5

The Government of the Union of Myanmar shall be responsible for the requisite conservancy services related to port and river navigation channels. The conservancy services shall also include carrying out periodic hydrographic surveys, issue of river notices, channel marking and upkeep of aids to navigation.

Similarly, for highway also, routine and periodic condition surveys will be carried out to keep the highway traffic-worthy.

ARTICLE 6

The necessary documentation required for transit transport shall be mutually agreed by the Contracting Parties.

ARTICLE 7

The vessels operating in Myanmar territory shall be allowed to purchase a reasonable amount of stores, which they may require for their operation during the voyage at places of bunkering. Similarly, road transport vehicles plying in Myanmar territory shall be allowed to purchase stores at transit and parking places.

ARTICLE 8

Fresh food and other provisions essential for fleet and terminal operation personnel shall be allowed to be purchased in Myanmar territory to meet

their daily requirements. The purchases shall be made at the points of bunkering and terminal locations of Sittwe and Setpyitpyin (Kaletwa). In exceptional circumstances purchases may be made at places other than the above points. The appropriate authorities of either country shall prescribe the manner in which such purchases may be made, should it be deemed necessary.

ARTICLE 9

The riverine cargo vessels and oil barges shall be constructed in accordance with the respective national laws and relevant class rules formulated by International Association of Classification Society.

All Vessels in operation in Kaladan multimodal transit transport facility, calling for urgent repairs shall be allowed to have repairs done at the existing repair docks that are available in the Myanmar territory. The expenditure incurred on such repairs shall be paid directly by the vessel operator to the concerned repair docks.

ARTICLE 10

Myanmar authorities shall extend all the necessary facilities to the vessels in the event of their grounding or otherwise in distress during their berthing in terminals and their voyage through the waterways. Expenditure incurred on salvage operations shall be borne by the operators of vessels.

In the unfortunate events of capsizing of vessel while in voyage or during berthing at terminals, Myanmar authorities shall extend all necessary assistance such as rescue, fire fighting, etc., on humanitarian grounds.

Similar facilities shall also be extended to road transport vehicles using the transit and transport facility.

ARTICLE 11

The licenses, safety certificates and other documents issued by the relevant authorities for the vessels and road transport vehicles shall be recognized and accepted as valid by both Contracting Parties. These certificates or documents shall be produced by the Master of the vessels / the road transport operator concerned to the inspection authorities or Myanmar as per the legal requirement.

ARTICLE 12

All inland vessels deployed in the waterways shall carry national flag of Myanmar besides their house flag to identify the vessel.

ARTICLE 13

Inland Vessels shall be allowed to be equipped with radio-telephone for facilitating effective communications while in transit through the facility, in conformity with the regulations prevailing in Myanmar territory.

ARTICLE 14

Any dispute and grievance of the users that may arise during the operation of the transit transport facilities shall be settled through mutual consultation.

ARTICLE 15

This protocol shall form an integral part of the Framework Agreement on the Kaladan Multi-Modal Transit Transport Facility. It shall enter into force on the date of its signature.

In witness whereof, the undersigned being duly authorized by their respective Governments, have signed this Protocol:

Done at New Delhi on the 2nd day of April, in the year 2008 in three originals each in Hindi, Myanmar and English languages, all the texts being equally authentic. In case of any difference or doubt, the English text shall prevail.

For the Government of the
Republic of India

(Pranab Mukherjee)

405. India's Reaction to the cyclone in Myanmar.

New Delhi, May 5, 2008.

A devastating cyclone hit Myanmar especially in Yangon and the Irrawaddy Delta causing immense damage to life and property. As the story of devastation unfolded, India's response had been swift in coming to the aid of the beleaguered country. The response was on May 5, when the Spokesperson of the Ministry of External Affairs said in his briefing to the media:

As you are aware, a severe cyclone hit Myanmar on 02-03 May 2008 causing widespread death and devastation, especially in Yangon and the Irrawaddy Delta. The Government of Myanmar have now estimated the death toll to be in thousands and the damage to have been more extensive than feared earlier.

The President Smt. Pratibha Devisingh Patil, Prime Minister Dr Manmohan Singh and External Affairs Minister Shri Pranab Mukherjee have each sent messages of condolence to the Government and the people of Myanmar. In his message to the Foreign Minister of Myanmar, EAM has extended his deep sympathy to the victims and the bereaved families. He has also conveyed India's readiness to provide immediate emergency relief assistance to Myanmar to cope with this calamity.

As we have announced earlier, in keeping with India's historical, close and good neighbourly ties with the friendly people of Myanmar, the Government of India is dispatching immediately two Indian naval ships from Port Blair with relief and medical supplies carrying food items, blankets, clothing, medicines, etc. We are also considering further immediate relief and medical supplies, including by air.

The very next day, on May 6 when it was found that the devastation was unprecedented, the Spokesperson in his briefing said:

- Recent reports are revealing that the death toll there is reaching immense proportions. Ten thousand people are reported dead and several thousands are missing. There is also widespread devastation. As we told you yesterday, the Indian leadership has sent messages of condolence. Prime Minister has conveyed his heartfelt condolences to the Government and people of Myanmar and announced India's readiness to assist Myanmar in their relief efforts.

- EAM also wrote to his counterpart conveying heartfelt sympathies to those who have suffered in the cyclone and condolences to the bereaved families on behalf of the Government and people of India. He also conveyed India's readiness to provide relief assistance and emergency assistance to help Myanmar cope with this calamity.
- As a follow up to these messages, two Indian Navy ships INS Rana and INS Kirpan, will reach Yangon early tomorrow morning carrying essential relief and medical supplies. India is also sending two Indian Air Force aircraft carrying tentage and medical supplies which are urgently required. These are also expected to reach Yangon tomorrow.

In the next couple of days it was clear to the Government of India that Myanmar needed more assistance to meet the unfortunate situation, New Delhi's response was further articulated by the Spokesperson (on May 8):

In the wake of the devastating cyclone in Myanmar where more than 20,000 persons are reported dead and 40,000 missing, two Indian Navy ships - INS Rana and INS Kirpan - carrying immediate relief and medical supplies reached Yangon yesterday (May 7, 2008). The Myanmar Minister for Social Welfare, Relief & Resettlement, Maj. Gen. Maung Maung Swe, received the relief supplies and thanked India for the prompt and spontaneous response.

Two AN-32 aircrafts carrying tents and medicine have also reached yesterday. They were received by H.E. Foreign Minister of Myanmar U Nyan Win, who expressed his gratitude for the prompt and generous assistance of the Government of India.

An IL-76 aircraft carrying tents, medicine and roofing material reached Yangon today. Another IL-76 aircraft will be leaving Delhi on Saturday (May 10, 2008) for Yangon¹.

1 Interestingly while Myanmar had no difficulty in accepting Indian assistance for the cyclone relief, it had serious reservations accepting the U.S. assistance because Myanmar's leadership was apprehensive of the intrusive nature of American assistance and the role of American personnel distributing the aid. America anxious to help with

406. Briefing by Official Spokesperson on India's assistance to Myanmar in the wake of devastating Cyclone.**New Delhi, May 12, 2008.**

Official Spokesperson (Shri Navtej Sarna): Good afternoon. Firstly, Myanmar. As you know, in the wake of the devastating cyclone in Myanmar where nearly 100,000 persons are reported dead and thousands missing, India's assistance has been spontaneous and immediate keeping in mind our close and friendly neighbourly relations with Myanmar. Two Indian Navy ships - INS Rana and INS Kirpan - carrying immediate relief and medical supplies, and five Indian aircrafts carrying tents, medicine, roofing material and other relief items have reached Myanmar. This included an IL-76 aircraft which landed in Yangon today carrying Meals Ready to Eat.

The External Affairs Minister spoke to H.E. U Nyan Win, Minister for Foreign Affairs of the Union of Myanmar. He expressed deep sorrow at the tragic loss of lives and widespread damage to property and underlined the empathy and solidarity of the Government and people of India with the Government and people of Myanmar.

humanitarian assistance given the reports of unprecedented damage and loss of life running in thousands approached New Delhi besides Chinese Foreign Minister and UN Secretary General to intercede with Yangon to soften the Myanmar's opposition to US assistance. The State Department Spokesperson McCormack told the media about Ms. Rice's conversation with Mr. Mukherjee and said while "part of their discussion was also about the Indian civil nuclear deal but they focused quite a bit on the issue of Burma [Myanmar]. And the message was to urge all the parties to do what they can to reach out and use whatever leverage they have with the top decision-making layer in the Burmese regime to get them to reverse the course that they have been on in terms of not allowing large scale humanitarian supplies to come into Burma, and then also, and very importantly, to allow experts who can offer assistance with humanitarian relief into Burma." "The issue to this point has been the decision of the Burmese regime not to allow in large-scale assistance. We're doing everything that we possibly can but importantly, the entire international system is mobilised now to do what it can to convince the Burmese regime to change its decision," added the spokesperson Sean McCormack. As a result of India's efforts, the US aircraft was able to land in Yangon where the aid cargo was unloaded. According to media reports Mr. Mukherjee while conveying this to Ms. Rice, explained her the need to move gradually with the military regime in Yangon which was sensitive to western presence on its soil. It may be noted that India had intervened in the past as well to facilitate the second visit of UN Special Envoy Ebrahim Gambia into Myanmar.

EAM reiterated India's readiness to assist Myanmar in whatever way we can in both the relief and rehabilitation efforts. He also urged Myanmar to accept international relief supplies to supplement their efforts.

The Foreign Minister of Myanmar expressed gratitude for the prompt and generous assistance of the Government of India. Myanmar have also conveyed their readiness to accept international relief and medical supplies. These are today's developments regarding Myanmar.

* * * *

Question: With reference to Myanmar, has India in any way raised concern about reports that are coming so far about UN relief material being stamped by the regime there? Have you in any way been concerned about it?

Official Spokesperson: Not to my knowledge. But this is a first conversation that has taken place with the External Affairs Minister and, as you can see, we have offered all assistance possible and we have expressed our sympathies. Our aid and assistance has been appreciated.

❖ ❖ ❖ ❖ ❖

**407. Press Release of the Ministry of External Affairs
announcing Indian contribution of US \$ 200,000 for repair
and renovation work at Shwedagon Pagoda complex in
Yangon, Myanmar.**

New Delhi, June 3, 2008.

India has decided to contribute US \$ 200,000 towards repairs and renovation work at the holiest of Buddhist shrines in Myanmar - the Shwedagon Pagoda complex in Yangon.

During the visit of Hon'ble Minister of State for Commerce & Power, Shri Jairam Ramesh to Yangon in May 24-25, 2008, he visited the Shwedagon Pagoda and witnessed the damage to some of the structures in the complex by the devastating cyclone in Myanmar earlier in May.

Given the close and friendly relations between the two countries, particularly India's ancient civilizational and spiritual links with Myanmar and in keeping with our commitment to assist Myanmar in the rehabilitation phase, India will contribute a sum of US\$ 200,000 for the renovation of the Shwedagon Pagoda complex¹.

1 When Minister of State of Commerce and Power Jairam Ramesh again visited Myanmar later in June, he presented a cheque for \$200,000 to the trustees of the sacred Shwedagon Pagoda in Yangon on June 22. The contribution was meant for repair of the holy shrine following damage caused to it by the recent Hurricane Nargis. Handing over the cheque, Mr. Ramesh said that it demonstrated the goodwill that the people of India have for the Myanmar people. The assistance also showed the deep cultural, geographical and historical bonds between the two countries. India was among the very first countries to send relief supplies as well as team of doctors to Myanmar in the aftermath of Hurricane Nargis. India had also agreed to finance the cost of 16 power transformers that were damaged in the cyclone. The assistance would amount to about \$20 lakh.

408. Press Release of the Ministry of Commerce on the visit of Minister of State for Commerce and Power Jairam Ramesh to Myanmar.

New Delhi, June 24, 2008.

India and Myanmar today signed four economic cooperation agreements demonstrating the expanding partnership between the two countries. The agreements were signed in the Myanmar capital in the presence of the Union Minister of State for Commerce and Power, Shri Jairam Ramesh and the Myanmar Minister for National Planning and Economic Development, Mr. U Soe Tha. He also called on the Myanmar Minister for Commerce Brig. General Tin Naing Thein and the Minister for Electric Power, U Zaw Min.

The first agreement is the Bilateral Investment Promotion Agreement (BIPA) between the two governments designed to facilitate greater Indian investment in Myanmar and vice versa. The Agreement, the 71st of its kind that India has entered into, provides a framework for the resolution of disputes, for promotion and protection of investment, for extending national treatment and most-favoured-nation treatment, for repatriation of investment and returns and for entry and sojourn of technical and managerial personnel.

The second agreement is a credit line agreement between the Exim Bank of India and the Myanmar Foreign Trade Bank for \$ 64 million for financing three 230 kv transmission lines in Myanmar to be executed by the Power Grid Corporation of India.

The third agreement is a credit line agreement between the Exim Bank of India and the Myanmar Trade Bank for \$ 20 million for financing the establishment of an aluminium conductor steel reinforced (ACSR) wire manufacturing facility to be used for expansion of the power distribution network in Myanmar.

The fourth agreement is between the United Bank of India and the Myanmar Economic Bank for providing the banking arrangement for the implementation of the border trade agreement between the two governments that takes place at Moreh (in Manipur) at present. Shri Jairam Ramesh also took up the expansion of border trade centres to

include Avangkhu and Lungwa in Nagaland, Zowkhathar in Mizoram, Pangsau Pass in Arunachal Pradesh and Behiang, Skip and Tusom in Manipur. In addition, he informed the Myanmarese Minister for Commerce that India would like to see normal trade at the border and not have it restricted only to specified items like at present in Moreh where trade only in 22 specified items is permitted.

Shri Jairam Ramesh also expressed India's great interest in participating in developing the hydel power potential on the Chindwin River in Myanmar and hoped that preliminary work on identifying and detailing these projects would commence soon. India is already developing hydel projects in Bhutan and recently Indian private companies have won contracts to develop hydel projects in Nepal also. India's investment in hydel power in Myanmar would bring significant benefit to both countries.

409. Press Note issued by the Ministry of Commerce on the visit of Minister of State Jairam Ramesh to Myanmar.

New Delhi, October 16, 2008.

The Prime Minister of Myanmar H.E. General Thein Sein and the Minister of State for Commerce & Power Shri Jairam Ramesh inaugurated the India-Myanmar Centre for Enhancement of IT Skills (IMCEITS) in Yangon today. The IMCEITS, set up by the Centre for Advancement of Computing (C-DAC) with Indian assistance, will be connected to ten regional centres and train nearly 1000 IT professionals per year.

In a significant development, India and Myanmar have announced the conversion of border trade to regular trade. Earlier, the India-Myanmar Joint Trade Committee, headed by the Minister of State for Commerce & Power and the Myanmar Minister for Commerce Brig. Gen. Tin Naing Thein met on 14-15 October 2008 in Mandalay. Both countries agreed to convert the present border trade at Moreh-Tamu and Zokhawthar-Rhi border points to normal trade. All goods except a handful of restricted items can now be traded at these points at MFN rates. The Joint Trade Committee also decided to open border trade at a new border point Avakhung (Nagaland) - Leshi (Myanmar), expand the current list of items for barter trade under the India-Myanmar Border Trade Agreement to 40 and operationalise the new banking arrangement for trade. The Ministers also reviewed bilateral cooperation in the field of gas/petroleum, power, information technology, telecommunication and agriculture including pulses.

The Myanmar Government announced their intention to submit the Letter of Intent to join the Duty Free Tariff Preference (DFTP) scheme of India under which India would provide unilateral tariff concessions to Myanmar on 94% of the tariff lines covering 99.6% of the trade. Myanmar has, in recent times, become an important trade partner of India. In 2007-08, India's exports to Myanmar were US \$ 185.28 million and imports were US \$ 809.55 million, with total two-way trade between the two countries almost touching one billion US \$.

410. Press Release issued by the Ministry of External Affairs after the conclusion of India-Myanmar Foreign Office Consultations.

Yangon, November 23, 2008.

The 9th Foreign Office Consultations between India and Myanmar were held in Yangon on 22-23 November 2008. The Indian side was led by Foreign Secretary Shri Shivshankar Menon and the Myanmar side by H.E. Deputy Foreign Minister U Kyaw Thu.

Leaders of both delegations expressed satisfaction at the close and friendly relations between the two countries and emphasized the need to maintain the momentum in bilateral relations. They welcomed the exchange of several high-level visits from both sides, including that of the visit of H.E. Vice Senior General Maung Aye, Vice Chairman of State Peace and Development Council in April 2008, and H.E. Prime Minister of Myanmar, General Thein Sein in November this year. .

The discussions covered a wide range of bilateral issues, including security and border issues, trade and economic cooperation and cooperation in cross-border developmental projects, IT, Energy, Power and Education & Training. Both countries stressed the need for greater vigilance at the border and agreed to enhance security cooperation to combat insurgent groups and arms smuggling. The decisions taken during the 3rd Joint Trade Committee held in October 2008 were welcomed, which included converting Indo-Myanmar border trade into normal trade, opening of a border trade point at Avakhung in Nagaland and expanding the existing border trade items from 22 to 40. Both sides expressed willingness to enter into an arrangement for long-term purchase of pulses from Myanmar.

Both countries appreciated the strengthening of cooperation in the areas of Energy and Oil & Natural Gas. They expressed satisfaction at the recent signing of an MoU on the development of Tamanthi and Shwezay Hydropower Projects on the Chindwin River in Myanmar. Other projects in the power sector include the renovation of the Tahtaychaung Hydropower Project, construction of transmission lines, replacement of transformers damaged during cyclone Nargis, supply of biomass gasifiers and solar lamps. India announced the waiver of the ban on wheat export to Myanmar for 950 tonnes. .

India welcomed Myanmar joining SAARC as an Observer and its taking over BIMSTEC Chairmanship in 2009. Both countries expressed

satisfaction at the close engagement between India and ASEAN and the special relationship of India with CLMV countries in supporting their developmental efforts. .

The talks were most cordial and constructive. Foreign Secretary invited his counterpart to India for the next Foreign Office Consultations - an invitation, which was readily accepted.

NEW ZEALAND

411. Speech by President Shrimati Pratibha Devisingh Patil at the banquet in honour of the Governor-General of New Zealand Anand Satyanand.

New Delhi, September 9, 2008.

Your Excellency, The Honourable Anand Satyanand,

Madame Satyanand,

Distinguished Guests,

Ladies and Gentlemen,

On behalf of the Government, the people of India and on my own behalf, it gives me great pleasure to extend a warm and cordial welcome to Your Excellency and Madame Satyanand on your first State Visit to India. I also extend a hearty welcome to the distinguished members of your delegation.

Excellency, your visit to India is the first ever by a Governor-General from New Zealand. We look upon your visit as ushering in a new phase of cooperation in the India-New Zealand relationship.

Our two nations share an extraordinary convergence of values, ideals and concerns. We have demonstrated a remarkable degree of independence of spirit in defending and upholding democratic values that are vitally important to the family of nations. Both our nations are active participants in regional and international fora and have worked together in close cooperation in matters of mutual interest and concern. It is this affinity of values and aspirations that has enabled our peoples to come closer. The

ease of blending of the significant Indian community with the New Zealand society, arises from a common appreciation of intrinsic human values.

We note with satisfaction a new momentum in our bilateral relations, especially since the visit of Prime Minister, the Right Honourable Helen Clark, to India in October 2004. The regular exchange of ministerial visits, the several agreements in operation for bilateral cooperation in education and information technology and high level official consultations have imparted a strong impetus to deepening and diversifying our bilateral relationship. The significant potential that bilateral investment, trade, tourism and the film industry hold, needs to be tapped and developed for mutual benefit.

It was an expression of the solidarity of our two peoples, that I had the privilege of conferring on late Sir Edmund Hillary, the Padma Vibhushan, one of India's highest civilian awards. We acknowledge, similarly, the magnanimous gesture of the City Council of Wellington, of the unveiling of a statue of Mahatma Gandhi on October 2 last year, the date dedicated by the UN General Assembly as the International Day of Non-Violence.

We recognise the imperatives of strengthening the UN system and other international organisations so that they are truly representative and reflective of contemporary reality, in order to address more effectively the political, social and economic challenges that confront the world community. In this context, India stands ready to shoulder greater responsibilities in the international arena.

Among the many challenges, terrorism and climate change are issues of enormous global consequence calling for thoughtful and prudent action. We acknowledge the expression of solidarity that New Zealand has extended to India in its steadfast struggle against the menace of terrorism.

India has adopted a strong national action plan on climate change so that carbon emissions remain within reasonable limits and our environment is protected. India's per-capita emissions are among the lowest in the world and India's carbon footprint is, indeed, small. India is committed to a path of sustainable development in harmony with its environment.

India's imperative, to maintain a high growth rate of its economy, to enhance the quality of life of our people and to generate employment for all, needs little emphasis. Internationally, nuclear energy has been acknowledged as a clean source for producing electricity with negligible environmental impact.

To develop this sector, we have in place effective and comprehensive regimes, which meet the highest international standards. In this regard, India has always demonstrated a strong commitment to non-proliferation objectives and has an impeccable record. Thus nuclear energy can help us meet the challenges of economic development, energy security and climate change, simultaneously.

Excellency, I do hope that what you see and experience during this State visit will reinforce the image that you have of a vibrant India taking significant strides towards progress and prosperity, in harmony and constructive partnership with the community of nations. India has always been and will continue to be a nation that stands by its commitments. At no time in our history, have we been ever wanting in promoting the cause of peace, economic progress and stability in our journey of socio-economic development.

We wish to reaffirm India's abiding friendship and goodwill for the people of New Zealand and our commitment to building a stronger and more flourishing bilateral relationship.

Ladies and Gentlemen, may I invite you to join me, in a toast to: -

- the health and well-being of Your Excellency and Madame Satyanand; and
- the close friendship and strong partnership between India and New Zealand.

SINGAPORE

412. Press Release of the Ministry of Commerce after review of economic relations with Singapore.

New Delhi, June 23, 2008.

Shri Kamal Nath, Union Minister of Commerce & Industry, has stated that a Bilateral Agreement on Intellectual Property Rights (IPR) Cooperation between the Intellectual Property Offices of India and Singapore will be signed shortly. During his bilateral meeting with Mr. Lim Hng Kiang, Minister for Trade and Industry of Singapore, here today, Shri Nath informed that as regards ASEAN-India FTA, considerable progress was made during the last meeting in Bali and added: "I am now hopeful that we would be able to achieve our target of announcing the conclusion of negotiations at the AEM-India Consultations in August".

During the interaction, Shri Kamal Nath said that Singapore was India's 5th largest merchandise trading partner and 4th largest merchandise export market and added that India's exports to Singapore grew by 16% in the year 2007-08 compared to a growth of 42% in the imports from Singapore. He further stated that Singapore ranks 4th in terms of foreign direct investment in India during the period 1991-2008 with investments of US \$ 4.7 billion.

The total bilateral trade during 2006-07 was US \$ 11.49 billion and has increased by 25.88% to US \$ 13.42 billion in the year 2007-08 (up to February 2008) over the same period in 2006-07. Major items of Indian exports to Singapore were: petroleum (crude & products); other commodities; transport equipments; electronic goods and non-ferrous metals. Major items of Indian imports from Singapore were: electronic goods; petroleum (crude & products); organic chemicals; machinery (except electrical & electronic) and project goods.

The top five sectors attracting FDI inflows from Singapore are: petroleum & natural gas, mining, services sector, construction activities and power, whereas the top five sectors attracting technology transfer are: electrical equipments (including computer software & electronics), hotel & tourism, food processing industry, chemicals (other than fertilizer) and miscellaneous mechanical & engineering industries.

VIETNAM

413. Press Release of the Ministry of Home Affairs on the signing of the MOU for Bilateral Cooperation between India and Vietnam on Security Matters.

New Delhi, March 24, 2008.

India and Vietnam have signed a Memorandum of Understanding (MoU) for bilateral cooperation in security matters which, among others, would include international terrorism, illicit drug trafficking and trans-national crime. The MOU was signed here today following delegation-level talks between the Union Home Minister, Shri Shivraj Patil and the visiting Vietnamese Minister for Public Security, General Le Hong Anh.

During the delegation-level talks, the two sides reviewed the on-going initiatives and discussed issues relevant to wider and enhanced co-operation in security-related matters. Capacity-building and training issues were substantially addressed.

General Le Hong Anh is visiting India with a team of senior officers on the invitation of the Union Home Minister, Shri Shivraj Patil. The visit has further catalysed the momentum in high-level exchanges between the two countries.

Shri Shivraj Patil had earlier paid an official visit to Vietnam from 8th to 10th October last year. During the visit, a Treaty on Mutual Legal Assistance in Criminal Matters between India and Vietnam was signed. The Treaty facilitates widest measures of mutual assistance in prevention, investigation and prosecution of crime, service of summons and other judicial documents, execution of warrants and other judicial commissions, and tracing, restraint, forfeiture and confiscation of proceeds and instruments of crime.

During the visit, India had agreed to impart training to officers of Vietnam in investigation of bank fraud cases, organised crimes, money laundering, economic offences, drug trafficking, cyber crime and scientific investigation. Two courses have since been conducted and more are likely to be conducted shortly. India had also agreed to set up in Vietnam a laboratory on cyber forensic at an estimated cost of 2.2 crore rupees in a phased manner. The components of this project are being put together in a prioritized manner.

414. Memorandum of Understanding for Cooperation between the Ministry of Home Affairs of India and The Ministry of Public Security of the Government of Vietnam.

New Delhi, March 24, 2008.

The Ministry of Home Affairs of the **Republic of India** and the Ministry of Public Security of the **Socialist Republic of Vietnam** (hereinafter referred to as the "Parties");

Guided by the desire to consolidate the strategic cooperative partnership between the two countries;

Recalling the Joint Declaration on the comprehensive cooperation framework between the Republic of India and the Socialist Republic of Vietnam signed in May 2003 and the Joint Declaration on the Strategic Partnership between India and Vietnam signed on July 06, 2007;

Reaffirming the desire to further strengthen and consolidate their discussions and cooperation in the framework of their bilateral dialogue mechanism on counter terrorism, transnational organized crime, and other relevant areas;

Have agreed as follows:

Article - 1

The Parties shall enhance cooperation, subject to their respective domestic laws, in combating international terrorism. To this end, the Parties shall:

- (a) Exchange experiences and information on terrorist activities, terrorist groups and their linkages;
- (b) Exchange experiences on combating hijacking, hostage situations and other crimes similar to terrorism;
- (c) Coordinate anti-terrorism endeavours at regional and multilateral levels.

Article - 2

The Parties shall cooperate, subject to their respective domestic laws, in the prevention and suppression of transnational organized criminal and illegal activities as follows:

- (a) Money laundering, other economic crime;
- (b) Illegal production, distribution and trade in narcotic drugs and psychotropic substances including chemical precursors;
- (c) Illegal dealing and trafficking in firearms, ammunition, explosives, strategic and prohibited materials;
- (d) High-tech crime;
- (e) Other transnational organized crime.

Article - 3

Cooperation between the Parties in the areas above shall be accomplished by:

- (a) Exchanging information in all areas indicated in Article-1 and 2 above;
- (b) Taking coordinated measures in their respective territories against illegal and criminal activities indicated in Article-1 and 2 above;
- (c) Exchanging regulations, publications and results of scientific research in the areas of mutual interest;
- (d) Making joint efforts in scientific research, technical exchange in all areas covered under Article-1 and 2 above.

Article - 4

The Parties shall promote coordination in regional and multilateral endeavours with reference to areas listed in Articles 1 and 2 and for this purpose carry out exchange of positions and views on related regional and multilateral issues.

Article - 5

The Parties shall strengthen cooperation in the areas of training and capacity building and to this end:

- (a) Organize technical exchanges between their respective Ministries, agencies, and organizations;
- (b) Provide training slots, on a reciprocal basis, in their training institutions;
- (c) Encourage exchanges between police forces and experts to share experiences and training;

- (d) Facilitate exchange of regulations, publications and scientific research in areas of mutual interest; and
- (e) Organize seminars on issues of mutual interest.

Article - 6

The Parties shall strengthen co-operation between Interpol National Central Bureau (NCB), India and Interpol National Central Bureau (NCB) Vietnam, in a beneficial manner in accordance with the Interpol's Regulations.

Article - 7

The Parties shall establish a mechanism to facilitate the effective implementation of the Memorandum of Understanding and to this end:

- (a) Designate the Policy Planning Division of the Ministry of Home Affairs of the Republic of India and the International Cooperation Department of the Ministry of Public Security of the Socialist Republic of Vietnam to work out the details, timing and methods of implementation of this Memorandum of Understanding, which shall be submitted to their respective Ministers or corresponding officials for approval;
- (b) Send delegations to meet once every year, alternately in the capital of each country, to exchange information on the implementation of this Memorandum of Understanding and discuss plans for future cooperation;
- (c) Encourage to strengthen the exchanges of police, security delegation between the Parties, especially the exchanges of expert delegations on special subjects and specific areas as agreed by the Parties;
- (d) Hold meetings between experts, when considered necessary, by mutual agreement in advance; and
- (e) Contact details of focal points on both sides may be exchanged for speedy interaction to facilitate the implementation of the Memorandum of Understanding.

Article - 8

The delegation and official exchange under this Memorandum of Understanding shall be implemented; the international return airfare shall be borne by the delegation sending Party while meals, accommodation and local transport shall be borne by the delegation receiving Party.

Article - 9

The information and materials exchanged under this Memorandum of Understanding shall not be handed over to a third party without the prior consent, in writing, of the originating Party.

Article - 10

Issues not covered by this Memorandum of Understanding may be decided through consultation between the Parties.

Article - 11

This Memorandum of Understanding shall be valid for five years commencing from the date of signing. Before 03 months of expiry of validity, if the Parties do not have any opinions in writing about validity termination, it shall be automatically renewed for another five years. The Memorandum of Understanding may be terminated by either Party after giving a written notice, of its intention to do so, of not less than 90 days in advance. The Memorandum of Understanding is subject to modification by mutual agreement whenever necessary.

Done at New Delhi on the 24th day of March 2008 in two originals each in Hindi, Vietnamese and English languages, all texts being equally authentic. In case of any divergence in interpretation, the English text shall prevail.

415. Briefing by Secretary (EAST) MEA N Ravi on President's visit to Vietnam and Indonesia.

New Delhi, November 21, 2008.

Please see Document No.379

416. Statement of President Smt. Pratibha Devisingh Patil, on board her special aircraft on her departure from New Delhi to Ho Chi Minh City, at the start of her State Visits to Vietnam and Indonesia.

November 24, 2008.

Please see Document No. 380

417. Speech by President Pratibha Devisingh Patil at the business luncheon meeting hosted by the Vietnam Chamber of Commerce and Industry.

Ho Chi Minh City, November 25, 2008.

Ladies and Gentlemen,

I am delighted to be here amongst you today at this very important business meeting. I appreciate the initiative of the Federation of Indian Chambers of

1 A 16-member business delegation from the Federation of Indian Chambers of Commerce and Industry was in Ho Chi Minh City to attend the Business Forum Meeting. A memorandum of understanding was signed between INCHAM and VCCI. In his address, Minister of State for Commerce and Industry Ashwani Kumar said Vietnam was "completely ready to embrace Indian industry." Noting that Vietnam's foreign investment was of the order of \$35 billion in 2007, he listed the investment advantages of the country as "a free market economy with a 95 per cent literacy rate and half its population below the age of 25." With this, the "huge goodwill towards India and leveragable democratic dividend

Commerce and Industry¹ and the Vietnam Chamber of Commerce and Industry in arranging this meeting during my visit to Vietnam.

Vietnam has always been a country that has evoked in India images of bravery and endurance. Under the leadership of President Ho Chi Minh, this great country waged a historic struggle for independence, and won it. The same energy and determination is now visible in Vietnam's economic development and national reconstruction.

Ever since the launch of "Doi Moi", Vietnam has seen rapid economic progress, which has brought prosperity for the nation and higher living standards for the Vietnamese people. I would like to compliment the Vietnamese leaders for their vision and leadership. I am confident that Vietnam will continue to march on its current path in the days and years to come. While the global economy is currently going through a turbulent phase, and which has impacted both India and Vietnam alike, I am confident that with the patience and wisdom of our leaders and sound economic policies of the two governments, India and Vietnam will be able to successfully address the current challenges.

India and Vietnam have a long tradition of friendship and close ties. These ties are based on unbreakable bonds of genuine trust and mutual goodwill. The economic and commercial content in our ties has also seen an upswing in recent years and which I believe would provide even more strength and sustenance to the political ties. The process of economic reforms under way in both countries will also, I am sure, open up even more opportunities for the businesses to create mutually beneficial linkages.

I am happy to know that Ho Chi Minh City, which is the economic engine of

make Vietnam an ideal destination for Indian investments." Vietnam's Vice-Minister of Trade and Industry Le Duong Quang said that in the wake of the adverse impact of the global recession in 2008 there was an "aggressive effort by the Vietnam government to promote foreign investments and we are seeing increasing foreign direct investment owing to our stable and favourable investment climate. We are a reliable partner in the world arena." To a question how Vietnam was managing the impact of the global crisis, Madame Nguyen Thi Hong, Vice-Chairperson of the People's Committee of Ho Chi Minh City, said the administration of the city and the central government had put in place a group of policies "with a focus on stabilising the economy for development with attention to social welfare." Despite the crisis, Ho Chi Minh City had seen a GDP growth rate of 10.9 per cent in the first nine months of 2008, she said.

Vietnam, is home to many Indian companies. I am told that specially in recent few years, several new investments have come to Vietnam from India. The investment by ONGC for oil exploration and exploitation, by TATA Steel for setting up an integrated steel plant, by ESSAR to set up a steel rolling mill, and similarly by many other companies, is good not only for the partner companies and entities, but also for the economic progress of our two countries. More and more linkages and ties will be created through such projects and more and more people will come in contact with each other.

I understand that many Indian companies are exploring investment and trading opportunities in this country in fields as diverse as minerals to pharmaceuticals. I am confident that the Vietnamese Government will continue to provide a congenial atmosphere for Indian companies and businesses to operate in Vietnam. Similarly, I would also request Indian companies to look at all possible areas where joint ventures or partnerships can be created with Vietnamese companies.

Both India and Vietnam are currently focusing on infrastructure development. India has, in recent years, achieved commendable success in this area. Some sectors such as the Highway Development Programme has become a model for public-private partnership, which can be usefully replicated in many other developing countries, including Vietnam. We would be happy to share our experiences. In many other areas, such as engineering, transportation and power generation, Indian companies can transfer their expertise to Vietnamese. Also, in higher education, research and human resource development, India can be a useful partner.

Similarly, there are many areas in which Vietnam has achieved commendable success and where India can learn from Vietnam. Be it processing of marine products or agricultural crops like cashew, pepper, coffee and rice, Vietnam has become a major exporting nation in the world. There are very many useful lessons in Vietnam's success for Indian companies.

Ladies and Gentlemen,

In many regional and multilateral fora, India and Vietnam closely consult and coordinate with each other. India also has very close ties with ASEAN, of which Vietnam is an important member. In fact, India and ASEAN are soon going to sign Trade-in-Goods Agreement. Conclusion of this Agreement will take India-Vietnam economic ties to even greater strength.

Our partnership with Vietnam in Ganga-Mekong Cooperation, the East Asia Summit and similar other regional fora will continue to provide further strength to our ties.

I look forward to my discussions with President Nguyen Minh Triet and other leaders in Hanoi. I intend to discuss with them ways and means to further strengthen our economic partnership, which is a pivotal part of our 'strategic partnership'.

I am confident that the discussions and deliberations at this business meeting will contribute to ever strengthening ties between India and Vietnam.

Thank you.

**418. Speech by President Shrimati Pratibha Devisingh Patil
at the Dinner hosted by Chairman of Ho Chi Minh City
People's Committee.**

Ho Chi Minh City, November 24, 2008.

Your Excellency Chairman Le Hoang Quan, Chairman of Ho Chi Minh City People's Committee,

Distinguished Guests,

Ladies and Gentlemen,

I am, indeed, overwhelmed by the warm welcome given to me and my delegation since our arrival in Vietnam. I am particularly happy to be in this great Ho Chi Minh City, which carries the name of the legendary leader of Vietnam, President Ho Chi Minh.

Excellency, our friendship is historical and traditional with deep cultural moorings dating back to centuries. The foundation of this friendship, which was laid by the leaders of our two countries, remains as solid as ever, amidst the changing world around. I am happy to note that in the current times too, our bilateral relations continue to be nurtured and developed, including through high level exchanges.

Excellency, we in India have sincerely admired the rapid economic progress made by Vietnam. In the rapid march of your country, Ho Chi Minh City has played a pivotal role and continues to be in the vanguard of Vietnam's march towards development. This province has also attracted many Indian investors. I would like to compliment you for your leadership and wish you ever greater success.

Excellency, we in India are also engaged in a similar process of major economic reforms and economic development of our country. Our policies have similarly produced good results. This provides new opportunities for the entrepreneurs, businessmen and industrialists from both countries to interact closely and avail of the emerging opportunities. An Indian business delegation is accompanying me and will be interacting with their business counterparts. We hope that this results in fruitful and productive outcomes.

Tomorrow, I will have an opportunity to visit the History Museum, which houses a rich treasure of the rich history of Vietnam. I will also witness the Water Puppet Show, which I am told is a unique facet of Vietnamese culture. I understand that Ho Chi Minh City has sister city relationships with cities like Osaka, Moscow, St. Petersburg, Toronto, San Francisco, Shanghai, Istanbul and Manila. We can also consider linking Mumbai and Ho Chi Minh City as sister cities. After all, both cities drive the economic engines in our fast growing nations.

Excellency, as our two nations stood by each other in the past, and as we stand now at the threshold of prosperity, it would be our endeavor to walk together, hand-in-hand, for future cooperation. There is immense possibility of further strengthening cooperation in diverse areas so that the strategic partnership between India and Vietnam continues to acquire ever greater strength.

May I now request you all to join me in a toast to: -

- the health of Chairman Le Hoang Quan and of all present here tonight;
- the ever growing friendship and cooperation between India and Vietnam; and
- the prosperity and happiness of the people of Vietnam.

Thank you.

419. Speech by President Shrimati Pratibha Devisingh Patil at the Reception hosted by the Indian Ambassador in Vietnam.

Ho Chi Minh City, November 25, 2008.

Ladies and Gentlemen,

My fellow Indians and

Vietnamese friends,

I am very happy to visit Vietnam and to meet the leaders and the people of this great country. I am delighted to be here today with members of the Indian community, who have all been participating in the rapid economic transformation of Vietnam.

India-Vietnam friendship is deep rooted. The people of India have always stood with the people of Vietnam, once for liberation and re-unification of Vietnam, and now for Vietnam's economic development. Similarly, the people of Vietnam have always held the people of India in high esteem, and have always welcomed Indian visitors. The friendship between us is very strong, based on genuine trust and goodwill.

We salute the achievements of the Indian community in South East Asia, and especially in Vietnam. We are proud that the Indian community is contributing in no small measure to Vietnam's admirable achievements. I am also happy that the Indian community is working and living in an atmosphere of cordiality and camaraderie as the Vietnamese people have always welcomed Indian visitors.

I understand that Indian companies doing business in Vietnam are contributing in promoting Vietnam's exports to India. In a few weeks, we expect that India-ASEAN Trade in Goods Agreement will be signed, thus paving the way for faster growth in trade and help in alleviating various constraints faced by exporters from both countries. We have every intention to fulfill our commitments. This Agreement, we hope, will also address the issue of trade deficit of Vietnam, which is a matter of some concern. India will be happy to help promote Vietnam's exports to India.

There are strong historical and cultural linkages between India and Vietnam. A number of ancient archaeological monuments depicting Indian culture have been found in Vietnam. The famous My Son Cham sanctuary near

Danang is a testimony to such links. I am told that Vietnam has been identified among the countries where new cultural centres are to be set up by the Government of India. The Indian Cultural Centre in Hanoi will be a bridge between the peoples of India and Vietnam.

I am happy to convey to the distinguished gathering here that India today is on the move. Indians are appreciated and respected all over the world for their skill, knowledge and enterprise. Indian companies are marching with confidence to many countries across the globe. Our mission to the Moon - Chandrayaan, is a symbol of our acknowledged strength in science and space technology. There are enormous opportunities that the new India provides to you, from Vietnam and indeed to all in many corners of the world. I invite you to take advantage of such opportunities.

The Indian community must always feel secure in the knowledge that India cares for you. The Ministry of Overseas Indian Affairs has been specifically set up to cater to various requirements and concerns of Indian expatriates living abroad.

I look forward to my meeting with Vietnam's leaders in Hanoi. Our countries are strategic partners and we have every intention to act like one. In fact, all political parties in India have great admiration and respect for Vietnam. There is a very bright future for India-Vietnam relations and for our bilateral cooperation.

I wish you success in your endeavours and seek your continued contribution to the development of India-Vietnam relations.

Thank you very much.

Jai Hind

420. Statement to the Press by President Shrimati Pratibha Devisingh Patil at the end of her visit to Vietnam.

Hanoi, November 27, 2008.

Your Excellency President Nguyen Minh Triet,

Ladies and Gentlemen of the Press,

I am greatly pleased to have had this wonderful opportunity to visit Vietnam, one of India's closest friends. I am privileged to have had this occasion for a detailed exchange of views with His Excellency President Nguyen Minh Triet. My talks with the President were extensive and covered the entire gamut of relations with Vietnam.

Our discussions were held in an atmosphere of traditional friendship and close understanding marked by a warm atmosphere. We expressed deep satisfaction at the level of bilateral relations and the mutually beneficial cooperation and partnership developing rapidly between India and Vietnam. Our discussions included a wide range of subjects of bilateral interest. These covered the expanding bilateral trade and the promising trend of Indian investment in Vietnam. We exchanged views on cooperation in the vital fields of defence and law enforcement, terrorism, information and communications and nuclear technology, lines of credit and cultural cooperation including restoration of the Cham temples. We also discussed regional and international issues of mutual interest, and agreed that terrorism was a global menace that required nations to work jointly.

I condemn in the strongest form the terrorist attacks Mumbai. This mindless attack is the work of those who have no regard for human lives, and are pursuing a path of destruction. My heartfelt condolences to those who have been affected by this act of terror.

Hostages are being held and I am informed that the authorities are dealing with the situation. I hope that this suffering comes to an end quickly and the perpetrators brought to book.

We noted that the Joint Commission has proved to be an effective mechanism in monitoring the activities of cooperation between the two countries in diverse areas and in giving concrete direction to such cooperation in future. We agreed that the 14th meeting of the Commission will be held in Hanoi in 2009.

We also considered exchange of visits between members of Parliaments to be an important instrument to promote bilateral understanding.

I have invited President Nguyen Minh Triet to pay a State Visit to India. The invitation has been accepted.

I am grateful for the warm hospitality extended to me and my delegation, and would like to take this opportunity to convey my deep gratitude to President Triet of the Socialist Republic of Vietnam. I look forward to reciprocating the hospitality we have received when President Triet visits India.

Thank you.

421. Press Statement of President Smt. Ptatibha Devisingh Patil on board the Special Aircraft on her way back to New Delhi after her visit to Vietnam and Indonesia.

December 1, 2008.

Please see Document No. 383

(iii) CENTRAL AND WEST ASIA

422. Address by Vice President M. Hamid Ansari at the inauguration of the Seminar on 'India and the Gulf' organised by the Association of Indian Diplomats at the India International Centre.

New Delhi, February 23, 2008.

I am delighted to be here today, amidst friends, and to talk about a subject that, by accident rather than design, became a life long pursuit.

Confusion about nomenclature is avoidable. The correct name of this body of water is the Persian Gulf (PG). This is recognised by the United Nations, the US Department of State, and by historical maps of the region. This confusion about name is reflected in practical usage; at times we are exclusive and make 'the Gulf' synonymous with the GCC, and at others we include all the littoral states in the term.

The Persian Gulf, and its littoral states, has been described as India's 'proximate neighbourhood'. Our task then is to locate India in relation to the PG states. This necessitates identifying the perception, in self, of the other: to determine (a) how we see these states and (b) how do PG states perceive India? Both are necessary to bring about a convergence of interests and the establishment of mutually beneficial relationships.

Iran occupies the whole of the northern coast of the Persian Gulf and has a coastline of 2440 km; Iraq, by contrast, has 58 km. The narrow entrance to the Persian Gulf in the Straits of Hormuz is controlled on the one side by Iran and on the other by Oman. This entire sub-region is:

- Within the security parameter of India and within the operational radius of the Indian Navy;
- Principal source of imported hydrocarbon energy supplies;
- Principal destination for manpower exports that provides employment to 4.5 million Indian nationals whose remittances exceed to US\$ 9 billion per annum;
- A major trading partner with whom the overall economic engagement is of the order of US\$ 75-80 billion;
- An increasingly important destination for Indian projects, and IT services;

- An increasingly important source for investments into India;
- Having an India-friendly and Indian-friendly orientation and desirous of enhancing its political, economic and technological interaction with India.

The focus of Indian interest, now and in the foreseeable future, is on the imperative necessity of (a) regional peace and stability (b) friendly regimes (c) access to oil and gas resources of PG (d) freedom of navigation in PG and through the Straits of Hormuz, and (e) continued access to regional markets for Indian trade, technology, investments and workforce. Within this general framework, the challenge for India is to develop policy approaches relevant to each of the littoral states.

The Persian Gulf states perceive India as (a) an emerging major power in their neighbourhood (b) a major destination for their primary exports (c) a possible venue for investments (d) a major source of skilled manpower that is acceptable in security terms and (e) broadly acceptable in cultural terms.

Domestic stability and regional peace are prerequisites for the Persian Gulf States to continue playing their role as the principal suppliers of oil and gas. These states, however, are also undergoing social, economic and political transformation that is generating tensions that need to be managed carefully in terms of domestic and external pressures. The imperatives of the 'youth-bulge', in particular, necessitate immediate responses in terms of social and political reforms. There is a near-consensus that these reforms need to be evolutionary. The earlier expectation that political change can be expedited has now been abandoned in favour of stability.

Developments on the domestic scene in each of these states need to be watched and analysed carefully. The forthcoming Majlis elections in Iran may suggest changes in political equations there. Stability and cohesion of Iraq remains an open question. Saudi Arabia and the other GCC states have appeared to imbibe the germs of political change. Kuwait's example of the succession question being settled in parliament, rather than in the ruling family, may have wider implications. In Saudi Arabia, King Abdullah has put in place an Allegiance Commission charged with implementing succession procedures; its efficacy is yet to be tested. The challenge in the immediate future is for the ruling establishments to renew their legitimacy

through a process of political liberalisation, cooption and accommodation. Each society would develop its own road to participatory governance, and should be allowed to do so without external imperatives.

Complexity characterises inter-state relations in the region. These relate to threat perceptions and national interests and need to be reconciled. The process would neither be short nor easy but must nevertheless be undertaken. The littoral states themselves are showing growing awareness of this.

Islamism is an ideology of protest, and of change. A perceptive observer has noted that 'Wahabism constructed from above was a pillar of the status quo. Wahabism from below has become the mortal enemy of the same status quo'. The pressures emanating from Islamist groups and tendencies are unlikely to subside and may gather momentum in the light of the successes recorded by these trends in Egypt, Lebanon and Palestine. At the same time the low levels of political activity in the GCC states, and the ingrained culture of tribal consensus that persists despite urbanisation, is likely to keep these trends within manageable bounds. In Iran, and notwithstanding the power struggle within the establishment, the primary orientation of policy will be reflective of national identity and interests.

The economies of all the Persian Gulf states would continue to prosper in the wake of high oil and gas prices. This would benefit all sections of these societies. Their integration in the global economy would increasingly reduce the local peculiarities. The structural changes now underway, pursuant to a policy of economic diversification away from hydrocarbons, cover areas of interest to Indian business. These include education, healthcare, construction services, insurance and banking, business and financial services, and tourism. An area of analysis should be the impact on India of possible changes in the skills-mix of manpower requirements of GCC countries.

Exercises in futurology have been undertaken, some in terms of pure economic growth and others in terms of variable politico-economic scenarios. No inter-state war appears likely in the region. Divergent security perceptions, however, would continue to prevail. Iran would remain apprehensive of external attempts at regime change or an attack against it. Iraq's threat perception would be focused on national unity and possible external interference.

Non-traditional threat to the security of the Persian Gulf states, or to their economies, can arise from (a) political mismanagement in domestic terms leading to instability and economic disruption (b) violence and terrorism directed at regimes and resulting in domestic instability (c) military action against a regional state by regional or extra-regional states resulting in retaliatory action that could disrupt shipping in the Persian Gulf and prevent / hamper the export of oil. All interested parties (including India), therefore, need to develop contingency scenarios to safeguard their interests.

Recent years have witnessed debates about an alternate security architecture for the Persian Gulf. NATO has been proposed as an option. Some regional states, and opinion makers, have gingerly suggested a role for larger Asian states like China and India. Iran's focus remains riveted on a cooperative security regime of the littoral states. The smaller littoral states, however, seek security in the involvement of Western powers. This debate needs to be monitored closely. The example of CTF 150 is suggestive of an inclination to keep India away from practical arrangements for security of sea lanes in this general area.

All these factors necessitate close and continuous study, and rigorous research, of the region. This, I am afraid, is not being done in adequate measure. The totality of India's interest demands that the 'Look East' policy be supplemented now by a 'Look West' policy.

The need of the hour is to put these studies on a firmer footing on the basis of cooperation between the academia and the business community. Knowledge of operative languages, and familiarity with the region through frequent field-trips, has to be a pre-requisite for such an endeavour.

Today's seminar, I venture to hope will underline the imperative necessity of such an approach. It would be in our national interest.

Thank you.

423. Inaugural Address by External Affairs Minister Pranab Mukherjee at the Conference on "Cooperative Development and Peace in Central Asia: An Indian Perspective", at CRRID¹.

Chandigarh, March 15, 2008.

**Shri Keshub Mahindra,
Dr. Rashpal Malhotra,
Ambassador P.S. Sahai, Prof. R.P. Bambah,
Distinguished Guests,
Excellencies,
Ladies & Gentlemen,**

India firmly believes in working constructively with the community of nations, particularly in its neighbouring regions. The past bears testimony to this cooperative approach, not just in the last sixty years of our independence, but over thousands of years of history. In a historic speech to the Constituent Assembly to mark India's independence in 1947, our First Prime Minister, Pandit Nehru, was mindful of the world community while referring to ending poverty, ignorance, disease and inequality of opportunity. He said, and I quote: "We have to labour and to work, and work hard, to give reality to our dreams. Those dreams are for India, but they are also for the world, for all the nations and peoples are too closely knit together today for any one of them to imagine that it can live apart. Peace has been said to be indivisible; so is freedom, so is prosperity now, and so also is disaster in this One World that can no longer be split into isolated fragments". Unquote. This remains the quintessential guiding spirit of our foreign policy to this day.

Excellencies, Distinguished Guests,

It is a matter of great satisfaction that India enjoys a vast reservoir of trust, confidence, understanding, respect and appreciation in all its five Central Asian neighbours. We cherish this strong foundation and are keen to actively build upon it. In the last fifteen years since the establishment of diplomatic relations with the countries of the region, we have established a sound framework for developing and nurturing these ties. We have periodic exchanges of high-level visits, Inter-Governmental Commissions, Foreign Office Consultations, Working Groups and other institutional mechanisms

1. Centre for Research in Rural and Industrial Development.

to systemically work towards further developing and strengthening our bilateral relations. It is our endeavour to deepen and broaden India's engagement with the region and make it more purposeful, productive and mutually beneficial for both sides.

All relationships are dynamic since they exist in a constantly changing global environment. There have been notable economic, social and political developments in India and all Central Asian states over the past one and half decades. When India launched an economic liberalisation programme in 1991, the Central Asian states had just embarked upon a new course of national transformation and development. The international political and economic scenario has evolved considerably since and Asia has emerged as the new hub of economic activity and growing attention of the international community. It is, therefore, timely to evaluate the partnership between India and the Central Asian region and identify areas for greater thrust and focus in the coming years.

Alongside its own immense domestic challenges, India has extended cooperation in the progress and development of its neighbouring regions. Central Asia has been one of the largest beneficiaries under the Indian Technical and Economic Cooperation (ITEC) programme and we have been offering human resource development training to about 300 candidates annually from this region. India has set up small scale projects in the region in diverse sectors, such as food processing, technical training and information technology. We are presently looking at the possibility of setting up a regional centre in Central Asia which may cater to nationals from the region in areas such as English language training, entrepreneurship development and technical courses. India is also prepared to share its experiences in the banking sector, market mechanisms, services, telecommunications, etc., with the Central Asian states.

There are natural synergies for greater economic cooperation between India and the Central Asian region where economies are strongly dependent on agriculture and dairy farming. India's experience in boosting food production and modernising agro-techniques, under the Green Revolution and subsequent periods, could be relevant for Central Asia, particularly in the context of the recent steep rise in food prices globally. Similarly, the strides made by India to emerge as the largest milk producer in the world, following our White Revolution, may be of interest to the region. India's success in developing small and medium enterprises could also be replicated in Central Asian countries in areas such as processing cotton, wool, leather and in producing carpets.

While efforts on the part of the Governments would continue, it would be important to involve the private sector in our cooperative ventures. A public-private partnership would not only enhance the reach of cooperative development but also make it more sustainable. In India, the private sector has demonstrated its capabilities by contributing immensely to progress in higher education, healthcare and schooling. Central Asian governments have accorded high priority to education and health, and it would be opportune for Indian companies to take initiatives there in these areas.

Excellencies, Distinguished Guests,

India's bilateral trade with all the Central Asian countries taken together stands at a modest US\$ 340 mn. I would urge businesses on both sides to see this as an opportunity. There is enormous potential for diversifying our trade basket. The pharmaceutical sector could serve as an example, as indeed the pursuit of the business potential in textiles & garments, metallurgy, automotive, chemicals, and food-processing sectors in Central Asia. India's technical and managerial skills also have complementarities in the region in the fields of hydrocarbons, mining, mineral processing, construction and industrial production. I believe that involvement of business and industry representatives in such conferences could also contribute by reducing the gap between ideas and their realization.

Absence of direct surface transportation routes has been a major handicap in further developing economic and trade ties between India and Central Asia. The recent steps taken by Kazakhstan, Turkmenistan and Russia to increase road and rail connectivity could be linked to further development of the International North South Transport Corridor. At the same time, air connectivity could be used to overcome this impediment; after all, several Central Asian capitals are closer to Delhi than Delhi is to certain Indian cities. The existing flights connections from Almaty, Ashgabat and Tashkent have potential for expansion in terms of capacities and frequency. The tourist flow and movement of people would also benefit from this development. I would therefore urge Indian air carriers to come forward and evaluate the feasibility of starting flights from India to these destinations and back. Depending on their assessment, the Government would be willing to look at ways of addressing any viability gap.

Excellencies, Distinguished Guests,

Regional organizations play a significant role in creating a conducive atmosphere for growth and development and strengthening cooperation

among countries. With Afghanistan's membership of SAARC last year, Central Asia and SAARC are now contiguous neighbours. This provides a further basis for closer regional cooperation. Some of the natural corollaries could be development of regional transportation networks, easing the movement of people and goods, and broadening the ambit of developmental projects and activities. As an Observer, India is awaiting finalization of guidelines by the Shanghai Cooperation Organization to enable more active and meaningful participation in SCO bodies and activities. Meanwhile, we look forward to identifying measures jointly with the Central Asian countries, so that connectivity can be enhanced.

Peace, stability and security in the region are of cardinal importance to all of us. India and the Central Asian countries are pluralistic societies endeavouring to accommodate the aspirations of diverse groups into a common national thread. Tolerance and mutual respect are the hallmarks of our shared cultures, traditions and heritage. The evils of terrorism, radicalism and narco-trafficking pose a serious threat to our social fabric and economic development efforts. Bilateral instruments such as Working Groups on terrorism should be made more pragmatic and effective by becoming a tool for exchange of concrete information and experiences. We should also look at regional structures to collectively address these challenges and promote our security interests. In this regard, interactions between regional organizations in South and Central Asia could make a fruitful contribution.

In conclusion, let me reiterate my appreciation at this very important initiative that has been taken. Let me also thank the organizers and participants for their contributions to the Conference and convey my best wishes for successful deliberations over the next two days. I hope that the Conference would outline and evaluate mutually beneficial opportunities between India and Central Asian states. The Conference could also aim at bringing out specific recommendations which could be circulated to governments, businesses, scholars and specialists. I look forward to receiving these recommendations.

Thank You.

424. Address by Minister of State E. Ahamed at the 20th Summit of the League of Arab States.

Damascus, March 30, 2008.

Your Excellency, President Bashar Al Assad

Your Majesties, Highness and Excellencies,

Your Excellency Dr. Amre Moussa, Secretary General of the Arab League,

Ladies and Gentlemen,

1. It is a great pleasure and honour to attend the 20th Summit of the League of Arab States in Damascus. On this occasion, I convey warm greetings from the people and leadership of India to the member states of the Arab League and the brotherly Arab people. I would like to express gratitude to H.E. Dr. Amre Moussa, Secretary General of the Arab League and to the Syrian Arab Republic and the members of the League of Arab States for inviting India to this august Conference. I warmly recall my leading the Indian delegation to the 19th Summit in Riyadh. We value this invitation as we have warm and cordial relations with all member states of the Arab League and the Arab League itself. I wish to assure the distinguished congregation that my government is committed to strengthen and diversify cooperation with Arab countries.
2. Relations between India and the Arab world are unique, resting on a civilization and historical foundation, characterized by people to people contacts and socio-economic exchanges for thousands of years. These age-old interactions have enriched our language and literature, culture and customs and art and architecture. India and the Arab world have been cradles of great civilizations of mankind, sharing a quest for knowledge, scholarship and scientific spirit that have left their indelible imprint on human accomplishments over the centuries. In this voyage, India and the Arab world have recognized the importance of the spirit of accommodation among peoples, in their quest for prosperity and peace. The road to progress is full of challenges that test the human spirit.
3. I take this opportunity to reiterate India's consistent and unwavering support for the just cause of the Palestinian people, whose struggle

for six decades has indeed been a very long one. India's solidarity with the Palestinian people was given voice during our own freedom struggle. In the early years of independent India, this policy was consolidated under the leadership of our first Prime Minister Jawahar Nehru. India's empathy with the Palestinian cause and its friendship with the people of Palestine is an integral part of its time-tested foreign policy.

4. India believes that a just, comprehensive and lasting peace in the region can be achieved through negotiations and dialogue so that a sovereign, independent, viable State of Palestine living side by side within secured borders and in harmony with all its neighbors through a negotiated solution to the conflict and in keeping with relevant UN resolutions. India believes that there is no military solution to the problems in West Asia. We have repeatedly called for all parties in West Asia to fully cooperate with the international community in its efforts aimed at achieving lasting peace.
5. At the International Donors' Conference for Palestine in Paris on 17th December last year, India pledged US\$ 5 million for development projects for further strengthening of Palestinian institutions and has committed to provide training to 400 Palestinian officials under the ITEC programme over the next two years. We reaffirm our commitment at the Donors' Conference to assist in the human capacity building and infrastructure development of Palestine. Till date, India has extended assistance to the tune of US\$ 27 million to Palestine, in the form of humanitarian aid and for development of its institutions.
6. The entire world is a witness to the manner in which the border restrictions, economic sanctions and a restrictive regime have brought the Palestinian economy to the verge of a collapse. We have viewed with alarm the continuous vicious circle of attacks, reprisal and counter-attacks, the worsening humanitarian and security situation in Gaza, as well as the continued violence inflicted on innocent citizens.
7. Over the decades, a multi-faceted framework of cooperation has emerged between India and the Arab countries encompassing political, economic, cultural and security areas based on shared interests and concerns for peace and stability in the region and for prosperity of its people. The Arab world has always figured very

high in India's foreign policy priorities. In modern times, traditional bonds have further strengthened and diversified, as our ties have steadily developed. In due course, the Arab world has become our primary source of energy, a growing market for our goods, an important destination for our investment, and a region that provides livelihood to millions of Indians working in the region. India considers the Arab world, a part of its strategic neighbourhood. Arab world is the only region for which the Government of India has appointed a Special Envoy.

8. India has always shown its willingness to share with Arab brethren its experience and expertise in institution and capacity building, governance, science and technology including Information Technology and biotechnology, healthcare and higher education. Indians have shared the growing prosperity of the Arab countries. India has made significant advances in educational, economic and technological fronts. In this context, we look forward to increasing investment from the Arab world in India's infrastructure development which offers a vast array of opportunities. We want to share the benefits of the success achieved so far with all our Arab friends.
9. India desires to strengthen cooperation to opportunities where we can share our capacities in human resource development including training of our Arab friends across the entire spectrum of potentialities that exists. We wish to work together to enable and ensure a framework for future generations to consolidate our ties in emerging sectors of the economy. The Arab world has the capital, while India has the opportunities, especially for the development of infrastructure. The more the long-term linkages that India and the Arab world develop, the greater our mutual stakes and interests in each other's success and prosperity.
10. In conclusion, I would like to convey our gratitude to the Government of the Syrian Arab Republic for the gracious hospitality extended to the members of my delegation. On behalf of the people of India and their leadership, I convey our good wishes for the success of the Summit.

**425. Speech by External Affairs Minister Pranab Mukherjee
at the India - Arab Investment Projects Conclave.**

New Delhi, April 18, 2008.

I am happy to have this opportunity of inaugurating the Arab - India Conclave. This is a laudable effort by FICCI, one of India's oldest industry bodies and I congratulate it for taking the initiative. I also take this opportunity to extend a very warm welcome to all the delegates and wish them productive participation in this two-day conclave.

I wish to extend a special welcome to our friends from the Arab world, whose association with India through commerce spans many centuries of our common history. The Silk Route between Asia and the Middle East was, until the 13th century, among the world's most important trade routes. Trade and investment between these regions have again assumed great importance in the modern era. Today, it is up to governments and the private sector to work as partners in both India and the Arab countries and create a more responsive investment climate that will allow this new Silk Route to achieve its full potential.

This Conclave is aimed at businesspersons and potential investors keen on establishing or expanding their existing projects through enhanced financial, technical and managerial participation in India and the Arab countries. It is also reflective of the desire of Indian industry to engage and increase its involvement in its extended neighbourhood. Today, there are enormous opportunities for profitable ventures in areas as diverse as IT, telecom, auto parts, healthcare, biotech, etc. There is also great potential in areas such as food-processing, education, manufacturing, construction and banking services.

In my view, however, the most important opening for the future is the chance for investible capital on one side to combine virtuously with capacity and experience on the other side. The increased availability of financial resources and investment opportunities at both ends of the new Silk Route is there for all to see. It is now for all of us to devise and help build a modern and strong bridge over the Arabian Sea by enabling the flow of resources and expertise between the two ends. This is especially relevant because one area where India has developed considerable expertise is capacity building, which we would like to share with our Arab friends.

Ladies and Gentlemen,

Let me underline for you three of the most important macro-economic challenges facing India. The first and possibly most important, is enhancing agricultural productivity. Increasing yields and productivity through appropriate technological inputs is our primary aim. This would entail creation of better infrastructure in irrigation facilities, improved quality of seeds, improved farm practices in post-harvest management, including cold chains, etc. We also need to tap the potential available in the agro-based food processing sector, for which enough scope exists through public-private partnerships. While the achievement of food security in the last five decades remains one of our greatest success stories, we are not immune to occasional global imbalances, especially of the kind that we are seeing at the moment.

Our second major challenge, which is almost inextricably linked to the first, is guaranteeing our energy security. India has to depend, to a large extent, on imported fuels for meeting its energy needs. Our energy needs will grow in keeping with our projected growth. High oil prices, now averaging more than 100 dollars a barrel, are a drag on our resources that could otherwise have gone for more productive purposes. We are conscious of these challenges and are exploring avenues for bilateral as well as multilateral cooperation with source countries. Our aim is to enter into long term arrangements for guaranteed supply of energy. We are simultaneously making efforts in the area of renewable energy and new technologies. Civil nuclear cooperation with various countries will also help in the achievement of our energy security objectives.

Thirdly, India is a country of young people. For many years to come, India will be one of the important contributors to the available global workforce. However, in order to sustain this, we need to invest in our people, in their education and in their skill-building.

Ladies and Gentlemen,

For meeting all these challenges, India needs capital. Our guests from the Arab world would be aware that many of the countries they come from are not only flush with funds, but also have massive capacity to invest in the infrastructure needs of India. I am happy to convey that a delegation headed by the Deputy Chairman of the Planning Commission is visiting Saudi Arabia in early May to begin discussions on these ideas. Earlier, an official delegation had gone to Oman to discuss prospects for the creation of a bilateral fund to finance infrastructure projects. All these efforts are part of

an approach to encourage investment from capital rich countries for infrastructure projects in India.

In this context, it is also noteworthy that like India, many Arab countries too are about to reap the talent and energy dividend of a young population whose needs for employment have to be met. Here, the respective capacities and capabilities of India and the Arab countries can prove perfectly complementary. Large projects in infrastructure or in the education and training sector can be the perfect vehicles for absorbing the budding talent of our respective young work-forces.

It is also pertinent to mention here that more than 4.5 million Indian nationals are working in the Arab countries in harmony with the local environment. Their contributions to their host countries through their skills and to India through remittances are remarkable. More importantly, they possess a wealth of experience in infrastructure construction projects which is invaluable. Monetary remittances are a tangible asset, but equally important, if not more, is the value of skills acquired through experience at work.

I am emphasizing these points because, to a large extent, our growth will depend on how we handle investments in infrastructure and remove bottlenecks. It is estimated that infrastructure alone will require an investment of more than 500 billion dollars in the next five years. We are on track to take speedy and faster decisions regarding investments in infrastructure such as rail, ports, airports, transport corridors, shipping, telecom, to name a few. Foreign Direct Investment has to increase substantially in these sectors to complement domestic investments. Given the opportunities available today, our friends from the Arab countries have a broad menu of sectors to choose from. An expansion of the investment footprint of Arab countries in India is long overdue and would be most warmly welcomed by government and business alike.

Friends, we have to take the first steps confidently, yet with care. Standing here, I see many familiar faces who are used to taking business decisions in an environment of uncertainty and have tasted success too. I take this opportunity to assure you that the reform process, which is approaching the end of its second decade, has now matured. The growth story of India and the achievements posted thus far provide us an opportunity to think ahead for an inclusive process that takes into account the needs and wants of all sections of the population, to enable us to lift more and more people from below the poverty line. It is a task that can be and has to be done by

public-private partnership. I look ahead with the confidence that India and the Arab world can work closely together for a brighter future for our following generations.

I wish the India - Arab Business Conclave successful deliberations and all success in its endeavours.

Thank you.

426. Speech by External Affairs Minister Pranab Mukherjee at the Emirates Centre for Strategic Studies and Research(ECSSR) on "India's Foreign Policy and India-Gulf Relations: Meeting the Challenges of the 21st Century".

Abu Dhabi, May 12, 2008.

It is an honour for me to address this august gathering at the Emirates Centre for Strategic Studies and Research. This institution has acquired a well-deserved reputation as a centre for foreign affairs research and as a podium for the expression of important ideas relevant to contemporary times. I am grateful to Dr. Jamal Al-Suwaidi, Director General, for providing me with this opportunity to share some of my perceptions pertaining to our contemporary environment. These perceptions guide India as it shapes its foreign policy and its ties with this important region - the Gulf.

India's ties with the Gulf go back many centuries: every area of the Arabian Peninsula continues to yield evidence of this intimate relationship. Every year, archeologists and scholars unearth new findings from the soil and from ancient manuscripts. This relationship was so comprehensive that it encompassed every aspect of human life - commercial, intellectual, religious, social and cultural. Indeed, our cultures were enriched by these interactions over the centuries. Today, if we feel a natural affinity for each other, it is because these ties were given shape and content by our ancestors over several centuries.

At the same time, relations between India and the Gulf have remained substantial and vibrant because they were constantly reviewed, and, where necessary, re-invented, so that they always remained relevant to their times.

In ancient times, Indian goods traversed across the Indian Ocean and then across land routes of the Arabian Peninsula to markets in Greece and Rome. Peninsular India had very substantial links with the Arabian Peninsula from pre-Islamic times. Hence, after the advent of Islam, interaction between these two regions continued seamlessly. The impact of the new religion which had taken birth in Hijaz came to be felt in Malabar soon after the divine message was revealed to the Holy Prophet, and a number of Indians became adherents of Islam on the basis of the influence and piety of Arab traders and teachers.

Indian pilgrims, over the last 1400 years, bravely crossed the seas in obedience to the call of the Almighty and performed Haj every year in their thousands. In due course, India came to meet most of the needs of this region - food and clothing, as also items of comfort and luxury such as silks, muslin and gold jewellery. It is interesting to note that the principal items exported from India to this region have not changed over the last several centuries: basmati rice, textiles and jewellery continue to constitute an important part of our exports to the Gulf!

The advent of the "oil boom" from the early 1970s qualitatively transformed our relationship. Now, as the countries of the Gulf embarked on massive programmes for the development of their infrastructure, including their hydrocarbon industries, India was in a position to meet their need for human resources.

It would not be an exaggeration to say that for the last 35 years, India has been a reliable source that has been drawn upon by the Gulf countries to meet their requirements of professionals, technicians and labour. It is a matter of pride for us that Indians are associated with most projects undertaken in the Gulf, as contractors, sub-contractors and as contributors of human resources.

Again, in recent years, the profile of the Indian community has changed in accordance with the changing needs of the Gulf. As the Gulf economies move slowly towards the development of the services sector, more and more Indian professionals have begun to come to the Gulf: 20 years ago, the Indian community was blue collar to the extent of 85-90 per cent, with a negligible percentage of professionals; today, it is only 65% blue collar, with 15-20% being professionals.

Before we identify the contours of the new ties between us that would be relevant for this century, let me briefly touch on the principal challenges before us. As I see it, the world today is characterized by two robust but contradictory trends. The first is the trend towards globalization where national boundaries are becoming less relevant in the wake of the movement of technology, finance, information and personnel. However, this scenario of a world without borders, at times referred to as a "global village", is challenged by the other trend, which is the tendency to reject globalization and to assert respective identities and interests.

This is not surprising. Today, the fruits of globalization tend to be enjoyed by those with the appropriate technological and educational tools and training. In this scenario, millions of those who are not similarly endowed and are thus excluded from the fruits of globalization tend to respond by mobilizing support from other similarly excluded groups. The result is resistance to the new global order, at times peacefully, at other times violently. When such a dichotomy occurs within the boundaries of one nation, it cannot but be a matter of concern for policy makers and government leaders.

How are we to cope with these challenges of inequity, both within our national borders and in the world order itself? There are no simple answers to this question, no facile remedies. But I would like to share with you some thoughts I have on this complex subject.

The obvious need, as far as developing countries are concerned, is to pursue the path of high growth rates, with active programmes to address the needs of those at the bottom of the economic ladder. After several years of modest annual growth, India has now entered the era of high growth rates, over 8 per cent per annum across the board, and between 9-12 per cent per annum in certain sectors, particularly the services sector. The impact of these growth rates is quite visible: today, we have a substantial middle class that, in terms of achievement - technological, managerial and financial - is able to hold its own with the best in developed societies. We have also been able to address the problem of poverty substantially. Many more people than before are today able to experience a palpable improvement in terms of food consumed and other aspects of daily life that enhance human dignity.

At the same time, I would not like to play down the problems we still face in India. Despite our successes in poverty reduction, far too many people still

remain in dire economic straits. Hence, the principal challenge before us is to ensure that we maintain high economic growth rates every year for the coming 15-20 years, so that we can bring prosperity to the masses at large.

Two of the most important pre-requisites in this regard for us are energy security and development of infrastructure. India needs \$500 billion in resources to meet specific targets in infrastructure development set out in our 11th Five Year Plan. We also need to expand electric power production six to seven times between now and 2032. Both these challenges, call for a robust national effort to obtain the resources required to meet these targets. It is here that I see the foundations of India's new terms of engagement with the Gulf region.

As a result of high oil prices and prudent fiscal policies, the countries of the GCC have generated extraordinary investible surpluses. More importantly, they are today looking beyond their traditional partners in the West: in fact, the "Look-East" policy is important to all the GCC countries. I am happy to note that all of them see India as an important partner in this regard. Hence, I personally believe that investments will constitute a new, abiding and mutually beneficial area in our ties for the foreseeable future.

The other area of energy cooperation is more familiar to us. For several years, India has obtained the bulk of its oil requirements from the Gulf. Given the Gulf's vast oil reserves and our geographical proximity, I am confident that India and the Gulf will remain long-term partners in the energy sector. However, the challenge before us is to transform the present buyer-seller relationship into something more substantial and enduring. I am referring here to the need for cross investments in each other's energy sectors. Indian companies could participate in exploration and development projects in the Gulf, while Gulf companies could invest in India's downstream and petro-chemical sectors. Both of us also recognize the need for trained personnel in the hydrocarbon sector. Thus, we can collaborate in the development of educational and training institutions, not only covering the technological aspects of the industry, but also related areas such as health, safety and environment sensitivity.

Trade in goods and services between India and the Gulf is expanding rapidly. The export of foodstuff constitutes an important part of India's export basket. Today, we are a reliable supplier of food products to the Gulf countries and this will only expand in keeping with the expansion of Indian agriculture. I thus see India's requirement for energy security and that of

the GCC countries for food security as opportunities that can be leveraged to mutual advantage. In order to strengthen bilateral economic ties, we have now in place institutional arrangements with individual GCC countries and with the GCC as a whole to hold periodic interactions. These should now be made more focused and result oriented.

Ladies and Gentlemen,

I have sketched out some of the broad challenges that the global community faces and the areas that I believe will bind India and the Gulf in the coming years. However, even as we focus on the positive and substantial aspects of our relationship, we cannot ignore the fact that the regional environment within which we are giving shape to our relations is disorderly, insecure and extremely uncertain.

The issue of Palestine is a matter of abiding concern. Even as Israel celebrates the sixtieth anniversary of its Statehood, the rights of the Palestinian people remain to be achieved. This situation cannot be allowed to continue: not only does it cause deep harm to the people of Israel and Palestine, it also has a negative resonance across the region.

India continues to extend its full support to the Palestinian people in realizing their aspirations for a sovereign, independent, viable and united state living side by side at peace with the state of Israel. I believe that the reasonable and pragmatic "Arab Peace Plan", which incorporates the collective wisdom of the Arab leadership, provides a valid basis to address the issue of Palestine, balancing Israel's need for security with the just aspirations of the Palestinian people for statehood.

The other area of concern for us is Iraq, with which India has civilisational ties. We are pained by the continuous violence and instability afflicting Iraq. We wish to see the Iraqi people freely determine their political future and exercise control over their natural resources. We believe the UN has a crucial role to play in the process of political and economic reconstruction of Iraq. The international community, especially Iraq's neighbours and the P-5 countries, should help in finding a political solution to the on-going violence and sectarian strife in Iraq. The US-Iran-Iraq talks are also important in this context and must seriously address these problems. A political process that brings together the different factions in the country and upholds the sovereignty and territorial integrity of this nation is of utmost urgency. India has conveyed its willingness to continue its assistance for

the reconstruction of Iraq in all fields, both bilaterally and through multilateral efforts.

I would now like to say a few words about Iran. President Ahmedinejad visited New Delhi a few weeks ago. This visit reflected our traditionally close relations. We see Iran as a major economic partner, particularly in the area of energy security. Again, taking into account its geographical location, its heritage and its natural resources, it is a significant role-player in regional and world affairs. I believe that engagement with Iran is important. Such engagement can play an effective role in promoting peace and stability in West Asia, particularly in Iraq and Palestine as also in Syria and Lebanon, while supporting the regional and global effort in combating extremism and terrorism. In this regard, I must mention that Iran plays an important role in Afghanistan. The international effort underway there would also benefit from greater engagement with Iran.

There have been, in recent years, some concerns pertaining to Iran's nuclear programme. Our position in this regard is clear: we fully support Iran's attempts to develop its knowledge-base pertaining to the harnessing of nuclear energy for peaceful purposes. However, it has to, in accordance with its own international commitments and obligations, satisfy the international community that its programme is indeed peaceful. In this regard, we believe that the most effective platform to address this matter is the IAEA, and we strongly support the need for continued dialogue between IAEA and Iran, without the accompanying cacophony of recrimination and threats of violence.

I am sure many of you have a deep interest in India's relations with Pakistan. In recent years, India has pursued a policy of positive and substantial engagement with Pakistan. We wish to address issues that have affected our ties over the last several years. We also wish to make progress in areas such as enhancement of physical connectivity and upgradation of economic ties. Through the medium of the composite dialogue, we have addressed a number of serious issues of bilateral interest and I am happy to report that we have made considerable progress in regard to most of them.

While developments in Pakistan over the last one year did slow down the process of bilateral interaction, the overall atmosphere remained positive. We welcome the revival of the democratic process in Pakistan and remain confident that we will be able to pursue the bilateral process of consultation and dialogue and continue to make progress in addressing various issues.

We do, nevertheless, remain deeply concerned about the strength of extremist elements in Pakistan who are not only a source of danger to neighbouring countries such as India and Afghanistan, but are also capable of severely wounding the body politic of Pakistan itself. With their intolerant and extremist mindset and propensity to terror, such forces, unless countered resolutely, could become a source of grave instability in our region.

Ladies and Gentlemen:

India has been a victim of extremist terror for nearly 25 years. We have seen at first hand how societies on the path of progress are torn apart by violence that divides traditionally fraternal groups and encourages hate and intolerance.

Just as we need a robust regional and global effort to pursue our positive and constructive programme of energy security and economic development, so also do we need a similar regional and global effort to combat the scourge of extremism and terrorism. India extends its hand of support and cooperation to the countries of the Gulf and calls upon them to set up vibrant partnerships with us to combat terrorism and also to take up the cause of development. We need to look collectively at the common regional challenges we face - political, economic, social and discuss these issues and find solutions together.

Before I conclude, I would like to say a few words about India's ties with the UAE. India has watched with deep admiration the strengthening of nationhood within a federal structure, which makes the UAE a unique political entity in West Asia. This achievement is entirely due to the wisdom of the founding fathers of the nation, His Highness Shaikh Zayed bin Sultan Al Nahyan, the former President of the UAE and the Ruler of Abu Dhabi, and Sheikh Rashid bin Saeed Al Maktoum, the former Prime Minister and the Ruler of Dubai. Having forged national unity, these two outstanding leaders of our times have put their country on the path of economic, social and cultural progress.

India is proud to have participated in this extraordinary developmental effort that has placed the UAE in the vanguard of nations in terms of its economic achievement. I am delighted to see that Dubai is now positioning itself to emerge as a global services provider, while Abu Dhabi is already a major source of investment on the global scene. Indeed, the UAE's energy resources and investible funds make it a natural partner for India, which is

seeking precisely these resources to sustain her high growth rates. In turn, we see ourselves as partners in the development of the UAE's services sector and the knowledge-based economy, which we will continue to support through our technological, financial and human resources.

Our bilateral relations have been strengthened by regular high level interaction. We were privileged last year to host His Highness Sheikh Mohammed bin Rashid Al Maktoum, Vice President and Prime Minister of the UAE and Ruler of Dubai, and His Highness Sheikh Abdullah bin Zayed Al Nahyan, Foreign Minister of the UAE, who led the UAE delegation for the India-UAE Joint Commission that was revived after 13 years. We are committed to expanding our ties and cooperating in ensuring the peace and prosperity of West Asia as a whole. In this regard, I am happy with the regular consultations that we have on issues of common interest and the steady expansion of our political and economic ties. The interactions between our security and defence personnel and the visits of our naval ships have added a new dimension to our relationship.

Ladies and Gentlemen:

I hope my remarks today have helped clarify certain aspects of how India sees the future of its relationship with this region. For us, this is a relationship to which we accord the highest importance and we remain committed to expanding its frontiers. My visit here today is only one in a series of high level exchanges that have marked our ties. I am confident that, in the coming years, our relationship will continue to grow from strength to strength.

With these words, I thank you once again for this opportunity and for your patience.

Thank you.

427. Briefing points by Official Spokesperson on meeting of the Consultative Committee of the Parliament on External Affairs on Central Asian countries.

New Delhi, November 19, 2008.

- On 19 November 2008, the External Affairs Minister met the Consultative Committee of the Parliament on External Affairs and briefed the Committee Members on India's relations with the Central Asian countries - Kazakhstan, Kyrgyz Republic, Tajikistan, Turkmenistan and Uzbekistan.
- The External Affairs Minister underlined the geographical proximity of the region located in our extended neighbourhood and emphasized the friendly and mature nature of mutually beneficial relations of India with each of the five Central Asian countries. He explained the regular exchange of high-level visits with the region starting from the period of the formation of the Central Asian countries in 1991. In particular, he mentioned that India was chosen as the first country for foreign visits by President Islam Karimov of Uzbekistan and President Nursultan Nazarbayev of Kazakhstan in 1992. Our Hon'ble Vice President has visited Turkmenistan and Kazakhstan in this year and the Deputy Prime Minister of Turkmenistan and Foreign Minister of the Kyrgyz Republic have traveled to India in 2008.
- India has institutionalized its relations with the Central Asian countries through bilateral mechanisms of Inter-Governmental Commissions, Foreign Office Consultations and Joint Working Groups in areas of mutual interest. These forums have been meeting regularly and have effectively steered our bilateral relations in specific areas. The External Affairs Minister referred to the Inter-Governmental Commission Meeting with Tajikistan taking place under the co-chairmanship of the Commerce Secretary on 19-20 November 2008 in New Delhi.
- Referring to steady political and economic development in India and the five Central Asian countries over the years, the External Affairs Minister noted that the trade figures were modest. The Minister mentioned the constraint of direct surface transportation routes between India and the region. He noted that the Government encouraged our private enterprises to adopt innovative approaches

for greater trade and investment with the region. He mentioned the impressive performance of Indian pharmaceutical products in the Central Asian countries. He also spoke about investments by Indian companies in Central Asia, particularly investment of US\$ 80 million by Spentex Group in the textile sector in Uzbekistan and US\$ 200 million by Ratteria Group in metal and mineral mining in the Kyrgyz Republic. He also mentioned that presence of Punj Lloyd in the field of oil and gas infrastructure and Indian IT companies - TCS, NIIT, APTECH and 3i-Infotech - in Kazakhstan.

- The External Affairs Minister mentioned the lines of credit extended by Government of India to all Central Asian countries and their mixed results. Taking into account the debt burden, India had written off two lines of credits to Tajikistan and Kyrgyz Republic. Government of India has undertaken some small scale projects in the region at its cost - food processing projects and IT centres in Tajikistan, Uzbekistan and Kyrgyz Republic. India is going to establish an IT centre in Turkmenistan and has started work on renovating and uprating a mini hydropower plant 'Varzob' in Tajikistan at an estimated cost of Rs. 75 crores. During natural disasters, India has extended humanitarian assistance to Tajikistan and Kyrgyz Republic.
- The Minister mentioned about the synergies in the hydrocarbon sector and bilateral efforts with these countries to pursue them. He mentioned that India had signed Framework Agreements in the field of oil and gas exploration and production with Kazakhstan, Uzbekistan and Turkmenistan and Indian companies are engaged with their counterparts there. He referred to an India-CIS Roundtable on Hydrocarbons scheduled next week (25-26 November 2008) in New Delhi. The Minister pointed out possibilities for cooperation in other mineral resources, including uranium, particularly after the NSG's recent decision on international civil nuclear cooperation with India.
- The External Affairs Minister noted India's efforts to contribute to human resource development in the Central Asian countries, particularly through training facilities funded by India under the Indian Technical and Economic Cooperation (ITEC) programme. He also mentioned the Government's support for academic exchanges, seminars, exhibitions and workshops between India and the countries of the region. Indian cultural centres based in Tashkent, Astana and

Dushanbe have been promoting cultural ties and these efforts have been well-received there.

- He noted considerable commonalities between India and the countries of the region in terms of pluralistic and multi-ethnic societies sharing similar concerns and perceptions. India has Joint Working Group on Counter Terrorism with Uzbekistan, Kazakhstan and Tajikistan. The Minister also mentioned growing defence cooperation with the Central Asian countries, particularly in the field of training.
- There are considerable convergence of views between India and the countries of the region on international issues, including international peace, security, sustainable development and terrorism. The Minister mentioned the Shanghai Cooperation Organisation (SCO) with Kazakhstan, Kyrgyz Republic, Tajikistan and Uzbekistan as members and India as an Observer State. India has participated in all Heads of State and Heads of Government meetings of the SCO since becoming an Observer in 2005. At the last SCO Heads of State Meeting in Dushanbe in August 2008, the SCO had decided to enhance the engagement and participation of Observer States in its work. India has been supportive of Kazakhstan's initiative of a Conference on Interactions and Confidence building measures in Asia (CICA).

428. Briefing by Secretary (East) in the Ministry of External Affairs N. Ravi on India-Arab Forum on Cultural Partnership.

New Delhi, November 20, 2008.

Official Spokesperson (Shri Vishnu Prakash): Good evening.

Secretary (East), Mr. N. Ravi is here to brief you about the India-Arab Forum on Cultural Partnership which is taking place in association with FICCI. To Secretary (East)'s right is JS (WANA) Mr. Tripathi; and to my left is JS (Gulf) Mr. Manickam. After the briefing, Secretary (East) will take a few questions. Thank you.

Secretary (East) (Shri N. Ravi): Good evening to all of you.

As just now mentioned, we are having the second part of the India-Arab Forum Partnership through business cooperation and now partnership through cultural cooperation. The Business Cooperation event was conducted in Delhi in April this year. We are now going to have the India-Arab Forum Partnership through Culture starting 2nd December, and till 7th of December it will be held in New Delhi.

Most of you are aware that India's trading links with the Arab world are as old as time, and these interactions over a period of time have really contributed immensely to our understanding of each other's culture, growth and development of economies. In countries like Oman we have people who have settled there, and who still have connections with Gujarat, for the last five to six or even seven generations in some cases. Over a period of time this link has translated itself in different areas, whether we import energy from there or we have, shall we say, employment of more than 4.5 million Indians across all Arab countries.

The Federation of Indian Chambers of Commerce and Industry in association with the Ministry will be organizing this Forum in Delhi. The six-day event will actually be inaugurated by His Excellency the Minister of External Affairs Mr. Pranab Mukherjee and His Excellency Dr. Amr Moussa, Secretary-General of the League of Arab States. The inauguration will take place on the 2nd of December at the FICCI Auditorium here in Delhi.

There are certain elements of the programme. The inauguration would be on the 2nd followed by a Seminar on India-Arab Relations on 2nd and 3rd December at the Indian Council for World Affairs in Sapru House. Then

there is also an Arab painting exhibition from 3rd to 7th December at the Indira Gandhi National Centre for the Arts. Then there is an Arab film festival; there are cultural performances; there is an Arab handicrafts fair. All these will take place in the FICCI Auditorium and in the FICCI lawns during this period between 3rd and 7th of December.

The Closing Ceremony is on the 7th. At the Opening Ceremony there will be a kind of a cultural performance on the evening of the 2nd where we expect a performance by the Cairo Opera House Modern Dance Theatre. That would be taking place on the 2nd evening.

In terms of participation from the Arab side we have the Culture Ministers from Oman, Palestine, Morocco, Egypt and certain other countries whom we are awaiting some confirmations. As soon as they come in you will have the information.

This Cultural Partnership, as I said in the beginning, marks the second part of the interaction which started with the business interaction in which, if my memory serves me right, about 200 business interactions were organized and up to 100 million dollars worth of proposals were discussed. Some of them have really fructified in the area of real estate, and some in the area of component manufacture. The details I do not have but I am sure FICCI would be able to help you in this.

In this Forum, we are having about 12 Arab countries taking part in different areas whether it is music or art or dance. About 200 artistes from the Arab world would be in Delhi over a period of about four days. We are going to screen award-winning Arab films during this period. A little over 100 pieces of art by modern Arab painters and sculptors would be exhibited at the IGNCA.

Overall, we hope that this would really bring the essential facet of our historical links back into the forefront in the modern era to bring our relations even closer.

Thank you.

Official Spokesperson: Questions please.

Question: Why did it take so long to organize a thing like this?

Official Spokesperson: It takes time to organize such an event. The business programme was organized much earlier because it was easier to establish

links. To collect people across different art forms it takes a little time. So, we have now come down to the end of the year. It is as simple as that.

Question: It has already been talked about that India wants, if nothing else yesterday the Navy Chief said, that all the Navies of different countries who are in the Gulf area to come together under the UN flag to work against piracy. Has India approached the UN for any effort on this matter? What is the procedure in this? When is this going to happen?

Secretary (East): The UN proposal is I think still in the making. The final shape is not yet known. The countries concerned are still examining the shape. But as we wait, there are two Resolutions of the UN Security Council - 1816 and 1838 - which actually directly relate to this issue of piracy. The UN Security Council Resolution 1816 of 2nd June 2008 allows States cooperating with the Government, meaning the Transitional Federal Government of Somalia, for a period of six months to enter Somalia's territorial waters and use all necessary means to repress acts of piracy and armed robbery at sea in a manner consistent with international law. The Resolution which succeeded this, 1838, seeks repressive action in a manner consistent with the United Nations Convention on Law of the Sea. So, under the UN Security Council Resolution 1816, the Government of India has conveyed through the Permanent Representative of Somalia in New York to the President of the Security Council our desire to use all necessary means to repress acts of piracy and armed robbery at sea. As far as the incident of yesterday is concerned, the Indian boat took retaliatory action because they were fired at. After I think giving reasonable warning they retaliated and the result was that one of the so-called mother ships apparently sank, but it is still a report. So, effectively there are already two Resolutions of the United Nations which permit all countries to take recourse to a particular method by which they can deal with this problem. So, the new UN, shall we say, proposal is still under consideration of different countries. So, something concrete will emerge only after everybody has consulted with each other.

Official Spokesperson: Thank you.

429. Press Release of the Ministry of External Affairs on the visit of the Secretary General of the League of Arab States Dr. Amre Moussa.

New Delhi, December 2, 2008.

At the invitation of the Hon'ble External Affairs Minister, Shri Pranab Mukherjee, the Secretary General of the League of Arab States, H.E. Dr. Amre Moussa, paid an official visit to India from 30 November to 2 December 2008.

During his visit, the Secretary General called on Hon'ble Vice President, Shri Mohammed Hamid Ansari, and on the Hon'ble Prime Minister, Dr. Manmohan Singh. His Excellency Dr. Amre Moussa also called on Hon'ble Speaker, Lok Sabha.

The Secretary General and Hon'ble External Affairs Minister jointly inaugurated the 'India-Arab Forum: Partnership Through Culture' at the Federation of Indian Chambers of Commerce & Industry on 2 December 2008.

Hon'ble External Affairs Minister held delegation level talks with His Excellency, Dr. Amre Moussa, following which a 'Memorandum of Cooperation between the Republic of India and the League of Arab States on the Establishment of the India-Arab Forum' was signed.

Hon'ble Minister of State for External Affairs, Shri E. Ahamed, called on the Secretary General.

430. Address by External Affairs Minister Pranab Mukherjee at the inauguration of the Indo-Arab Forum: Partnership for Culture.

New Delhi, December 2, 2008.

Your Excellency, Mr. Amre Moussa, Secretary General of the Arab League,

Excellencies, Ministers of Culture

Excellencies,

Ladies and Gentlemen

It is a matter of great honour for me to address this gathering on such a landmark event in India-Arab relations. Let me first welcome His Excellency Mr. Amre Moussa. I also deeply appreciate that several Arab countries including Syria, Sudan, Yemen, Oman, Morocco, and Egypt are being represented in the India-Arab Forum at Ministerial or Deputy Ministerial-level, though some of them have not been able to be physically present here today with us.

India's vibrant relations with the Arab world go back many centuries. It would not be an exaggeration to say that our relations are as old as time itself. The Indus Valley Civilization had vibrant links with the Mesopotamian and the Egyptian civilizations. We have ample archeological evidence for this. Archaeologists and historians are confirming the details of this relationship from excavations as well as from ancient manuscripts.

Our relationship was so comprehensive that it encompassed every aspect of human life; commercial, intellectual, religious, social and cultural. We always had a regular exchange of visitors between India and the Arab world. Queen Hachepsut of Egypt is said to have despatched a large expedition to India. The famous Saudi Arabia traveller Ibn Batuta travelled extensively in India and wrote interesting accounts in his "Rihla". The Sufi saint, Abdul Kadir Jeelani travelled to our northern province of Jammu and Kashmir and left his indelible imprint on the culture in the Kashmir valley. Dionysus was sent by Ptolemy Philadelpus to the Mauryan court, and left an account of India. The Mauryan emperors sent ambassadors to the Egyptian Courts. It is said also that the rulers of Syria had good relations with the rulers of India. Antiochus of Syria, maintained direct contacts with India in the 3rd Century B.C.

Even our folk tales are derived from a shared heritage. Tales of the Arabian Nights i.e. Alf Laila wa Laila, are as popular in India as they are in the Arab World. Similarly, Panchatantra tales from India have found a second home in the Arab World and find a presence in the Western world also as the Tales of Aesop.

In ancient times, Indian merchants traversed across the continents through the Arab World to the markets in Greece and Rome on the ancient Silk Road. Peninsular India had very substantial links with the Arabian peninsula from pre-Islamic times. After the advent of Islam, this interaction between these two regions continued seamlessly. The impact of the new religion which took birth in the Hijaz came to be felt in Southern and Western India. Indian pilgrims, over the last 1400 years, bravely crossed the seas to perform Haj every year in their thousands.

Since before independence, India has always stood by its friends in the Arab world in their quest for national independence, sovereignty, peaceful existence and development. India and the countries in the Arab World are living examples of South-South cooperation.

The Gulf region, with which India has traditionally enjoyed close historical links, is an important source of energy for India. At the same time, India has become an important source for providing human resources. As we speak, nearly 5 million Indians live in the Arab world and it is a matter of great satisfaction and pride for us that Indians have contributed significantly to the development of the countries which they rightly consider as their second home. Increasingly, the profile of the Indian community in this region is changing and today almost 20% of Indians are professionals. Bilateral trade between India and the countries in the Arab World has also increased significantly. India and the Arab world face common challenges and strive for similar goals and this underpins our cooperation in international fora.

India has always supported the Palestinian cause. There is much popular support for Palestine among the Indian people. Peace and stability in the region is of paramount importance to us. We are concerned about lack of progress in the peace process. India has constantly supported the quest of the Palestinian people for a homeland in line with United Nations Security Council Resolutions 242 and 338 calling for a negotiated solution resulting in a sovereign, independent, viable and united State of Palestine living within secure and recognized borders, side by side at peace with Israel. We have also called for an end to the expansion of Israeli settlements in occupied Palestinian territories and for an early and significant easing of restrictions on the free movement of persons and goods within Palestine such as we have witnessed in recent times in the Gaza strip.

The Arab peace initiative that we wholeheartedly support was a significant move. We feel that the Annapolis process needs to be taken forward. The end of the year, the target date for a settlement, is already upon us. There does not seem to have been much progress. We, however, remain convinced of the need for continued dialogue.

We remain concerned with the isolation of Gaza and the recent upsurge of violence there. We also remain concerned at the adverse effects of the closure of access points into the Strip on the prevailing humanitarian situation. There can be no justification for the denial of essential supplies including food and fuel to the civilian population of the Gaza Strip. Like any other people in the world, Palestinian people must also be given the right to live in a safe and dignified manner.

With the Arab League, we have been developing our relations in a structured manner. India and the Arab League signed an MOU institutionalizing the process of dialogue between the two sides in March 2002. Since then, I have met with Secretary General on several occasions at various fora. We have also had four rounds of formal talks in 2002, 2003, 2004 and in 2007. These interactions are extremely useful as these not only provide opportunity to us to revisit our relations but also to constantly review those in light of changing realities at the global and regional levels. Beginning with the Algiers Arab Summit in March 2005, India has been participating as an Observer at the Arab Summits. My colleague, Shri E Ahamed participated in the Summits held in Algiers, Khartoum, Riyadh and most recently in Damascus.

Today we are taking an important step in our relations with the launch of the India-Arab Cooperation Forum. We believe that this Forum will emerge as a mechanism to strengthen and diversify our relations in various fields including, culture, trade, energy and human resources. I am also happy that we have been able to organise a week-long cultural festival to coincide with this important occasion. I am overwhelmed by the enthusiastic response from our friends. The presence of Ministers of Cultures, Deputy Ministers, senior delegates and artistes from so many Arab countries is gratifying. I thank the Federation of Indian Chambers of Commerce and Industry for its role in organising this Forum. I am confident that the brick that we have laid today will be transformed into an edifice which does justice to our close and longstanding relations.

I thank you for giving me this opportunity to address you.

431. Memorandum of Co-operation between the Republic of India and the League of Arab States on the establishment of an Indian-Arab Co-operation Forum.

New Delhi, December 2, 2008.

Preamble

The Republic of India and the **Arab States**, represented by the League of Arab States, (hereinafter referred to as "the Parties"): -

Cognizant of the depth of historic, cultural and civilizational links between the Parties,

Expressing their satisfaction at the evolution of India-Arab relations in the recent past,

Believing in the strong foundation, great potential and wide-ranging prospect for India-Arab Co-operation,

Aspiring to open new horizons of co-operation in different areas,

Confirming the commitments of both Parties to international peace, security and sustainable development,

Emphasizing the significant contributions made by India in the Middle East Peace Process and consistently supporting the legitimate rights and aspirations of the Arab peoples, including the inalienable rights of the Palestinian people to establish an independent Palestinian State in conformity with the relevant United Nations and other international resolutions;

Reaffirming the positive efforts exerted by the League of Arab States in boosting Arab solidarity and cooperation and enhancing the economic well-being and social development of the Arab peoples;

Convinced of the importance of maintaining the continuity of interaction and further enhancing close consultations and co-ordination between the Parties,

Agree on the following Memorandum of Co-operation:

Article - 1

The Parties have decided to establish the Indian-Arab Co-operation Forum (IACF), as a framework for dialogue and co-operation between the Parties,

for strengthening the foundations of the India-Arab relations and diversifying India-Arab co-operation in all areas.

Article - 2

The IACF would be based on the following

1. Respect for the principles of the United Nations;
2. Commitment to achieving, preserving and enhancing international peace and security through dialogue and consultations;
3. Support for the efforts of the international community to re-activate North-South Dialogue as well as South-South Co-operation;
4. Respect for pluralism and values of different cultures and civilizations, as well as for the need to strengthen the dialogue among civilizations;
5. Further strengthening and enhancing India-Arab Cooperation in all areas based on an "Action Plan", to be mutually agreed upon herein; and,
6. Recognizing the participation by India in the League of Arab States Summits in accordance with the norms of the League of Arab States.

Article - 3

The IACF shall work inter alia, on the following

1. Extending support for all efforts towards establishing, preserving and enhancing international peace and security;
2. Exchanging views and holding consultations on the policies and stances on issues of mutual interest and concern;
3. Enabling the Parties to deepen the level of understanding at the people-to-people level;
4. Intensifying efforts aimed at achieving sustainable development;
5. Boosting and enhancing economic, commercial and financial co-operation between the Parties;
6. Encouraging and facilitating the establishment of joint ventures on both sides;
7. Intensifying co-operation in the fields of education, culture and human resource development;

8. Enhancing co-operation in scientific and technological fields including in areas of applied research, with special emphasis on sustainable development and development of renewable energy sources;
9. Encouraging cooperation in the field of Information and Communication Technologies including in the implementation of the outcome of “the World Summit on Information Society”;
10. Exchanging views and holding consultations on policies in international fora on environment protection and safeguarding each party’s cultural heritage; and
11. Exchanging views and holding consultations on other issues of common concern as may arise from time to time.

Action Plan for IACF

The two Parties :

- Convinced that the said Forum would achieve tangible results and offer positive contributions in consolidating and developing friendly ties between them,
- Taking into account the Memorandum of Understanding between the Ministry of External Affairs of the Government of India and the Secretariat-General of the League of Arab States, signed in Cairo on 06 March 2002,
- Confirming the necessity of drawing up an action plan for implementation of the principles, goals and objectives mentioned in the IACF,
- Affirming their willingness to strengthen links by maintaining regular contacts at various levels;
- Hereby agree to set up an Action Plan for the forum for a period of 5 years as of the date of signature of this Memorandum of Co-operation by the Parties as follows:-

I. Political Cooperation

The Parties confirm their commitment to further strengthen political cooperation and accordingly agree to establish a mechanism for political consultations.

II. Economic, Trade and Investment

In order to further expand trade and bilateral investments, provide easier access to each other's markets, exchange management expertise, and enhance co-operation among small and medium enterprises, the following measures will be taken:-

- (i) Organization of an India-Arab Partnership Conference every year, in one of the Arab member states and in India for co-operation on policy, institutional capacity building and enterprise joint ventures. Venue of this meeting would be decided by the joint high level committee at their annual consultations, as provided for in sub-para VII(i). The Federation of Indian Chambers of Commerce & Industry (FICCI) would liaise with the General Union of the Chambers of Commerce, Industry and Agriculture of the Arab countries and the concerned main chambers of commerce and industry of the member states of the League of Arab States and the Secretariat of the League of Arab States for this purpose. It will also provide information and briefing about the investment climate in India and the member states of the League of Arab States in general, and the specific investment opportunities, in particular, for the businessmen of the Parties.
- (ii) Organization of an exclusive India-Arab exhibition and an India-Arab Symposium along with the India-Arab Partnership Conference as in (i) above. The symposium will discuss potential areas of co-operation in the fields of investment, information technology, science and technology, exchange of information on environmental policies and on the use of technology in environmental protection, poverty eradication, as well as possibilities of establishing co-operation networks between the institutions of both Parties including non-governmental and civil society organizations. India Trade Promotion Organization would liaise with FICCI, and the concerned main trade promotion bodies of the member states of the League of Arab States and the Secretariat of the League of Arab States for organizing the exhibition and the symposium. [ITPO may, if necessary, enter into separate MOU with the League of Arab States for organizing the exhibition]
- (iii) Encourage exchange of expertise in the field of economic management and cooperation between small and medium enterprises. The Technical Cooperation Division of the Ministry of External Affairs of the Government of the Republic of India will offer

experts from India on secondment in appropriate training/skill upgradation programmes in the field of small and medium enterprises to the member states of the League of Arab States.

III. Energy Sector

- (i) The Parties, recognizing the importance of enhancing cooperation in the field of energy, particularly oil, natural gas and renewable energy, will encourage investments from each other to be used in energy sector projects and will encourage their institutions to establish joint ventures in this sector.
- (ii) The Parties will establish a dialogue mechanism for the purpose of India-Arab cooperation in the field of energy. This dialogue will be at the level of senior officials of the concerned ministries of the member states of the League of Arab States, the Secretariat of the League of Arab States, and the Ministries of External Affairs and Petroleum and Natural Gas of the Government of India and meet annually.

IV. Human Resource Development

- (i) The Technical Cooperation Division of the Ministry of External Affairs of the Government of India will, every year, train professionals from member states in the League of Arab States and the Secretariat of the League of Arab States in five areas to be decided by the joint high level committee as provided for in sub-para VII(i) from the courses listed under the ITEC training programme. The number of available training slots shall be determined by the Ministry of External Affairs of the Government of India and the applications for these slots will be channeled through the Secretariat of the League of Arab States.
- (ii) The Foreign Service Institute of the Ministry of External Affairs of the Government of India will organize an exclusive tailor-made training programme on an annual basis for four weeks' duration, for junior and middle level diplomats of the member states of the League of Arab States and the Secretariat of the League of Arab States in India or in one of the Arab capitals. Each member state would be entitled to nominate one of their diplomats to attend this training programme. Local hospitality could be as per mutual agreement.
- (iii) Trainees from India will also be sent to member states of the League of Arab States, wherever feasible and upon mutual agreement.

V. Culture & Education

In order to promote cooperation in the fields of culture and education, the following measures will be taken:-

- (i) Institutionalization of an annual conference of the heads of different Universities in India which have departments of Arab/West Asia/ Middle East Studies as well as in the member states of the League of Arab States. The University Grants Commission (UGC) of India will liaise with the Arab League Educational, Cultural and Scientific Organization (ALECSO) and the Secretariat of the League of Arab States for this purpose.
- (ii) The Parties mentioned in paragraph (i) will consider and discuss, the modalities of establishing Chairs of India-Arab learning in select Arab and Indian universities.
- (iii) Efforts will be made and steps will be taken to identify and twin the libraries in India which are repositories of material including manuscripts which bear testimony to age-old historical and cultural ties between India and the Arab states, with their counterparts in the member states of the League of Arab States.
- (iv) The Parties will undertake a project to build up a database of digitalized Arabic manuscripts from Indian collections, along with similar manuscripts available in various libraries of member states of the League of Arab States. Material for the latter would be made available by member states of the League of Arab States through an organization specifically nominated by the respective Ministries, as the focal organization for this purpose. After collection of such database, displays will be organized in select Arab and Indian universities, along with organization of seminars and symposia on related subjects.
- (v) The Indian Council for Cultural Relations, along with ALECSO, and in cooperation with the relevant organizations of the member states of the League of Arab States and the Secretariat of the League of Arab States, will organize an India-Arab festival on a regular basis in the member states of the League of Arab States. This festival can include, inter-alia, seminars, exhibitions, film festivals, food festivals and cultural performances. ICCR will send one performing art group to the respective Arab member State where the festival is being organized.

- (vi) The Indian Council for Cultural Relations, along with ALECSO and the Secretariat of the League of Arab States, will support FICCI's initiative to organize annually a Heritage Festival in India along with its Partnership Conference. This festival may comprise a food festival, traditional products (handicrafts, gems-jewellery, dress etc) and cultural performances (music, dance & drama, films, books paintings etc). FICCI will invite participants from all the member states of the League of Arab States.
- (vii) The Parties shall organize an India-Arab Friendship Year and arrange suitable cultural and other events by mutual agreement.

VI. Media Sector

- (i) The Parties will work on intensifying media cooperation and encouraging important media organizations on both sides, including those in the electronic and print media and those in both the public and the private sectors, to enhance contacts between them.
- (ii) The Parties will exchange visits of prominent journalists nominated by the two Parties from the print and the visual media, every year, on a tour of India. The External Publicity Division of the Ministry of External Affairs of the Government of the Republic of India will host one journalist each nominated by the League of Arab States from the print and the visual media, every year, on a 10-day tour of India.

VII. Mechanisms

- (i) In conformity with sub-para I regarding political cooperation, the two Parties agree to establish a joint high level committee to be convened at various levels as mutually agreed from the troika of the Arab Summit and the Secretariat of the League of Arab States on the Arab side, and such representatives from the Indian side as may be decided by the Ministry of External Affairs. The committee will meet once every year to discuss bilateral, regional and international issues of mutual concern alternately in New Delhi and Cairo. The agenda for such political consultations would be drawn by mutual consultations.
- (ii) The Ministry of External Affairs of the Government of India and the Secretariat of the League of Arab States shall be the principal focal points for consultations and co-ordination in regard to the implementation of the Forum's Plan of Action.

- (iii) A meeting of the Minister of External Affairs of the Government of India and the Foreign Ministers of the member states of the League of Arab States would be considered one year after the establishment of the IACF.

Final Provisions

The working of the Indian-Arab Co-operation Forum and the implementation of the Action Plan will be reviewed after a period of 5 years from the date of signature of this Memorandum of Co-operation by the Parties with a view to effecting necessary modifications and renewing them for a further period.

This Memorandum of Co-operation and the Action Plan are signed in New Delhi on December 2, 2008 in two originals each in Hindi, Arabic and English languages, all texts being equally authentic. In case of divergence in interpretation, the English text shall prevail. These shall enter into force upon signature and shall remain in force till they are terminated by either of the Parties by giving six months notice to the other Party.

In witness whereof, the undersigned have signed the present Memorandum of Cooperation and Action Plan thereto.

For the Republic of India

For the League of Arab States

Pranab Mukherjee

Amre Moussa

Minister of External Affairs

Secretary General

IRAN

432. Response of Official Spokesperson to a question on a comment by Official Spokesman of the US State Department on the visit of Iranian President to New Delhi.

New Delhi, April 22, 2008.

Our attention has been drawn to a comment made by the official spokesman of the US State Department¹ concerning the visit of President Ahmadinejad of Iran to India. India and Iran are ancient civilizations whose relations span centuries. Both nations are perfectly capable of managing all aspects of their relationship with the appropriate degree of care and attention. The situation in the region has always drawn the attention of both the nations and it can be seen perfectly well that these have been managed through continuous dialogue and exchange of delegations at various levels. Neither country needs any guidance on the future conduct of bilateral relations as both countries believe that engagement and dialogue alone lead to peace. It is important that the genius of each nation living in a particular region is respected and allowed to flower to meet the expectations of enriching relations with neighbours.

¹ The Spokesperson was referring to the American Spokesperson Mr. Casey's statement in Washington that USA wanted India to talk tough with Iran during Mr. Ahmadinejad's visit, hoping it would ask Tehran to suspend its uranium enrichment activities in line with the U.N. Security Council's demands. He had further added that "Washington would also encourage New Delhi to ask Iran to "become a more responsible actor on the world stage" by ending its "rather unhelpful activities" regarding Iraq and support for terrorism. He, however, said it was up to India to decide how to manage its bilateral ties with Iran. Separately the External Affairs Minister interacting with journalists during an interaction with reporters at an orientation programme on parliamentary reporting on April 23, 2008, firmly turned down the U.S. advice and made it clear that it was for the International Atomic Energy Agency (IAEA) to decide on the nature of Iran's nuclear programme. He said the U.S. could not arrogate to itself the right to determine whether Iran's nuclear programme was peaceful or not. "We are advising Iran that since it is a signatory to the Non-Proliferation Treaty [NPT], it has some obligation to international treaties. We are telling the U.S. 'do not take on yourself the responsibility whether Iran was manufacturing weapons or not. Leave it to the IAEA, the designated authority'," Mr. Mukherjee said. "It is not for me or for Iran to certify... it is for the IAEA to convince themselves whether [Tehran's programme] is peaceful," he said. Describing the Ministry's response as "good," CPI(M) leader Sitaram Yechury said the issue had to be taken up "more seriously." It was made clear to Washington that India would not brook any unsolicited advice on its bilateral relations with Iran. He demanded that the U.S. Ambassador in New Delhi be summoned and told in no "uncertain terms" that India knew how to conduct its foreign policy independently.

433. Media Briefing by Foreign Secretary Shivshankar Menon on visit of Iranian President Mohammad Ahmadinejad.

New Delhi, April 29, 2008.

Official Spokesperson (Shri Navtej Sarna): Good evening. We have been waiting for the Foreign Secretary. He has come straight from the talks with President Ahmadinejad. I would request the FS to brief you.

Foreign Secretary (Shri Shivshankar Menon): What I will do is I will just run over what happened and then maybe answer any questions you might have. As you know, President Ahmadinejad stopped over in New Delhi on his way home from Sri Lanka where he paid an official visit. He was in Sri Lanka yesterday and most of today. He came in the afternoon after four; he called on the President at six; and then met with the Prime Minister from about 6:45 onwards. They had a meeting which was followed straight by dinner which the Prime Minister offered to him. This went till about 9:45. So, I come straight to you from there.

They used the occasion to discuss bilateral relations, where to take the relationship, the various big issues in the relationship including our economic, commercial relations, energy, the Iran-Pakistan-India natural gas pipeline, trade. They also discussed regional issues, the situation in the region, in West Asia, in Afghanistan. As I said, they had three hours of talks, went into some detail. They had a very good exchange of views.

1 Before the arrival of the Iranian President there was hectic activity in New Delhi. The Minister for Petroleum and Natural Gas Murli Deora had returned from Pakistan a few days earlier after detailed discussions on the I-P-I Gas Pipeline Project with the Pakistani leaders. On April 27, he said in New Delhi that the \$7.4 billion Iran-Pakistan-India (IPI) pipeline deal would be "clinched soon," Stating that India and Pakistan had almost worked out a general agreement on the "transit fee," Mr. Deora added that the visit of Iranian President Mahamoud Ahmedinejad would be utilised to pave way for trilateral talks on the deal. "The talks with the Pakistan leadership were very cordial and assuring. I will be updating the Prime Minister on all the issues, including the IPI pipeline, and also the \$7.3 billion Turkmenistan-Afghanistan-Pakistan-India (TAPI) pipeline that India has formally joined this time," he said. He sounded very confident particularly after his meetings with the top political leadership of Pakistan, including the People's Party of Pakistan (PPP) Co-Chairman, Asif Ali Zardari, and Pakistan Muslim League (Nawaz) president Nawaz Sharif. Interestingly, the Iranian President had made a brief halt in Islamabad on his way to Colombo on April 28 when the IPI project too had come up for discussion. The Pakistani Foreign Minister briefing the media after the discussions between the Presidents of the two countries said that all outstanding issues relating to the Iran-Pakistan-India (IPI) gas pipeline had been resolved and a final agreement on the project can now be signed. A press release of the Pakistan's Ministry of Foreign Affairs added a new element

On the bilateral relationship, both sides expressed satisfaction on the fact that it was moving forward. We did about 10 billion dollars worth of trade last year - most of it is oil-related. Therefore, we both agreed there is a need to diversify that part of the relationship.

There was a discussion on the natural gas pipeline, on how to take it forward. From our point of view, most important is to construct an economically, commercially viable project, to have assured supplies, and to ensure the security of supply in various ways. Discussions will continue. They both agreed that the officials would continue to discuss how to craft such a project which would meet the various criteria that we have mentioned.

On trade, there was a feeling that we could do more. President Ahmadinejad mentioned and Prime Minister agreed that we might try for a target of 30 billion dollars, in other words tripling the trade in the next few years.

We are working towards a Joint Commission meeting later this year. It is due. We are hoping that many of the economic and commercial and other ideas that were discussed will bear fruit by then and we will do the work, prepare them and have them ready for the Joint Commission around the middle of the year.

They also discussed Chabahar Port, the railway up to the border with Afghanistan which would give us another means of transit to Afghanistan and Central Asia. We have done the Zaranj-Delaram road within Afghanistan which would connect to the Iranian border which is, you remember, at some cost in terms of lives. In fact, two Indians were killed there a few weeks ago. We talked of the importance of that, of carrying those projects forward, doing them quickly, as quickly as possible.

when it said that the two leaders also discussed the inclusion of China in the project, and the Iranian leader "welcomed" President Musharraf's proposal that China could join the project. "It was agreed that the Foreign Ministers of the two countries would meet soon to discuss and fix dates for its (agreement) signing," the release stated. The Pakistani Foreign Minister said Iran gave a positive response to the Pakistani proposal for allowing a gas pipeline through its territory to provide gas to China, along the Karakoram Highway. This was in sharp contrast to the position which Iran had adopted earlier. Earlier in February on being asked if Iran would accommodate China in the project, the Spokesperson of the Iranian Ministry of Foreign Affairs Mohammad Ali Hosseini had said "Iran is highly determined to implement the project between the three countries that have consulted and cooperated with each other on the project from the very beginning. We can consider other countries after the implementation and realization

Overall, there was satisfaction on the bilateral relationship. There was a discussion on ways to push forward, to move things forward in various projects and to see how to build the economic and trade relationship.

On the regional issues, there was a discussion on Afghanistan; a slightly longer discussion on the situation in the Middle-East and in Iraq. It was basically an exchange of views where we discussed what could happen with the Middle-East peace process. Our interest is clearly in a peaceful resolution of the issues in West Asia. We have big stakes, not just in terms of energy but in terms of four and a half million Indians working in the area. As a source of remittances, as a source of trade, we have big stakes in peaceful transitions in these areas.

On Iran nuclear issue, President Ahmadinejad briefed PM. There was a short discussion on it. Our approach is quite clear. We have said that Iran has the right to peaceful uses of nuclear energy for fulfilling her various obligations and that the right way to do that is through the IAEA, to assure the world that she is fulfilling her obligations.

That is what I have in my list. But you are free to ask about any other aspects that you would like to.

Question: Does this meeting tonight mark a significant shift in relationship after the vote at the IAEA and launching of the Israeli spy satellite to monitor Iran? Do you see this as a shift by India in its relationship with Iran back to how it traditionally had been?
