AVTAR SINGH BHASIN

(b.1935). BA (HONS); MA in History. Initially he had short stints of service in the National Archives of India and the Ministry of Defence. In 1963 he joined the Ministry of External Affairs where he served for three decades, retiring in 1993 as Director of the Historical Division. He was posted in Indian missions in Nepal, Bonn, Vienna and Lagos. He travelled to several other countries in the discharge of his duties in the Ministry. Some of the countries visited were USA, China, South Africa, Kenya, Zambia, Malawi, Botswana, Russia, Ukraine, Belarus, Hungary etc. He was member of several ministerial and official delegations for discussions with various countries both in India and abroad.

Since retirement he has taken to academic research. He was Senior Fellow of the Indian Council of Historical Research from 1994-96. He was Honorary Fellow of the Institute of Contemporary Studies, Nehru Memorial Museum and Library from 1997 to 2001. He has edited and authored several books on South Asian affairs. He also contributed many articles in newspapers on developments in the neighbouring countries. His 75 pieces on Partition and Freedom were published in the Asian Age consecutively from June 1 to August 14, 1997 coinciding with the Golden jubilee celebrations of the Indian independence.

Section – VII	Americas (i) North America (ii) Central And South America
Section – VIII	Europe
Section – IX	India And The United Nations
Section – X	India At The United Nations

P R E F A C E

Published annually, the present Volume is the seventh in the series India's Foreign Relations. As its name implies, it showcases the documents on India's foreign relations and is published in cooperation with the Public Diplomacy Division of the Ministry of External Affairs. This Division was created in 2006 to reach out to think-tanks, academia, civil society and industry both within the country and abroad to interact with them on the contours of Indian foreign policy and to initiate debate and discussion within the wider public about the key foreign policy issues.

As in 2007, the issue of civil nuclear energy cooperation with the United States, continued to dominate both the foreign policy discourse as well as domestic politics of the country. It was not until the realignment of domestic political forces that the hump was crossed at home that the government felt emboldened to talk the issue over with other international players in the game and signed agreements with institutions like the IAEA, NSG and individual countries. The bombing of the Indian Embassy in Kabul, sea-borne terrorist attack in Mumbai, Pakistan's intransigence in withholding cooperation and adopting bellicose posture, threatened to stall the peace process so arduously put in place in 2004. It is therefore natural that documents on nuclear energy cooperation and relations with Pakistan should form the bulk of the Volume.

Considering the importance of climate change in international discourse today, a separate section has been added for this subject.

The documents have been categorized region-wise, thematically and arranged chronologically. There are documents which do not fall in any particular category, and have references to several subjects/issues; these figure in the General category, with cross referencing, wherever possible. To take care of the bulk, bilateral agreements of only strategic nature having bearing on foreign relations have, as a rule, been included here. However, in the case of neighbours, all agreements have been included comprehensively, as each one has a bearing on the overall relationship.

X

In reproducing the documents every care has been taken to adhere to the original in terms of spellings of proper nouns, and punctuations.

The Library of the India International Centre has provided me a great deal of logistic support in my work. I am grateful to its Chief Librarian Ms. Sushma Zutshi and her colleagues.

I wish to acknowledge the support and help of a large number of officers of the Ministry of External Affairs in the preparation of this volume. While not naming every one by name since the list is quite a long one, I would particularly like to acknowledge the contributions of M/s. Amit Dasgupta and Narinder Singh. My personal thanks to all of them. I owe a debt of gratitude to TCA Rangachari for sparing a good deal of his time, to go meticulously through the Introduction with a fine comb to rhyme the text. Thank you, Sir. Whatever deficiencies have occurred in the publication in any manner and form, I do not share the blame for that with any one else. They are all mine.

I am dedicating this book to late V. Venkateswara Rao, who was a Counsellor in the Indian Embassy in Kabul and became a martyr when the Mission came under terrorist attack on July 7, 2008. It was for the first time that an Indian asset was attacked by terrorists outside the country. The Officers of the Indian diplomatic service posted in far flung places, carry out their arduous duties in difficult areas of the world in the service of the nation not caring for their personal security and comfort. They make themselves vulnerable to all sorts of dangers but they honour the call of their duty. I salute the memory of late Venkateswara Rao by this humble dedication.

February 10, 2009.

Avtar Singh Bhasin

INTRODUCTION

India's opening to the world, and its active engagement in different regions, near and far, continued in an active fashion. This policy is reflective of the Indian response to an increasingly multi-polar world. It has served and continues to serve the wider interests of India that is undergoing rapid socio-economic transformation. The engagement with the United States and other institutions like the IAEA and the Nuclear Suppliers' Group for civil nuclear energy cooperation is one strand of this policy. It dominated India's foreign relations and domestic politics for better part of the year 2008. The conclusion of such an agreement with its wider implications had the potential to open the doors of nuclear trade with all other countries. Indian response to the terrorist attack on Mumbai, of engaging the international opinion to put pressure on Pakistan to tackle the menace of terrorism was part of the same policy of active engagement with the world to find solution to the problems which had ramifications beyond our borders. India is convinced that terrorism is not an Indian problem alone, but one that affects the civilized nations around the world.

I

Civil Nuclear Energy Cooperation

2. The nuclear cooperation agreement with the United States encountered hurdles and road blocks all the way, at home and abroad, before fruition. At home, the Left Party allies of the United Progressive Alliance Government, encumbered by their ideological baggage of the past, were opposed to the agreement. They were fully aware, yet refused to recognize that without the US cooperation in this field, similar cooperation with other countries including France and Russia, was out of question. The lengthy consultations between the ruling UPA Alliance and the Left Parties failed to bring the two sides closer than when they started the consultation process in 2007. Aware of the criticality of their support to the government for survival in the parliamentary system, the Left parties held the sword of Damocles hanging all through the negotiations. The Ruling Alliance torn between its international commitments and political compulsions at home was forced to look for an alternative arrangement for the government to survive. In a fast

XII

developing political domestic conundrum, another political party - The Samajwadi Party - came to the ruling alliance's rescue and the government successfully met the challenge of parliamentary majority. In July, it asked for a vote of confidence and obtained it comfortably, upholding the tradition of good parliamentary practices.

3. Having weathered the challenge at home, the government felt confident to walk the talk with other principal international interlocutors. The International Atomic Energy Agency at Vienna was the first stop. The Safeguards Agreement which had been earlier negotiated with the IAEA after several rounds of negotiations, beginning in November 2007, went before the 35-member Board of Governors who adopted the 22-page framework document by consensus on August 1. Termed an "umbrella" arrangement, it allowed India to add nuclear facilities over time but under IAEA safeguards. The IAEA would begin to implement the new Safeguards Agreement in 2009, with the aim of bringing a total of 14 of the existing Indian reactors under Agency safeguards by 2014. Currently IAEA safeguards apply to six Indian nuclear reactors under agreements concluded between 1971 and 1994. India has also agreed to sign an Additional Safeguards Protocol with the IAEA to complete the process. Meanwhile the document adopted by the IAEA Board of Governors on August 1, 2008 was signed between the IAEA and India on February 2, 2009.

4. El Baradei, Director General of the IAEA welcoming the IAEA consensus said: "I believe the agreement is good for India, is good for the world, is good for non-proliferation, is good for our collective effort to move towards a world free from nuclear weapons. What the agreement does is bring India closer to the debate on our ultimate goal, which is the goal of the Nuclear Non-Proliferation Treaty (NPT) - to establish a world free from nuclear weapons." Underlying the importance of the event he said: "I have always maintained that if we were to move forward toward strengthening non-proliferation to reduce the nuclear weapons arsenal, toward moving to a world free from nuclear weapons, that dialogue has to be universal and inclusive." El Baradei believed that India Safeguards Agreement had "a lot of positive implications, development implications, security implications, non-proliferation implications, and arms control implications". He felt happy that something he was supportive of from the beginning had been achieved, and that his "judgement has been certified by the Board in approving the agreement by consensus."

5. The Prime Minister Dr. Manmohan Singh who was in Colombo, the day the news of the adoption came in, felt "delighted" and describing the day as "historic" said: "This is an important day for India, and for our civil nuclear initiative for the resumption of India's cooperation with our friends abroad. The civil nuclear initiative is good for India and good for the world. As we move forward towards our goal of sustainable development and energy security, the peaceful uses of atomic energy will play an increasingly important role...I am deeply appreciative of the historic significance of this milestone in our cooperation with the IAEA and the international community in peaceful uses of atomic energy."

6. The next stop at NSG proved more challenging. There were diehard members of the group who held strong views on non-proliferation. They were reluctant to make an exception for India to allow it unrestricted access to nuclear technology without signing the NPT. Even if they were willing to make adjustments, they wished to add some pre-conditions, which were unacceptable to New Delhi. The Greens and the Atomic Non-Proliferation Association too lobbied hard to stall the vote in favour of waiver not only at the NSG but at other possible levels too. The Greens even staged a well-advertised but small protest demonstration outside the NSG meeting.

7. India from the very beginning had bet on unconditional and clean waiver of the NSG's trading restrictions in favour of India. Conscious of the possible opposition at the NSG, India fielded a powerful diplomatic delegation led by the Foreign Secretary Shivshankar Menon and supported by officials from the Atomic Energy Department, Prime Minister's Office and the External Affairs Ministry itself. In addition, Special Envoys of the Prime Minister travelled to all the NSG capitals in the run up to the Vienna meeting to canvass support for the waiver.

8. The NSG meeting which was scheduled for a day only, spilled over to the next day, before the recalcitrant gave in. This was achieved not before last minute high-level diplomacy both on the part of New Delhi and Washington. The Statement that the External Affairs Minister Pranab Mukherjee issued on September 5 proved crucial to clinch the issue. The statement sought to reiterate India's stand on disarmament and non-proliferation. It reminded the international community that "India has a long-standing and steadfast commitment to universal, non-discriminatory and total elimination of nuclear weapons." It assured that India's civil nuclear initiative "will strengthen the international non-proliferation regime." Reminding the NSG members that New Delhi had only "recently submitted

XIV

a Working Paper on Nuclear Disarmament to the UN General Assembly," the Statement reaffirmed to the world India's commitment "to a voluntary, unilateral moratorium on nuclear testing," and "policy of no-first-use of nuclear weapons." Mr. Mukherjee's statement recalled India's impeccable non-proliferation record and showcased the "effective and comprehensive system of national export controls, which has been constantly updated to meet the highest international standards." This manifested in the enactment of the Weapons of Mass Destruction and their Delivery Systems Act in 2005. It sought to assure the NSG that "India will not be the source of proliferation of sensitive technologies, including enrichment and reprocessing transfers. We stand for the strengthening of the non-proliferation regime." "In keeping with our commitment to sign and adhere to an Additional Protocol with respect to India's civil nuclear facilities, we are working closely with the IAEA to ensure early conclusion of an Additional Protocol to the Safeguards Agreement," concluded the statement. The reassuring Statement of Mr. Mukherjee ended the suspense instantaneously, when even China, which the previous night had surprised every body by its adverse stance and abruptly leaving the meeting, withdrew any reservation it had the previous night.

9. The NSG waiver was an event of great importance. It sought to end India's nuclear apartheid it had suffered for more than three decades. The External Affairs Minister, speaking in the Lok Sabha on October 20, metaphorically likened the IAEA clearance and the NSG waiver to a "passport which allows us to engage in civil nuclear cooperation with our international partners. We are now in the process of getting visas by engaging with our international partners to negotiate and finalize bilateral cooperation agreements."

10. Significantly, the IAEA agreement and the NSG waiver made the ratification of the 123 agreement by the U.S. irrelevant as far as India's ability to negotiate nuclear cooperation with other countries was concerned. The NSG waiver enabled India to sign with France its first nuclear cooperation agreement on September 30th itself, without waiting for the US ratification. A similar agreement with Russia did not have to wait long. It was signed in December when the Russian President visited New Delhi.

11. Nevertheless, New Delhi was keen that the cooperation agreement with the US, which kick-started the process in July 2005, should also be clinched. For that, the next stop was Washington. Just then both the President and the US Congress were faced with a new global crisis of economic

meltdown needing their undivided attention. Given the importance of the Agreement and the fact that both the Congress and the President had invested a lot of their precious time on it, both acted with the necessary dispatch and found time to accommodate the ratification process in their tight schedule. The Non-proliferation lobby worked overtime, in its last ditch effort to derail the process, met with little success. The Agreement finally received Congress' approval on October 2 by an overwhelming vote, rejecting some killer amendments. It marked the culmination of a three-year long journey.

12. President Bush hailed the passage of the legislation, saying it would strengthen global nuclear non-proliferation efforts and help India increase its energy production. Significantly both Presidential candidates, Senators Barack Obama and John McCain, threw their weight behind the deal during their election campaigns.

13. In New Delhi both the Government and the Congress Party termed the passage of the India-U.S. civil nuclear cooperation by the U.S. Congress "historic" and said it would address the nation's energy and high technology requirements. The Congress president Sonia Gandhi described it as a "landmark development" and said it marked the successful culmination of a process initiated by the Prime Minister in July 2005, "a process which, guided by India's supreme national interest, the Congress party has throughout endorsed." She said it was an acknowledgement of India's impeccable credentials and paved the way for India's integration into global mainstream.

14. For New Delhi it was a historic initiative towards nation building in respect of energy, sustainable development, technology and other aspects. The *Times of India* in its editorial on October 3 described the India-France nuclear cooperation agreement and the US Congress approval as "double delight" for "Prime Minister Manmohan Singh and his team-who pushed for the deal against formidable domestic and international odds..." The *Deccan Herald* in its editorial on October 3 described it "a landmark event in the international nuclear regime because for the first time the accepted rules for nuclear co-operation have been rewritten for India, which will now be considered a de facto nuclear power." The Mumbai based *Daily News and Analysis* in its editorial on October 2 said: "Now India has to make use of this great opportunity of access to technology denied to it for 34 years. With France quick to sign an agreement with India, there will be a rush to see the commercial possibilities offered by this deal. The thrust

now will be on getting the best technologies available in the international market and see how these help India's economic growth." The Chennai based *The Hindu* remained somewhat skeptical. It advised the Government against signing the Agreement because of the riders accompanying the ratification, even if these were negated by the accompanying Presidential statement in exercise of his executive overriding powers. The Left parties and the main Opposition Party, the Bharatiya Janata Party, failed to overcome their antipathy and remained critical of the final act. The opposition of the BJP was all the more ironic, since it was the party which initiated the process when in power, under the garb of Next Step in the Strategic Partnership.

15. The taste of the pudding lies in its eating. The signing of the agreements both with France and Russia have opened up the vast vista of international nuclear trade which hopefully will unleash the forces of development through clean energy, something India had hankered for long. The basic principle of diplomacy is that there is no full stop in international relations. Diplomacy is a process by which sovereign nations reconcile their sovereign but conflicting interests. Diplomacy in international relations like politics at home is an art of possible. You make the best of the bargain, when constrained by circumstances and proceed from then on to better what has been achieved. In the search for a gold medal at the Olympics, one has to run and win many heats. To win a war one has to fight many battles! India may not have, in this round, won the war, as some sceptics would like to believe, it certainly has won a decisive battle.

II

Pakistan

16. Before one said adieu to 2008 the terrorist attack on Mumbai on 26 November close on the heels of the terrorist attack on the Indian Embassy in Kabul ripped open the old wounds inflicted by terrorism emanating from Pakistan-based terrorist groups. Looking back, the installation of a civilian government in Islamabad and restoration of democratic institutions gave some hope of a new relationship taking shape based on democratic values. India whole-heartedly welcomed the emergence of the people's government in its neighbourhood after a long time. But alas it was not to be. The two dastardly events in quick succession destroyed the pious hopes, New Delhi had entertained.

17. It may be recalled that it was the tour of an Indian cricket team to Pakistan that marked the beginning of a fresh phase in India-Pakistan relations in 2004 after President Musharraf undertook “not to permit any territory under Pakistan’s control to be used to support terrorism in any manner.” Ironically, four years later, in the wake of the Mumbai terror attack, it was the Indian cricket team’s scheduled tour to Pakistan that became the first casualty. The Board of Control for Cricket in India, on the advice of the Government of India cancelled the projected tour of the Indian cricket team in January 2009 to Pakistan. M. S. Gill, the Minister for Sports echoed the sentiments of millions of Indians when he said: “Is it possible for one team to arrive in Mumbai and indulge in mass murder and have another team go and play cricket in the winter afternoon sun at Lahore immediately after?” The Minister of State for Commerce and Power, Jairam Ramesh, too cancelled his scheduled visit to Pakistan. India was anguished and distressed that Pakistan either did not or could not live up to its commitments. Whatever the reason, the fact was that several Indian cities came under repeated terrorist attacks in which innumerable precious lives of innocent men, women and even children were lost. New Delhi, however, persisted with the peace process in the expectation that people-to-people contacts which had developed at a mass scale, visit of journalists, artists, opinion makers, academics coupled with greater flow of trade, even if not as much as India wished, would create a vested interest in peace and Pakistan would control the Frankenstein in its backyard.

18. Political instability, long dictatorial army rule in several spells, denial of democratic rights, feudal economic structure of the economy, stagnating political, economic and social order, and dire dependence on foreign aid had led to demoralization of the Pakistani society. Over the last few years, Pakistan itself had come under attack from its homegrown terrorists. The assassination of one of Pakistan’s most charismatic leaders, Benazir Bhutto, underlined the extent to which the Pakistani society had been brutalized. It was the fond but futile hope of India that Islamabad, now at least, would realize that terrorism was a monster that could gobble it too. Return of democracy and civilian government in Islamabad following general elections, gave some hope that Pakistan, after several spells of disastrous military rule, had perhaps realized after all that democracy, like liberty, needs to be nurtured and cannot be taken for granted. For it to succeed, socio-economic development of society was one of the pre-conditions. But development cannot come without peace, both internal and external, and Pakistan would have to realize that terrorism is the anti-thesis of both peace and development.

XVIII

19. India too is a developing society and it needed peace more than anything else to accelerate the pace of its development and sustain it too. Peace, like security, is indivisible. Peace in the subcontinent cannot be the concern of India alone. It cannot come with weapons or military might. The mightiest nations have suffered terrorist attacks despite all the weaponry at their command. As long as terrorists can find safe heavens, no area of the world is safe. Unless all the countries realize this basic postulate, we will all remain vulnerable to terrorism.

20. It would be recalled that after the Mumbai train attack in July 2006, India was outraged when Pakistan Foreign Minister Kasuri had tried to link such terrorist actions to the so-called lack of resolution of disputes between the two countries. This remark had serious implications - one, it was a tacit admission that the attack had its origin in Pakistan and two, Pakistan would not desist using terrorism as an instrument of coercion to resolve outstanding issues with India.

21. At that time Prime Minister Manmohan Singh had warned that the peace process could not move forward "if terror aided and abetted by outside continued to take the lives of innocent citizens..." There would perhaps have been irreparable damage to the relationship then also but for the meeting between President Musharraf and Prime Minister Dr. Manmohan Singh in Havana on the sidelines of the NAM Summit in September 2006 which helped to salvage it. The two leaders decided to continue with the peace process and "put in place an India-Pakistan anti-terrorism institutional mechanism to identify and implement counter-terrorism initiatives and investigations". Much to India's disappointment, the periodic meetings of this group produced no concrete results and India continued to reel under repeated terrorist attacks.

22. The peace process somehow survived, once again, a near fatal blow when the Indian Embassy in Kabul was bombed on July 7, in which lives of senior Indian diplomats and security personnel besides Afghan visitors to the Embassy, were lost. There was incontrovertible evidence, even then of Pakistani involvement, provided not only by India but also by the Afghan and US intelligence agencies. The US conveyed its concern to Pakistan albeit at a low key. American media, however, openly charged Pakistan for abetting the Embassy attack while producing the evidence that America had collected and shared with Islamabad.

23. It was once again summit diplomacy that rescued the relationship. The meeting between the Prime Ministers of India and Pakistan in Colombo

on the sidelines of the SAARC Summit and later between Prime Minister Dr. Manmohan Singh and President Asif Ali Zardari in New York in September on the sidelines of the UNGA helped to prevent the collapse of the peace process. During the latter meeting in New York on September 24, Pakistan was made aware that the peace process had come "under strain in recent months" and President Zardari agreed with Dr. Manmohan Singh "that the forces that have tried to derail the peace process must be defeated" as that was the only way for "the continuation and deepening of a constructive dialogue for the peaceful resolution and satisfactory settlement of all bilateral issues, including Jammu and Kashmir". To confirm his bona fide that he sincerely meant peace and business, President Zardari reiterated that "the Government of Pakistan stands by its commitments of January 2004." India accepted his reassurance at face value.

24. When relations seemed returning back to normal, tsunami struck again in true fashion via the Arabian Sea. The sea-borne terrorist attack on Mumbai on November 26 practically broke the proverbial camel's back. New Delhi cried foul. It said it could take no more and enough was enough. Two hundred lives from all communities and even foreigners (including American, British and Israeli) were lost. Its psychological impact on the people of not only Mumbai but also the entire country was horrendous. Such terrorist attacks have the potential to break the delicate fabric of communal harmony of the multi-religious Indian society. If this and other similar attacks had failed to hurt this harmony and India came out stronger from these tribulations, the credit should go to the institutional strength of the society so assiduously built over generations. Since there was no immediate direct evidence of Pakistan Government's involvement even if the footprints were clear, there was no attempt to blame it on that country. In his first reaction to the attack, an upset Prime Minister while addressing the nation on November 27, without naming Pakistan said: "We will take up strongly with our neighbours that the use of their territory for launching attacks on us will not be tolerated, and that there would be a cost if suitable measures are not taken by them." It did not take long for impeccable evidence of Pakistani involvement to emerge. Though it was a suicide squad that attacked Mumbai, one of its members was arrested alive. He and other pieces of evidence that emerged from the preliminary investigations left little doubt about the source of the attack.

25. Pakistan's first reaction was one of innocence and assurance of full cooperation in investigations. President Asif Ali Zardari in his telephonic talk with the Prime Minister while extending sympathy promised to send immediately the Director General of the Inter Services Intelligence (ISI) to

XX

New Delhi to help in the investigations. Speaking on a television interview a couple of days after the attack, Zardari, describing the terror attack on Mumbai as a "world incident," said "let me assure you [that] if any evidence points to any individual or group in my part of the country, I shall take the strictest of action in the light of the evidence and in front of the world." Promising to deliver on his assurances he said: "I am delivering for Pakistan; I am delivering for the existence of Pakistan. I have a personal threat. I have a country threat by these same forces. They may not be the same individuals, but they are definitely the same forces with the same mindset." All this sounded music to Indian ears.

26. The Pakistani Foreign Minister Qureshi after a Cabinet meeting on November 29 felt relieved that the Indian leadership had not blamed the Pakistan Government and was only suspecting "groups or individuals" in his country. He told a press conference in Islamabad that Pakistan's "hands are clean, we have nothing to hide, we have nothing to be ashamed of." He asserted his government attached "the highest importance to good neighbourly relations with India [that are] essential for regional peace and stability."

27. These initial sound bites from Pakistan gave hope of Pakistan's sincerity to cooperate in investigations. Alas it was not to be. It did not take too long for good sense to evaporate. Zardari, perhaps not realizing or not being aware of the involvement of his infamous Inter Services Intelligence (ISI), soon went back on his offer to send the DG of the ISI. He described his earlier promise a mis-communication, and instead offered, in the first instance, to send one of the Director level officers of the ISI and later, if the need arose, the Director General himself. Even this stance had a short life. It was then adumbrated that unless India officially provided evidence of Pakistani involvement, there was no point in sending anyone. In yet another somersault, Pakistan offered instead a joint investigation into the dreadful incident, which New Delhi promptly rejected. Initially President Zardari did not rule out the possibility of his non-state elements being involved. Later realizing that a State cannot abdicate its responsibility for the acts of omission and commission even of non-state actors from its territory, altogether denied that any Pakistani was involved. All these somersaults had a subtle message to convey: the army brass had vetoed the President and cooperation, for they found the civilian sweet song too jarring for their ears. Similarly, there was a volte-face on Maulana Masood Azhar of the outlawed Jaish-e-Mohammed, the most wanted terrorist in India. Pakistan initially said he had been put under arrest. A week later Foreign Minister Qureshi surprised everyone saying that he was out of the country. A couple of weeks later,

Information Minister Sherry Rehman told NDTV, a private T V channel in India, that these people have their own network, and it was not difficult for them to escape. An incomprehensible statement from a person holding a responsible Cabinet position of Information Ministry!!

28. Soon enough the identity of the captured terrorist, Ajmal Amir Kasab as a Pakistani was proved beyond an iota of doubt. His father recognized his wayward son after he saw his images on the television screen. The Pakistani media carried out due diligence and declared him to be a Pakistani. Former Prime Minister Nawaz Sharif raised pertinent questions about the hesitation of the Pakistani authorities to recognize his identity (though, later, under pressure he too tried to change his tune). But Islamabad's official stance to New Delhi's chagrin, remained one of complete denial and non-cooperation.

29. Pakistan came under heavy pressure both from New Delhi and international community to give up its lethargy and act against those responsible for the carnage. The US Secretary of State Dr. Rice and the British Prime Minister Gordon Brown visited both New Delhi and Islamabad. In New Delhi they offered their condolences for the killed and had little difficulty in recognizing Pakistani footprints on the appalling crime committed by the gang coming from the sea. While in Islamabad they made the Pakistani leadership squirm with embarrassment on the involvement of Pakistani actors. The British Prime Minister, to Pakistan's mortification and discomfort, while still in Pakistan, bluntly told the Pakistanis that 80 percent of the terrorist acts investigated by the British intelligence found Pakistani footprints. The United Nations Security Council was seized of the horrendous situation and it called upon Pakistan to act.

30. Speaking to journalists Prime Minister Manmohan Singh on 23rd December while saying that "no body wants war" India would insist that Pakistan dismantle the "terror infrastructure". He appealed to the international community to bring upon Pakistan the necessary pressure to persuade it to end this menace of terrorism. "The issue is not war, but terrorism being aided and abetted by Pakistan. We want Pakistan to make objective efforts to dismantle the terror infrastructure," he said. Prime Minister pointed out that there was no dearth of UN resolutions besides, the latest one, on the need to end terrorism and Pakistan should comply with them.

The External Affairs Minister Pranab Mukherjee too told reporters the same day that the real issue was "that there has been an attack on Mumbai that

originated from Pakistan's soil" and "India has requested Pakistan to take action against the perpetrators of the crime. We have again urged the Pakistani authorities to fulfil their commitment." Mr. Mukherjee once again repeating himself emphasized: "My request to friends in Pakistan is to address the issue that is terrorism and not create war hysteria. They should act against those responsible for the Mumbai terror attacks."

31. Against a mountain of evidence of Pakistan's involvement, its leadership from President down to the man in the street became aggressive. The media which initially embarrassed the Government by identifying the arrested terrorist as a resident of Pakistan thought it prudent to buy the official line. Pakistan deflected the issue of arrested terrorist Ajmal Amir Kasab by simply saying that he did not figure on the National Database of Registration Authority (NADRA) as if every citizen of Pakistan was so registered. (In September 2007, NADRA had announced it had issued computerized National Identity Cards to 60 million of Pakistan's approximately 180 million population). In the same denial mood, it found fault with the letter Kasab wrote to the Pakistan High Commission in New Delhi asking for consular access.

32. The Interior Minister claimed that the Lashkar-e-Taiba did not exist having been banned earlier in 2002. Meanwhile on December 9, acceding to India's strong plea, UNSC discussed the question of terrorism and the Committee on Terrorism set up under the earlier resolutions of the Council called upon Pakistan to ban the Jammat-ud-Dawa and arrest four of its top functionaries including Hafeez Saeed. Fearing non-action on this account could lead to Pakistan being branded a Terrorist State, it did ban the Jammat and arrested the four terrorists. This fear of being branded a terrorist state was articulated both by Pakistani Prime Minister and his Defence Minister. It was clear that Pakistan chose to act under compulsion than compunction.

33. Unfortunately there was hardly any touch of sincerity in its actions. Hafiz Saeed was allowed to hold a press conference in Lahore and instead of being arrested was put only under house arrest. Defence Minister Ahmed Mukhtar said that unless evidence was made available to bring charges against him, he would be released after 90 days. It is a questionable decision but Pakistan has done it so often in the past.

34. Even this half-hearted action, whether against Saeed or JuD, was claimed to have been taken in fulfillment of UNSC obligations rather than as required by the State itself, against an individual or an organization involved in terrorism or to assuage the ruffled feeling of a friendly neighbour. JuD's

website was functional, its headquarters at Muridke was not sealed. Only under further international pressure Pakistan finally took over some of its assets under provincial control. Islamabad needed to be reminded that there were other Resolutions of the UNSC like 1269, 1566, 1626 adopted in the past which enjoined member states to act against the terrorists by denying them safe havens, finance, and requiring to extend cooperation in the fight against terrorism etc.

35. India, on its part, continued to mount pressure on Pakistan to act and cooperate. The International Conference of Jurists on Terrorism and Rule of Law, in session in New Delhi at that time, adopted at its conclusion on December 14 a Resolution declaring harbouring of terrorist groups and providing logistic and financial support to them no less crime than terrorism. It denounced the tendency to identify terrorism with freedom struggles and urged world leaders to impose multilateral sanctions against countries providing sanctuary and financial and logistic support to terrorist groups. It asked countries to take concrete steps to address these issues on a priority basis and "impose multilateral sanctions against nations not extending their cooperation in this regard." The resolution described terrorism as a serious threat to the maintenance of the rule of law and the worst form of human rights violation across the globe.

36. Prime Minister Manmohan Singh on December 14 ruled out normal relations with Pakistan until it ensured that its soil was not used for terrorist activities against India. Speaking in Kashmir, he said the fight against terrorism would continue at all cost and at all levels. "Pakistan should control situation in its country as it is evident that some people in Pakistan are engaged in carrying out terrorist attacks like the recent Mumbai attack in our country. Our relations with Pakistan will not improve until it curbs the terrorists who are operating on its soil to carry out terrorist attacks on India," he said. Dr. Singh said India had always wanted to have good relations with them but "our kind desire should not be treated as our weakness." "We want solution to all the problems, including Kashmir, through friendly relations," he said but repeated that "borders cannot be changed but unnecessary restrictions on the people's movement could be removed." He mentioned the steps taken by his government to open the roads across the Line of Control and said: "There is much headway and we will take further steps to remove the bottlenecks to make the exercise meaningful."

37. The next day on December 16 India cautioned that improvement of ties would have to wait until Islamabad took demonstrable action to get to

XXIV

the bottom of the Mumbai terror attacks. External Affairs Minister Pranab Mukherjee and Defence Minister A.K. Antony delivered the same message in Srinagar and New Delhi respectively: Pakistan must follow up on its promise of action against the "elements" which orchestrated the attacks in Mumbai last month and the future of bilateral ties depended on Pakistan sincerely investigating the incident. "We expect good sense will prevail in the backdrop of these assurances and [hope] a conducive atmosphere can be built up. That is possible only after words are followed by action," Mr. Mukherjee told media persons. Referring to Maulana Masood Azhar, Mr. Mukherjee asked, "What is the problem in handing him over?"

38. Dispelling any doubts that India wished to create panic or war hysteria Defence Minister AK Antony on the occasion of Vijay Diwas (Victory Day) marking the 37th anniversary of India's military victory over Pakistan in Bangladesh said on December 16: "We are not planning any military action... but at the same time unless Pakistan takes actions against those terrorists who are operating from their soil against India and also against all those who are behind the Mumbai terrorist attack, things will not be normal." On the issue of troop deployment along the Indo-Pak border, Antony said the situation there was "normal" and armed forces were "always ready". When further questioned he said "I cannot say what course of action we will take but unless Pakistan shows sincerity in whatever they are saying through their actions, one thing is very sure that there is no question of things as usual."

39. Repeated urgent messages for action against terrorist groups operating from Pakistani soil from the Indian leaders did not elicit any positive response from Islamabad. In its obdurate mood it continued to deny every thing and, as pointed out above, denied that the arrested terrorist Kasab was a Pakistani national notwithstanding the fact that Kasab's father had identified him and the Pakistani media both print and electronic had after an on the spot enquiries and investigations had declared him to be the resident of the village Faridkot in Okara district.

40. In its efforts to obfuscate the issue, Pakistan found reason to believe Indian involvement in an incident in Lahore, in which a woman was said to have been killed. It was claimed that of the four Indians involved, one had been arrested, *a l' affaire* Kasab of Mumbai. Pakistan drummed up war hysteria, its fighter aircraft made maneuvers over Lahore, Rawalpindi, Karachi and some other cities in apparent preparation for an any 'untoward eventuality'. The speeches from the Pakistani leaders created a sense of

panic in border areas on both sides of the border. The Pakistani leadership both at the highest level of political and military hierarchy made inflammatory statements in order to make the whole issue look one of India - Pakistan war than one of terrorism. Prime Minister Manmohan Singh was right in his observation that the issue was not one of war but one of terrorism and the option of war were not on Indian table at least. The External Affairs Minister Pranab Mukherjee in his statements never used 'the ready for war' rhetoric of the type emanated from Pakistani leadership both civil and military. As a minister looking after external relations he was always speaking of various international options to which he hoped Pakistan would respond. No senior Indian military officer indulged in bellicose lingo. Defence Minister *ab initio* had explicitly ruled out any military action in making Pakistan see reason.

41. India still persisted with its diplomatic pressure to make Pakistan see reason. On December 26, the Indian High Commissioner in Islamabad Satyabrata Pal called on the Pakistani Foreign Secretary and impressed upon him the need for action to bring the perpetrators of the Mumbai attack to justice. At the same time, he assured him that India had not moved any of its troops along the Pakistani border and the reports of any such movement were without foundation. Mr. Pal reportedly told Islamabad that the UN resolutions on terrorism required Pakistan government to take "judicial action" against the Jamat-ud-Dawah and individuals designated by Resolution 1267 as "terrorists". The next day, December 27 External Affairs Minister Mukherjee said in Behrampur, West Bengal "an unfortunate atmosphere is being created....I would like to state that the issue is not the defence of Pakistan or war. Instead the issue is the strike in Mumbai." Reacting to Indian pleas for action against the terrorists even if they were "non-state actors," President Zardari speaking on December 27, at the function to mark a year of the assassination of Benazir Bhutto, promised his country would act against "non-state actors" responsible for terrorism. A day earlier, Bruce Riedel, terrorism advisor to President-elect Obama transition team said in an interview to the *New York Times* that he saw the terrorist network in the mountains of Pakistan's northwest as the biggest threat to the incoming Obama Administration. He accused Pakistan of fleecing Washington of billions of dollars, ostensibly to be used in the fight against terrorism, while actually allowing the Al-Qaida to regroup in the tribal agency areas.

42. It was not until the visit of Chinese Vice Foreign Minister He Yafei on December 29 that conciliatory noises emanated from Islamabad. Mr. He during his stay in Islamabad met President Zardari, Prime Minister Gilani and Foreign Minister Qureshi and on the military side, both the Chief of Staff of the Army

General Kayani and Chairman of the Joint Chiefs of Staff Committee Gen. Tariq Majid. A press release issued by the Public Relations of the ISI said: "COAS highlighted the need to de-escalate and avoid conflict in the interest of peace and security." The second release from the same source on the Chinese visitor's meeting with Gen. Majid said: "CJCSC emphasized the need for avoidance of provocative belligerent posturing, initiation of reciprocal measures for immediate de-escalation and earliest resumption of the peace dialogue." He's meeting with Zardari resulted in a sober statement emphasizing that "cooperation and dialogue are the only way forward." Even though all the three top leaders of Pakistan government told Mr. He of Pakistan's joint investigation offer, their efforts failed to elicit Chinese support to this dubious game plan. Pakistan's effort to involve China in a mediatory role declaring that Mr. He had been given a blank cheque by Pakistan, was spurned by New Delhi without a second thought. India's uncompromising stance on Pakistan accepting its responsibility and action, saw Pakistan slowly but surely coming out of the denial mood. A day after the change of track by the top brass of the government and the army, the National Security Advisor Mahmud Ali Durrani opened a small window of hope, though at the cost of his job, that Pakistan after all wished to make amends. He said that the arrested terrorist Ajmal Amir Kasab "could be" a Pakistani national. Cautiously, he added, "I am not saying anything more than that", since Pakistan did not have the proof. About the other terrorists involved in the Mumbai attack, he was not sure. Thanks for small mercies, but one has to sympathize with him since he lost his job pronto.

43. Islamabad tried another trick to shrug off action. Now it said in the absence of an extradition treaty with India, Pakistan could not extradite its people suspected of involvement in Mumbai attacks. Unfortunately for Islamabad it held little water. Pakistan was reminded that as a signatory to international conventions including the SAARC Convention it was expected either to prosecute terror suspects or extradite them to the country that wanted to try them.

44. Taking a tough posture, the Home Minister P. Chidambaram said Pakistan would have to give "cast iron guarantees" that its soil was not used to launch terror attacks on India or else it would pay an "enormous price." Clarifying he said "guarantees have to come from those who control the levers of power and that means, the elected civilian government, plus the army. These are not guarantees that you can execute on a piece of paper. These are guarantees that have to be given to the international community."

45. On January 5, India provided full evidence showing that the Mumbai attack had its roots in Pakistani territory. The same evidence was provided to the United States, the United Kingdom, Israel, and others whose nationals were among those killed in the terror attack. To further mount international pressure, same evidence was shared with other members of the international community including China, to enable these countries to satisfy themselves of the Indian charge and bring pressure on Islamabad to cooperate.

46. Pakistan came out with one after another ploy to extricate itself. It said the evidence provided was information and not proof; it was examining it; it was conducting its own investigations; no Pakistani national can be extradited to India; the crime was not planned from the Pakistani soil, (without denying that its nationals were involved). Faced with the strength and enormity of the evidence provided to it, Pakistan has lately come out with yet another subterfuge. It leaked out stories that the attack was planned by the Bangladeshi outfit HUJI and some elements in Dubai were also involved. In short to absolve itself of any blemish in this sordid affairs, it sought to make it look like an international plot against India in which one or more Pakistani nationals were somehow involved.

III

Africa

47. In a major initiative to turn the existing relationship with Africa into one of partnership, New Delhi organized an India - Africa Forum Summit. The Common Market for Eastern and Southern AFRICA (CoMESA) with 405 million people, encompassing 25 countries stretching from Egypt and Libya to Zambia to Mauritius and Seychelles is one of the largest economic groupings in Africa with which India has already close interaction. Another grouping with which India has developed close affinity is South Africa Development Community (SADC). India - SADC Forum was launched in April 2006 in Namibia and is a framework for promoting technical cooperation in all fields of economic activity. A Techno-Economic Approach for Africa - TEAM-9 - was set up between India and eight West African countries in March 2004 to accelerate economic, social and cultural development of the member countries through transfer of technology, know-how and knowledge management involving governments, experts, and entrepreneurs. In April 2006 India had invited a high level delegation from the ECOWAS, which included four ministers and Executive Secretary of ECOWAS. India has the largest line of credit with ECOWAS countries amounting to 500 million US dollars. In 2006, during the visit of the ECOWAS delegation another 250

XXVIII

million dollars line of credit was pledged. It may be recalled in 2006 at the G - 8 Summit India had presented a Non-paper underlining the close relations with Africa not as one of donor-recipient but of partnership for mutual development. India's technical cooperation programme with Africa is four decades old. It provides a wide range of training facilities and project expertise to African countries. The Indian approach has been one of strengthening of south-south linkages and promoting self-reliance through transfer of technologies appropriate to the needs of India's African partners. In monetary terms India has spent over a billion dollars on its technical cooperation programme for Africa and continues to provide training annually to almost 1000 officials in various capacity-building programmes. This is apart from hundreds of African students who join Indian universities and colleges annually. In 2004 during the visit of Indian President to Africa, India had announced its willingness to share the benefits of satellite-based technologies with the countries of Africa. Following that the Indian Space Research Organisation developed an ambitious plan to link 53 countries of Africa through a network that uses satellite fiber optic and wireless links. Since then India has established a network that joins learning centers, universities and hospitals in every African country with the counterpart institutions in India, with proven expertise in those fields.

48. It was in this background of already existent strong ties that the initiative for the Summit has to be seen. It was attended by the leaders of the 14 African countries and heads of the continent's regional economic groupings. The joint declaration adopted at the end of the summit identified food security, high oil prices and climate change as the top concerns of the developing world. India and Africa pledged to work together as partners to meet the economic and political challenges facing them. "The partnership will be based on the fundamental principles of equality, mutual respect and understanding," the joint statement stressed.

49. India received the best tribute for its efforts from Alpha Oumar Konare, Chairperson of the Commission of the African Union, when he said that the Summit showed that India "truly understood" the African continent's needs and aspirations. He said today's Africa did not need a "guiding hand" from any country and the continent could benefit from the advances India had made in areas such as health, information technology and agriculture. Prime Minister Manmohan Singh, highlighting the strong ties between India and Africa, hoped that the Summit would provide a solid foundation for a "new framework of cooperation".

50. The India-Africa summit and the meticulous preparations behind it underlined New Delhi's earnestness to engage Africa in a more dynamic way. Unlike the Western countries which reminded the African countries of the old colonial relationship, India, on the other hand, was looked upon as a role model. The Indian initiative to launch Africa Fund for dismantling the apartheid infrastructure in South Africa has not been forgotten.

51. India's trade with Africa rose from \$97 million in 1991 to \$20 billion in 2007. Lest India's initiative should be misunderstood as competing with the Chinese, Prime Minister Manmohan Singh said that India's renewed interest in Africa had nothing to do with Chinese expansion in the region. He told the media in New Delhi that India was "not in a race or competition with China or any other country". He pointed out that India and Africa had a shared colonial experience and had worked together in bilateral, regional and multilateral fora.

52. At the Summit, New Delhi pledged easier access for African exports to the Indian market. Prime Minister announcing this said that the 21st century could be turned into a "century of Asia and Africa". The India-Africa Framework of Cooperation agreed at the summit pledged to boost trade and investment and share expertise in agriculture, science and technology, water management and education. India pledged to provide preferential markets to the 34 "least developed" African nations. Prime Minister said that in the next five to six years, India would issue grants for projects in excess of \$500 million. He added that developing infrastructure in information technology, telecommunications, power and railways would be the priorities in Africa for the Indian government.

53. Mr. Jakaya Kikwete, President of Tanzania and the current Chairperson of the African Union (A.U.), made a significant announcement that the continent was "determined to take India to the citadel of power - the United Nations Security Council. We have reaffirmed our commitment to India."

54. The feelings of the African leaders, which found expression at the Summit that India should not look at Africa simply as a source of raw materials but should invest in the continent's human capital and share know-how and expertise with its nations already is at the core of its African policy pursued during the last four decades.

55. Since the liberalization of the Indian economy, the Indian entrepreneurs are looking outward and Africa is an important direction in line of their sight. Tata Steel has a \$1.5 billion joint venture in an iron project in Cote d'Ivoire,

XXX

and Tanzania has become a magnet for Indian companies, attracting some \$825 million in investment since 1990. These companies are making up for time lost until the early 90s, when Africa's economic difficulties and India's inward-oriented development had kept them apart.

56. This is only the beginning and the hope is always in the future. One such prospect lies in Angola where a major breakthrough was achieved during the year when Angola's largest diamond producing company Endiama agreed to do business directly with the Indian diamond industry. In return, India promised to open an 'institute for jewellery manufacturing' and also a diamond cutting and polishing centre in Angola, which is the third largest producer of roughs in the world. Angola is particularly impressed with the success of Tata Motors, Angola's diamond company Endiama showed interest to tie up with Tata Motors to manufacture its own commercial vehicles, while Mahindra and Mahindra are too in demand for its tractors. Angola, a member of the Organisation of Petroleum Exporting Countries (OPEC) and third largest producer of crude in Africa, has also agreed to facilitate the bid of an oil consortium that includes ONGC Videsh, in three off-shore oil blocks. ONGC Videsh will be investing \$1 billion in these oil blocks. Angola has also offered a 30 per cent stake to India in its upcoming Libito refinery. On its part, India has promised to set up a centre of excellence in petroleum technology, besides constructing gas-based 300 MW power plant, rebuilding its railway infrastructure and its financial sector. India will also give technical support in the field of education and mining, particularly in the field of coal and iron ore.

57. Similarly, India and Namibia agreed to set up a joint working group to prepare a detailed plan for long-term partnership in the diamond sector where India would help Namibia in value-addition to its diamond industry, while India got the advantage of being able to procure rough diamonds for its own cutting and polishing industry. India will help Namibia on major infrastructure projects including modernisation of its crucial 300-km rail link between Walvis Bay and Windhoek. India has also offered help to set up a 300 MW power plant in Namibia, while the two governments have agreed to cooperate in the mining sector covering exploration, beneficiation and processing. In the education sector, India will help the University of Namibia to establish a Faculty of IT, a Faculty of Mining Technology and a Faculty of Management.

58. The success of Indian information technology giants in South Africa has now led to demands from various other African nations to TCS, Infosys, and Wipro to set up their units so that they too can catch up with the IT revolution that is happening around the globe. All in all a new chapter has begun with the Summit and its success will add luster to the existing shining relationship between India and Africa.

IV

Sri Lanka

59. As the year 2008 came to an end, Sri Lanka's security forces were buoyed by the success of their military operations against the LTTE. Having flushed out LTTE from the Eastern Province, Sri Lanka government was determined to push them out of the North too. At the start of the year, Colombo formally abrogated the Ceasefire Agreement of 2002, ending the fiction of ceasefire. Sri Lanka now felt free to deploy all its resources to achieve a decisive victory and have since claimed complete successes in that direction driving the Tigers out of most of their strongholds, destroying their naval wing, driving them out of their administrative capital Kilinochchi, and pushing them to the jungles of Mullattivu. This resulted in the civil population in the conflict zone suffering 'collateral' damage and their displacement from their hearths and homes. The Government of India was deeply concerned at this unfortunate development. Responding also to the sentiments and concerns of the Tamil population in Tamilnadu, a concerned New Delhi interceded with Colombo on several occasions to avoid casualties among the civil population. In October there were reports that a large body of civil population had been trapped in the conflict zone and was in distress. New Delhi felt disturbed. The National Security Advisor, Mr. Narayanan, summoned the Deputy High Commissioner of Sri Lanka and conveyed New Delhi's distress to him. The Prime Minister too personally being concerned told journalists on October 15 in New Delhi that Sri Lanka must respect the human rights of ethnic Tamils. He said the Government was concerned at the escalating hostilities, losses suffered by civilians and increasing number of displaced persons. "We always believe that the situation in Sri Lanka does not call for military victory. It calls for a negotiated, political settlement which respects the unity and integrity of Sri Lanka and at the same time respects the essential human rights of minorities, particularly Tamil minorities."

60. On its part, Colombo, at the highest level, assured New Delhi, that every effort would be made to minimize the difficulties of the internally displaced persons caught in the conflict zone. Colombo too responded

positively to the request of New Delhi that the relief supplies sent from Tamilnadu would be allowed to reach the internally displaced persons, who needed this assistance the most.

61. While New Delhi did not interfere with the decision of Colombo to fight out the issue with the LTTE, it remained convinced that "there is no military solution to the ethnic problem", which was the real issue in Sri Lanka. The way forward was "a peacefully negotiated political settlement within the framework of a united Sri Lanka acceptable to all communities, including the Tamils." This basic postulate of Indian policy towards Sri Lanka's ethnic problem was repeatedly conveyed by the Indian leadership at the highest level and on several occasions to Colombo. Colombo on the other hand while appearing to do every thing to relieve the distress of the civilian population caught in the conflict zone, was not prepared to settle for any thing short of LTTE's surrender.

62. Every time New Delhi expressed its fears on the plight of the civil population, Sri Lanka too on its part, went on repeating its assurance to be solicitous of the safety, security and well-being of the civil population caught in the conflict zone. This assurance was conveyed by President Mahinda Rajapaksa himself to Prime Minister Manmohan Singh in August and again in October when the two leaders met on the sidelines of the SAARC and the BIMSTEC Summits. Prime Minister Dr. Singh's remarks that one cannot envisage a prosperous India without strong links with her neighbours, were reassuring to Colombo. A reassured President did not hesitate to acknowledge the benefits Sri Lanka derived from the investments of Indian entrepreneurs and the Indian development cooperation to Sri Lanka, including the rehabilitation of the tsunami-affected Sri Lankan Railway.

63. In January 2009, both the Foreign Secretary and the External Affairs Minister crossed the Palk straits to be in Colombo to convey again their concerns for the safety of the civilians and Sri Lanka once again at the highest level assured both that Colombo will do every thing to ensure the safety of the civil population caught in the conflict zone. It warmed the cockles of Sri Lankan leadership when they heard Mukherjee saying that India was "fighting terrorists and all sorts of terrorism. Therefore, we have no sympathy for any organization indulging in terrorist activity, particularly the LTTE, which is a banned organization in India."

64. Following on Indian concerns, and vouching to prove that it was really concerned with the safety of the Tamils trapped in the conflict zone, Sri Lanka on 29th January 2009 announced a 48-hour ceasefire to enable the trapped

civilians to move to safer areas. It was Colombo's contention that the Tigers were holding the civilians to ransom and using them human shield. According to reports emanating from the war-zone, the LTTE would not let the people move out to safer areas to prove to the world that the civilians were not anxious to move out since they feared for their lives without its protection. The result was not many civilians either did not come out or were not allowed to move out of the conflict zone as the cease-fire limit expired, and the Sri Lankan security forces resumed their campaign with full force.

65. The safety of the Indian fishermen fishing in Gulf of Mannar remained another concern of New Delhi. There were innumerable occasions when the Indian fishermen fishing in the Gulf came under attack of the Sri Lankan navy, often with loss of life. The Sri Lankan navy maintained that such attacks were unavoidable since the Indian fishermen often crossed the International Maritime Boundary Line and got mixed up with the LTTE vessels. In October Senior Advisor to President and his brother Basil Rajapaksa visited New Delhi. Along with the plight of the internally displaced persons, the plight of fishermen figured in the talks. It was agreed to put in place practical arrangements to deal with the bona fide Indian and Sri Lankan fishermen crossing the International Maritime Boundary Line (IMBL). The practical arrangements included the "designation by the Government of Sri Lanka of sensitive areas along the Sri Lankan coastline and their intimation to the Government of India." The Indian fishing vessels were not to venture into the identified sensitive areas. The Sri Lankan navy agreed not to fire on Indian fishing vessels. For proper identification of Indian fishing vessels, they would carry valid registration/permit and the fishermen would have on their person valid identity cards issued by the Government of Tamil Nadu. With these arrangements in place, it is hoped there would be no more repetition of firing incidents in the Mannar involving Indian fishermen.

In the meantime, in May 2008, New Delhi extended its ban on the LTTE for another two years as a terrorist organization. This was also confirmed by the Review Tribunal as required by law in this regard.

V

Nepal

66. The constitutional process which was stuck for some time, received a shot in the arm, with the Nepalese Government responding positively to the concerns of the people from Tarai and reaching an agreement with them on February 28. It cleared the road for holding the elections to the Constituent

XXXIV

Assembly (CA), which were completed in May. The Communist Party (Maoists) emerged as the single largest party.

67. This elections and the victory of the Maoists were welcomed in New Delhi. India's policy towards Nepal since the emergence of new forces was not only to strengthen democracy but also mainstream the Maoists. The elections finally brought into place a structure with greater legitimacy than the outgoing parliament which was elected nine years ago. On April 15 External Affairs Minister Pranab Mukherjee spoke to Maoist leader Pushpa Kamal Dahal, 'Prachanda' over the phone, to congratulate him and to convey India's willingness to work with his party towards building a stable Nepal.

68. The first action of the Constituent Assembly (C.A) was to abolish monarchy. The King in compliance with the CA resolution made his quiet exit, thus allowing the constitutional process to go ahead. Nepal was declared a Federal Democratic Republic. In July Dr. Ram Baran Yadav and Permanand Jha were elected the President and Vice President, respectively of the new republic.

69. In September 2008, new Prime Minister 'Prachanda' made his first official visit to New Delhi and conveyed his appreciation of "the positive support extended by the people and Government of India throughout the peaceful political democratic transformation in Nepal". Dr. Manmohan Singh once again expressed "full support to the peaceful, political, democratic transition in Nepal". The visit was marked by bonhomie and friendly understanding of the issues on both the sides. The Joint communiqué issued at the end of the visit underlined "the need to inject new dynamism into the relations between the two countries for a forward looking change, in tune with the realities of the time as well as the wishes and aspirations of the people of both the countries." To forge a forward looking relationship the two prime ministers agreed on the need "to review, adjust and update the 1950 Treaty of Peace and Friendship and other agreements, while giving due recognition to the special features of the bilateral relationship." India recommitted itself to continue to extend its assistance towards building economic assets, particularly in the infrastructure sector. As an immediate measure, New Delhi agreed to provide Rs.20 crores as immediate flood relief to the people in Nepal and rebuild the segments of the East-West Highway, damaged in the recent Kosi floods. To tie over the shortage of petroleum products India agreed to provide a credit of Rs. 150 crore and ensure for the next three month uninterrupted POL supplies in Nepal. To

relieve the shortage for the essential commodities New Delhi agreed to lift its ban on the export of rice, wheat, maize, sugar and sucrose for quantities agreed with Nepal.

70. As far as the review of the 1950-treaty was concerned, this was an old issue under discussion between the two countries for more than a decade. India never shied away from discussing it with a view either to review it or amend it to accommodate the Nepalese sensitivities. Even before Parchanda came to New Delhi, treaty revision had attracted a lot of political dust in Kathmandu and it was therefore natural for him to raise this issue to satisfy his domestic constituency.

71. Responding to the Nepalese aspirations for a treaty revision, Foreign Secretary Shivshankar Menon had as early as April 29 told journalists: "We have said consistently for many years now that we would be quite happy to discuss with Nepal new arrangements to govern the relationship." Mr. Menon, however drew satisfaction from the fact that the demand was either for "replacing it or changing it" and not scraping it altogether. "We are quite happy to do that exercise.and we will be happy to work with Nepal to that end." The matter rests there for the time being, while Nepal mulls the pros and cons of the emotional but sensitive question in its relations with India.

VI

Afghanistan

72. India remained committed to Afghanistan's development despite terrorism creating some problems. In January two of Indian personnel working on road projects there became victims of terror attack. The Indian Embassy in Kabul too came under terrorist attack in July when two senior diplomatic officers, security personnel and many Afghan visitors to the Mission lost their lives. President Karzai visited New Delhi in August on way back from Colombo after attending the SAARC Summit to convey his condolences and express his anguish at the dastardly incident. Both Prime Minister Dr. Manmohan Singh and President Hamid Karzai agreed that terrorism posed a serious threat not only to the security of the two countries but to the entire region, since it knew no barriers. But they determined that they would not let it stand in their way and fight it "unitedly and with full determination".

73. New Delhi conveyed to Mr. Karzai its "abiding commitment to Afghanistan's efforts to build a democratic, pluralistic and stable polity".

XXXVI

During the visit, India committed an additional amount of US \$ 450 million over and above the already committed amount of US \$ 750 million to meet the requirements of the ongoing and forthcoming projects to be financed by India.

VII

Bangladesh

74. Bangladesh Chief of Army Staff and Advisor to the caretaker government General Moeen U. Ahmed visited India in February as guest of the Chief of Army Staff General Deepak Kapoor. After almost 37 years of the liberation of Bangladesh, Dhaka agreed, as a gesture of goodwill, henceforth to honour the memory of Indian soldiers who were martyred in the war for liberation of Bangladesh. The remembrance would be officially on March 25 each year, the day when the Pakistan Army began 'Operation Searchlight,' a brutal campaign of genocide and rape against the people of East Pakistan and the Awami League responded by declaring Independence. General Ahmed met with President Pratibha Patil, Prime Minister Manmohan Singh, External Affairs Minister Pranab Mukherjee, Defence Minister A.K. Antony and National Security Adviser M. K. Narayanan. It was expected that the visit would contribute to a greater commitment from the Bangladesh side to clamp down on anti-India militants perceived to be camping on the Bangladeshi territory. The need to reduce tensions on the Indo-Bangladesh border figured in the discussions as well as the question of illegal immigration.

75. In April, Maitri Express (Friendship Express) a train connecting Dhaka with Kolkata was inaugurated to facilitate people-to-people contacts.

76. The foreign secretaries and the Home Secretaries of the two countries met for their regular annual bilateral consultations. The two meetings "condemned terrorism in all its forms and manifestations, and reaffirmed ... commitment not to allow their territory to be used for any activity inimical to each other's interests."

77. Despite multiple assurances, India remained skeptical of Dacca's cooperation. This sense of exasperation was evident from Home Minister P. Chidambaram's remarks in the Lok Sabha on December 15 while replying to the debate on terrorism in the backdrop of terrorists attack in Mumbai. He said: "We continue to be concerned that the territory of our neighbour, Bangladesh is being used by Indian Insurgent Groups to plan

and execute terrorist acts against India and the Indian people. The Government of Bangladesh has repeatedly assured that they would not allow their territory to be used by the Indian Insurgent Groups. However, the regrettable fact is that many leaders of the Indian Insurgent Groups continue to use Bangladesh as a safe haven. It is our expectation that Bangladesh will implement its commitments and assurances not to permit the use of its territory for such actions or allow sanctuary to such militant groups."

78. Before the sun set on 2008, Democracy returned to Bangladesh after a hiatus of two years. A vote on December 28 saw the return to power of Awami League led by Sheikh Hasina Wajid with a convincing haul of 230 out of 299 seats. Its allies won another 32 seats taking the total to 262 for the alliance. The other alliance led by another former Prime Minister Begum Khaleda Zia could get only 30 seats.

79. India welcomed the return of democracy in its neighbourhood in the hope that a stable political regime would be a shot in the arm for development. It would help the emergence of healthy and stable socio-economic order in the neighbouring country. Prime Minister Dr. Manmohan Singh in his congratulatory message to Sheikh Hasina felt confident to say that under her "leadership Bangladesh will attain even greater heights." He committed India to "further strengthening and deepening of relations with Bangladesh". India can take heart from Sheikh Hasina's assurance that she wanted "continued good relations with neighbours" particularly with India and that she would not allow Bangladesh territory to be used for terrorism against her neighbours. India can keep the fingers crossed.

VIII

Maldives

80. A new and important milestone in the history of Maldives marking the ushering in of a new era in democracy and political reform occurred in October with the election of a new President Mohamed Nasheed replacing its long serving President Gayoom. India expressed its appreciation "at the free and fair nature of the elections wherein the people of Maldives turned up in large numbers and made their choice." India and Maldives have traditionally enjoyed excellent bonds of friendship and cooperation. "We are confident that the new democratically elected

XXXVIII

government will strengthen these links and build on the close and multi-faceted engagement between the two countries," Mr. Mukherjee said in his message.

81. Showing his regard for New Delhi and its leaders, the new President Mohamed Nasheed made his maiden visit abroad to India. He offered his country's assistance in "observing" the Indian Ocean following the rise in piracy and the use of the sea route from Karachi to Mumbai in carrying out the Mumbai terror strikes. He said Maldives being a country of the Indian Ocean, "understands the topography of the Indian Ocean; and ready to cooperate in observing the Indian Ocean."

82. Keen on education for his people and to avoid Maldivian students going to Pakistani Madrasas, he said he would request India "to open up as much as possible to the Maldivian students so that there is no need for them to go to madrasas to satisfy that demand. No parent in his right mind would send children to madrasas if India opens up its educational institutions. The Indian government has given assurances in this regard," he said.

83. India extended a \$100-million standby credit facility, increased the State Bank of India's lending ceiling to a higher level and assured the visiting President that the Exim Bank would make more facilities available for Indian traders for expanding trade with Maldives. He thanked India for being receptive to Maldives' requirements.

IX

Bhutan

84. The dawn of 2008 saw India congratulating and saluting the people and the Royal Government of Bhutan. An official statement from the Government of India congratulated "the Royal Government of Bhutan for the successful conduct of the first ever elections for National Council (Upper House) of Bhutan that were held on December 31, 2007 for 15 Dzongkhags." The Statement added "This is indeed a great moment in Bhutan's history and an important step in Bhutan's transition into a new system of governance. India is committed to extending full support in the establishment of institutions required for the consolidation of Democratic Constitutional Monarchy in Bhutan." In March the Kingdom completed the election process for the National Assembly (Lower Hosue).

85. On May 16 and 17, Prime Minister Dr. Manmohan Singh visited Bhutan. It was a special year for Bhutan as Foreign Secretary Shivshankar Menon pointed out in his press briefing before the Prime Minister's departure. He said: "This is a special year for India-Bhutan relations. For Bhutan itself it is the centenary of the Wangchuk dynasty. It is also the year of Coronation of the new King of Bhutan. It is the year when democracy has been ushered in; Parliament has been elected; and Bhutan is going through an internal transition; so also when Bhutan's Tenth Plan begins. For India and Bhutan it is also the fiftieth anniversary of Pandit Jawaharlal Nehru's visit to Bhutan in 1958, which in a sense laid the foundations of all that we have seen since in this relationship which is uniquely warm, close and friendly." His emphasis on travel on horse back by Pt. Nehru was to remind the journalists of the revolution in communications that the kingdom had undergone in the last five decades.

86. Speaking to the members of the National Assembly, Prime Minister paid a handsome tribute "to the enlightened leadership and statesmanship provided by His Majesty Jigme Singye Wangchuck that Bhutan has succeeded in reaching these milestones in an atmosphere of utmost peace and stability while steadily improving the welfare of its people. During His Majesty's reign, Bhutan has witnessed unprecedented social and economic development. He is the architect of Bhutan's constitution and polity. Today His Majesty's vision of vesting sovereignty in the people of Bhutan has borne fruit." He also assured Bhutan that it "can continue to count on India, as a friend and - may I say - an admirer of Bhutan. India will stand by you as a factor of stability and support in your quest for greater prosperity and happiness." It may be recalled that only last year India and Bhutan had revised their treaty of friendship to bring the relationship in tune with the changing realities obtaining today.

X

West Asia

87. In the extended neighbourhood of India, West Asia occupies an important place where ties have remained substantial and vibrant. Oil revenues and prudent fiscal policies followed by the countries of the region have generated substantial surpluses which in the past had flowed to the West. In the last few years there is a discernable change. Most of the Arab countries are looking eastward for investment opportunities. India's political, economic and social stability have given vibrancy to democratic institutions, resulting in high growth and a modern industrial society. The financial

XL

institutions that are in place today are internationally credible and make India an investment destination. It is important here to note that despite the global economic meltdown and global financial crisis, the Indian financial institutions, by and large have shown vibrancy compared to that of many other countries. The leaders of the oil-rich countries of the region, shrewd as they are, did not fail to notice emerging India's promising opportunities.

88. In January, the External Affairs Minister Pranab Mukherjee visited Oman. Among other things, he discussed enhanced cooperation with the six-nation Gulf Cooperation Council. The GCC is India's single most important source of energy. Trade between India and the countries comprising West Asia and North Africa has risen to \$34 billion.

89. In April, External Affairs Minister inaugurated the India-Arab Conclave organized by the Federation of Indian Chamber of Commerce and Industry (FICCI). The Conclave was aimed at businesspersons and potential investors, keen on establishing or expanding existing projects through enhanced financial, technical and managerial participation in India and in the Arab countries. It was also reflective of the desire of Indian industry to engage and increase its involvement in its extended neighbourhood. Mr. Mukherjee alluded to India's need for investible surplus funds from the rich Arab countries and India's capacity to absorb those in its massive infrastructure projects. The Conclave identified projects worth around \$200 billion in the energy and infrastructure sectors to be taken up in the near future.

90. The visit to New Delhi of Secretary General of the Arab League, Amre Moussa towards the end of the year was an important event. He jointly inaugurating with the External Affairs Minister, the India-Arab League Forum and held discussions with the Indian leadership. He also signed a Memorandum of Understanding to establish an India-Arab Cooperation Forum, as a framework for dialogue and cooperation for strengthening the foundations of the India-Arab relations and diversifying cooperation in such diverse fields as sustainable development, economic, commercial, educational, scientific, energy, Information Technology, culture, etc.

91. Earlier in April, External Affairs Minister had a successful visit to Saudi Arabia. In his meeting with his Saudi counterpart an agreement was reached on establishing a Saudi-India investment fund to help kick-start investments in major infrastructure projects in India. Mr. Mukherjee confirmed to journalists

that while calling on the Saudi King he reiterated India's requirement of an investment of around \$500-600 billion to build its infrastructure projects. To facilitate business contacts both the countries agreed to issue long-term visas to businessmen. On April 20th the Bilateral Investment Promotion and Protection Agreement was ratified by the two countries to remove a major legal impediment to closer business ties. This placement of a legal regime set the stage for the economic relationship to take-off. Acknowledging India's efforts to acquire energy security, Saudi Foreign Minister Prince Saud invited Indian companies to identify specific projects in Saudi Arabia, following an interaction with Saudi oil majors including the State-run Aramco.

92. To cap these efforts, Prime Minister made a successful visit to Oman and Muscat in November. With Muscat a Defence and Security Agreement was signed paving the way for joint maritime security, sharing of intelligence on threats posed by terrorism and cooperation in tackling trans-national crime. "We discussed the modality of Qatar investing about \$5 billion in India. In the next two to three months, we will work out the modalities to identify projects in the areas of energy, power, fertilizer and other related activities to enable the government of Qatar take firm decisions about the areas these investments could be directed," Prime Minister Manmohan Singh told the journalists while returning to New Delhi. India already has an agreement with Qatar for the supply of 7.5 million tons of LNG annually.

93. In Oman the Prime Minister discussed measures to intensify cooperation in the defence field by undertaking more high level exchanges of personnel and ships. India's largest joint venture project, Oman-India fertilizer Company is located in Oman. The MoU for the joint investment fund was signed between the State Bank of India and the State General Reserve Fund of the Sultanate of Oman. It would focus on infrastructure, tourism, health, telecom and urban infrastructure. The two countries also signed a MoU aimed at improving the working conditions of the Indians in Oman, especially in case of a dispute between the employee and employers. More important, the MoU stated that the two sides shall take measures to facilitate recruitment of Indian manpower and exchange of visits between officials for consultations in job creation and generation of employment opportunities. A landmark proposal discussed was to set up a joint investment fund whose seed money could go up to \$1.5 billion to finance infrastructure projects.

94. India has traditionally maintained very close contacts with the Palestinian people. Despite close relations with Israel, India's commitment

to the Palestinian cause remained steadfast. This point was stressed by Prime Minister Dr. Manmohan Singh in his speech at the Foundation stone laying ceremony of the Chancery building of the Palestinian State in New Delhi during the visit of Chairman Mohammed Abbas in October. "India and Palestine have been steadfast partners over decades. It is only fitting that India's commitment to Palestine and its future should find one of its embodiments in the building which stands before us. I have no doubt that it will serve as a symbol of our friendship and solidarity in the future," said Prime Minister Dr. Manmohan Singh. The construction of the building is being entirely funded by the Government of India as a gesture of Indian goodwill and friendship for the people of Palestine. Besides the Chancery building in New Delhi, India also signed an MOU to finance the construction of a school in Palestinian territory to be named after the first Prime Minister of India Jawaharlal Nehru. India announced a grant of US \$ 10 million as a budgetary support to the Palestinian National Authority to help meet its immediate requirements and an additional ten million dollars as assistance for development projects.

95. Towards the close of the year, as the 6-month old cease-fire agreement between Israeli and Hamas expired, there were some rocket attacks from the Gaza side on some Israeli civilian targets. In a disproportionate use of force, Israel chose to resort to aerial bombardments of Gaza followed by ground operations. The Government of India called for "an immediate end to the use of force against Palestinian civilians in the Gaza Strip that resulted in large numbers of casualties." With no end in sight to the fighting, on December 29, India again expressed its disappointment at the "disproportionate force" being used and called the Israeli action "unwarranted and condemnable".

96. On January 2, 2009 to somewhat alleviate the suffering of the Palestinians, New Delhi, in response to the Flash Appeal made by United Nations Refugee Welfare Agency (UNRWA), extended an assistance of US\$ 1 million for use by the Agency to provide shelters, cash assistance, essential household items etc., to affected families in Gaza.

97. In April India formally joined in the Turkmenistan-Afghanistan-Pakistan-India Gas Pipeline Project. While doing so, India had sought to dispel the impression that it had little interest left in the Iran-Pakistan-India gas pipeline project. The Minister for Petroleum and Natural Gas Murli Deora on April 23 said: "For us, both are equally important. As far as India is concerned, we want to settle and activate both because the energy demand in India is so

much and the oil prices are shooting up." The Iranians were also assured of the Indian interest in the Iran-Pakistan-India pipeline when India participated in the ministerial tripartite talks in Islamabad in April and again the same month when the Iranian President visited New Delhi. But the developments in India - Pakistan relations following the terrorist attack on Mumbai in November originating from Pakistani soil, threaten to cast ominous shadow on the security aspect of the pipeline passing through Pakistan. Gas price and cost of delivery too remain unsettled.

XI

China

98. Prime Minister Dr. Manmohans Singh's visit to China in January set the tone for the relations between the two countries. They had in their earlier meetings shared the view that there was enough space for India and China to grow together and their simultaneous rise would contribute to both peace and prosperity in Asia and beyond. Given the past history of relations, there was no doubt both India and China understood the need to manage their relations prudently as one of the highest priorities for both of them. There was recognition that their management of relations was going to have an impact on their own interests beyond Asia and the world as a whole. Flowing from this recognition was the tradition now fully established for frequent and regular engagements between the two at different levels. Indian and Chinese leaders have met regularly not only in their own capitals but also at regional and international fora. Senior officials too have been holding regular consultations on a range of regional and international issues in the annual Strategic Dialogue which commenced in 2005. There was a security dialogue focusing on counter-terrorism and a defence dialogue between their defence establishments. Exchange of visits by naval vessels and, more recently, friendly exercises between naval and land forces, provided valuable opportunities for confidence building. Both sides are committed to expanding such exchanges.

99. Apart from his annual summit meeting in Beijing with President Hu Jintao, Dr. Manmohan Singh met with him again in Hokkaido in July on the sidelines of the G-8 Summit. Prime Minister met the Chinese Premier Wen Jiabao in New York on the sidelines of the UNGA session. External Affairs Minister Pranab Mukherjee visited Beijing in June. In October the Chinese Foreign Minister came to India. Foreign Secretary Shivshankar Menon too visited Beijing in April. The two countries also opened their Consulate

XLIV

generals in Kolkata and Guangzhou as agreed between them in November 2006 during the visit of Hu Jintao to New Delhi.

100. In May Wenchuan in Sichuan province was struck by an earthquake, India announced an humanitarian assistance of US \$ 5 million.

101. After a year-long hiatus, Indian and Chinese Representatives met in September for the only time during the year for talks on the boundary question, as against thrice in 2007. Premier Wen Jaibao and Prime Minister Dr. Manmohan Singh meeting in New York on September 24 on the sidelines of UNGA, expressed "satisfaction" at the progress made by their delegations. On the question of Arunachal Pradesh, however, China continued to express its reservation, albeit at a low key. India on its part reiterated its claim to Arunachal Pradesh and reminded the Chinese that it was an integral part of the country and its constitutionally elected representatives sit in the Parliament.

102. During the course of the year there were occasions when there were some hiccups, but it is a matter of satisfaction that the mist of temporary misunderstanding lifted fast enough. One such occasion was the demonstrations by the Tibetan at the Chinese Embassy in New Delhi against human rights violations in Tibet. On another occasion at the Nuclear Suppliers' Group meeting in September to consider a waiver on India's nuclear trade, China's temporarily dithering created some concern in New Delhi. Sure enough before any damage could be done, it thought it prudent to fall in line and lend its weight to the waiver. At the end of the day the relations remained unscathed.

XII

Japan

102. The Prime Ministers of India and Japan met in Tokyo for their annual Summit in October. They shared the view that "India and Japan, as major countries in Asia, sharing common values and interests, must advance bilateral cooperation as well as cooperation in regional and multilateral areas with the objective of promoting peace, stability and prosperity in Asia and the world. They reaffirmed the importance of the Strategic and Global Partnership established in 2006 for this purpose and for harnessing the full potential of India-Japan relations.

103. India-Japan economic relationship too received a big momentum when Japan committed 225 billion Japanese Yen (Rs. 8582 crores) to India for undertaking nine new infrastructure projects in various parts of the country. New projects approved with Japanese assistance included Kolkata Metro Project, Hyderabad Outer Ring Road Project, Hogennakal Water Supply Project, Tamil Nadu Urban Infrastructure Project, Haryana Transmission System Project and UP Forestry and Poverty Alleviation Project. In addition, Government of Japan also committed to fund Phase-II of Delhi Metro Project, which was seen as a shining example of India-Japan relationship. Earlier in the year, Government of Japan also committed to fund Goa Water Supply and Sewerage Project and Maharashtra Transmission System Project.

The actual disbursements on ongoing projects reached a new high of 95 billion Japanese Yen (Rs. 3500 crores approx.) during the year which was a hike of 70% over the previous year. Already the two Governments have started negotiations to undertake several key infrastructure projects like Dedicated Freight Corridor, Delhi Mumbai Industrial Corridor, Chennai Metro besides several other infrastructure and social sector projects in the year 2008-09. Both Governments are also negotiating to set up an IIT in the country with involvement of Government of Japan.

104. India and Japan have worked out several levels of mechanism for dialogue in various sectors. During the Prime Minister's visit another mechanism for security dialogue was added. There already exists the Annual Strategic Dialogue between the Foreign Ministers as well as the other policy dialogues at respective levels. About defence cooperation the Joint Statement said: "They also welcomed the steady upgradation of defence exchanges and cooperation and decided to encourage their Defence Ministries to enhance their dialogue and collaboration further based on the Joint Statement of May, 2006. They also welcomed the contribution of established bilateral dialogue mechanisms and urged them to continue their valuable work."

105. The two countries are already working on the Economic Partnership Agreement / Comprehensive Economic Partnership Agreement on which substantial progress has been achieved. As far as the bilateral trade is concerned it is expected to touch the US \$ 20 billion target by 2010.

106. Another major landmark development had been the agreement to have a Bilateral Currency Swap Agreement to meet any short term liquidity crisis. Both countries also set up two important forums namely, High Level Policy Dialogue on Economic Development and India-Japan Strategic

XLVI

Dialogue on Economic Issues to discuss all important economic issues. These two dialogues are to be held annually.

107. The visit of Deputy Chairman Planning Commission, Dr. Montek Singh Ahluwalia, to Japan in September offered an opportunity to work out future areas of cooperation between the two countries. The Japanese side while welcoming India's recent formulation of the "National Action Plan on Climate Change" worked out with India action plan for enhanced cooperation in the energy sector to ensure energy security. The two countries agreed that focusing on key energy consuming sectors could enhance the effectiveness of respective national energy efficiency policies. It was recognized that a cooperative approach for enhancing energy efficiency through sectoral approaches could be a useful method for improving energy efficiency, and agreed to work collectively with the other countries on their practical development.

108. To achieve the objectives of energy security it was decided to work towards (1) Cooperation in Energy Efficiency and Conservation Sector (2) Cooperation in the Power and Coal Sectors; (3) Cooperation in the Renewable Energy Sector; and (4) Cooperation in the Oil and Natural Gas Sectors. It was agreed to start work in these areas and their modalities were identified. Setting the agenda for the future it was emphasized that "bilateral cooperation based on the Japan-India Energy Dialogue will not be limited to what has been identified above and that they will continue to further deepen their bilateral cooperation."

109. Japan as a member of the NSG was part of the consensus decision of the Group to the waiver for India's nuclear trade. As noted in the preceding paragraph, Japan agreeing in various forms of energy cooperation, the nuclear energy sector was left to be discussed in the future. The joint statement issued at the end of Mr. Ahluwalia's visit said: "The two Ministers noted that the Nuclear Suppliers Group adopted by consensus the Statement on Civil Nuclear Cooperation with India. They confirmed that they will exchange views and information on their respective nuclear energy policy". Despite Tokyo strong views on nuclear non-proliferation, Japan did not rule out cooperation in this sensitive field.

XIII

Myanmar

110. Myanmar with 1600 Kms. long common border with India is a close and friendly neighbour and a gateway to South East Asia for India's 'Look East Policy'. With the Kaladan Multi Modal Transit Project gradually taking shape after the

signing of the Rs. 5500 million Kaladan Multi-Modal Transit Transport Facility in April, Myanmar in coming years would become an important link for India's northeastern states. It involves developing an alternative trade route between India and Myanmar to provide access to India's North East region.

111. In June the two countries signed four important agreements which would help enhance the economic links between them. These were the (i) Bilateral Investment Promotion Agreement; (ii) The 64 million US dollars credit agreement with the Exim Bank to finance the 230 kv transmission lines; (iii) another US \$ 20 million credit agreement with Exim Bank for an aluminium conductor steel reinforced wire manufacturing facility and (iv) Banking arrangement for financing border trade.

112. In March the Home Secretaries of the two countries met in New Delhi for their regular consultations. At this meeting both agreed to work closely for enhanced cooperation and in this context, discussed various institutional mechanisms particularly to strengthen security cooperation

113. Senior General Maung Aye, Vice Chairman of the State Peace and Development Council, the number two man in the Myanmar ruling hierarchy visited India in April. During his stay in New Delhi, among other Indian leaders he met the Prime Minister who stressed to him the importance of pursuing various cross-border projects to promote greater connectivity and economic engagement between the two countries. They agreed that more needed to be done to enhance trade between them and, towards this end, agreed to take steps to open up the existing border points in the North East States for regular trade. Both leaders recognized the need to cooperate closely in the hydrocarbon sector. PM reiterated India's commitment to support Myanmar in the Telecommunication and the IT sectors.

114. Noting the positive steps being taken by the Myanmar Government towards national reconciliation and political reforms, including the announcement of elections in 2010, Prime Minister Dr. Manmohan Singh underlined the need for Myanmar to expedite the process and make it broad-based to include all sections of society, including Daw Aung San Suu Kyi and the various ethnic groups in Myanmar.

115. It may be recalled that in February at the Foreign Secretary level Consultations, Mr. Shivshankar Menon had pointed out to his Myanmar counterpart the need for broad-based political reforms. In a departure from the position taken by the West, India opposed sanctions against Myanmar as it believed they would hit most the marginal and the destitute. India felt

XLVIII

the desire for sanctions was directly proportionate to the distance from Myanmar of the country demanding it. New Delhi's stand operated within the parameters defined by External Affairs Minister Pranab Mukherjee: "We want political reforms and the process of reconciliation to start immediately and it has to be inclusive. As far as possible, important political prisoners should be released."

116. New Delhi was deeply distressed when in May Myanmar was hit by hurricane Nargis causing heavy damage to life and property. Over 100, 000 persons were reported dead and many thousands missing. In a spontaneous response two Indian Navy ships - INS Rana and INS Kirpan - carrying immediate relief and medical supplies, and five Indian aircraft carrying tents, medicine, roofing material and other relief items were rushed to Myanmar. External Affairs Minister Mr. Mukherjee reiterated India's "readiness to assist Myanmar in whatever way we can in both the relief and rehabilitation efforts." He also urged Myanmar to accept international relief supplies to supplement India's efforts. India also contributed US \$ 200, 000 for the repairs to the sacred Shwedagon Pagoda in Yangon heavily damaged during the cyclone.

XIV

Vietnam and Indonesia

117. The President paid state visits to Vietnam and Indonesia in December. The visits were of great "significance from the point of view of India's 'Look East' policy with two members of ASEAN, Vietnam at its northern periphery and Indonesia at its southern rim." This was a great opportunity to establish contacts at the highest level of the leadership of the two countries and a cross section of their societies in the field of economic, commercial and social spheres. The leaders of the two countries expressed the desire to work closely with India to strengthen the Strategic Partnership. While condemning the terrorist attacks in Mumbai they expressed full support to India.

118. In her discussions with the leadership and in the official interaction at the delegations' level, great emphasis was laid on increased contacts through tourism, trade and commerce, assisted by air links. In Vietnam a MoU was concluded between the Chambers of Commerce and Industry of the two countries. India also decided to open a cultural centre in Hanoi.

119. In Indonesia the President in her talks with President Sushilo Yudhoyono, covered bilateral and other subjects of regional and international importance. It was agreed on the "need to give substance and content to the Joint Declaration on the Establishment of a Strategic Partnership between the two countries." The President and her counterparts expressed satisfaction at the growth of institutional linkages between India and the two countries visited by her. The rapid expansion in bilateral trade and investment and the development of closer linkages in science & technology and culture was particularly noted.

120. The President expressed her satisfaction at the feeling of genuine friendship that exists in both countries. In her statement at the end of the two visits she said "I am, therefore, satisfied that the objective of further deepening and strengthening relations with these countries have been achieved. My visit was a step in the 21st century, which offers us many opportunities and yet equally complex challenges. I am confident that with the experience, maturity and wisdom that all countries possess, we can work towards a bright future."

121. While still abroad, the President was grieved to receive the news of the death of former Prime Minister V. P. Singh and the terrorists attack in Mumbai. She cancelled her ceremonial engagements and after completing her official engagements in Indonesia, hastened back home to be with the people. In response to the expression of sympathy and support which she received she conveyed India's determination to face the challenges squarely and root out terrorism completely.

Brunei Darussalam

122. The visit of the Sultan of Brunei in May underlined the mutually beneficial cooperation and partnership existing between India and Brunei Darussalam. It offered an opportunity for discussion "on a wide range of subjects covering economic, trade and investment, defence, information and communication technology, space, shipping & ports, health, culture, arts & sports, and consular areas." The visit provided an opportunity to the two countries to sign five agreements: a) Agreement on Reciprocal Promotion and Protection of Investments; b) MOU of Cooperation in Information and Communication Technology; c) MOU on Cooperation in the fields of Culture, Arts and Sports; d) MOU on the Establishment of Joint Trade Committee and e) MOU on

L

Cooperation in the Operation of the Telemetry Tracking and Telecomm and Station for Satellite and Launch Vehicles and for Cooperation in the field of Space Research Science and Applications.

XVI

Australia

123. It may be recalled that Australian Government under John Howard, despite committed to the policy of not supplying uranium to a country that did not sign the NPT, had in 2007 decided to make an exception in the case of India. The new regime in Canberra under Mr. Kevin Rudd staying committed to the policy of making no exception was yet keen not to lose the goodwill of India. Foreign Minister Stephen Smith gave indication of this when he said in June that his country was "determined" to elevate its ties with India to "a new economic and strategic level" by shaping "practical initiatives" and by going "far beyond" the sensitive issue of Canberra's uranium export norms. Praising India's "strong record on non-proliferation," he appeared apologetic when he said, on the eve of Mr. Mukherjee's visit to Canberra in June, that the Kevin Rudd government's policy "is long standing and well known". The important point, he emphasized was that "Australia's relationship with India goes far beyond this single issue." He spoke of Australia's proposal of forming "a new Asia-Pacific Community" for "greater strategic stability in our rapidly-developing part of the world," which he said he proposed to discuss with Mr. Mukherjee. He desired New Delhi to become a member of the existing Asia-Pacific Economic Cooperation (APEC) forum when its "membership moratorium ends in 2010." Hailing India as a "positive force in Asia's future," Mr. Smith said Canberra "strongly believes" that New Delhi "should have a permanent seat on a reformed United Nations Security Council".

124. The visit of Mr. Mukherjee to Canberra was the occasion to hold the Second Foreign Ministers' Framework Dialogue. The Australian Foreign Minister made a return visit to India in September and reassured New Delhi of its support for membership of the UN Security Council. Despite its strong commitment to non-proliferation and reluctance to supply uranium, Australia was supportive of waiver for India when it came up for discussion at Vienna at the NSG meeting in September.

125. Indo-Australian trade which has been growing at 30 per cent a year currently was around more than ten billion US dollars. Australia is India's 10th largest trading partner while India is Australia's 9th largest partner. The Joint Statement issued at the end of Mr. Smith's visit spoke of "increasing

dynamism of the economic partnership, and noted in particular the growing diversification of trade and investment linkages." India and Australia are working towards a free trade agreement, which would determine the future growth of bilateral economic relations between the two countries.

XVII

France

126. France and India have traditionally enjoyed closer relations between them. The binding force that holds the two countries together is democracy, which bestows on them common values of freedom, human rights, secularism, and rule of law, tolerance and belief in multilateralism in the international political and financial architecture as the means to tackle global challenges effectively. These human values are at the core of their enhanced cooperation and strategic partnership.

127. Two summit level visits in one year marked the warmth of relations between India and France. The French President came in January and Prime Minister Dr. Manmohan Singh visited Paris in September. President Sarkozy was the Guest of Honour at the Republic Day celebrations in New Delhi. The two countries have strategic partnership and have made substantial progress in expanding and deepening cooperation in diverse areas including political, defence, trade, economic, science and technology, culture and education. Bilateral trade has more than doubled in the last three years. It currently stands at US \$ 6.23 billion. France is the eighth largest investor in India with total investment commitments of US \$ 1.76 billion during the period 1991 to 2007. Major sectors for French investment and technology transfer have been fuels, chemicals, cement, gypsum products, glass, food-processing industries, electric equipment, industrial machinery and the transportation industry. Particular areas in science and technology which both countries are working on, include water technology - that includes ground water research - pharmacology, nanotechnology, neurosciences and so on. Cooperation in medical research is also an important aspect of the bilateral relationship. This is taking place through collaborated arrangements of ICMR in India and INSERM, which is the French medical research body.

128. In the political arena France has been one of the strongest supporters of India. It supports forcefully India's membership of the UN Security Council. It put all its weight behind the proposal to grant India a waiver for nuclear trade at the NSG meeting in Vienna in September. It wants G-8 to be expanded to include India. France in recognition of India's need for clean

LII

sources of energy and promotion of stable sustainable development was the first country after the NSG waiver to offer its cooperation in the development of nuclear energy in India and sign the bilateral agreement for civil nuclear energy cooperation, which will form the basis of wide-ranging bilateral collaboration in energy and research. Both have strong partnership in defence cooperation by increasing the range, level and frequency of their military joint-operations and cooperation.

129. Convinced that strong economic ties can be further built in a spirit of social and environmental responsibility, India and France have been eager to maintain the fast rising trend of their trade and the smart pace of their business to business relations. They are now working towards achieving an ambitious target of reaching 12 billion euro bilateral trade by 2012 and significantly stepping up investments.

XVIII

United Kingdom

130. At the start of the year 2008, British Prime Minister Gordon Brown came to New Delhi for the Fourth India-UK Summit. The first Summit between the two countries was held in September 2004 with the visit to London of Prime Minister Dr. Manmohan Singh. It was then decided to launch a Comprehensive Strategic Partnership between them. This has since developed in a multifaceted and substantive Comprehensive Strategic Partnership built on trade and investment, education, science and technology, and so on. Now it is aimed at further expansion of economic linkages, R&D collaboration, cooperation in higher education and academic exchanges, as well as cooperation in counter-terrorism.

131. Besides the frequent high-level interactions, there are several bilateral dialogue mechanisms which are in place including the Joint Economic and Trade Committee for trade and investment and the Science and Innovation Council for S&T cooperation. In terms of trade, the UK is India's fourth largest global trading partner and accounts for 3.56 per cent of Indian trade, second largest in the EU. The annual two-way figure of trade stands at Euro 8.5 billion. UK continues to be the largest cumulative investor in India with a figure of 3.4 billion pound sterling; and the third largest investor post-1991 with 3.6 billion US dollars. India has emerged as the second largest investor in the UK in terms of number of projects. Over a billion pounds have been invested in the UK and 50 Indian companies are actively trading on the

London Stock Exchange. In the field of higher education there is the UK-India Education and Research Initiative launched in April 2006.

132. At the 2008-Summit the two countries once again reiterated their commitment to the Strategic Partnership built between them based on their shared conviction in the values of democracy, fundamental freedoms, pluralism, rule of law, respect for human rights and multilateralism in the international political and financial architecture as the means to tackle global challenges effectively. Recognizing that nuclear energy is a safe, sustainable and non-polluting source of energy, which could make a significant contribution to meeting the global challenge of achieving energy security, sustainable development and economic growth, United Kingdom was a strong supporter of India-US civil nuclear co-operation initiative and supported New Delhi all the way to obtain the waiver from the NSG. London also agreed to work expeditiously towards a bilateral agreement for bilateral cooperation in this sector, in line with the strong commitment to non-proliferation. On the question of control of emissions, the United Kingdom agrees with New Delhi on the adaptation strategies in a manner that supports further economic and social development in particular of developing countries on the basis of per capita emission rates, as an important and equitable principle.

133. Great Britain agrees with India that terrorism is a global threat requiring a global response, needing joint international efforts in countering it, since terrorism could not be justified under any circumstances. It was in keeping with this recognition of its wide ranging ramification that when Mumbai was hit by terrorist in November, the British Prime Minister rushed to New Delhi to convey his sympathies. He described the Mumbai attacks as "horrific" and "a human tragedy on a terrible scale." He wanted the world community to ensure that there were "no safe havens for terrorists" and "no safe place for those who finance terrorist activities." He had no doubt about the origin of the attacks and said "We also know that the group responsible is LeT and they [Pakistan] have a great deal to answer for." He suggested that the world community must focus on choking the funding of non-state actors who have resorted to repeated acts of violence on unarmed civilians. The world must also "continue to expose the perverse and unacceptable messages that are sent out by extreme terrorist groups who are perversionists and misuse religion," he added.

LIV

134. The British Prime Minister, more than underlined his own concerns and that of New Delhi in delivering a blunt message in Islamabad the next day (December 15). He asked Pakistan to clean out terrorists operating from its territory in order to make the world a more secure and safer place. "The time has come for action, not words," Mr. Brown said at a joint press conference with Pakistan President Asif Ali Zardari. Zardari squirmed when he asserted that a majority of terror plots investigated by the British intelligence had a Pakistani link. I have told President Zardari that three-quarters of the most serious terror plots investigated by British authorities have links to Al-Qaeda in Pakistan" said Mr. Brown.

135. Unfortunately, British Foreign Secretary David Miliband when in New Delhi in January 2009 muddled the waters of Indo-British understanding. He tried to link Pakistani terrorism with Kashmir. His utterances were negation of the so far articulated British views on terrorism, held not only by the present Prime Minister but also by the previous Prime Minister Tony Blair. One would like Miliband to read the India - British Joint Statement issued, on January 6, 2002, soon after the terrorist attack on the Indian Parliament in December 2001, which described terrorism as "an attack on the human rights and civil liberties of the citizens of the world", and condemned "all acts of terrorism whatever the motivation". Tony Blair gave went to his outrage unequivocally and most emphatically when he agreeing with New Delhi, said "We condemn all those who support terrorism, those that finance, train or provide support to terrorists share their guilt".

XIX

United States

136. The high point of the India - US relations was the signing of the Civil Nuclear Energy Cooperation Agreement. Once New Delhi was ready to sign the agreement, after receiving parliamentary support, through the Motion of Confidence in the Government from its Parliament but not before there was realignment of domestic political forces, Bush Administration put its weight behind the deal all along, at the IAEA, NSG, and the Congress. The Agreement was finally signed on October 10 in Washington by External Affairs Minister Pranab Mukherjee and US Secretary of State Condoleezza Rice.

137. External Affairs Minister described the Indo - American relationship as "based on the bedrock of long-term commitments and a shared vision." Mr. Mukherjee spelled it out rather graphically to the Carnegie Foundation on March 24. He said: "Emblematic of this new relationship was the

willingness of both countries to shed the baggage of the last 30 years to launch a new era of cooperation in civil nuclear power to address India's burgeoning energy requirements." It is a matter of satisfaction that the civil nuclear energy initiative has reached its logical conclusion. Now, he said "we intend to press ahead on all these and other initiatives." Speaking of the economic linkages in the relationship, the External Affairs Minister said: "Economic cooperation looks particularly promising. Whether it is meeting the need for better infrastructure or addressing energy deficiency, improving telecommunications, or modernizing the manufacturing sector, the opportunities for US business and industry in India are huge. India has become the fastest growing export destination for US products, having registered a growth rate of 75% last year. The US is one of the largest foreign direct investors in India, while US-bound investment from India has grown dramatically in recent years, particularly in 2007. India's transparent economic policies, regulatory framework and judicial system are a source of reassurance to our foreign partners. I am confident that this economic synergy between India and United States is bound to continue in the coming years and decades." On the eve of his departure for New York in September, the Prime Minister speaking profusely of the new relationship said: "In recent years our relations have expanded significantly in areas of interest to us such as education, trade, business, technology, energy and agriculture. The engagement between the two countries has strengthened and we are pursuing the multi-faceted cooperation to our mutual benefit."

138. The US President, George W. Bush, in his meeting with the Prime Minister on September 26 acknowledging the new relationship said, "You and I have worked hard to change the relationship between our countries. India is a great country with an incredibly bright future, and it's in the U.S. interest to have a good, strong strategic relationship with India. And we've worked hard to achieve that."

139. Both India and the United States have been cooperating in the fight against terrorism, by recognizing it as a menace against humanity. The Joint Working Group on Counter Terrorism meets periodically to consider ways and means to tackle this horrendous crime against civil society. India for some years has been the victim of cross-border terrorism and the United States has lately recognized the role of Pakistani elements, even if they were non-state actors in promoting terror groups. That these groups used the Pakistani soil for training and mounting attacks on neighbouring countries no one had any doubts. Pakistan, as a responsible State of comity of nations,

LVI

could hardly wash its hands of its responsibility for sheltering these groups. During the recent attack on the Indian Embassy in Kabul in July and again the terrorist attack on Mumbai in November, the United States joined New Delhi to put pressure on Islamabad to act against elements responsible for the heinous attacks. The US intelligence agencies did not hesitate to confront Pakistan with the evidence collected by them of the involvement of Pakistani elements for which Washington, like New Delhi, held it responsible. The United States publicly reminded Pakistan of its responsibility to act against them and cooperate with India in investigating these atrocious crimes.

XX

Central and South America

140. The Latin American Region comprising a large number of countries accounts for a combined GDP of US\$ 3.44 trillion and a trade turnover of US\$ 1.65 trillion and a population of 562 million people. It also includes five of the world's most bio-diverse countries - Brazil, Colombia, Ecuador, Mexico, and Peru - as well as the single most biologically diverse area in the world - the eastern slope of the Andes. The countries of the region are almost at the same stage of economic development as India, they offer the unique opportunity for south-south cooperation. Despite the distance and problems of connectivity, India, in recent years, has endeavoured to develop close relations with this region. The region has a very substantive presence of the Indian diaspora. Indian cultural centers have been set up in Georgetown, Paramaribo and Port-au-Spain. Some distinguished persons of Indian origin from these countries have been given Pravasi Bharatiya Awards and other recognition.

141. The President's visit to Brazil, Mexico and Chile during 2008 was the high mark of India's relations with the countries of this region. Of the three countries Brazil is India's biggest trade partner and there is a strategic partnership between the two. The two countries together interact on other fora as well-- IBSA (India-Brazil-South Africa forum) and BRIC, enlarged from trilateral cooperation forum among Russia, India and China to include Brazil. Brazil and Mexico along with India are among the Outreach countries that are associated with the G-8.

142. In June 2007 Brazilian President had visited India and was the Chief Guest at India's Republic Day celebrations. New Delhi had the pleasure of hosting him again in October 2008 for the IBSA Summit. Prime Minister Manmohan Singh paid a bilateral visit to Brazil in September, 2006, besides

visiting Cuba for the NAM Summit. External Affairs Minister Mukherjee visited Brazil in February. Apart from discussing various matters of common interest to the two countries, he signed three MoUs on Infrastructure, Combating Hunger & Poverty Alleviation and Cooperation in Sports & Youth Affairs which in coming years impart added momentum to the multifaceted bilateral engagement of India and Brazil.

143. Mexico, the second largest country in Latin America, is also the largest trading country. Mexican President Calderon had paid a State Visit to India in September 2007. The visit provided an opportunity to sign the India-Mexico Extradition Treaty besides an Agreement on Mutual Legal Assistance in Criminal Matters.

144. Chile-India trade relations predate our independence. Today Chile is one of the most open and liberal economies in the region. Relations with Chile have developed particularly well since the milestone Indian visit of the Chilean President Ricardo Lagos in January, 2005. Both the countries have a preferential trade arrangement which has helped to strengthen economic cooperation between them.

145. India's bilateral trade with the region in April 2007- March 2008 period was to the tune of US\$ 11.63 billion [imports- 6.5 billion and exports- US\$ 5.13 billion]. With Brazil alone the trade last year was \$ 3.2 billion, with Mexico it was about \$ 2 billion and with Chile about \$ 2.4 billion. With Brazil there is a trade target of \$ 10 billion by 2010 and with Mexico \$ 5 billion by the same date. As far as Chile is concerned, there are a large number of Indian companies working there. Some of them are -- Essar Steel, Bajaj Auto, UP Hotels, Jindal Steel, SEWA, NIIT, etc. In Brazil also there is a very good spread of the IT companies.

146. Indian companies, excluding those owned by Non-Resident or Overseas Indians, have either already invested or committed to invest US \$ 9.73 billion in LAC countries. Given the economic strengths of these countries, there are excellent opportunities for enhancing this relationship. The process has already begun. Indian Business Conclaves are being held in Latin America by apex Indian chambers of commerce and industry. Trade missions are also being organized and increased participation in trade events is being encouraged. Government of India's FOCUS -- LAC programme, which commenced in 1998, has been extended. Trade and investment missions from these countries are also being organized. The trade agreements signed with the MERCOSUR group of countries and individually will promote such initiatives. Bilateral Investment Promotion

LVIII

and Protection Agreements and Avoidance of Double Taxation Agreements have been signed with some countries and are being processed with others.

147. Apart from Chile, there is a long list of Indian companies having their presence in other Latin American countries. These include TCS, The Cellofarm, Zidus Cadilla, Glenmarc, Torrent, BEML, Mahindras, IRCON, Vijay Pharmaceuticals, Vijay Electricals, Pidilite, Bajaj Hindustan, Rajshri, Renuka Sugars, Raj Industries. Videocon, Ranbaxy, Claris Life Sciences, Dr. Reddy's, NIIT, Sasken Communications, Infosys, Aditya Birla Group, Reliance. These industries have generated a lot of employment opportunities in Latin American countries.

148. The fundamental changes that have taken place in the pattern of governance in Latin American countries too contributed to the closer relationship between India and the countries of the region. On June 20th the External Affairs Minister Pranab Mukherjee while addressing the Consultative Committee of Parliament attached to the Ministry of External Affairs recounted the many commonalities that bind India to the region. These, he said are "the multiculturalism, multilingualism, and multi-ethnicity, as well as common objectives of achieving inclusive growth through democratic systems".

149. These complementarities have provided strength to Indian initiatives in fields as diverse as agriculture, S&T, hydrocarbons, mining, defence, space, ICT and infrastructure. Cooperation with these countries is being pursued through bilateral agreements and MoUs and through interaction between experts from both sides. With air and maritime connectivity improving gradually, linkages between centres of excellence and academic institutions will also strengthen thus leading to a varied and multi-sectoral dialogue between the citizens of both sides.

150. In June, New Delhi hosted the meeting of the Foreign Ministers of the Central American Association for Integration (SICA), which gave an opportunity for extensive discussions with them. The galaxy of VIPs on the list were the Foreign Minister of Costa Rica; the First Vice-Prime Minister and Foreign Minister of Panama; the Foreign Minister of Guatemala; the Foreign Minister of Nicaragua; Vice-Foreign Ministers of El Salvador, Honduras, and Dominican Republic; as well as a representative of the SICA Secretariat. External Affairs Minister Mr. Mukherjee had met the Foreign Ministers of SICA in New York in October 2007, when the idea of the New Delhi meeting was decided.

151. The meeting discussed several proposals made by External Affairs Minister. India has already set up IT training centers in five SICA countries, namely, Panama, Guatemala, Nicaragua, El Salvador, and Honduras. Now there is a proposal to set up IT centers in Belize, Costa Rica and the Dominican Republic. In addition India had already offered lines of credit to the tune of 80 million dollars to all the SICA members with 10 million dollars for each country. Some of the countries have submitted concrete proposals. At this meeting Mr. Mukherjee requested the others to also send in their requirements and projects for infrastructure investment and capacity building. Investments in SICA countries from India in the automotive sector; pharmaceuticals, textiles and IT were discussed. Mr. Mukherjee held out the possibility of raising the number of scholarships for SICA countries from 68 to 100. He also offered to share expertise in agriculture, pharmaceuticals, small and medium industries, tourism, renewable energy, etc. The Exim Bank has agreed to extend a line of credit of 10 million dollars separately. Trade stands at 537 million dollars and it was felt that both sides should strive to double this figure in the coming three years. In addition, in their interventions, the SICA Foreign Ministers particularly focused on some areas of interest in which they wanted India to share expertise, particularly food security, and said that India's success in agriculture, etc., needed to be shared to build up food security in their countries. It was, therefore, decided to set up a Joint Technical Group with sufficient technical experts available to discuss this and other aspects of cooperation. They also signed agreements on diplomatic and official visas and Foreign Office Consultations. In discussing issues of international interest, there was a lot of commonality of views on UN Security Council reforms, Climate Change, Terrorism, Energy Security, Agriculture, Doha Round, nonproliferation, and nuclear disarmament. El Salvador, Guatemala and Honduras - have already committed their support to India's candidature for permanent seat on an expanded UN Security Council. With these initiatives, it is expected that India's ties with the countries of Latin America will gather momentum and grow from strength to strength.

152. The Minister of State in the Ministry of External Affairs Anand Sharma has visited these countries regularly. During 2008 he visited Venezuela, Guyana, and Suriname. With Venezuela India signed an important agreement for development and production of oil as a joint venture partner. The ONGC, Videsh (OVL) has chipped in with an investment of US \$ 356 million in the Venezuelan company Petroleos De Venezuele S.A to develop the San Cristobal Field in Junin, in the Orinoco Region of Venezuela to claim 40 percent of the production,

LX

from its present level of 20, 0000 barrels to 40, 000 barrels per day. India and Venezuela also signed an MOU in April to develop oil and gas exploration and production projects in that country. The Ecuadorian foreign Minister visited New Delhi in December 2008.

XXI

Multilateral Cooperation

153. Occupation with bilateral diplomacy and domestic politics did not in any way diminish New Delhi's enthusiasm for regional and multilateral institutions. Prime Minister found time to travel to various destinations to fulfill his commitments to them. He traveled to Hokkaido (Japan) to participate in the G-8 Outreach Summit in July, to Colombo for the SAARC Summit in August, to Marseilles for the India - EU annual Summit in September, to New York for the UN General Assembly Session also in September, and to Beijing for the ASEM Summit in October. In between he chaired the BIMSTEC Summit in September and the IBSA Summit in October both at home. External Affairs Minister visited Yekaterinburg (Russia) for the Trilateral -- Russia-India- China Ministerial meeting in May and Tehran for the NAM Ministerial Council and the NAM Committee on Palestine meetings in July. In September he attended the Ministerial Meeting of the IBSA Dialogue Forum in New York. He chaired the BIMSTEC Foreign Ministers' meeting in New Delhi in August. He was represented by the Finance Minister for the Commonwealth Foreign Ministers meeting at New York in September. The Minister of State, Anand Sharma attended the Foreign Ministers' meeting of the East Asia Summit in Singapore in July, the CICA Ministerial meeting in August at Almaty and the 32nd Annual meeting of Ministers of Foreign Affairs of the G-77 in New York in September. The Commerce Minister attended the ASEAN Economic Minister's Consultations in Singapore in August. The Minister for Petroleum and Natural Gas Murli Deora attended the Shanghai Cooperation Organization Summit meeting as Observer for India in August at Dushanbe. Finance Minister attended the Madrid meeting of the SAARC Finance Ministers in May.

154. Towards the end of the year, the world was faced with a severe financial crisis, said to be the worst since the Great Depression of the thirties of the last century. US President George W. Bush took the initiative to invite the Heads of State/Government of the leading economies of the world for a conference in Washington in November to consider the way out of the financial impasse. The Prime Minister Dr. Manmohan Singh, responding to

President Bush's invitation attended the conference. In his speech at the meeting, Dr. Singh regretted that though the emerging economies "were not the cause of this crisis, they are amongst the worst affected victims." Pointing out its impact on India, he said "After growing at close to 9% for four years, our growth rate is expected to slow down to between 7 to 7.5% in the current financial year". He expressed his anguish that "slow down of growth in developing countries will push millions of people back into poverty, with adverse effects on nutrition, health, and education level." These he said, were not "transient impacts, but will impact a full generation." Describing the summit as timely, since the problem needed a global response, he said "the international community needs to consider special initiatives to counter the shrinkages of capital flows to developing countries". He suggested as a source of quick disbursing liquidity the establishment of short term swap arrangements, to reduce the burden on IMF, and add to confidence. He advocated new financial instruments for infrastructure financing, and provision of liquidity support to banking institutions. He, particularly underlined the need for "specific steps to support developing countries in this period of exceptional difficulty" and said their willingness to do so "will be a test of our collective leadership".

155. The G-20 summit adopted a Declaration which called for immediate, short term and long term "strong and significant actions ...to stimulate our economies, provide liquidity, strengthen the capital and financial institutions, protect savings and deposits, address regulatory deficiencies, unfreeze credit markets...." and hoped that "international financial institutions (IFIs) can provide critical support for the global economy."

156. Earlier at the ASEM Summit the Prime Minister called for needs to "analyse objectively how and why these failures (which caused global crisis) have occurred with such ferocity". On another occasion, he warned that "our preoccupation with the global financial crisis should not detract from pursuing the goal of fulfillment of Millennium Development Goals".

157. External Affairs Minister Mr. Mukherjee on November 8 speaking in Kolkata about the BIMSTEC admired how the Bay of Bengal initiative had evolved to bring in its fold more than 20 percent of the world population and provided a unique link between South and Southeast Asia. The Prime Minister called the BIMSTEC as the "bridge between South Asia and Southeast Asia" bound together by nature and geography." He, however cautioned about the "dangers posed by the sea" since much of the region is bound by the waters. Describing Asia as "the engine of the world economy", the Prime

Minister called BIMSTEC "an important part of the wider Asian Community", to the ideals and objectives of which "India is firmly committed".

158. The India-EU Marseilles Summit gave an opportunity for discussion on regional, global issues and bilateral relations. Among the global issues, the dominant concern was the recent meltdown in the global economy -- issues like food security and climate change etc. At the summit it was decided (i) to extend strategic partnership to new areas, (ii) to a joint work-programme on energy, clean development and climate change, (iii) to a horizontal civil aviation agreement and (iv) to launch a European Business and technology Centre in India, which shall support business-to-business and research cooperation between the EU and India.

159. Annual G-8 grouping of developed countries has recognized the importance of new emerging economies and the need for their cooperation to tackle the global economic issues. This recognition has found expression in the annual invitation extended to the new emerging economies, Brazil, China, India, Mexico and South Africa. The consultations that take place between them on this occasion provide an important input in the decisions of the G-8. This institutionalized arrangement provides an additional opportunity to the Five to consult among themselves and issue their own independent declarations and find independent solutions to their own problems besides taking a coordinated position in discussions with the G-8. At the Hokkaido Conference in July The Five particularly underlined this fact and in their declaration said: "Our increasing interdependence demands an integrated and concerted response to these global challenges. We must ensure development and prosperity on a sustainable path, both within and across nations. That is the historical challenge of our generation. To achieve this fundamental goal, we must act in a coordinated manner to ensure equitable growth with care for the environment, taking appropriate account of cross-border interactions in fulfillment of our shared responsibility." To that extent they made it known that they were not supplicant at the G-8 interaction. They were "ready to consolidate bilateral relations, improve our cooperation level, and mechanisms and continue the dialogue and collaboration with the G-8 and the international community at large" only on the basis of "principles of equality, mutual respect and cooperation for the common good". If these conditionalities were met, they declared they would continue to contribute to multilaterally promote "action-oriented global partnership for equitable and sustainable development, including by making positive contributions in such critical areas as global governance, financial stability, and climate change as well as food and energy security".

160. The 15th SAARC Summit in August was a landmark development. As the Prime Minister said in his message it moved 'from a phase of declaration to a phase of implementation and action.' As part of this approach he recounted several initiatives that were taken, "notably the establishment of the SAARC Development Fund, the SAARC Food Bank, the proposal to establish a South Asian University, SAFTA and greater people-to-people contacts." New Delhi drew satisfaction from the fact that most of these initiatives were Indian. There are no two opinions now that SAARC has emerged as a successful instrument of regional development. It is now being taken note of. Afghanistan joined it as full member last year bringing its strength to eight.

Though SAARC has been in existence for more than two decades, it is only now that major countries have started taking note of it. While China, Iran, Japan, Korean Republic, Mauritius, the United States and the European Union have already obtained Observer status, Australia and Myanmar got it now, at 2008 Summit.

XXII

Climate Change

161. For the past few years, environmental pollution and climate change have become a matter of major concern to governments round the world and hence a subject of international discourse at any international gathering or even in bilateral relations. India is as concerned about it as any other country and has made it a matter of national commitment. In 2006 India adopted the National Environment Policy synergizing environmental and economic policies and appropriate institutional mechanisms to support the integration of three pillars of sustainable development, economic development and environmental protection. India has recognized that the environmental management cannot be treated separately from other developmental concerns. It has brought about a new model of partnership between the government and the civil society.

162. On June 30, Prime Minister Dr. Manmohan Singh formally launching the National Action Plan on Climate Change, held it out as reflecting the importance India attached to mobilizing the nation's energies in meeting the challenge of climate change. He said "Without a careful long-term strategy, climate change may undermine our development efforts, with adverse consequences, across the board, on our people's livelihood, the environment in which they live and work and their personal health and welfare. It is also a challenge which

LXIV

encompasses the interests of both present and future generations." Therefore he said "We have the moral responsibility to bequeath to our children a world which is safe, clean and productive, a world which should continue to inspire the human imagination with the immensity of the blue ocean, the loftiness of snow-covered mountains, the green expanse of extensive forests and the silver streams of ancient rivers."

163. On April 21, looking the subject of environment in civilizational context, Prime Minister's Special Envoy on Climate Change Syam Saran described it "a powerful asset". Speaking of India's "civilizational legacy" which places high value on the preservation of the environment and the maintenance of ecological balance, he said "We look upon Nature, instinctively, as a source of nurture, not as a force to be subdued." Quoting Mahatma Gandhi dictum: 'The earth has enough to meet our needs, but will never have enough to satisfy our greed', Mr. Saran said making excessive demands on earth's resources could be injurious to the larger interests of preserving the environment for the good of humanity.

164. Speaking to Asia Society on September 30 on Climate Change and Energy Security, External Affairs Minister Pranab Mukherjee reminded the world of India's commitment to environment by recalling that Mrs. Indira Gandhi was the only head of Government apart from the host state, who attended the first international conference on environment protection held in Sweden in 1972. India was among the first few countries in the world to set up a separate Ministry of Environment. As early as 1987 the late Prime Minister Rajiv Gandhi spoke of the need to balance development and conservation in his address to the United Nations, Mr. Mukherjee reminded the conference. He said "these leaders were not only pioneers in the global environment movement, but projected India's age-old conviction and commitment to environment protection. "Their beliefs were deeply rooted in our civilizational legacy, which emphasized the need for harmony between Man and Nature, rather than Man triumphing over Nature. Indeed, from ancient times, Nature has been deeply revered as a source of Man's sustenance. The concept of sacred groves, sacred trees and sacred animals created a spiritual framework of conservation, which is still observed in many parts of our country," said the Minister. Mr. Mukherjee reminded the audience that "despite this excellent track record of responsibility, India has taken major steps to further enhance the sustainability of its growth. This is not because we are under pressure to reduce our emissions, but because we genuinely believe that it is in India's best interests to pursue environmentally sustainable growth."

XXIII

165. It was a fast paced scenario that the Ministry of External Affairs encountered during the year. The Indian missions abroad play a very significant role in helping the Ministry to meet the challenges it faces and achieve the objectives it sets for itself. What are the objectives of Indian foreign policy, when defined by its history, geography and international environment? Simply put, they are to secure peace for development and seek security to preserve and secure those gains. To that end it is not only necessary to secure friendlier relations with the countries around and in its extended neighbourhood, but also beyond, whose interests co-join with its own interests.

166. The diplomatic outposts around the world are not only the eyes and ears of the Ministry but the two together constitute an integral whole. The conclave of the heads of mission around the world organized by the Ministry of External Affairs towards the close of the year 2008 was not only timely but in fact long overdue. In normal course each mission looks at the international scenario from the prism of its limited vision. The conclave was intended to give them a first hand feel of the international situation as seen from the broader perspective of New Delhi and emerging challenges posed by a new globalized world. The External Affairs Minister Mr. Pranab Mukherjee observed in his opening remarks to the conference that since the structure of international system was "changing at a rapid pace", the challenges too were evolving rapidly and they have to be prepared to face them in their daily functioning. This had become particularly necessary now since time and space have been cut short by the emergence of electronic media. Instant communications give little time to ponder over issues for too long and consult with the headquarters. Hence the Minister's emphasis on the need for a change of traditional approach to problems and adopting "more forward looking approaches of cooperative solutions".

167. The External Affairs Minister, speaking earlier to the National Defence College on November 3 had posed a pertinent question on our traditional diplomacy; and asked whether it had met our needs and requirements in a globalised world adequately. Mr. Mukherjee spoke of the increasingly demanding role that India was being called upon to play globally. He said that the country's ability to respond to these challenges would "shape and influence the future direction of our country. The past can act as a guide; but it is the decisions we take in the present which shape our future." It was in this context that the Minister while speaking to the Indian diplomats spoke of the evolving geo-political and economic re-alignment that was taking place

around India, and our interest necessarily and increasingly intersecting globally. His thesis that there was a shift in the center of gravity of the world economy and politics towards Asia and the Indian Ocean has come to have greater economic and strategic importance than ever before. It was valid and relevant. Existing and emerging threats in the form of piracy, drug trafficking, proliferation of weapons of mass destruction, pollution, accidents, closure of choke points, regional conflicts and other disputes have all become of vital concern internationally, observed Mr. Mukherjee. These are the new challenges for which Indian diplomacy and Indian diplomats have to prepare themselves.

INDIA'S FOREIGN RELATIONS - 2008

SECTION - I

GENERAL

001. Speech by the External Affairs Minister Pranab Mukherjee at the Inauguration of the Exhibition and Seminar on "Cities, Roads and Caravan Sarais: An Emblem of Linkages Through the Ages" at the Indira Gandhi Centre for Arts.

New Delhi, January 8, 2008.

Shri Chinmaya Gharekhan,

Excellencies,

Distinguished Scholars,

Ladies & Gentlemen,

It is my privilege to inaugurate the Exhibition and Seminar on "Cities, Roads and Caravan Sarais: An Emblem of Linkages through the Ages" at this premier institution. It is also a pleasure to be in the company of so many scholars and experts from the Central and West Asian regions and beyond.

The Indira Gandhi National Centre for the Arts has chosen a very interesting subject focusing on regions that form part of India's extended neighbourhood and figure prominently in India's foreign policy priorities. For several millennia, India has been at the crossroads of an intense engagement between these regions, yielding a significant exchange of knowledge, ideas and culture. In the present times, these regions remain absorbing for us, not only in terms of people-to-people contacts, but also in the significant economic and commercial opportunities that exist for all sides. A seminar on linkages between these regions is therefore extremely timely.

One of the most abiding motifs that comes to mind when discussing India, Central Asia and West Asia is the Silk Road. As those present in this distinguished audience will know, the Silk Road was more than just a road and about more than just silk. Trade may have been the main imperative for this network of roads, which was supplemented by the sea routes from the Malabar Coast and western Indian cities to the Persian Gulf and the Arabian Peninsula. But a more significant and lasting imprint was left by the ideas emanating from the different regions and the influences resulting from exchanges among traders and travellers moving across cities, roads and caravan sarais. Their contacts with ordinary people, in particular, enriched these exchanges and led in no small way to the composite culture that we in India are immensely proud of.

Historians and archaeologists have traced links between India and the countries of the Central and West Asian regions in considerable detail. Many learned works have been written on the architectural similarities that the regions abound in, the shared traditions and history that can be found everywhere, and the linguistic and cultural parallels that even casual modern-day travellers encounter throughout the region. The diffusion of Buddhist traditions from India to Central Asia left its footprints in monasteries and monuments along the Silk Road. Sufism permeated the region and its impact in society and life can be felt even today. In the other direction, West Asia was the fountainhead of Judaism, Christianity and Islam, all of which made a deep impact and found a lasting home in India. We see the resulting connectivity and overlap in various ways, be it through the testimony of art and architecture, painting, calligraphy, music, literature, poetry, etc., or in the shared recollections of the era of empires. At a popular level, it is not a coincidence that people all over the region relish dishes such as pulao and kababs and naan, with undisguised delight. By the way, apart from the intellectual fare on offer, I do hope that these dishes also feature on the menu on the sidelines of this Seminar.

The historical contact and cultural linkages I refer to form the basis of the close affinity that has always existed between India and the various countries of these regions. It helps that many of our societies are pluralistic and marked by rich and colourful diversity, as well as an ethos of tolerance and respect. Our governments are engaged in realizing the objectives of socio-economic development for our peoples. Our shared ethos and culture thus make for an ideal platform on which to develop ties that are suited to meeting modern day challenges of securing development and combating extremism and terrorism.

India has been working together with the countries of the Central and West Asian regions to share experiences and cooperate in diverse fields. We have institutionalized mechanisms for pursuing cooperation, such as Foreign Office Consultations, Inter-Governmental Commissions and expert-level dialogues on specific subjects. Economic cooperation forms an important component of our exchanges. There are enormous complementarities for us to work together in the areas of trade, investment and economic development. India also has significant technical manpower which could contribute to the realization of the economic potential in these countries. For example, we have programmes for capacity building in nearly all the countries.

There are also natural convergences between India and these countries in terms of worldview and approach to issues in multilateral forums. These need to be strengthened in order to bring us even closer on contemporary issues of global importance. For example, the Central Asian countries supported India as an Observer state in the Shanghai Cooperation Organization. We are keen to contribute actively in economic development programmes, counter-terrorism and anti-narcotics trafficking efforts under the SCO. We are confident that given our historic experience in the flow and exchange of ideas, India's experience will be found useful.

Ladies and Gentlemen, I am confident that your exchanges over the coming days will be mutually beneficial, and I hope you will look at ways to further develop and consolidate the ties between our respective countries. I convey my best wishes for your deliberations at the Seminar and for the exhibition.

Thank You.

002. Speech by President Smt. Pratibha Devisingh Patil at the valedictory session and conferment of the Pravasi Bharatiya Saman Awards at the 6th Pravasi Bharatiya Diwas.

New Delhi, January 9, 2008.

I am delighted to be here in this gathering of over 1,500 Overseas Indians from across the world. The Pravasi Bharatiya Divas signifies the homecoming of the Pravasi. So let me say to all of you - welcome home and also I wish you a Happy New Year.

Nearly a century ago, on this day in 1915, the first great Pravasi, Mahatma Gandhi, returned home after his successful struggle against apartheid in South Africa. He energised a people to resist colonial rule and lead a uniquely successful non-violent struggle for the freedom of India. In the 21st century we are living in a world that is witnessing violence and acts of terror. These are times when the world must be inspired, once again, by the principles of Truth and Non-violence for which Mahatma Gandhi - the great apostle of peace - lived and died.

Globalisation is increasing prosperity across the world but at the same time

widening the wealth and income gaps between the rich and the poor. The world and indeed India must make efforts to reduce these gaps by adopting an approach of 'inclusive development' - which requires us to urgently address the task of the greater good of the greatest numbers. I am glad that the Conference this year focused on social development challenges that we face in India.

Over the last two days you would have deliberated on how you can contribute to the social development of India. Several ideas, I am sure, have emerged for building partnerships in health, education, rural development, empowerment of women and gender equality. These ideas must be transformed into individual initiative and community action. It will be "action on ground" that will contribute to improving the lives of the people who need help.

The overseas Indian community is impressive in terms of its size, spread and its growing influence. Estimated at about 25 million in 130 countries, the Indian Diaspora is a significant economic, social and cultural force in the world today. This vast and diverse overseas Indian community grew out of a variety of causes - mercantilism colonialism, and globalisation - and migration took place in different waves over several hundreds of years. The divergent patterns of settlement, the varying degrees of integration with their new homelands and the emergence of new identities and ethos make the Indian Diaspora unique. It is difficult to speak of one great 'Indian Diaspora'. There are communities within communities whose bond with India and the manner and extent of engagement is marked by its own experiences as well as by time and distance. However, what binds you all with India - is your origins, roots and links with India.

Overseas Indians are representatives of India and its people, regions, religions, languages, values, culture and history. The general reputation of Indians living abroad is that they are hardworking, as also loyal and committed to the country in which they live and work. This should be kept up. At the same time, overseas Indians should also look at ways in which they can be partners in the growth of India.

India is emerging on the global stage. India is today the fastest growing free market democracy. With a growth rate of 9 percent per annum over the last three years, the economy has demonstrated the capacity for sustained growth. With foreign exchange reserves in excess of US \$250 billion and Foreign Direct Investment of nearly US \$ 30 billion last year, we are confident

that we will attain a growth rate of 10 percent. This growth has helped us lift millions of people out of poverty. We have been able to expand access to education, healthcare and economic opportunities to a vast majority of our population.

Yet this is but work in progress and much remains to be done. The slow growth in agriculture is a cause for concern. With more than half the population directly dependent on this sector, low agricultural growth has implications for 'inclusiveness' of growth. We have embarked on a national action plan to significantly raise the level of investment, technology and innovation in Agriculture. We have also sought to address the mammoth task of health and education for all on a mission mode. Social Development is important for our stable growth. Investing in India's human capital to bring every citizen into the fold of economic development in a sustainable and quick manner is a mammoth task. The Indians living abroad can contribute to schemes and projects in the fields of education, health and rural development as also invest in infrastructure projects and enterprises whether they be small, medium or large sized industries.

There have been some recent initiatives, including partnerships involving overseas institutions and the Indian Diaspora, helping India to further its development goals and invest in its human capital. More such partnerships should be established. Linkages between institutions of advanced learning would also be useful. Overseas Indians could be catalysts and promoters of such linkages given that they represent a reservoir of knowledge, skills, resources and enterprise.

Overseas Indians, as doctors, engineers, scientists, lawyers, entrepreneurs, academics and statesmen have excelled in their spheres of activity. Some of you have been honoured today with the prestigious Pravasi Bharatiya Samman Awards. I must specially congratulate Dr. Navinchandra Ramgoolam, the Prime Minister of Mauritius. You are a special friend of India. You have led your country with distinction and statesmanship. Let me also congratulate all the other awardees on achieving this distinction. You have with excellence in your fields enhanced the image of India.

I call on the Overseas Indian community to engage proactively in contributing to the growth of India. I will leave all you with some ideas for raising the level of engagement. Ideas that can help build a critical mass for development. First, Overseas Indians must make use of the Overseas Citizenship of India scheme. It gives you a lifetime free visa to India and also allows you to live and work in India whenever you choose. Second, the newly established

Overseas Indian Facilitation Centre, can be the Diaspora's window to invest in and benefit from India. It will serve as your 'one stop shop'. Government has begun work on establishing a 'Diaspora Knowledge Network' - an electronic platform to enable the Indian Diaspora to transform ideas into individual initiatives and community action in India. I would urge you to participate actively in this project. The soon to be established 'India Development Foundation', will provide the Overseas Indian Community a credible window to contribute to social development causes such as empowerment of women and rural development in India.

I conclude by emphasizing that there is an important role that each one of you can play in India's journey to becoming a strong, just and equitable society. The time has come for a strong and sustained partnership between India and its Diaspora.

I have no doubt that together; we will keep our 'tryst with destiny'.

I wish you success in your endeavours.

Thank You.

003. Speech of Prime Minister Dr. Manmohan Singh at the Pravasi Bharatiya Diwas.

New Delhi, January 8, 2008.

Ladies and Gentlemen,

Let me begin by wishing all of you a very happy new year. Even though Delhi is cold right now, I assure our Pravasi Bharatiyas that a warm welcome awaits you in this land of our ancestors.

The Pravasi Bharatiya Diwas is a special day for all of us. Each of you represents the idea of India in different parts of the world. Like I had said last year, we are one family and the whole world is our home. The invisible thread that binds us together and bonds us with Mother India is 'Indian-ness'.

Each year we have the honour and privilege of having an eminent Pravasi as our Chief Guest. This year we have the distinguished Dr. Navin

Ramagoolam, the Honourable Prime Minister of Mauritius as the Chief Guest. The people of India and Mauritius have deep emotional links. Mauritius is a special friend of India and Dr. Ramagoolam a personal friend. It is indeed my pleasure to extend a very warm welcome to him.

As we begin the year 2008, we look back at the year gone by with some satisfaction. It has been a good year for the Indian economy, for our working people and our entrepreneurs. The conditions are today favourable to achieve and sustain nine to ten percent growth rates - which is our objective over the 11th Plan period. The growth process now underway will transform our economy to emerge as a major powerhouse of the globalised world.

At the heart of the development effort is the imperative to transform the quality of life of all our people and give them access to health, education and economic opportunity. This is the essence of the thinking that defines the 11th Five Year Plan. I have dubbed it India's "Education Plan".

In focusing on education, as an instrument of empowerment, we are inspired by the example of the Indian diaspora. After all, what other capital did most of your forefathers have when they left the shores of India? It is by investing in your capabilities that you have empowered yourselves. This is how I wish to see India empower itself.

We in India take pride in the achievements of the people of Indian origin in diverse fields of human endeavour in different parts of the world. I am particularly happy at the strides made by our women. Indra Nooyi, Sunita Williams, Kalpana Chawla and Jhumpa Lahiri are role models for our society seeking to give women a rightful place.

The ambitious growth rate that we seek to achieve will require determined efforts to raise our savings and investment rates. The bulk of resources for India's development must come from home. However, it is our sincere desire to create a framework which will provide profitable opportunities for overseas Indians to invest in India's development. It is also our sincere desire to benefit from the vast reservoir of technological, managerial and entrepreneurial skills represented by overseas Indian communities. We seek to encourage in every possible way our links and relations with overseas communities of Indian origin.

It is therefore appropriate that the theme of this year's Pravasi Bharatiya Divas is 'Engaging the Diaspora: The way forward'. I welcome all of you to be active partners in this exciting journey of India's progress and prosperity.

Ladies and Gentlemen,

India is a knowledge based economy and is fast emerging as an education hub. A key initiative on education that I had announced last year was a proposal to establish a PIO University in India for the benefit of children of overseas Indians from across the world.

I am happy to inform you that the government has approved the policy framework for this university. This university will be established in a public-private partnership with active participation of credible overseas Indian Trusts or Societies. The University will have the autonomy and flexibility in the disciplines that it offers and in its academic governance. The Ministry of Overseas Indian Affairs has through a due diligence process short listed a few of the proposals and a final decision is expected to be taken soon. I am confident the work on the university will commence this year.

An important constituent of the overseas Indian community is the Overseas Indian Worker. Estimated at about five million they are mostly located in the Gulf and South East Asia. They play an important role in India's economy. All of you know that India is the largest recipient of remittances from its overseas community - estimated at about US \$ 26 billion in 2006. What is less known is the fact that close to fifty percent of this comes from the Indian workers in the Gulf.

The Ministry of Overseas Indian Affairs has started a nation-wide skill up-gradation training programme for potential migrant workers. The scheme targets training of nearly two lakh emigrant workers over the 11th plan period. This will help create a strong cadre of highly skilled workers who will then be best placed to fill the large labour supply gaps emerging in the western world.

I am happy to announce today the launch of an 'Overseas Workers Resource Center' (OWRC) which will provide relevant information and assistance to potential migrant workers, and also operate a multi-lingual help line for grievance redressal and interventions for overseas workers in distress. This is a pioneering effort and I hope this center will in the long run expand the scope of services to promote legal migration.

You will be happy to know that the government has approved the setting up of the 'Council for the Promotion of Overseas Employment' to serve as a strategic 'Think -Tank'.

Last year I had spoken of the need for a single window facilitation for

overseas Indians to provide a host of advisory services. You will be happy to know that the Ministry of Overseas Indian Affairs has established the 'Overseas Indian Facilitation Center' (OIFC), which is a not for profit trust in partnership with the Confederation of Indian Industry.

Ladies and Gentlemen,

Diaspora philanthropy is not a new phenomenon. Apart from making contributions at times of national calamity, like earthquakes and the tsunami, many of you are already engaged in various development initiatives. Philanthropy is an ideal area where a number of new partnerships can be built, existing ones strengthened and the range and reach scaled up.

To give impetus to these partnerships, a proposal to promote an 'India Development Foundation', as an autonomous not-for-profit Trust, is being examined by the Ministry of Overseas Indian Affairs. The foundation will serve as a credible institutional mechanism to direct overseas Indian philanthropic propensities into human development efforts in India.

The Foundation will assist overseas Indians to contribute to the cause of education, health and rural development in their home village, district or state. It will also partner with credible NGO's and philanthropic organisations actively engaged in social development, thus providing a strong public-private partnership bridge between overseas Indians and their target beneficiaries.

Ladies and Gentlemen,

In this increasingly inter-dependent and inter-connected world, overseas Indians are becoming 'Global Citizens'. The overarching idea of a shared culture and shared values bonds us together. The Indian Diaspora is a pluralistic community just as India is. It holds within its fold people of different languages, faiths and regions. I call this multi-cultural identity, Indian-ness. The idea of India transcends the narrow barriers of religion, language, caste or class, both within and outside the Indian nation.

What then do our common cultural values stand for? Throughout history Indian culture has been a living example of pluralism, assimilation, tolerance, inclusiveness and the eternal values of truth and non-violence. It is these values of Indian-ness that unite us both in ideology and practice. That is what makes us globally Indian. It is these values that we must uphold to the world in all that we do.

This gathering of the Pravasi Bharatiya has, therefore, a global relevance. We can show our troubled, divided, embattled world a new pathway to living together inspired by our modern idea of "Unity in Diversity".

This message is especially relevant today as we see growing violence in many parts of the world where our communities are settled.

The security and welfare of Indian residents living abroad is a top priority of our diplomatic missions. I urge community leaders to develop better liaison and coordination with our missions to better serve our non-resident communities. It is through such engagement that the embassies will become more responsive to the needs of overseas Indians.

There is a clear recognition in India of the growing clout and influence of Indian communities in their adopted homes. The Public Diplomacy Division of the Ministry of External Affairs has initiated a programme of Indian origin Parliamentarians, whom I had the privilege to meet some months back. I had a lively discussion with them on their hopes and aspirations for their constituencies and I was struck by their enthusiasm for promoting links with India through innovative local efforts.

I wish to record our special gratitude to the Indian community in the USA for the efforts made by them in mobilising support of the political leadership in that country for Indo-US cooperation in civilian nuclear energy.

Ladies and Gentlemen,

I have decided to establish a Prime Minister's Global Advisory Council of People of Indian Origin. The Council would comprise of people of Indian origin from a variety of disciplines who are recognized as leaders in their respective fields, not only in their country of residence but globally as well. The Council would serve as a high level platform for the Prime Minister to draw upon the experience and knowledge of the best Indian minds wherever they may be based.

I would like this gathering to inspire our people, inspire people of Indian origin, inspire our region and our neighbours, inspire the world to learn to live together in peace and harmony despite our many diversities. I wish you well in all your noble endeavours.

Jai Hind.

004. Address of External Affairs Minister Pranab Mukherjee as Chief Guest at the Plenary Session on "Developmental Challenges of the States: Partnership Opportunities" (Plenary IV of Pravasi Bharatiya Divas 2008).

New Delhi, January 9, 2008.

**My colleague Minister of Overseas Indian Affairs, Shri Vayalar Raviji,
Chief Ministers and Ministers of various States represented on the dais,**

President CII Shri Sunil Bharti Mittal,

My brothers and sisters from the diaspora,

Distinguished guests,

Ladies and Gentlemen,

It is my privilege to be here this morning at this important plenary session on "Development Challenges facing the states". This debate could not have come at a better time. The public discourse on the development challenges that India faces must engage the attention of all us, whether in government or outside it. It should also engage the attention of civil society and the overseas Indian community.

The overseas Indian community has over the years in various parts of the world gained positions of prominence in the field of politics, academics, economics, science and technology, trade and business and have scripted many a success story of their individual and community successes. Simultaneously, there is, if I may say so, a silent revolution taking place in India with our country enjoying a significant growth trajectory of over 8% in the last 5 years and with current projection, will be soon touching a near double digit rate of growth.

Ladies and Gentlemen,

India's development process in the past few years has captured global imagination. The focus of the Eleventh Plan is on inclusive growth, poverty alleviation and good governance. How to balance growth with development is the biggest challenge for a rapidly growing and industrializing continental size country like ours with an enormous bouquet of diversities.

Today, I see many Chief Ministers and representatives of States present at this Session. You will be hearing from them the various strategies adopted at the state level for sustaining and promoting development. I deem this as one of the most important Sessions not only for informing and making aware the progress in their respective States for an overseas Indian gathering but also finding ways and means of bringing the resources, talents, expertise and experience of this widely diverse audience to bear on their development. This Session has two sub-texts, developmental challenges and partnership opportunities. Allow me to dilate on both.

The States of India in a federal polity like ours constitute the theatre of India's development efforts. States are both the harbingers as well as recipients of growth. However, there are vast divergences and, if I may say so, imbalances in the rates of growth achieved by different States. While some States offer attractive investment climates, others are lagging behind in infrastructure and social services. Progressive States have grown at a much faster rate than States who are below a certain threshold of development. To promote inclusive growth, it is critically important that all parts of the country share equally in the fruits of higher growth.

States in our federal system enjoy vast powers relating to matters that have a crucial bearing on growth, incomes and therefore shaping the lives of our people. It is understandable that our States should orient their policies for development according to their own particular needs and local conditions. However, at some level and particularly from a national perspective, there has to be a degree of homogeneity and a balanced view of certain primary conditions of every State which should put development and growth on a fast track. Certain areas which are crucial for national development, such as education, healthcare, infrastructure, agriculture, irrigation, etc. are those which fall well within the jurisdiction of the States. Unfortunately, these are the very same areas in which India on the whole has been making slow progress as compared to other areas that are in the domain of the Centre.

State level reforms therefore assume urgency. This has been emphasized time and again and in the recent meeting of the National Development Council was once again brought to the fore. It needs no reiteration that if India has to grow at the pace which it has already assumed and sustain that growth, it needs to develop at a balanced pace throughout the country in order to ensure equity and balanced regional growth. It is therefore essential that the States of India invigorate their efforts to invite investments and engagement of all concerned agencies, more particularly the overseas

Indian community who have proved their worth and their interest in bringing to their motherland not only economic investment but also their talents and skills, resources and ideas and above all, their emotional bonding.

Ladies and Gentlemen,

I recall at last year's Pravasi Bharatiya Divas, the Prime Minister had urged our overseas brothers and sisters to not only nurture their roots but also extend their branches, to invest in India not just financially but socially, culturally and above all emotionally. I am heartened to note that the overriding theme of this year's conference is to engage the diaspora in India's social development. This is indeed timely, particularly given the emphasis of our Government on "Aam Aadmi", the common man, and the number of ground-breaking measures which our Government has taken so as to benefit the lot of poor and the under-privileged. Just to name a few, the National Rural Employment Guarantee Scheme, National Rural Health Mission and above all the 'Bharat Nirman' programme which aims to make substantial investments in rural infrastructure to unlock the growth potential of rural India with provision of electricity, safe drinking water, telephone connectivity, rural road network, housing, additional irrigation capacity and the like. These measures will chart the course to significantly bridge the so-called rural-urban divide while empowering the masses and making them visible and integral entities in a vibrant democratic set up such as ours.

In my last year's address, I had highlighted six areas which I felt were extremely important where partnerships between the States and the diaspora could be meaningfully forged. At the cost of sounding repetitive, let me once again mention the very six areas. Foremost is the social sector, comprising social services such as, health, drinking water and sanitation to all villages. The others are infrastructure, agriculture, education, energy security and the basic research & development activities. These are the very sectors that will in substantial measure make or mar our future development. These are also the sectors that will need enormous and accelerated public investments in the ensuing years and a radical overhaul of the governance institutions in the states to enhance the efficiency and effectiveness of the public delivery system.

I had also stressed on the area of energy security. Today, more than ever before, the need for generating energy security for a rapidly growing economy like ours is acute. Today, a barrel of oil has touched 100 dollars and this has sent shock waves across the world. For India, it means

additional resource allocation of millions of dollars in our national plan. We are therefore making all possible efforts to build our energy stocks, explore alternative avenues of energy, research and produce renewable sources of energy and leverage multilateral and bilateral frameworks to secure energy supplies over the long term. The India-US civil nuclear energy cooperation is precisely intended to address our concerns on energy security.

The challenge for today's India is to balance the rights and needs of the populace with the growing demands of industrialization. Sustainable economic growth is more than a buzzword. It is the reality on which our society has to be built. Our Government is cautious in formulating a balanced policy in so far as SEZs are concerned, so that while we build up on our industrial and manufacturing strengths, we do not neglect the legitimate rights and demands of the people. This has, no doubt, become a sensitive area, but I am sure States are working out their own policies towards relief and rehabilitation and offering suitable compensation packages to the people impacted.

In my view, the fundamental challenge is to migrate from a vicious cycle of persistently high revenue deficits feeding into higher fiscal deficits and public debt, thereby constraining development of social and physical infrastructure with serious consequences on economic growth, employment and poverty reduction, to one that is virtuous, giving impetus to growth, employment and human development. Because they are enjoined with the responsibility of most elements of social and economic development, this transformation also becomes a fiscal responsibility imperative for the states. Many of you may know that the States incur almost 55 percent of total government expenditure in the country and raise over 37 percent of total revenues.

At the heart of fiscal responsibility is the objective of providing a better quality of life to the people - universal access to education, health and economic opportunity. The arithmetic of balancing the budget is not an end in itself. In the ultimate analysis, we must demonstrate that fiscal reform is essentially pro-people, pro-poor and pro-development.

Distinguished Guests,

India has been engaging in bilateral and regional trade agreements not only to boost its trade but also to give shape to its strategic partnerships with nations and groupings. Trade agreements are one aspect of India's growing external orientation. Strategic partnerships go beyond trade to include cooperation in investments, human resources, science and

technology, defense and security, and cultural exchanges. India seeks to involve itself inextricably with the world, and of course the diaspora, on all these aspects in order to enhance the competitiveness of its economy and open more avenues to globalization. Our States are uniquely placed to harvest the benefits arising of our external engagements. India's 'Look East Policy' and regional associations such as SAARC and ASEAN are poised for harnessing unprecedented economic dividends.

I am indeed happy to note that a unique feature of this year's Pravasi Bharatiya Divas has been the organizing of a "market place" by the newly set-up Overseas Indian Facilitation Centre, which intends to focus on one-to-one meetings between overseas Indians and the energy partners of OIFC, in areas as diverse as real estate, taxation, FDI, education, healthcare, rural development, women empowerment, small and medium enterprises, tourism and philanthropy in a buyer-seller format. I commend the Ministry of Overseas Indian Affairs for such an innovative idea and I wish that such ideas bear fruit in so far as actively energizing the overseas Indian community for India's socio-economic development is concerned.

Here I must commend those States who organize meets with their respective diasporas, which in turn garner significant engagement in the States' development. It is critical for the diaspora to engage with States as State Governments directly interact with the people and influence policies at the grassroots.

Ladies and gentlemen, I am sure the views expressed during this Session and in subsequent sessions at this Pravasi Bharatiya Divas will stimulate the minds of our overseas Indian brothers and sisters to come forward and take their resources and energies to whichever pocket of India they belong to, to work towards the composite development of this country. Let this be yet another success story, on a national scale, an abiding partnership between India and its diaspora.

Thanking you.

005. Remarks of Prime Minister Dr. Manmohan Singh while releasing the Journal: "India and Global Affairs".

New Delhi, January 11, 2008.

I compliment Abhijit Pawar and Dileep Padgaonkar for taking this important initiative to launch a new journal on "India and Global Affairs". I do hope this journal becomes an important and informed window to the outside world for thinking citizens of our country. I also hope it will help students and scholars in international affairs, diplomats and policymakers to get a better appreciation of the world around us.

We live in interesting times, indeed in challenging times, in this fast-changing world. There are great opportunities awaiting us but also profound challenges facing us. As India re-engages the world, as a more self-confident nation, we must be better informed about the world to be able to deal with it. Understanding the processes of change is the first step in trying to change these processes.

An honest, factually informed and analytically rigorous discussion is, therefore, necessary for us to be able to deal with reality, as it exists, and shape it in a manner that serves our national interest and global peace and stability.

I therefore hope that this journal will contribute to a better informed discourse on global change and the tasks before us as a nation. How will they impact on our country? How can we influence them so that we can ensure a neighbourhood of peace, prosperity and stability?

I find that the first issue of this journal is devoted to a discussion of political and social developments in Pakistan. It seems events have already overtaken the contents of the journal. The questions raised on the cover of this issue have acquired even greater importance. We must look for informed and convincing answers.

I have referred to some of these issues on more than one occasion in the past three years, including in the essay that has been published in this inaugural volume. I do feel that policy making at home is often more reactive than pro-active. Governments are driven by the force of events. One does not always have the luxury of time to plan. But, it is important and necessary to try to do so. Creating a body of informed opinion is part of that process of preparing oneself and our country to deal with unexpected events.

Proactive planning is the goal of strategic thinkers worldwide. This is where scholars and analysts must step in and identify problems, highlight trends, develop scenarios, and suggest policy options, before events and crises overtake us. I have often felt that there is a dearth of long term planning on strategic policy issues in our country. Of course, there is the problem that purely academic work can appear impractical to policy makers and, on the other hand, the policy options Governments deal with are sometimes bereft of long term vision.

There is a certain "chicken-and-egg" sort of problem with the relationship between the academia and government in these matters. Some in government feel purely academic analysis is ivory tower stuff and bereft of practical relevance. Some in academia feel governments are insular and knowledge-proof! A healthy interaction is useful for both. There is, therefore, a need to foster mutual interaction and respect between the world of policy making and the world of analysis.

The cost of investing in long-term policy making - in terms of time, money and energy - is quantifiable and immediate. Unfortunately, the benefits are reaped, if at all, in some distant future, and all too frequently, by successor governments. These benefits are also hard to quantify, since a crisis averted does not register on the popular consciousness.

The incentive for in-depth analysis and long-term policy planning may be weak, despite the obviously disastrous consequences of ignoring such efforts. I do feel, however, that it is incumbent upon us in Government to help foster creative thinking outside government on matters of national interest. This will allow the nation to consider alternative approaches to the resolution of a problems that we face as a nation.

At the same time, I also believe that it is incumbent upon analysts and opinion makers outside government to have a better appreciation of the changing reality and not adopt either rose-tinted or jaundiced perspectives on on-going trends, events and policy options.

I have often said that our national security must be based on three pillars. First, a strong economic, technological and social base; second, adequate defence capability; and, finally, mutually beneficial partnerships, in the strategic, economic and technological spheres, aimed at enlarging our policy choices and developmental options. Our engagements with major powers, and indeed with the world at large, must be set in this wider perspective.

I believe we must balance the pursuit of national interest with a clear appreciation of what other nations perceive as their core interests. To advance our own security interests, we must engage in cooperative, constructive and mutually beneficial relations with all major powers of the world. Most of all, we must engage in proactively strengthening multilateral mechanisms for financial, economic and political security. We have as a nation, a great stake in a rule based international system that is just, equitable and effective.

I believe that our great strength as a plural and liberal democracy is that public policy is shaped by a broad consensus, based on a rich and healthy tradition of open debate and public discussion. This has lent a measure of predictability and resilience to our policies, both domestic and external. Journals like the present one play an important role in shaping that public discourse and in evolving an informed consensus.

As Tennyson said once, knowledge comes, but wisdom lingers. True confidence comes from wisdom, while ignorance and limited knowledge make us tentative or foolhardy. There is today a surfeit of information, but all too often a paucity of knowledge and more so of wisdom. In this era of information explosion and knowledge revolution we must never lose sight of the need to pause, to analyse, to reflect and to ponder.

As a means of generating and spreading wisdom, based on accurate information and informed analysis this journal can play an important role. I compliment Dileep Padgaonkar on the initiative that he has taken. I hope it will promote a responsible, informed and intelligent debate on the issues confronting our nation and our world today. I also hope it will instill a sense of confidence in our people and our political and intellectual leadership. This is the need of the hour. I wish you well in your endeavour to this end.

006. Valedictory Address by External Affairs Minister Pranab Mukherjee at the Global Summit of Management Accountants.

New Delhi, January 12, 2008.

Dear Shri Wadhwa, President ICWAI

Mr. Cabraal, Governor, Central Bank of Sri Lanka

Mr. A.N. Raman, Chairman Global Summit

Distinguished Guests,

Ladies & gentlemen,

I am indeed privileged to be here amongst the professionals who have assembled from various parts of the globe and more so as many of them are from SAARC countries. I appreciate the efforts made by the organizers of this Global Summit to come up with an idea for Repositioning the Management Accountant. I hope the participants have acquired vast treasure of knowledge over a period of three days by listening to great speakers like Dr. Robert Kaplan, Mr. Gary Cokins, Prof. Okano Hiroshi, Prof. V.G. Narayanan, Mr. R.S. Sharma, Prof. M.B. Athreya, Mr. D. Sundaram, Mr. V. Srinivas and other eminent speakers from India and abroad.

I am also delighted to present the SAFA (South Asian Federation of Accountants) Best Presented Accounts Award this year. The Award has gained recognition since its institution a decade ago and reflects how the domain of accounting is not just a figure building exercise, but has the potential of grasping the entire ethos of an enterprise. The development of professionalism in cost and accountancy has gained the corporate mind space in recent years. This development requires a partnership of all stakeholders including government, corporates and the practitioners.

I have been informed by the President and organizing members of the summit about the sub-themes of various sessions. I find that the summit has deliberated on the managerial accounting practices, techniques, strategy and management of enterprises.

Distinguished Guests, Ladies & gentlemen,

There is a new dynamism in the stakeholders of the resurgent India. This dynamism entails that the enterprise governance and cost audit has to

move beyond the compliance oriented mechanism. As professionals, all of you are aware that the dynamics of global business calls for rule shaping and strategizing rather than simply ensuring compliance. Innovation is the driving force behind excellence in enterprises. Innovative practices will pave the way for effective and optimum resource utilization to achieve higher levels of output for the enterprise and the economy as a whole. I hope that the cost audit framework in India is being aligned with the enterprise governance concept in the global context.

A decade and a half ago India embarked on economic reforms. In the 11th Five Year Plan which takes off this year, the Government has set a target of 9% growth in GDP. This can only be attained by increasing our competitiveness as a nation. The crucial areas that need to be addressed for this are education, agricultural productivity, infrastructure development and external engagement. These are also the areas critical for ensuring sustained and inclusive growth.

Education and skill development is the key to equitable development. In keeping with this need, the government spending is being given a massive threefold increase in the share of education. The plan outlay on education will go up from 7.68% of the Central gross budgetary support in the 10th Plan to over 19% in the 11th Plan. Given that 52% of India's population is below 25 years of age, our country stands to gain a significant demographic dividend. This has to be harnessed with imparting education at all levels, both vocational as well as non-vocational, as also building of schools so as to generate domestic employment. Institutions such as ICWAI could help to build a vast pool of skilled professionals who can substantially narrow down the gap.

While we can take some satisfaction in gaining industrial productivity as a result of deregulation and liberalization of industrial activity, we have a lot to do on the growth front. Farm employment continues to be the dominant form of occupation and livelihood for the majority of our people, and the resultant pressure on land leads to both, low land and labour productivity. To raise productivity therefore, also implies better utilization of land and more off-farm employment opportunities. Much remains to be done by way of reforms, which have so far bypassed the sector. To reverse the downward trend in agriculture, emphasis has to be placed on using more advanced technologies for value addition and greater market linkages with increased support of corporates.

Distinguished Guests,

There has been a distinct improvement in our speed of decision making in development of infrastructure. This is reflected in rapidly increasing investments being made in this sector. Investment requirements for India over the next decade, as projected by the Planning Commission, will be in the order of nearly US\$ 1.5 trillion. Foreign Direct Investment in infrastructure must grow from the current levels to compliment the huge funds required to sustain growth. The opportunities available for investment are immense, be it roads, ports, airports, highways, telecommunications, and transport corridors.

The other vital area of concern to us that has a direct impact on our fledgling growth is the energy security. Oil is demanding \$100 a barrel. Continuous escalation in oil prices is exerting tremendous pressure on the economy. It is one of the major hurdles we face in achieving high growth rate as it means huge resource allocation in our national plan to build our energy stocks. The rising external security concerns together with the cost of managing the environmental concerns on global warming are making huge impact on the country's energy security. The task of investing in overseas energy assets for the country has, therefore, become an important aspect of our economic policy. Evolving a suitable mechanism and its cost management through "Carbon Credit" accounting system among the member countries are the sunrise areas for the professionals like you.

External engagement of the Indian economy has also made good progress. Our trades in goods and services now forms about 48% of our GDP, with trade of services being particularly encouraging at over \$ 76 billion for 2006-07. This has helped us manage our current account deficit and impart stability to our trade with rest of the world. India is already one of the world's largest exporters of software services, and these are on track to achieve the \$60 billion target in the next two years. You may be aware that the multilateral trading system has been extended to cover trade in services through GATS which provides for legally enforceable rights to trade in services. With the establishment of the new regime in trade and services in WTO, you as professionals, have to meet the challenges and plethora of opportunities to extend your reach beyond Indian shores.

The sustainability of the economic growth will depend upon how good we are at the task of risk management. There are several areas of high threat that need to be adequately managed. These relate to unequal growth opportunities, environmental damage and climate change and energy

security. The surest way to mitigating these risks is to continue to build the climate for rapid economic growth by mainstreaming those who remain socially and economically marginalized. This would call for developing participative models build on public-private partnerships, engage civil society bodies and take basic social services such as health, drinking water and sanitation to all villages. India cannot afford to control carbon emission at the cost of its development. However, we can learn from other countries and introduce technologies that have already been tried and tested in developed countries for energy efficiency, reducing Green House gas emissions and clean industrial development.

Distinguished Guests, Ladies & gentlemen,

The challenge for today's India is to balance the rights and needs of populace with the growing demands of industrialization. There are visible changes in the behaviour among corporate stakeholders as a result of the awareness that sustainable business models have to undertake social responsibilities. The corporate social responsibility has to change from an individualistic mindset to a more holistic and qualitative delivery system. The professionals should find balance in clients' interest and public interest without disregarding one for the other. Essential to this is the belief in transparency and ethical practices in corporate governance. I see a major task cut-out for the management accountants in designing and shaping up the corporate responsibilities in mainstreaming the economically marginalized in keeping with our motto of inclusive growth.

The professional fraternity having played the crucial role in rejuvenating the Indian economy is entrusted with onerous responsibilities. A summit of this order and magnitude to me reassure of the country's march towards global repositioning. I would look upon all of you, as professionals, to ethically drive enterprises in the emerging global context. In our country, the role of government in shaping the future of corporate world is enormous and as professionals, the management accountant should take lead in helping the government in policy making to ensure good governance. The professionals of today have to be self-innovative through effective communication skills, self-regulation, adaptability to new changes and proactive attitude towards various stakeholders. You are the wealth creators of tomorrow.

I understand that the summit has been hosted with the objective to showcase the management accountant as a strategist and performance management specialists. As I see, the theme to reposition the management accountant

is not only from the Indian perspective but also from the global perspective. I hope the consensus arrived at during the summit would be taken forward and all Indians would work in tandem to frame and present the complete blue-print for further growth.

Thank you

**007. Interview of External Affairs Minister Pranab Mukherjee
by Karan Thapar for CNBC/TV18.**

New Delhi, January 13, 2008.

Interviewer (Mr. Karan Thapar): Foreign Minister, let us start with Pakistan. There is a widespread belief that the country faces the gravest threat to its unity in sixty years at a time when worse still the Government in Islamabad has perhaps lost all credibility with the people. How do you view the state of affairs in Pakistan?

External Affairs Minister (Mr. Pranab Mukherjee): There is a problem, no doubt. At the same time I am quite confident of the resilience of the system and the people of Pakistan and I do hope that they will overcome this crisis. After all we shall have to keep in mind that in different phases there have been different types of problems in the history of Pakistan, but somehow or other the people of Pakistan and the system there have managed the situation. Let us hope so because in our own interest we want a stable, peaceful and prosperous Pakistan as it is an important neighbour of ours, and in our neighbourhood we would like to have peace, stability and development.

Interviewer: You are talking about the resilience of Pakistan and the resilience of the Pakistani people. Does that mean that you do not share the fear, many experts have it, that Pakistan could be breaking up?

External Affairs Minister: I am not coming to any such conclusion. Experts have their liberty of passing their judgment and making analysis. That is the privilege of the analysts or the journalists. As a representative of the Government my job is to deal with the representatives of Pakistan.

Interviewer: Let me quote to you what the American scholar Stephen Cohen wrote on December the 27, the day Benazir Bhutto was assassinated. He

wrote, "I fear for Pakistan. Its further decay will affect all its neighbours in unpredictable and unpleasant ways". Do you share that concern?

External Affairs Minister: Of course. The problem is that whenever there is instability in the neighbourhood it has its impact on the other countries here in the neighbourhood. It goes without saying. Interviewer: So, instability in Pakistan will have an impact.

External Affairs Minister: If there be instability in Pakistan, naturally it will have adverse impact on us and on other neighbours of Pakistan. But I am not coming to a definitive conclusion. Let us hope that Pakistan would be able to address the problems in the way they want to address; stability will be brought back; peace, prosperity and development will take place.

Interviewer: Do you have a special Committee or special monitors watching then situation for you carefully at the moment? Have you put in place mechanisms to watch closely what is happening?

External Affairs Minister: There is a mechanism to share information.

Interviewer: To watch Pakistan too?

External Affairs Minister: There is no such group of experts to watch developments in Pakistan but we are watching. We are getting reports from our Mission. We are analyzing the reports coming from different sources and trying to share our perceptions.

Interviewer: Now you say that you are getting regular reports from your Mission in Islamabad. Does your Mission view General Musharraf as part of the problem or does it see General Musharraf as part of the solution?

External Affairs Minister: Firstly, your question is like a leading question of a criminal lawyer. If I say yes there is one set of problems and if I say no, there is another set of problems.

Interviewer: You have to grant it is better than a misleading question.

External Affairs Minister: First of all, we are interested in peace, stability and development of Pakistan. As I mentioned in response to another question, we are to deal with whoever is in office in Pakistan. Therefore, we do not make any value judgment of any individual.

Interviewer: Don't make a value judgment but the people of India look upon you as Foreign Minister for some sense of understanding, for some

sense of guidance on what is happening in Pakistan. In that light let me ask you, do you believe that General Musharraf is stable and the moment or is he in danger of being removed perhaps by the Army, perhaps overtaken by political developments?

External Affairs Minister: Only future events will show what course of action will be taken by the establishment in Pakistan or the people of Pakistan. From the last history we have seen that developments have taken a particular turn at a particular point of time, but it is not always predictable.

Interviewer: So, unpredictability is really the key word for Pakistan at the moment.

External Affairs Minister: I am not saying that unpredictability is there but an element of unpredictability is there. I cannot say that situation will not turn around in a positive manner. I started my observations by saying that I have tremendous faith in the resilience of the Pakistani people to manage their crisis.

Interviewer: It was reported in the Indian papers that the Government wanted to send you as Foreign Minister to attend Benazir Bhutto's funeral but you were advised by the Pakistani Government that it might be better for you not to come. Is that correct?

External Affairs Minister: It is correct. It was not merely in respect of me but was in respect of all other countries. Various countries showed interest but they were advised not to go. That was because firstly it was declared as some sort of a state mourning but it was not a state funeral as such and the arrangements were not made to that extent; and secondly, the law and order situation at the place where burial took place was not conducive to receive the representatives of the foreign governments. In this hour of difficulty, we did not want to embarrass the authorities and we listened to that advice.

Interviewer: As you assess Benazir Bhutto, did you see her as a friend of India?

External Affairs Minister: In fact, when she was in Government earlier she was Prime Minister and I was the Foreign Minister. Not in Pakistan or in India but at the margins of various international events several times I had interaction with her. It appeared to me that she had a sincere desire to improve the relationship between India and Pakistan.

Interviewer: So, her death is in a sense a setback to the improvement of Delhi - Islamabad relations?

External Affairs Minister: If a tall leader dies, naturally always we feel - and particularly in our neighbourhood - sad because he or she might have contributed to the improvement of the relationship between our two countries.

Interviewer: And in Benazir Bhutto's case there was a real prospect for the improvement, you believe.

External Affairs Minister: Her coming back to Pakistan after a long time, the process of democratization, regular elections, kindled hopes for the restoration of normal democratic process in Pakistan to a considerable extent.

Interviewer: The Hindu on the 5th of January reports that as the turmoil in Pakistan gets worse, groups such as the Lashkar have begun to replenish their cadre and rebuild their operational capabilities. Are you worried that you could see a sharp increase in infiltration as well as in Jihadi activity targeted at India?

External Affairs Minister: We shall have to wait till the snow melts and the passes are cleared particularly in Jammu and Kashmir. Infiltration has never stopped completely. Sometimes the number has increased; sometimes the number has decreased. Therefore, our advice to the security forces has always been "Be on alert. Maintain your vigil."

Interviewer: But once again you are keeping yourself alert to the possibility that infiltration and Jihadi activity could build up because of the turmoil in the country.

External Affairs Minister: As I said, let us not link it with the turmoil in the country because terrorist activities from the other side of the border have never completely stopped.

Interviewer: In other words, this is a situation you have to watch. The Prime Minister on Sunday goes to China. It is a visit that is taking place after months of reports in the papers of alleged Chinese incursions across the Line of Actual Control and even into Bhutan. Are these reports of frequent Chinese incursions both in number and in scale and scope accurate?

External Affairs Minister: Sometimes incursions take place and we immediately take it up. There is a regular channel through which we exchange information. There is an institutional mechanism in the border. You know

we signed the Treaty of Peace and Tranquility on the border in 1993 and again in 1996. Thereafter certain mechanisms have` been established through which we address this type of problems.

Interviewer: Absolutely. But has the number and the frequency of incursions increased?

External Affairs Minister: It is normal as usual. It has suddenly not increased.

Interviewer: So, there is nothing worrying about this?

External Affairs Minister: There is nothing to be worried at this point of time; the mechanisms which we have are doing well.

Interviewer: The Hindustan Times claims that the head of the Indo-Tibetan Border Police has said that in the year ending October 2007 there were over a 140 incursions. India Today claims that a few of them in September went as far as five kilometers deep into Indian territory.

External Affairs Minister: Sometimes incursions take place, as I mentioned to you. Every incursion is taken care of. It is being addressed through the established mechanism and the same practice is continuing.

Interviewer: Side by side, The Indian Express has had a report a couple of days ago which says that Chinese infrastructure in terms of road and railway around the border area of Arunachal Pradesh has increased and improved so significantly that now they can move two Divisions, which is 10,000 troops, in just 20-25 days. Apparently, earlier it took anywhere between three and six months. Does that concern you?

External Affairs Minister: As far as the development of infrastructure on the other side of the Indo-China border is concerned, their infrastructure in terms of road, electricity and availability of other facilities is much superior to that of the infrastructural facilities available on our side of the border. It is a known fact. That is why recently we have decided that we should also build up roads and other type of infrastructural facilities.

Interviewer: In the meantime, speaking privately Generals in the Indian Army do not deny that the difference in the infrastructure between the two sides gives the Chinese troops a significant advantage over Indian troops. As someone who was Defence Minister just sixteen months ago, are they right to be concerned?

External Affairs Minister: With the situation which is prevailing right now at the border along the LoC, there is no need of pressing any panic button. Peace and tranquility are being retained there and various confidence-building measures were taken up - for instance, participation of troops on both sides on different occasions including the National Days, holding various festivals, etc.

Interviewer: But the important thing is there is no need to press the panic button.

External Affairs Minister: As I told you, one should remain alert, vigilant, but need not be panicky.

Interviewer: Last week the Sri Lankan Government announced that with effect from the 15th of January they intend to abrogate the ceasefire agreement with the LTTE. In your eyes, is this a mistake or is this - given the spate of LTTE attacks in recent weeks and months - both understandable and perhaps also inevitable?

External Affairs Minister: We shall have to see what impact it has. Of late, the clashes between Sri Lankan forces and LTTE terrorists have increased. As far as terrorism is concerned, I made our position quite clear. India's position in respect of terrorism is 'zero tolerance'. Therefore, any country which takes action against the terrorists is free to do so within its legal system.

Interviewer: But you are not criticizing Sri Lanka for abrogating the accord.

External Affairs Minister: That is because we are not a party to it. Please remember that we were never a party to it. Attempts were made to drag us to be a party to it but we scrupulously avoided it for the obvious reasons as we had to pay a very high price.

Interviewer: I understand. So, you have no comment to make about the abrogation either.

External Affairs Minister: As I have stated, the fight against terrorists is one issue. But as far as finding a solution to the problem of ethnic minorities including the Tamilians so that their legitimate aspirations are fulfilled within the system of Sri Lanka is concerned, that effort should not be lax and the effort should continue to arrive at a solution.

Interviewer: It is well known that the Prime Minister has been invited to visit

Sri Lanka to be the Chief Guest at their 60th anniversary celebrations, which are on the 4th of February. Clearly this is a significant honour for the Indian Prime Minister. The question is, will he accept?

External Affairs Minister: It has not yet been decided.

Interviewer: Is not it getting a bit rude and discourteous to Sri Lanka not to make up your mind one way or the other?

External Affairs Minister: No, because we require time.

Interviewer: But the event is three weeks away.

External Affairs Minister: As and when it will be decided we will let you know. No decision has yet been taken.

Interviewer: Are you hostage to Indian Tamil politics in deciding this issue?

External Affairs Minister: This has nothing to do with it. There are certain things. Sri Lanka is going to host the SAARC Summit this year. Naturally we will be going there if it takes place.

Interviewer: That is a commitment.

External Affairs Minister: Of course, it is a SAARC commitment. If they do not hold the summit, how would I go? If they hold the summit, surely we will be going. But as far as participating in their independence day is concerned, no decision has yet been taken.

* * * *

Interviewer: Foreign Minister, there is a widespread perception that after the Congress Party's substantial defeat in Gujarat and Himachal Pradesh and given the unchanging attitude of the Left parties, it is only a matter of time before the Government accepts that they cannot take the nuclear deal to completion. Would you accept that?

External Affairs Minister: You are fully aware of the fact that we are engaged in discussions with the Left parties and the UPA Chairperson appointed a small group to iron out the differences. Several rounds of discussions have taken place. We have not yet been able to completely iron out the differences. Of course, there was agreement to initiate discussions with IAEA for India-specific safeguards arrangement which are currently going on. As per the decision of the last meeting which we

had on 16th of October, we are to show them the agreed text of the India specific safeguards arrangement which our negotiators will enter into with the IAEA authorities. After that, the Left parties and the UPA partners in the UPA-Left Coordination Committee will decide what course of action they will take.

Interviewer: I understand that. The reason I sounded cautious, if not skeptical, is Prakash Karat has gone on record at the end of December to say that the Left parties do not want the Government to complete the agreement. Debabrata Biswas, the General Secretary of the Forward Bloc, in fact had said that the only reason the Left gave you permission to go to the IAEA was so that you could have an honourable exit.

External Affairs Minister: The fact of the matter is that various interpretations are coming and I am not going to comment on that. We are aware of the position stated by various Left parties from time to time. Despite that we are talking with each other. The current discussions in which our negotiators are engaged with them IAEA Technical Team are as per the decision taken in the meeting of the Left- UPA Coordination Committee.

Interviewer: Quite right. Outside that Committee, A.B. Bardhan says that the Parliament majority shown in the last session is against the deal and you are honour-bound to abandon it.

External Affairs Minister: The fact of the matter is various political parties have expressed their views inside Parliament and outside, and it is known. Yes, in speeches the Members had expressed their views but the issue was not framed before the Members. As per the parliamentary practice, there was no scope of ascertaining the opinion of the House on the discussion because the discussion took place under a rule in which this is not required and this is not relevant.

Interviewer: You are saying something very important. You are saying, therefore, that discussion in the House in December does not constitute a sense of the House against the deal.

External Affairs Minister: I am not saying that because we did not seek the sense of the House. When somebody asked if we were not going to take the sense of the House, I told him that as per the commitment of the Prime Minister I will come to the House when the entire process is complete. The process has not yet been completed and the Government did not seek the opinion of the House.

Interviewer: That is your position, not Karat's.

External Affairs Minister: Whoever might have said it, as per the parliamentary practice there is a definitive way to ascertain the view of the Parliament and that was not done in this case deliberately, with the consent of everyone.

Interviewer: Do you think your Left allies will accept that?

External Affairs Minister: What they will accept and what they will not shall have to be discussed by us and we are discussing.

Interviewer: This is the problem. Let me quote what A.B. Bardhan says. He says, "The sense of the House is that the majority of the Members are opposed to the deal". You are disagreeing with that. You have got a problem.

External Affairs Minister: I am not disagreeing that majority of the Members did not speak against the deal. The fact of the matter is that majority of the Members who participated in the discussion expressed their views against Government proceeding further. That point is all right. What I am disputing is your contention that it was the opinion of the Parliament which was sought in that debate. It was a discussion. Normally in parliamentary language in these discussions the issue is not talked out; the House does not express its views.

Interviewer: Okay. You have very clearly put the Government's position. The Left may agree or not, that is their prerogative. Let me put something else to you. Has your ability or your willingness to take the deal to conclusion been affected by defeat in Gujarat and Himachal Pradesh elections? Have you lost the political leeway?

External Affairs Minister: No. When we began the negotiations various political parties expressed their views against this deal. The discussion which we had in the Parliament recently was not the first one. On every major development in this deal we came to Parliament. We suo motu initiated discussions and the Members expressed their views.

Interviewer: But Gujarat and Himachal may have changed the landscape. Do you still have the capacity, you have the leeway?

External Affairs Minister: That is a different thing. I do not have the capacity if the Government becomes a minority Government. I made it quite clear that we would not like to proceed with the deal if the Left parties withdraw support from the Government.

Interviewer: But can a Government damaged by Gujarat pursue it?

External Affairs Minister: Please try to understand this. Defeat or success in an election in a provincial Assembly in a federal structure like ours does not matter in this sense because there was no referendum on this issue in the Gujarat election. Gujarat election was fought completely on different issues.

Interviewer: So you are saying Gujarat is irrelevant.

External Affairs Minister: A success in Gujarat election would not have added to the Government's capacity nor has it reduced the Government's capacity now because not a single Member has been added or deducted from the existing strength of the various political parties in Parliament. It has nothing to do with this deal.

Interviewer: In which case let us then come to the talks you are having with the IAEA. Has the IAEA accepted India's Separation Plan, and in particular have they accepted that India wants the capacity to take corrective measures if there is any disruption in fuel supplies? Have they accepted that?

External Affairs Minister: The talks are still going on. I would not like to comment on what is appearing in the newspaper because I do not have that luxury. I shall have to go through the text word by word as and when it is finalized. When it will be available to us I will share it with the Left parties and the country will come to know it.

Interviewer: Let me, for the audience's sake, flag up two issues that are critical for India and ask you whether you believe progress is being made. The first critical issue is India wants reflected in the safeguards agreement its negotiated position with America that it can have lifetime supplies of fuel. The IAEA it seems is reluctant to do this because they do not want to set a precedent. Have you got over that?

External Affairs Minister: You are placing the cart before the horse, Karan. I am concerned on three matters, not on two.

Interviewer: Which are?

External Affairs Minister: I am concerned about (1) the assured fuel supply; (2) India should have the right to build up strategic reserves in case of unintended disruption in the supply of fuel, and (3) India's strategic programme should be pursued independently and it should not be affected

in any way. I would expect that these concerns get adequately reflected in the India-specific safeguards arrangements. That is why we are talking of India-specific safeguards arrangement, which is different from other safeguards arrangements. Unless I have the text on all issues, I would not like to make any comment in between.

Interviewer: The only problem is that newspapers have revealed that the IAEA may be prepared to reflect your concerns in a preamble or in a separate statement but not in the operative part of the text.

External Affairs Minister: I have neither seen the preamble nor the articles of the agreement. So, it is not possible for me to comment and I would not like to make a comment in between unless I see the text.

Interviewer: Okay. Is satisfactory progress being made or are you facing resistance?

External Affairs Minister: This is a question which is to some extent hypothetical and is some sort of a value judgment. I have no scope of indulging in this type of speculative questions and answers because as Government of the day I shall have to approve it or I shall have to reject it, as the Board will have to approve it or the Board will have to reject it.

Interviewer: Absolutely. Governments of the day always sound optimistic. They send out a message to the people that progress is being made. I have in front of me a Minister who refuses to talk about progress, who refuses to suggest that it is being made even incrementally. Therefore, I have to ask you this. Are you covering up for problems with the IAEA? Are you meeting resistance which is why you cannot be more positive?

External Affairs Minister: There is no question of covering up anything. I am just stating the fact. The fact is that we are having negotiations and I am happy with the way the negotiations are going on. As to whether it will address all our concerns or not, unless I get the agreed text it is not possible for me to make any comment.

Interviewer: But it sounds, from the way you are answering, that there is a possibility it may not address all your concerns. Otherwise, you would not raise that possibility.

External Affairs Minister: No, I am not saying that. This is your own interpretation.

Interviewer: Okay. Assuming you get a satisfactory outcome from the IAEA, are you confident that you can get a clean and unconditional clearance from the NSG?

External Affairs Minister: How can I say that unless it goes to NSG? In NSG there are 45 countries and all these 45 countries have their different views. Therefore, we will try. That is why repeatedly I am saying on the floor of the House and outside that there are three stages. To just say, 'you accept it or you reject it' even before we reach near the goalpost is absolutely irrelevant.

Interviewer: The reason I brought up the NSG is because now it is becoming clear, and I am sure that your officials have told you this, that countries like Austria and Netherlands could possibly insist upon an NSG right of return in the event that India carries out further nuclear tests. That would be a major obstacle. Does it worry you?

External Affairs Minister: In these issues I am not to be guided merely by what information or advice I get from outside. Sometime back Austrian Foreign Minister visited India. I had a discussion with her and she made quite clear their position in respect of nuclear proliferation. They say that they are against any sort of nuclear proliferation. So, naturally these views may get reflected in the meeting of the NSG. But the fact of the matter is, how could I comment on what stand, what individual country will take when the agreed text is not even before the Board?

Interviewer: All right, I understand that. Then let me put it like this. Do you have a date in mind by when you would like the deal to go back to the US Congress so that it gets passed whilst President Bush is still in office?

External Affairs Minister: We will try but it does not depend on me because what is required first of all is that one stage we have passed and that is the 123 agreement. Text has been agreed and initialed. Second is India-specific safeguards arrangement. It will have to be approved by the Board as per the USA's requirement. Then the third stage is NSG agreement. All these three documents will have to be placed on the table of the Congress and they will remain there for 90 days or so after which the US Congress will take it up. Therefore, these procedures have to be followed.

Interviewer: So, you cannot be sure Bush will still be in office.

External Affairs Minister: I do not know. That is why I am saying that it is

difficult for me to point out as to at what point of time it will be approved by the US Congress.

Interviewer: In which case let me put it this way. If operationalisation slips beyond the American elections - which could easily happen - and if the new President is a Democrat - which is perhaps very likely - does it worry you that the new Administration may want to seek changes in the 123 to India's disadvantage?

External Affairs Minister: So many 'ifs' you are talking of.

Interviewer: But very likely 'ifs', not hypothetical.

External Affairs Minister: It is likely and it is equally unlikely. The fact of the matter is, if you look at the pattern of the voting in Congress both in the House of Representatives and the Senate, this particular Bill received overwhelming majority and bipartisan support. Therefore, I am not going to make any comment on whether a Republican President will support it fully or a Democratic President will oppose it. We will have to see as and when things happen. Let us not presume. That is your prerogative. That is not my prerogative.

Interviewer: Let us not presume but it also sounds as if you are saying, 'I am keeping my fingers crossed. I am hoping for the best.'

External Affairs Minister: Thank you.

Interviewer: And that is what you are saying, aren't you? You are keeping your fingers crossed.

External Affairs Minister: I always keep my fingers crossed because unless I achieve every objective, unless I cross every stage, how can I say that it is going to be implemented, it is going to be approved. We do not have that luxury.

Interviewer: Mr. Mukherjee, if India were to put the deal on hold because of domestic political compulsions, what do you believe will be the reaction of the Bush Administration?

External Affairs Minister: We are in discussion with each other. They understand our political difficulties and the ground realities there as we understand the political situation prevailing there.

Interviewer: You are saying they will accept?

External Affairs Minister: Everybody is to await the outcome of these negotiations, and particularly after the IAEA stage we shall have to go to the NSG stage.

Interviewer: And what would be the impact of India pulling out, on our ambition to become a permanent member of the United Nations Security Council and our desire to be recognized as a major international player?

External Affairs Minister: As far as the role of India in the international field is concerned, India is playing an important role in the international arena from the very beginning of its Independence. Therefore, I do not know what you mean by that. If you talk of the permanent membership of the Security Council, there are so many stages which have to be overcome and ...

Interviewer: You are saying this will have no impact on it?

External Affairs Minister: You are talking of just catching a train which is yet to arrive at the platform. As far as the expansion of ...

Interviewer: I am talking of a train waiting at the platform which you miss because you do not have the guts to get on. That is what I am talking about.

External Affairs Minister: No, that is not the point. As far as the Security Council is concerned, the discussion in the open-ended Working Group appointed by the UN General Assembly President is still continuing. There are various formations. Various ideas are there.

Interviewer: But will anyone recognize India as a legitimate member?

External Affairs Minister: The claim for permanent membership of the Security Council is nowhere visible. There is no question of arriving at the platform.

Interviewer: I put it to you that if India backs out of the nuclear deal it will have lost credibility and face internationally, and it will not be considered by people as a legitimate claimant ...

External Affairs Minister: That is your assumption. I do not share your assumption.

Interviewer: A lot of your retired Foreign Secretaries say this.

External Affairs Minister: That has nothing to do with it. The question is

that if you fail to implement or operationalise a major international deal, it has some adverse impact. But it has nothing to do with the permanent membership of the Security Council as there is no guarantee that even if this agreement is fructified we will get our seat as a permanent member in the Security Council.

Interviewer: If you get a satisfactory outcome from the IAEA but the Left do not permit you to go to the next stage, will you defy the Left to secure the deal or will you sacrifice the deal to appease the Left?

External Affairs Minister: This is an absolutely hypothetical question.

Interviewer: Of course, it is. But it happens very quickly.

External Affairs Minister: It is a totally hypothetical question. Before I went to IAEA the position was. "No, you do not proceed further". From that position we have improved somewhat and we have gone to the IAEA.

Interviewer: So, you think you can push the Left incrementally.

External Affairs Minister: It is not a question of pushing in or pushing out. It is a question of accepting the ground reality as and when it unfolds itself. Let us wait, first let us have the agreed text. Let us discuss with the Left leaders in the Committee and wait for the outcome of it.

Interviewer: And let us keep our fingers even more tightly crossed. At that point when you are smiling, pleasure talking to you Minister.

External Affairs Minister: Thank you.

008. Special lecture by External Affairs Minister Pranab Mukherjee on the occasion of Platinum Jubilee Celebrations of Indian Statistical Institute, Kolkata.

Kolkata, January 19, 2008.

Topic: 'Looking towards the East: the pioneering role of Professor P.C. Mahalanobis and the present possibilities'

**Respected Shri Jyoti Basu,
Director ISI, Professor Sankar Pal,
Professor Tarun Kabiraj,
Professor Atis Dasgupta and friends,**

We have inherited a great legacy left behind by Professor Prasanta Chandra Mahalanobis who founded the Indian Statistical Institute in Kolkata on 17th December, 1931. We are trying to fathom the depth of this legacy through various academic programmes that are being organized in the Institute in course of the Platinum Jubilee celebration over the last one year. One aspect of this rich legacy is connected with Professor Mahalanobis's pioneering role in looking towards the East. In this regard, he envisaged a comprehensive discourse which drew its main sustenance from India's innovative experiment in national planning in the context of the emerging role of welfare state in the wake of independence of the country. He sought to situate his path-breaking perception of statistics as a 'key technology' in the midst of the planning process and interlace it with national sample survey which he had initiated in ISI in 1950.

2. These major events, which Professor Mahalanobis could bring into focus with the inspiration and cooperation of Pandit Jawaharlal Nehru, the first Prime Minister of India, attracted the attention of several eminent scientists and front-ranking statesmen from abroad. Chou-en-Lai, Prime Minister of Peoples' Republic of China, and Ho-Chi-Minh, President of Peoples' Republic of Vietnam, were invited by Pandit Jawaharlal Nehru to visit India and come to ISI. I would trace the contribution of Pandit Jawaharlal Nehru and Professor Mahalanobis in introducing the national planning process, then, briefly explain the significant visits of Chou-en-Lai and Ho-Chi-Minh in ISI and, thereafter, relate the new possibilities of looking towards the East in the present situation.

3. The closeness of Professor Mahalanobis with Pandit Jawaharlal Nehru in respect of planning for national development can be traced to 1940, when they had the occasion to begin in-depth discussion. Let me recapitulate from the writings of Professor Mahalanobis as mentioned in 'Talks on Planning': "After the day's work was over, we started talking and after dinner we sat up till after two in the morning". During the Silver Jubilee celebration of the Institute, Pandit Jawaharlal Nehru sent a message to Professor Mahalanobis, which Shri C.D. Deshmukh, the President of the Institute, read out in the meeting held on 17th December, 1956: "The Indian Statistical Institute has gained a reputation for itself not only in India but in every country where statistics is studied. It has grown in recent years and has performed important functions in connection with our planning work. Indeed, it is an essential part now of our planning organization. On the occasion of its Silver Jubilee, I send to all my good wishes". In India, statistics came to centre stage in national life through national sample survey which Professor Mahalanobis and his colleagues initiated in ISI in 1950 for carrying out socio-economic survey of all-India coverage on a continuing basis. This provided the Central Government, for the first time, with a database for various developmental programmes, particularly in respect of the Five-Year Plans of the country. It is well known that in 1954 Prime Minister Jawaharlal Nehru entrusted him and his colleagues in the Institute with the responsibility of preparation of the draft Second Five-Year Plan of the country.
4. Many projects initiated by Professor Mahalanobis at the ISI yielded information of great social relevance that pertained to rural indebtedness, road development, family budgets, traffic flow, etc. At the request of the then Government of Burma, the Institute helped in organising a sample survey of economic conditions in Rangoon in 1948-49.
5. After the historic Bandung Conference, which stood out as a land mark event for enunciation of non-alignment policy for developing countries, Chou-en-Lai, then Prime Minister of China, came to India and visited Indian Statistical Institute on 9th December 1956 to interact with Professor Mahalanobis on the role of ISI in the planning process of India. On this occasion Professor Mahalanobis said in his welcome speech: "Your Excellency, we welcome you on behalf of our workers, members and friends. As time is very short, I shall briefly

mention that this is an Institute which is now working in close co-operation with the Planning Commission in carrying on studies for national development. That, I think, is the principal work being done here. We are also carrying on work in mathematical statistics in its application to various branches of science, agriculture and industry. Two years ago, Prime Minister Nehru inaugurated in this Institute basic studies on planning, and this Institute helped in preparing the Draft Plan-frame which was submitted to the Government last year, and was accepted as the basis of the Second Five-Year Plan. We also have here an International Statistical Education Centre where students come from 14 or 15 Asian countries". He continued: "Our aim is to make this Institute a centre of fruitful work in cooperation with the scientists from other countries to promote national development and human welfare.

We recall the cultural contact between China and India that was established 2,000 years ago and was renewed by the visit of Rabindra Nath Tagore to China in 1924, and has been strengthened by the exchange of visits by the Premier of China and the Prime Minister of India. We now look forward to Chinese scholars and scientists coming to this Institute to work with us in harmony and goodwill. We thank you, Your Excellency, for having planted a young mango tree in our garden. This tree, as it grows from year to year, will be a living symbol of the growing friendship between China and India".

6. Chou-en-Lai, in his reply, said: "We hope that among the 14 or 15 countries who have students here, there would be one more Asian country, China. We are willing to make the study in this Institute as a beginning of our learning from the wisdom of India". As mentioned by Professor Mahalanobis, Chou-en-Lai planted a mango sapling near 'Amrapali' in ISI during his visit. After the formal ceremony, some officials asked the gardener to complete the job in order to save time. But Chou-en-Lai insisted on putting back the earth himself. He remarked: "Let me actually plant it myself, otherwise it will be his work and not mine". Soon after, Chou-en-Lai cordially invited Professor Mahalanobis to visit China. In June 1957, Professor went to China and, as requested by Premier Chou-en-Lai gave his incisive views on how to implement large-scale sample survey for enriching the planning process in China.

7. On 13th February 1958, Professor Mahalanobis received Ho Chi Minh, President of Peoples' Republic of Vietnam, in ISI, when the historic struggle against imperialism of the West was going on in Vietnam. Ho Chi Minh spoke to a large gathering in the Institute: "In India planning work is very large and very high. I see that we have to learn much from you". Ho Chi Minh further said that India and Vietnam were working together for democracy, brotherhood and humanity and that both followed the principles of Lord Buddha.
8. For the country as a whole, the challenges now appear to be more complex, but, at the same time, laden with greater possibilities. Resurgence of the role of welfare state is being presently emphasized in the context of the 11th Five-Year Plan of India with more emphasis on Human Development indicators and the improvement of quality of life of the common people. This is being reflected in expanding the ambit of work of National Sample Survey Organization, where the participation of ISI in strengthening the base of official statistics should be solicited in a more comprehensive manner.
9. The seventies and the eighties saw the emergence and consolidation of engineering and management education in India. It was the obvious culmination of the process of industrialization of India that first demanded technologists and then managers to control and assist the growth of production and innovation. It is particularly in the latter aspect, that is, in management education that we see the vision of Professor Mahalanobis emerge into reality.

Professor Mahalanobis demonstrated that statistics is an essential tool for rational decision making based on fallible information in all activities related to sciences, industry, trade and administration. He called statistics as a "key technology". It is therefore hardly surprising that one of the compulsory subjects of study in any management curriculum is Statistics and Probability. It is the starting point of any form assessment of an existing process or system that is in need of optimization. The application of statistics brings order to any situation: whether it is inventory management or market research or brand recall or process control, a sample survey is the first step. This helps us in estimation and developing a suitable solution. These steps, in appropriate situations, help innovation.
10. To quote the Professor: "Statisticians, in fact, have a four-fold task in national development. Firstly, to conduct properly organised surveys

for the collection, analysis, and interpretation of relevant statistical data. Secondly, on the basis of such information, to help in the choice of an efficient programme of action. Thirdly, when the plan goes into operation, to measure the progress of work and to assess the results achieved. And, finally, on the basis of such assessment, either to report that the work is proceeding as desired or to give the danger signal that the results attained are not proceeding in accordance with the plan or are not commensurate with the effort; in which case the plan itself may have to be modified. In this way the four-step cycle would begin again." This is the core concept in management education. Today when we see enterprises whether in the manufacturing sector or in the services sector, it is a signal tribute to the vision of Professor Mahalanobis who foresaw the immense possibilities in a developing society like ours.

To give an example: In the last few years, India has established Entrepreneurship Development Centres in Laos, Vietnam and Cambodia and is in the process of doing so in Myanmar. To quote yet another example: In the Indian Technical and Economic Cooperation (ITEC) programme being implemented by the Ministry of External Affairs subjects related to office management and entrepreneurship are among the most popular. Trainees come from all round the world and especially from south east Asian countries. These would not have been possible were it not for the vision of Professor Mahalanobis who conceived of India's second five year plan of industrialization and strongly endorsed the use and study of statistics in national development. The former helped us produce entrepreneurs and the latter helped us guide our reform process using techniques of management. In today's age of globalization and decentralization, if Professor Mahalanobis were amidst us he would not have felt out of place at all.

11. I distinctly recollect that, during the inauguration of P.C. Mahalanobis Birth Centenary celebration on 29th June, 1993, the issue of the basic autonomous character of ISI for the furtherance of the scientific activities was brought to a sharp focus by Shri P.N. Haksar, the then Chairman of the ISI Council, in the presence of Shri P.V. Narasimha Rao, the then Prime Minister of India and Shri Jyoti Basu, where I was also present.

Shri Haksar pointed out: "Since you, Hon'ble Prime Minister, have graced this occasion, I shall be failing in my duty if I do not point out that we have to understand that Indian Statistical Institute is not an attached and subordinate office to the Government of India. I might take this occasion to remind ourselves that when piloting Bill for the ISI Act of 1959, Pandit Jawaharlal Nehru, endowed as he was with the unusual sense and sensibility, said in the Parliament that he knew that science and the spirit of enquiry could not flourish in government institutions and that's why he said he had ensured that Indian Statistical Institute should remain autonomous".

12. The process of growth of ISI, across the last 75 years, has been phenomenal due to the relentless contribution of Professor Mahalanobis and his associates. Over the decades, the Institute has expanded significantly by setting up seven scientific divisions at the headquarters in Kolkata, along with two Centres in Delhi and Bangalore, a Branch in Giridih, a network of Statistical Quality Control Units in some provinces of the country, and a station at Takdah in Darjeeling. The Institute has also envisaged to set up a Centre at Chennai and upgrade the Giridih Branch to the level of a Centre.
13. Let me conclude with a passage from Rabindranath Tagore's, brilliant essay 'Crisis in Civilisation', which bears an enduring significance in the context of the overview for looking towards the East: "The wheels of fate will someday compel the English to give up their Indian empire. But what kind of India will they leave behind? What stark misery? ... I had one time believed the springs of civilization would issue out of the heart of Europe. But today, when I am about to quit the world, that faith has gone bankrupt altogetherAs I look around, I see crumbling ruins of a proud civilization strewn like vast heap of futility. I hope that the message of reassurance and liberation will come from the cottages of the East, and I shall not commit the grievous sin of loosing faith in man."

009. Address by External Affairs Minister Pranab Mukherjee at the Defence Services Staff College on "Shaping India's Foreign policy to its Rightful Place in the Comity of Nations".

Wellington, January 22, 2008.

Commandant Lt. Gen B J Gupta,

Members of the faculty and staff,

Student officers,

Ladies and gentlemen,

I am happy to be at this premier institution of training in command and staff responsibilities for members of the armed forces and civil servants. You have a long and glorious history going back to pre-independence India. Since independence, you have carved out a distinct identity for yourself as a tri-service institution. This includes an established international dimension with officers from several countries now regularly participating in the training. I believe that 430 officer students from all three services qualified for the award of a post graduate degree in Defence and Strategic Studies given by Madras University after completion of the last course. This is an impressive number. Your alumni constitute a veritable Who's Who list. I commend you on your achievements and wish you continued success.

The subject that I have been asked to speak on is evocative. It takes us back to our struggle for freedom. The leaders of our National Movement were aware of what had been India's position in the world and the decline that had set in bringing the country under colonial domination. India's struggle for freedom was not only to throw off foreign rule. It saw itself as an active participant in international affairs, making a contribution to freedom everywhere. Here I would like to quote Pt. Jawaharlal Nehru, not as the prime Minister of India, but as one of the outstanding leaders of pre-independent India on one of his European tours, when asked to define his objectives of freedom, replied "when we talk of freedom, I mean freedom from slavery, economic bondage and freedom from cultural stagnation". Decolonization, in fact, was the dominant theme in India's foreign policy in the early years following independence. It is only logical that the comity of nations has always been considered in the Indian tradition as one family - Vasudeva Kutumbakam as our ancient seers put it so eloquently. India,

immediately after independence, snapped off its bilateral ties with South Africa due to the policy of apartheid. In early 1990's when I was the Commerce Minister, I had the privilege to restore these ties.

The objective of our engagement with the world, from the earliest years of our independence, has been to create and maintain an international context that would provide an enabling environment for democratic governance, social and economic development leading to the alleviation of poverty and the fostering of an inclusive society based on equity, justice and prosperity for all our people. Equally our foreign policy has aimed at making a contribution to put in place an equitable, peaceful and stable world order. It would be appropriate to examine if we have succeeded in some measure in achieving our objectives in these areas.

It would be no exaggeration to say that the Indian economy has been completely transformed from what it was in 1947. Building on the base that was created in the first four decades of our independence, the reform agenda pursued since 1991 has made our economy one of the most energetic and amongst the fastest growing in the world. This has now attracted international attention and is being globally acknowledged. From 6% in the 1990s, the GDP growth rate has accelerated to 7% in the seven-year period 2000-01 to 2006-07. While the growth rate in the last four years averaged 8.6 per cent, it has been still higher at 9.0 per cent and 9.4 per cent respectively in the last two years. We expect the current year to end with 9% growth. The economic performance of recent years has been supported significantly by domestic savings and investment and has been accompanied by productivity growth. Further, inflation, a sensitive indicator in a democracy, has remained under control even as growth has accelerated. The value of both exports and imports, in US dollar terms, is three times what it was in 2000-01. Foreign exchange reserves at more than US \$ 275 billion are currently much higher than the external debt. India's growing and broad based entrepreneurial class, with its innovative practices and professionalism, has impressed its global peers and is increasingly attracting partners from across the globe.

In a sense, the Indian economy is rediscovering its global role. Two thousand years ago, when the Roman Empire ruled the west, India and China were the largest economies in the world contributing more than half of the global output. This contribution remained more or less constant till the beginning of the industrial revolution, when relative decline set in. Today, India and China are contributing nearly 40% of the world's incremental output and the

day is not far when they would contribute a similar percentage of the world's total output. The contribution of the Indian economy to the global economy would continue to rise, especially since India can reap a "demographic dividend". As important as the numbers will be the intangible contribution India and Indians make to the global knowledge economy through innovation, ideas and other critical human inputs. In this context, it is notable that 125 of the Fortune 500 companies already have R&D centers in India. This is, in a sense, an expansion of India's traditional soft power, which has been placed on a firm, modern footing through our investments in science and technology, education and governance.

India has conclusively demonstrated that substantive social and economic progress is possible through true democratic governance. In our success, we have proved wrong the sceptics who had argued that democracy could not be sustained in a country of continental size, hosting all the religions of the world, a bewildering array of languages and cultures, as well as vast disparities in social and economic status. Indeed, we have established that in a pluralistic society, democracy is the way to promote socio-economic transformation for the betterment of all sections of the people, especially the under-privileged and the deprived. Our experience also shows that as the world becomes more connected and inter-dependent, the management of global diversity would require the application of democratic principles to global governance as well. India, with its experience of democratic governance, is ready to contribute to this process.

India has demonstrated its ability to contribute to peace and security in the region and beyond. This ability is now backed by significant capabilities developed, maintained and deployed in a responsible manner by India. Our capabilities and new responsibilities have led to a new and intense engagement with the major powers on India's role in international security. Our longstanding commitment to disarmament, non-proliferation and international security has been acknowledged in these dialogues. We reached out swiftly to our neighbours after the Indian Ocean tsunami of 2004, despite having been severely affected ourselves. We remain actively involved in different forums in Asia on disaster relief, maritime security and counter-terrorism. In the United Nations, India has contributed to the Peace-building Fund and is a member of the Organisational Committee of the Peace-building Commission. We are among the top five providers of military personnel and civilian police to UN peacekeeping operations. More than 90,000 Indian troops, military observers and civilian police officers have participated in 43 of the 61 peacekeeping missions launched since the

inception of the UN. Indian troops are currently participating in two complex and challenging missions in Congo and Sudan under Chapter VII mandates. We are ready to assume even more responsibility for international peace and security in a reformed and revitalized UN Security Council.

I will attempt a brief survey of how India's foreign policy is being currently shaped so that it contributes to the well-being of our people and to peace and prosperity in the wider world. To begin with, we are working from a realization that an economy that is growing at 9%, possibly 10%, would require investments, resources, energy and technology at a hitherto unprecedented scale. In all of India's bilateral relationships and in all her multilateral engagement, the focus is on the facilitation of trade and investment flows, the modernization of infrastructure, the assuring of predictable and affordable energy supplies and the widest possible access to technologies. India is strengthening her relationships with all the major powers - US, Russia, EU, China and Japan - as well as with emerging economies in Asia, Latin America and Africa, with an eye on all these critical ingredients of economic success. We are also investing energy in crafting bilateral and multilateral trade arrangements and measures to promote investment and technology flows.

In the crafting of foreign policy, priority and special attention has to be given to a country's neighbourhood. We do not believe in territorial expansion and neither do we believe in exporting ideology. A peaceful and stable neighbourhood is conducive to growth and development. India is no exception. Thus, we are convinced that a stable and peaceful neighbourhood is essential to India's future. We are therefore according the highest priority to closer political and economic ties with all of our neighbours. Our objective is to promote inter-dependence, create stakes in each other's stability and develop cross border infrastructure and other links. South Asia has flourished most when connected to itself and to the rest of the world. Connectivity - physical, economic and of the mind - is the key to the full use of South Asia's geographical and resource endowments. This is a priority area of focus for us as the Chair of the South Asia Association for Regional Cooperation (SAARC). As the largest economy in the region, India is ready to offer its market and resources as an engine for the region's growth.

India is committed to peace, friendship and good neighbourly relations with Pakistan. We are happy that people-to-people contact is making headway. We would like to purposefully build on this beginning. Of course, we have continuing and serious concerns on cross-border terrorism and attach

importance to Pakistan fulfilling its own commitments in this regard as was reflected in its commitment in the Joint Statement on 6th January 2004. We wish Pakistan well and hope the people of Pakistan can emerge soon from their current difficulties. With Afghanistan, India has had a historically friendly relationship and we are actively engaged in the reconstruction and development of Afghanistan. Our assistance commitment to Afghanistan, since 2002 stands at US \$ 750 million and includes development initiatives in key infrastructure sectors. We are not engaged in providing security which is done by NATO and others. We are engaged in reconstruction activities such as power projects, power transmission lines, roads, education etc.

Among our other neighbours, Nepal is going through a difficult transition. India whole-heartedly supports the restoration of multi-party democracy and political stability in the country. We are committed to a long term partnership with Bangladesh and wish to see a peaceful, stable and democratic Bangladesh. In Sri Lanka, the resumption and intensification of hostilities is a cause for concern. We are convinced that there is no military solution and the only way to resolve the ethnic issue is through a negotiated, political settlement acceptable to all communities in Sri Lanka. Resolving the ethnic problem and terrorism should not be clubbed together. We have zero-tolerance to terrorism. Ethnic conflict should be resolved by political process. India supports the process of national reconciliation and political reform in Myanmar, another important neighbour with which we are strengthening cooperation.

The Gulf and Central Asia are part of India's extended neighbourhood. We are adding important elements to our traditional ties with the countries of the Gulf and the Central Asian regions by leveraging economic opportunities and long standing cultural and people to people links.

Our Look East policy, which was based on ASEAN's economic, political and strategic importance in the Asia-Pacific region and its potential to become a major partner of India in trade and investment, has now evolved to include the Far Eastern and Pacific regions. Our trade with countries of the East Asia Summit, including the ASEAN, has crossed US \$ 80 billion. A virtual Asian Economic Community is emerging, which could be the third pole of the world economy, after the EU and the NAFTA.

Let me discuss briefly our relations with the major powers. Our bilateral engagement with the United States covers an unprecedented agenda today. Shared values, the private sector in both countries and the Indian community

in the US are among the key drivers of our bilateral partnership, and the US is India's single largest trade partner and leading foreign investor. The India-US initiative on civil nuclear energy is a measure of the importance we attach to energy security and India's access to high technology. India and Russia enjoy traditionally friendly and cooperative relations. We are strengthening our strategic partnership in the areas of trade, defence, energy, space and technology. With the European Union India has a strategic partnership. The EU remains India's largest export destination and one of the largest sources of foreign investment. EU member states, notably UK, Germany and France, are also key destinations for Indian investments. We have also launched negotiations for a broad-based Trade & Investment Agreement that we hope will be completed at an early date.

Prime Minister has just returned from a successful visit to China. Our bilateral trade crossed 38 billion \$ last year, up from a little below \$ 3 billion in 2000. Two-way investments are growing. Now we have fixed a target of US \$ 60 billion by 2010. The bilateral economic relationship is set to become one of the most important in the global economy. As Prime Minister Dr. Manmohan Singh has very clearly stated "the rise of India and China is a global public good". There is space for both of us to grow. Of course there are some unresolved issues in the bilateral relationship. We are committed to working with China to resolve these issues while remaining sensitive to each other's concerns and aspirations. With Japan, our relations have witnessed a transformation following Prime Minister's landmark visit in December 2006. We have established an India-Japan Strategic and Global Partnership and agreed to double our trade by 2010 to \$20 billion. Our comprehensive economic partnership is being given substance through infrastructure collaboration on flagship projects like the Dedicated Freight Corridors Project. We are also aiming for a Comprehensive Economic Partnership Agreement by the end of the year.

In today's interdependent world no nation can be an island. India's international engagement therefore has an important multilateral component. We work with major powers in forums such as the UN, the G8, East Asia Summit and ASEAN Regional Forum, the trilateral initiative with Russia and China and the IBSA forum with Brazil and South Africa. This allows us to contribute actively on issues such as regional and international security, climatic change and environmental protection, economic growth, pandemics, energy and terrorism. We are conscious that India's economic growth has global implications. That is why we have made an important commitment,

in the context of common but differentiated responsibility, that India's per capita emissions of green house gases would not cross the developed country average.

In this brief survey, my attempt has been to highlight the rapid expansion and qualitative change in India's foreign policy perspectives. This is not only in India's interest but is also a positive development for international peace and stability in a rapidly changing world. As new trans-national challenges emerge from the forces of globalisation and technological change, India, with its unique blend of 'hard' and 'soft' power, would be an indispensable player in strengthening peace, stability and prosperity in its region and indeed in the world.

In closing, let me say that how delighted I am to be at the Staff College today. As a former Minister of defence, this is not unlike a homecoming and I am thankful for the opportunity of being able to spend and interact with these young mighty minds. The Indian Army and its training institutions are among the finest in the world. I bring to you my best wishes in the New Year and great success in the years ahead.

Thank you.

**010. Address by External Affairs Minister Pranab Mukherjee
at the 176th Annual General Meeting of the Calcutta
Chamber of Commerce.**

Kolkata, February 3, 2008.

Shri Patodia,

Distinguished members of the Chamber,

Ladies and Gentlemen,

At the outset, let me thank Mr. Patodia for the honour and privilege of addressing the 176th AGM of the Calcutta Chamber of Commerce. We know this Chamber holds the proud distinction of being the oldest in Asia. What started as a modest association more than a century and three quarters back, has evolved over the years into a vital and vibrant body engaged in shaping and guiding business prospects in the country, and more so in the eastern region of India. The active association of leading names in business and enterprises has modeled the chamber into a formidable body which has constantly engaged the government, its peers and other stakeholders to partner in seeking solutions to the emerging challenges arising out of Indian economic reforms and globalization.

In a few weeks from now, we shall be launching the 11th Five Year Plan. The Plan has set a target of achieving an average 9 per cent GDP growth in the five year period beginning April 2008. Our economic growth during the last five years has averaged about 8.5 per cent per year. This stellar performance has created confidence that we can do even better. The plan on anvil provides an opportunity to restructure our economic policies to achieve faster, more broad based, sustainable and inclusive growth building on our past experiences. The formulation of this Plan provides a renewed vision to better handle the opportunities and challenges that we face today. Allow me to reflect briefly on some of these challenges and opportunities.

Enhancing agricultural productivity is our foremost challenge. In the last five years, agriculture has grown at an average of 2 per cent per annum and we will have to make an all out effort to achieve 4 per cent growth as targeted in the 11th Plan. We need to assist farmers in increasing yields and productivity through management chains and appropriate technological inputs. This would entail creation of better infrastructure in irrigation facilities, improved quality of seeds, improved farm practices in terms of harvest and

post harvest management, including cold chains and development of Commodity Exchanges and Forward Markets. The investments in irrigation still have the potential to give high incremental capital output ratio and provide millions of jobs, apart from improving food and water security of the nation. The rural road network for improved access to market will have to be built. The easy availability of credit and its facilitation in this sector will have the effect of value-addition and increasing the purchasing power of farmers. Simultaneously, the population pressure on land has to be eased by tapping the potential available for moving into agro-based food processing, for which I see enough scope through public-private partnerships.

Employment generation is an integral part of the growth process. We have to devise strategies directed to accelerate not only growth of employment but also for increase in wages of the poorly paid. Recent surveys indicate evidence of reduction in underemployment and disguised employment in the informal sector and larger work opportunities. However, creation of productive employment needs a very high priority. About 50 million jobs were created in the last five years and in the next five years our goal is to create jobs for 70 million people. It is not only the quantities or the numbers that are important. Equally important is the quality of jobs that we create.

This can only be achieved with people gaining access to more productive assets by which they can generate decent incomes. An economic growth that generates sufficient demand for wage labour is the way forward. A significant part of this would be achieved by doubling the agricultural growth. Besides, additional employment opportunities will have to be generated in the manufacturing and services sectors. What I see is a major boost required for labour intensive manufacturing activities such as food processing, leather products, footwear, textiles and service sector activities such as tourism and construction.

Employment opportunities need to be enhanced through a multi-pronged strategy. We must train people vocationally so that we create employability. The organized labour force is growing marginally. Major changes are required to boost organized employment. The potential of Small Scale Industries in this context is significant. SSI in India is the second largest manpower employer in the country, next only to agriculture. In the tenth plan period, the average annual growth in employment in this sector was around 4.75 %. In order to meet the future employment goals, the need is to increase the use of labour intensive and capital saving technology to

rejuvenate growth of employment in both unorganized as well as organized sectors.

The city of Kolkata and its suburbs offer immense potential and massive opportunities in creating employment in these sectors. Indeed, this part of the country has a comparative advantage in trade & manufacturing of labour intensive items, backed by its historical location as a hub of manufacturing and industrial activity.

Distinguished members,

Indian industry has achieved an impressive growth over the last decade, ranging from 8 to 11.5 per cent per year. The growth has been led largely by the manufacturing sector, which grew by 9 to 12.5 per cent a year. We are definitely hopeful of achieving manufacturing and industrial growth of around 12 per cent in the 11th Plan.

There has also been evidence of pick up in productivity and efficiency of capital use. The feasibility of attaining 9 per cent growth in GDP depends on large improvements in efficiency and optimum utilization of scarce resources, both in the public as well as in the private sector. Recent studies on India have indicated an increase in Total Factor Productivity (TFP) growth in recent years. However, this is a continuous process and we shall have to constantly address and remove any constraints on efficient allocation of resources.

To a large extent, our growth story depends on how we handle investments in infrastructure and remove bottlenecks. Massive creation of infrastructure is required spanning across all sectors. It is estimated that infrastructure alone will require an investment of more than US \$ 500 billion in the next five years. We are on track to take speedy and faster decisions regarding investments in infrastructure such as rail, ports, airports, transport corridors, shipping, telecom, to name a few. Foreign Direct Investment has to increase substantially in these sectors to complement domestic investments.

The strengthening of economic activity in recent years has been supported by increase in domestic investment rates from less than 23 per cent of GDP in 2001-02 to more than 33 per cent in 2005-06. Domestic saving rates have also improved from 23.5 per cent to 32.4 per cent during the same period. We have also successfully managed to keep the average inflation rate benign and contained well below five per cent. Exports have been growing at an average rate of 24 per cent during the last five years.

Our current foreign exchange reserves of around US \$ 275 billion exceed the country's external debt, reflecting improved external sector sustainability of the economy.

We have an unprecedented challenge in the form of ensuring our energy security. India has to depend, to a large extent, on import of hydro carbon and other fossil fuels for meeting its energy needs. Our energy needs will grow in keeping with our projected economic growth. Oil prices averaging at US\$100 a barrel, are a drag on our resources that could have gone for more productive purposes. The only way out is by investing to build future assets in energy. My Ministry is aware of these challenges and we are making all attempts by focusing bilateral and multilateral engagements for cooperation with source countries. The agreements on Civil Nuclear Cooperation with various countries will, in particular, help in increasing the share of civil nuclear power in our energy mix.

As we focus on economic growth, Indian business and industry will also have to respond to the growing concerns about climate change and environmental protection. Though our per-capita emission of green house gases is well below the world average, the global imperative to adopt environmentally sound policies is not lost on us. In aggregate terms, India, with 17% of the world population, has only 4% of global GHG emissions. We are also prepared to contribute on the basis of the well-recognized principle of common but differentiated responsibilities and respective capabilities.

Distinguished members,

Economic growth cannot be the only objective of national planning. Over the years, development objectives are being defined not just in terms of increase in GDP or per capita income, but also in broader terms of enhancement of human well-being. This includes the expansion of economic and social opportunities for all individuals and groups. It is important to ensure that growth is inclusive and equitable. The two are intimately linked to the growth objective and attainment of one may not be possible without the other. Going by the data of human development indicators, the country has met with reasonable success in the past decade and a half. The number of people living below the poverty line has come down from 36 per cent in 1993-94 to about 22 per cent in 2004-05. Life expectancy has gone up from less than 60 years in 1991 to close to 65 years now. The literacy rates have gone up by more than 10 percentage points in the same period.

However, these are the very indicators that remind us of our task ahead. They remind us that there are still over 250 million people, living on less than \$1 a day. Similarly, one-third of our population remains illiterate. Several estimates put the number of unemployed between 250 to 300 million. These staggering figures are not only numbers; they are also pointers as to how sustainable our growth could be in the future.

Since I am in Kolkata, I would like to take the opportunity of highlighting some aspects of our foreign policy that have a particular bearing on this region. Now that the Nathula border in Sikkim has opened to trade, the entire Eastern and North Eastern hinterland can benefit from increased trade relations with China. Our business and diplomatic ties in each others' countries will also be enhanced by the presence of consulates in Guangzhou and Kolkata.

Kolkata and the eastern region are also uniquely placed to reap higher benefits arising out of the improved trade and investment ties that we are building with the ASEAN region. The State of West Bengal has an important role to play in realizing the objectives of our Look East Policy and benefit from our warm and dynamic relationships with our South-Eastern neighbours. Through West Bengal, India shares international boundaries with three countries in South Asia and this can speed up industrial and trade relations with these countries. This is one of the fastest growing States in India and is strategically located to attract foreign investment. In fact, it can play a crucial role in opening the doors for investment and business opportunities for the whole of eastern and north eastern India.

The Calcutta Chamber can play a key role in the process of economic development in this region. I hope the members of this august body will deliberate on many of these opportunities, challenges and potential with a view to contributing to the process of economic development. Surely, the deliberations in today's AGM would come up with informed opinions on these issues. I look forward to the outcome of the proceedings.

Thank you.

011. Keynote Address by External Affairs Minister Pranab Mukherjee at the 10th Asian Security Conference organized by the Institute of Defence Studies and Analysis on "Asian Security in the 21st Century".

New Delhi, February 5, 2008.

Shri A. K. Antony, Defence Minister of India,

Director IDSA,

Excellencies, Ladies and Gentlemen,

It is indeed an honour to address this distinguished gathering of scholars and experts from around the world. IDSA has been at the forefront of the Indian debate on national and international security issues for the last 42 years. Its annual Asian Security Conference has served as an important international forum for the last 10 years. Each year, distinguished experts have assembled here to share and debate their views and perspectives on Asian security and on how to manage it better. On the 10th anniversary of this forum, IDSA has rightly chosen to focus on some of the pressing security issues that face Asia as a whole. I am sure your discussions over the next three days would go a long way in enlarging our understanding of Asia's many security dilemmas and help devise better solutions to manage them.

This morning I would like to offer you my thoughts on some key issues relating to Asian security in the 21st Century.

Asia in the 21st Century will be a very different place than what it was in the past. For over 200 years, external powers played a dominant role in shaping Asia's political, social, economic and cultural arenas. This situation has been undergoing significant changes for quite some time now.

The balance of influence on Asian affairs has begun to shift in favour of the countries of Asia. Japan was a lone swallow in the first half of the 20th Century. But in its second half, it blazed a trail that was followed by the East and Southeast Asian tiger economies. China and India have further fanned this Asian revival with their prowess in the manufacturing and service sectors. Asia today contributes just around a quarter of the global GDP, and this share is expected to rise to more than 50 per cent of the world by 2025. As Prime Minister Dr. Manmohan Singh recently noted, by the middle of the century, Asia may well account for more than 50 percent of foreign trade, income, saving, investment and financial transactions of the globe.

Asia's economic revival has given rise to many predictions about its future. These projections are based on two factors. The first is Asia's growing and relatively youthful population. It has been estimated that by 2010, 60 per cent of the world's population in the age group of 20 to 35 is likely to be Asian. And the second is the rapid growth of several Asian economies during the last few decades. China, for example, has been averaging a growth rate of about 9 per cent a year since 1980. For its part, India has averaged 8.5 per cent a year in the last five years. It is believed that these two factors would enable Asian countries to dominate the international economy and, by extension, international politics and security.

Whether this scenario comes about or not depends on a number of domestic and external factors. But what seems certain is the growing influence of major Asian countries on the structures and processes of international relations in Asia. At the same time, we cannot overlook the influence of external actors on the continent. Asian security in the 21st Century will thus be shaped by the interactions between major Asian powers and influential external actors such as EU, Russia and the United States.

Many security challenges confront Asia today-the spread of nuclear weapons, the threat of terrorism, threats to energy security, and so on. And many more challenges are likely to arise in the course of the Century, including the issue of climate change.

India has a critical role to play in tackling these challenges. With its economy growing at an impressive rate over the last few years, India has emerged as one of the driver of economic growth in the world. India is a unique example of a country where development and democracy have gone hand in hand. Its role has become crucial for international economic integration and trade organisation, for preventing the spread of nuclear weapons, for tackling the threat of terrorism, for stabilising conflict-affected states like Afghanistan, for dealing with the issue of climate change, for building and strengthening multilateral institutions, and for collective and co-operative security in Asia.

Ladies and Gentlemen, a principal cause of concern in recent years has been the threat of nuclear proliferation. This is not limited only to new states acquiring nuclear weapons capability. It also extends to the very real threat of terrorist groups laying their hands on nuclear material and even fully assembled nuclear weapons.

These two security challenges are interlinked. And they are products of the demand-supply dynamic. On the supply side, the proliferation problem is a

product of two factors. One is the inability of states to sufficiently safeguard their nuclear material, technology and facilities against attempts to procure WMD relevant items. The second factor is deliberate and callous proliferation by states including state failure to exercise adequate control over personnel engaged in nuclear programmes. It is well known how transfer of uranium enrichment technology, equipment and even weapon design has taken place clandestinely and flagrantly in our region. Even more alarming is the interest shown by radical terrorist groups in acquiring nuclear material and technology and the linkages that they had forged with a few nuclear scientists.

The challenge before us is to make sure that national laws and international commitments are better implemented by states to prevent leakage of material and technology from established nuclear programmes. The challenge also is to do this consistently and without short-term considerations of political expediency.

On the demand side, the best way to address the dilemmas in the nuclear domain is to focus our efforts on the goal of global nuclear disarmament.

India, as you know, has held a principled position on the issue of nuclear weapons since the dawn of the nuclear age. It has many firsts to its credit in promoting arms control, disarmament and non-proliferation. As early as 1954, Pandit Jawaharlal Nehru issued the first ever call for a standstill to nuclear weapons tests. In 1965, it was India that first put forward the principles for a Nuclear Non-Proliferation Treaty. Indian enthusiasm for the NPT waned when it saw the reluctance of established nuclear powers to give up their arsenals. But in all these years, we have strictly abided by all the basic obligations enshrined in this Treaty as they apply to nuclear weapon States. Today, as a responsible nuclear weapon power, we are even more mindful of our duty to control the spread of WMD technologies and their delivery systems. We have signalled our willingness to be a part of the international consensus by adopting a comprehensive WMD Export Control legislation. We have also harmonised our export control lists with those prescribed by the Nuclear Suppliers Group and Missile Technology Control Regime. These measures also fulfill the obligations prescribed by UN Security Council Resolution 1540, which calls upon states to refrain from supporting non-state actors in their quest for weapons of mass destruction and their delivery systems.

We do not wish to see the emergence of additional nuclear weapon states, for it will only further endanger international security. And our goal continues

to be a world free of nuclear weapons. This year marks twenty years the since the late Shri Rajiv Gandhi presented a bold Action Plan for a nuclear weapon free and non-violent world order. The central premises of the 1988 Rajiv Gandhi Action Plan are of current significance and relevance as they were two decades ago:

- First, a binding commitment by all nations to eliminate nuclear weapons in stages;
- Second, participation by all states in the process of nuclear disarmament; and here I would like to emphasis that nuclear disarmament does not alone mean arms control;
- Third, demonstration of good faith and building of confidence through tangible progress towards the common goal of a nuclear weapon free world;
- Fourth, changes in doctrines, policies and institutions to sustain a world free of nuclear weapons.

The vision of Shri Rajiv Gandhi continues to guide India's approach to nuclear disarmament. Personalities such as Henry Kissinger, George Shultz, Sam Nunn and William Perry who were at the center of crafting nuclear policy and who thought that nuclear weapons were essential to the security of their state are having a rethink today. We welcome this development and hope it leads, as envisaged in the Rajiv Gandhi Action Plan, to a commitment by all states to a nuclear weapon free world. As a responsible nuclear weapon power, India is ready to play its part in the process leading to global, non-discriminatory and verifiable elimination of nuclear weapons.

Ladies and Gentlemen,

I now turn to the challenge of terrorism which haunts the world today. Asia in particular is home to by far the largest number of terrorist groups in the world. India has been facing this curse since the nineteen-eighties; first in Punjab, then in Jammu and Kashmir, and now in other parts of the country as well. We have consistently highlighted the need for a unified international response to trans-national and trans-border terrorism.

Terrorists derive their justification from politics, perceived or genuine grievances and economic disadvantage. In our view, no goal or grievance can justify the targeting of innocent people. In our view, terrorism is best defined as the deliberate targeting of innocent men, women and children.

The September 11 attacks, the Madrid train bombing, the tragedy at Beslan, targeting of the London Underground, the serial bombs that ripped through Mumbai's commuter trains during rush hour in July 2006, all demonstrate this basic fact. Secondly the fact that terrorists have successfully used weakly governed territories to organise attacks, recruit and train their cadres should not obscure the responsibility of the state concerned to prevent the misuse of its territory for terrorist attacks. Terrorism is not a political tool to be deployed and withdrawn at will, for it can turn around and critically wound the state that wields it.

Afghanistan under Taliban rule was the most telling example in this regard. Continuing to allow these groups to enjoy the luxury of this space will have terrible consequences for the world at large. It is vital that Afghanistan emerges as a stable and peaceful country that no longer serves as a base for these groups.

The legitimately elected government in Kabul must be enabled to extend its rule throughout the country. Reconstruction activities need to go hand in hand with efforts to combat radical groups and ensure security. India is one of the largest contributors to the reconstruction effort in Afghanistan. We have committed around 800 million US dollars. Three thousand five hundred Indians work in various projects in that country. We will persevere with our earnest efforts in this regard and we will continue to co-ordinate these efforts with those of the international community.

It is equally important to stabilise Iraq, which is being torn apart by various factors including sectarian conflict and a violent insurgency. Failure will have repercussions throughout the West Asian region. Regional instability could damage the international economy by disrupting energy supplies and further driving up oil prices which have already breached the 100 dollar mark.

In the context of instability in West Asia, we need to reflect on issues impinging on energy security. Rapid economic growth, especially in Asia, is causing increased demands for fossil fuel. At the same time, reserves are estimated to deplete in future. There is the additional fear that energy flows could be disrupted either by the actions of states or non-state actors. Asian countries, which predominantly source their fossil fuel requirements from the Persian Gulf, seem particularly vulnerable to such disruptions. They all feel the acute need to ensure the security, stability and sustainability of fossil fuel supplies.

Ladies and Gentlemen, allow me to share with you my thoughts on another important future challenge that will confront Asia as well as the world at large. This is the issue of climate change due to the accumulated and continuing emissions of carbon dioxide and other greenhouse gases. Weak and fragile states are particularly vulnerable to the damaging effects of climate change. You will recall that a few months ago UN Secretary General Ban Ki-moon highlighted the correlation between climate change and the crisis in Sudan's Darfur region. Climate change is truly a global problem and it requires global solutions. Developing countries like India cannot be expected to unilaterally forego the economic aspirations of their people. Advanced economies indeed have a greater obligation to cut down on emissions by encouraging more sustainable patterns of consumption. We need to devote greater efforts to generate alternate technologies and industrial processes that are environment-friendly and these technologies must be provided at affordable cost. The key principle is common but differentiated responsibility.

Ladies and Gentlemen, none of the challenges I have outlined can be effectively tackled by individual countries on their own. Pooling national efforts and resources and channelling them through the co-operative structures of multilateral frameworks and institutions is essential. Only then can we muster the necessary will and resources to tackle these challenges.

Former UN Secretary-General Kofi Annan succinctly pointed out in an address at Harvard University in June 2004, and I quote a few lines from there: "It is in the interest of every country to have international rules and to abide by them. And such a system can only work if, in devising and applying the rules, the legitimate interests and points of view of different countries are accommodated, and decisions are reached collectively. That is the essence of multilateralism ..." Unquote.

May I conclude by wishing you all success in your deliberations. Before I thank you, I apologise for lengthening my observations.

012. Speech of Defence Minister A. K. Antony at the 10th Asian security Conference organized by the Institute of Defence Studies and Analysis on "Nations Must Devise Ways and Means to Cooperate to effectively Counter Terrorism".

New Delhi, February 5, 2008.

"I am glad to be present at the opening of the 10th Asian Security Conference.

IDSA serves as a useful platform for frank interactions between experts - both military and civilian and the Government on security-related issues of national and international importance.

Of late, the Asian region has acquired a unique centrality in global strategic affairs.

The challenges for the Asian region - and indeed all the nations the world over are of a similar nature. Terrorism, nuclear proliferation and sectarian conflicts are some of issues that require our urgent and focussed attention.

Today, the world has truly become a global village. Thus, security of nations cannot be restricted to narrow geographical and political boundaries.

With increasing globalisation, it is often argued that the chances of the breakout of a conventional war are remote. All the same, we have to be eternally vigilant and ever-prepared for any eventuality.

In recent years, conflicts have broken out between states and non-state players. Such conflicts are differently categorised as civil war, insurgency, ethnic conflict, irregular war, or even - terrorism. The nature of conflicts notwithstanding, it is the civilian population that bears the brunt of such conflicts. The traditional distinction between soldiers and the civilians is increasingly being obliterated, for both are targets for terrorists.

It is well-known that no price is too high for the security of a nation. Global defence expenditure during the 1990s had registered a marginal decline. However, of late, global defence expenditure has registered a sharp upward growth.

The world today realises that no nation can consider itself to be immune from terrorism. The lessons learnt elsewhere can prove to be useful in devising our policies. Similarly, other nations too can benefit from our experiences. Nations must devise ways and means to cooperate to effectively counter terrorism.

The Indian policy makers will keenly look forward to these deliberations as they have implications for our own strategies. I also urge IDSA scholars to continue to pay attention to this phenomenon on a long-term basis and generate ideas and policy options that are useful to decision makers.

Increasing use of information technology will mean that wars in future will be hi-tech, intense, yet brief. The mobility and destructive capacity of weapons has gone up several times. Experts apprehend that with proliferation of technologies - particularly information technology, space technology, bio-technology, nano-technology and genetic engineering will only multiply the lethal force of new weapons.

Nuclear proliferation continues to be a serious challenge for mankind. I am sure that experts attending this Conference will deliberate on the future of the nuclear order, its relevance and implications for security of the Asian region.

The emergence of non-state players is another grave challenge confronting all nations. These non-state players do not recognise any territorial boundaries. They utilise latest global communication and transport networks and rely on garnering international support. Their common objective is to disturb existing state apparatus, destabilise neighbouring states and create new states based on ethno-cultural identity. Most of these non-state players are not fighting for a national identity, or territory and have abstract notions of carving out a separate and unique identity of their own based on ethnicity, religious and tribal basis.

According to estimates of Military Balance, out of the 343 non-state armed groups operating in the world, 187 groups operate in Asian region.

India has been the target of disruptive elements for several years. Major powers of the world then believed that they would be immune to such elements and had as such, little sympathy for our concerns. However, now all nations realise and accept the need for greater cooperation in effectively meeting such challenges.

The conference will also consider another important issue that has a direct bearing on Asian Security in the 21st century - the generic issue of fragile states and nation building, with Afghanistan as a live case.

Trends indicate that international efforts at nation building are faltering on many counts. This is a potentially dangerous situation. It is therefore only appropriate that this conference will consider the challenges posed by the recent developments in Afghanistan.

The deliberations during the special session will address the questions such as - what is the assessment of major players regarding the future course of action in Afghanistan? What can be done to stabilise Afghanistan? I am hopeful that the Conference will come up with creative solutions for the well-being of Afghanistan.

I have briefly referred to some of the principal challenges that Asia and other regions of the world are likely to face. All these challenges are transnational, or have the potential of becoming transnational. While we must guard against the outbreak of conventional wars, we must recognise that newer forms of conflict are more likely. In my view, the following measures can help the Asian states in meeting various challenges effectively.

The first one is to maintain an active dialogue process, not only among governments, but also defence establishments to build strong channels of communication and dispel mistrust. Secondly, we must develop mechanisms to share intelligence about terror groups, criminal elements, drug cartels and other transnational networks that foment violence and subvert states.

Thirdly, we must attempt to devise common solutions to common challenges that threaten our collective security. We need to develop multilateral frameworks to promote dialogue and prepare strategies for cooperative action.

It is heartening that this year's Asian Security Conference will touch upon several important issues and will conclude with a discussion on cooperative frameworks for Asian Security in the 21st century. I am sure that the deliberations by eminent scholars and experts on security issues at the Conference will be fruitful and provide crucial inputs on security-related issues.

With these words, I am pleased to inaugurate this important conference and convey my best wishes for its success".

013. Inaugural Speech of Prime Minister Dr. Manmohan Singh at the Indian Ocean Naval Symposium¹.

New Delhi, February 14, 2008.

It is a matter of great privilege for me to be present with you on the occasion of the launch of the Indian Ocean Naval Symposium. This is a unique gathering of Chiefs of Navies and Heads of Maritime Security Organizations representing the littoral states of the Indian Ocean.

Spanning 28 million square kilometers, the Indian Ocean is host to a third of the world's population. The littoral states of the Indian Ocean account for 25% of the global landmass and 40% of the world's energy sources. They have a rich heritage and share close socio-cultural ties.

Above all, they are linked by a history of sea faring. A significant share of international trade passes through the sea-lanes of the region. Regrettably the Indian Ocean also accounts for 70% of the world's natural disasters.

These are all reasons why we must pool our resources and act for the common good of all. Your presence here is a testimony to your belief in the need for cooperative action.

Indian Ocean littoral States have witnessed rapid economic growth. These high levels of growth are translating into increased intra-regional trade and global trade, a significant portion of which is seaborne.

The sea-lanes of the region have thus emerged as one of the most important lines of communication in the world. Container handling at the ports of Colombo, Mumbai, Chittagong, Bangkok and Malaysia's Port Klang are registering double-digit growth rates. A growing percentage of the world's large merchant ships and bulk carrier ships fly an Asian flag. This expansion in trade and economic growth dictates the need to ensure the safety and security of the sea lines.

Recent years have seen a rise in crimes such as terrorism, smuggling, including of narcotics, arms and weapons, piracy, and robbery. These activities not only pose a threat to our growing naval commerce but also

¹ The Seminar was organised by the Indian Navy. The participants included all the 33 Indian Ocean Rim Countries. It was aimed to increase maritime cooperation among navies of the IOR countries by providing a forum for discussion of maritime issues.

affect innocent fishermen and tourists. In addition there is the abominable practice of trafficking in human beings.

The perpetrators of these crimes are well organized and well-funded transnational crime syndicates who take full advantage of the vastness of the oceans. The need for cooperation among the Navies of the region in preventing such transnational crimes is therefore of paramount importance.

The monsoons play a vital role in the lives of the peoples of the Indian Ocean littoral states. They have also been pivotal in determining the sea routes that would transport precious cargo, be it spices from western India or rubber from the plantations of Malaysia.

Recent years have witnessed a marked rise in incidents of natural disasters. We look upon our Navies to protect our citizens from natural disasters and mitigate the effects on our coastal zones from phenomena like cyclones and tsunamis. Our coastal ecosystems sustain livelihoods and are host to a diverse species of marine life. We must have robust capabilities to deal with environmental emergencies.

Our coastal ecosystems sustain livelihoods and are host to a diverse species of marine life. The United Nations Convention on the Law of Sea sets out the legal framework within which all activities in the oceans and the seas must be carried out. The Indian Ocean is a repository of rich fish and mineral resources. We should address the issues relating to navigation, conservation and management of these resources, and for the conservation and management of biological diversity of the sea-bed in areas beyond national jurisdiction.

A better understanding of the oceans through the application of marine science and technology, and greater synergy between scientific knowledge and decision making are necessary for the sustainable use and management of the oceans. India would be happy to share its experience with countries of the region in harnessing the resources of Indian Ocean for sustainable economic development.

The concept of maritime security needs to be viewed in the above background. It should ensure freedom from threats arising either in or from the sea. You, as the guardians of the seas, are well placed to deliberate on current and emerging threats, and develop a comprehensive cooperative framework of maritime security.

I also hope that the Symposium will harness the remarkable diversity among us, and reinforce the commonalities that bind us. It should provide a platform for discussions on how we can further accelerate the pace at which we are engaging each other. We need greater connectivity among us, not just in trade and commerce but of ideas, people and cultures.

This requires a consensus based approach, with a focus on pooling of resources and capacity building, information-exchanges and development of interoperability in doctrinal and operational terms.

You have a rich agenda before you. I am sure that with your professionalism and desire for mutually beneficial cooperation, the Symposium will come up with sound practical ideas to address our common challenges. The Symposium is an important milestone in our quest for a cooperative and inclusive world order.

India remains committed to an Indian Ocean region that is stable and peaceful. We would like to cooperate with all like minded countries so as to ensure the freedom of the seas for all nations and to deepen trade and economic linkages between the Indian Ocean Rim countries.

I wish you all success in your deliberations.

014. Speech of Defence Minister A. K. Antony at the opening of the Indian Ocean Naval Symposium.

New Delhi, February 14, 2008.

Ladies and Gentlemen, GOOD MORNING,

At the outset, I welcome you all to the 'IONS' - Indian ocean Naval symposium. 'IONS', the word itself, connotes 'movement' and, as such, is the apt acronym for the Indian Ocean Naval Symposium. It is entirely fitting that the Indian Navy and the National Maritime Foundation have jointly taken the initiative of hosting the inaugural activity of the IONS initiative, namely, the IONS Seminar-2008.

Ladies and Gentlemen, we all know that safety, stability and security are prime requirements of mankind for physical economic prosperity and also for spiritual well-being. The happenings in the maritime domain, whether natural or manmade and whether occurring for good or ill, impact upon man's natural land-habitat. As such, the maritime domain is demanding and deserving of continuous study, discussion and debate. The fact that the littoral states of the Indian Ocean Region too, realise this and understand its implications is clearly evident from your presence here at the launch of the 'Indian Ocean Naval Symposium' initiative.

I find IONS to be uniquely consultative and cooperative initiative...one that holds so much promise for the future for cooperative security within the maritime domain. It encourages us all to view the oceanic expanses of our region as bridges that integrate national-states. This is why the Navy's peaceful forays overseas are often described as building 'Bridges of Friendship'.

In providing a forum to discuss issues and concerns that bear upon regional maritime security and consensually, the 'IONS Initiative' fulfils a long-felt need for cooperative engagement in the face of present-day maritime challenges.

Today we are privileged to sit amongst the assembled Chiefs-of-Navy of very nearly all the littoral states of the Indian Ocean. I would like to warmly welcome them and the distinguished members of their respective delegations to India. We are also surrounded by an entire galaxy of national and international luminaries drawn from various disciplines and segments and the members from print and electronic media. We are all here to...'dream

the Indian Ocean Dream'...We have come together to share and explore the contours of a grand vision of a coalesced, prosperous and progressive Indian Ocean. This is a vision that is neither diminished nor daunted by our diversity.

I would like to exhort all present and future members of the 'IONS Initiative' to resist the temptation of trying either to provide a prescriptive set of answers to a prescribed set of problems or challenges. I would caution them against seeking to import extra-regional template. I would, instead, ask them to tap the huge intellectual and innovative resources available within the IOR littoral. I encourage them to explore a variety of regionally-relevant and regionally-sensitive solutions to problems whose very definition is given form and shape - not by extra-regional players often pursuing, agendas of their own - but by the regional players themselves, acting in close consultation with one another and cooperating freely for the common good of all.

The principal interlocutors of the Indian Ocean Naval Symposium are, of course, the navies of the region. However, I hope that these interlocutors will not remain restricted to the apex levels represented here this morning by the assembled Chiefs-of-Navy. I, for one, would be extremely happy to see a much wider and more dispersed representation of young or mid-level officers and sailors, engaging and interacting with one another to their mutual benefit. It is, after all, they who will have to face the nebulous but nevertheless deadly threats of the future and it is, consequently, they who must be prepared and armed to face them.

The threats facing present day law-abiding states are not arising from the territorial or ideological ambitions of other nation-states. They are, instead, a bewildering variety of manifestations of malevolent non-state entities. Within the maritime environment, thieves and robbers, illegal traffickers in guns, drugs and human beings, poachers, polluters, pirates, warlords, terrorists are establishing pan-oceanic and trans-oceanic connectivities that lend to make a mockery of our boundaries and borders. To these problems must be added natural disasters and manmade catastrophes such as cyclones, earthquakes, landslides, floods, tsunamis, and the very real threat of widespread coastal inundation caused by global warming. These are common threats and demand common approaches and common solutions.

It is these very solutions and, indeed, this very commonality of approach that this inaugural IONS seminar and the seminars and other activities that are to follow, must find. In your ensuing deliberations, debates and

discussions on these and allied issues, I wish each one of you- speakers, panellists, and listeners alike - every success. In the end, I would like to assure you of our continued support to the Indian Ocean Naval Symposium and all its present and envisaged cooperative and consultative activities.

015. Address of Vice President M. Hamid Ansari at the Indian Ocean Naval Symposium -2008.

New Delhi, February 15, 2008.

Once upon a time the commander-in-chief of a rising land power, unfamiliar with seafaring and uneasy about it, asked one of his field commanders to describe the sea and seafarers to him. The officer dutifully reported:

'Verily I have seen a great creature [that is, the sea] ridden by a small one [that is, man]. When it is calm it renders the heart with anxiety, and if it is agitated it leads the mind into confusion. On it certainty shrinks and doubt increases. Those who are on it are like a worm on a twig; if it bends he is drowned, and if he is saved he is astounded'.

In another region of the world, in the island of Bali, the traditional belief considered the sea to be full of demons; hence to be approached with care if not avoided.

In both cases, perhaps, the immenseness of the body of water and the mysteries in its depths acted as a deterrent.

These examples can be multiplied. History is witness to great land powers failing to comprehend the relevance of the sea as an instrument of statecraft. The historian Paul Kennedy attributes the rise of European powers, sixteenth century onwards, to 'technological change and military competitiveness'; he may have added, with equal justice, that seafaring was an equally relevant ingredient of promoting trade, competing with rivals, and eventually overcoming them.

The fact nevertheless remains that for a good percentage of humankind, the sea is not in the same category of familiarity as the land. This may be

no more than an accident of natural history and the manner in which humans assumed a centrality on this planet. On the other hand, certain facts relating to this planet of ours may suggest correctives to such a slanted approach.

Earth is a planet of oceans. They constitute 71 percent of its total area. In a very real sense, they sustain life on earth. Cheap transportation is possible through them. They are in increasing measure a source of food, energy and minerals.

The Indian Ocean is the third largest ocean in terms of area but unquestionably the first in terms of its impact on human civilisation. The reason for this is obvious; some of the oldest civilisations took shape and blossomed in lands around the Indian Ocean or the seas adjacent to it. They interacted with each other principally through trade. For this reason alone, a gathering of people from Indian Ocean lands would provide a useful collection of perspectives.

II

Today's conference, I believe, goes beyond an exercise in history and ethnology. Its timing and purpose are sharply focused on the world of today and tomorrow. A look at recent history provides the perspective.

The Portuguese discovery of the sea route to India was of such critical importance that the King of Portugal thought it fit to reflect it in his formal titles. Its wording is to be noted: 'Lord of Conquest, Navigation and Commerce, of Ethiopia, Arabia, India and Persia'. Their hegemony lasted for two centuries, to be replaced by the British who followed the pattern and the new jewel in the Crown justified the additional title of Empress of India.

The end of the British era saw the enhancement of the role of the United States. Alongside, the Cold War witnessed super-power rivalry extended itself in the Indian Ocean littoral. In each of these, the external impulse remained the dominant one. The littoral states themselves had little or no input into it.

Whatever be the past, the imperative today is of a qualitatively different situation in the Indian Ocean littoral. The external impulses have in good measure given way to internal dynamics of individual societies. This, however, is not easily comprehended and older patterns of thinking persist. A few years back a scholar in Honolulu delved in futurology pertaining to the Indian Ocean:

'We do not yet understand the political geography of the 21st century. However, no region is likely to feature as prominently in that geography as the Indian Ocean due to its combination of oil, Islam and the likely rise - and probable mutual rivalry of both India and China. Indian Ocean regionalism, or regional integration, remains quite retarded when perceived through an economic lens. Sadly, however, it is the converse conclusion that seems warranted when the region is perceived through the prism of geopolitics and nuclear weapons'.

This prognosis, and many other similar ones, is premised partly on the location specifics of the Indian Ocean and partly on the known behaviour pattern of states. It is argued, with regard to the first, that unlike the Atlantic and the Pacific Oceans, the Indian Ocean can be accessed through several choke points and thus necessitates intense policing. With regard to the second, it is asserted that only one-fifth of the total trade flowing through the Ocean is conducted among the countries of the IOR, that 80 per cent of it is extra-regional, and that local conflicts in the Indian Ocean littoral have the potential to acquire international dimensions in view of the need to safeguard the Sea Lines of Communication (SLOCs). These are augmented by actual and potential threats, of varying intensity, from non-state actors. In addition, most of the contemporary international conflicts from Iran-Iraq war, to Operation Enduring Freedom and Operation Iraqi Freedom have taken place in the Indian Ocean Region.

There is merit in both sets of arguments. The quest for security of SLOCs is most vividly demonstrated in the case of Japan where, as shown by Euan Graham in an excellent study published in 2006, it has been the lifeline of the economy and seen as the core security concern. Given the nature of the trade passing through the Indian Ocean, the logic holds good for a great many other regional and extra-regional states.

In this globalised world of today, 95% of world trade is conducted through the sea. Around 100,000 ships transit the expanse of the Indian Ocean annually. Roughly 40% of this sea-borne trade is accounted for by the Straits of Malacca. The Persian Gulf and adjoining region accounts for 50% of the world's containerised cargo and 33% of bulk cargo. Every day 15.5 million barrels of oil, or 40% of the entire global oil trade passes through the Straits of Hormuz and 11 million barrels of oil pass through the Malacca and Singapore Straits.

At the same time, the argument of securing maritime traffic or lessening

the vulnerability of sea-lanes has also been used as a rationale to build up naval capabilities and thus give rise to questions about intentions.

The SLOC argument, valid in itself, is nevertheless reflective of partial reality. The ocean is admittedly a channel of communication; it is also a resource both for basic forms of existence and for sustaining advanced forms of civilisation. It supports life on earth, regulates temperatures, humidity, rainfall and seasons. It can and does generate catastrophic convulsions affecting the human race.

Any discussion of the ocean therefore, must be multi-dimensional and reflective of four aspects:

- The security paradigm
- Disaster management
- Oceanic resources
- Environmental questions.

Solutions, likewise, would need to be comprehensive and balanced rather than slanted in favour of one aspect, however weighty.

III

Throughout recorded history, maritime security has been the prime concern of states and of their nationals undertaking international trade. In an earlier era, piracy by entrepreneurs for themselves or on behalf of states was common. Then came a time when the balance of advantage was found to lie in the suppression of piracy. The same pattern was followed in regard to slave trade. Economic interests and prevailing moral norms played and continue to play a role in shaping perceptions as is evident by the present-day measures against narcotics. Some would no doubt recall that in another age a great European power used its military superiority to dump opium on an Asian people in order to correct trade imbalance.

In the past, initiatives for maritime security generally emanated from a strong power driven principally by express or tacit hegemonic perceptions. They received cooperation at times and aroused apprehensions at others.

In conceptual terms, the requirement of maritime security is of necessity linked to threat perception. In the period of the Cold War, security perceptions were based on identified threats and on the need to contain them. The

approach, therefore, was cooperative amongst allies and competitive in relation to perceived enemies. In the period after 1990, the focus shifted and attention came to be riveted on questions of common concern. The expectation was that a more comprehensive cooperative approach, on a non-discriminatory basis, would gradually take shape. It would not dispense with the traditional paradigm of requiring naval power to defend territory or essential national interests but would, instead, add a dimension that would minimise if not eliminate the need to resort to the use of force.

In practical terms, maritime security is to be considered at three levels:

- Measures to create transparency - these include advance notice of exercises and of ship movements.
- Measures to build confidence - these could be undertaken through joint exercises, training, joint naval hydrographic operations, joint task forces for policing and agreement on avoidance of incidents at high sea.
- Measures to build security - regular gatherings of littoral states, user states and other stakeholders to discuss matters of concern and undertaking initiatives to establish regional maritime security mechanisms.

This gathering, I venture to hope, is indicative of a broad acceptance of the need to take these three sets of measures to further maritime security in the Indian Ocean Region. Overtime, these may lead to what a distinguished Indian had described many years back as an 'Indian Ocean Panchayat, a self-governing council or collective Ombudsman empowered to take decisions on behalf of the community, settle disputes, and suggest ways to prevent disputes.

The voyage even to this point has not been eventless. The recent effort at pursuing security at choke points in the Indian Ocean was highly selective and predominantly extra-regional. It emanated from the Global War on Terror (GWOT) and the Iraq War, and is focused on the western Indian Ocean, the Persian Gulf, Gulf of Aden, Red Sea, Gulf of Oman and the Arabian Sea and extends out to Pakistan's border with India. It functions through a Coalition Task Force known as CTF 150 and includes ships principally from the navies of the United States, UK, Australia, Germany, Italy and France. Its three non-NATO members are Australia, New Zealand and Pakistan. The Task Force is mandated to prevent terrorist attacks on

maritime targets, and disruption of shipment of arms and material to terrorists in Persian Gulf and thereby secure the ocean for use by 'legitimate mariners'. It is currently led by the Pakistani Navy.

An initiative aimed at the eastern choke point was taken in August 2005 when the governments of Indonesia, Malaysia and Singapore convened a meeting at Batam for creating a forum for the purpose of making a framework of cooperation to enhance the safety of navigation, environmental protection and security in the Straits of Malacca and Singapore while respecting the sovereignty and sovereign rights of littoral states. In September 2006 the three states convened a larger meeting under the International Maritime Organisation's Protection of Vital Shipping Lanes Initiative. It was attended by 34 countries including 11 Indian Ocean littoral states.

Also in September 2006, the Regional Cooperation Agreement on Combating Piracy and Armed Robbery Against Ships in Asia (ReCAAP) came into force involving ASEAN, Japan, China, South Korea, India, Bangladesh and Sri Lanka. Subsequent meetings have reinforced the need for cooperation between the littoral states, user states and users of the Straits of Malacca and Singapore. A cooperative mechanism has also been established.

The difference between the two approaches, in respect to the western and the eastern choke points respectively, is significant. The former primarily involves the extra-regional powers and gives the impression of being hegemonic; the latter primarily involves the littoral and user states and is focussed on cooperation. This gathering would, undoubtedly, make its own judgements.

IV

Security against anticipated threats is one aspect of the matter. In human terms, situations created by natural disasters and accidents are equally relevant. Tsunamis and cyclones take a heavy toll every year. 70 percent of the world's natural disasters take place in the Indian Ocean region. Environmental disasters, oil spills etc hold the potential for large-scale damage. These happenings do not respect national boundaries. The response, accordingly, has to go beyond national efforts to be meaningful. A very good example of international cooperation is the effort mounted after the December 2004 tsunami. The Indian Navy undertook a commendable operation on that occasion. More recently, the Indian Navy provided help and succour to the victims of the earthquake in Indonesia.

Gentlemen

The innate sense of curiosity of the human mind, and the progress of science, has opened the doors on the mysteries of the sea. These, when unravelled, indicate the immensity of resources that the oceans possess. These can be accessed rationally or irrationally. Our generation has not been slow to learn lessons from the past. Hence the comprehensive effort that resulted in the UN Convention on the Law of the Sea and the subsequent Agreement to create the International Seabed Authority charged with the responsibility to organise and control all mineral-related activities in the international seabed beyond the limits of national jurisdiction.

The exercise of regulating the exploitation of the Common Heritage of Mankind has some teething problems that, hopefully, would be overcome. While exploratory ventures have been made, the consensus at this stage is that technology for economic mining of the ocean depths is probably a decade away. This interval is a blessing; deep-sea ecosystems are the main reservoirs of global biodiversity and the scientific and legal framework for protecting them and minimising the potential environmental impact of such mining is yet to be put in place.

V

Given the diversity of ocean-related activities of humankind, the responsibility of undertaking them is shouldered by various segments of society. Each of these requires an atmosphere of peace and stability. The maintenance of peace is a politico-military exercise necessitating intelligent use of available resources to achieve desired ends. The challenge always is to ensure that contention and cooperation are in harmony. The totality of objectives sought to be achieved in the Indian Ocean region by the littoral, hinterland and user states can only be achieved through a methodology of cooperation.

It has been said, with justice, that the narrative of conflict, as advanced by belligerents, is always one of grievance. The causes, conditions and consequences of conflict almost invariably relate to economic, social and environmental factors. Each of these is better addressed by common endeavour.

The Indian Ocean Region is among the fastest growing regions of the world. The existing structure of cooperation in this broad region is primarily based around five groupings, namely ASEAN, GCC, SAARC, SADC and SCO. These are not formally linked to each other; their overlapping and

overarching framework is an implicit recognition of each other's sensitivities and concerns. It is also reflective of the tenuous equilibrium of the region. An earlier effort, to create an Indian Ocean Rim grouping, did not produce the desired results.

Within the region, and around it, are important political and economic powers that have a stake in peace, stability and progress. They could form the nucleus of an eventual Asian Economic Community.

Gentlemen

India is and will remain a maritime nation. In keeping with its maritime heritage, its overseas presence would be based on its soft power and cooperation.

- With 7516 km long coastline, 27 islands of the Lakshadweep chain and 572 islands of the Andaman and Nicobar chain, 13 major and 185 minor ports and a merchant shipping fleet of over 750 ships, the security imperatives are compelling.
- Disaster management in a multilateral framework of cooperation for speedy and effective relief operations is an important element of our maritime approach.
- India is a UN recognised pioneer investor in deep-sea mining and has been allotted a mining area of 150,000 sq. kms in the central Indian Ocean. In addition, the EEZ of India is set to increase to 2.54 million sq. km. Furthermore, around 20% of our overall petroleum demand is met by offshore production.
- Environmental issues are now global themes and India has a vital stake in the approaches towards management of global environmental issues.

By disposition, and by inherent capacities, India is well placed to be part of bilateral and non-discriminatory and inclusive regional and multilateral arrangements for maritime security, in consonance with international law and respecting the sovereignty of littoral states.

The evolution of perceptions takes time. The key to the future, in the words of Prime Minister Manmohan Singh, is the development of new synergies. This needs to be a comprehensive endeavour. A convergence of interests in the maintenance of peace and in the creation of a co-prosperity area

would greatly facilitate the effort. This gathering of the Chiefs of Navies of the Indian Ocean region attends to one aspect of the matter.

I thank Admiral Sureesh Mehta for inviting me to address this distinguished gathering. I am confident your discussions would further the larger objective of promoting understanding and cooperation among the nations represented here.

016. Remarks by Prime Minister Dr. Manmohan Singh while releasing a book titled: 'INDIA TO BE A GLOBAL POWER'.

New Delhi, February 15, 2008.

I am delighted to release my esteemed friend, Shri *Vasant Satheji's new book. I have had the privilege of long years of association with him. I recall where I was the Deputy Chairman of the Planning Commission, some very stimulating discussions that I had with him leading through thought-provoking comments by him on many aspects of our economic and political management. Thereafter, when I became the Finance Minister and issues of tax reforms came up, there also, Satheji came up with a lot of innovative ideas. You may not agree with the solution that he propounds but the question he has often raised they are very relevant questions they are thought-provoking question, there is lot of food for thought in the latest book he has penned down. I have always been impressed by his erudition, his range of interests and his grasp of the complex realities of our vast country. Satheji has served in several ministries holding several important portfolios in key sectors of our economy. At the same time, he has a deep and abiding interest in cultural issues and has a keen understanding of our society, our civilizational values and our cultural ethos.

The catholicity of Shri Sathe's personality is evident in this book. This is a book by a restless soul. It raises issues which cannot be dismissed as irrelevant. They require a debate and a meaningful debate, a purposeful debate and I hope the message that the book has will travel far and wide. I am struck by the choice of issues Satheji has highlighted as defining our

* A former Cabinet Minister.

quest for a global personality. The four pillars of Satheji's architecture are summarized by the headings of the four chapters. First, a Universal Vision, second, Political Stability, third, Economic Self-Reliance and fourth, Social Reforms.

India's universal vision defines her place in the comity of nations. Our vision is captured in the Preamble of our Constitution. It is based on the ideas and ideals that inspired the national movement. It is a vision that defines India, that defines the idea of India and that defines India's message to the world at large.

As we reflect on the processes of change around the world, it is now so evident that India made the correct political choices after Independence. The whole world has come to value the principles of a liberal, plural and secular democracy. This is the vision of India and our vision of the world that defines our place in the world today.

It is this vision that has also contributed to the second pillar of progress that Satheji discusses, namely, political stability. India despite misgivings of many people to the contrary has demonstrated to the world that despite our diversity, despite our internal differences, despite all the contentious and contending tendencies, we have steadfastly adhered to the principles of parliamentary democracy. We have in the process as Lord Meghnath Desai pointed out grown in strength, economic as well as political. I recall way back in the sixties, seventies a distinguished correspondent of the New York Times came here wrote a book India : The Most Dangerous Decade predicting that at the end of the sixties probably India would cease to be a unified nation. I think we have proved many skeptics wrong. But that does not mean that we do not face challenges. We cannot rest on our laurels. But we can take pride in our achievement that we have despite all our trial and tribulations of managing a complex economy and a complex polity have stayed faithful to the idea of plural democracy.

The smooth change of governments, even after highly divisive electoral campaigns, testifies to the stability of our political process. Governments come and Governments go, but the country moves on without fear of political destabilization, without fear of any threat to our democracy. This too gives us a unique place in the comity of nations. At the same time we have to recognize that the processes of change are throwing up new patterns of leadership, new patterns which lead to and empowers the hitherto marginalized sections. With this we have seen the rise of new leadership

from various States, Regional formations and many of them probably have not been bred in the values of democracy, liberal democracy and many of them do not make the distinction between State and private property. But I do believe that although there are tensions in our polity these are essentially the pangs of growing up and I feel confident that our country that has proved the skeptics wrong in the past will continue to surprise about our continuing vitality. But that does not mean that the question that Satheji has raised should not be discussed widely. I think they merit a nationwide debate. I do hope that this book will prompt such achievement.

Third, Satheji discusses the role of economic self-reliance. Different people may have different definitions of self-reliance, but I believe the true definition of self-reliance is one's ability to stand on one's feet, harness in full measure modern science and technology, take responsibility for one's actions and have the self-confidence to work with other nations in an increasingly inter-dependent world that we live in. Self-reliance does not mean the pursuit of self-sufficiency. It in fact means having the self-confidence to enter into relationships of mutual benefit with others. The poet John Donne rightly said "No man is an island, entire of itself". Hence, true self-reliance is based on the recognition of the inter-connected nature of human existence and our ability to deal with it. I do, however, recognize the fact that a nation must have confidence in itself, its capabilities and its abilities so that it can feel self-reliant. In this context, it is most important to manage the economy efficiently, operate on the frontiers of modern science and technology and pay adequate attention to the imperatives of national security as Lord Desai emphasized a moment ago. These are important attributes of a global power.

Finally, Satheji reflects on social reform and social change. In doing so, he draws our attention to the importance of an inclusive growth process. Unless all sections of society feel they are part of the processes of change and that they are active participants in these processes, the process of empowerment are in fact working, we will not be able to move forward as a Nation. Our external strength can only be based on internal cohesion. I often said that today India does not face any serious external constraints. Our problems are at home, our challenge are at home and there are also enormous opportunities. The things that we do and the things that we do not do will have a profound consequence on our ability to emerge as a truly global power. An internally divided and divisive society cannot project an external image of strength and power. And I think this is a guideline which should guide the acts of all political parties. Those who seek to divide our people

on the basis of religion, on the basis of caste or differences to which place one belongs, I think they do not serve the cause of national unity or national progress. We have to find practical, pragmatic pathways to deal with these tendencies which if not curbed can have destabilizing consequences. But I do recognize that we are a functioning democracy therefore, the internal cohesion, that I am talking about, cannot be forced. It cannot be imposed. That is not the way in which the Indian people wish to govern themselves. Therefore, all those who influence the mindsets of our people, whether they are in the academic institutions, whether they are in the media or other institutions, they have an obligation to lay proper emphasis on the need for a minimum amount of national discipline, if our country has to realize its ambitions to emerge as a great power.

So such internal cohesion in a democracy has to be consensually arrived at. That should be the aim of all social reform. Be it the reform of our personal laws, reform of our educational system, reform of our health care, reform of local government. All of these must be based on the idea of social inclusion.

I believe these are all important messages coming out of Satheji's book. I hope he will continue to write, continue to be actively engaged in the ongoing debates of our times. I wish him many more years of creativity and public involvement. With these I once again congratulate Satheji for having produced a very provocative and very inspiring book which I hope will be read widely and particularly by the young people who are the focus of his concentrated attention.

017. Keynote Address of Defence Minister A. K. Antony at the National Seminar on "Defence Cooperation as a tool for enhancing National Interest".

New Delhi, February 18, 2008.

The most visible manifestation of a strategic relationship between two countries is cooperation in the sphere of defence. Strong political and economic ties between two countries can be further enhanced through closer defence cooperation, provided the potential challenges are identified and addressed and there is clarity on its terminal benefits. Most countries build defence relationships that promote specific national security interests, develop friendly military capabilities for building mutual confidence and trust as also to imbibe 'best practices' for various aspects of defence functioning. Defence cooperation also leads to optimizing action in the field of UN peacekeeping as well as disaster management.

Globalization has affected defence as much as any other activity and there is a need to continually find avenues for exchanging points of view with armed forces of other countries, as well as learning from successful innovations being implemented elsewhere. Defence cooperation may be defined as any arrangement between two or more nations where their Armed Forces work together to achieve mutual aims and objectives. This can include exchanges and liaison visits, individual and joint training, joint military exercises, common doctrine and equipment procurement.

The objectives of defence cooperation between countries are to promote intra and extra regional peace and stability through dialogue and cooperation in the field of defence and security, to promote mutual understanding on defence and security challenges as well as to enhance transparency and openness and to imbibe 'best practices' in various military fields by observing specific aspects of functioning of the militaries of more advanced countries.

Defence cooperation offers a range of benefits. It helps build trust and confidence, as also facilitates cooperation at political and economic level between nations. Expertise available with various militaries can be shared for development of mutual concepts and operational doctrine. Advanced countries have access to superior technology in weaponry and systems. Such technologies can be available to the Armed Forces of developing countries through means of Defence cooperation. Cooperation can be most successful when forces have inter-operable systems and weapons which facilitate functional cooperation when undertaking peacekeeping or disaster

management operation together. The efforts of various countries can be optimized in new innovations in rapidly changing operational environment through joint development and production of military equipment. Through Defence cooperation mechanism, countries make mutual arrangements for Promotion of Regional security and economic interests in the maritime zone through protection of Sea Lines of Communication.

India has very wide ranging international defence and military cooperation. It has been used as an effective tool of foreign policy and forms one of the main forms of engagement with many countries such as Russia, Singapore, UK, USA, France, Indonesia, Israel, Japan, Mauritius, Myanmar, Maldives, Nepal, Sri Lanka, Bangladesh, South Africa, Tajikistan, Oman and Bhutan.

The range of international military cooperation arrangements includes formal defence agreements which could be bilateral or multilateral; bilateral forums for meetings are at the strategic, military and technological levels. Military to military activities include high level visits, attendance at courses at military training institutions, professional defence and military expert exchanges, joint exercises, courses, defence equipment and technology-transfer, military assistance programmes, sports and adventure activity and cooperation in UN Peace Keeping Operations. Obviously, the levels of military cooperation with each and every country cannot be at the same level. These would be dependent on our national interests and our foreign policy goals and priorities. An analysis of the levels of existing cooperation indicates that there is scope for us to further enhance international defence and military cooperation with many countries, particularly those located within India's strategic periphery.

India's approach to international defence cooperation has been reasonably effective and is in sync with the national foreign policy. India can claim many successes in this; however, much more can be done to create conditions of peace, stability and security in the region for economic and social development of the country and its people.

018. Extract from the Speech of President Shrimati Pratibha Devisingh Patil to the Joint Session of Parliament.

New Delhi, February 25, 2008.

* * * *

56. The foreign policy of my Government seeks to promote an environment of peace and stability in our region and in the world to facilitate accelerated socio-economic development and safeguard our national security. Government has made vigorous efforts to develop friendly and cooperative relations with all our neighbours and to strengthen engagement with major powers. Since the 14th SAARC summit in New Delhi in April 2007, India has made every effort to strengthen SAARC, moving it from a declaratory to an implementation phase. Progress has been registered towards the establishment of the SAARC Development Fund, the South Asia University and the SAARC Food Bank.
57. Our goal remains a peaceful, stable and prosperous neighbourhood. India is committed to extending full support to Nepal's development during its political transition. India also stands ready to assist the Nepalese people's choices in the transition to a democratic, stable and prosperous State. As a close and friendly neighbour, India would prefer to see a peaceful, stable and liberal democratic Bangladesh. It is our hope that the people of Bangladesh will be able to exercise their will through free and fair elections for restoration of full democracy. There has been an unfortunate increase in violence in Sri Lanka. We are clear that there can be no military solution to the ethnic issue. It is necessary to find a negotiated political settlement within the framework of a united Sri Lanka that is acceptable to all sections of society. We will continue to help Afghanistan in whatever manner we can in its reconstruction and in building a pluralistic and prosperous society. We are committed to peace, friendship and good neighbourly relations with Pakistan. A stable and prosperous Pakistan, at peace with itself, is in the interests of our entire region. When conditions permit we will resume our dialogue process with Pakistan, aimed at building mutual confidence and resolving outstanding issues, premised on an atmosphere free from terror and violence. We hope that Myanmar's on-going national reconciliation and political reform process and the recognition of the need to expedite the process will make it more inclusive so as to ensure peaceful and stable democratization.

58. India attaches high importance to its bilateral relations with the People's Republic of China, with which we have a Strategic and Cooperative Partnership for Peace and Prosperity. This partnership has been further enhanced and given a global dimension with the signing of a Shared Vision for the 21st Century during the visit of the Prime Minister to China last month. Peace and tranquility have been maintained on our border with China and both countries are determined that this should continue.
59. My Government has made rapid improvements in our relationships with the major powers of the world. Our relations with the United States of America have improved in the past few years, and now span a wide spectrum including high technology, space, agriculture, education and trade and other linkages. It is our hope that civil nuclear cooperation with the USA and other friendly countries will become possible. Government has been working to further develop the time-tested friendship with Russia. The visit of Prime Minister to Moscow in November 2007 contributed to further strengthening our strategic partnership with Russia. We attach importance to our relations with the member states of the EU individually as well as collectively. The 8th India-EU Summit was held in New Delhi in November 2007. Most recently Prime Minister of UK visited India and the President of France was the Chief Guest at our Republic Day.
60. Government has achieved significant progress in the implementation of its "Look East Policy" through participation in the ASEAN-India and the East Asia Summits in Singapore in November 2007. India continues to work with Japan to strengthen its partnership. India's increasing engagement with countries of Africa and Latin America received further impetus with the visit of the Prime Minister to Nigeria in October 2007 and the visits of the Presidents of Brazil and Mexico to India in 2007. Prime Minister led the Indian delegation to the 2nd IBSA Summit held in Pretoria in October 2007. India will host the first India-Africa Forum Summit in April this year.
61. We have considerably enhanced our interactions with countries of the Gulf region that is home to over 4.5 million Indians and is an important economic partner and a major source for our oil and gas imports. The countries of West Asia have age-old links with India culturally and economically and are part of our extended neighbourhood. Developments in this vital region impact directly on

our interests and security. India is keen on cooperating with these countries to promote peace and stability in the region. Government has been closely following events in Iraq and hopes that peace and stability would soon return in Iraq. Government has also supported a rejuvenated Israeli-Palestinian dialogue and looks forward to a peaceful resolution of issues leading to an independent state of Palestine living side by side at peace with its neighbours. Sadly, recent events in Gaza and the West Bank have caused deplorable misery and hardship to the people of Palestine. India will extend additional assistance to the Palestinian people and stands ready to help the peace process to move forward.

62. India has also been engaged with Central Asian countries in our extended neighbourhood to widen cooperation with them. As an Observer State, India participated in the Heads of State and Heads of Government meetings of Shanghai Cooperation Organisation in August and November 2007 respectively. The India-Russia-China trilateral Foreign Ministers dialogue also continues to be productive.
63. India remains committed to universal, non-discriminatory and comprehensive nuclear disarmament as reflected in the Action Plan presented by the late Prime Minister Rajiv Gandhi and has called for renewed efforts for general and complete disarmament, particularly nuclear disarmament.
64. To commemorate Mahatma Gandhi's birthday every year as the International Day of Non-Violence, India piloted a resolution in the UN General Assembly which was adopted by consensus. The First International Day of Non-Violence was observed at the UN on 2nd October 2007.
65. Government has played a constructive role in the Doha Development Round of WTO trade negotiations and carried forward negotiations for establishing trade and economic partnership agreements with important trading partners and regional groupings to create a better external economic environment for our growth. The negotiations on the India- ASEAN Free Trade Agreement are scheduled to be completed soon. India worked with the international community to address key global challenges such as terrorism, energy security, sustainable development and reform of the United Nations.

66. Hon'ble Members, India is on the move. There is an air of optimism among our youth and of expectation among the less-privileged sections of society. The challenge before us is to sustain the development process in the face of external and internal threats. The people of India have the potential to fuel the engine of global growth. My Government has been able to sustain historically high rates of growth through prudent and sound economic management. This has contributed to the stability of the growth process, and to predictability and transparency in policy. This is reflected in the rising investment rate and in the buoyancy of tax revenues for both Central and State governments. Your leadership can unleash the full potential of our people and ensure the stability and sustainability of our growth process. I sincerely hope, therefore, that the proceedings of Parliament this year will be purposeful, peaceful and productive.

019. Statement of External Affairs Minister Pranab Mukherjee in both Houses of Parliament on "Foreign Policy Related Developments".

New Delhi, March 3, 2008.

The Minister of External Affairs (Shri Pranab Mukherjee): Sir, I rise to apprise the House of developments related to foreign policy since the conclusion of the Winter Session last December. During this inter-sessional period, the Government has made vigorous efforts to promote our objective of an external environment that enables India's accelerated development efforts and increases our strategic space.

The Prime Minister paid an official visit to the People's Republic of China, our largest neighbour, from 13 to 15 January, 2008. He was received with great warmth. The Prime Minister and Premier, Wen Jiabao signed a joint document on "A Shared Vision for the 21st Century between the Republic of India and the People's Republic of China", that reflects the congruence of interests that we share on regional and international issues, and our willingness to work together in those areas. The Prime Minister also took up the issue of trans-border rivers. The first meeting of the Expert Level Mechanism was held in September, 2007. We have proposed to the Chinese side that we expand our cooperation in this area. We have also agreed to

intensify high level exchanges with China. I will be visiting China this year and the Chinese Foreign Minister will also visit India. We will be holding the second annual defence dialogue as well as the second joint military exercise this year in an effort to continue deepening mutual understanding and trust between our Armed Forces. Our bilateral trade continues to show strong growth and both governments have revised the trade target to 60 billion dollars by 2010. Our Commerce Minister will visit China in April for the 8th meeting of the Joint Economic Group.

On the boundary question, during Prime Minister's visit, both sides positively appraised the work of the Special Representatives in seeking a mutually acceptable framework for a settlement that will be based on the Agreement on Guiding Principles and Political Parameters signed in April 2005. Both sides have also agreed to maintain peace and tranquility in the border areas.

The hon. Members are aware that Chinese officials have expressed regret at Prime Minister's visit to Arunachal Pradesh in end January, 2008. The Prime Minister's visit to Arunachal Pradesh was to assure our citizens that Government is mindful of their developmental needs, and is ready and willing to assist them through concrete projects. The fact that Arunachal Pradesh is an integral part of India has been clearly conveyed to the Chinese side by the Government.

The hon. Members would also have followed the significant developments in Pakistan. India shared the anguish of the people of Pakistan at the tragic assassination of former Prime Minister, Mrs. Benazir Bhutto in a despicable terrorist act. We are gratified that, in the recent elections in Pakistan, the people of Pakistan were able to express their wishes clearly and in a democratic manner on their own future. India wishes to see Pakistan develop and prosper in a stable democratic order. The Government stands ready to resume the Composite Dialogue process as soon as a duly constituted Government is in place in Pakistan. It remains our hope that we would be able to resolve outstanding issues and build a mutually beneficial relationship with Pakistan in an atmosphere free of violence and terrorism. The security situation in Afghanistan remains a concern to us, but will not be allowed to affect our commitment to Afghanistan's reconstruction. We lost two of our personnel in a terrorist attack on a major road building project in Afghanistan in early January this year. Five of our personnel were also wounded in this attack, which also claimed the lives of twelve Afghan security persons. We extend our heartfelt condolences to all their families. The international community must stand firmly with President Karzai and his Government as they face up

to the twin challenges of a major threat from terrorism in the form of the Taliban, and seek to build a democratic and pluralistic polity.

Nepal is undergoing a critical transition. After two postponements, Constituent Assembly elections are scheduled to be held on April 10, 2008. The elections will offer all Nepalese, including those in the terai, a chance to have a say in their own future. Government is committed to assist in every possible way Nepal's transition to a democratic, stable, peaceful and prosperous State.

India is closely monitoring developments in Sri Lanka and is concerned about the recent upsurge in the violence and conflict in that country. As hon. Members are aware, our policy towards Sri Lanka is based on the conviction that there is no military solution to the conflict. The way forward lies in a peacefully negotiated political settlement within the framework of a united Sri Lanka acceptable to all communities, including the Tamils. The interests of the Tamil community in Sri Lanka are a matter of particular significance to us in our dealings with Sri Lanka. With this in mind, we have welcomed as a first step the declared intention of the Sri Lankan Government to fully implement the 13th Amendment. We are also fully conscious of the need to provide for the safety of our fishermen. While it is important for our fishermen to respect the International Maritime Boundary Line (IMBL), especially keeping in mind the on-going operations in Sri Lanka, we have impressed on the Sri Lankan Navy to act with restraint and for our fishermen to be treated in a humane manner.

The Foreign Minister of Myanmar visited India in early January 2008 and briefed us on initiatives taken by the Myanmar Government for political reform and national reconciliation. Foreign Secretary also visited Myanmar in February 2008. Myanmar is India's close neighbour and a gateway to the ASEAN. We have emphasized to Myanmar that the process of national reconciliation should be broad-based to include all sections of society including Aung San Suu Kyi and the various ethnic groups. India fully supports the United Nation Secretary-General's good offices and his Special Envoy Mr. Ibrahim Gambari's mission to initiate a process of dialogue. At the bilateral level, co-operation in cross border infrastructure development projects, for providing better connectivity to the landlocked North-Eastern region of India is an important area of our relationship with Myanmar. Considering our common ethnic linkages and security considerations, it is essential for India to ensure that there is peace and stability in Myanmar during the period of its political reforms.

I chaired the 29th session of the SAARC Council of Ministers that was held in Delhi from 7-8 December, 2007. This session reviewed the progress made since the 14th Summit in April, 2007 to move SAARC from declaratory to implementation phase. We decided to operationalise immediately the SAARC Development Fund. Other decisions taken related to establishment of the South Asian University, the SAARC Food Bank and for promotion of physical connectivity.

Hon. Members are aware that in a suo motu statement made on 30th November, 2007, I had referred to the concerns expressed by hon. Members regarding the alleged harassment of participants of the rally organised by the Hindu Rights Action Force (HINDRAF) in Kuala Lumpur on 25 November, 2007 and subsequent related matters. As conveyed to hon. Members on that occasion, Government remains deeply solicitous for the welfare of people of Indian origin living abroad. There is a large community of people of Indian origin in Malaysia who are citizens of that country. We have friendly relations with Malaysia and we are in touch with the Malaysian authorities in the matter. During our interactions with them, concerns expressed in India, including in Parliament, regarding developments pertaining to the Indian community in Malaysia have been suitably conveyed.

The Government has been deeply concerned about the recent events in Gaza and the West Bank. The hardship and misery caused by these developments is deplorable. We have indicated that India is ready to extend all possible assistance to help the people of Palestine to overcome the suffering they are facing.

There were significant visits from countries outside our immediate neighbourhood, which have helped in strengthening our relationship with these countries. The recent visit of Russian Prime Minister Viktor Zubkov to Delhi (12-13 February, 2008) contributed to strengthening the strategic partnership with Russia. During his visit to New Delhi, the Russian Prime Minister inaugurated the "Year of Russia in India", which will be followed by the "Year of India" in Russia next year. Prime Minister Gordon Brown of UK visited India (20-21 January, 2008) for the 4th India-UK annual summit. President Nicolas Sarkozy of France was the Chief Guest at the Republic Day celebrations this year. This was the first visit by President Sarkozy to India and helped in deepening our strategic partnership. Our partnership with Japan continues to expand on the basis of the Road Map signed when the Prime Minister of Japan visited India in August last year. In recent conversations that Prime Minister and I have had with our new Japanese

counterparts, they have expressed their desire to work towards further strengthening our bilateral relationship. President Gayoom of Maldives paid a state visit to India from February 6-12, 2008. India has provided economic and technical assistance to develop infrastructure facilities in Maldives in mutually identified areas including the Indira Gandhi Memorial Hospital in Male. The Deputy Prime Minister for the Council of Ministers of the Sultanate of Oman, Sayyid Fahad Bin Mahmoud Al Said, visited India last December, marking the first visit in a decade. I visited Oman in January, 2008. During this period, we also hosted visits from Prime Ministers of Denmark, Hungary and Greece.

Hon. Members would also be aware that we are currently engaged in negotiations with the International Atomic Energy Agency to arrive at an agreed text of an India-specific Safeguards Agreement. The conclusion of such an agreement will enable the Nuclear Suppliers' Group to amend its guidelines for civil nuclear commerce in favour of India. This will open the door to civil nuclear cooperation with various countries, including Russia, United States of America, France, UK, etc., with many of whom the necessary enabling bilateral agreements for such trade have been discussed and are in various stages of finalisation. This development will signify, finally, an end to the unfair technology denial regimes and sanctions that India has been faced with for over three decades. We will continue to seek broad political consensus within the country to take forward our engagement on this issue with other countries.

In this context, Members' attention may have been drawn to some statements by United States officials regarding the applicability of the Hyde Act to Indo-US civil nuclear cooperation. Let me take this opportunity to reiterate that the Hyde Act is an enabling provision that is between the executive and the legislative organs of the United States Government. India's rights and obligations regarding civil nuclear cooperation with the United States arise only from the bilateral 123 Agreement that we have agreed upon with the United States.

To sum up, Sir, I would emphasise that the Government will continue its efforts to develop close political, social and economic relations with the countries of our region and with all the major powers of the world, so as to add to our ability to pursue our independent foreign policy as dictated by our national interest.

020. Extract from the Speech of Prime Minister Dr. Manmohan Singh in the Lok Sabha on the Motion of Thanks to the President for her Address to the Parliament.

New Delhi, March 5, 2008.

Prime Minister (Dr. Manmohan Singh) :

* * * *

Sir, I should say a few words about some matters of foreign policy. Our foreign policy has sought to promote an environment of peace and stability in our region. The challenge before us is to create an external environment that is conducive to our long-term and sustained economic development. We want mutually beneficial relations with all our neighbours, with all major powers and with all our economic partners. It is with this perspective that we have engaged the world and sought partnerships across the world.

I should say a few words about the Civil Nuclear Energy Cooperation with the USA and other countries. We continue to make efforts to make this possible in a manner in which we can maximise the use of nuclear energy for peaceful purposes. We are presently engaged in negotiations with the International Atomic Energy Agency for an India-specific safeguards agreement. We also continue to seek the broadest possible consensus within the country to enable the next step to be taken. I believe that such cooperation is good for us for our energy security and for the world.

Mr. Speaker, Sir, I was very happy some days ago that the former National Security Advisor, Shri Brajesh Mishra coming out openly in defence of the Nuclear Cooperation Agreement. Also, Sir, we had seen in this country Mr. Strobe Talbot, who negotiated on this issue with the NDA Government saying that if NDA Government was prepared to follow even 50 per cent of the deal that would be enough..... ... (Interruptions)

* * * *

Mr. Speaker, Sir, I should say a few words about our policies towards our neighbourhood. Our top priority remains our neighbourhood. We want peace, stability and prosperity in South Asia.

I want to begin by congratulating the people of Pakistan who have shown that, like us, they want to choose the democratic path. I am sure, the House

will join me in conveying to them our warmest good wishes as they consolidate democracy in that country.

The great daughter of Pakistan had to sacrifice her life in the process. We mourn with profound sadness, the death of Benazir Bhutto. The people of Pakistan have paid their tribute to her memory in their own way.

Sir, I would like to assure the newly elected leadership in Pakistan that we seek good relations with Pakistan. India wants to live in peace with Pakistan. The destinies of our two nations, I have often said, are closely inter-linked. We need to put the past behind us; we need to think about our collective destiny, our collective security and our collective prosperity.

In their first pronouncements after the elections, the leaders of the main political parties in Pakistan have also spoken of their interest in developing close relations and working with us to bring about a durable peace. Indeed, the dialogue that we have resumed with the Government of Pakistan over the last few years was started when the late Benazir Bhutto and Shri Rajiv Gandhi were the Prime Ministers.

The most courageous steps to build peace were taken by Prime Ministers Nawaz Sharief and Atal Bihari Vajpayee. We have continued the process with President Musharraf. I have said before that I have a vision for the future of India and Pakistan. I believe that in both countries, there is a consensus that we must have close and cooperative relations and a framework for enduring peace.

I hope that the newly elected leaders in Pakistan can quickly move forward with us on this. I am sure that this House will want me to say that we would welcome this and meet them half-way.

* * * *

DR. MANMOHAN SINGH: Mr. Speaker, Sir, the direction in which we have moved the country in the last four years is well laid out in the Rashtrapatiji's Address. It is in the direction of inclusive growth; it is in the direction of empowering the poor and marginalized sections of society. It is in the direction of unleashing the enterprise and creativity that is inherent in every citizen of this great country so that she or he can live up to her full potential. It is in the direction of taking everybody along and working to eradicate poverty, ignorance and diseases. It is in the direction to enhance our citizens' security. I hope the direction is now clear for all to see.

Of course, I am aware that some Members have been wishing that this Government falls and this has been their wish since the day we came into Office. To their misfortune and to the good fortune of the nation this has not happened. But Sir, such fond dreams do not die easily. Therefore, they continue to see visions where none exist.

Mr. Speaker, Sir, the future beckons India. I seek from the Leaders of all national Parties a long term vision that will enable us to widen our development options. I seek a commitment to the nation's best long term interests. Let us not divide ourselves by adopting narrow perspectives on important national policies. It is this perspective that informs the President's Address this year. I am, therefore, happy to express my sincere gratitude to Rashtrapati Ji for her Address to Parliament.

021. Extract from the speech of Prime Minister Dr. Manmohan Singh in the Rajya Sabha on the Motion of Thanks for President's Address.

New Delhi, March 5, 2008.

The Prime Minister (Dr. Manmohan Singh): Mr. Chairman, Sir, I rise to join other Members of the House in conveying our very sincere thanks to the hon. President for her inspiring Address.

This is the 60th year of our Independence and it is a matter of pride for all of us that in this 60th year of our Republic, the first lady President of the Republic addressed the Parliament. Sir, my esteemed friend, Shri Jaswant Singhji, has tried to introduce unnecessary acrimony and anger, and I wish to assure him that I have nothing but the highest respect for him as a distinguished leader of our country who has served our country with great distinction. So, whatever I have said, should not be taken as any personal criticism. He brought up what I said in the other House and the discussion was on the subject of terrorism and my reference to Kandhar was in the specific context of the allegation that we are soft on terror. This was also the point that Shri Arun Jaitley made that we have provided a soft legal regime for terrorists, and those sorts of allegations were made. I was referring merely to the fact that the existence of POTA, all the sabre-rattling of the BJP could not prevent the incidents at Akshardham, Raghunath Mandir and IC-814.

On the contrary, I made the point that terrorism is a common enemy which we have to fight unitedly. There are no questions of party lines in dealing with this menace which threatens our very existence as a civilised state. Therefore, I would also beg of our colleagues on the Opposition that they may not like what we are doing and they have a right to differ -- that is the essence of democracy -- but they should not then call us anti-national or that we are soft on terrorism. To accuse the Congress of being soft on terrorism is something which, I do not think, we will be able to tolerate.

I would respectfully submit to this House that we should be resolute in our opposition to all forms of terror and support our brave security forces who are fighting a difficult, long drawn out battle. It should be a common endeavour and should not divide the country, should not divide either Houses of Parliament. Sir, I listened to the debate. I was not present all the time, but I have looked at the transcripts and it is good that this debate took place. I sincerely hope that the Opposition will make it a habit to promote such debates because this debate brings out what unites us and what divides us. Democracy thrives when there is dialogue, there is discussion, there is scope for dissent, there is scope for difference of opinion without being branded anti-nationals or other sorts of names that Mr. Jaswant Singh has tried to use against me personally; I would not talk about that. I sincerely hope that such debates will be the norm and the House will not witness the type of disruptions which do us no credit either to the Government or to the Opposition.

*

*

*

*

In the same way, I listened in my room with great respect to what Dr. Kasturirangan had to say. I compliment him the way he has tried to educate all of us as to what the nuclear deal is about, what we need to do to strengthen our capabilities in the space programme, in the strategic nuclear programme, and, I assure him that we will not compromise on the security needs of our country. We take very seriously what he has said. Sir, while I am on the subject, the President did mention that negotiations on the nuclear deal are on with the International Atomic Energy Agency. We hope that they will be successfully concluded but I also recognise the other dimension that we have to evolve a broad based consensus. Simultaneously, these efforts are on and we will continue to persist with that effort also. But, Sir, while I am on the subject, I would not like to say something more. But I read, with great interest, the statement and interview given by Shri Brajesh Mishra, former National Security Advisor to the NDA Government, in which he

listened to the call of his conscience and has now come out openly in favour of the Indo-US nuclear deal. There are also statements of the former American negotiator, Strobe Talbott, who negotiated these matters with my learned friend, Shri Jaswant Singhji, about the BJP's willingness to accept a much less favourable civil nuclear deal when they were in office. (Interruptions)

Shri Yashwant Sinha: It is absolutely wrong. (Interruptions) The Party has condemned the statement...(Interruptions)...

Mr. Chairman: Please allow the hon. Prime Minister to reply.

(Interruptions)

Dr. Manmohan Singh: He has stated....(Interruptions)...

Shri Yashwant Sinha: By quoting this...(Interruptions)....It will not give any credit...(Interruptions)...

Mr. Chairman: Please allow the hon. Prime Minister to continue.

... (Interruptions)...

Shri Yashwant Sinha: You will not gain anything by quoting a statement which has already been contradicted by me... (Interruptions)...

Mr. Chairman: Please allow the hon. Prime Minister to continue...

(Interruptions)... Hon. Members can seek clarifications. Please allow the Leader of the House to proceed... (Interruptions)...

Shri Priyaranjan Dasmunsi: Sir, we did not interrupt the Leader of the Opposition... (Interruptions):

Shri Yashwant Sinha: He is not prepared to listen to us...(Interruptions).... He is misleading this House...(Interruptions).... He cannot mislead the House.

...(Interruptions)...

Mr. Chairman: You can seek a clarification, but please allow the speech to proceed...(Interruptions)...

Dr. Manmohan Singh: Mr. Chairman, Sir, I now urge the Bheeshma Pitamaha of Indian politics, Shri Atal Bihari Vajpayee, to also listen to the call of his conscience, and let the national interest prevail over narrow political and partisan approach... (Interruptions)...

Mr. Chairman: I would request the hon. Members to allow the Prime Minister to proceed... (Interruptions)...

Shri Yashwant Sinha: Does it mean that the people who are opposed to the deal are anti-national? Does it mean that we do not have the conscience? ... (Interruptions)...

Mr. Chairman: You will have an opportunity. Please allow the speech of the hon. Prime Minister to proceed... (Interruptions)...

Shri S. S. Ahluwalia: That means those who are not supporting the deal, are anti-national... (Interruptions)...

Shri Priyaranjan Dasmunsi: Sir, we did not interrupt the Leader of the Opposition... (Interruptions):

❖ ❖ ❖ ❖ ❖

022. Speech by External Affairs Minister Pranab Mukherjee at the Global Minorities Meet.

New Delhi, March 6, 2008.

My colleague Shri Vyalar Ravi, Minister of Overseas Indian Affairs,

Mr. Justice Ahmadi, Former Chief Justice of India

Mr. Justice Sachar, Former Chief Justice, High Court, Delhi

Mr. Navaid Hamid, Secretary, South Asian Council for Minorities

Excellencies, Distinguished Guests

Ladies & Gentlemen,

It is my privilege to be here this afternoon at this important Conference on Global Minorities being organized by the South Asian Council for Minorities.

The issue of minorities has been on the consciousness of the Indian state since its birth in 1947. In 1947, though partition of the country could not be avoided despite best efforts of Mahatma Gandhi and other leaders, the Indian state made a compact with secularism which is one of the basic tenets of our Constitution. The Indian society as we know it today is the

culmination of centuries of assimilation of diverse peoples and ethnic groups. Indian society has been an inclusive and open one and if one looks closely at the pre-colonial India, the concept of minorities did not exist. I say this because of the very definition of what is a minority.

Minority feelings arise because of the self perception of a particular group who feel disadvantaged or feel discriminated against in relation to the perceived majority in the community. The nation state, based on law, created a situation where the experience of discrimination by a group, based on religious and other consideration, developed into a consciousness of being a minority. And when this group was able to convincingly make a case of discrimination then its claim for minority rights got strengthened. The political process and its concurrent exercise of power was thus the natural crucible in which minority status was formed.

As Prof. R. Pannikar, the sociologist said "Indian society in the pre-colonial period had different religious groups, but they were neither culturally nor politically disadvantaged nor victimized. For in matters of patronage, discrimination on the basis of religion was not pursued by medieval governments, headed either by Hindu or Muslim rulers. Such a policy of non-discrimination was rooted in the social reality of commonly shared quotidian life experience anchored in mutual accommodation and respect. As a consequence, although different religious groups existed with different religious and cultural practices, there were no minorities". The issue of minorities can thus be traced to the colonial period when the occupying powers played politics with the different ethnic and religious groups in India.

Excellencies, Ladies & gentlemen,

We are justifiably proud of the fact that India has an inclusive, open, multi-cultural, multi-ethnic, multi-lingual society marked by unparalleled pluralism. But we are also conscious of the fact that minorities and minority sentiments exist in India. And the framers of our Constitution, acutely aware of this sentiment, made considerable efforts to ensure that the rights of minorities in India are protected under the law.

India is home to almost all religions of the world and secularism is a fundamental tenet of the Indian Constitution and political system. All persons are equally entitled to freedom of conscience and the right to freely profess, practice and propagate religion. Citizens residing in India have the right to conserve their distinct language, script or culture. At the same time, India

set up statutory systems to safeguard the rights of minorities and to ensure their welfare. In 1993, five religious communities viz. Muslims, Christians, Sikhs, Buddhists and Zoroastrians (Parsis) were designated as minority communities. The Minorities Commission which was set up in 1978, became a statutory body the same year i.e in 1993 and was renamed as the National Commission for Minorities. To promote economic activities amongst the backward sections of these notified minorities, the National Minorities Development and Finance Corporation (NMDFC) was incorporated in 1994. This entity provides concessional finance for self-employment activities to eligible beneficiaries, belonging to the minority communities, having a family income below poverty line.

Our government has created a new Ministry of Minority Affairs in 2006 to ensure a more focused approach towards issues relating to the minorities and to facilitate the formulation of overall policy and planning, coordination, evaluation and review of the regulatory framework and development programmes for the benefit of the minority communities. The Prime Minister's New 15 Point Programme for the Welfare of Minorities was announced in June 2006. An important aim of the new programme is to ensure that the benefits of various Government schemes for the underprivileged reach the disadvantaged sections of the minority communities.

The objective of inclusive growth requires affirmative action towards socio-economic development of minorities. A High level committee under the chairmanship of Justice (Retd.) Rajindar Sachar was set up in March 2005 to prepare a comprehensive report on the socio, economic and educational status of the Muslim community of India. The Committee submitted its report in November, 2006. Decisions on the follow-up action on the recommendations of the Committee have been taken.

It has been the government's policy to ensure that we embark on a course of action which would ensure the well-being of the minorities and remove their perception of discrimination and relative backwardness that they suffer. We have to be aware that some minority communities are being exhorted to resort to violent and militant means to express their feelings. In this regard, we have to guard against fundamentalist forces which thrive on the religious obscurantism and cultural backwardness of some minority communities. The state should, in no uncertain terms, make it clear that there would be no compromise with the fundamentalist forces and help reduce the influence of obscurantist forces. India will always remain a secular state despite the efforts of many to try and change this character. The rights

of minorities can only be protected by a secular state which does not remain indifferent or hostile to minorities.

Distinguished participants,

As a government, we need to ensure equality, both in principle and in practice and to create conditions to enable the minority communities to achieve economic and cultural advancement. The role of civil society is also important as they have to be conscious of the rights of minorities in a democracy and evolve methods for defending them. Civil society has to be wary of the powerful propaganda being spread by religion centered populist forces. These forces tend to marginalize the minorities in public space and deny them civic opportunities as has happened in some states of India. This is a threat not just to the minorities but also to the very social fabric of India and its democratic traditions. The struggle for the rights of the minorities is not just a matter of social justice but also of the continuity of democracy and secular tendencies in India.

I have great pleasure in inaugurating this meet. I am also sure, the discussions will help all the stakeholders to move forward in appreciating the cross-cultural perspectives on minority issues which, particularly for a country like ours is of far reaching dimensions. I extend my deep appreciation to the participants and organizers who have come out to engage experts, scholars and administrators on this important societal issue.

Thank You.

023. Speech of External Affairs Minister in the Rajya Sabha replying to the short duration discussion on the Suo Motu statement made by him in both Houses of Parliament on 'Foreign Policy Related Developments' on March 3¹.

New Delhi, March 19, 2008.

Shri Pranab Mukherjee:

Mr. Deputy Chairman, Sir, at the very outset, I would like to express my gratitude to all the hon. Members who have participated and have made their contributions on the suo motu statement which I made on the floor of this House on 3rd March, 2008. On that very day, Sushmaji herself suggested that at some point of time, instead of seeking clarifications, as the statement was a bit comprehensive, it would be better to have a full-fledged discussion on it. Therefore, we are having this discussion, and, I am indeed grateful to the hon. Members for participating in it, and making their contributions.

Sir, a large number of issues have arisen. First of all, one point, I would like to make quite clear that in the very first paragraph of my suo motu statement, I mentioned, "during the inter-sessional period, the Government has made vigorous efforts to promote our objective of an external environment that enables India's accelerated development efforts..." and "I rise to appraise the House of developments related to foreign policy since the conclusion of the Winter Session". Therefore, you will notice that in this Statement I have referred to only those countries where certain developments took place between the Winter Session and the current Session. Therefore, if there is an omission of Iran or there is an omission of Iraq, that is nothing to do with any deliberate action or any pressure from any quarter. It is simply because of the fact that between these two Sessions, in the inter-session period, there has not been any major development. Some developments always take place, in some countries, but any major development. I thought that I should like to clarify that point.

Sir, another point which the hon. Leader of the Opposition stated is this. Naturally, as he was an experienced Foreign Minister who served this country since 1998. I think, only for one year, he went to the Finance Ministry, but rest of the period of that six years, he served as the Foreign Minister of

1. Please see Document No.19

this country. And, even before assuming that office, he was engaged in discussions with his interlocutor from USA. So, he knows this subject. He has wondered why in paragraph 3, we have used the word 'boundary', not the words, 'Actual Line of Control' or 'Line of Control' which normally India and China sometimes earlier used to paraphrase in their documents or in their statements. Perhaps, the Leader of the Opposition will recollect that even up to 2002 this phrase was used.

But in June, 2003, when Prime Minister Atal Behari Vajpayee visited China, with the institution of the Special Representatives representing the two Prime Ministers of the two countries, in that document, the word 'boundary' was used to settle the boundary issues between India and China; thereafter, we are using this word. It is neither any omission nor it is being done casually nor is it conveying any other sense. But, the normal practice is, whatever has been used in important documents, after that institution, the Special Representatives of two Prime Ministers met several times and they have arrived at certain stages of agreement---agreement on political parameters, agreement on guiding principles, and now they are engaged in working out a framework in which a just, fair and mutually acceptable settlement of the boundary issue between the two countries is arrived. I thought that I should clarify these two technical issues at the very beginning.

Mr. Deputy Chairman, Sir, I would also like to respond to some of the issues. First of all, let me make it quite clear that there is continuity in our foreign policy. Foreign policy of a country is not in isolation. Foreign policy of a country, as one hon. Member has very correctly pointed out, and it is true, that it is advancement of our national interest in the context of the contemporary world. Therefore, from time to time, there will have to be adjustments, there will have to be additions and alterations. But, the basic principles, the fundamentals of the foreign policy of a country are based on its own civilization, history and culture. Therefore, India's foreign policy is also based on its civilization, culture, its history and its commitments. When I entered into these doors, I have noticed; Sir, all of you have noticed that at almost every door, there are some quotations from various scriptures and various other texts. One such quotation is written somewhere and it just reminds me: *vasudhaiva kutumbakam*, the whole universe is my friend. Here, it is written: *ekam sad-vipraa bahudhaa vadanti*. These are the basic philosophical frames, which also epitomise the basic tenets of our friendship that we want to expand our friendship, the basic tenets of our foreign policy.

Therefore, when we talk of the five principles, it is not just a slogan. Indian foreign policy is based on five principles which was evolved in 1954 with discussions between India and China. What are those basic five principles? Mutual respect for each other's territorial integrity and sovereignty; mutual non-aggression; mutual noninterference in each other's internal affairs; equality and mutual benefit; and, peaceful co-existence. What appeared to be the founding principles of bilateral relations between India and China? These two great nations, India and China---India became Independent in 1947, China was Independent but there was a change in the system, a new regime came and, thereafter, on the basis of these five principles, our bilateral relations developed over the years. Which was basically between India and China, ultimately, became the fundamental principle of conducting the foreign policy to many of the developing countries, almost all developing countries which joined the Non-Aligned Movement. They accepted these as their basic principles of the foreign policy. And we are continuing to have that. Therefore, there had not been any basic changes there.

During this period whoever has come to the Government, they have accepted these principles, guided their policies in the context of these principles. Of course, there will have to be certain adjustments, certain reallocation of the priorities in the context of the changing world. Two important international institutions were established immediately after the Second World War, one was IBRD, International Bank for Reconstructions and Development, that is, World Bank, and another was International Monetary Fund. But there was a third leg, which was missing, that was GATT, which later on came in 1994 as the WTO. Now a large number of countries have joined them, these organisations.

These are the institutional arrangements. When we began our Non-alignment Movement there was no existence of WTO, there was no existence of having such a huge trade agreement where a large number of countries will participate, a large number of economic activities will be brought within the parameter of this. Therefore, when these changes take place, naturally, it will get reflected in the foreign policies of the countries. In the days of the Cold War when there was Super Power rivalry, the type of foreign policy, which we used to have, to some extent, it will lose its relevance in the context when the Cold War has come to an end. And I would not say, it has become unipolar world because in my own observations in one of the public addresses in Carnegie Foundation in

the USA sometime in 1995 I said that 'I do not subscribe to this view.' This is multipolar world. Somebody militarily may be very powerful, but somebody may be equally very powerful in economic muscles.

Therefore, there are multi-polar worlds, there are various polars and, moreover, certain countries, certain economies are emerging. Why? In our foreign policy, even in my own statement, I have emphasised on building up relationships with China and this aspect has to be kept in view. One hon. Member, representing Samajwadi Party also mentioned quoting Dr. Lohia very correctly, that is the ground reality. At one point of time, not far-off period, contribution of India and China taken together was nearly 60 per cent of the world output. After that industrial revolution in Europe, after colonisation and some sort of deprivation in China our positions were downslide and today again that possibility is there. When you talk of the Asian Century, next century or this century being the Asian Century, we talk of emerging power of India and China. But how could we achieve it -- through rivalry, through confrontation, through tension or through cooperation, co-existence? Therefore, if a statesman while visiting India points out, "I would like to convey to the international community that there is enough space to grow India and China together and we are determined to grow India and China together", surely we should welcome that statement and we should try to work on it.

That does not mean that there will be no problem of problem areas, there will be no area of divergence of opinion, there will be no area of differences of approach. There will be and it will be our endeavour to sort out those differences, to convert the divergences of the views into convergence of the views. To my mind, Mr. Deputy Chairman, Sir, most respectfully I would like to submit, that is the job of those who are conducting the Foreign Policy of this country, to convert the divergences into convergence. Yes, we have differences of opinion in respect of Arunachal Pradesh and the Prime Minister's visit.

The Leader of the Opposition has quoted very extensively from some expert's opinion. I am not disputing that. Yes, they have their own perceptions. They have their own views. We have our own perceptions. When they -- not formally, but informally -- placed a demarche to our Embassy about the visit of our Prime Minister to Arunachal Pradesh, immediately I responded by saying that Arunachal Pradesh is an integral part of our country, we are having representatives of the people of that area in our Parliament and it is quite natural that if there had not been development, particularly,

infrastructural facilities were not built up on this side of the border of an important international border, if Prime Minister visits and assures the people of Arunachal Pradesh that the Government of India is fully aware of their developmental requirement and the package is being declared, it is quite natural and quite consistent with the policies. That is the policy we have stated. Therefore, I do not feel that there is any inherent contradiction in these approaches.

It has been stated, hon. Leader of the Opposition also mentioned about Sikkim. I am aware of the problem of Sikkim. But unlike the Macmohan line, boundary between Sikkim and China has been settled in Anglo-Sikkim Convention of 1890. Physically, it has not been delineated but both sides have agreed and accepted their position. There have been some occasions where some bunkers have been destroyed and some activities have taken place, but, it has been agreed that neither side will take any unilateral action to change this status quo and through dialogue we would like to settle the issue which will be sorted out, I do hope, in course of time. Sir, in respect of the recent developments in Tibet, hon. Members are fully aware of the history. If I remember correctly, His Holiness Dalai Lama entered into India sometime in 1959. On 23rd March, 1959, the then Prime Minister, Pandit Jawaharlal Nehru made a statement on the happenings of Tibet and when his Holiness Dalai Lama entered India, naturally, India extended shelter to him and to his followers. Again Panditji made a statement. The first statement was made on 23rd March and another statement was made perhaps on 29th March, 1959 after Dalai Lama entered, addressed the place at Tejpur and he was given shelter.

The conditions are well known. He is considered as a religious and spiritual leader. He is allowed to have all religious and spiritual activities to continue. His followers are provided with shelter and all sorts of facilities which they require. But, at the same time, they are advised not to indulge in any political activities or any sort of activity which can jeopardise our relationship with any friendly country. And, this is fully appreciated by His Holiness Dalai Lama. Very recently, he had made a statement from Dharmashala on 10th March. His Holiness said and I quote, "I would like to take this opportunity to thank the Government and people of India, in particular, for their continuing and unparallel support for Tibetan refugees and the cause of Tibet." He expressed these sentiments in respect of his State on an occasion which was organised to honour him. It has been stated that it is some sort of patronage. It is not patronage. It is appreciation. If Chinese authorities feel that India's conduct in this matter is reassuring of continuing

friendly relationship, good neighbourly relationship and if they appreciate in words, one need not take it as if it is some sort of patronage. This is what I would like to submit most respectfully.

Mr. Deputy Chairman, Sir, certain other points have also been made, particularly by my friend, Mr. Yechury. He has, particularly, taken some exception about the joint-exercises. First of all, I would like to assure him that entering into joint-exercises is neither giving up the sovereign right of any country nor subjecting oneself into some sort of pressure. It is not that. We have been entering into joint exercises for quite sometime. A question may arise that we did not do it in 50s, 60s and 70s. Yes; we did not do it. We did not have the capability. India's military power was never recognised earlier as it is being recognised today. When the most advanced countries come and see the competence of our Air Force pilots, whether it is in Kolaikundai Joint-Exercise or in some other place or even in Alaska, they do agree that we have build up the capacity. We have build up the capacity in the Indian Navy. With how many countries are we having it? We are having it with Malaysia, Vietnam, Indonesia, Australia, Laos, Japan and the Republic of Korea.

In Army, we are having joint-exercises with Mongolia, USA, Thailand, Seychelles, Maldives, Russia, UK. In Air Force, we are having it with the USA, Russia, Singapore, France. Then, we are having Naval exercises with Singapore, France, Russia, Oman, Sri Lanka, Japan, Thailand and China. Therefore, with a large number of countries we are building up these joint-exercises. It would be, to my mind, a bit strange logic if we say if we enter into joint-exercises with Russia or China, we are not subject to the pressure, but we are subject to pressure if we enter into joint-exercises with the UK or France. It is not so.

Questions have been raised. Yes, the fact is that certain Israeli satellites were put into the orbit with the help of ISRO. And, when we described it as a 'commercial exercise' we did not mean that the satellite has been put in the orbit for commercial purposes. 'It is a commercial activity' it has nothing to do with the Government of India. It was not an arrangement between the Government of India and the Government of Israel. It was between two commercial entities -- one belonging to Israel and one belonging to India. It was not Government-to-Government. That is the meaning of the expression 'it was commercial'. And, surely when we enter into some commercial transactions, it is a commercial secret. It is a fact that we are entering into a defence cooperation with Israel. It is not one day's business. They have

built up their capacities in certain areas. But we are having defence cooperation with a large number of countries, both, developing countries and developed countries. Sir, I have been in the Government several times.

In different decades, I have seen it. Yes, there was a time when at a particular time you used to have all your military hardware from one particular country. But if that particular country is not in a position at a particular point of time, should we give up our exercise; should we give up our efforts? At one point of time, I was Commerce Minister.

Twenty-eight per cent of total international trade was directed towards one bloc. If today that bloc is not available, should I give up my international trade? Can that be a policy of any national interest?

We shall have to adjust our policies because new forces emerge, new realities emerge. I am happy that Mr. Yechury has appreciated divergence of various outputs in our international relations -- IBSA (India, Brazil, South Africa); trilateral arrangement between India, Russia and China, for which I am going. Three meetings have already taken place. We are going to hold Africa-India Summit in India in the first week of the next month. At one point of time even during the heydays of Non-Aligned Movement many other outfits emerged -- G-77 emerged; in 80s, G-40 emerged. Today, the United Nations Security Council G-4 has emerged, where we are working. These various formations and combinations depended on the situation prevailing at that point of time. This is quite natural. We are just responding to that. Yes, a day may not be far off when we will convert BRIC into BRISC, including South Africa. And, that will be a quite important formation. Three continents, three major developing countries -- Latin America, Africa and Asia. India Ocean dream is there. Those littoral countries of Indian Ocean have formed this. In 1995, we made a very small beginning. Now, it has expanded. So, these types of formations are bound to emerge. And, some of them, in the course of time, may lose their relevance and would be substituted by other formations.

I think, a question has been raised that have we diluted our policies in respect of our stand on Palestine. Mahatma Gandhi has been quoted. Mr. Raashid Alvi has also pointed out that he was asked that you can speak in favour of Palestine, but, you cannot vote in favour of Palestine. But, if we look at our track record of voting, it is like this. In the United Nations fora, on the 3rd of this month, my colleague, Shri Anand Sharma, when he participated in the Ministerial Conference of the Human Rights' Organisation

in Geneva, he voted with the Arab world, condemned the atrocities; disproportionate atrocities, and retaliations which have taken place in Gaza. We are supporting the Security Council's Resolution. What is the contention of the Security Council's Resolution? It is that Israel will have to vacate the occupied land. When we are supporting the Resolution that solution lies in implementing the Security Council's Resolution, am I diluting my policy by not repeating in every statement that Israel should vacate its occupied land because my total support is with the U.N. Security Council Resolutions, the Arab League initiatives and even the recent initiatives taken by Saudi Arabia to resolve these issues and to have peaceful solution to the problems of Palestine? People have suffered too long. During the last couple of weeks, thrice we have expressed our deep concern on it. But, surely, Mr. Deputy Chairman, Sir, you will agree with me that even the strongest sentiments can be expressed in most sober words, and in most sober language. We are exactly doing that. We are not diluting our stand. We believe that Palestinians have every right to have their homeland. They have their right to live in peace. As Israelis have their right to have their own homeland, similarly, Palestinians must have their right to have their own. Nobody can deny it. And India stands by that. Therefore, there is no question of dilution on that.

One question has been raised, Mr. Deputy Chairman, Sir, about the conditions of the persons of Indian origin. Recently, on Malaysia I made a statement when that happened. After that, we took it up with the Malaysian authorities. Sometimes, some news items come, appear, we take it up. One news item appeared, sometimes, that there will be discrimination about the recruitment of Indians. But, immediately, it was corrected by the Malaysian authorities that there is no such discrimination. Indians who have settled there, who have accepted their citizenship, they have contributed substantially in building up the economy of that country. They have organized themselves, maintaining their old relationships, maintaining their own identify, having their own faith in their own culture. And that is quite natural. One cannot forget his or her root; they must remember it.

Some hon. Members have expressed their concerns about the happenings in our Southern most neighbour, Sri Lanka. We are fully in agreement with their views that political solution is the only answer, not the military solution. We are all for taking action against terrorist outfits. We have no sympathy for LTTE. I have no hesitation in telling this to you. This is a banned organisation in India. Subsequent Governments banned it. But every Tamilian is not a subscriber to the philosophy of LTTE. Most of them are

not. Therefore, they have every right to live in their own country, that is, Sri Lanka, within the territorial integrity and Constitutional sovereignty. Their ethnical issues must be addressed within the framework of Sri Lanka's Constitution, maintaining the territorial integrity. That is why, it was agreed that, perhaps, the 13th amendment of their Constitution was the solution. We are asking the Sri Lankan Government, "please fulfil your own commitment." You had appointed the High-Powered Committee of political representatives. They have come out with good reports. Implement those reports and try to assuage the feelings of the ethnic minorities, Tamilians and others. Then, their rights will be fully protected and we stand by you. Your security concern is my security concern, because we are the closest neighbour to you. If Sri Lanka becomes the victim of international big powers, India will not be immune from that adverse impact. Therefore, it is in your own national interest. We would like to give you all assistance which you require, which you want, and, actually, we are doing it, but, at the same time, you address the genuine issues of the people. In respect of Pakistan, my colleague, Shri Tarlochan Singh has given certain suggestions. As for one suggestion, I will readily respond to that.

Of course, I cannot give details right now; I shall have to talk to our Missions. Wherever Guru Nanak Devji visited, whichever country it was, our Mission should commemorate, because his was the voice of peace, universal brotherhood and till today we do believe in the contemporary period that there was a great mesiah of humanity, that is, Guru Nanak and his message should be conveyed through an appropriate mechanism and some sort of commemoration functions, in whichever country he visited during his lifetime. It is a very good suggestion, Sir. In respect of liberalisation of visas, in respect of the Prisoners of War, in respect of certain other issues, yes, we have moved. We have moved forward. The composite dialogue began. Before the visit of the then Prime Minister, Shri Atal Bihari Vajpayeeji, in January, 2004 to Pakistan in connection with the SAARC, an assurance by the then President, President Musharaff was given to the then Prime Minister that land of Pakistan will not be allowed to be used by terrorists and we are keeping our faith on it. Please fulfil your commitment. Please don't allow your land to be used by the terrorists.

The composite dialogue process is going on. The next round of talks will be initiated. For obvious reasons, we have to be a little slow because of the unsettled situation there. When the tragic assasination of Benazir Bhutto took place, I myself expressed my desire to go and pay my respect but we could not do so. Even the Congress President, Shrimati Sonia Gandhi, had

also expressed her desire to visit that country to express her condolences to the family, but because of the situation the Pakistan Government advised us not to go; so, we adhered to that. We are now waiting. As soon as the new Government is in place, we shall begin our composite dialogue. We are all in favour of liberalising visas. We are all in favour of expanding trade and SAPTA is basically aimed at that.

One hon. Member wanted to know where the SAARC University will be established. We are trying to locate the land at Delhi. I have told our people that if you do not get land in Delhi, appropriate land in Delhi in time, please go to the neighbouring States like Haryana or wherever you can get, but the university project must be implemented as early as possible because we do not want that SAARC would merely confine itself to declaration. Now, we shall have to go for implementation and we have operationalised the SAARC development fund, food bank and the SAARC villages. In fact, in later part of this month in India, development work will take place in seven SAARC villages. We are going to formally launch that project. In every SAARC country it will be done, because, now the SAARC has assumed more importance geographically with the inclusion of Afghanistan in it; and through land of Pakistan, one day, I do believe that transit to Afghanistan through Pakistan would be possible. Though it is not possible today, but, after today, there is tomorrow; after tomorrow, there is day-after-tomorrow. I hope a day will come when it will be possible. That means, the SAARC is being linked with through Afghanistan to the West Asia, to the Central Asia, and, through Bangladesh-India up to Myanmar, i.e., ASEAN, and, the Central Asia, the West Asia will be linked with SAARC. It has immense potentiality. So, we are going to implement the SAARC development funds, the SAARC food bank and the SAARC university projects. Sir, I do hope that the next SAARC summit at Sri Lanka, whenever it takes place, will give some new momentum to the SAARC developmental activities.

In short, Mr. Deputy Chairman, Sir, I would like to say that I have tried to cover as many points as I wanted to cover.

However, Sir, at the end, I would like to clarify one more small point because the impression should not go that we are responsible for causing chaos in Nepal. Most respectfully, I would like to submit that not by intervention, not interference, but with our suggestions, with our advice to the political parties, it has been possible to bring a hardcore militant, believer in violence,

organisation in the mainstream of the democratic politics of Nepal. They are participating today in the Constituent Assembly elections. The elections are going to be held under the supervision of the United Nations. The people are going to exercise their rights. They are going to constitute the Constituent Assembly, which will frame their Constitution. I do feel that this is the most important right, a democratic right of any people of any country to have their own Constitution and to have their own Government through the process of elections. All-party alliances have taken place, seven-party alliances, including, the Marxists. They have given up violence. Yes, there may be some problem here, some problem there; there may be some teething problems; but, we have not contributed in creating chaos in Nepal. We have tried to defuse the chaos and tension which was prevailing there by bringing the political parties together, not by -- I am repeating -- intervention or interference, but by our counsel and that is the approach which we are having. Our approach is, we neither believe in exporting our ideologies nor we have any territorial ambition. We are only interested in moving together for peace, prosperity and development and making our own contribution in that process.

Thank you, Mr. Deputy Chairman, Sir, for giving me this opportunity.
...(Interruptions)...

Dr. V. Maitreyain: Sir, the hon. Minister has not mentioned a single word about the IAEA Agreement. ...(Interruptions)... He has not mentioned a single word about it. ...(Interruptions)...

Shri S.S. Ahluwalia: Sir, one point, please. ...(Interruptions)...

Shri D. Raja: Sir, I also want to seek one clarification.

...(Interruptions)...

Mr. Deputy Chairman: One-by-one please.

...(Interruptions)...

Shri S.S. Ahluwalia: Sir, I have not spoken. ...(Interruptions)...

Mr. Deputy Chairman: I know that you have not spoken. ...(Interruptions)... Please sit down. ...(Interruptions)...

Shri D. Raja: Sir, one clarification, please. ...(Interruptions)...

Mr. Deputy Chairman: Mr. Raja, you have spoken, but he has not spoken. Therefore, first I am calling Mr. Ahluwalia. After that, I will call you.

Mr. Deputy Chairman: Mr. Raja, just a minute please. You have already spoken. Mr. Ahluwalia has not spoken. He wants a clarification. Let him speak. I will call you later.

Shri S.S. Ahluwalia: Sir, from tomorrow, we are going into a recess. In the meanwhile, a lot of development has taken place on the Indo-US Nuclear Deal; our learned friend, Dr. Maitreyan, also raised this issue. Leader of Opposition also raised it. In between, on 16th or 17th, there was a meeting between the UPA and the Left and they have briefed each other. They are sharing views with each other. But, as far as I understand, the hon. Prime Minister had said on the floor of this House that whatever the team involved in discussions with the IAEA or the NSG does, they would apprise the Parliament of the situation. But tomorrow is the last day and today, when the External Affairs Minister is speaking on this, he should speak on this too. This is part of paragraphs 14 and 15 of his statement.

Shri D. Raja: Sir, I am happy that Shri Pranab Mukherjee tried to convince the House in his own sober way on several issues. But in relation to Sri Lanka, I would like him to state the position of the Government of India.

Mr. Deputy Chairman: He has talked about that.

Shri D. Raja: No, Sir. Firstly, what is the position of our Government on the deployment of sea mines by the Sri Lankan Government? Secondly, is there any effort or decision taken to extend military cooperation to Sri Lanka at this point of time, such as sharing Intelligence, military Intelligence, giving training, etc. Thirdly, the Kachatheevu Agreement guarantees traditional rights to Indian fishermen. Now, the Government of Sri Lanka violates the agreed positions of the Kachatheevu Agreement. If Shri Pranab Mukherjee clarifies to the House on these three issues, it would help not only Tamil Nadu but the whole country. What is the Government's stand on these three issues? These are concrete issues.

Shri Pranab Mukherjee: Sir, as far as the issues relating to Sri Lanka are concerned, we are addressing these issues. So far as laying of mines is concerned, there is an international convention and every country is signatory to it. Therefore, that will be taken up as per international norms and practice. In regard to the problems of fishermen, we are currently engaged and perhaps we will be able to arrive at a solution which would be acceptable to both countries and the fishermen will be benefited to a

considerable extent. So far as training and other facilities are concerned, Sri Lanka is one of the countries which sends the largest number of trainees to our different Defence institutions, not today, but for quite some time. In regard to political solution, I have already stated that we are encouraging them, we are advocating them and we want them to have this political solution which they have agreed to by the 13th Amendment of their Constitution by devolution of power so that the large ethnic minority feel assured that their legitimate aspirations are fulfilled within the constitutional framework of Sri Lanka.

Sir, in respect of the Civil and Nuclear Deal, I did not deliberately spell it out because I have nothing to spell out now. During the last debate I had said that there were three processes. One process was that there should be India-Specific Safeguards Agreement with the IAEA. That negotiation has been going on but it has not been inked and initialled. After that, it will go to the Board; after the Board approves it, it will go to the Nuclear Suppliers Group; then, the Nuclear Suppliers Group will have to amend its guidelines; after the guidelines are amended in the NSG, all these documents will have to go to the US Congress for its ratification. Thereafter, the question of its operationalisation will arise. So, what is happening in between? Certain talks are going on. It has not yet been concluded. There has been an advancement. But as and when the IAEA Board approves the India Specific Safeguards Agreement, I assure the hon. Members of Parliament that we will come back. But before that, what should I report to you? Every time we discuss this issue whenever there has been any major development.

Shri Sitaram Yechury: You can tell them if they want to know the information that you are telling us, then let them join the UPA. ..(Interruptions)..

Shri Pranab Mukherjee: I mentioned it why we did not agree to the Joint Parliamentary Committee. You may like it or you may not like it, but I strictly adhere to and my party strictly adhered to the constitutional position. There never before we have subjected the international agreement as such. Any legislation arising out of international agreement will have to be approved by the Parliament; any legislation to implement the international agreement, if it is a Central legislation, will have to be approved by Parliament, but not the agreement as such. Therefore, we consider that it is not the appropriate forum. But whenever there will be any major development in respect of this

agreement, we will come and share the information with you. I think, since July 2005, five times we have discussed the Civilian Nuclear Agreement with the Members of Parliament. In respect of the UPA-Left Coordination Committee, I told it quite clearly that this is an internal arrangement because they are supporting us and I am to carry conviction with them.

Therefore, I am sharing certain information with them and if you are interested, next time when Parliament will meet, I will be too glad to share that information with you. Since this is just a short Session of three weeks or so, there will be no major development. But I can assure my good friend, Mr. Ahluwaliaji, and others that whenever out of three stages if any stage is complete, I will come and share that information with the House. As the Prime Minister committed, when the entire process is going to be over, if it is over and if we go to that stage, then in that case, surely, we will come and seek the opinion of the Parliament. That is Prime Minister's commitment here. Standing here, he made this commitment. But let that stage come. Now what the Leader of the Opposition says, I do not subscribe to that view that either you mend it or you end it because we are in a stage where neither we can end it nor we can mend it. We are in the process of dialogue with our supporters. Thank you.

**024. Address by External Affairs Minister Pranab Mukherjee
at the All India Annual Conference for Haj - 2008.**

New Delhi, April 2, 2008.

**Hon'ble Shri E. Ahamed, Minister of State for External Affairs,
His Excellency Mr. Saleh Al Ghamdi, the Ambassador of Saudi Arabia,
Distinguished delegates from South Asian Moassassa, Kingdom of
Saudi Arabia**

**Shri M.OH. Farook, Ambassador of India to the Kingdom of Saudi Arabia
Chairman and Members of Haj Committee of India,**

Honorable Members of Parliament,

Chairmen and Members of the State Haj Committees,

Distinguished Religious Scholars,

Members of the Media and

Friends,

I am very glad to be amidst you this morning to inaugurate the All India Annual Conference for Haj 2008. I compliment and congratulate the Government of the Kingdom of Saudi Arabia under the benign leadership of His Majesty King Abdullah bin Abdul Aziz Al Saud for the successful and incident-free completion of last Haj. I also commend the Ministry of External Affairs, the Haj Committee of India and the Indian Embassy and the Consulate General in Saudi Arabia and all other individuals and agencies for their untiring contribution in the smooth and successful organization of Haj arrangements during last Haj.

It is a matter of great pride for us that the third largest contingent of Haj pilgrims in the world goes from our country. I am glad to learn that about 1,57,000 Indian pilgrims performed Haj last year, which is an all-time record. Indeed, under the UPA Government the pilgrim quota has increased by 38,000 during the last four years. In this connection, I would like to express my sincere gratitude to the Royal Government of Saudi Arabia and the Custodian of the Two Holy Mosques for acceding to the request made by the Government of India for enhancement of our quota in the past years.

For millions of Muslims around the world, pilgrimage to the Holy places of Makkah and Madinah is a cherished and life-long dream. To that end, the Government of India is committed to ensure that the best possible arrangements are put in place for the comfort and well-being of Indian pilgrims to facilitate their sacred pilgrimage. Ministry of External Affairs, in coordination with the Ministry of Civil Aviation and Ministry of Health & Family Welfare, our Missions in Saudi Arabia, other agencies of the Government of India, the Haj Committee of India and the State Haj Committees work in close coordination to take all necessary measures to provide and improve facilities and services for the pilgrims in Jeddah, Makkah Mukarramah, Madina Munawwarah and the Mina/Arafat areas. The Ministry of External Affairs with the benefit of the experience of my colleague, Shri E. Ahamed, has made dedicated efforts in bringing about significant improvements in Haj management during the last four years. I congratulate him, his colleagues and senior officers.

I am also happy to note that our Haj Mission in Saudi Arabia has been able to fulfill the mandate given to it of serving the Hajis and taking care of their needs and interests during their stay in the Kingdom of Saudi Arabia.

It is needless to mention that the Government would continue to depute, in sufficient numbers, administrative, para-medical and medical personnel to look after and assist the Indian pilgrims during their stay in Saudi Arabia. Sufficient medicines and other critical medical equipment would also be made available to our doctors for the benefit of Indian pilgrims. The Government would also make arrangements for polio, meningitis and influenza vaccinations for the pilgrims.

A significant aspect of the Haj arrangements for Indian pilgrims is the enhanced use of Information Technology through total computerization of pilgrim location and movement including all those who are going through private tour operators. I am happy to know that the Haj Committee of India has made considerable progress in its plans for the computerization of its arrangements by networking with all the State Haj Committees in India and the Consulate General of India in Jeddah. I would like to assure this gathering that the Government's objective is to bring about regular improvements and innovations in our Haj management, both in India as well in Saudi Arabia.

Ladies and Gentlemen, the Annual Haj Conference is a very important event in Haj management as the Central and State Haj Committees,

Members of Parliament, religious scholars and the Government officials, who participate in the Conference, jointly introspect, review and deliberate upon the experiences of the previous Haj. They also discuss inadequacies and shortcomings, if any, and suggest ways and means for ensuring better arrangements in the following year. I am sure that this Conference would provide a very strong platform for serious discussion and healthy debate to achieve the common objective of making the best possible arrangements for Indian Hajis in an objective and transparent manner.

As welfare and well-being of Haj pilgrims is always a matter of utmost concern to the Government, I would urge the Haj Committee of India, the State Haj Committees, our Missions in Saudi Arabia and all concerned with Haj affairs to give high priority to the orientation of prospective Haj pilgrims so that they are able to perform their holy rituals in a proper and safe manner. The orientation programme should not only cover pilgrims going through the Haj Committee of India but also the ones going through Private Tour Operators.

As part of the preparations for Haj 2008, a composite delegation of senior officials from the Ministry of External Affairs, the Ministry of Civil Aviation, Air India and the Haj Committee of India, has already met in Jeddah in March 2008 and gave final touches to the plans for next Haj. In order to provide maximum convenience and comfort to the pilgrims, it has been decided that, as in previous years, only such buildings, which are suitable, will be hired for the stay of Indian pilgrims for Haj 2008. You may be aware that good accommodation in Makkah is currently in short supply due to redevelopment of Haram Sharief area. It has, therefore, been decided, in consultation with Haj Committee of India to rationalize parameters and rates for the accommodation. The number of categories of the accommodation have now been reduced to three i.e. Green, White and Azizia. Separately, efforts are being made to ensure that most of our pilgrims are accommodated within the traditional boundaries of Mina. Shri E. Ahamed, MOS, would also be visiting Saudi Arabia later this month to meet with his Saudi counterpart and to conclude the formal agreements for Haj 2008.

We are taking action to ensure that henceforth air travel for our pilgrims is as smooth and convenient as possible. Air India has been advised to charter wide-body aircrafts so that the pilgrims along with their checked-in baggage travel on the same flights. Also there is a proposal that the baggage to be carried by pilgrims should be standardized and colour-coded according to various embarkation points so that it is easily identified and transported.

During Haj 2007, due to general shortage of Zam Zam locally, the airlines faced difficulty in obtaining Zam Zam. In view of these difficulties, it would no longer be possible for the airlines to provide Zam Zam at disembarkation points in India. All pilgrims may, therefore, procure and carry their own supply of Zam Zam. The airlines would permit carriage of 10 litres of Zam Zam for each pilgrim as part of accompanied baggage on their return flights.

As improvement in Haj Management is a continuous process, I, on behalf of Government of India, would like to assure you that we would very carefully consider all suggestions that would emerge from the deliberations of this Conference and try to implement them, to the extent feasible, in the overall interest of our pilgrims.

I extend my best wishes for a very successful All India Haj Conference.

025. Address by Commerce Minister Kamal Nath at the seminar organized by International Institute for Strategic Studies on the theme of "India as a Rising Great Power - Challenge and Opportunities".

New Delhi, April 18, 2008.

Introduction

Thank you Sir Win Bischoff, and thank you very much for the commercial for my book! All of you who have not read it, please do get a copy. Thank you Dr John Chipman for inviting me to be here with you today, distinguished participants.

The IISS is one of our leading international think tanks, and that leading international think tank has chosen, in its 50th year, to have a conference dedicated to India. Calling it the first IISS-CITI India Global Forum demonstrates that India is being recognised, but I am a bit uncomfortable with the title: the rising great power.

I have been asked frequently about India becoming a rising great power, and this word power often makes me uncomfortable. Yes, India is growing, and all of you are familiar with the figures. India is on a growth trajectory as never before, but India has its great challenges and its complexities. Yes,

India is growing at 8 or 9%, it does have its institutional strengths, we do call ourselves the fastest growing free market economy, and we do pride ourselves in respecting intellectual property. So those of you who are here from abroad and would like to buy counterfeit goods, will not get them here, you will have to go to another Asian country to find them. We respect GIs.

The Reform Model

It was about 17 years ago when our present Prime Minister, Dr Manmohan Singh, as Finance Minister, launched India on the reform process. A reform process that was India specific. What was the reform process we had to follow - India, with all its complexities and diversities. The India specific reform process, where India could integrate with the global economy. I still remember the World Bank president, Mr Preston, telling me in 1993 that India would never make it. He told me, 'this is not enough, this is not the reform model that is going to work', but India chose its own reform process. It was not a reform process modelled on south and central American patterns, where the bubble burst. Not on the East Asian models, we had no Asian crisis, we rode over the Asian crisis.

We chose a reform process that helped us to globalise in a calibrated process. In a calibrated process that the Indian economy, business community and industry could absorb. So, today, we talk of India engaging with the global economy, just a few days ago I announced the Foreign Trade Policy, that India's engagement with the global economy was going to hit \$500 billion. If you had had this forum 10 years ago, I would have had to tell you a different story, but as you have it now, of course I say that we are engaging with the global economy to the extent of \$550 billion.

Imports and Investments

We are not only an exporter, we are a large importer, and we are a large market for the western world. Our imports from Europe are going up by over 32%. Our imports from the US are going up by 35% every year. So India is not just an exporter we are a big importer. In 1991 we did not have foreign exchange for more than 15 days for our oil, today we talk over \$300 billion. Of course we are looking for FDI, we want FDI, and we want technology, but India is also a big investor. Our investments in the US last year were more than the US investments in India, and India created more jobs in the US than the US created in India. This message must be taken to the primaries in the US that are taking place now.

Global Competitiveness

So India is not only creating jobs within our country, we are creating jobs all over the world. It is this engagement, and this is the new global economic architecture. It is not India, it is East Asia, because as the process of globalisation started, and so did the process of global competitiveness. When we talk of the name of the game of global competitiveness, East Asia stands out where the massive economic activity shifts from the Atlantic Ocean to the South China Seas, to the Indian Ocean, not merely in terms of large populations, but in terms of global competitiveness, in terms of foreign exchange reserves.

It is these great changes that present even more challenges, more challenges for India, in East Asia challenges of a different kind, and when all of you come to India when IISS has this global forum in India in its 50th year, what do you see on the map? What is our neighbourhood? Our neighbourhood is Pakistan, Afghanistan, Nepal, Bangladesh, and Sri Lanka. Within all these countries you see a country, an island, where there is stability, a democracy. It is not only the largest democracy in the world, we also take pride in being the rowdiest democracy in the world, if some of you have seen how our parliament functions and how combative politics gets. It is this that gives India the strength and stability.

Growth Management

It is the young India. It is a young India that is raring to go. An India where 50% of our population is around 25. Huge numbers, but as a country, as we move on, as we move on in stability, we move on with confidence. We move on with confidence, building up a momentum of growth. It is not only India's 8 or 9%, but all the ingredients that make this 8 or 9%, the fundamentals. So when today we meet in a looming global economic outlook that is gloomy, the question is, how does India respond to this? That is another challenge. Of course we are not an externally driven or export driven economy, we are a domestic market driven economy. We are an economy today in global trying times in food, where global food prices are going up. We have 15 million people in India that are moving from having one meal a day to two meals a day. People who were having two meals a day are moving to have some more vegetables, poultry and dairy. This presents the challenges today on our supply side management.

So the challenge today is growth, but bigger than that challenge is the management of growth. The management of growth is a very big challenge

for India today. Where millions of people are moving ahead, our 8 or 9% growth is showing up on the radar screens in different ways. When it shows up on our radar screens in different ways the management of growth becomes a big challenge. When we say this we talk of India's IT skills and these great figures, but we cannot lose sight of the fact that India has 300 million people living on less than \$1 per day. How do we make growth reach them? How do we make it touch their lives? That is our challenge.

The Paradox of India

So when I said that I am uncomfortable using the word power, I am uncomfortable because here is a country that has more poor people than all the LDCs (least developed countries) put together. We have all kinds of conferences for LDCs, but India has 300 million - more than all the LDCs put together, with far more complexities. It is this great challenge, how we make growth touch the lives of those people, how we make growth touch the lives of the people in my own district, who voted for me for so many years.

That is the challenge, because in a democracy your shelf life can be very small, and when your shelf life is very small that is a challenge in itself in this complex India. An India that is a paradox, where we talk of so many million cell phone connections a month, but there are still so many thousands of villages that have never heard the ring of a landline telephone. That is the great paradox of India and it the need to understand these complexities.

Conclusion

When I say that I feel uncomfortable with this word power, of course we are rising, of course we are growing, but we have got a way ahead to go to reach all the per capita figures of the western world. We have got a huge way to go before we can move forward, but what we are today is an India that is vibrant, a thriving nation. India today is a confident India, and an ambitious India. We no longer dream of a better life for our children or our grandchildren, we dream for a better life for ourselves.

Question and Answer

Dr Tim Huxley

Minister, towards the end of your speech you mentioned the problem of poverty in India, with 300 million people still living on less than \$1 a day. I wondered whether you had any ideas about what sort of policies might make a practical difference in terms of reducing the incidence of poverty,

which is clearly one of the factors that is holding back India from achieving even greater economic success in the medium to long term?

Kamal Nath

One of the biggest challenges when I talk of 300 million people living on less than \$1 a day is in rural India, in our agricultural sector. There are 650 million people engaged in agriculture, which is not commerce, which is subsistence. Agriculture, which is livelihood security, agriculture labour. We have to have this great transformation in agriculture, we need to move 200 million people away from agriculture into services and manufacturing. That is our trust. How do we reform agriculture? It is not just investment in agriculture, when you are going to have agriculture on one or two acres of land, no matter what you invest it is not going to work. It is not going to be sustainable.

The government's focus on rural employment programmes, generating rural jobs, is another major effort. So, I think if we are able to address the issues in rural India, we are able to address the issues of poverty.

Ambassador Robert Blackwill

Minister, I know you have made an enormous effort to do India's part in finishing the Doha Round successfully. Can this get across the finish line or are the domestic protectionist policies in a variety of countries going to stop it from doing so?

Kamal Nath

What I am most concerned about is the protectionist policies in the US today, which we are hearing sounds about. I will be better able to answer this on 9 May 2008, because I am meeting Susan Schwab on 8 May 2008. I believe that all countries today want to have a rule-based global trading system, on a multilateral basis. We need it, India needs it as much, if not more, than most countries, because as we engage we must have a rule based multilateral system. There are challenges, and I believe that if in the next two months countries respect the sensitivities of other countries - we need to respect the sensitivities in Europe, the US, and Africa. Similarly the developed countries need to respect some sensitivities. We are grappling in this round with some of the most difficult issues of global trade. I am optimistic, because the momentum that has been built up in the last two months, and even in the last two weeks, is heading towards it. We are hoping to have a ministerial meeting towards the third week of May, and I

am sure that if countries are determined - because we have seen substantial progress since this time last year. If you look at today and three months ago, there has been substantial progress. We have got to cross that last mile, we have run the race, and everybody has got to touch the tape. I hope we can do it.

Dr John Chipman

Mr Minister, I think that our delegates have recognised that you have very admirably sung for your supper, and therefore you deserve it. On behalf of both the IISS and Citi, thank you very much for your eloquence and your presence here.

(courtesy: International Institute of Strategic Studies)

026. Keynote Address by Foreign Secretary Shivshankar Menon at the seminar organized by the International Institute of Strategic Studies : "India as a Rising Great Power - Challenges and Opportunities".

New Delhi, April 19, 2008.

Dr. John Chipman, Ladies and Gentleman, I am honored to be here at the first India Global Forum organized by the International Institute for Strategic Studies, London and Citi Group. You have a most impressive agenda and list of speakers. I am sure that your conference will contribute to informing opinion on India's future and its place in the world.

I would also like to convey apologies on behalf of Minister Pranab Mukherji. He had hoped to be with you and to deliver the keynote address, but unfortunately has to be away from the country at this moment.

I thought that I would speak to you today about India's opportunities and challenges. You might ask why. In the last two decades, India and most of the world have gone through a period of unprecedented opportunities, which have transformed India and the world. It may be, however, that we have arrived at the cusp of a shift in the balance between opportunities and challenges, when challenges to the world system increase and the external environment is harder for us all, including India. In order to examine whether

this proposition is true, let us look at how India and the world have changed, and at the opportunities and challenges that we face today.

India Transformed

In the sixty years since India's independence a plural and diverse nation has built and consolidated a democratic political order and has achieved considerable success in its development tasks, both social and economic. Economic growth, modernization and the pace of technology driven change are transforming our society at an unprecedented pace. As a result of twenty five years of 6% growth, itself largely the result of reforms since 1991, India is today in a position to engage with the world in an unprecedented manner. Movements of goods, services, capital and people connect us more closely than ever to once distant societies. India is more linked with the world economy than it has been for centuries. Almost 50% of India's GDP is accounted for by the external sector. Our needs from the world have changed, as have our capabilities.

However, daunting tasks remain. The two greatest challenges are poverty alleviation and inclusive development by sustaining growth and bringing its benefits to every strata of Indian society. If we are to eradicate mass poverty by 2030, we need to keep growing our economy at 8-10% each year. The recent change in India's GDP mix has increased contributions from the industrial and service sectors; we need to ensure that our agricultural sector also achieves similar growth, particularly since a majority of our population still relies on agriculture. Our priorities include minimizing developmental disparities across regions and peoples, reducing illiteracy and removing social barriers, maintaining a healthy balance between urban and rural development and, ensuring infrastructure development. At a minimum, this entails the efficient use of our resources, including human resources, enhancing education standards, improving productive skills and harnessing science and technology to our development. These are essential to sustaining and boosting rates of economic growth.

At another level, maintaining the current growth trajectory of India's industry will depend on the ability to meet our rising energy needs. For this an effective energy strategy is necessary, combining augmentation with energy conservation. India's imports of crude oil and petroleum products are unlikely to decrease any time soon. Our dependence on oil imports requires proper management so as to lessen their inflationary impact and preserve positive balance of payments, particularly given high global oil prices.

Equally, if growth is to be inclusive and serve the goals of social justice, food security becomes essential for India. I will return to these themes later.

The World Today

To successfully meet these challenges we also require an external environment which is conducive to India's transformation and continued development. This remains the primary objective of our foreign policy. We have a vital stake in the promotion of an environment of peace and stability in our region and in the world, which will facilitate India's accelerated socio-economic development, safeguard our national security, and lead to greater strategic autonomy. For the last two decades, conditions conducive to our quest did exist, generally speaking. And yet, when we look at the world around us, it seems less likely that this supportive environment will continue in the absence of concerted international effort.

Looking at the world from India, it often seems that we are witness to the erosion of the Westphalian state system and a redistribution in the global balance of power leading to the rise of major new powers and forces. Our shorthand for this phenomenon is the rather inadequate term "globalization". Twin processes of globalization and economic inter-dependence have resulted in a situation where Cold War concepts like containment have very little relevance. The interdependence brought about by globalization has put limits beyond which tensions among the major powers cannot escalate. What seems likely, and is in fact happening, is that major powers come together to form coalitions to deal with issues where they have a convergence of interests, despite differences in broader approach. In other words, what we see is the emergence of a global order marked by the preponderance of several major powers, with minimal likelihood of direct conflict amongst these powers. The result is a de-hyphenation of relationships with each other, of each major power engaging with all the others, in a situation that might perhaps be described as "general un-alignment".

The international situation has facilitated the rapid development of India's relationships with each of the major powers, and this is apparent in developments over the last few years. India's relations with the United States of America have been transformed. They now span a wide spectrum of issues including high technology, defense, space, agriculture, education and trade and other linkages. It is our hope that civil nuclear cooperation with the USA and other friendly countries will become possible soon. Our strategic relations with Russia are rooted in a friendship that spans several

generations and a relationship that straddles multiple areas of common interest. The India-Russia-China trilateral Foreign Ministers dialogue continues to be productive. With Japan, we are committed to strengthening our partnership. India shares a strategic partnership with the 27-member European Union, which is adding an increasing political role on the international stage to its considerable economic might. Through the IBSA forum, India is engaged with two leading emerging economies, Brazil and South Africa.

Equally important have been two other necessary conditions which have given India space to work in: Due to India's rapid economic and social transformation, our engagement with the global economy is growing rapidly. India can do and consider things that we could not do or consider twenty years ago. This is reflected in how India perceives its own future, its ties with its neighborhood and its approach to the larger international order. The second necessary condition which has obtained to a greater or lesser extent is our attempt to build a peaceful periphery within which India's transformation can take place.

We will continue our efforts to develop close political and economic relations with all our neighbors. Our goal is a peaceful, stable and prosperous neighborhood. India will continue to remain a factor for stability and peace in the region. Our economic growth is having an impact in the region and there are increased opportunities for our neighbors to benefit by partnering India. We will continue to make unilateral gestures and extend economic concessions. The political challenge will be set aside past mistrust and suspicions which have restricted the expression of our natural affinities, based on shared geography, history and culture.

The recent elections in Pakistan, Nepal and Bhutan have served to underscore the potential contribution of multi-party democratic frameworks to peace and stability. India will continue working with the new leaderships in these countries so as to enable each of us to pursue our shared objectives. It is our hope that the people of Bangladesh will also soon be able to choose their future and leaders through free and fair elections restoring full democracy. Our destinies in the subcontinent are linked, and will stay so. One major objective is therefore the establishment of better connectivity in the subcontinent, connectivity of the mind and physical connectivity.

The resumption of rail links last week between India and Bangladesh after forty-three years is testimony to this commitment. At the 14th SAARC Summit

in New Delhi last April, we set the goal of achieving in a planned and phased manner a South Asian Customs Union, a South Asian Economic Union, and a South Asian community. The popularity of such initiatives throughout the subcontinent indicates the strength of the impulse to remake these relationships.

This desire is equally strong even where difficulties persist. The unfortunate increase in violence in Sri Lanka reinforces our consistent position that there can be no military solution to the ethnic issue. It is necessary to find a negotiated political settlement within the framework of a united Sri Lanka, one that is acceptable to all sections of society. We will continue to assist Afghanistan in whatever manner we can in its reconstruction and in building a pluralistic and prosperous society. Equally, a peaceful, stable and prosperous Pakistan, at peace with itself, is in India's interest. We hope that Myanmar's ongoing national reconciliation and political reform process would be successful. We recognize the need to expedite the process and make it more inclusive so as to ensure peaceful and stable democratization. Our relations with our largest neighbor China are hinged on the mutual recognition that there is space enough and opportunity for both countries to grow and prosper.

With ASEAN, India's engagement has been different. It is a civilizational engagement. India's "Look East" policy forms the pillar of our relations and substantial steps have been taken towards integrating our economies, societies and institutions. The most visible achievement has been to meet the bilateral trade target of US\$ 30 billion a year ahead of schedule. Similarly, exports from ASEAN members continue to exceed expectations. An India-ASEAN fund with an initial corpus of US \$ 1 million has been established and a proposal to establish an India-ASEAN Green Fund, with a corpus of US\$ 5 million is on the anvil. I am optimistic over the future of this partnership.

At the global level, India's engagement is geared towards playing a positive role in world affairs. It is this thought and aspiration that lies behind our desire to be a permanent member of the UN Security Council. A strengthened, more democratic UN is a basic necessity of the new global order.

Opportunities

As this brief survey shows, the last few decades have translated into opportunities for India's external relations in several significant ways. Can

we expect this to continue? Certainly, India's capacity to utilize the opportunities that may emerge is today far greater than it has been before. As we seek to build a knowledge society, the revolution in technology, annihilating distance and enabling us to leapfrog stages of development, offers a significant opportunity.

India's growing economy, linked as it is to the world today, hopes to benefit from an open international trading regime, and requires an open rule-based international trading and investment environment.

Challenges

Paradoxically, it is these same interdependencies which pose the likely external challenges of the foreseeable future. Today we are told that the prospects for the world's largest economies, and for the world economy as a whole, are now cloudy. As one of the beneficiaries of globalization, India cannot be unaffected by a change in global economic prospects. India has a major interest in the success of the Doha Development Round, so long as it lives up to its name as a development round, and is true to its stated purpose of an open, predictable, rule based trading system. We will do what we can to make it a success, and to see that the concerns of countries such as India with large numbers of subsistence farmers are taken on board.

Two other recent developments that are worrying are the spurt in food and oil prices and their effects on energy security and food security. The world has yet to come to grips with these problems, and to deal with them on the basis of equity. The relationship between climate change and development is another such issue. India's commitment is clear and fair. Our per capita green house gas emissions will not exceed those of the developed countries, even as we continue to seek to develop our economy.

Let us look at energy and climate change in a little more detail to understand why India adopts this approach:

For India clean, convenient and affordable energy is a critical necessity to improve the lives of our people. The average consumption of electricity per capita each year in India is currently only 550 kWh against a global average of 2430 kWh, a US average of 13070 kWh and a Chinese figure of 1380 kWh. At a projected growth rate of 8% a year through 2031-32, the minimum necessary to eradicate poverty, India needs to increase its primary energy supply by 3 to 4 times, and its electricity generation capacity by 5 to 6 times current levels. Even though we have been growing by over 8% there has

been effective decoupling of our GDP growth from energy consumption and we have not followed the energy intensive growth pattern seen in the OECD. Our present energy generation inputs are predominantly thermal. We have abundant coal reserves which can be better utilized through cost effective solutions and clean-coal technologies.

Linked to energy security is the challenge of dealing with climate change. The international community already has instruments to deal with the challenge of climate change in the form of the painstakingly negotiated UNFCCC and the Kyoto Protocol. More than 50% of GHG emissions are currently from OECD countries. India with 17% of the world's population accounts for only 4% of such emissions. And yet the adverse effects of global warming caused by accumulated and continued high emissions by industrial countries will largely be felt by developing countries. These unsustainable patterns of consumption and production must be tackled on an urgent basis. It is imperative that the developed countries in Annex 1 of the Kyoto Protocol urgently commit themselves to truly higher levels of GHG reductions. The true free-loaders are those who have used up the world's carbon space for their own development and want to keep occupying it.

By mentioning energy and food security, I do not mean to minimize the risks from traditional political complexities. In addition, fresh and major causes for worry are the changing nature of international security threats, such as terrorism and the proliferation of weapons of mass destruction, and the possible link between the two. India is ready to work with others to evolve a new international consensus to deal with these life and death issues. We believe that non-proliferation and disarmament are mutually reinforcing processes. The most effective non-proliferation measure would be a credible program for global, verifiable and non-discriminatory nuclear disarmament, as reflected in the Action Plan presented by the late Prime Minister Rajiv Gandhi in 1988. In this the 20th anniversary of the Action Plan it would be fitting to renew joint efforts for general and complete disarmament, particularly nuclear disarmament.

In sum, the factors which threaten systemic stability come from larger crosscutting or transnational issues: food security, energy security, climate change and the environment, terrorism and the proliferation of weapons of mass destruction. As the world globalizes, technology ensures that these threats also globalize. No single country can deal with these issues alone, and they require fair and equitable global solutions which involve us all.

Conclusion

All in all, it is probably too early to come to a definite conclusion that challenges now outweigh the opportunities in the international arena. But the signs are that they will do so if we do not rapidly address clear and present elements of instability, and reform global governance and institutions to make it possible to do so equitably and efficiently, involving all those who can contribute to solutions. At the same time, in the near term, the continuing primacy of India's domestic developmental tasks and challenges likely means that the fundamental tenets underlying India's global engagement, of benign and cooperative engagement, will continue.

Question and Answer Session

Vice Admiral (Retd) Madanjit Singh, Former Chief of Western Naval Command

Those were very interesting remarks by Secretary Menon. I am just quoting your remarks where you said that we have a stake in the region, and we have. There are a few situations in the Asian region, and I specifically mention Iraq, Afghanistan, and Sri Lanka, which you mentioned, and Myanmar. We seem to be playing a secondary and supporting role in these crisis situations. Can we not play a more active role? Can we not, as a country, be involved in sorting out solutions for the conflicts in these countries?

Shivshankar Menon

In Afghanistan and Sri Lanka we are like a duck, paddling madly under water, but trying to appear still above the surface. I think we are very actively engaged in both Afghanistan and Sri Lanka. We have a commitment in Afghanistan of over \$850 million in terms of assistance; we have a presence across Afghanistan. There are almost 4k Indians today working on the reconstructing of Afghanistan in Afghanistan itself. We just lost two people last week on one of our projects to a Taliban attack, we have paid prices for this, but our commitment is quite clear. What is important in Afghanistan is to look at it not just as a law and order situation or a security situation, because I think the real challenge in Afghanistan is to enable the creation of a plural and stable society again, society and economy. To that extent what we are doing in Afghanistan is crucial to the international effort, what we are doing with our friends and with other countries.

In Sri Lanka it is quite clear that we and the world have wanted to help the situation evolve in the direction of a negotiated political settlement, but we

have not succeeded yet, but we will keep trying. As Dr Chipman said, large parts of this are really a matter of internal politics. We will keep trying to create an environment within which that politics can take the desired direction, but we cannot be seen to be interfering with somebody else's internal politics.

Iraq is a case unique to itself, and if you gathered 10 countries together and said, 'What is your solution?', you would get less than 50 solutions. Please do not expect me to tell you how we are going to solve Iraq or what India is going to do.

Dr Liam Fox, Shadow Secretary for Defence, UK

Foreign Secretary, how certain can the international community be that India will support and maintain a robust position on the Iranian nuclear issue, and what implications does such a position have for civil nuclear cooperation with the US?

Shivshankar Menon

I think our position on the Iranian nuclear issue is quite clear. We have made it quite clear that it is certainly not in our interest to have another nuclear weapons state in our neighbourhood. We have also made it quite clear that while Iran might have the right to peaceful uses of nuclear energy, she also has an obligation to implement the various commitments that she voluntarily undertook. Ultimately the issue of whether or not she is implementing those obligations depends on the technical judgement that is best done by the IAEA (International Atomic Energy Agency). They are in the best place to do it if they are allowed to implement their commitments to carry on their work properly. That is what in the IAEA board of governance, together with the UK and other countries, we worked for that.

Will this succeed? I do not know, I do not have a crystal ball. The Iranian cases of systemic failure, where we find that the existing regime is not sufficient to cover all possible cases, is a good reason to change the way we look at non-proliferation issues. This is why I said it is important that we now create a new international consensus on non-proliferation and that we work together to do so. We, as a nuclear weapons state, are ready to do so and to participate.

The India-US civil nuclear agreement, which we hope to bring to fruition soon, I see more as an immediate answer to India's energy security needs, to the problem of clean energy in the world, and less as a non-proliferation

issue. Quite frankly there is no direct non-proliferation issue involved in India's case. India has had an exemplary record, better than most, in the matter of not just how we handle and keep sensitive technologies, but also in how we use them. Given that, I am not sure that the kinds of links that some people try and draw between various situations and the truth. What is clear from our experience over the last 20 years is that we do need to sit down together and evolve a new non-proliferation consensus among ourselves, all of us. It is not going to be easy, but certainly we can do something better than we have done so far.

Ichita Yamamoto, Ranking Member, Committee on Foreign Affairs and Defence, House of Councillors, Diet of Japan; Former State Secretary for Foreign Affairs

Secretary Menon, you mentioned China three or four times, and I never dreamed that China would achieve such economic growth so quickly. As you see, the Chinese GDP will surpass Japan in a few years, and they will become the second largest economy very soon. How do you look at this rising of China? Do you think China can take a path of becoming a responsible superpower? Do you think the China factor will benefit India or the world?

Shivshankar Menon

As you said, the rise of China has been a remarkable achievement. Our own attitude, quite frankly, is that there is enough space today, both strategically and economically, for all of us to rise. The rise of China does not necessarily have to prevent the kind of development and growth of an open international system, which is more equitable and democratic, and is what we see. It does not necessarily have to work against it. Now, our experience of engaging with China over the last 20 years, both in a direct bilateral sense - we now do over \$40 billion of trade every year, China is our second largest trading partner, we now have exchange, we do military exercises together - our experience of engaging with them suggests that the best way to deal with this phenomenon is more engagement. Where it will end I cannot answer, but it should be our attempt, all of us in Asia, to work together to create a web of interlocking relationships, and an open security and economic architecture within which we can all grow.

Admiral (Retd) Arun Prakash, Former Chief of Naval Staff and Chairman, Chief of Staff Committee

Mr Menon, yesterday we had the opening keynote addressed by Mr Kamal

Nath, and he said right at the beginning that he felt a sense of discomfort with the title of this forum, India: Rising Global Power. He felt uncomfortable with the term power. Now, that is a true reflection of India's historic discomfort with the mantle of power on its shoulders, we have never actually shouldered it, possibly because of our heritage of non-violence. However, the fact is that no country has become a great or middle power without the armed forces being actively associated in policymaking and strategy. What has happened in India is a decoupling, and perhaps even an exclusion of the armed forces from strategic issues and policymaking. As Foreign Secretary what do you think of the participation of the armed forces? Do you see them as an instrument of diplomacy or state policy? Do you see them as a nuisance, or do you think they are irrelevant to higher policymaking? I could not have asked this question a year and a half ago so I am taking the first possible opportunity.

Shivshankar Menon

You posed two questions in one. You said about discomfort with power. Historically I cannot think of a single rising power that started saying 'we are a big power' until they were well beyond the peak of their power. It is amazing, and this is historically true. Deng Xiaoping's 24 character strategy, keep your head down, hide your lights, and is something that most rising powers have. Frankly I am not worried about the word power in the title, I am more worried about the hubris that comes with saying, 'look at us, we are rising, we are so good', which is why you noticed that what I spoke on was on our challenges and opportunities, rather than the title that I think was originally there.

The second part of your question, certainly the armed forces are an instrument of stage power, it just works with different bits and pieces of that power, and they have to work together, and I think we do. We have managed, it in a sense, without doing this publicly, and this is why it is such a unique relationship. Every other bit of our public business we do out in the open. I used to tell the Chinese that all your arguments that you do within the politburo and the central committee, we do outside in public and the streets. So please do not be confused by what you see, but this is one part of our work that all my experience suggests that we have actually managed to do quietly among ourselves. Certainly we cannot make foreign policy without the armed forces and their input, but they have to also be one of several actors. As I said, as India changes our means also expand, and today we are dealing with many more aspects of policy than just sheer hard power in the

old sense of the word. That is where we need to broaden.

Our problem is not that we disregard hard power or that we are uncomfortable with power. No, I do not see that at all in government. I think Mr Subrahmanyam sitting here is living proof that it is not. Our problem is the opposite, that we need to integrate the various forms of power together, and that is something that we have to learn as we go along, because the pace of change has been so fast.

Pierre Lellouche, President, Franco-Indian Group, French National Assembly; Former President, NATO Parliamentary Assembly, France

Mr. Secretary, first of all I want to tell you how much I appreciated your talk, and I was struck by its lucid analysis of the difficulty of the international system. I would have expected a more upbeat view on the part of the rising star of the new international system, but you had this note of caution, which I found very interesting. I am going back to the nuclear question raised by my British friend and colleague. I do not think you can handle Iran by saying that you want a new non-proliferation consensus, because we will be there in about 20 year time. The question is, assuming they continue to enrich uranium and we have a crisis in the next few months, on which side will India be? As you know, in my country we tend to be rather pessimistic about this situation, not that we like to be pessimistic, but we see the situation as a serious one. It would be interesting to have your view on this.

Second, you said very openly 'we are a nuclear weapons state', we know and respect that, but how do you run this relationship with your neighbours? Pakistan is also a nuclear weapons state, have you managed to work out channels of communication that would be at least reassuring to the rest of the world who watch this situation? On the Pakistan side there is particular concern, because we do not know how nuclear weapons are controlled. India is a democracy and there are elements of control, but we still do not know how it works in Pakistan. Can you tell us what you know and how you can build confidence?

Third, I like your notion that we should go towards disarmament. I believe my own country should be much more active in this at the end of the day. So what specific steps would you take in that direction?

Finally, on the same nuclear question, do you think that the idea of a nuclear fuel bank, which the IAEA is pushing for, is a proper answer to national enrichment facilities, and would India be prepared to participate.

Shivshankar Menon

On Iran, quite frankly, if you look at all the options, and you asked what the answer is if Iran goes on enriching, what are your options? Ultimately you need to have in place a system in which Iran is a party, which means you do need a consensus on something, whether you have a global consensus on a non-proliferation regime, you at least need to have Iran as a party to whatever you agree on her own programme. Otherwise, whatever you do, any of the other alternatives or the other options - sanctions, military action - none of them is a lasting solution. In fact, it is only likely to exacerbate the problem. That is the way we look at it. So, you need to evolve something which involves Iran as well, where Iran is part of it and is tied to the solution. How do you do that if you do not talk to them, if you do not involve them in it? The rest is short-term thinking, quite frankly, from our point of view, and it runs the risk of making the future much worse.

About India and Pakistan with nuclear weapons. Immediately after the 1998 tests both India and Pakistan realised that we needed to be in touch with each other. Given the history of our relationship this was not easy, but it is quite remarkable. In 1999 itself we actually agreed on a series of discussions on nuclear CBMs (conventional ballistic missiles). We have been carrying that out, we do have an expert group on nuclear CBMs, which has produced some results in terms of confidence building measures, about notification of ballistic missile tests, et cetera. We have a series of steps that we are taking, but it is a conversation that will need to continue, that will need to develop, and that both sides will need to work at. So the honest answer to your question is we recognise the need, we have some mechanisms in place, but we still have a lot to do together.

Disarmament: what steps? Our view has been that if you can set a clear goal of a nuclear weapon free world, you can then work backwards from that, and make it clear that it is a time bound verifiable programme. Make it clear that that would be the logical and effective way of dealing with disarmament, and that partial measures or steps that you might take always run the risk of creating fears of imbalance, and of generating precisely what you do not want, which is more local arms races, depending on where you create the imbalance.

On the nuclear fuel bank, we run a full fuel cycle of our own, and we would be happy to participate and to provide a home for the fuel bank if that is necessary. Discussions are still a long way away from that yet.

Gopinath Pillai, Executive Chairman, Savant Infocomm Pte Ltd, Singapore

In your painting of the scenario of the neighbourhood and relationships you omitted ASEAN (Association of Southeast Asia Nations). Does that mean ASEAN is irrelevant to India's foreign policy?

Shivshankar Menon

I have a whole paragraph in here on ASEAN, which I did not read because I realised I was running out of time. So I will give you the text.

Gopinath Pillai

Why did you leave ASEAN out?

Shivshankar Menon

It was not central to my argument. Here is a success story, what we call our Look East policy, it has worked very well, it is developing well, and I think it is going to get better. So when it comes to weighing challenges and opportunities, frankly, this is the case that stands apart and the exception the proves the rule. That is honestly why I did, but I will give you the text.

Dr John Chipman

Foreign Secretary, we are delighted to be in the presence of a professional, and thank you very much for a wonderful speech. A necessarily diplomatic reply when required, but full frankness for most of our discussions. You really started off the debate here on India's foreign policy, India as a rising power, right term or wrong term, in an invigorating way. Thank you very much for honouring us with your presence today.

(courtesy: International Institute of Strategic Studies)

027. Speech of National Security Advisor M. K. Narayanan at the seminar organized by the International Institute of Strategic Studies on the theme of: "India as a Rising Great Power - Challenges and Opportunities".

New Delhi, April 20, 2008.

Introduction

Dr John Chipman

Ladies and gentlemen, let us begin the fourth plenary session on India and the Great Powers. There was a great deal of talk on Friday as to whether the term great power was on that could properly now, or in the near future, be assigned to India. There are at least three countries represented here today that have absolutely no difficulty with the phrase great power being attached to their countries, and we have a very vital representative from India, in the form of its own National Security Advisor. We will have a continued and excellent debate on the place that India will take in the new international society of powers, and the perspective from the US, France and China on the relationship that those countries might have with this rising India.

The speakers will speak in turn for about 10 minutes, and then we will engaged in debate. To kick it off it is a delight to invite the National Security Advisor to the Indian Prime Minister, N K Narayanan to speak. A great friend of the IISS, he has spoken in Geneva, Manama, Bahrain and we are delighted that he is now speaking to the IISS in New Delhi India.

Mr M K Narayanan

National Security Advisor to the Prime Minister, India

Dr Chipman, Ambassador Blackwill, His Excellency Lallouche, Professor Heng, it is indeed a pleasure and I am grateful to the IISS for inviting me to speak at this forum on the subject of India and the great powers. As you have mentioned Dr Chipman, this is a rather delicate subject, particularly for an Indian to speak on. After hearing His Excellency Mr Carl Bildt a few minutes ago, I find that my task has become even more complicated. It is a very difficult act to follow a person as eloquent and as masterful of a subject as Mr Carl Bildt. Therefore, I start with a great deal of handicap, but I hope I will be able to present India's case and position before this audience.

All members of this audience are aware that our interaction with the great powers should be seen as an element of our engagement with the outside world. I need hardly add here that it was India's brush with the British Empire, which was essentially a struggle against imperialism and colonialism, which helped shape and profoundly impacted on the course of events in the latter half of the 20th Century.

Post-independent India, led by visionary leaders like Pandit Jawaharlal Nehru, remained in the forefront of opposition to the attempts of the victorious powers, following the Second World War, to carve out their separate and distinct areas of interest. In its place Pandit Nehru, and others who believed like him, came up with ideas and beliefs that would, over the next few decades, ensure greater strategic space and autonomy of decision making for many countries across the globe. It was during this period that concepts, such as the non-align movement, came into being, and helped sustain independence of thought and action to those who preferred to keep aloof from the two antagonistic military blocs of the time.

To repeat what His Excellency Mr Carl Bildt said a few months ago, the end of the Cold War did not herald the end of history, as some historians and strategic thinkers of the time had predicted. In the two decades since, we have witnessed the beginnings of a new world order, perhaps one that is less predictable than what existed previously, but has, nevertheless, helped maintain a certain balance in world affairs. The emergence of the European Union, and this reference to the EU is being made very strongly, the revival of the Soviet Union, the rise of Japan, China and India, and the spectacle of Africa on the march, posits a challenge, economically and politically, to US influence worldwide, even though the US still remains the pre-eminent military power. As a result, concerns about a uni-polar world have been assuaged to a very great extent, although the multi-polar system has yet to prove that it is capable of achieving global security and stability.

It is against this background that India began to reformulate its engagement with the great powers. We have taken some time to adjust to the realities of the situation. We are also now trying to adapt ourselves to a globalised and increasingly interdependent world. Cautious deliberation on India's part has resulted in the establishment of many robust relationships, including with the major powers of today. These have been exceptional, if only for the reason that they are mutually exclusive. Even when new relationships have been established and we have expanded our engagement

with the outside world - I may sound preachy - but we have not deviated from principles derived from our inheritance, of sustaining a multi-ethnic, multi-religious, and multi-regional society. Side by side with this, we have retained our commitment to an open society, the rule of law, human rights, and strong institutions.

What are the main imperatives that underpin our approach to the globalised world of the 21st Century, and relations with major and medium powers across continents? The key imperative has been that we seek a peaceful and supportive global environment. Second, we have tried to draw on our many strengths to create wide-ranging partnerships to improve and strengthen relations across the globe. Third, we have also been conscious of the need for our world view to mirror and be linked to the other national objective of promoting a model of inclusive and sustainable socio-economic development. We have every reason to believe that India's influence in the world has been enhanced to no little extent by the fact that we have demonstrated that democracy can deliver development and empower the marginalised. Fourth, India recognises, as His Excellency Mr Carl Bildt said a few minutes ago, that there are several global challenges that confront the world, and these are not confined to particular regions of the world, or to particular countries, and that India needs to play an important role in finding answers to some of them, such as terrorism, fundamentalism, food security, energy security, and climate change.

As we survey the changes that have occurred in India's relations with other countries, perhaps the most profound is a change that has occurred in the nature of our relations with the US. The relationship is, first and foremost, characterised today by greater maturity and dynamism. This has resulted in mutually reinforcing commitments to common values, based on a better understanding of each other's attitudes. I believe that the US today sees great value in our pluralist, secular, socially equitable and democratic framework, and regards it as a factor contributing to international stability.

On India's part there have been equally profound attitudinal shifts, born out of confidence in our economic strength, capabilities and capacities. There is also more recognition in India today of the need to engage and work with the major powers, especially in areas such as knowledge power, agriculture, high technology and health, apart from trade and commerce. The ongoing negotiations regarding the civil nuclear cooperation agreement, between the US and India, reflect this imperative, and should

be seen as a vivid demonstrating and expression of confidence in India's scientific prowess, as well as a recognition of India as a responsible power with advanced nuclear technology.

I would like to mention our longstanding relationship with Russia, and the erstwhile Soviet Union. This has been one of the constants of our policy, and one that has always enjoyed wide national consensus. As the Russian economy revives, and Russia begins to regain its influence in the world, we feel that this would lead to a further strengthening of the India- Russia, by substantially widening its ambit. The real challenge in our relations with Russia is not how to deepen the relationship, but how best to diversify it so as to fully leverage the emerging complementarities between our two economies.

Of seminal significance is the improvement in our relations with the countries of Europe and the EU. I can hardly say this any more eloquently than His Excellency Mr Carl Bildt a few minutes ago, but I would like to stress the fact that this relationship is not merely in the context of the growing economic prowess of the EU and its member countries, it now extends to the strategic and political plane as well. India and the EU entered into a strategic partnership in November 2004. We have established strategic partnerships with France, Germany and the UK among the European countries. These have been accompanied by a series of high level exchanges among the leaderships of these countries. The institutionalisation of the India-EU dialogue at the summit level, the changing character of the partnership, with India and the EU today jointly reflecting upon and addressing global challenges, and the emergency of the EU as India's largest trading partner, clearly point to the exponential growth in our relations with the EU.

India's relations with China have both vastly expanded and diversified in recent years. We see China as a rising power and believe that it is in the mutual interest of our two countries, who live in close proximity to one another, and have risen peacefully in the same timeframe, to strengthen their relations. We have taken a number of positive steps and measures to improve the quality of our relationship, and now allowed our differences to impact on the overall development of the ties. In 2005 India and China decided to, and did, establish a strategic cooperative partnership of peace and prosperity. In the year 2007, during the visit of President Hu Jintao to India, a ten point roadmap for further enhancing the strategic partnership was drawn up. In January this year, during Prime Minister Manmohan

Singh's visit to China, the two Prime Ministers signed the shared vision for the 21st Century. This is a landmark document, which signals the readiness of both countries to look beyond their bilateral relations, and the bilateral dimension of their relations, to work together on the global stage. We believe that there is enough space for both India and China to develop and prosper together, and that the relationship is in the interests of global peace and stability.

Today India has a vibrant strategic relationship with the great power in the east, Japan. In recent years the relationship with Japan has matured to a level where it holds great promise for the future. This comes at a time when Japan has demonstrated its willingness to play a more active role internationally. This has provided a proper setting for the transformation in India-Japan relations.

The relationships that have been outlined are based essentially on a mutuality of interest. There is widespread recognition today that India can make contributions to global peace, stability and prosperity, whether it is in dealing with the scourge of terrorism, whether it relates to the stability of the global economy, whether it amounts to the reform of the UN, or issues such as climate change. There is also the subliminal belief that no serious undertaking worldwide would be complete without India's participation, and that India offers a unique model of development with democracy, which stands out for its continuity.

The most important part of what I am saying is that closer engagement with the major powers has not and will never deflect India from its areas of core interest, namely its immediate and extended neighbourhoods. India is anxious to see south Asia emerge as a major powerhouse of economic creativity and enterprise, and believes that this is possible only through the creation of an enabling environment. This is now being attempted by India at two levels. At one level India is making important contributions to help preserve the integrity and assist in the transition to democracy of countries in its neighbourhood. At another level, it is also collaborating closely with many neighbouring countries on major development projects, in some cases it has opened its markets through the free trade association (FTA) mechanism.

Therefore, India is actively involved in revising the SAARC (South Asian Association for Regional Cooperation) process, as a vehicle for South Asian economic integration, and a platform for addressing social economic

challenges that confront the region. India has also been emphasising on the restoration of traditional linkages within the region, and between the region and the rest of the world. It has actively pursued cooperative arrangements such as dialogue ASEAN. We have also taken steps to strengthen institutional mechanisms, such as the East Asia summit process. However, economic prosperity and development are dependent on peace and stability. We do not believe that it is a virtue to become involved in the internal affairs of countries in our immediate or extended neighbourhood. Nevertheless, we recognise that the advantages of a stable region, and therefore welcome a stable Pakistan and believe that the transition to democracy would help in the building of a mutually beneficial relationship in an atmosphere free from violence and terror.

We have an equal interest in a stable Afghanistan, and are of the view that Afghanistan's emergence as a democratic state is vital for regional and global stability. We have committed nearly \$800 million for reconstruction efforts in Afghanistan, and are supportive of international efforts at restoring stability, defeating the forces of terrorism and eliminating the ideology of the Taliban and Al Qaeda in Afghanistan.

There are other challenges facing countries in our neighbourhood, such as Nepal, Bangladesh and Sri Lanka. We stand ready to render any assistance required to enable these countries to meet these challenges. The recent elections to the Constituent Assembly in Nepal is a step forward on the path to constitutional democracy. Stability in Myanmar is also of direct interest to us, given our long border with Myanmar and its sensitive location. We support the good offices of the UN Secretary Generals, and hope that the process of political reconciliation moves ahead in a manner that responds to the aspirations of the people there. To the west, we have important stakes in the continuing stability of the Gulf region and the establishment of peace in West Asia, which is home to more than 4 million Indian workers.

In conclusion, India's engagement with the great powers should be seen as intrinsic to positioning itself as a partner in the league of responsible powers seeking to work constructively to find global responses to global challenges. This brings with it a reinforced commitment to the UN, and the principles of multilateralism. India stands for inclusive and sustainable globalisation, but above all it seeks to safeguard our development objectives and the values for which the Indian state stands.

Dr Chipman

Thank you Mr Narayanan. I am glad you were able to place the emphasis that you wished to on India's crucial relationship with its own immediate neighbourhood.

Question and Answer**Siddarth Varadarajan**

Mr Narayanan, there is a subliminal feeling globally that no major problem can be solved without India being involved in some way. One of the biggest issues confronting the world in terms of global security is the Iran nuclear issue. Why is India not playing any role? It is not part of the P5+1 arrangement, and it really seems to be on the periphery. Why are we seeing as the world, and particularly the United States, taking the Indian position for granted on this?

To Ambassador Blackwill, I do not think the US-UK special relationship is a very good model to advertise the future of the Indian bilateral relationship with the US. It is less a partnership than a one-way communication process, and we have seen how within the UK itself this special relationship is contested. There are some in India who probably find that attractive, and you have others who perhaps look at the US-France relationship as a better model. There are others who probably think that the US and India need to chart an entirely different kind of relationship. I am not sure that is necessarily a very helpful analogy.

Participant

Ambassador Blackwill said that he would like to see a lot more Indian diplomacy and a lot more US diplomacy towards Southeast Asia. Is that meant particularly in relation to the issue of Myanmar, or more broadly in terms of issues such as maritime security? Or, was he talking about competing with China's growing influence in Southeast Asia? What are the mechanics of such an approach to Southeast Asia?

Lieutenant General (Retd) B S Malik

My question is also for Ambassador Blackwill. Objectivity should not be lost sight of. You commented on the recent elections in Pakistan and a return to democracy. Elections in Pakistan by all accounts have been extremely fair and transparent. You say that nobody knows what is going to happen and that the future looks uncertain. My suggestion is please not to jump to such hasty conclusions. Things are falling into place, so please

be patient with us. On Pakistan-India relations, my advice is to let both Pakistan and India conduct our relations bilaterally. We are quite capable of doing so. The dialogue process is proceeding well and is on track. Next month, the foreign minister will be travelling to Pakistan to carry the process forward. I would also suggest that now that you are India, please visit Pakistan, where I am sure that you will be able to see for yourself all that has happened in the last few months.

Manish Tewari

Last year at the Shangri-La Dialogue I had asked the German defence minister why NATO is not winning in Afghanistan. He went to great lengths to explain how NATO was actually winning. Now we hear that NATO is not doing so well. What would it take to win? What are the implications for the region in the event that NATO does not win? Given the history of US engagement/disengagement in Afghanistan, would it be wise to speculate that it is time for NATO to pack up?

Robert A Manning

One thing in our discussion that has not taken a more prominent role is how to adjust the international system to emerging powers. If we think about it, the international system has not changed very much since 1948, whether you are looking at Bretton Woods institutions to the UN Security Council, and so on. One of my favourites is the IAEA, which does not have the presence of the two countries driving global oil demand. Subsequently, they are free riders on that's system. Does the panel have any thoughts about how we adjust the international system to reflect these emerging realities and to empower the rising countries to be responsible stakeholders both in abiding by the rules, but also in shaping the rules of the future.

Evgeny Kozhokin

[loss of audio] how to diversify relationships with India. In many fields, it is quite possible to have cooperation, including in such political and intellectual spheres as understanding better the Indian experience of constructing democracy. I suppose that for quite a long time, we thought that democracy was only in the West, which was a mistake. To create democracy not only in Russia, but also in other countries such as Iran and China, we should take into account the Indian experience, which is very important for our region.

Speaking and thinking about democracy, we should concentrate not only on internal democracy, democracy of the state, but also democracy of international affairs. It is very important for India, China, France, and Russia to cooperate in this field, as we all need space for freedom in international affairs.

Now one of the key issues, not only in global affairs, but also in Asian affairs, is the issue of Iran. It is absolutely necessary to distinguish the problem of the regime in Iran and the problem of the nuclear issue. These are absolutely different questions, and we should not be able to improve the situation around Iran without these distinctions.

Finally, I do not think it is possible to come to a normal situation in Afghanistan without the active involvement of regional countries - India, China, Iran, and Russia. The collapse of NATO's operations would have negative consequences not for the United States, but for the regional countries.

General (Retd) Jehangir Karamat

It is up to India to [loss of audio]. The India-Pakistan dialogue is far more important than any dialogue with Washington. On Islamic extremism, my point is the same: Islam is within India, and India knows more about Islam than anyone else.

M K Narayanan

I am glad I have the opportunity to talk about Iran. I do not think the only dialogue with Iran should be between the P5+1. I think Iran is an ancient civilisation which has relationships across the globe with many countries. There are differences of opinion, and I think India has a relationship with Iran which goes back several hundreds of years. Today, we have the second largest population in the world. For Iran, it is not merely a foreign policy issue, but a domestic issue. What happens in Iran, or what others do with Iran, has a major impact on us. I think there is a great deal taking place between Iran and India which is not in the public realm. What we have avoided is getting into the kind of conflict diplomacy which is taking place. At the level of the Iranian clerics and Shia clerics in India, the Shia clerics in India are some of the most erudite and respected clerics in the Muslim world. I think there is a lot taking place. President Ahmadinejad is coming here on his way to Sri Lanka, and there will be discussions.

We are not involved in the P5+1, and we do not wish to be.

There is a great deal happening, and I stick to my point: I think there are few issues where India is not involved, but India will never thrust itself forward. We have always tried to do what we do within our own limits; we have never thrust ourselves forward. We have capabilities and we have capacities, and in dealing with Iran perhaps India is better poised and better placed than anyone else, but we do not necessarily have to be part of a compact of certain countries. We believe we understand Iran better, the number of Iranians who are present here, other than Shias, are far more than in many other parts of the world, and there a meeting of minds is available. Please do not Iran in the manner that you treat Mugabe, it is a big country, it is a major country, with tremendous influence, and you need to deal with it diplomatically. The negotiations should be done at the level of erudition and understanding of an evolved mind, otherwise the world will have to pay a heavy price. Since we have a very large Shia population we are concerned that the mistakes that others come to will impact on us. That is all that I have to say on the Iran issue.

Regarding the Indian example of democracy, this is a case of induction. We do not want to thrust democracy, and we have never tried to impose on other regimes. Each nation chooses the kind of system that it likes. We would prefer democracy, and whenever there is an option we do that, but it is not for us to say that democracy has to be of the Westminster form, is there only one form of democracy? President Putin mentioned this very succinctly in a discussion that he had, asking why people think there is only one form of democracy, but we do not want to get into semantics. India has a very open democracy, and it is widely recognised as a very inclusive democracy. If others are willing to follow that we will, but we do not wish to thrust democracy at them.

The world will pay a very heavy price if it does not ensure that Afghanistan is saved from the Taliban. I am saying that as a basic point, because I mentioned it briefly in my comments. All of us have a stake, India and Russia have had discussions on what needs to be done, and India has helped in opening the Afghan-Russian dialogue. There are relationships that China has with the Afghan leadership. I think things are in place. That covers the two points that were made, so I will leave the floor to Ambassador Blackwill.

Ambassador Robert D Blackwill

First, when I talked about the US-UK relationship, what I meant was that the British government and its diplomats are extraordinarily entrepreneurial in

Washington. Through that entrepreneurship affect American policy, probably more than any other country. I am not making a point about Tony Blair or Iraq, I am talking about the last half century. I believe that it would be in India's interest and in the American interest if, over time, some similar habits of consultation occurred, not least, as someone else said, because we can learn a great deal from India, for example, about Iran, if we are willing to ask and listen.

Second, Southeast Asia, I did have in mind Myanmar; I do not agree with the administration's policy on Myanmar, and I came from seeing the top of the Thai government a few days ago. There is a great deal of identity of view between most ASEAN countries and India about a more quiet approach, and China has the same view, a more quiet approach to trying to deal with Myanmar. I was thinking more expansively. The American administration has not had the bandwidth to deal with South East Asia with any intensity, given it is preoccupied in the Middle East, and I hope the next administration will improve that record.

On Pakistan, I am sorry if I was not understood. I was not proposing that the US get between Pakistan and India. I am absolutely against that. I will go further and say that in the gloomy, if not grim, international period in the last several years, one of the few bright lights is the bilateral relationship between India and Pakistan. I do not think America has a role to play in trying to improve it or manage it, or anything like that. I do not think I was jumping to a conclusion when I said that the future of Pakistan is uncertain. That does not qualify as a conclusion, and given the stakes that both the US and India have in the future of Pakistan, they ought to talk about it. I do not have the slightest hesitation in Pakistan talking to the Americans about India. So, making such a boundary is artificial and unhelpful.

In Afghanistan three things need to be done in my opinion. First, we have to deal with the Taliban sanctuary in Pakistan. Second, to reinforce what my old Russian friend said, we need to involve the neighbours much more than we do, including Iran and Russia. Third, we need to do better on nation building. As N K Narayanan said, we cannot lose in Afghanistan, the strategic consequences of a victory by the Taliban - these days the Taliban / Al Qaeda - would be devastating for the region and far beyond the region.

Finally, to agree with my Russian friend, the objective of the international community, including the US, regarding Iran, should be for it to cease its enrichment programme, not regime change. Those are completely separate, and we have a total identity of view on that. Thank you.

Dr John Chipman

Ladies and gentlemen, thank you for your comments. To the four panellists, thank you very much for your interventions.

(courtesy International Institute of Strategic Studies)

**028. Address by External Affairs Minister Pranab Mukherjee
at the National Conference of Confederation of Indian
Industry on India's Foreign Policy.**

New Delhi, April 29, 2008.

**Shri Sunil Bharti Mittal, President, Confederation of Indian Industry,
Captains of Indian Industry and Distinguished Guests,**

Ladies & Gentlemen,

It is a pleasure for me to address this august gathering of eminent business persons from all over India. I congratulate the awardees of the CII President Awards. You have truly proved yourselves outstanding in dedicated service to industry. Your vision, entrepreneurship, dynamism, and your achievements have contributed to making India a major global economic and technological success story.

Your present Conference theme "Building People, Building India" is timely and representative of your balanced, far-sighted priorities. Human resource is the single most important input in any human endeavour, and so it is for advancing India to its destination of our dreams.

To all CII members present here today and those all over the country, I extend my felicitations on your Annual Session. The Confederation of Indian Industry has indeed been a positive and worthy partner to Government of India in its efforts to promote development and growth in the country. I believe your antecedents go back to 1895, a world which was vastly different from that which we face now. Since then, you have proved to be an effective voice for industry, a champion of reforms and liberalization and an active instrument for promoting competitiveness of Indian companies. These efforts have helped Indian industry gain confidence in itself, look beyond its own

shores, and venture out into the world economic arena. You are the true ambassadors of a new India.

CII's partnership has been particularly valuable since the early 1990s, a period during which economic reforms were unleashed in India. More important, the face of the world changed in this period. The Soviet Union collapsed, globalization became a way of life, and technological advancement compressed time and distance. All these transformed the political and economic landscape, leading us to restructure our thinking. In the current century again, economic forces seem to be shifting from the West to Asia, as a resurgent region reprises its former glory. During this period, CII has been active in welcoming deeper relations with all regions of the world, and has helped India in its globalization process.

In my remarks this evening I will seek to outline the contours of India's Foreign Policy. I will focus on the implications of globalization on India's economic security and how we should posture ourselves in our way forward in tune with the emerging international order.

Foreign policy of a country is the pursuit of national interests, deriving essentially from its overall national policies, its future goals, and the self perception of its role and destiny in the world. India's approach to the world is naturally a function of our values, civilisational heritage, historical experience, and geography. It is also of how we perceive our interests, based on principles and a broad national consensus.

India's engagement with the world has been based on a desire to establish a peaceful, secure and equitable world order. The objectives of our foreign policy have been to sustain an international environment conducive to our growth and development, alleviate poverty, and foster equity and prosperity for our citizens. Peace and security in our neighborhood, and in the larger region, are a vital consideration in our strategies. Our commitment to disarmament, non-proliferation and responsible use of nuclear technology has underlined our role in international security. We have engaged with major powers on multiple issues and challenges. We have contributed to international peacekeeping efforts under the aegis of the UN, and remained active in combating terrorism. In the aftermath of natural disasters in Asia, India has been swift in its response, bringing succor to many.

Our policy of non-alignment is our ability to judge and to act on our own judgment on the basis of enlightened self-interest, so that we are not passive observers or recipients, but are contributing to shaping a global order. Our

policy further seeks to nurture and increase our activism in traditional constituencies in the developing world.

We also strive for India to be a factor of stability and a voice of moderation in the world, whose progress is beneficial to the creation of an equitable, peaceful and stable world order. Our civilisational philosophy of Vasudhaiva Kutumbakam, perceiving the world as one large family, has shaped our approach as equitable rather than self-centred. Even as we draw from the world, we remain ready to contribute. We are now a net aid donor, extending a broad spectrum of technical cooperation to some 156 nations.

Ladies & Gentlemen,

The Indian economy has been completely transformed from what it was in 1947, or even two decades ago. Since the economic reforms program initiated in the early 1990s to integrate India with the world economy, we have steadily moved ahead toward greater openness to trade and investment. Today the robust Indian economy is attracting widespread foreign investment and has emerged as an internationally competitive market economy. India's share in the global flows of goods, services, knowledge and culture has grown significantly over the past decade. India's contribution to the global economy continues to rise, aided by the 'demographic dividend', the intangible gains of the global knowledge economy, and the expansion of India's soft power.

Our capabilities and new responsibilities have led India to rediscover its global role in international security. India's global engagement has increased dramatically in recent years. Our relations with all the major powers are being strengthened, as well as with emerging economies in Asia, Latin America and Africa. We are also investing energy in crafting bilateral and multilateral trade arrangements and measures to promote investment and technology flows.

One of our primary strategic challenges is to restore traditional linkages within our region and between the region and the rest of the world. Connectivity would enable India's reintegration into the immediate and extended neighborhood, whether in Central Asia, South East Asia or West Asia. This has led us to pursue actively cooperative arrangements such as SAARC, BIMSTEC, our dialogue with ASEAN and in East Asia, the IBSA forum with Brazil and South Africa, RIC - the trilateral initiative with Russia and China, and the recent India-Africa Summit. In pursuance of a vision of prosperity, India's political and economic ties with the Asia-Pacific region

are also growing, and we are also developing closer linkages with major powers like the United States, Japan, the European Union and Russia. Today, India enjoys strategic partnerships of one kind or another with about a dozen countries - and the EU. We are also clear that the development of closer relations between India and any one strategic partner need not be at the expense of relations with any third country.

The Indian Ocean littoral today has greater economic and strategic value to the world economy than ever before. India has a natural and abiding stake in the safety and security of the sea-lanes of communication from the Malacca Straits to the Gulf. We have endeavoured to promote greater cooperation between Indian Ocean littoral states.

To sustain growth and development, a peaceful and stable neighbourhood is conducive, and must be given priority and special attention. We do not believe in territorial expansion or in exporting ideology. We are convinced that a stable and peaceful neighbourhood is essential to India's future. Our objective is to promote inter-dependence, create stakes in each other's stability, and develop cross border infrastructure and other links. As the largest economy in the region, India is ready to offer its market and resources as an engine for the region's growth. Since the 14th SAARC Summit hosted in New Delhi last April, India has made every effort to strengthen SAARC, moving it from a declaratory to an implementation phase. Our commitments to establish the South Asian University, Model Community Development Initiative and Tele-Medicine Project are already on ground.

As we now see, the international landscape, too, is undergoing dramatic changes. The current world order is one of "general un-alignment", a de-hyphenation of relationships, and re-engagement amongst several major powers in informal alliances to deal with issues on the basis of convergence of interests. No great power today pursues exclusive cooperation with others, or asks us to limit ties with others. Indeed increased cooperation with one power opens the doors further with others. For the first time in India's independent history, we are now on an upward spiral of improving relations with all major powers.

India's entrepreneurs and professionals have leveraged these changes to create wealth and employment on an unprecedented scale. The changed global landscape obviously requires the application of democratic principles to global governance and management of the global diversity as well. India is ready to assume still greater international responsibilities, starting with a

reformed and revitalized UN Security Council, reflecting the present day realities.

The transformation in our approach is not just in scope and content but in our attitudes too. Today Indian diplomacy approaches the world and the opportunities that await it with much greater confidence. We look forward to leveraging the external environment to achieve faster growth.

Ladies & Gentlemen,

The world today is increasingly multivalent, marked by considerable political cooperation among major powers whose economies are becoming inextricably intertwined with each other. The current global economy is increasingly defined by freer and substantial movement of capital and by the technology revolution, in particular information technology. While capital is free to roam the world, other factors of production like labour and technology are not, and access to markets remains patchy. India's development imperatives demand intensive economic engagement with the rest of the world. India needs huge resources to foster inclusive growth, both in terms of funds as well as in terms of natural resources, energy resources, technology, and knowledge. Infrastructure requirements alone are expected to cross \$500 billion in the next five years, and sustaining a 8-10% growth necessitates capital for manufacturing, agriculture, and services sectors estimated at around \$1.5 trillion.

Global trade has an undeniably important role in fighting the evil of poverty and fostering economic development around the world. It however continues to face considerable barriers and distortions, particularly in the agriculture sector and by way of denial of access for trained manpower from the developing to the developed economies. India remains fully committed to the multilateral trading system. We eagerly look forward to early and successful completion of the negotiations for the fulfilment of the mandate agreed at Doha, with the development dimension at its core.

Technology access is another economic objective that we are giving high priority. India has remained isolated from high-technology commerce due to its position on nuclear energy. We hope to resolve this soon and implement various agreements on civil nuclear cooperation. We will continue to build a broad national political consensus on this issue so as to realise early the promise inherent in the initiative.

We have also been looking at energy sources. To this end, we are engaging in oil diplomacy with countries such as Nigeria, Saudi Arabia, Russia, and Venezuela. Our oil and gas companies are exploring and bidding in regions around the world, investing large amounts in places like Sakhalin, Sudan, and Vietnam. India is conscious of the fact that energy consumption during the course of its march to development could place pressures on carbon emissions. We have voluntarily placed limits on our per capita emissions, but we have a long way to go before we reach those limits. Immediate and real effect must be given to commitments on international cooperation in fighting climate change, especially in the areas of adaptation, technology transfer, capacity building and the development of the carbon market. Trade advantages should not be sought through the instrumentality of environmental treaties.

However, the world today is unfortunately not only about expanding economic and technological horizons. There are dangers and pitfalls like growth of terrorism, extremism and intolerance; energy, food and water security; environmental degradation and climate change; proliferation of weapons of mass destruction and the risk of their falling into the hands of irresponsible actors. These are interlinked, cross-boundary issues, with complexities going well beyond traditional dimensions. These are not issues of the future but are already confronting us. They require global solutions, to ensure that the process, inevitable as it is, proceeds with minimum bumps and upheavals. This calls for further streamlining and revamping of global governance systems. Equally, the architecture of international financial structures, including that of the institutions such as World Bank and the IMF, needs urgent revamping to better serve the international community.

Ladies & Gentlemen,

The primary challenge for the world, and for India, still remains the elimination of poverty, and a radical improvement in the living standards of people in the developing world, as the minimal first step. Our approach for this remains rooted in widest consultation and cooperation, including South-South cooperation. Recent steep rise in food prices, in India and all around the world has brought the issue of food security starkly to the fore. Food security for us is not only about food production, given that 2/3rds of our population is dependent on agriculture. Last year India was a net importer of food after many years. The growing size of our population, and economic growth and prosperity, have led to consumption and life-style changes. By 2020, we are estimated to require 340 million tonnes of food grains. This is a challenge

for our scientists, planners and administrators. We need to tap into the resources of developed countries, to usher in our second Green Revolution, harnessing contemporary tools like bio-technology, water conservation and rain harvesting techniques and other steps which are environmental-friendly and economically sustainable. The SAARC Regional Food Bank and the India-US Agriculture Knowledge Initiative are steps in this direction, and we need to follow up with further similar arrangements.

Management of increasingly inadequate water resources for drinking, agriculture, industry, and power, is another critical challenge for the future. While our sub-continent is fortunate to have abundant water, we have not seen enough collaboration in its use. We have to address this, and, as agreed at the SAARC Summit, we will work with our neighbours in this regard.

Ladies & Gentlemen,

In concluding, I should like to re-emphasise that the focus of our economic diplomacy in coming years will be on promoting trade and investment flows, especially in critical areas such as infrastructure, in assuring predictable energy supplies and in securing the widest possible access to technologies. We would work towards significantly upgrading our economic relationship with South-east Asia, East Asia, Latin America and Africa, and build new investment-driven partnerships with USA and EU. We intend to nurture a web of cooperative energy security networks in Asia and with new suppliers in West Africa, Central Asia and Latin America.

In today's environment, business has taken centerstage in economic development, with governments building the right operating and investment climate for it. Under current conditions, it is crucial that industry and government come together to form holistic strategies for leveraging the forces of globalization for economic prosperity. Corporates through their overseas mergers and acquisitions, their international manufacturing and service operations, and their expansion of overseas markets have taken the lead role as effective partners in India's global engagement.

Indian diplomacy would get more business oriented and the integration of science & technology and other knowledge-based initiatives into our foreign policy goals would be the norm. The challenges that India's foreign office faces today are different from those that we faced in the past, and the challenges of tomorrow will be different still. India's envoys abroad today represent a different India. It is an India that may not have yet solved all its problems, but is still resurgent and confident. It is an India that is no longer

satisfied with being a spectator in any arena. It is an India willing to be heard with a voice that can make a difference to any outcome. And, as home to one sixth of the world's population, it is an India that has not only a vital stake in the future of the world - whether we view this future in political, economic or even environmental or energy terms - but also the wherewithal to play a decisive role in shaping this future.

The rapid expansion and qualitative change in India's foreign policy perspectives that I have mentioned are in India's interest and also a positive development for international peace and stability. In keeping abreast with the new global challenges - from trade to environment to international security - or in the new regional opportunities for peace and prosperity, India is ready to fulfil its obligations. India, with its unique blend of 'hard' and 'soft' power, would be an indispensable player in strengthening peace, stability and prosperity in its region and indeed in the world.

I look forward to your views and ideas on how to develop greater synergy between industry and government for commerce. I wish you all a very successful annual session and conference, marked by fruitful deliberations and conclusions.

Thank you.

029. Speech by External Affairs Minister Pranab Mukherjee on the occasion of inauguration of Rabindranath Tagore Centre in Kolkata.

Kolkata, June 1, 2008.

At the outset I express my regret because I was the cause for postponement of programme from 31st May to 1st June. Dr. Karan Singh told me that without you programme cannot be held today. I express my regrets especially to those who have not been able to come today.

I am delighted to be present here today to inaugurate the Indian Council for Cultural Relation's Rabindranath Tagore Centre in Kolkata. Let me begin by first placing on record my gratitude to the Government of West Bengal and its learned and culturally sensitive Chief Minister, Buddhadeb babu.

The gift of this land to ICCR took place when he was the Minister for Culture and today we see the fruition not only of the combined efforts of ICCR and the Ministry of External Affairs, but of his vision and commitment to give to Kolkata a Centre of this stature. I am happy to have it formally inaugurated during his tenure of Chief Ministership. I am also grateful to Dr. Karan Singh and Shri Pavan K. Varma as it is their efforts which left no stone unturned to get the Centre constructed.

It is in the fitness of things that the Centre has been named after Rabindranath Tagore because no one could have expressed more lucidly the philosophy of universalism and pluralism that is at the core of the Indian experience. Every major work of Tagore - poems and songs, novels, short stories and dramas - were imbued with the dominating idea of transcending the narrow for a greater, all-embracing, human and humane ideal. It was this realization - that narrow, local, national and regional differences are to be sublimated in the search for eternal values, that led Tagore to create Visvabharati - the 'India of the World' or the 'Universal India'. In the process he transformed himself from being Bengal's 'Kabiguru' to 'Visvakabi' - the poet of the world.

True to the ideals of the poet-philosopher, this Centre seeks to carry forward modern India's commitment of taking India to the world and bringing the world to India. Today, cultural diplomacy has assumed even greater importance as we seek to strengthen and reinforce people-to-people contacts transcending political boundaries. India, a cultural super power, is in a unique position to facilitate this cultural interaction. Our culture goes back to the dawn of time. It is distinguished by antiquity, continuity,

refinement, diversity and an ability to assimilate the best from outside without losing its own inherent character and authenticity.

I am confident that this Centre with its modern galleries, its Maulana Azad Conference Centre, Ramkinkar Baij Sculpture Court, Satyajit Ray Auditorium, along with a museum shop and a café, will become one of our most important hubs for the implementation of cultural diplomacy, especially with regard to friendly countries in the neighbourhood, such as Bhutan, Nepal, Bangladesh and Myanmar. At the same time, we would like the Centre to become ICCR's outreach to the rich cultural wealth of Bengal, and the entire Eastern region, and very importantly, to the civilisational treasures of the North East India. In this context, I am particularly glad that the Inaugural Week will see cultural performances by artistes from Bangladesh and our own artistes from the North East. I am happy also that the opening of this Centre is coinciding with an Exhibition from SAARC countries, and an important exhibition from France. Currently India is the chair of SAARC Summit & SAARC Council of Ministers.

Naturally, the Centre will depend greatly for its success on the support and cooperation of the people of West Bengal and I take this opportunity to invite their fullest participation and cooperation. I hope too that the Rabindranath Tagore Centre will help to showcase the best talent available in Bengal and allow ICCR to use in greater number the artistes from this region.

Once again I would like to express my deep gratitude to the people of West Bengal and, in particular, to the Chief Minister Shri Buddhadeb babu. I also take this opportunity to compliment Dr Karan Singh and Shri Pawan Varma, DG, ICCR for completing this long delayed project, and creating a Centre for excellence in this vibrant, artistic and cultural city. Almost 15 years ago I presided over this Ministry despite of land available we could not get the Centre, now we have realized this dream.

Thank you.

030. Speech of Minister of State for Defence M.M. Pallam Raju at the 7th Shangri La Dialogue on "India's Defence Policy Aiming to Deter Exploitation of Internal Vulnerabilities by External Forces".

Singapore, June 1, 2008.

I am very pleased to join all of you this morning at the session devoted to discussing making defence policy in uncertain times. At the outset, let me thank the International Institute for Strategic Studies, in particular its Director Dr. John Chipman, for the invitation to speak at this prestigious forum. The Shangri-La Dialogue has established a very enviable reputation and like the earlier meetings, I am sure that the seventh one will be just as thought provoking and productive. I would also like to take the opportunity to express my appreciation to the Singapore Government and its Defence Minister Teo Chee Hean for their excellent arrangements and hospitality.

The term 'uncertain times' provides an interesting context to the discussion we hope to have during this session. For a policy maker dealing with security situations, all times have been uncertain. More than two centuries ago, when the world was considerably simpler, Charles Dickens captured this sentiment with the paradox of the coexistence of 'the best of times' with the 'worst of times'. What certainly has changed since then is the complexity of the uncertainty and, to a considerable measure, its spread as well. We have to deal today with far more variables, which make any security calculus infinitely more difficult. At the same time, living as we do in a more integrated and globalised world, the comfort offered by national boundaries no longer constitute effective defence. As the situation in Afghanistan demonstrated, uncertainty anywhere affects security everywhere.

What then are the key factors of our current uncertainty? To begin with, there are domestic challenges emanating from poor governance, lack of development and extreme ideologies. There are then larger regional concerns when such factors spread beyond national boundaries. Obviously, the behaviour of states towards each other is a critical factor in assessing both regional and global uncertainty. While the pursuit of national interest is legitimate, doing so with disregard for international norms such as non-proliferation adds to global volatility. At a global level, divergent beliefs, competing demands and conflicting goals can become a basis for differences. The making of defence policy is, in essence, devoted to the management of challenges at these three levels. The problem is to get our

reading at each level right, factor in the imponderables the best we can, and obtain desired outcomes regularly and consistently. This task is made more difficult by the Dickensian paradox, where positive trends parallel the negative, and human advancement cuts in both directions.

Allow me to briefly describe our present predicament. On the positive side, the world in general and Asia in particular have witnessed a period of extraordinary growth. Our quality of life is visibly improving, poverty rates have dramatically declined, nation states have consolidated themselves, regional and international cooperation have grown, the benefits of technology are increasingly enjoyed by the many, and a sense of global norms has taken root. Yet, the very nature of our progress has produced increasingly intricate security problems, made even more challenging by the process of global integration. The very connectivity and the same technologies that drive global growth and progress have made terrorism more potent and international, the WMD threat more serious, pandemics more probable, and raised the stakes for transnational crime. In responding, we face four broad conceptual issues:

- i) The progress of globalisation is taking us into uncharted territory, making it hard to predict successes or anticipate problems. What does the future hold in terms of energy, water or food security? How uncertain will competition in these areas make the world? When the past, present and future are so different from each other, policy making is not made easier.
- ii) While our challenges are likely to be more global and trans-national, yet our approach to them continues to be largely national in nature. This is particularly inadequate in situations where power centres may not be nation states. We are already grappling with this problem in a rather unsatisfactory manner.
- iii) Global security architecture is characterised today by less rigidity and greater freedom of choice. While generally a welcome development, this calls for more sophisticated hedging strategies on part of all states. The pursuit of competing interests need not constrain cooperation in other areas.
- iv) Our ability, collectively or nationally, to address these challenges is as uncertain as the problems themselves. Future directions of growth and the extent of global interdependence cannot be accurately predicted. While we can assume that interdependence will place limits

on competition, the degree to which this will happen is still far from certain.

With this overarching perspective, I would like to share with you all my thoughts on India's defence policy making in these uncertain times. In terms of the specific concerns that we seek to address, I would categorise them using the three levels mentioned earlier:

In respect of domestic security challenges, our concerns emanate primarily from forces that ideologically challenge India's pluralistic and secular character. By espousing ethnic or religious extremism and advocating separation, they seek to threaten the Indian identity. Many of these groups obtain sustenance from outside. While we recognise that pluralistic cultures are broadly under threat from narrow and sectarian beliefs the world over, India which lives in a particularly difficult neighbourhood, has borne the brunt of such attacks much longer than most other states. In recent years, the consequences of uneven growth and unmet expectations have added to our vulnerabilities. The internal security dimension occupies a significant portion of our policy making attention. Our defence policy aims to deter the exploitation by external forces of our internal vulnerabilities while we fashion a domestic political response, which draws on our democratic strengths. On the whole, the nature of the challenge is predictable and manageable, even if there is not a ready end in sight.

The neighbourhood, however, gives us much less cause for complacency than our domestic prospects. While India's economic growth has created an enormous sense of optimism in our society, this is not quite the case with our neighbours. Some are seriously afflicted by terrorism, itself a cause for concern to India as a neighbour. Such concerns are further aggravated when that terrorism spills over into India, through state sponsorship or otherwise. Undeniably, we have a difficult history with some neighbours and the political challenges are no less formidable than the physical terrain of our borders. For its further growth and prosperity, India clearly needs a secure and peaceful periphery. To ensure that, we are seeking to give our neighbours stakes in our own growth through trade, investment and services. The challenge is to convince them that we are all better off growing together rather than expend energies checking each other. To this end, reviving old affinities are helpful in building new interdependence. Regions like Southeast Asia have been inspiring in this regard. In the last few years, considerable progress has been made towards the goal of a more integrated South Asian region. Politically, the successful holding of elections in many of these states

is itself a cause for encouragement. But, at the end of the day, regional cooperation will only gather momentum when the salience of hard security is reduced.

The global situation too offers a very mixed picture for defence policy makers. On the positive end of the spectrum, the post Cold War world marks a departure from structural rigidities that significantly constrained our freedom of choice. As a result, there is considerable scope for new partnerships and initiatives. At the negative end, we are staring at the prospect of state collapse and rise of non-state actors, including in our proximate region. Somewhere in between, there is the equally complicated challenge of establishing appropriate equations among nations at a time when their inter se capabilities are changing. India finds itself well placed in this regard, partly because it enjoys cordial ties with the other major players, and also as the culture of non-alignment has given it considerable experience in global political hedging. Policy making in this area rests on two key assumptions - (i) that the natural competitiveness among nations would continue, but will be constrained by an interdependence among major states that has increasingly become a source of global security, and (ii) the real threats to international security would arise from states that would avoid interdependence, particularly with neighbours, and from non-state actors.

The growing integration of India with the world economy also imposes its own responsibilities on our defence forces. Our exposure to the external world has tripled in the last 15 years. Our trade interests have expanded steadily, as have our investments abroad. We have developed a legitimate interest in securing our supplies of external natural resources. The number of Indians who work and live abroad has also grown significantly. For a variety of reasons, as Minister Mentor Lee Kuan Yew has perceptively noted, the rise of India does not evoke international disquiet. On the contrary, we find that there is a new interest on the part of many countries in partnering India on security cooperation. Past historical connectivity and shared traditions have been helpful in forging new defence bonds, particularly in Southeast Asia and West Asia. With its vigorous democracy and strong individualism, India has a natural ability to relate across cultures. The long term challenge for India, as indeed for every other major nation, is its ability and willingness to contribute to public good. We certainly have the latter, with a long and distinguished record in UN peace-keeping operations to show. The ability will, no doubt, rise with time and with our own economic growth. In the meantime, we remain focused on responding to challenges within our capacity, such as ensuring safety of sea lanes, enhancing the

security capacities of our partners, and responding to natural disaster situations.

A larger Indian economy will obviously provide a greater resource base for our defence forces. Equally, they will lead to more burdens and greater responsibilities. How they will balance out is difficult to predict. Taking into account the various constraints that we face at the current stage of our development, much of the answer to our security concerns lie in the realm of international politics. In Asia, unlike in Europe, an acceptable security architecture is still far from being evolved. We not only need an open architecture but an open mind in undertaking joint activities as well. It is equally important that our responses to new challenges are not determined by old theologies. Nor indeed can we afford to overlook, as we have done in the past, critical threats such as WMD proliferation for tactical political considerations. Uncertain times require greater creativity and more jointness among nations. It would certainly help if decisions of global import were seen to have greater legitimacy, taken by institutions with a more representative character. Where India is concerned, our efforts in defence policy making will give particular priority to expanding the range of our defence contacts, enhancing confidence and comfort levels, building habits of cooperation and encouraging greater interdependence. There can be no better forum than the Shangri-la Dialogue to send out this message and I thank the IISS for the opportunity to do so¹.

1 Responding to questions from the floor Mr. Raju made it clear that India was not engaging itself in proxy politics against any other rising power. Asked by U.S. Senator Joseph Lieberman whether India's positive ties with the U.S. might be seen by China in a different light, he said: "Whatever bilateral relations we have with other nations should not be construed as ganging up on another nation. We have no such intentions, and whatever role we have played has been with a benign intent of securing the region. We will continue to do that." As a "responsible nation," India would cooperate with other major powers "in every meaningful manner, towards the containment of weapons of mass destruction in the region." Asked whether it would join the U.S.-led Proliferation Security Initiative, Mr. Raju said: "The PSI is a very good initiative, but we do have other domestic political compulsions. There is some resistance. We are working on that." (Speaking at the main plenary session, the U.S. Defence Secretary Mr. Gates, when asked about the "market rumours" that the U.S. might be selling its Kitty Hawk aircraft carrier to India, said: "I expected it to come up during my visit in India. And, well, [I was] somewhat surprised when it did not. I am aware of no such plans." On the nuclear deal with India, he reaffirmed Washington's commitment to the accord. "It has been the position of the United States to be patient, the Indians work through this issue" in the context of

031. Keynote Address by External Affairs Minister Pranab Mukherjee on "Globalization, Growth & People" at the 87th Annual Conference of ASSOCHAM.

New Delhi, June 3, 2008.

Shri Venugopal N. Dhoot, President ASSOCHAM

Shri Sajjan Jindal, President-Elect, ASSOCHAM

Distinguished Guests,

Ladies and Gentlemen

It gives me great pleasure to be amidst eminent business personalities of India at the 87th Annual Session of ASSOCHAM. I am also happy to release the Chamber's study report on "Economic Diplomacy - India's Strategy for Coming New Economic World Order". The Chamber is credited with bringing out outstanding research papers on the issues which are of concern and relevance to our economy. We look up to the deep insights provided in your studies to issues pertaining to various segments of the economy and business environment. The Chamber has been doing commendable work in providing excellent platform to the industry and government through its summits on various topics. My government values the recommendations provided by your esteemed think tank.

I must also convey my appreciation to the organizers of the event in selecting the theme of this year's Annual Function as "Globalization, Growth and People". It is indeed important that the benefits of global growth are equitably distributed to make a meaningful impact on poverty eradication and ensure

their "domestic challenges" in this sensitive domain.) The Chinese representative at the Shangri La dialogue Lt. Deputy Chief of the General Staff of the People's Liberation Army Lieutenant General Ma Xiaotian outlining "the future of East Asian security", said: "In recent years, the mil-to-mil relations between China and India have been improving. The two defence chiefs have already exchanged visits, and senior leaders from the military forces also exchanged visits. Also, a good example is that last year we had a joint training exercise between the two Armies. I was then the head of the Chinese observation team, present during a large part of the exercise, and the deputy chief of the Indian Army also was there. We, both sides, gave a very positive comment on the recent development of the mil-to-mil defence relations between the two countries. It is our common, shared, aspiration to step up this type of interaction and engagement to improve our relations in the military field." On the politically sensitive "issue of Tibet," he said: "We have received positive, active, support from the Indian Government, either it is about 'the Tibetan exile government's march movement' or the Olympic torch relay.

the welfare of people. We must balance growth with development, particularly for a large and diverse country like ours so that we derive optimum gains from the process of globalization.

The world is changing faster than ever before. The key driver of this change is globalization. Countries are becoming more closely interlinked with one another through the cross-border movement of goods and services, capital and labour, technology and ideas. An integrated world is making economics more efficient and business more competitive.

India's experience shows the benefits of plugging into the global grid. Indeed India's economic transformation is based fundamentally on globalization, which has opened markets and, if I may say, made political borders extraneous. India with a trillion dollar economy and a sustained growth trajectory of nearly 9 per cent per annum for the past five years, a 300 million strong middle class and optimistic outlook sustained high growth rates, is emerging as an important driver of growth in Asia and beyond. However, 220 million people are still waiting to be lifted out of poverty, although the proportion of population below poverty line has considerably declined from about 44% in 1983 to 22% in 2005. We have to make enormous efforts to achieve a truly inclusive growth.

India, along with the rest of the world has experienced significant, although uneven, economic growth and major economies in the developing world including India, have been contributing significantly to it. Globalization has played an important role as a dynamic force for growth. However, its impact has left us with a world beset by acute economic and social inequities. The marginalization of many developing countries, especially in Asia & Africa, calls for intensified international co-operative efforts, international policy coherence and co-ordination.

The coming years promise new vistas of human development and economic growth. It also demands a new mindset and a pragmatic forward-looking approach towards our society, polity and economy. We need to undertake a reality check so that we can better address the issues of today and cater to the greatest well being of the largest number of our people.

Ladies & Gentlemen,

Development is a right, central to people's progress and critical to the eradication of poverty, fostering peace, stability and security of all nations. We are committed to working with multi-lateral and regional forums, and

with our strategic partners to advance the development agenda and the eradication of poverty. We believe that eradication of poverty in the world is not only an issue of importance to developing countries, but also a matter of collective global interest. It is indeed a matter of great concern that 880 million of the global populations are below poverty levels and one-third of humanity, nearly 2 billion, remains at near subsistence levels.

India's focus on evolving a multi-faceted relationship with all strategic regions is an outcome of the significant changes in the world's political and economic scenario since the early 1990s and India's own march towards economic liberalization. The process of economic integration is taking place at varying paces, but in the clear direction of a global marketplace. Competition is greater than ever before between companies, nations and regions and we still see discriminatory practices and protectionist tendencies among some developed countries who do not wish to see development and growth shared equitably. We have to resist such tendencies in every forum that we can.

We are, however, convinced that globalization is an irreversible process and despite the risks, opening up is the best way to achieve economic progress and improve the lives of people. We have pursued sound macro-economic policies, strengthened our financial systems and improved corporate governance. Some of this is still work in progress. Investors are taking notice; FDI inflows to India have shown significant increase exceeding US\$ 20 billion last year. At the same time, a growing number of Indian entrepreneurs are internationalizing their operations and have invested in foreign markets, partnered and taken over major business concerns, many of them in developed countries. Indian talent has given leaders to some of the best run multi-national corporations today.

Human capital is the most valuable resource that we have. For us, the concept of sustainable development must include the needs of our people for health, nutrition, education and housing so as to provide to all a life of dignity in a clean, safe and healthy environment. The challenge is to have more access and integration with global technology. India has remained isolated from high-technology commerce due to its position on nuclear energy. We hope to resolve this soon.

Ladies & Gentlemen,

Globalization demands a paradigm shift in the manner in which we conduct our economic policy. India's contribution to the global economy continues to rise, aided by the 'demographic dividend', the intangible gains of the

global knowledge economy. The information and communication technology revolutions have virtually shrunk the globe. Geography is no longer a buffer. Events taking place across borders near and far, impact us in a much more direct manner today. In the process of building blocks for an evolving regional architecture for cooperation we have intensified our dialogue with our strategic partners at multiple levels. Our cooperation is multi-dimensional, engagement at the levels of government, business, civil society, academia and people to people contacts.

The opportunities beckon. In a globalizing world, we have to look beyond national and regional boundaries and work together. We recognize that a supportive and an enabling global policy environment, based on principles of equality, mutual respect, equity and justice, constitute a positive framework for international co-operation.

Overall, globalization represents the best hope to improve the lives of the world's population. It has created growth and wealth, and fostered trade and interdependence. Managed properly, it will be a powerful force for social good. With effective functioning of multilateral institutions and restructuring of the global economic architecture, countries in the developing world would stand to benefit from open markets and competition.

India is steadily emerging as an important global player. That devolves certain responsibilities on us and we need to support the economic integration process in our neighbourhood and beyond. For this good governance is the key. There is need for greater public private partnership and for the private sector to earnestly take up corporate social responsibility so that benefits of growth reach all segments of the society.

My message to the CEOs gathered here today is simple - you have to explore these new trends and ensure purposeful functioning while you seek greater gains for your enterprises. The lowest common denominator has to be the welfare of the people and that is where we need to coordinate our policies and actions. I urge you all to extend the boundaries of your thought and vision, and draw from the experience of today's global economy.

Thank you.

**032. Speech of External Affairs Minister Pranab Mukherjee on
"India's Foreign Policy Today" at Peking University.**

Beijing, June 6, 2008.

Please see Document No.368

**033. Address by Prime Minister Dr. Manmohan Singh to Indian
Foreign Service Probationary Officers.**

New Delhi, June 11, 2008

I begin by congratulating each one of you for having been selected for a very prestigious organized service in our system of government. The foreign service occupies a unique place in our system of governance and with every passage of time the importance of having a foreign service which is committed to our national objectives which has the requisite skills and motivation to carry out the task of implementing our foreign policy in diverse areas of activity - its importance is only going to grow in the years to come. We live today in an increasingly integrated, globalised world, and the growing interdependence of nations creates new challenges for the management of global economy, global polity and foreign policy is essentially a projection of our national interest abroad.

And therefore the starting point of every good foreign service training must be a thorough grounding of what are our national concerns, what are our national objectives and ever since India became independent the foremost task before our country has been to accelerate the pace of social and economic development to ensure that our economy grows at a rapid rate, that with it we can generate more wealth in our country with which we can wash away the tears from the marginalized sections of our society and in internal domestic policies have an important role to play as to what will happen to the pace of development in our country. But as I said in an increasingly interdependent world that we live in we need an external environment which is conducive to the promotion of rapid economic development in our country. And when I talk about international environment, I have in mind the fact that what happens to the world trading system

impinges on our capacity to grow at a faster pace. International trade particularly in the globalised world we live in has emerged as an important engine of growth of nations. And therefore we have to create an environment with which India's trade can grow, India's economy will benefit enormously if our exports are given a level playing field if we don't face barriers to increase exports of our country and therefore what happens to the multilateral trading systems, what happens to barriers to trade, barriers of commerce, is a very important indicator of what will be the pace of development of our country.

In the same way we are now today faced with situation where there are new challenges. Never before in the history of the world capital flows have emerged as major determinant of international system. Today financial liberalization has taken roots although many countries, even our own country, maintain some controls on capital movements but as far as inward movements of capital concerned by and large, we have a very liberal system which encourages the import of capital. As a part of our strategy to accelerate this tempo of development we need a rapid increase of savings and investments. If we want to grow at the rate of 9 to 10 per cent we need an investment rate of 35 to 40%. The bulk of savings needed to sustain this investment have been generated domestically. And fortunately our savings rate today is as high as 35%. We invest about 37% of our GDP and we save about 35% and therefore the net capital inflow from abroad is about 2% of our GDP. It is small but it is important. It is also important because capital inflows are harbingers of transfer of technology, management skills and therefore we have been trying to create over time a congenial atmosphere for investment in our country, both for domestic capital formation as well as in our ability to attract foreign capital.

In addition to the liberalization of trade and financial services, we are today faced with new challenges. There are environmental challenges. There is the growing concern of global warming. There is a growing concern about pandemics. Disease today knows no national barriers. Avian flu can travel from one country to another and this is yet another aspect of growing interdependence of nations. There are problems which no nation acting alone can solve and therefore we need regional cooperation, we need multilateral cooperation to deal with this new challenges.

I mentioned global warming. The world is not a morality play. The world's political and economic system is a power play and those who have greater power use it to their advantage. And therefore those who are less powerful

are always at a disadvantage. Our effort has been through collective strategies working towards with various coalitions of developing countries, sometimes with coalitions of like-minded developed countries to create an environment where power factor does not work to our disadvantage. Because even though when we recognize that the global warming is common concern. The whole world shares a single environment and therefore if the environment deteriorates if climate change becomes a reality we will also suffer. But it is also important that in devising solutions to these formidable new challenges that are on the horizon, we must protect our essential national interests. And for a poor country like ours, development and the eradication of poverty is the supreme concern. So we have to marry the concern of management of global climate with the concern for development, for removal of poverty.

Now in the international systems, there is going to be an immense pressure. And countries like India, countries like China - people are blaming them for global warming, for global food crises. Also blaming us for the rapid growth in demand of hydrocarbons as factor in the global crisis with regards to energy. All these are projections of national interests of various countries and our effort has to be that while we recognize the world is an increasingly inter-dependent entity, the management of this inter-dependence must be equitable, it must operate in a manner which will protect our national interest. These interests are that India need a long period of peaceful development to sustain the tempo of social and economic development so that over a period of time, in our lifetime, we can get rid of chronic poverty, ignorance and disease, which has been the lot of a majority of our people for centuries. There are opportunities, but there are challenges. So when we deal with global issues like management of international economic system, world trading system, the management of international financial system, the world monetary system, the world system for the regulation of international flows, the how to handle issues like climate change, how to handle issues like growth of pandemics and how nations of the world can cooperate in research and development. An early warning system is also need to deal with challenges like Tsunami. In this one world that we live in, interdependence of nations is a fact. Peace and prosperity are indivisible. But as Jawaharlal Nehru said as early as 1947 in his famous speech on midnight of 15th of August, disaster is also an indication of interdependence. This is also indivisible, and therefore though there are new challenges our effort has to be that in dealing with them India's national interest must be protected to the fullest possible extent. And that is where the foreign service comes in and therefore your awareness for national

concerns and how best we can achieve our objectives in an increasingly interdependent world that we live in is the biggest single challenge facing our foreign policy establishment.

There are other areas - the growing menace of terrorism. Until 9-11 the world probably did not pay as much attention to the fact that countries like India have been the victim of terror for the last 20-25 years. After 9-11 the world situation has changed, and has changed to a certain degree to our advantage. But terrorism today is an international phenomenon, that there are still states who are sometimes actively backing the terrorist elements, and that there is a growing importance of the non-state actors in areas relating to terror. I think this gives our national security a new dimension. Also there is a growing fear that the security of nations can be threatened by nuclear weapons and sensitive technologies falling into the hands of terrorist elements. All this we have to be conscious of, we have to handle our approach to dealing with these global issues in a manner which will project and protect our national interest.

What we have been trying to do is to create an international environment conducive to the achievement of our national goals of sustained economic and social development. We need a peaceful neighborhood. And that is why it is very important that our relations with our neighbours whether they are China, Pakistan, Bangladesh, Nepal, Sri Lanka- they are of critical importance in realizing our national ambitions. With regard to China we have this whole problem of the border. We have in the last four years actively engaged through our special representatives to find pragmatic pathways to handle this complicated issue. Some progress is being made but I think there is a long arduous journey ahead of us. In the meanwhile both the Chinese and our government have appreciated that we cannot allow the border dispute to affect the pace of cooperation in other areas and that is why our trade with China has grown at a handsome rate. There is a scope for further expansion of trade and cultural relations.

The soft power of India in some ways can be a very important instrument of foreign policy. Cultural relations, India's film industry- Bollywood I find wherever I go in Middle-East, in Africa - people talk about Indian films. So that is a new way of influencing of world about the growing importance of India. Soft power is equally important in the new world of diplomacy.

With our neighbours - particularly with neighbours like Bangladesh, Sri Lanka, Nepal - we have a vested interest in their stability, in their progress because if they do not progress many of their problems can become our

problems. If Bangladesh suffers from global warming, I think a large number of people will willy-nilly migrate, legally or illegally, into our country. India and Nepal have a very porous border and if the Nepali system does not provide adequate opportunity to Nepali youths - willy-nilly there will be migration. In the same way, there is a conflict in Sri Lanka, tragic though it is, it has given a lot of worries because many times it happens that when ethnic tensions increase, there is a tendency of increased inflow of refugees in our country and this creates both domestic problems as well as foreign policy problems. So our relations with our neighbours is of critical importance. In some ways the most aspect of our foreign policy is our management of our relations with our neighbours. I would encourage each one of you to take a lot more interest in our neighbourhood. We know a great deal of what goes on in the West - in Europe, in America. But we don't know adequately enough of what goes on in our neighbourhood. And many a times our own thinking about these countries is influenced excessively by western perceptions of what is going on in these countries. I would like our diplomats to develop an Indian perspective on what is happening in our neighbourhood and use it as an important analytical tool for, I think, telling us what are the meaningful foreign policy and domestic policy options before us in dealing with the neighbouring countries.

But in the world in which science and technology have created a situation where distances have lost their old significance, the concept of neighbourhood is no longer the immediate neighbourhood that we know of. And that is why in the last 15-20 years, we have been trying to look East-ward to South-east Asia, to East Asia. This is where in the last 20 years there has been the most rapid economic and social growth. And that is why we are trying to work very closely to find new avenues of cooperation between India and the ASEAN countries. Also we are trying to expand our cooperation with other countries of East Asia. We have now an East Asia summit in which we are partners, which consists of Asean and three countries. It meets every year and discusses issues which have growing importance for the future of East Asia as a whole. The aspiration is, which we are projecting, that we all should work towards a flourishing East Asian community which will give new meaning to our inter-dependence with countries of South East Asia and East Asia.

At the same time the countries of West Asia are also of great importance. Those of you who have studied economics, our balance of payments depends a great deal from the flow of remittances of Indian workers - a large part of these comes from Middle East. We have about five million

Indian citizens working in these countries and their earnings are very important for our balance of payments. And therefore the peace and prosperity in East Asia and the Gulf countries is of equal importance to us. Not only for that reason but also because the concerns with energy security is now assuming a new dimension. Since the 1970s when the world woke in 1973 that the world of cheap oil was dead and gone - there has been several phases of crises in the management of hydrocarbon economy. We now have a similar situation whereby the price of hydrocarbons, particularly petroleum products, have quadrupled in the last two years. This has created new problems. The world is not able to grapple that the crises that it faces. In the last three or four years, the average production of crude oil in the world has been about 85 million barrels a day. The demand is increasing faster than ever before and the quest for access to the oil resources is going to become another major factor of power play in the world. The Chinese have seized the opportunities and have been going around the world in Africa, in Latin America, investing and exploring and developing the natural resources for increased oil production - this tension will increase in the years to come. So the quest for sensitive natural resources, oil security, energy security will emerge as a major source of interplay of forces in the evolving world economy.

Now competition and cooperation have to be the watchwords. We have to cooperate but have also to recognize that there will be increasing competition from China, from other countries and also those who are in entrenched would not like to make way for others - the new comers. So therefore tensions will be a part of the evolving world systems and how we handle our problems, how we project our national interests, will be a crucial determinant of our capacity to be successful in the race for development.

For us Europe and United States matter a great deal because our trade and capital flows have a very large element coming from these countries. And that is why we were the first country who recognized the great important of European integration. So when the European economy community came to existence, India was one of the first few developing countries to establish diplomatic relations. Now the European integration process has gained new momentum and it has potential for good and it has potential to create new tensions. And therefore our effort has been to find new way of working together with the European Union - we are trying to negotiate a broad base trade and investment agreement to use the resources of Europe to promote our development objective. The process has been on for last three or four years and we have made progress but we have to concentrate a lot more.

In recent years our government has sought a new dimension to our relationship with the United States in the form of a nuclear deal. I don't want to talk a great deal about it. But I think it is for the first time we got the US to appreciate that India is a nuclear weapons state, that India has the right to develop nuclear power to protect its strategic interests, and that it is a decision that must be made by the people of India not subject to any international supervision or any international interference. And despite the fact that we are not a signatory to the NPT, and we have also said that if the CTBT came into being we will not sign it, there is no pressure from the US on India to sign the NPT or any other international arrangement of that sort to enter into nuclear cooperation for civil energy. So as I see it this nuclear agreement that we signed with the US it has run into some difficulties, but it protects our national interest, it protects our capacity to use the nuclear power to protect our strategic interests. At the same time it opens us new opportunities for civilian cooperation and without that, I think, the trade in dual technologies - sensitive advanced technologies - can not become a reality. But our domestic politics has prevented us from going ahead, I still continued to hope that we will make progress in the months that lie ahead. But it is very important for us to move forward to end this nuclear apartheid that the world has sought to impose on India. This agreement, if it materializes, if it sees the light of day, it will open up new possibilities of cooperation, not only with the US but all other nuclear powers like Russia, France, who are very keen that once we have this deal through, that India should become eligible for civil nuclear cooperation.

These are some of the areas where I would shared my thoughts with you. All I can say is that you have an exciting career ahead of you. The service of India is the service of teeming millions of our people. You are privileged that you have this unique opportunity to be instruments for implementing our national vision, our national objectives, our national goal in the field of foreign policies. With these words, I once again congratulate you for being selected for this prestigious service of our country.

034. Speech of External Affairs Minister Pranab Mukherjee at the 107th Annual General Meeting of the Merchants' Chamber of Commerce on "India's Creditable role in world affairs, while ensuring high economic growth, democratic values and social justice".

Kolkata, June 14, 2008.

Hon'ble Shri Bhattacharjee, Chief Minister, West Bengal : Smt. Meira Kumar, Minister for Social Justice & Empowerment : Shri Churiwal, President, Merchant's Chamber of Commerce : Distinguished Guests : Ladies & Gentlemen,

It gives me great pleasure to be here at the 107th Annual General Meeting of the Merchants' Chamber of Commerce. It is one of the oldest and most prominent chambers in the Eastern India. I must appreciate the organizers of the event in selecting the theme of this year's Annual Function "India's Creditable role in world affairs, while ensuring high economic growth, democratic values and social justice". I can say that India's international role and our successful growth story, democratic values and our emphasis on social justice draw strength from each other. In our overall development paradigm we cannot isolate these important features from one other.

The objective of our engagement with the world, from the earliest years of our independence, has been to create and maintain an international context that would provide an enabling environment for democratic governance, social and economic development leading to the alleviation of poverty and the fostering of an inclusive society based on equity, justice and prosperity for all our people. Equally our foreign policy has aimed at making a contribution to put in place an equitable, peaceful and stable world order.

India's growth story is relatively recent. Even though our economic liberalisation began in the 90's, the fruits started bearing only in the last 4 to 5 years. Now we are a trillion dollar economy growing at an average rate of nearly 9 per cent per annum for the past five years. India with a 300 million strong middle class, a burgeoning market economy with significant investment inflows and robust long-term outlook for its ability to sustain high growth rates, is emerging as an important driver of growth in Asia and the world. At the same time, 220 million people are still waiting to be lifted out of poverty, perhaps the largest population of the poor in the world,

although the proportion of population below poverty line declined by more than half from what it was two decades ago.

The world is changing faster than ever. The key driver of this change is globalization. Along with the globalisation the world has witnessed India emerging stronger in both political and economic terms. Most of us are familiar with traditional diplomacy where governments negotiate with governments. Globalization, however, has led to a paradigm shift altering the manner and approach of conducting our foreign economic policy. The information and communication technology revolutions have virtually shrunk the globe. Geography is no longer a buffer. Events taking place across borders near and far, impact in a much more direct manner on us. We are witnessing a phenomenon where countries are becoming more closely interlinked with one another, through the cross-border movement of goods and services, capital and labour, technology and ideas. An integrated world is making economics more efficient and business more competitive.

India, along with the rest of the world has experienced significant, although uneven, economic growth. Globalization has played an important role as a dynamic force for growth. However, its impact has left us with a world beset by acute economic and social inequalities. India's growth story has come at a time when the world is facing threats from a variety of factors, be it energy crisis, or issues of food security or climate change or even pandemics and disasters. One of the biggest challenges we face today is how to address assimilate these divergent issues and work towards the common good, peace and security of mankind. With growing economic power now, our people are willing to spend more for better living. Our employment guarantee and poverty alleviation programs are designed to ensure decent food and economic security to our 'people who need help'. However our developmental efforts should in no way be assumed as contributing to global crises of food, energy or climate change.

The real reason for these crises is the distortions perpetuated by developed countries over centuries of exploitation of natural resources. The developing countries are facing pressure to scale down the use of the resources that contribute to their growth. You can very well observe that our per capita consumption of resources is one of the lowest in the world. We are not in a position to make any sacrifice which can directly affect our capability to address the issues of social justice. No doubt we will contribute our might to find solutions to these vexed problems. However these solutions should be based on new technological innovations, techniques of adaptation and

better use of resources. We are using our presence in international fora to convey that the solutions for energy crisis, food security and climate change problems has to come primarily from the developed world. Those who have consumed resources over decades have major responsibilities for transfer and financing of technologies to address these issues.

Ladies and Gentlemen,

India is credited with an impeccable record on nuclear non-proliferation that is well acknowledged by the world. Our present engagement with IAEA and the United States on the bilateral civil nuclear energy cooperation is an outcome of the confidence and our ability to keep this commitment in years ahead. The future growth of India is incompatible with continuing technology denials. With more than 50% of our energy requirements met by coal and fossil fuels, and the current unprecedented situation of a sharp rise in the prices of oil and gas, given our energy requirements for the next 20-25 years, we have come to the conclusion that there is no alternative to developing our nuclear energy sources. Today we have an installed power generating capacity of 1,60,000 MW. However, the actual generation is 1,38,000 MW constituting 89,000 MW thermal, 35,000 MW hydro, 10,000 MW renewable sources and 4,000 MW nuclear as of November 2007. Our projected requirement is 800,000 MW by 2030-31.

The coming years will demand a new mindset and a fresh approach-towards our society, polity and economy. We must adopt a perspective that is based on pragmatism. The challenges ahead call for an enabling framework for sustainable development to be in place which is provided by our system of democratic governance, with an active civil society and media. India has conclusively demonstrated that substantive social and economic progress is possible through true democratic governance. In our success, we have proved wrong the sceptics who had argued that democracy could not be sustained in a country of continental size, hosting all the religions of the world, a bewildering array of languages and cultures, as well as vast disparities in social and economic status. Indeed, we have established that in a pluralistic society, democracy is the way to promote socio-economic transformation for the betterment of all sections of the people, especially the under-privileged and the deprived.

In this era of globalisation we are committed to working with all regional forums and advance the development agenda for eradication of poverty. We believe that eradication of poverty and sustainable inclusive development

are not only issues of importance for developing countries, but also matter of our collective global interest.

The Indian economy has surged, over the past 10-15 years, on the basis of its high sustained growth trajectory and integration with the global economy. We are convinced that despite the risks, opening up is the best way to achieve economic progress and improve the lives of their people. We have focused on enabling our economy to meet the challenges and seize opportunities in global markets. We have pursued sound macro-economic policies, strengthened our financial systems and improved corporate governance. Some of this is still work in progress. Investors are taking notice; FDI inflows to India has reached US\$ 20 billion, a growing number of Indian companies are also internationalizing their operation and have invested nearly US\$ 10 billion in the last six years in 4000 projects. The changes are already showing results in a big way, so much so that the world is talking note of the extraordinary rise of India.

The process of economic integration is taking place within regions at varying paces, in the direction of a global marketplace. Competition is greater than ever before -between companies, between nations, and between regions. For the first time, it can be said, that the world is becoming one big market. In this emerging market, we have to be extra careful. We do not think that more than 200 million Indians who earn less than one dollar a day can effectively withstand the market forces. One of our important challenges therefore is to ensure that our people who are below the poverty line are not affected by the adverse factors of globalisation. I can say with conviction that the UPA government is making all possible efforts to bridge the gap between growth and development and social equity. Various flagship programs and projects have been introduced and implemented in the last four years such as NREG, Bharat Nirman to the tune of 12,000 crore, Tribal Rights on Forest Lands. The Eleventh Five-Year Plan has provided for higher outlays in many core sectors such as Agriculture by 11%, Education by 19% and Health by 7%, to name a few.

Ladies & Gentlemen,

Democratic values do not necessarily mean free market forces. Real democratic values can be judged on the quantum of concern that society shows for the underprivileged and marginal sections. We need to have growth but growth without proper distribution of income is a danger to democracy and a pitfall for social engineering. We are aware of this fact

and have been able to manage our growth with sustainable development to ensure that fruits of growth are available to all sections of the society.

Global trade plays an important role in fostering economic development and fighting poverty. Nevertheless, international trade continues to face barriers and distortions particularly in the agricultural sector, which affect the overall efforts of developing countries to enhance the well-being of their societies. We are aware of such distortions and protectionist policies adopted by developed countries and these are among the possible reasons for the food crisis that we face today. We are however determined going to ensure that our farmers get their due share in the ongoing negotiations under WTO.

There are major changes taking place on our domestic and external fronts, which call for new policy approaches for development. In these circumstances, India has the enormous potential to exploit her geographical advantages and bring significant benefits to populations residing in the region in a much more direct and participative manner than before. In a globalizing world, we have to look beyond national and regional boundaries and work together. We recognize that an enabling global policy environment, based on principles of equality, mutual respect and justice, constitute a positive framework for international co-operation.

India hopes to emerge as an important global player in the coming decades. With effective multilateral institutions, all countries can contain the risks and benefit from open markets and competition. We not only aim at becoming an engine of growth but also to support the globalization and integration process in other parts of the world.

Before I conclude, I would like to mention two brief comments on food shortage and inflation. India's production increased from 51 million tonnes in 1950 to 227 million tonnes in 2007 which is no mean achievement. But, population simultaneously has increased from 350 million to 1112 million in the same period. Therefore, we are still left with more than 200 million people who have limited access to food. About the rise in inflation. We import more than 100 million tonnes of crude every year. Crude price has increased from US\$ 35 a barrel to US\$ 138 a barrel in the last four years. At this count alone the government has had to bear the extra burden of Rs. 40000 crores in the first year that is 2005-06, Rs. 49,000 crores in the second year, Rs. 70,000 crores in the third year, and a whopping Rs. 2, 25,000 crores estimated for the current year. The inevitable price hike is to compensate only a meagre amount of this huge financial burden.

I am convinced that the captains of the industries gathered here today will explore these new trends and ensure purposeful functioning as well as higher profitability of their respective enterprises. The quotients of responsible business conduct and corporate social responsibility have to be upped. I implore you all to extend the boundaries of your thought and vision, and draw from the expertise and experience of today's global economy.

035. Statement by Official Spokesperson on National Launch of e-passport.

New Delhi, June 25, 2008.

The President launched the issuance of e-passports, also known as biometric passports, at a ceremony at the Rashtrapati Bhawan today.

Minister of External Affairs Shri Pranab Mukherjee presented the first e-diplomatic passport to the President of India, Smt. Pratibha Devisingh Patil, at the ceremony. He also presented an e-diplomatic passport to Dr. Devisingh Shekhawat.

The External Affairs Minister presented e-diplomatic passports, subsequently, to the Vice President Shri Mohammad Hamid Ansari and Smt. Salma Ansari at a function at 6 Maulana Azad Road.

He also presented an e-diplomatic passport to the Prime Minister Dr. Manmohan Singh at a function in Prime Minister's office, South Block.

With the National Launch today, India has become the first major developing country to issue e-passports. 41 countries issue e-passports now, most of them having commenced the issuance of such passports in the last two years.

From today, the Ministry of External Affairs will be issuing e-passports in the diplomatic category. Issue of e-passports in the official passport category will commence next month. The e-passports will be issued to all fresh applicants and to those who apply for reissue.

The Ministry of External Affairs has drawn up a programme for the full roll out of e-passports in the ordinary passport category by September, 2009.

The e-passports of India conform to the specifications laid down by the International Civil Aviation Organization (ICAO) which is the competent international body to recommend specifications for all travel documents.

The e-passports contain an electronic contactless chip embedded in the passport booklet. The cover page of the passport has an ICAO approved special logo indicating that it is an e-passport. The chip in the e-passport booklets to be issued by the Ministry of External Affairs in the diplomatic and official passport categories will contain data such as facial bio-metrics, signature, name, nationality, date of birth etc. of the passport holder. Specified bio-metric features such as finger-prints of the holder are also proposed to be added to this data when e-passports are issued in the ordinary passport category.

The Indian e-passports will have the necessary technical features to prevent access to the data stored in the chip by unauthorized persons and to enable authentication of the bonafides of our e-passports by immigration authorities anywhere in the world.

The e-passports offer significant advantages. The Indian citizens will be in a position to move more easily and faster through the border control points that have e-passport reading facilities. These passports also provide higher level of protection against fraudulent misuse and tampering. Authenticity of the e-passports can be easily verified by the immigration authorities. e-passports will also be useful in preventing holding of multiple passports.

The Indian e-passports have been designed and developed by the Government using its own resources. The National Informatics Center (NIC) provided the entire technical expertise and support for the project with the assistance of IIT, Kanpur. It has been ensured that the software of our e-passports is compatible with other important documents such as the National ID card and Driving License. The India Security Press, Nasik is also an important partner of the Ministry of External Affairs in the e-passport project. They will produce all the blank e-passport booklets.

The Central Passport Organization of the Ministry of External Affairs issued 50 lakh passports in 2007 through its 34 Passport Offices all over the country, compared to about 44 lakh passports in 2006 and 36 lakh passports in 2005. To cater to the growing demand of passports of about 18% per annum, the Ministry of External Affairs has already initiated the Passport Seva Project for introducing better and latest IT solutions, further simplification of procedures and reducing paper work to the barest

minimum, with a view to maximizing the comfort levels of passport applicants and achieving the best international standards. The project, which is expected to be implemented in a time frame of 19 months, will result in the issuance of passports within three days and, in cases which require prior police verification, within three days after the completion of the verification process.

036. Inaugural Address by External Affairs Minister Pranab Mukherjee at the opening of the Passport Office in Amritsar.

Amritsar, June 28, 2008.

Sardar Parkash Singh Badal, Hon'ble Chief Minister of Punjab,

Members of Parliament and State Legislative Assembly,

Senior Government Officials,

Distinguished Guests,

Ladies and Gentlemen,

I am delighted to be in this holy and historic city to inaugurate the new Passport Office. The office will fulfill the aspirations of the people of the border districts of Punjab to have a passport facility in Amritsar.

Last year, more than 3.50 lakh passports were issued jointly by the Regional Passport Office, Chandigarh and Passport Office, Jalandhar to the people of Punjab. The number of passport applicants from this State is expected to be around 4.00 lakh this year. In the first five months of this year, about 35,000 passports have already been issued to applicants from the six districts that will be served by the Amritsar Passport Office.

A lot of people from the border districts of Punjab travel abroad for business, tourism and other purposes. As all their requirements could not be catered to by the District Passport Cells and Speed Post Centres, located in these districts, a large number of passport applicants had to go to Jalandhar or Chandigarh for passport services. I am sure the Amritsar Passport Office will remove the hardship suffered by the public in this area. It will also enable more and more people to travel abroad to

seek business and employment opportunities in foreign countries.

The Office, being opened today, is equipped with the latest Information Technology. In addition, I am happy to inform you that it is a fully air-conditioned office and will provide comfortable conditions for submission of passport applications.

With India's rising international profile, fast growing economy and our increasing integration with the global economy, the number of Indians traveling abroad has shown phenomenal growth in the recent years. There has been considerable interest among overseas investors in India. Engagement of foreign business community in the Indian economy has increased considerably. This in turn has resulted in rapid increase in the issuance and re-issuance of passports and other miscellaneous services rendered by our Passport Offices. We issued about 50 lakh passports last year, compared to 22 lakhs in 2000. We expect to issue around 60 lakh passports in 2008 and over 80 lakh passports in 2010.

- We have taken a number of steps to simplify the passport issuance system and to make it applicant-friendly. Let me take this opportunity to mention some of these:
- To improve the efficiency and effectiveness of Passport Offices, we embarked on computerization - and I am happy to inform you that all the 36 Passport Offices including the one in Amritsar are fully computerized.
- All the passport offices and our Missions abroad issue machine-printed, machine-readable passports as per the standards laid down by the International Civil Aviation Organisation. Additional security features have also been introduced in the passport booklets. These measures have facilitated expeditious immigration clearance for Indian travelers.
- Electronic token system has been introduced in several Passport Offices to ensure orderly submission of applications. We are introducing a token system at this office too.
- Facility of online registration of Passport applicants is now available in all Passport Offices.
- 464 District Passport Cells have been set up all over the country, enabling easier submission of applications and taking the passport

issuance system to the doorsteps of the applicants.

- In addition to these District Passport Cells there are 1095 Speed Post Centres for submitting passport applications and 15 Passport Application Collection Centres.
- In Punjab there are 16 District Passport Cells and 35 Speed Post Centres and in the area served by the Amritsar Passport Office, we have six District Passport Cells and nine Speed Post Centres.

However, we still have a long way to go. The National Common Minimum Programme envisages introduction of e-governance on a massive scale, to simplify procedures and to make Government citizen-friendly. As a rapidly growing and modernizing country, we are duty bound to provide services to our public that are completely transparent, prompt, user-friendly and, above all, in conformity with the best international standards and practices.

While our Passport Offices are fully computerized, there is scope to make further improvements by introducing better and latest IT solutions that have become available as a result of the rapidly growing Information Technology. There is also need to further simplify our procedures and to reduce paper work to the barest minimum with a view to maximizing the comfort levels of passport applicants and achieving the best international standards. The Government has already approved implementation of the Passport Seva Project with the objective of delivering passport related services to the citizens in a timely, transparent, more accessible, reliable manner.

The Passport Seva Project is expected to be implemented in a time frame of 19 months and will result in the issue of passports within three days, and in cases which require police verification, within three days after the completion of the verification process. Tatkal passports will be issued on the day of submission of the application. We propose to have 68 Passport Facilitation Centres all over the country where the non-sovereign functions, involved in the passport issuance process, such as initial scrutiny of the application forms, acceptance of fee, scanning of the documents, taking photos, etc. will be performed by a service provider to be selected through an open bidding process. The process of selection of such a service provider is in its final stages. The Government staff at the Passport Facilitation Centres will verify the documents and decide on granting of passport. The other activities such as printing and dispatch will also be done by the Government staff. Police verification will be expedited through electronic linkage of the Passport

Facilitation Centres with the police authorities in State Capitals.

Distinguished Guests,

With the National Launch of e-passports, India has become the first major developing country to issue such passports. We have started issuing e-passports, also known as biometric passports, in the diplomatic category during this week. I had the privilege of presenting our very first e-diplomatic passports to the Honourable President, Vice President and Prime Minister earlier this week. Issue of e-passports in the official passport category will commence next month. The Ministry of External Affairs has drawn up a programme for the full roll out of e-passports in the ordinary passport category by September, 2009. Such passports will be much safer against forgeries and will facilitate easier movement of our people through the border points equipped with e-passport reading facilities.

While the Amritsar Passport Office will greatly facilitate employment opportunities abroad for the people of this region, we should not lose sight of the fact that there are a number of unscrupulous agents who exploit innocent people by giving false hopes of lucrative employment abroad. We have been urging concerned State Governments to take strict action against such activities. I understand the Government of Punjab is taking a number of steps in this regard. I assure the Hon'ble Chief Minister of our full cooperation to the efforts of the Government of Punjab in this direction. It is imperative that while promoting avenues of employment abroad for our citizens, we firmly curb illegal immigration that brings untold misery to the concerned persons. I would also like to assure you that our Passport Office at Amritsar will spare no effort in rendering prompt and efficient services to the public.

Before I conclude, I would like to convey my sincere gratitude to Sardar Parkash Singh Badal who took special interest in making the Amritsar Passport Office a reality. I would also like to thank the Government of Punjab for the support and co-operation extended by them for the opening of this office.

Thank you.

037. Speech of External Affairs Minister Pranab Mukherjee on Statistics day.

New Delhi, June 29, 2008.

- Shri G.K.Vasan-ji, Minister with Independent Charge for Statistics and Programme Implementation,
- Dr. Pronab Sen, Chief Statistician of India,
- Dr. S.K.Nath, Director-General of Central Statistical Organisation,
- Prof. S.P. Mukherjee,
- Distinguished Guests,
- Ladies & Gentlemen,

It gives me great pleasure to address this august gathering at the celebration of 'Statistics Day' in the country. India has always been a path breaker in the collection and use of statistics for planning and policy making. It has also given to the world some of its finest Statisticians for many decades. I have had reason to appreciate the strong statistical base that has developed in the country not only in my earlier tenures as Finance Minister & Deputy Chairman, Planning Commission but now as the External Affairs Ministers too.

The quality of statistics being generated by a country contributes immensely to the country's reputation. It is not merely the question of availability of data which helps decision making by various foreign governments and agencies interested in our country but its 'reliability' & 'transparency' which are now being regarded as important indicators of the quality of governance. It is a source of great pride that our statistical system measures up to the best in the world in terms of its quality and openness, and that this characteristic raises the stature of our country in international deliberations.

The high quality of our statistical system did not happen by accident. It owes an enormous debt of gratitude to its founding father and long time mentor - Professor Prasanta Chandra Mahalanobis. He was one of the very few pioneering Statisticians who was instrumental in creation of the United Nations Statistical Commission. I am therefore extremely delighted and honoured to be here today to participate in the celebration of the Second Statistics Day and to pay homage to the memory of late Prof. P.C. Mahalanobis, the doyen of Indian Statistics on his 115th Birth Anniversary.

Prof. Mahalanobis pioneered the organized collection of official statistics. He contributed immensely in establishment of formal teaching of statistics in many Indian universities and also in the Indian Statistical Institute which he founded at his residence itself in Kolkata. In collaboration with the International Statistical Institute, he established an International Statistical Education Centre at the Indian Statistical Institute. Many of our great statisticians have been products of this institutional legacy left by Prof. Mahalanobis.

Mahalanobis's contribution to large scale sample surveys is among his most significant and lasting gifts to statistics. He started his work on sample surveys with estimation of area and yield of jute crop in Bengal in 1937. However, it was not easy for him to get these estimates accepted. Ultimately he was able to demonstrate that estimates based on sample surveys were often more accurate than those based on complete enumeration, and that sample surveys could yield estimates with small margins of error within a short time and at a smaller cost than complete enumeration. He made many methodological contributions to survey sampling. Mahalanobis's concept of pilot surveys was a forerunner of sequential sampling developed by Abraham Wald, as acknowledged by Wald himself in his book. In addition to introducing these concepts, Mahalanobis raised important and difficult philosophical questions on randomness and representativeness of a sample, which remain relevant and challenging even today.

He was elected Chairman of the United Nations Subcommission on Statistical Sampling in 1947, and held the post till 1951. His tireless advocacy of the usefulness of sample surveys resulted in the final recommendation of this Subcommission that sampling methods should be extended to all part of the world. Mahalanobis received the Weldon Medal from Oxford University in 1944 and was elected a Fellow of the Royal Society, London, in 1945, for his fundamental contributions to Statistics, particularly in the area of large-scale sample surveys.

As an architect of India's economic planning models he realized early that the models developed for advanced countries might not be applicable to India. He, therefore, developed completely new approaches, which are now known as Mahalanobis two-sector and four sector models of economic development. He also recognized that the data needs of our country could not be met through conventional methods. India is too large and diverse to be amenable to simple data collection systems.

Professor Mahalanobis therefore responded by creating two strong pillars of the Indian Statistical system, namely the Central Statistical Organisation and the National Sample Survey Organisation. These two organizations have brought India on the world map of official Statistics. The credit must go to the Indian Statisticians manning these organizations who have managed to cover such a vast country and consistently produce credible data for the planning and policy needs of the country. I understand the last Economic Census conducted in 2005 has shown to the world that India can conduct such a gigantic Statistical exercise visiting 211 million households and 42 million establishments without any legal backing and with limited resources. No other country even comes close to such magnitudes.

However, meeting our domestic data needs is no longer sufficient. In a world which is rapidly getting integrated and where major issues of a global nature are becoming increasingly more important, it is incumbent for our statistical system to generate data which are necessary to undertake analysis and to facilitate policy decisions in a multilateral framework. Environmental degradation, climate change and its concomitant effects, disaster management, and global food and energy security are only a few examples of such imperatives that have come to the fore in recent years. India has a particularly important role to play in this regard, since many developing countries look to us for providing standards and methodologies which reflect the specific conditions of developing countries and which can be met within the limits of our resource constraints. This is a responsibility we cannot shirk. I am confident that Indian statisticians will again rise to the challenge as they have done so many times in the past.

In today's international environment, characterized by rapidly increasing interdependence between countries, especially with the advent of information and communication technologies, the demands being placed on statistical systems are growing apace. The role of Statisticians has consequently undergone major changes during last two decades. In earlier years, various international or multilateral organizations like the United Nations, International Monetary Fund, World Bank etc. played a key role in evolving the contours of international statistical developments. In recent years, however, many regional statistical groups also have come up like EUROSTAT, OECD, AFRISTAT etc., which seek not only to meet the needs of their economic groupings but also to influence the future course of international data flows.

We cannot be impervious to these developments, since they have a bearing on the course of strategic engagements all across the world in the future. In such a situation, the first condition for the efficiency and sustainability of any statistical authority is to define a clear vision of the role of statistics in decision-making in its widest sense and the strengthening of capacities to anticipate and evaluate emerging trends in the statistics arena. This is indispensable for the strategic processing of new demands for statistical data and information and to ensure that we protect our long-term interests. I am happy that India took a lead role in creation of SAARCSTAT - a statistical cooperation group under the aegis of SAARC Secretariat - for raising the quality of official statistics and harmonization of statistical system in this region.

During 14th SAARC Summit, this point was emphasized by Heads of States when they met at SAARC Retreat.

It is, therefore, necessary for the National Statistical Organisation to develop a strategic framework and plans for the development of statistical capacity and infrastructure, which will be sufficiently robust, stable and independent to respond to these challenges. It will also be necessary to ensure that the entire range of statistical agencies in Central Ministries and States, which operate in our federal framework, are sensitised to the strategic aspects of data and information flows.

Ladies & Gentlemen,

The primary statistical function to be fulfilled in this framework will of course continue to be the production of reliable, relevant and timely data for the formulation and monitoring of policies in the interests of the poor and the most vulnerable groups. It will also have to facilitate decision-making, coordination of available resources and detection of financial and institutional obstacles.

The National Statistical Commission, under the chairmanship of Dr. C. Rangarajan had already gone into these issues pointing to the imperative need to improve credibility, timeliness and accuracy of our data system. Much has been accomplished, but much remains to be done. More importantly, in this fast changing world, reform and restructuring of our statistical system cannot be a one-time exercise.

Our government also firmly believes in transparency and openness. Reliable and timely statistics is a basic requirement for this. Accordingly, to meet

both these requirements, we have set up a nodal body - the National Statistical Commission - to oversee all core statistical activities in the country.

The Commission has a wide mandate. It would oversee the design and implementation of strategies for collection, analysis and dissemination of core statistics as per a standardized advance release calendar. Besides implementation of a comprehensive nationwide programme for capacity creation in collection and analysis of data, its mandate also includes implementation of strategies for improving the quality of statistics, enforcing appropriate standards, encouraging the use of statistical analysis in policy formulation and increasing public awareness of Official Statistics.

I am aware that the Statistical system is already overburdened in view of ever-increasing data needs. The CSO deserves special commendation for taking up new emerging areas of work like Cost of Price Index for Urban sector, Natural Resource Accounting, and Disaster Management Statistics for policy, planning, analysis and advocacy. The NSSO has more than ably supported these initiatives through the collection of primary data on an ever-expanding range of issues. But we cannot rest on our laurels. New demands will arise, and we will have to meet them in the best way we can. New theories and innovative approaches will have to be developed to cope with the demands within the resources available to us.

As I understand it, a major problem confronting the official statistical system now is paucity of proper manpower at all levels. Today there is hardly any science or academic discipline be it medicine, engineering, finance, business, sociology, anthropology or information technology which is in some way not dependant upon statistics and statisticians. It is therefore no wonder that the globalized knowledge regime is attracting large number of students of statistics in other fields like information technology etc.

In this context, the role of the Ministry of Statistics and Programme Implementation has become all the more critical to ensure that at least the basic minimum number of statisticians are drawn into and retained within the official system. As a matter of fact, it is extremely necessary to develop a high level human resource development programme for the Indian Statisticians not only at the Central level but also in the States. I am happy to know that the Central Statistical Organisation has set up a National Academy for Statistical Administration (NASA) for human resource development for Indian Statisticians and also for the Statisticians of other developing countries.

India is one of the very few countries where the Statistics Ministry has total transparency and makes the micro level data available to the public. India has succeeded in creating long time series of data about its people and their standard of living. No other developed, developing or undeveloped country has such a wealth of statistical information as India has about its people. This huge wealth of data is the handiwork of an army of Statistical Investigators working under the fold of the NSSO. Over the years, in other important sectors like health and education, a number of large scale surveys have been introduced. What is important about the findings of these data is their credibility. For the sake of ensuring credibility of statistics, Prof. P. C. Mahalanobis used to emphasize on statistical craftsmanship. The skill of data collection and validation is something, which cannot be fully replaced by the use of modern gadgets. With the increase of demand for diversified statistical products and owing to the needs of globalization, the statistical system has to develop its base right from the village level. The existing institutional mechanism has, therefore, to harness the skill of statistical work from beyond limited scope of colleges and universities.

I have great expectations from the outcome of the "Statistics Day" celebrations through out the country and look forward keenly to the development of Indian Statistical System to meet the growing needs of the society.

I would also like to express my gratitude to the Prime Minister, who, while visiting Indian Statistical Institute, accepted our request to observe the birth anniversary of Prof. Mahalanobis as "Statistics Day".

Thank You.

038. Speech of Minister of Petroleum and Natural Gas Murli Deora at the 18th World Petroleum Congress on "Energizing India for sustainable growth".

Madrid, July 3, 2008.

I am delighted to be present in this historic city of Madrid with professionals of oil and gas sector from all over the world sharing ideas on the challenges facing us.

2. India's population has crossed the 1 billion mark. To maintain high growth rate of the economy, we need substantial amount of oil and natural gas.
3. India is currently world's fifth largest consumer of energy and accounts for nearly 3.5% of world's energy consumption. Our consumption of oil has been on the increase. Till the mid of 80s, we had been self-sufficient to the extent of 70% in oil. Today we are importing around 75% of our oil requirements.
4. A small section of the oil analysts has been ascribing the relentless rise in crude prices in recent months to the spurt in demand for oil from India and China. I wish to take this opportunity to set the record straight. While China and India account for over one-third of the global population, their combined oil consumption is less than one-eighth of the world's consumption. And, with steadily declining energy intensity, both our countries are registering rapid economic growth with less than proportionate increase in oil demand. And their high rates of economic growth are a significant factor in ensuring stable and orderly growth of the world economy. India's refining capacity today stands higher than our oil demand. This has a sobering effect on the product prices by reducing the mismatch between product demand and supply. Given these facts, we are of the firm view that attribution of high crude prices to rising demand from India and China is completely devoid of merit and misses the wood for the trees.
5. Economic growth rate of 9% to 10% calls for rapid development of energy market. India's energy needs are growing as income levels and population are both rising. Our main focus is to enhance energy security for the country. Government of India and Oil Companies have taken several steps to enhance energy security for the country, which include :

- (a) increasing exploration and production activities in the country
 - (b) acquiring oil and gas assets abroad
 - (c) development of alternate sources of oil and gas
 - (d) strategic storage of crude oil
 - (e) conservation of oil and implementation of environment friendly Policies.
6. The development of E&P sector has been significantly boosted through the New Exploration Licensing Policy of Government of India, which ushered in major liberalization in the sector and opened it up to for private and foreign investment, where 100% Foreign Direct Investment (FDI) is allowed. Before implementing new exploration licensing policy (NELP), 11% of Indian sedimentary basins was under exploration which has now been increased to cover 44% of Indian sedimentary basins. In the next four years, it is planned to increase coverage of 80% of total Indian sedimentary basins. By 2015, entire area of Indian sedimentary basins is likely to be under exploration.
7. Under NELP, licenses for exploration are being awarded only through a competitive bidding system. Six rounds of bids have so far been completed under NELP, in which 162 exploration blocks have been awarded. 60 oil and gas discoveries have already been made in onland and offshore areas including deepwater, for which development plans by the operators are in progress. In India, apart from the two national oil companies, ONGC & OIL, more than two dozen foreign companies are working in E&P sector including global majors like BG, BP, ENI, Petrobras, Santos, Cairn and NIKO.
8. With recent exploration and development efforts under way in India, Crude oil production is likely to increase by over 30% in the next five years. Similarly, by year 2012 natural gas production will more than double from the present level of about 90 million standard cubic metres per day (MMSCMD). The seventh round of NELP has been very successful as 96 companies including 21 foreign companies, have submitted 181 bids for 45 exploration blocks. We will be awarding these blocks shortly.
9. In view of unfavourable demand - supply balance of hydrocarbons in the country, acquiring equity oil and gas assets overseas is one of the important components of enhancing energy security. The

Government is encouraging Oil PSUs, ONGC Videsh Limited and others to aggressively pursue equity oil and gas opportunities overseas. In addition, private companies such as Reliance Industries Limited, Essar and Videocon are also investing on overseas E&P assets. Indian companies now have presence in 22 countries. ONGC Videsh Ltd. (OVL) has made an investment commitment of over US\$ 7 Billion and had an oil and gas production of 8.92 million tonnes in the year 2007-08.

10. Ensuring uninterrupted availability of petroleum products is essential for sustained economic growth. To achieve this, in the downstream sector, India has doubled its refining capacity in last 10 years.
11. India's geographical location between East Asia and the Middle East makes it ideally placed to emerge as an export hub for the growing Asia Pacific market. Our product exports have soared more than 10 times, from 2.4 MMT in 1997-98 to over 32 MMT in 2007-08, with foreign exchange earnings of about US\$ 26 billion. Over the next four years, Indian downstream companies, both public and private, are poised to set up new refineries that will enhance capacity by an additional 90 MMT, with a cumulative investment of US\$ 22 billion. We are committed to increasing the product availability for the domestic market and also meeting the requirements of the export market.
12. Holding the price line of life-line fuels is important from the point of view of ensuring equitable access to the weaker sections of the society, in the interest of inclusive growth. To protect the domestic economy from the inflationary impact of high oil prices, we have taken steps to stabilize the retail selling prices of life line fuels so that the weaker sections of the society are not affected. The issue of subsidy on life-line fuels is a sensitive one. While we agree that fuel subsidies may have a negative impact on the energy market in the long run, the current volatility in the international oil prices and its potential for destabilizing emerging economies, makes States' intervention in pricing of life-line fuels inevitable.
13. The national endeavour to bridge the ever-increasing gap between demand and supply of petroleum products in India by intensifying exploratory efforts for oil and gas in the Indian sedimentary basins and abroad need to be supported by other alternate sources of energy like Coal Bed Methane, Gas Hydrates, Coal Liquefaction,

Ethanol and bio-diesel etc. I am happy to inform you that the first CBM gas production from one CBM block in India has commenced in July 2007.

14. Towards other efforts for energy security, Government is pursuing Iran-Pakistan-India (IPI) Gas Pipeline, Turkmenistan-Afghanistan-Pakistan-India (TAPI) Gas Pipeline and Myanmar-India Gas Pipeline Projects.
15. Creation of proper gas infrastructure network is crucial to evacuate the gas produced from the field. Presently GAIL is operating about 6170 km gas pipeline and authorization for laying additional pipeline of about 3400 km has already been issued. In addition Reliance Gas Transportation Infrastructure Limited (RGTIL) has plan of laying gas pipeline of 1386 km from Kakinada to Ahmedabad. RGTIL has also been given authorization for laying another four pipelines with total length of 2875 km.
16. The continuous rise in crude oil price in the last ten years is not sustainable over longer period. Now, time is ripe to find out new technologies, which are harmonious to economic growth and environment friendly as well. In this regard, developed countries should take pro active actions in order to meet the growing energy demand of the world.
17. In India, we do believe in knowledge sharing for the benefit of people and harnessing natural resources judiciously while protecting the environment. We should employ the technology which is environmentally sensitive and socially acceptable. We should not forget the fact that the environment we are enjoying today belongs to future generations and we are custodians of these environs which must be handed over to our progeny with no damage whatsoever.
18. We would need to form strategic alliances and investments from major global players for technology, services and resources. Forums like WPC offer tremendous scope not only to discuss areas of mutual interest but also for paving the way for firming up alliances.
19. I am sure that WPC will offer enough opportunities for technological understanding and networking with people and companies for mutual benefit. I am also confident that the Council will come out with sustainable solutions for the overall benefit of the hydrocarbon sector.

20. With these words, I wish great success for the 19th World Petroleum Congress and fruitful outcome of the discussions and deliberations.

Thank you.

039. Speech by External Affairs Minister Pranab Mukherjee at the Post Graduate Institute for Medical Education and Research XXIX Convocation, 2008.

Chandigarh, July 18, 2008.

Dr. Anbumani Ramadoss, Minister for Health & family Welfare & President PGIMER

His Excellency Shri A.R Kidwai, Hon'ble Governor of Haryana

His Excellency Genl. S.F. Rodrigues, (Retd) Hon'ble Governor of Punjab

Shri Parkash Singh Badal, Hon'ble Chief Minister of Punjab

Members of Parliament & State Legislature

Dr. K.K. Talwar, Director PGIMER, Chandigarh

Members of the faculty

Students

Distinguished Guests,

Ladies & Gentlemen,

It is my privilege to be here in one of India's most prestigious medical institutions, on the occasion of its Convocation Day. The Convocation Day of any institution is the most important day in its calendar, because it symbolizes the very purpose of the existence of that institution. Today, 287 students have received their post-graduate and doctoral degrees in various specialties and super-specialties and many of them would be leaving the portals of this institute to start a career. I congratulate you all for your achievements and wish for a bright future. I also take this opportunity to congratulate the esteemed faculty of the Post-Graduate Institute for Medical Education and Research (PGIMER) for successfully training yet another batch of students, who will disperse and spread the fame of PGI. It is indeed a proud day for all of you.

Getting a degree is not the end of the road, it is only the beginning. Medical science is probably the most vast, complex and impermanent of the sciences. The ancient Indian physician, Charaka had said to his fellow-physicians: "Always strive to acquire more knowledge, for there is no end to medical science. And even if possessed of sufficient knowledge, you should not boast of that knowledge, because it will ultimately give way to new knowledge." It is a measure of the wisdom of our ancient predecessors that around 2000 years after they were written, these lines continue to be so true.

Our country has seen considerable improvement in health standards over the last six decades. The indicators for life expectancy, child mortality, infant mortality and maternal mortality have continuously shown encouraging trends. Small pox and guinea worm have been eradicated and there is hope that poliomyelitis will be contained in the near future. Recent studies show that the Infant Mortality Rate is now 57 per 1000 live births, down from 72 per 1000 live births a decade back. Although the overall fertility rate stands at 2.7 children per woman, there are 10 states where the replacement level fertility rate of 2.1 has already been achieved. Similarly, urban India has already achieved the replacement level fertility rate of 2:1.

Nevertheless, problems abound. Malnutrition affects a large proportion of children. An unacceptably high proportion of the population continues to suffer and die from new diseases which are emerging apart from continuing and new threats posed by the existing ones. Pregnancy and childbirth related complications also contribute to the suffering and mortality.

The National Rural Health Mission (NRHM) was launched in April 2005 by the UPA government to address the gaps in health infrastructure and human resources. This envisages a generic public health delivery system from village to block level. The Mission aims to provide universal access to equitable, affordable and quality health care which is accountable and at the same time responsive to the needs of the people. The Mission is also expected to achieve the goals set under the National Health Policy and the Millennium Development Goals. NRHM facilitates increased access and utilization of quality health services by all, forge a partnership between the Central, State and the local governments. It provides a platform for involving the PRIs and the community in the management of primary health programmes and infrastructure and furthers the opportunity for promoting equity and social justice. The urban areas will also need a similar strategy.

Distinguished Participants,

Access to health services by the poor remains a big challenge. The strong link between poverty and ill health needs to be recognized. The onset of a long and expensive illness can drive the non-poor into poverty. Ill health creates immense stress even among those who are financially secure. High health care costs can lead to entry into or exacerbation of poverty. The importance of public provisioning of quality health care to enable access to affordable and reliable health services cannot be underestimated. This is specially so, in the context of preventing the nonpoor from entering into poverty or in terms of reducing the suffering of those who are already below poverty line. The recently launched Rashtriya Swasthya Bima yojana will provide family health cover of Rs. 30,000 to every unorganized sector worker living below the poverty line.

Availability of appropriate and adequately trained human resources is an essential concomitant of Rural Health Infrastructure. Across rural areas, there are considerable shortfalls plus a large number of vacant positions of doctors, nurses and paramedical personnel. There is also wide variation in number of persons served by a specialist in rural areas. A large proportion of population is visiting private providers for their health care needs. The challenge is to resolve these problems and provide the poor access to affordable public health services.

The government, under the Pradhan Mantri Swasthya Suraksha Yojana, has undertaken to establish six new medical institutions with 850-bed hospitals and upgradation of 13 existing medical institutions on lines of AIIMS to provide quality health care and medical education in poorly served States. Construction work has already started in seven existing medical institutions and will begin soon for the new ones.

The Eleventh Five Year Plan commits itself to provide accountable, accessible and affordable system of quality health services. One of the prime objectives of the Plan is to achieve good health for people, especially the poor and the underprivileged. In order to do this, it is guided by a comprehensive approach which encompasses individual health care, public health, sanitation, clean drinking water, access to food and knowledge of hygiene and feeding practices. To achieve these objectives, aggregate spending on health by the Centre and the States will be increased significantly to strengthen the capacity of the public health system to do a better job. The 10th Plan allocation for health was Rs. 42,000 crore. The 11th Plan envisages tripling the allocation,

which shows the determination and priority that the Government attaches to the health sector. Contribution of the private sector in providing primary, secondary and tertiary services will be enhanced through various measures including partnership with the Government.

Distinguished Participants,

During the 14th SAARC Summit held in New Delhi from 3-4 April 2007 the leaders of SAARC Member States urged for early implementation of the telemedicine project in the region. In line with its commitment to discharge its responsibilities in a non-reciprocal manner, India has taken the lead in setting up the project. It is proposed that three super speciality hospitals in India will provide telemedicine services to designated hospitals in SAARC Member States. I am happy to note that PGIMER has been chosen to provide telemedicine services in the first phase of the SAARC telemedicine project. Agreements have been signed with Telecommunications Consultants India Limited for implementing the project in Bhutan and Sri Lanka. Assessment visits by a team from Government of India to all Member States have taken place. Memorandums of Understanding have been signed between Government of India and Governments of Bhutan and Sri Lanka regarding the project. Telemedicine services to Bhutan are likely to begin in September 2008 followed by Sri Lanka and other SAARC countries.

It has been decided to set up a SAARC Development Fund as an umbrella body to fund development projects in the region. The Agreement for setting up the Fund will be signed during the 15th SAARC Summit in Sri Lanka from 2-3 August 2008. India has shared concept papers with SAARC Member States on implementing projects in the areas of setting up of blood banks, Sick Newborn Care Units, cold chain in routine immunization and training programmes in the areas of obstetric care and AIDS. To begin with, the projects will be implemented by an interim cell set up at the SAARC Secretariat. To show its commitment towards early operationalization of the Fund India has paid USD 19.2 million out of its assessed contribution of about USD 100 million to the SAARC Secretariat.

Distinguished participants,

The youth of today in India is full of hopes, aspirations, energy and ideals. They are part of a generation that is living in historic times. I believe that posterity will judge the initial decades of the third millennium as one that changed India's destiny forever. We have seen India emerge as software giant on the global stage, as an elite member of the space club, as the most

avored destination for medical tourism and as a hub for biotechnology industries. Today, India is gaining strength not just because of its booming economy and its strategic might but because of its so-called "soft power". Some of our most popular exports today are our festivals, our movies, our culture, our cuisine and our authors. You, the students of today, have the unique privilege of starting your professional lives in this new, confident and effervescent India.

How has all this change occurred and why is the world standing up to take note of India? One very important reason is that unlike what happened in many third world nations after independence, India gave importance and respect to her institutions. We, the people, have continued to respect our democratic traditions and institutions that uphold a semblance of order in public life. We have nurtured and taken pride in our institutions. The Postgraduate Institute of Medical Education and Research (PGIMER) at Chandigarh is a shining example of the same. It ranks amongst the foremost institutes of India. This culture of respecting institutions was given primacy by none other than our first Prime Minister, Pandit Jawaharlal Nehru, in whose honour the main hospital building is named.

Our doctors have a responsibility. They must remember that the science and art of medicine is learnt from the bodies and minds of the poor and underprivileged. It is from the unclaimed dead body of a wretched man that you learn anatomy dissection; it is from the poor patient lying in the general ward that you learn your clinical and surgical skills. Ask yourself, how many times have you spoken rudely to a shabbily dressed patient because you thought you would get away with it, whereas you reserved your sweetest behavior for a well dressed affluent patient? Remember, the wound caused by a surgical blade will ultimately heal, but not the scar left by the tongue. Since you have learnt medicine by virtue of the poor, you need to give back something to this stratum of society. To those of you who are planning to join private and corporate hospitals, I will implore you to keep aside a part of your time for those who cannot afford your fees. Your standard of living is not going to impact by this gesture. The twin destinations of self-interest and societal interest are not mutually exclusive. Some of the richest people in the world have also been the greatest philanthropists.

I am well aware that the Faculty of PGIMER is among the best in India, and comparable to many in the world. They have continued to do research, teach students and take care of patients under trying circumstances. I am no expert on the health research priorities of India, but as a lay person, I would urge the faculty to focus their energies on answering the

health needs of this country. We need a lot more grass-roots research on the epidemiology of our diseases, on infections, on nutrition and its interaction with disease processes, on simplified treatment regimens, and so on. I am sure that well conducted studies on large number of patients on these aspects would attract international attention and would get published in leading journals. Others are not going to solve our health problems for us.

We also have a vast and ancient system of traditional medicine that has stood the test of time. It is not the fault of this ancient system, that it is not based on evidence as per modern norms. It is the duty of institutes like this to collaborate, investigate and inform us all about which among the many traditional medicines have a scientific basis for usage. I am told that China performs much more scientific research on their traditional herbs than what we do. It would be a pity if some day, researchers in other countries perform scientific trials on our herbs and teach us what we were supposed to know all along. I am glad to hear that PGIMER has taken steps in this regard.

Doctors can have tremendous influence on society. I remember the legendary doctor; Dr. Bidhan Chandra Roy, who had an amazing influence on his patients as well on the political life of this country and who could be an ideal for most of you. He was the founder of the Indian Medical Association, a Bharat Ratna recipient, an exemplary politician and the Chief Minister of West Bengal, all rolled into one. Doctors' Day is observed on 1st July each year on his birth anniversary and the prestigious BC Roy awards are instituted in his name. It would surprise you to know that he continued seeing patients even after he became Chief Minister. One humorous side of his personality was that he managed to defuse many agitations and strike by meeting their leaders, diagnosing their illnesses in the course of negotiations and converting them from bitter opponents into grateful patients! Dr BC Roy continued serving humanity till his death.

Service to society is something which is integral, and not incidental, to a doctor's calling. I salute all of you who have chosen this noble profession. I would like to end with the poignant words of Gurdev Rabindranath Tagore. He said:

"I slept and dreamt that life was joy. I awoke and found that life was service. I acted and discovered that service was joy."

Thank you.

**040. Speech by External Affairs Minister Pranab Mukherjee
at the Engineering Export Promotion Council on the
occasion of All India Award Presentation.**

New Delhi, August 9, 2008.

Chairman Shri Rakesh Shah, Chairman, EEPC

Shri G.D. Shah, former Chairman, EEPC

Members on the Dais,

Distinguished Award Winners,

Ladies and Gentlemen,

At the outset, I regret for my delay. By grace of God and magnanimity of all Congress Prime Ministers since 1970's, I was given important & critical portfolios, in which capacities I had been present amongst you all on such occasions.

It is my pleasure to be amongst you all on this occasion of All India Export Excellence Award presentation function of the Engineering Export Promotion Council (EEPC) of India for the year 2006-07. I am also happy to know that Engineering exporting community of India has made substantive contribution in projecting India's image as a producer of high quality engineering goods. Quarter century ago, I had initiated reforms & felt need to push exports.

At the outset, I congratulate all the Award Winners for their outstanding export performance during the year 2006-07. In this very year, engineering exports were to the tune of USD 26.49 billion out of total exports of USD 126.26 billion accounting for 20.98% of India's total exports. Thus making engineering goods as the largest foreign exchange earner among merchandise goods. Today's Award Winners can, therefore, justifiably claim credit for this achievement and I am extremely proud of the efforts made by you all in promoting "Brand India" worldwide.

I would also like to take this opportunity to hail the efforts, in particular, of those members of the Council who are from Small and Medium Scale sector for their spectacular performance and their continuous effort to show case their engineering skills abroad. This sector employs an estimated 31 million persons spread over 12.8 million enterprises. This labour intensity in the MSE sector is pivotal to inclusive growth.

I am aware that Indian exporters were severely impacted by the appreciation of the Indian Rupee against the US dollar. To mitigate their problem, Government took series of measures, like the enhancement of certain export benefits, interest subvention and the use of the market stabilization scheme by RBI to sterilize the inflows.

Your Chairman has brought out the problems being faced by the engineering exporters in the country. The price of engineering raw materials like steel, pig iron and other metals have increased substantially resulting in the imposition of export duty on many steel items. Here I would like to mention that Government response has to be calibrated since the interests of both manufacturers and users of engineering raw materials has to be kept in mind in formulating policies.

It is also true that our trade infrastructure needs to be upgraded to meet the growing trade volumes of the country. One must appreciate that within a span of 16 years India's trade as a percentage of GDP has increased from 14% in 1990-91 to 34% in 2006-07. This is bound to strain the infrastructure. The Government is aware of this and is doing its best under the circumstances to upgrade the infrastructure keeping in mind the needs of the country over a longer period of time. The Core Committee set up under the Cabinet Secretary would ensure implementation of schemes taken up for improvement of infrastructure.

On the fiscal side, I think much has been done and will continue in the days ahead. There is the problem of refund of taxes on goods being exported, both at the central and state level. I do believe that with the introduction of the Goods and Service Tax (GST) in 2010, much of the problem will be sorted out, particularly with taxes at the State level. Some of the suggestions of your Chairman will be considered by the Government and appropriate steps will be initiated at the earliest possible time.

The dynamics of global trade has thrown up considerable challenges for the participants in the international trading system. The recent deadlock at Geneva over the Doha Negotiations points to the difficulties in liberalizing trade notwithstanding the commitments made by the Developed world over the present negotiations being a "Development Round". India has always been a believer in multilateralism and a supporter of trade liberalization under the auspices of the WTO. This should not, however, blind us to the other reality of our country. India has nearly 300 million people below the poverty line. We would always ensure our country's legitimate food security concerns

protection of livelihoods of rural communities. No compromise can be made on these issues.

I must applaud the EEPC for re-focusing their area of operations from being merely an export promotion organization to a premier trade promoting organization of the country. India is a country with tremendous manufacturing capability and there is, therefore, no reason to adopt mercantilist approaches to the world at large in this context. A country which imports has a greater capacity to export value added products. The new EEPC Logo which I have had the privilege to release today will carry this message far and wide and ensure that the foreign trade sector plays an important role in wealth creation and employment generation.

Before I conclude, I am tempted to small part of speech of your Chairman that not only we require change of law but of mindset/culture/attitude. I belong to generation of your Chairman's father. When I look at the younger generation like your Chairman I am confident that they are set to conquer world and India will be net investor in U.K. in future. With leadership of present Commerce Secretary, I am confident that I will achieve the target.

To conclude, let me congratulate the Award Winners, once again, for their achievements and do hope that they will achieve many milestones in the years ahead. India is a country of great diversity and resilience. The latent skills of its people are what make this country march ahead despite the challenges faced by us. I am sure that the members of EEPC will successfully face the challenges of the present times and move forward as in the past.

Thank you.

041. Press Release of the Ministry of External Affairs on the Fourth Meeting of the Nalanda Mentor Group.

New Delhi, August 13, 2008.

The Nalanda Mentor Group held its Fourth Meeting in New Delhi on 12 - 13 August 2008. The Mentor Group reviewed the developments since its last meeting in New York in May 2008.

The following issues were discussed in the Meeting.

The Group reiterated the objective of the Nalanda University to provide contemporary studies in philosophy, history, business & management, languages and literature, ecology & environment, international relations, among others.

The Group also discussed the legal and financial framework necessary for setting up of the Nalanda University.

The Group reaffirmed that the Nalanda University should be a unique place of learning, of high scholarship, centre of academic excellence, aimed at becoming one of the best universities in the world meant for high calibre students and scholars. The Group felt that while the Nalanda University will be located in the state of Bihar proximate to the site of the ancient university, one of the six schools would be based in New Delhi.

The report of the Group will be finalized by the time of the EAS Summit to be held in Bangkok in December, 2008. Once it is adopted, Government of India will proceed with the necessary legal framework.

The Group unanimously adopted to use the 'Nalanda Seal' in the emblem of Nalanda University.

The Group considered the views of the experts from academia and commerce & industry and agreed to incorporate suggestions on public-private partnership, connectivity, distinctiveness, to attract the best international students and faculty members. There was emphasis on creation of physical infrastructure as a 'green campus'.

The External Affairs Minister hosted a dinner for the Members of the Nalanda Mentor Group on 12th August, 2008. The group interacted with the former president of India, Dr. A.P. Abdul Kalam and the Chief Minister of Bihar, Shri Nitish Kumar on 13th August, 2008. The Group called on the Prime Minister

and conveyed the extent of progress made thus far on the Nalanda University Project.

The Group decided to visit the Nalanda University site in early 2009.

042. Extract from the speech of Prime Minister Dr. Manmohan Singh delivered from Red Fort on the occasion of the Independence Day.

Delhi, August 15, 2008.

My dear countrymen, brothers, sisters and my dear children

Greetings to all of you on this happy occasion of our Independence Day. This is a sacred day for every Indian. Today we remember the sacrifice of those who under the leadership of Mahatma Gandhi fought for our freedom from foreign rule. Today we remember the hard work and dedication of all those who have toiled to build a free and modern India. And we re-dedicate ourselves to that cause. We remember our farmers, our workers and our teachers. We remember our soldiers - who defend our borders in snowy mountains, in deserts, in jungles, on the shores and in the oceans.

* * * *

Four years ago I stood here and said to you that I have no promises to make, but I have promises to keep. The implementation of the National Common Minimum Programme, was our promise to keep;

To give a "new deal to rural India", was our promise to keep;

To make our economy and society inclusive was our promise to keep;

To take India to its rightful place in the comity of nations, was our promise to keep;

* * * *

India's atomic scientists and technologists are world class. They have developed nuclear energy capacities despite heavy odds. But there are handicaps which have adversely affected our atomic energy programme. We have inadequate production of uranium. The quality of our uranium resources is not comparable to those of other producers. Many countries

have imposed sanctions on trade with India in nuclear materials, nuclear equipment and nuclear technology. As a result, our nuclear energy programme has suffered.

The nuclear agreement that we are negotiating with developed countries will end India's nuclear isolation. It will open up new opportunities for trade in dual-use high technologies and nuclear materials and equipment, opening up new pathways to accelerate industrialization of our country. It will enable us to provide electricity to meet the needs of our farmers, our artisans, our traders and our industry.

* * * *

Terrorism, extremism, communalism and fundamentalism have emerged as major challenges to the unity and integrity of our country. The recent terrorist attacks in Bangalore, Ahmedabad, Jaipur and other parts of the country have shocked the nation. What words can I find to condemn such acts of barbarism. I share the sorrow and grief of people affected by terrorism. The Government of India will take concrete steps to rehabilitate and help such families.

I commend our security forces and intelligence agencies for the dedication with which they are dealing with the problem under difficult circumstances. But I agree that we have to further strengthen our intelligence agencies and police forces to deal with the problem of terrorism.

We will examine the functioning of our intelligence agencies and police and security forces and take all possible steps to equip them to tackle this challenge. Whatever resources are required, will be provided. Whatever manpower is required will be provided. We are firm in our resolve to meet the challenge of terrorism. I urge the State Governments, all political parties, civil society groups and social and religious leaders to cooperate with us in rooting out terrorism from our country.

* * * *

Our ancient Himalayas are under environmental threat. If the Himalayan glaciers recede, the flow of water in our sacred rivers will go down. Climate change can disrupt our economy in several ways. Some of our coastal areas could be submerged. Our monsoon pattern may change. We need long term solutions to such threats. A national consensus is also required for the Government to evolve effective policies to deal with these problems.

Our Government has come forward with a National Action Plan on Climate Change. This plan shows how each of us must adapt our ways of working and living and how we must treat our natural resources, so that our carbon emissions remain within reasonable limits and our environment is protected.

My fellow countrymen,

Our goal in South Asia is to seek a peaceful, stable and prosperous neighbourhood. We seek to accelerate the pace of social and economic development in our country and our region, while safeguarding our national security. Our foreign policy has been based on these principles.

We wish all our neighbours well. We welcome the strengthening of democratic forces in our neighbourhood, especially in Bhutan, Nepal and Pakistan. The recent blasts in our Embassy in Kabul have cast a shadow over our efforts to normalize relations with Pakistan and to bring a lasting and honourable peace in our region. I have personally conveyed my concern and disappointment to the Government of Pakistan.

If this issue of terrorism is not addressed, all the good intentions that we have for our two peoples to live in peace and harmony will be negated. We will not be able to pursue the peace initiatives we want to take. The terrorists and those who support them are enemies of the people of India and Pakistan, of friendship between the two countries and of peace in the region and the world. We must defeat them.

In the last year we have strengthened our relations with the major powers, Latin American countries, Arab countries and African countries. We will continue our efforts in this direction, keeping in view our national interests.

India is today viewed with respect as one of the world's fastest growing economies. People of Indian Origin are engaged in diverse activities around the world and their capabilities are recognized the world over. Their achievements inspire us. The world today expects India to regain its due place in the comity of nations. This is a moment of opportunity for us.

We are rapidly marching forward to regain our rightful place in the comity of nations. But to reach that goal we have a lot of work to do at home. We have to overcome each of the challenges I have spoken about. We have to forge a greater unity of purpose between various political parties, between different communities, between all sections of our society, rich and poor.

043. Inaugural Address by External Affairs Minister Pranab Mukherjee at the 26th Health Ministers' meeting and the 61st Regional Committee Session of South East Asia Region of the World Health Organisation.

New Delhi, September 8, 2008.

Excellencies,

Distinguished Delegates,

Ladies and Gentlemen.

On behalf of the people and the Government of India, I warmly welcome you all to the Twenty-sixth Meeting of the Ministers of Health and the 61st Regional Committee Session of WHO's South-East Asia Region. We are delighted that India is hosting this significant event. It is also a great privilege to address this august forum which provides an opportunity to all of us not only to visit the public health agenda but also reaffirm our commitment and renew our efforts. The importance of this Meet is underscored by the fact that we have with us a number of international experts and leaders in the field of health from countries of the Region. We look forward to gaining new knowledge in examining many health issues in depth through your discussions.

The South East Asia Region is home to more than a quarter of the world's population, with almost 30 % of the global disease burden. The countries of this region, many of them being economies in transition, bear the irony that on one hand we have strong economic growth leading to prosperity of the people as never before; on the other, sustenance of growth momentum is threatened by weak social sector indicators led by poverty, illiteracy, disease and ill-health. We are faced with existing prevalence of communicable diseases and non-communicable diseases. Our countries are faced with the unprecedented threats from emerging infectious diseases and the growing burden of chronic diseases. Negotiating a health care scenario with such diverse needs and demands requires a number of different thinking hats. I must compliment all of you for your achievements in bringing about a steady improvement in health care delivery in our region despite the many complexities and odds, not the least of which are the limited resources available.

The health sector is a very crucial sector and, being fundamental to overall socio-economic development, is a priority for any government. It is well

known that poverty and ill-health are closely correlated. Poor countries tend to have distinctly worse health outcomes than wealthier countries. Inequities in access to healthcare services exist across our nations. Therefore, cooperation in the field of Health & Medicine will further strengthen the friendly relations and deepen the historic ties that exist among our countries. Recognising the significant capabilities that exist in the South East Asia Region, we must step up collaboration amongst ourselves for promoting universal access to quality health care and affordable medicines.

Excellencies, Distinguished Delegates,

Your leadership of the health programmes in the region has been remarkable. That all of you operate in a very complex area can be gauged from the fact that the 60th Regional Committee for South East Asia held in Thimpu, Bhutan adopted ten resolutions on subjects as varied as Nutrition and Food Safety, Prevention and Control of Non-Communicable Diseases, Implementation of the New Stop TB Strategy, The Revised Malaria Control Strategy and International Migration of Health Personnel. I am given to understand that the progress so far has been positive and encouraging in most of these areas.

This time you will be deliberating upon emerging and important issues such as Climate Change & Health, Millennium Development Goals, Tobacco Control, Emerging and Re-emerging Vector-borne Diseases, Combating HIV / AIDS, Managing Human Resources, Counterfeit Drugs, Pandemic Influenza Preparedness, Re-vitalizing Primary Health Care and UN Reform Process & Health Partnerships. The achievements of technical programmes being run in these diverse areas with the resultant improvement in health indicators of our region are a tribute to the political commitment at the national level and the resources being made available by all our countries for the health sector.

Access to health services by the poor remains a big challenge. The strong link between poverty and ill health needs to be recognized. The onset of a long and expensive illness can drive the non-poor into poverty. Ill-health creates immense stress even among those who are financially secure. High health care costs can lead to entry into or exacerbation of poverty. The importance of public provisioning of quality health care to enable access to affordable and reliable health services cannot be underestimated. We must introduce innovative financing methods, so that healthcare is within the reach of all households. Poor people have to be empowered to enjoy access

to modern healthcare systems, more so because ill-health accentuates poverty.

The health sector in India is undergoing both quantitative and qualitative transformation. Our government's vision and persistent efforts have seen an unprecedented scaling up of health investments not only to control communicable and non-communicable diseases but also to expand and strengthen the primary and referral health care. There is more than two-fold increase in allocation over the Xth Five-Year Plan outlay for the Health & Family Welfare and Health Research, which now stands to US \$ 350.34 billion (Rs. 140135 crores) in the XI Plan. The National Rural Health Mission (NRHM) was launched in April 2005 by the Government of India to address the gaps in health infrastructure and human resources. This envisages a generic public health delivery system from the village level to specialised health care. The Mission aims to provide universal access to equitable, affordable and quality health care which is accountable and at the same time responsive to the needs of the people.

With the initiatives taken in the health sector, both the decadal birth and death rates have shown steady decline, having fallen from 33.9 % in 1980 to 23.8% in 2005 and from 12.5% to 7.6 % during the same period. Life expectancy has risen to 64 years. The total fertility rate (TFR) which was over 6 children per women in 1960 has declined to 2.8 in 2006. While nearly a quarter of deaths occur in those less than five years, child mortality has shown a decline in recent years, under five mortality rate falling from 125 in 1990 to 85 in 2005 (MDG Target 2015 - 41). The infant mortality rate fell from 80 to 57 during the same period (MDG Target 2015 - 27) and the maternal mortality ratio (per 100,000 live births) has declined from 437 to 301 (MDG Target 2015 - 109). The efforts being made under the National Rural Health Mission, especially on inter-sectoral convergence with the avowed aim of reducing maternal and infant mortality rates, will, I am sure, bear desired results and help accelerate progress towards achieving the Millennium Development Goals.

A serious challenge faced in the region is the undersupply of skilled health workers. Through capacity building and formal training all countries need to develop a skilled health workforce. Availability of appropriate and adequately trained human resources is an essential concomitant of Health Infrastructure. Although it is a known concept now, e-health or telemedicine has come to characterise as not only 'Internet medicine', but also virtually everything related to computers and medicine. The World Health Organisation (WHO) defines e-

health as: "The cost-effective and secure use of information and communications technologies in support of health and health-related fields, including services, surveillance, literature and education, knowledge and research."

The events, such as the one here today, reaffirm our commitment to fight the challenges together and come out with shared solutions. Of many such multi-lateral forums, one glowing example is our cooperation under the aegis of the South Asian Association for Regional Cooperation (SAARC). In keeping with its commitment at the 14th SAARC Summit held in New Delhi (3-4 April 2007) India is implementing a telemedicine project in the SAARC region under which super-speciality hospitals in India will provide telemedicine services to designated hospitals in Member States. The project is already being implemented in Bhutan and Sri Lanka and will be extended to other Member States. India's programme on telemedicine under SAARC can be replicated by adaptation to the South East Asia region under WHO.

The Charter for setting up the SAARC Development Fund to fund projects for socio-economic development of the region was signed during the 15th SAARC Summit in Colombo (2-3 August 2008). India intends to take up projects on maternal and child healthcare to be implemented under the Fund. The proposals relate to setting up blood banks, Sick Newborn Care Units, vaccine storage facilities and training programmes on HIV/AIDS and will be implemented shortly. Similar projects, I am sure, could also be considered as a part of our "Look East" policy.

Excellencies, Distinguished Delegates,

All the Member countries of the Region have rich experiences to share. These meetings can serve as an ideal stage for discussing the primary health issues of the Region. Through robust long-term cooperation, we must ensure that healthcare can be made available to all. I am confident that with the presence and participation of leading health experts such as Dr. Margaret Chan, Director General, WHO and Dr. Samlee Plianbangchang, Regional Director, South East Asia Region, the 26th Health Ministers' and 61st Regional Committee Meetings of the South East Asia Region will be constructive and conclude the agenda items with useful insights on meeting the new challenges emerging at various levels of governance to manage and deliver quality health services.

In conclusion, I would like to say that with the increasing role being played by our emerging economies in setting global health agendas, taking our cooperation

forward would result in public health gains for all of us and enable us to meet the aspirations of our people for equitable and accessible health care.

I can see that a very hectic schedule has been drawn up for you over the next four days. Even so, I sincerely hope that you will be able to find some time to experience and see this historic and lively city, which is a microcosm of our national heritage, culture and way of life. I wish you all a pleasant and comfortable stay in India and a very fruitful meeting.

I now declare the Twenty-sixth Health Ministers' Meeting and the Sixty First Regional Committee Meeting Session of the South East Asia open.

Thank you.

044. Inaugural Address by External Affairs Minister Pranab Mukherjee at the opening of Regional Passport Office, Coimbatore.

Coimbatore, September 14, 2008.

**My colleagues Shri Chidambaram,
Shri Vasan, Smt. Subbulakshmi Jagadeesan and Shri Elangovan,
Shri Pongalur N Palanisamy,
Members of Parliament and State Legislative Assembly,
Mayor of Coimbatore,
Senior Government Officials,
Representatives of Media,**

Ladies and Gentlemen,

In December 2006 in Chennai, while announcing a series of measures to further simplify the passport issuance procedure, I also committed to the people of Tamil Nadu that we would open a Branch Secretariat of the Ministry of External Affairs in Chennai and two more Passport Offices in Coimbatore and Madurai. The Branch Secretariat was opened in August 2007. The Madurai Passport Office was opened in December 2007.

Now, I am delighted to be in this textile city today to inaugurate the new Passport Office. This office located in the heart of the city will fulfill the

aspirations of the people not only in the district of Coimbatore but all the adjoining four districts to have a passport facility of their own. From today, Tamil Nadu will have four Passport Offices in Chennai, Trichy, Madurai and Coimbatore out of a total of 37 in the entire country. This Office is equipped with the latest Information Technology. In addition, I am happy to inform you that it is a fully air-conditioned office and will provide comfortable conditions for submission of passport applications.

Last year, about six lakh passports were issued jointly by the Regional Passport Office, Chennai, and the Passport Offices in Trichy and Madurai. The number of passport applicants from Tamil Nadu is expected to be around seven lakh this year. In the first eight months of 2008, about 40,000 passports have already been issued to applicants from the five districts that will be served by the Coimbatore Passport Office.

Coimbatore is a major industrial, educational and business centre in Tamil Nadu, accounting for export revenue of about Rupees 20,000 crores per annum. Tirupur Corporation in the Coimbatore district alone contributes export revenue of Rs 11,000 crores per annum. Given the abundance of skilled manpower and favourable government policies, the State of Tamil Nadu has been able to attract a large amount of overseas investment, technology transfers, joint ventures and foreign collaborations. Tamil Nadu is one of the largest recipients of foreign direct investment. Consequently, a number of people from this area travel abroad for business, study, tourism and other purposes. As all their requirements, especially Tatkal services, could not be catered to by the District Passport Cells and Speed Post Centres located in this area, a large number of passport applicants had to go to Chennai for passport services. The Coimbatore Passport Office will remove the hardship suffered by the public in this area. It will also enable more and more people to travel abroad to seek business and employment opportunities.

Distinguished Guests,

With India's rising international profile, fast growing economy and our increasing integration with the global economy, the number of Indians traveling abroad has shown phenomenal growth in the recent years. There has been considerable interest among overseas investors in India. Engagement of foreign business community in the Indian economy has increased considerably. This in turn has resulted in rapid increase in the issuance and re-issuance of passports and other miscellaneous services rendered by our Passport Offices. We issued about 50 lakh passports last

year, compared to 22 lakhs in 2000. We expect to issue around 58 lakh passports in 2008 and over 80 lakh passports in 2010.

We have taken a number of steps to simplify the passport issuance system and to make it applicant-friendly. Let me take this opportunity to mention some of these:

- To improve the efficiency and effectiveness of Passport Offices, we embarked on computerization - and I am happy to inform you that all the 37 Passport Offices including the Coimbatore Passport Office are fully computerized.
- All the passport offices and our Missions abroad issue machine-printed, machine-readable passports as per the standards laid down by the International Civil Aviation Organisation. Additional security features have also been introduced in the passport booklets. These measures have facilitated expeditious immigration clearance for Indian travelers.
- Electronic token system has been introduced in several Passport Offices to ensure orderly submission of applications. We are introducing a token system at this office too.
- Facility of online registration of Passport applicants is now available in all Passport Offices.
- 464 District Passport Cells have been set up all over the country, enabling easier submission of applications and taking the passport issuance system to the doorsteps of the applicants.
- In addition to these District Passport Cells there are 1095 Speed Post Centres for submitting passport applications and 15 Passport Application Collection Centres.
- In Tamil Nadu there are 31 District Passport Cells and 140 Speed Post Centres and in the area served by the Coimbatore Passport Office, we have 5 District Passport Cells and 21 Speed Post Centres.

However, we still have a long way to go. The National Common Minimum Programme envisages introduction of e-governance on a massive scale, to simplify procedures and to make Government citizen-friendly. As a rapidly growing and modernizing country, we are duty bound to provide services to

our public that are completely transparent, prompt, user-friendly and, above all, in conformity with the best international standards and practices.

While our Passport Offices are fully computerized, there is scope to make further improvements by introducing better and latest IT solutions that have become available as a result of the rapidly growing Information Technology. There is also need to further simplify our procedures and to reduce paper work to the barest minimum with a view to maximizing the comfort levels of passport applicants and achieving the best international standards. The Government has already started implementation of the Passport Seva Project with the objective of delivering passport related services to the citizens in a timely, transparent, more accessible, reliable manner.

Ladies & Gentlemen,

The Passport Seva Project is expected to be implemented in a time frame of 19 months to be completed by the last quarter of 2009. It will result in the issue of passports within three days, and in cases which require police verification, within three days after the completion of the verification process. Tatkal passports will be issued on the day of submission of the application. We propose to have 68 Passport Facilitation Centres all over the country where the non-sovereign functions, involved in the passport issuance process, such as initial scrutiny of the application forms, acceptance of fee, scanning of the documents, taking photos, etc. will be performed by the service provider who has been selected through an open bidding process. The Government staff at the Passport Facilitation Centres will verify the documents and decide on granting of passport. The other activities such as printing and dispatch will also be done by the Government staff. Police verification will be expedited through electronic linkage of the Passport Facilitation Centres with the police authorities in State Capitals.

With the National Launch of e-passports, India has become the first major developing country to issue such passports. We have started issuing e-passports, also known as biometric passports, in the diplomatic and official categories. I had the privilege of presenting our very first e-diplomatic passports to the Honourable President, Vice President and Prime Minister in June this year. The Ministry of External Affairs has drawn up a programme for the full roll out of e-passports in the ordinary passport category by September, 2009. Such passports will be much safer against forgeries and will facilitate easier movement of our people through the border points equipped with e-passport reading facilities.

It will be our effort to make the Passport Office at Coimbatore a model passport office. I am hopeful that the people of Coimbatore region will benefit from this office, which will spare no effort to render prompt and efficient service to the public.

I would like to convey my sincere gratitude to my colleague Chidambaramji who took special interest in making the Coimbatore Passport Office a reality. I should add that without his support and active involvement we would not have been able to implement the Passport Seva Project. I look forward to his continuing support, especially for additional manpower in the Passport Offices to cope with the increasing work-load.

Before I conclude, I would also like to thank the Chief Minister of Tamil Nadu Thiru Karunanidhi and Thiru Palanisamy who is representing the Chief Minister today, for the support and co-operation extended by the Government of Tamil Nadu in opening this Office.

Thank you.

045. Address of Vice President M. Hamid Ansari at the 4th North East Business Summit.

Guwahati, September 15, 2008.

This is a conference with a difference and I am delighted to be present here to inaugurate the 4th North East Business Summit, to showcase the potential of this region for domestic and foreign investors.

Nowhere else in the country do we have such a geographical agglomeration trying to attract business and investments with a commonality of purpose, and driven by their common strengths, and indeed, their common problems.

This Summit is as much about business as it is about politics, both domestic and external. It is about correctives. The effort today is as much to overcome the physical and commercial isolation of this region, as it is to set aside its "geo-political isolation and put it on the path of accelerated and inclusive growth".

Ladies and Gentlemen

The humanitarian and political consequences of the events of 1947 have

been well documented. Less understood and appreciated are the implications of parceling economic entities whose functioning and welfare was contingent on their integrity. This regrettably is the case with the North Eastern Region; it was among the prosperous regions of India at the time of independence and six decades later is lagging far behind the rest of the country in most parameters of growth.

Let me cite a few indicators:

1. The region accounts for around 8% of the geographical area of the country and around 4% of our population. Yet, its contribution to the Net Domestic Product of India has remained at less than 3%.
2. The region as a whole is amongst the poorest regions in the country with per capita income that is roughly 2/3rd of the national average. Over 35% of the population of this region is below the poverty line as compared to the national average of 26%.
3. It is a paradox that this region has a literacy rate that is higher than the national average, with one of the States having the second highest literacy rate in the country. Yet, agriculture provides livelihood support to 70% of the population of the region, indicating paucity of employment opportunities in the manufacturing and services sectors. The unemployment rate is close to 12% as against the national average of 7.7%.
4. Despite agriculture remaining the main source of income, the region is a net importer of food grains even for its own consumption, as it produces only 1.5% of our total food grain production.
5. The pace of urbanization is far slower than the rest of the country. Urban population in the region is less than 15% as compared to the national average of around 28%.
6. Per capita resource consumption and output is far lower than the national averages. For instance, domestic electricity consumption in the region is around 1/4th of the national average and the gross per capita industrial output is about 1/3rd of the national average.

Friends

The eight States of the North Eastern Region have different levels of

human development, resource endowments, levels of industrialization and infrastructure facilities. What are common, however, are the existence of immense potential and the lack of its realization for the benefit of the peoples in the region.

Despite rich natural resources and high literacy levels, what we see is a pattern of low capital formation, poor infrastructure, high levels of poverty and unemployment, poor geographical and physical connectivities and lack of exploitation of inherent strengths of the region.

The gathering today is an affirmation that it should not be so and that the development deficit of the region should be addressed.

The North Eastern Region Vision 2020 document approved by the members of the North Eastern Council and released by the Prime Minister in July this year is the best testimony of the commitment of the Union and various State Governments to the comprehensive, inclusive and accelerated development of the region so as to restore its national economic eminence.

What we need today are similar concerted and innovative approaches to fashioning economic and trade arrangements, not only for ensuring closer integration with the national economy but also with the economies of neighbouring countries in the region.

It is here that I come to the very important external dimension to economic development and growth of business and entrepreneurship in the North Eastern Region.

The Vision document has noted that the region should play "the arrow-head role....in the vanguard of the country's Look-East Policy". The Look East Policy was not just a foreign policy initiative. It was an amalgam of a strategic shift in our global perspective, an aspect of our economic reform process focused on enlargement of our external economic engagement accompanied by renewal of civilizational linkages with our neighbours in South East and East Asia.

The Look East Policy was also complemented with a 'Look Around Policy' of closer economic and political partnership with our neighbours in the SAARC region.

The North Eastern Region is at the focus of all of these multi-faceted initiatives. South East Asia begins where North East India ends. Within SAARC Bangladesh, Nepal and Bhutan are central to ensuring sustainable

regional economic development and prosperity through close cooperation and partnership.

The institutional structures for increasing economic cooperation and trade are being put in place. Let me cite a few:

- All SAARC states are committed to implementing SAFTA in letter and spirit.
- The Indo-ASEAN FTA negotiations have been completed and this lies at the core of our engagement with ASEAN.
- During the visit of Vice Senior General Maung Aye of Myanmar in April this year, the Agreement and Protocols for the Kaladan Multi Modal Transit and Transport Project were signed by both countries. This is a milestone in mutually beneficial cross-border cooperation and would considerably enhance connectivity to the North Eastern Region.
- Besides ASEAN, The Bay of Bengal Initiative for Multi-Sectoral Technical and Economic Cooperation, BIMSTEC, represents the second element of our Look East Policy architecture. This grouping focuses on trade and investment, technology, transport and communications, energy and tourism, and is mandated to serve as a bridge between South Asia and South East Asia.
- The Mekong Ganga Cooperation brings together Cambodia, India, Laos, Myanmar, Thailand and Vietnam and is focused on promotion of tourism and cultural and educational cooperation.
- Finally, the East Asia Summit provides a forum to take forward our vision of an Asian Economic Community, beginning with a Pan-Asian Free Trade Agreement.

Our target is to enhance connectivities of the North Eastern Region with Thailand and with other ASEAN countries beyond. The existence of land route connectivity was amply demonstrated by the India-ASEAN Car Rally of 2004. The missing links of the road route need to be upgraded.

All these efforts must be seen within the context of the objectives of the Vision statement of "an imaginative leap in the foreign policy, defence policy and internal security policy as much as in investment, infrastructure and commercial policy" to end the geo-political isolation of the North Eastern Region and launch it on the growth path. I believe that this new development

paradigm is firmly ensconced in the approaches and efforts of the government, business and industry and civil society. The various institutional structures put in place must be harnessed to this end. Only then would there be real and tangible dividends for the people of the North Eastern Region.

The task is gigantic and cannot be achieved without private investment that can infuse capital, modern technology, managerial best practices and generate employment. For investors, the North East Industrial Investment and Promotion Policy (NEIIPP) 2007 provides liberal concessions and subsidies. I am happy to note that 68 investment proposals worth over US\$ 1.5 billion have been received under this Policy covering various economic sectors. Private investment has a huge opportunity in sectors such as agriculture, education, healthcare and tourism. I urge businessmen participating in this Summit to take full advantage of this Industrial Investment and Promotion Policy.

The interest shown by members of the diplomatic community is heartening. The Government of India is committed to converting diplomatic initiatives into commercial opportunities for the overall development of the North Eastern Region.

The efforts of Prime Minister, Minister Mani Shankar Aiyar and various Chief Ministers and Governors of the States of the Region have resulted in a plan of action and identification of sectors where private investments have immense opportunity. The Central and State governments are fully aware that good governance, adequate physical infrastructure and power supply, skilled manpower and peace and security are as important as concessions and incentives for attracting investments. The experience and example of Public Private Partnership in other parts of the country must be used for developing the infrastructure in this region.

Friends

I once again extend my good wishes for the success of the 4th North East Business Summit and thank Minister Mani Shankar Aiyar for inviting me to inaugurate it.

046. Press Releases of the Ministry of Home Affairs regarding the Asia Pacific Regional Seminar on Terrorism.

New Delhi, September 15 and 16, 2008.

September 15, 2008.

Union Home Minister, Shri Shivraj V. Patil, inaugurated an International Seminar on Terrorism organised by the Asia Pacific Chapter of the International Association of Chiefs of Police (IACP) at Vigyan Bhawan, New Delhi today. He expressed hope that such seminars would provide opportunities to forge cooperation and coordination between Governments, police and security organisations of countries in different regions of the world to effectively tackle the menace of terrorism. He emphasised the need for exchange of intelligence on terrorism and called upon countries not to provide shelter to terrorists and to prohibit the free flow of funds, which are collected for financing terrorism.

The Home Minister also stressed upon putting an end to the open sale of weapons and explosives in some countries and pointed out that training of police personnel and development of innovative technologies were critical to combating terrorism and threats from nuclear, chemical and biological weapons.

The National Security Adviser, Shri M.K. Narayanan in his keynote address, emphasised upon the global ramifications of terrorism, elaborating on the particular susceptibilities of Asia on account of its rapid economic growth. He said that the continent faced challenges originating from diverse issues such as ethnicity, religion, politics and development, as also climate change and energy security. The use of asymmetric warfare, he stated, was the most significant challenge. He expressed that the outreach of technology, identity politics and the emergence of non-state players had enhanced the vulnerabilities of nation-states. Stressing on zero tolerance against terrorism, the National Security Adviser emphasised that liberal democracy was the strongest answer to terrorism.

Alain Bauer, President, French National Crime Commission, in his presentation, "New Criminals and Terrorist Threat", focused on the need to diagnose and analyse terror acts before looking for solutions. Highlighting the dangers of customised forms of terrorism, he stressed on the need for strengthening the basic structures of the judiciary, police and society for tackling terror. He underlined that terrorism is principally a policing issue

and also pointed out that in addition to sharing compiled data on terrorist outfits, cooperation between countries should extend to timely exchange of actionable intelligence.

Earlier, Director, Intelligence Bureau, Shri P.C Haldar mentioned that traditional counter-terrorism strategies needed review and required a quick, dynamic and uniform response conforming to national systems. He stated that in the fast changing paradigm of terror, the terrorist remains invisible and exhibits a cross-national spread, spawning intricate networks, with the internet being used as a force multiplier and a resource base for terror cells.

The two-day seminar is being attended by foreign delegates from 13 countries in the Asia-Pacific region, President and key officials of the IACP besides senior security administrators and police officials from terrorism/militancy affected States, officers of Central Para-Military Organisations and analysts/commentators from think-tank institutions in India.

After the conclusion of the Seminar the Ministry issued another Press Release.

September 16, 2008.

The 2-day Asia Pacific Regional Seminar on Terrorism concluded today. IACP President, Ronald Ruecker, in his address observed that the recent terror strikes in several parts of the world had clearly demonstrated the need for law enforcement agencies throughout the world to establish effective intelligence sharing mechanisms and working relationships with one another. He reaffirmed IACP's commitment towards enhancing international cooperation, communication and exchange of critical information.

Earlier, Haroun Mir, Co-Founder and Deputy Director of Afghanistan's Centre for Research and Policy Studies and Frederic Grare of the Carnegie Endowment for International Peace discussed terrorism related issues in South Asia and its neighbourhood. He identified poverty, unemployment, madrasa education and radicalisation as some of the factors fuelling the growth of terrorism in Afghanistan. He remarked that drug money and charities received from the Middle East and the Gulf are contributing significantly to terrorism in the region. Mir also called upon Pakistan to take effective measures on the Pak-Afghan border to curb radicalisation and growing terrorist activities. His prescriptions for containing terrorism in

the region included economic development, promotion of democratic values, strengthening of civil society and international cooperation.

Frederic Grare stated that the South/South East Asian region has the highest concentration of jihadi terrorist groups in the world. Elaborating on the gradual politicisation of terrorism, he alluded to the use of terror as an instrument to either pursue foreign policy goals or further domestic political interests. In this context, he commented that Pakistan has been both a major actor in terrorism as also a victim of this menace.

Thomas Michael Sanderson, Deputy Director and Senior Fellow in the Center for Strategic and International Studies Trans-national Threats Project, presented an overview on extremism, insurgency and radicalisation in South East Asia with special focus on Thailand, Indonesia and Philippines. Dilating on the social, religious, economic and political causes of extremism, he suggested de-radicalisation and demobilisation as effective tools for tackling terrorism. He pointed out that the Thai Muslim youth were adopting jihadi rhetoric from Indonesia. Sanderson also focused on the efforts of Jemaah Islamiyah in Indonesia to consolidate its support base in order to reengage in jihad.

Praveen Swami, Associate Editor, Frontline and Dr. Ajai Sahni, Executive Director, Institute for Conflict Management, also participated in the Seminar.

047. Field Marshal KM Cariappa Memorial Lecture 2008 delivered by External Affairs Minister Pranab Mukherjee on "Emerging India - Economic and Security Perspective".

New Delhi, September 17, 2008.

Hon'ble distinguished colleague in Council of Ministers, Finance Minister Mr. P. Chidambaram, Guest Speaker; General Deepak Kapoor, COAS; Lt. Gen. Rajender Singh, Director General, Infantry; Members of the Diplomatic Corps; Ladies and Gentlemen, before I make my short observations I would like to compliment my young colleague Shri P. Chidambaram for a brilliant exposition and particularly for thinking in a bit non-conventional way. He has raised a number of questions and these need to be answered. He has very strongly and adequately advocated for moving from gradualism to transformation. Even for timing he has indicated time has come. In regard to time Shri Aurobindo once explained and particularly quoted German Philosopher Shauvin Hoffer that the right moment perhaps can be distinguished when it has just passed. I will not say the correct time is right now. I would like to confirm my observation to his brilliant exposition particularly and by raising lot of thoughts and ideas which this distinguished gathering will have to bear and mind and will have to ponder over it.

2. It is indeed an honour to be with this distinguished gathering on the occasion of the 13th Field Marshal KM Cariappa Memorial Lecture. It is only befitting that the Indian Army is perpetuating the memory of a great soldier of India through these annual lectures on issues of national importance. I must compliment the organizers for selecting a relevant topic - "Emerging India - Economic and Security Perspective" - for today's lecture. Recent developments, particularly the terrorist acts in Delhi last Saturday and in other parts of India recently, serve to emphasize both the critical importance of the subject of this years lecture as also the umbilical link between economic progress and the security environment.
3. India stands at the threshold of exponential economic growth which will help us keep our 'tryst with destiny', as envisioned by our first Prime Minister, Pandit Jawahar Lal Nehru. Though economic growth is undoubtedly the engine for development, many other momentous

changes are also taking place in the country. It is a tribute to successive Indian governments that we were able to adjust to the momentous economic and strategic changes ushered in during the 1990s.

4. It is with a sense of satisfaction and pride that we see the fruits of our decisions to liberalize our economy and integrate globally. As the balance of economic power shifts to Asia, India is referred to as one of the engines of global growth. Economic forecasts and surveys routinely describe India as a lead economic player in the years to come. For the last 3 years, economic growth has clocked 9% as India is hailed as the fastest-growing free-market democracy of the world. Here I would like to emphasize word democracy as this is being difference with Chinese model.
5. As you are aware, globalization has many benefits, but it also throws up challenges. Volatility in financial, capital and currency markets, as well as energy and commodity prices can have an unsettling effect not only on corporates but also national economies. Inflation, which has become a global phenomenon, can also wipe out hard-earned economic gains.
6. India's economic stature has well deservedly risen manifold. Steady industrial growth, rising exports and sound foreign exchange reserves are all signs of growing economic strength and resilience. Robust investments and sizeable capital inflows are other indicators of strong economic fundamentals. World over, there is a growing realization that India's business environment is changing. We are being watched with great interest and both developed and developing countries have shown considerable eagerness to forge economic partnerships with us.
7. At the same time, it is even more important that we ensure domestically that the gains of our new growth are spread across all sections of society to make them irreversible and sustainable. The rising tide of economic growth does not lift all boats equally. For this, our rapid economic growth is not an option but an imperative. India's economy needs to grow at a sustained rate of above 8% over the next decades to make a significant dent on our poverty and meet our human development needs. India also has to address its infrastructure deficiencies to secure our economic achievements.

8. Our focus is now on faster development of infrastructure, rural development, increase in agricultural productivity, further development of the education and health sectors and small and medium enterprises. We have ably demonstrated to the world, how India - a developing nation of more than a billion people - can give its people a better quality of life within the framework of a secular democracy. It is a tribute to the greatness of the people of India that amidst all trials and tribulations, we have made rapid progress as a nation. As members of the largest thriving democracy in the world, it is our duty to meet the challenges of security while achieving prosperity of the nation.
9. We have always maintained that an economically resurgent India is a growth opportunity for others, including in our neighbourhood. By resurrecting the ancient trade template of South Asia, we can once again bring natural trade partners who can benefit immensely from negligible distances and low transport costs into a mutually beneficial economic framework. In the international domain of trade and economics, India seeks an open, fair, equitable, inclusive and rule-based economic order. India is ready and confident of assuming new roles and responsibilities that the new economic order will create.
10. Ladies and Gentlemen, the topic of today's lecture underscores the fact that economic prosperity and security are interlinked and go hand in hand. Our national aim is to ensure a conducive internal and external environment for unhindered economic progress and socio-political development so as to enable India to assume its rightful role as a major power in the comity of nations. Security is thus the sine qua non for all economic activity and prosperity.
11. A number of factors are shaping the global and regional security environment. The dynamics of globalization has resulted in a blurring of the traditional boundaries between international and national security. The global war on terrorism, proliferation of Weapons of Mass Destruction, rising crime, considerations of food and energy security are defining new threat perceptions.
12. In this emerging global scenario, security is an evolving concept. It has undergone a profound change, and still continues to do so. No longer can security be viewed in terms of traditional threats to sovereignty, territories and borders. It is increasingly being defined in terms of a wider, concept which encompasses both the traditional

military dimension but has necessarily to include vital aspects of human and economic security, where aspects like human and economic security find an important place.

13. Changes in our perceptions of threats and conflicts first came to the fore in the post-Cold War era. The future security environment will be determined not only by the traditional military paradigm, but also by a complex interaction between geo-strategic elements, technological advancements, economic development, environmental trends and demographic factors.
14. How does all this impact on India? As India grows economically, the need for a conducive and supportive environment, to sustain this growth, becomes an absolute necessity. All of you would agree that only an environment of peace and prosperity can guarantee the economic development that our country would like to achieve on its path.
15. Let me highlight a few implications of the changing dimensions of India's security calculus. The traditional threats, the defence of our airspace and protection of our maritime energy supply routes are important components of our traditional security calculus. But there are additional and equally compelling other threats that we have to deal with on a daily basis.
16. We believe that terrorism is the greatest security threat that haunts the world today. We have been facing this scourge since almost three decades. Terrorists are increasingly and deliberately targeting symbols of our national pride and economic dynamism to disrupt normal life. The dastardly perpetration of violence against innocent citizens on Saturday in the heart of our capital deserves to be condemned in the strongest language. More than twenty innocent lives were lost and many times that number injured. The nation has rallied in support. The resistance and calm shown by the people of Delhi and earlier by other cities is a message to the perpetrators of the violence that their desires will not succeed. A zero tolerance policy which we will follow is the only logical response to these cowardly acts. The calibrated targeting of commercial centres is calculated to undermine and disrupt our economic security. They should realize that their attempts will be met with resolute counter measures by a determined government and people of India. We propose to fully

utilize all the provisions of law to contain, curb and finally eliminate this scourge.

17. The linkages and relationships among terrorist groups, their support structures and funding mechanisms today often transcend national borders. Global cooperation to break the links between terrorist groups and their financing channels has therefore become most critical. We have consistently underlined the need for a unified international response to terrorism.
18. Clandestine nuclear proliferation continues to be another major cause of concern in recent years. Recent reports have underlined the risk of nuclear proliferation and passing of Weapons of Mass Destruction into the hands of terrorists. It also underscores the fact that the security challenges of terrorism and nuclear proliferation are inter-linked and the international community must take immediate steps to cut supply links of WMDs to terrorists.
19. Further, we have been targeted by various forms of fourth generation warfare, of which the proxy war and cross-border terrorism have been the primary manifestations. Cyber attacks on our critical networks, as also the possibility of financial dislocation through manipulations of our stock markets or circulation of counterfeit currency, are other potent threats which India needs to guard against.
20. India's efforts at achieving high economic growth, as part of its national aspirations, can, as I have observed earlier, be hampered as easily by non-military security threats, as by the traditional ones. Today, India stands ready to take off and occupy its rightful place both as a regional and global player. You are all aware of India's success in enlisting the support of member countries of the IAEA and NSG to grant an India-specific waiver to enable resumption of civilian nuclear commerce with the international community. The support for India clearly indicates our standing in the world. As we engage more globally, it will bring a new set of security challenges and responsibilities. Thus, India will need to address both the traditional, as well as the emerging non-traditional security challenges effectively, if it is to achieve its aspirations of a rightful place in the world order of the future.
21. In conclusion, let me take this opportunity to express our gratitude to the brave personnel of our Armed Forces whose eternal vigil

and protection of our borders, seas and skies under challenging circumstances have ushered in a climate of peace enabling us to plan the path of future progress and development of the nation.

22. **Ladies and gentlemen**, it was a great privilege for me to be with you. Thank you very much.

048. Intervention of Finance Minister P. Chidambaram at the Round Table on "Poverty and Hunger" during the High-Level Event on the Millennium Development Goals convened by the Secretary-General and the President of the General Assembly at the United Nations.

New York, September 25, 2008.

Mr. President,

In 1990, more than 1.2 billion people, 28% of the population of developing countries, lived in extreme poverty. By 2004 this had been reduced to barely 980 million.

We are particularly concerned that in sub-Saharan Africa 41.1 per cent of people were still living in extreme poverty in 2004 and the poverty gap ratio was the highest in the world.

In India, a growth rate of around 8.9 percent for the past four years has allowed us to make considerable progress in the eradication of extreme poverty.

But, we still have more than a quarter of our population surviving on less than a US\$ 1 a day.

Mr. President,

In India, we recognize that economic growth must be socially inclusive and regionally balanced. We have taken major initiatives in agriculture and rural development, in industry and urban development, in infrastructure and services, and in education and healthcare, aimed at promoting inclusive growth.

A unique social safety net has been created through the National Rural Employment Guarantee Act, which guarantees 100 days of employment to every rural family in India. Through Bharat Nirman, a massive rural development scheme, we are investing huge sums in rural infrastructure.

We have recently adopted our Eleventh Five Year Plan for the years 2007-2012. Its monitorable targets include generation of 58 million new work opportunities, reduction in the head-count ratio of consumption poverty by 10 percentage points and reduction in infant mortality rate (IMR) to 28 and maternal mortality ratio (MMR) to 1 per 1000 live births, and by 2011-12 increasing the literacy rate of children of age 7 years or more to 85%, reducing the dropout rates of children at the elementary level to 20%, and the gender gap in literacy to 10 percentage points.

Mr. President,

The last year has seen major changes in the global economy with the very high food and oil prices and the disproportionate impact of climate change seriously jeopardizing the gains against hunger, poverty and disease in many developing countries.

An argument is made that large developing countries are "over-consuming" leading to increased food costs. Nothing could be further from the truth. Developing countries continue to have high child malnutrition levels and still need to battle chronic hunger. In India, in-fact, this is a major issue and our Eleventh Five Year Plan aims at reduction in malnutrition among children of age group 0-3 to half from its present levels.

Mr. President,

To prevent food shortages and continuing hunger in the developing world in particular, there is a need for a quantum leap in agricultural productivity, food grain output and farm incomes in the developing countries.

We are confident that the world has enough resources and ability to cope with this crisis.

Mr. President,

All studies on attainment of MDG goals have identified lack of finances as the main impediment and have called for vast increases in Official Development Assistance (ODA).

Despite many developed countries having increased their ODA, the imperative to reach the goal of 0.7% of Gross National Income on an urgent basis cannot be overstated.

This urgency is underscored by the very limited time that we have to reach the MDG targets.

Mr. President,

MDGs comprise the core human development agenda. They embody our collective vision of human dignity and solidarity.

When we adopted the Millennium Declaration we wanted to mount a frontal attack on poverty, hunger, ignorance and disease, and that its benefits would percolate across the globe.

But eight years later, and more than half-way to our target date of 2015, we are discussing implementation of the MDGs with a realization that most developing countries will not be able to achieve these goals. This situation must change.

We welcome the initiative of the UN and others, and urge that we act urgently and collectively in a global partnership to translate commitment into concrete action in the interest of our future generations.

Thank You.

049. Address by External Affairs Minister Pranab Mukherjee on 'India and Global Challenges: Climate Change And Energy Security' at The Asia Society.

New York, September 30, 2008.

Mr. Victor J. Menezes, Ambassador Frank Wisner, Ambassador Ronen Sen, Ambassador Nirupam Sen, Consul General Prabhu Dayal, Ladies and Gentlemen,

I wish to thank Asia Society for giving me an opportunity to share with you India's perceptions on two of the key issues of global concern in our times - climate change and energy security. We meet at an extraordinarily turbulent and uncertain juncture in contemporary times. The world has barely come to grips with a growing energy crisis with oil and gas prices reaching unprecedented highs. This has been further compounded by increase in food prices. And now the financial markets have plunged into a volatile and high risk situation due to the cumulative impact of the US sub-prime crisis, a continuing credit crunch, and a severe decline in investor and consumer confidence. As we are acutely aware, it is an interconnected world that we live in. Like it or not, along with all the advantages that this implies, we are all exposed, in different degrees, to the risks and uncertainties inherent in the situation.

Precisely for this reason, we need to keep our attention focused on the fundamentals. In fact, the very challenges that seem so overwhelming at the moment may well offer the opportunities that we are looking for to enable the world economy to regain its dynamism and restore a positive outlook for growth, in particular for developing countries.

It is against this background that I would like to speak to you today about the twin challenges of Climate Change and Energy Security, which are, in important ways, closely interlinked. The energy dimension of Climate Change is crucial, just as the Climate Change dimension is a decisive factor in the energy choices that we make.

Ladies & Gentlemen,

India has always been conscious of the need for global cooperation on environment protection. Prime Minister Indira Gandhi was the only Head of State or Government, apart from the host country, to attend the first international conference on environment protection held in Sweden in

1972. India was among the first countries in the world to set up a separate Ministry of Environment. Prime Minister Rajiv Gandhi spoke of the need to balance development and conservation in his address to the United Nations in 1987.

These leaders were not only pioneers in the global environment movement, but projected India's age-old conviction and commitment to environment protection. Their beliefs were deeply rooted in our civilizational legacy, which emphasized the need for harmony between Man and Nature, rather than Man triumphing over Nature. Indeed, from ancient times, Nature has been deeply revered as a source of Man's sustenance. The concept of sacred groves, sacred trees and sacred animals created a spiritual framework of conservation, which is still observed in many parts of our country.

It was this enduring philosophy, which was reflected time and again by our seers over the millennia. In Mahatma Gandhi's profound observation, which I feel should serve as our guiding principle in global efforts to preserve our planet; he said, and I quote, "The earth, the air, the land and the water, are not an inheritance from our forefathers, but a loan from our children. So we have to hand over to them at least as it was handed over to us". Far from heeding the Mahatma's plea, we have imperiled the very existence of our future generations. There is no longer any doubt that humanity faces a very real threat to its very survival due to the risks emanating from Climate Change.

The Fourth Intergovernmental Panel on Climate Change, which has been honoured with the Nobel Prize, has unequivocally confirmed that Climate Change is taking place, and that this has resulted from an accumulation of greenhouse gases (GHG) in the atmosphere from intensified industrial activity in the last two centuries.

The risks from such Climate Change are real, serious and immediate. They must be addressed with a sense of urgency, if potentially catastrophic consequences are to be avoided. These consequences are no longer in the zone of the distant future; instead, we are beginning to see adverse consequences even in our own lifetime. The world has become susceptible to more frequent and extreme climatic events such as hurricanes, typhoons and heavy rains. There is a rapid decrease in the polar ice-caps, and even in our own Himalayas, there is evidence of glacial retreat. The risks of these climatic changes are greatest to developing countries, which are also the most vulnerable and least equipped to cope with climate challenge.

It is time that the world recognizes that Climate Change represents a classic example of a global cross-cutting issue, where only a timely multilateral and collaborative approach among nations will be able to provide the required response. I often hear people say that climate change is a truly extraordinary challenge and deserves an extraordinary response. I agree. Unfortunately, what we are witnessing at the multilateral negotiations on the Bali Action Plan is that attempts are being made to reach only the usual least common denominator outcome at the Conference of State Parties scheduled in December 2009. There is no sign, whatsoever, that the negotiations are being undertaken with the spirit of seeking an extraordinary and ambitious outcome.

Does India want an ambitious outcome at Copenhagen? We most certainly do. We are prepared to make our own contribution, with a sense of global responsibility. But, it must be recognized that no outcome will be viable and command a global consensus, unless it is seen as being fair and equitable. Equity demands the acknowledgement, indeed acceptance, of the principle that each citizen of the globe has an equal entitlement to the global atmospheric space. This would eventually lead us to a per capita convergence of greenhouse gas emissions. We recognize that this cannot happen overnight. But this is a principle which should inspire our ongoing negotiations.

In the context of Climate Change, historical accountability is often conveniently ignored. On the other hand, the current discourse, particularly in developed countries, has focused almost entirely on current GHG emissions, virtually side-stepping the scientific fact that it is accumulated GHG emissions in the atmosphere - collected over a hundred years - that are responsible for climate change. Current emissions only add to the problem, particularly as they accumulate for the future.

As I had mentioned earlier, our present crisis is the result of activity over the past two centuries, where the contribution of developing countries had been minimal. It is, therefore, completely one sided to target countries like India, whose emissions, though modest, are rising, but fail to bring to account those who have been responsible for more than 70% of the accumulated emissions in the atmosphere.

And, incidentally, despite the targets for reductions in emissions that these countries assumed under the Kyoto Protocol, there are few signs that these will be met. And if they are not met, will there be any accountability? The United Nations Framework Convention on Climate Change, which was

agreed to by consensus in Rio in 1992, recognizes this historical responsibility. It is for this reason that emission targets were confined to developed countries and the Framework Convention accepted the principle of "common but differentiated responsibilities".

Developing countries are committed to sustainable development, to be supported by transfer from developed countries of new and additional financial resources and technology on preferential and concessional terms. Emission reductions would follow as a result of sustainable development and not be the vehicle for sustainable development. This is an important distinction, which is largely being ignored in the debate today.

Even if we were to focus on current emissions, India's record is impressive. Despite being a continental-sized economy with a billion plus population, India's total emissions of carbon dioxide, the most important of the greenhouse gases, constitutes only 4% of the global total, while the U.S., for instance, accounts for 20% and Europe for around 15%. India's per capita level of emission is only 1.1 ton, as against 20 tons in the US, and that of Europe is over 10 tons. Additionally, during the past decade, while our economy has grown at 8% per annum, our energy growth has been a modest 3.7%, thus keeping the rise in emissions considerably low.

Ladies and Gentlemen,

Despite this excellent track record of responsibility, India has taken major steps to further enhance the sustainability of its growth. This is not because we are under pressure to reduce our emissions, but because we genuinely believe that it is in India's best interests to pursue environmentally sustainable growth. As Prime Minister Dr. Manmohan Singh has said "Our people want higher standards of living, but they also want clean water to drink, fresh air to breathe and a green earth to walk on".

The challenge for India is to reconcile its development imperatives with environmental responsibility. In order to eradicate poverty and bring about a modest increase in the living standards of our people, India needs to significantly increase its energy consumption. The Report of the Expert Committee on Integrated Energy Policy envisages an increase in power generation from a current level of 1,60,000 megawatts to about 8,00,000 megawatts by 2030-31.

In order to meet this magnitude of power requirement, we will need to pursue all available forms of energy. Our energy mix currently is 51% based on

coal, 36% on oil, 9% natural gas and only 2% from hydropower and nuclear energy respectively. If this energy mix remains unchanged over the next 25 years then our dependence on fossil fuels will continue and much of our energy requirement will have to be sourced from abroad. It is estimated that in 2030-31, we would have to import 66% of our coal, 90% of our oil and 60% of our natural gas. This is obviously not good news for India's energy security, particularly at a time when the prices of fossil fuels are steadily increasing. Unless this is effectively addressed, India's growth is likely to confront a major energy constraint.

Needless to say, even if there were no climate change arguments, considerations of energy security alone would require a medium-to-long term strategy of implementing a strategic shift from fossil fuels to non-fossil fuels, from non-renewable to renewable sources of energy, and from conventional to non-conventional sources of energy.

It is because we recognize the linkages between climate change and energy security that we have adopted a National Action Plan on Climate Change, which focuses on the need for the strategic shift which I referred to earlier. This Plan was released by the Prime Minister on the 30th of June this year and, in reality, constitutes India's plan for sustainable development. The Plan gives priority to Eight National Missions, of which two directly impact on energy security. The Mission which occupies pride of place among the 8 missions is the Solar Mission. The Sun is the original, inexhaustible and renewable source of energy. This Mission has the following objectives:

Firstly, to disseminate as widely as possible, existing applications of solar energy, such as solar lanterns. We currently have a nation-wide programme for the distribution of solar lanterns, particularly in rural areas where there is still no electricity. There are also plans to promote the use of solar photo-voltaic panels for larger, commercial buildings and solar heaters for urban residential buildings.

Secondly, there will be a focused effort to bring about improvements in efficiency and lowering of costs through technical innovations. We intend to do this through public-private partnerships. This includes not only promotion of new solar photo-voltaic technologies, such as thin film, but also solar thermal applications, which would help in providing both grid as well as distributed power.

Thirdly, to launch a major R&D effort to develop applications that can provide convenient, cost-effective and large-scale applications

of solar energy. The key here would be the development of storage systems that could make solar energy grid compatible.

Our Government is currently engaged in a series of brainstorming sessions with stakeholders, such as business and industry, scientific and technical institutes, non-governmental organizations and concerned government agencies to evolve an ambitious, but practical, plan to develop solar energy as the chief source of our energy over time. We would seek greater international collaboration in this area. This is an exciting adventure, because if India succeeds in this Mission, it would basically overcome energy constraint on its growth, and on global growth, while avoiding negative consequences for environmental sustainability.

Another Mission in this context relates to energy efficiency. India has already scored impressive results in this regard. The energy intensity of India's growth has been virtually halved over the past three decades, from over 0.30 kg of oil equivalent per US Dollar of GDP to the current 0.18 kgoe. This is already equivalent to the OECD average. Our experts say that this could be further improved by about 25%, bringing us closer to 0.12 kgoe. which is currently the best in the world. India enacted the Energy Conservation Act in 2001 and a Building Code in 2005, the implementation of which will bring about significant improvement in energy efficiency in high energy sectors, such as steel, paper and pulp and commercial buildings. Here again, a number of activities are planned with several stakeholders, particularly business and industry.

I would also like to add that, in our energy plan, nuclear energy occupies a prominent part. Nuclear energy is also a clean source of energy. We have, over the years, developed an impressive and comprehensive infrastructure for our nuclear industry, despite the fact that the country has, since its Peaceful Nuclear Explosion in 1974, faced a virtual isolation from the international civil nuclear energy market.

With the success that we have achieved in obtaining a waiver from the Nuclear Suppliers' Group and the pending US Congressional approval of the India-US civil nuclear agreement, we will not only close a chapter of over three decades of global nuclear apartheid against India, but open a new chapter in India-US and international cooperation in addressing shared interests in energy security, combating climate change and preventing non-proliferation in weapons of mass destruction. India is now also poised for a major expansion of its nuclear power sector. Our current estimates are that we can scale up nuclear power to at least 63,000 MW by 2030-31.

Ladies & Gentlemen,

To conclude, India is meeting the twin challenges of climate change and energy security by pursuing a strategy of sustainable growth. In multilateral negotiations on climate change, it will be our effort to evolve a global regime which does not unduly restrict our energy options, nor imposes significant costs of adjustment to a low-carbon economy. A shift to a low-carbon economy is critical to prevent climate change. But this can only be possible if the global regime is fair and equitable. India will contribute to this effort as a responsible global citizen, through its own ambitious Climate Change Action Plan. This sense of responsibility is obvious from our Prime Minister's solemn commitment that India's per capita emissions will never exceed that of developed countries, even as the country traverses a high growth trajectory.

As the Prime Minister recently reiterated in the UN General Assembly on 26th September 2008, "we in the developing countries do not have the luxury of time. Political compulsions force us to meet the aspirations of our people quickly even as we subject ourselves to newer and more rigid international standards and norms. We owe it to our future generations to make strong efforts to meet the Millennium Development Goals. There is a mutuality of interest in this between the developed and the developing countries. We hope the world will act in this spirit of enlightened self-interest".

Thank you.

050. Press Release of the Ministry of External Affairs on the signing of the agreement on the Passport Seva Project.

New Delhi, October 13, 2008.

Shri Shivshankar Menon, Foreign Secretary presided over a function today in New Delhi where the Ministry of External Affairs signed an agreement on the Passport Seva Project with M/s Tata Consultancy Services appointing them as the service provider for the project. Mr. S. Ramadorai, CEO and MD of TCS was also present at the function.

The Passport Seva Project is one of the Mission Mode Projects under the National E-Governance Programme. It aims to deliver passport related services to the citizens in a timely and transparent manner and in a comfortable environment, through streamlined processes. The entire project is being implemented on the Public Private Partnership (PPP) mode.

Speaking on the occasion, Foreign Secretary informed the gathering that about 5 million passports were issued last year all over India by the Central Passport Organization. The total demand for passports is expected to grow to over 10 million in 2011. To meet this rapidly growing demand, the Ministry of External Affairs conceived the Passport Seva Project which is expected to be completed in phases by January 2010. It will result in the issue of passports within three days, and where police verification is required, within three days after the completion of the verification process. Tatkal passports will be issued on the day of submission of the application. 77 Passport Seva Kendras will be opened all over the country. The pilot locations for the project are Bangalore and Chandigarh and the pilot sites will be functional by June 2009.

The design of this Project ensures that only support functions like improving citizen interface, managing the technology backbone, the call centres, training and change management etc. are provided by TCS, and the Government will continue to exercise all sovereign and security related functions in the passport issuance process. Security aspects have been fully taken care of in the Project with all strategic assets including the Data Centre, Database and the Application Software to be owned by the Government.

The Ministry of External Affairs has also started issuing e-passports, also known as biometric passports, in the diplomatic and official categories since June 2008, with full roll out of e-passports in the ordinary passport category

by September, 2009. The e-passports will be much safer against forgeries and will further facilitate the movement of their holders through the border points equipped with e-passport reading machines.

051. Address by External Affairs Minister Pranab Mukherjee at the National Defence College on "India's Security Challenges and Foreign Policy Imperatives".

New Delhi, November 3, 2008.

Major General N. K. Singh, AVSM, VSM, Senior Directing Staff,

Members of faculty and staff,

Student Officers,

Ladies and gentlemen,

I am very happy to be here once again at the National Defence College and share my thoughts on the security and foreign policy challenges before India.

You are all professionally engaged on the various dimensions of security and foreign policy - from the perspective of internal and regional, to the continental and global. The goal of our foreign and security policy remains to increase our strategic autonomy, so that we can like any other country, engage in a reasonable pursuit of its national interests, and bring to bear any capabilities it may have to promote geo-strategic stability and global economic prosperity and contribute to resolving a range of global problems as well as crisis situations. Our policies have been shaped by the geography and history of our region. India has traditionally taken a broad view of security, an approach that goes beyond defence preparedness and includes fundamental issues of economic strength, technological self-reliance, food security, energy security, human security and preservation of core national values and cohesiveness.

Underlying these principles is India's security paradigm, of expanding circles of engagement, with our neighborhood at its center and extending outwards in concentric circles. The framework of a policy embedded in our geography

and historical experience and coupled with a paradigm of a concentric security structure has served us well.

The question nevertheless is, in a globalised world have these parameters met our requirements? Is such an approach adequate? These questions assume particular salience given that we are at a historical cross-road; firstly, India is being called upon to assume an increasingly demanding role on the global stage; and secondly, the global architecture is under strain and fundamental shifts are underway. Our response to these challenges will shape and influence the future direction of our country. The past can act as a guide; but it is the decisions we take in the present which shape our future.

Global Developments

Recent developments, particularly the challenges confronting the global financial system, have thrown up a qualitatively different set of questions to security and foreign policy practitioners. The most obvious is the unprecedented linkage between economic stability and security policy. We have in recent weeks seen countries seeking international financial assistance to stave off financial and economic collapse; elsewhere, falling oil prices have dampened political confidence and muted foreign policy and security orientations. In addition we also are hearing protectionist voices as previous notions about globalization bringing in all around benefits are being questioned.

The manner in which the present events reshape the structural contours of the world can be difficult to predict. We can however conclude with some certainty that we will be required to address new challenges the coming years, the biggest of which would be the management of global interdependence.

From India's perspective, we need to see how best to manage the crisis while positioning ourselves to play a role in any future global financial or political structure. The immediate challenge will be to continue with economic reforms, striking a balance between financial stability, price stability and maintaining growth rates. The long term challenge will be to fashion a set of policies encompassing both the security and foreign dimension such that we can ensure an external environment conducive to India's transformation and continued development.

Immediate challenges

What are the immediate challenges that we face. To my mind, the foremost among these would be (a) to cope with the rise of China; (b) maintenance of a peaceful periphery; and (c) managing our relations with the major powers.

China as India's largest neighbour and as an emerging power is both a challenge and a priority. As a result of our engagement with China over the last thirty years we have now reached a somewhat normalized relationship. Of course there are some unresolved issues between us. However we need to factor in the fact that as a result of our engagement we have today a completely different situation than when we started. Further the economic developments in this period has given both our countries new capabilities. We are today faced with a new China. Today's China seeks to further her interests more aggressively than in the past, thanks to the phenomenal increase of her capacities after thirty years of reforms. There are also new set of challenges which China poses such as the strategic challenge as China develops its capabilities in outer space; the geopolitical challenge as it reaches out to various parts of the globe in search of raw materials and resources. We would need to develop more sophisticated ways of dealing with these new challenges posed by China. We cannot change our neighbors. It is important therefore for us to recognize and work with the reality. Our belief is that there is sufficient space for both of us to grow together and build a cooperative relationship in the new architecture.

We need to ensure a peaceful periphery and an environment of peace and stability in our region and in the world, which will facilitate maintenance of socio-economic development and safeguarding of our national security. India is already engaged in establishing strategic partnerships and expanding the scope and depth of our economic and strategic interaction with different countries, groupings and regions - whether it is Russia, a long standing partner, South East Asia, Japan, Central Asia, IBSA or many others with whom we are developing a fruitful and active dialogue. The underlying rationale is that in a globalized world, challenges, be they financial or security, can no longer be tackled by countries acting alone.

The biggest threat to peace and security in our region and to the world at large comes from terrorism which emanates from our neighbourhood. This is compounded by the danger posed by terrorists' accessing weapons of mass destruction or related technologies. The series of terrorist attacks in

Pakistan shows the fragile internal situation of that country, a situation we continue to monitor closely and which we hope will not deteriorate. The situation in Afghanistan remains grave concern and a resurgent Taliban poses a threat beyond Afghanistan.

Our challenge has been try and work with both countries, to stabilize the situation. With Pakistan, India has called for removing bilateral impediments to trade and economic relations, which should not be predicated on resolving contentious political issues. Some progress has been achieved in this regard, notably along the line of control. We are however continuing to persuade Pakistan to grant overland transit to our goods as this can speed up stabilization in Afghanistan. We believe this can also lead to greater commerce and benefit all the countries in the region.

Our goal of a peaceful, stable and prosperous neighbourhood is predicated on enabling each of our neighbors to pursue the shared objective of the development of our peoples. Our economic growth is having an impact in the region and there are increased opportunities for others to benefit by partnering India. The challenge will however be to persuade our neighbors to set aside past mistrust and suspicions which have undermined development of harmonious relations and restricted the space for expression of our natural sentiments of affinity, based on a shared history. We continue to put forward proposals, multilaterally through the SAARC and bilaterally, to our neighbors, by making unilateral gestures and extending economic concessions. The facility of extending duty free access to imports from Bangladesh, Nepal, Bhutan and Sri Lanka demonstrates India's readiness to assume asymmetric responsibilities.

Looking beyond the immediate neighbourhood, we continue to add important elements to our traditional ties with countries in the Gulf and the Central Asian regions by leveraging economic opportunities and long standing cultural and people to people links. Our Look East policy which was based on ASEAN's economic, political and strategic importance in the Asia-Pacific region and its potential to become a major partner of India in trade and investment has now evolved to include the Far Eastern and Pacific regions.

I have just concluded a visit to Iran, a country with whom we have had a long history of cultural interaction. Today, a sizeable portion of India's energy requirements are met by Iran. Discussions on an India-Iran-Pakistan gas pipeline are ongoing. We are also exploring possibilities of transit for our goods to central Asia and Afghanistan through Iran, since Pakistan does

not permit transit to us. On the nuclear issue, we have conveyed that Iran must fulfill all its international commitments including those it has undertaken under the NPT.

Another set of challenges is that of managing our relationship with the world's major powers. We need to use our strengths to create partnerships with major powers in a manner which would allow us political and economic space to grow. This will require us to strengthen relations with all the major powers of the world. Over the last few years our relations with all the major powers have substantially strengthened. Our relations with the US are now completely transformed and this is reflected in the successful completion of the civil nuclear initiative. As the US prepares itself for electing a new administration, we can be satisfied with the fact that today there exists a strong bipartisan support in the US for further strengthening and broadening our relations. We have developed a strong partnership with the European Union covering a wide range of areas including trade and investment, culture, science & technology. Our traditional relations with Russia continue to remain strong. PM's visit to Japan recently further strengthened the strategic and global partnership that we have established with Japan. As we look forward to an increasing role in global affairs we need to expand our network of international relationships, political engagement and economic and technical cooperation with the world. We are also working with the major powers in forums such as the UN, G8, East Asia Summit and ASEAN Regional Forum, the trilateral initiative with Russia and China (RIC) and the IBSA forum with Brazil and South Africa. Multipolar engagement allows us to contribute actively to the search for solutions to issues such as regional and international security, terrorism, climate change, economic growth and energy.

In closing, and to illustrate the changes underway in the global order and India's role, I will use the example of the civil nuclear initiative. The decision adopted by the NSG on 6th September 2008, enabling civil nuclear cooperation with India is a landmark development. You know that the NSG was established in response to our nuclear tests of 1974. On the one hand it is a vindication of our policies, of our impeccable non-proliferation record and our principled refusal to compromise on a well established nuclear policy. On the other, it is a recognition of India's achievements. Despite years of technology denials and discriminatory measures, India developed a comprehensive atomic energy programme covering the entire fuel cycle in respect of uranium, plutonium and thorium fuels and has established

world leadership in heavy water nuclear reactors. Over the years, we have progressively developed and put in place a domestic nuclear infrastructure comparable to the best in the world, including critical designs for validating thorium based advanced heavy water reactor core. The NSG's decision enables India to make an even bigger contribution to the growth of international civil nuclear cooperation.

The importance of this initiative lies not just in the fact that it allows a resumption of international cooperation in civil nuclear energy with India but also that it would in course of time lead to greater access to technologies that were hitherto denied to us. We would need to adapt and master these so that we can meet the challenges of the future.

To conclude, it is not merely the structure of the international system that is changing at a rapid pace. The challenges themselves are evolving rapidly. We need to charter new waters, leveraging our competitive skills and managerial talent across the globe with confidence. We must be ready to play our rightful role on the global stage through forward looking approaches, based on our ethos of non-violence and peaceful co-existence, which would allow us greater strategic autonomy and space for maneuverability.

Thank you.

052. Clarification¹ issued by the Ministry of External Affairs on November 7 on the remarks by the External Affairs Minister about China in his speech.

We have seen press reports which convey a misleading impression of what the External Affairs Minister said about China in his speech to the National Defence College on 3rd November. The full text of the speech is available on MEA's website. It is clear that in his speech he recognized that there is enhanced engagement with China and as a result of our engagement we have today a completely different situation; economic development has given both our countries new capabilities and that it is our belief that there is sufficient space for both India and China to grow

¹ The clarification became necessary because a section of the media interpreted the speech in a manner as if EAM was alluding to aggressive challenges from China in the region of India's natural sphere of operation.

together and build a cooperative relationship in the new architecture. At no point in his speech did the Minister use the word "threat" to describe China. There is thus no cause for misinterpretation and the kind of negative gloss that has been put on the speech by certain elements in the media.

**053. Speech by External Affairs Minister Pranab Mukherjee
at the 8th Buddha Mahotsava.**

TAWANG (Arunachal Pradesh), November 9, 2008.

General (Retd.) J.J. Singh, Governor

Mr. Dorjee Khandu, Hon'ble Chief Minister

Distinguished Guests,

Ladies and Gentlemen,

When the Hon'ble Chief Minister invited me to be the Chief Guest at the 8th Buddha Mahotsava in Tawang, I accepted his invitation with great happiness, not only because of my deep respect for the Enlightened One, the Buddha, but also because Tawang finds a special place in the spiritual and cultural history of Buddhism. On this auspicious occasion I wish to convey my greetings and warm good wishes to all the people of the state of Arunachal Pradesh. We are very proud of your efforts to develop the state and your patriotic spirit and your contribution to the overall development of the country.

In the 5th century B.C. the great spiritual teacher who is the Light of Asia emerged from our country to shed his radiance over millions of people around our world. The story of his life and his teachings created lofty ethical and humanitarian ideals and a vibrant spiritual tradition that suffused our own great civilization and radically transformed other civilizations in Asia, and even beyond. His teachings were not only lucid and deep, but also simple and direct, and dealt with the most universal of all human problems, the problem of suffering. His greatness lay not in his ability to discern the causes of such suffering, but in teaching a universal message addressed to all human beings on how to live a life that is both morally correct and practically useful to our fellow beings. We celebrate Gautama Buddha for this today.

We can rightfully be proud that India is the *janm-bhoomi* and *karma-bhoomi* of this great son of ours. It is also a matter of pride for all Indians that it is we who nurtured and developed the Buddha's teachings and spiritual traditions at Nalanda, Vikramsila and other Buddhist centres after his *parinirvana*, and that his message of peace and tolerance was carried abroad by Indians as well - by Mahinda, the son of Emperor Ashoka to Sri Lanka, by Padmasambhava to Tibet, by Kashyapa Matanga and *Boddhidharma* to China and by countless others to the vast swathe of our world from Central Asia to the islands of Japan. What is remarkable is that throughout this great journey the message of peace and compassion was never spread by the force of arms. The tradition of persuasion by truth and non-violence, for which India is justly famous, found fruition two millennia later in our freedom struggle led by our beloved Gandhiji who always acknowledged a debt of gratitude to Lord Buddha.

Lord Buddha's message of peace, tolerance and harmony must continue to guide us in this new century as it has in the past twenty four centuries. The world is still troubled by suffering and conflict and our country is seeking to liberate millions from the ignominy of social and economic deprivation. There can be no two views on the pressing need for social and economic changes so that we achieve the full potential of our future. The Buddha's teachings can be a great unifying force and a practical way of achieving social integrity. But we must always remember that Lord Buddha did not merely speak of abstaining from unwholesome actions (*sabba papassa akaranam*), but in fact practiced it, and it is in the practice of his message that we Indians must find the solution to whatever problems it is we face. Violence of any kind by anybody and at any time was condemned by Lord Buddha and we should pledge to do the same at this 8th Buddha *Mahotsava*. It is only in this way that we will be truly honouring the teachings of this great son of India.

Buddhism is an important and integral part of life and tradition in Arunachal Pradesh. We rejoice in this diversity of our country's spiritual and cultural traditions. Our Government has given the highest priority to the development of the north-eastern region, including the state of Arunachal Pradesh. Although you are geographically further from Delhi than some other regions, you are close to our heart. We have a clear strategy for the development of this great state, and when our Prime Minister visited you in January this year, he announced several steps that we would be taking to ensure that there is more development here, and that the people of Arunachal can

enjoy better economic and social conditions as quickly as possible. We recognize that the state needs good connectivity and good infrastructure, as well as more opportunities for all round economic development. Government is making special efforts to fast-track the development of road and other infrastructure projects, so that economic and tourism opportunities will benefit the citizens here. The mighty Brahmaputra, that has brought life to millions of Indians through centuries of our recorded history, flows through this beautiful state. Its mere presence offers immense opportunities for development, and it is time for us to realize this hidden potential. I would like to assure the Hon'ble Chief Minister and all of you present here on this occasion that we will give priority to all those projects that the Hon'ble Prime Minister announced during his visit here earlier this year.

Ladies & Gentlemen,

It has also been my effort, as External Affairs Minister, to enhance the external linkages of our north-eastern region with our neighbours. Arunachal Pradesh shares its border with three countries - China, Myanmar and Bhutan. We enjoy cordial relations with China, our great neighbour to the north. I visited China earlier this year and it was also my privilege to host the Foreign Minister of that country. Our Prime Minister has also visited China twice this year. Although we have not yet settled the boundary question with China, the Special Representatives of our two countries are working together to find a fair, reasonable and mutually acceptable settlement which will create a boundary of peace and friendship between us. The Chinese side is fully aware that Arunachal Pradesh is an integral part of India. At the same time it has been my constant endeavour to develop friendly and cooperative ties with China, and to explore all possibilities for economic and other cooperation between China and our border states. We will continue to work with our Chinese friends to persuade them to open border trade with Arunachal Pradesh and to create other economic opportunities for communities on both sides of the border.

I also want to say how pleased I am at the opportunity afforded me to visit the beautiful town of Tawang. Tawang has had a long and illustrious association with Buddhism. Arunachal was a home to Buddhists from the first millennium AD when Guru Padmasambhava came here with Lord Buddha's message, and it is in these high mountains that some of the earliest Buddhist temples are found. Tawang's great monastery, which I will be visiting later in the day, continues to flourish today and the gentle

traditions of Buddhism are carried into the new century by the people of Tawang district. I sincerely congratulate all the people of Tawang for making renewed efforts to build the economy and to improve life in this high altitude part of the state. With its great natural beauty, rich cultural and spiritual heritage and vast resources, Tawang and all of Arunachal Pradesh will be able to develop its economy and tourism and we will fully support and assist you in this endeavour. Your progress will strengthen the nation.

In conclusion, I express my gratitude to the Chief Minister and the people of Arunachal for their warm welcome and hospitality, and extend my best wishes to the organizers of the 8th Buddha *Mahotsava* and to all the participants who are gathered here today on this auspicious occasion.

Thank you.

054. The Second Noble Laureates Lecture "WITNESS : The Inward Testimony" delivered by Noble Laureates Dr Nadine Gordimer as part of the Outreach Programme of the Public Diplomacy Division of the Ministry of External Affairs.

Kolkata, November 10, 2008.

September 2001, A sunny day in New York. Many of us who are writers were at work on the transformations of life into a poem, story, a chapter of a novel, when terror pounced from the sky, and the world made witness to it.

'HORROR was written on the sun'

The prophetic words of the South African poet William Plomer. The horror of Hiroshima and Nagasaki were part of the unspeakable horrors of a past war; this was the horror that had come with the arrival of a new kind of war in a new millennium that has dedicated itself to globalization - a concept which both implies and is absolutely reliant on an end to violent solutions of international conflict. It is now 2008: we have come to coexist with the horrors of Madrid bombings, London underground trains explosions, the dead in Afghanistan, Rwanda, Irak, Darfur, Sri Lanka and the knowledge that this incomplete list of tragic violence continues to lengthen even as we sit here. Suicide bombers and retaliation attacks of all natures - including

blockades of food and medicine - slaughter the innocent bystander wherever, destroy homes and livelihood, whatever territorial, political religious aims, just or unjust, they represent.

What place, task, meaning will literature have in witness to disasters which make the entire world the front line of any and every conflict?

Place. Task. Meaning.

To apportion these for us, the world's writers, I believe we have first to define what witness is.

No simple term.

I go to the Oxford English Dictionary and find that definitions fill more than a small-print column.

'Witness: attestation of a fact, event or statement, testimony, evidence; one who is or was present and is able to testify from personal observation.'

Television crews, photographers, are pre-eminent witnesses in these senses of the word, when it comes to catastrophe, staggeringly visual. No need for words to describe it; no possibility words could.

First-hand newsprint, elaborately descriptive journalism, becomes essentially a pallid after-image. Television makes 'personal observation', 'attestation of a fact, event' a qualification of witness not only for those thousands who stood mind-blown aghast on the scene, but everyone worldwide who saw it all happening on television.

The place and task of attesting the fact, event or statement, testimony, evidence - the qualification of one who is or was present and is able to testify - this is that of the media. Analysis of the disaster follows in political, sociological terms, by various ideological, national, special or populist schemas, some claiming that elusive, reductive state, objectivity.

Place, task - meaning.

Meaning is what cannot be reached by the immediacy of the image, the description of the sequence of events, the methodologies of expert analysis. If witness literature is to find its place, take on a task in relation to the enormity of what is happening in acts of destruction and their aftermath, it is in the tensions of sensibility, the intense awareness, the antennae of

receptivity to the lives among which writers experience their own as a source of their art. Poetry and fiction are processes of what the Oxford Dictionary defines the state of witness as 'applied to the inward testimony' - the individual lives of men, women and children who have to reconcile within themselves the shattered certainties which are as much a casualty as the bodies under rubble.

Kafka says the writer sees among ruins 'different (and more) things than the others.... it is a leap out of murderers' row; it is a seeing of what is really taking place.'

This is the nature of witness that writers can, surely must give, have been giving since ancient times, in the awesome responsibility of their endowment with the seventh sense of the imagination. The 'realization' of what has happened comes from what would seem to deny reality - the transformation of events, motives, emotions, reactions, from the immediacy into the enduring significance that is meaning.

If we accept that 'contemporary' spans the century in which all of us here were born, as well as the one scarcely and starkly begun, there are many examples of this fourth dimension of experience that is the writer's space and place, attained.

'Thou shalt not kill' : the moral dilemma that patriotism and religions demand be disregarded in the individual sent to war, comes inescapably from the First World War pilot in W.B Yeats' poem: 'Those that fight I do not hate, Those that I guard I do not love'. A leap from murderers' row that only the poet can make.

'The Radetsky March' and 'The Emperor's Tomb' - Joseph Roth's peripatetic dual epic of frontiers as the Charybdis and Scylla of the breakup of the old world in disintegration of the Austro-Hungarian Empire, is not only inward testimony of the ever-lengthening host of ever-wandering refugees in the new century, the Greek chorus of the dispossessed that drowns the muzak of consumerism. It is the inward testimony of what goes on working its way as a chaos of ideological, ethnic, religious and political consequences that come to us through the vision of Roth.

The statistics of the Holocaust are a ledger of evil, the figures still visible on people's arms; but Primo Levi's 'If This Is A Man' makes extant a state of existence that becomes part of consciousness for all time.

The level of imaginative tenacity at which the South Africa poet Mongane Wally Serote witnesses the apocalyptic events of apartheid amid which he

was living is organic, in its persistent perception. He writes 'I want to look at what happened; /That done./ As silent as the roots of plants pierce the soil / I look at what happened.../ When knives creep in an out of people / As day and night into time.'

In an earlier age, the greatness of Conrad's inward testimony finds that the heart of darkness is not Mistah Kurtz's skull-bedecked river station besieged by Congolese, but back in the offices in King Leopold's Belgium where knitting women sit while the savage trade in natural rubber is efficiently organized, with a quota for extraction by blacks that must be met, or punished at the price of severed hands.

These are some examples of what Czeslaw Milosz call the writer's 'fusing of individual and historical elements' and that Georg Lukacs defines as the occurrence of 'a creative memory which transfixes the object and transforms it', 'the duality in inwardness and the outside world'.

The duality of inwardness and the outside world - this consciousness, which is that of the writer - reveals at a depth beyond history, the unpredictable developments in social and personal values that come about in the aftermath of drastic; transforming political change: the veering of power from one form of order to another, the post-victory as the attainment of freedom. There is a strangely interesting and in some instances contradiction in the situational similarities of South Africa and India, as seen in their literatures. Both revealed the distortions brought about in the human personality by a long era under colonialism, the reduction of a people into 'The Other' and at the same time the discovery within themselves of forms of resistance, psychological as well as active, that defeated the self-appointed masters, finally.

India finds herself left with the trauma of partition, the wound lacerating individual lives both territorially and exacerbating religious conflict. And there is the caste system, a traditional oppression surviving the British one. These ironic inheritances within freedom are brought to the world's real understanding by the creativity of Indian writers.

South Africa's victory over apartheid, in which South African Indian freedom fighters had an important role, finds South Africa left with the land itself still mainly in the title deeds of the white minority. And colour, if not caste, remains a source of prejudice and pain, even if it now more understandably sometimes manifests itself in reverse, black against white in certain situations

of the new age. South African writers - which identify includes South African Indian writers - brought to the world the totally invasive impact of apartheid on the individual and group human psyche.

Much of contemporary writing from India now has the running theme of a new servitude among India's peoples: an apparently uncontrollable urge of materialism, the passion for possessions, and the corruption at many levels which is an inevitable consequence, along with corruption attendant on passion for political power. The winner of this year's Booker prize is novel critical of the present-day national ethos by a young Indian writer, Aravind Adiga.

In South Africa the same betrayal of what freedom was envisaged as, the goal of human justice and caring, has evidenced itself in the same way - even by some heroes who were the bravest and most self-sacrificing in the freedom Struggle. Pavan K Varma's outstanding comprehensive study, 'The Great Indian Middle Class', with a change of names and places could be read as a study of South Africa in the ten years since his was written. The relevance of witness literature's inward testimony to world-wide fault-lines in the evolution towards freedom of human relations political, religious, national, international, brilliantly analysed in Amartya Sen's 'Identify And Violence' find another dimension in Nayantra Sahgal's extraordinary, vivid feat of inward testimony captured by her novel 'Mistaken Identify' - the country, continent, planet-wide, obsessive fear of terrorism that means any one of us, anywhere, no matter how irrationally and haphazardly, may find him or herself imprisoned as a kind of random precaution against who-knows-what fundamentalist political or religious threat. The highly original new surrealism of Kunal Basu's novel, 'Racists' carries to a startling ultimate the human entanglement of science and myth of racism with concepts of identify.

Writers cannot and do not indulge the hubris of believing they can plant the flag of truth. A deep thinker like Karan Singh brings together philosophy, interfaith national and international possibilities, along with political responsibilities in this context. What is sure is that we can exclude or discard nothing in our solitary travail towards meaning, downward into the acts of violence. We have to seek this meaning in those who commit such acts just as we do in its victims. We have to acknowledge them. Graham Green's priest in 'The Comedians' gives a religious edict from his interpretation of the Christian faith. 'The Church condemns violence, but it condemn indifference more harshly.'

Where does the despotism of violence begin to grow; why? And where will it end? How? This is the mined territory of meaning, in the crises of the present, from which the writer's responsibility cannot be absolved. 'Servitude, falsehood and terror.... Three afflictions are the cause of silence between men, obscure them from one another and prevent them from rediscovering themselves.' That is what Camus found in that territory. It is a specification within Milan Kundera's credo: 'For a novelist, a given historical situation is an anthropological laboratory in which he explores the basic question: What is existence?' And Kundera goes on to quote Heidegger: 'The essence of man has the form of a question'.

Whether this question is unanswerable, just as final truth is unattainable, literature has been and remains a means of people rediscovering themselves. It has never been more necessary, vital, than now, when information Technology, the new faith, has failed to bring this rediscovery about.

Is there inevitably a loss of artistic liberty for the writer in inward testimony as witness?

A testy outburst not from a writer, but a painter, Picasso, replies vis-à-vis their creativity, for artists in every medium. 'What do you think an artist is? An imbecile who has nothing but eyes if he is a painter or ears if he is a musician, or a lyre at every level of his heart if he is a poet... quite the contrary, he is at the same time a political being, constantly aware of what goes on in the world; whether it be harrowing, bitter or sweet, and he cannot help being shaped by it.' Neither can the art. And there emerges Guernica.

Flaubert writes to Turgenev: 'I have always tried to live in an ivory tower, but a tide of shit is beating at its walls, threatening to undermine it....'

Witness literature is not anathema to, incompatible with experiment in form and style, the marvelous adventures of the word. On the contrary, when writers, as Andre Pieyre de Mandiagues asks 'have been given a disaster which seems to exceed all measures, must it not be recited, spoken', in response the writer has to wrestle with all the possibilities of his medium, the Word, to find the one way in which the demands of meaning can be recited, spoken.

There is no style and form readymade for witness literature.

If it is to be poem, it has to be found among all the combinations of poetics, tried or never tried, to be equal to the unique expression that will contain the

event before and beyond the event; its past and future. If witness is to be a story or a novel, that final demand - the expression of the event before and beyond the event - is the same. Among all the ways of plumbing meaning, existing and to be, this has to be discovered. Julio Cortazar, Carlos Fuentes,

Gabriel Garcia Marquez, Octavio Paz, Jose Saramago, Amos Oz, Chinua Achebe, are among those who discovered it unsurpassably in different eras for their own people, own countries, and by the boundlessness of great writing, for the rest of us who see the same responsibility of discovery to be pursued in our own countries.

RK Narayan, Salman Rushdie, V.S Naipaul, Anita Desai, Shashi Tharoor, Kumal Ba, Amitav Ghosh, Vikas Swarup; South Africans Zakes Mda, Achmat Dangor, Mongane Wally Serote, Lewis Nkosi, Andre Brink, Rajesh Gopie, Ahmed Essop, are some of those who come to mind, only a random few among many. And some of them belong to the phenomenon of writers in the diaspora: Indians and South Africans who for political, personal, and sometimes inexplicable choice write from other countries where they have made their homes. Whatever the reason, one cannot ignore Jean Paul Sartre's view. 'To go into exile is to lose your place in the world'. However, these writers, even of voluntary exile, often seem to disprove this in their writings.

I have had my own experience as that of a writer given evidence of disaster, which seemed to exceed all measure. In South Africa racism in its brutally destructive guises, from killing in conquest to the methodology of colonialism, certified as divine will be religious doctrine, took the lives of thousands of Africans and stunted the lives of millions more, systematically. I grew up in the Union that came out of wars for possession between the British and descendants of the Dutch, the Boers. The African had already been dispossessed by both. I was the child of the white minority, blinkered in privilege as conditioning education, basic as ABC. But because I was a writer - for it's an early state of being, before a word has been written, not an attribute of being published - I became witness to the unspoken in my society. Very young I entered a dialogue with myself about what was around me; and this took the form of trying for the meaning in what I saw by transforming this into stories based on what were everyday incidents of ordinary life for everyone around me: the sacking of the backyard room of a black servant by police while the white master and mistress of the house looked on unconcerned; later, in my adolescence during the '39-45' War, when I was an aide at a gold mine casualty station, being told the white

intern who was suturing a black miner's gaping head-wound without &: 'They don't feel like we do'.

As time and published books confirmed that I was a writer, and witness literature, if it is a particular genre of circumstance of my time and place, was mine, I had to find how to keep my integrity to the Word, the sacred charge of the writer. I realized, as I believe many writers do, that instead of restricting, inhibiting, coarsely despoiling aesthetic liberty, the existential condition of witness was enlarging, inspiring aesthetic liberty breaching the previous limitations of my sense of form and use of language through necessity; to create form and use anew.

I read Rabindranath Tagore's 'Chokker Bali', translated by Radha Chakravorthy, only in 2003. But Tagore, in his foreword a hundred years before, 1903, expressed far better than I do here and now, that necessity, when he declared 'The literature of the new age seeks out not to narrate a sequence of events but to reveal the secrets of the heart'. This holds good for the literature of our new age, the new millennium. Aesthetic liberty is an essential of witness literature. Through bold and innovative liberty we writers have to question the story of our time in many inner voices, to tell it in whatever we might reach of its meaning, submerged beneath public ideology, discourse and action.

An aesthetic quest?

But there is no ivory tower that can keep the assault of reality from beating at the walls, as Flaubert dismayedly noted. In witness to it the imagination is not unreal but is the deeper reality. Its exigency can never allow compromise with conventional cultural wisdom and what Milosz calls official lies. That outstanding intellectual of no compromise, Edward Said, asks who, if not the writer, is 'to uncover and elucidate the contests, challenge and hope to defeat the imposed silence and normalized quiet of power?' And the final word on witness literature surely comes from Camus: 'the moment when I am no more than a writer I shall cease to be a writer.'

055. Statement of Prime Minister Dr. Manmohan Singh before his departure for Washington for the G-20 Summit.

New Delhi, November 13, 2008.

At the invitation of President George W. Bush, I am leaving today to attend the Summit on Financial Markets and the World Economy in Washington D.C., USA

This gathering of world leaders takes place against the backdrop of the financial crisis that has emanated in the United States and Europe. It has become clear over the last several weeks that the effects of the crisis are spreading. In varying degrees, all countries will be impacted. We are facing the prospect of a global economic slowdown.

I look upon the Summit as an opportunity to exchange views with other leaders on the reasons behind the recent developments and to consider what measures can or need to be taken by the international community to arrest the negative fallout. The Summit also has an important role to play in considering corrective measures to prevent future recurrence of such events. The issues involved are complex and will require sustained deliberation over a period of time.

As a major developing economy which is getting increasingly integrated with the global economy, India has a vital stake in the stability of the international economic and financial system. I will put forward our views on the need for greater inclusivity in the international financial system, the need to ensure that the growth prospects of the developing countries do not suffer, and the need to avoid protectionist tendencies.

The fundamentals of the Indian economy are strong. We have taken several measures to ensure adequate liquidity and credit in the system. I have met different stakeholders in the run up to the Summit.

I am fully confident about the growth prospects of our economy. The Indian economy, in fact, has the potential to contribute to global economic growth. My participation in the Summit demonstrates this changing landscape of the international economy.

056. Statement by Prime Minister Dr. Manmohan Singh at the Summit of Heads of State/Government of the G-20 countries on Financial Markets and the World Economy.

Washington (D. C), November 15, 2008.

We are meeting at a time of exceptional difficulty for the world economy. The financial crisis, which a year ago seemed to be localized in one part of the financial system in the US, has exploded into a systemic crisis, spreading through the highly interconnected financial markets of industrialized countries, and has had its effects on other markets also.

It has choked normal credit channels, triggered a worldwide collapse in stock markets around the world. The real economy is clearly affected. Industrialised countries were expected to slow down in 2008. They are now projected to be in a recession in the second half of the year, and there is as yet little prospect of an early recovery. Many have called it the most serious crisis since the Great Depression.

Emerging market countries were not the cause of this crisis, but they are amongst its worst affected victims. Recession will hit the export performance of developing countries and the choking of credit, combined with elevated risk perception, will lead to lower capital flows and reduced levels of foreign direct investment. The combined effect will be to slow down economic growth in developing countries.

India is experiencing this negative impact. After growing at close to 9% per year for four years, our growth rate is expected to slow down to between 7 to 7.5% in the current financial year. The pace of growth next year will depend, in part, upon how long the global recession lasts and how quickly global capital flows return to normal. Much of India's growth is internally driven and I expect we can maintain a strong pace of growth in the coming years, but many developing countries will be harder hit.

A slowing down of growth in developing countries will push millions of people back into poverty, with adverse effects on nutrition, health and education levels. These are not transient impacts but will impact a full generation. If we are to prevent a slide back and ensure that MDGs are achieved, we need to ensure that growth in developing economies is not affected.

Since the crisis is global, it calls for a coordinated global response and this summit is therefore timely. In our discussions, we need to distinguish between

the immediate priority, which must be to bring the crisis under control as quickly as possible with as little adverse effect on developing countries, and the medium term objective of reforming the global financial architecture to prevent similar crises in future. I will comment briefly on both.

As far as the immediate priority is concerned, I recognize that a number of important steps have already been taken by countries to inject liquidity into the financial system, recapitalize banks and other systemically important institutions. Some countries have also introduced a number of innovative, even unorthodox, measures to restore confidence so that the financial system could start functioning again. These measures have had some effect, but the crisis is far from over. Credit channels remain clogged and the signs of distress in the real economy suggest that additional measures are needed.

An obvious issue is to consider whether the emergence of recessionary trends calls for some fiscal stimulus. A coordinated fiscal stimulus by countries that are in a position to do so would help to mitigate the severity and duration of the recession. It would also send a strong signal to investors around the world. Resort to fiscal stimulus may be viewed as risky in some situations, but if we are indeed on the brink of the worst downturn since the Great Depression, the risk may be worth taking. We should therefore take all possible measures at the national level to complement any coordinated international stimulus.

The international community needs to consider special initiatives to counter the shrinkage of capital flows to developing countries that is almost certain to occur over the next two years. The initiative by the IMF to establish a new liquidity facility is a welcome step. However, we must also consider whether the IMF is adequately funded for the task it will face in managing this global crisis. Looking ahead we must plan for possible additional demands on the IMF if the global recession is pronounced. This suggests that we must activate a process for replenishing IMF resources.

An alternative to the IMF as a source of quick disbursing liquidity is the establishment of short term swap arrangements. The existence of such arrangements will reduce the burden on the IMF and will add to confidence in the system. Countries in a position to do so should consider the scope for expanding such arrangements.

Depressed conditions in the global economy are likely to produce a downturn in private investment in developing countries which will worsen recessionary

trends. It is necessary to take steps to counter this development. Expanding investment in infrastructure by the public sector and also the private sector where possible is an ideal countercyclical device. It has the immediate effect of stimulating demand counter-cyclically and the longer-term effect of laying the conditions for an early return to faster growth. Investment in infrastructure today is perhaps the best signal for reviving private investment, including FDI, tomorrow.

This requires new and innovative ways of solving the financing problems that will restrain infrastructure investment. The World Bank, regional development banks and national governments need to consider measures such as providing additional credit for infrastructure projects, promote new instruments for infrastructure financing and providing capital and liquidity support to banking institutions to lend to infrastructure projects that are underway. The World Bank / IFC and the Regional Development banks should aim at making an additional \$50 billion per year in support of infrastructure development in the public and private sectors. This window can be wound down once normalcy returns to global capital flows.

Industrialized countries can also help to revive trade flows in developing countries by expanding the scale of export credit finance available to these countries. We know there is a temporary market failure in this area with elevated risk perceptions which discourage private flows. There is a need to intervene to overcome market failure. A collapse of trade is the last thing that one wants in the current crisis, with all its implications for growth and employment. Concerted government action in expanding export credit financing on reasonable terms will help support the pace of development in developing countries, which is critical for achieving poverty alleviation and employment objectives.

Our willingness to take specific steps to support developing countries in this period of exceptional difficulty will be a test of our collective leadership. Many developing countries have made strenuous efforts to implement economic reforms to deal with the challenges of an increasingly open and globalised world. This has often required implementation of policies which have aroused domestic fears and uncertainties. We have persevered in this process and have benefited from it. Economic performance in almost all developing countries has improved. In the process, attitudes towards globalization have begun to change and people all over the world have come to appreciate the enormous benefits that can be derived from global economic integration. It would be a great pity if this growing support for

open policies in the developing world is weakened because of a failure to protect developing countries from a recession which is not of their making.

We need to take urgent steps to strengthen the global trading system and forestall any protectionist tendencies which always surface in times of recession. A successful conclusion of the on-going multilateral trade talks would be an important confidence builder at this stage. We are willing to work constructively with other major players to reach a balanced and mutually beneficial outcome.

While our immediate priority should be to deal with the crisis which is still unfolding, we also need to look ahead to see what changes are needed in the global financial architecture to avoid such crisis from recurring. Much useful work in this area has already been done by Finance Ministers and there is considerable consensus on many areas. I will, therefore, limit my remarks to a few points.

I agree with the general consensus that there are several factors behind the crisis and the future global economic architecture must be designed to deal with these. These include failure of regulatory and supervisory mechanisms, inadequate appreciation and management of systemic risks and inadequate transparency in financial institutions.

The new architecture we design must include a credible system of multilateral surveillance which can signal the emergence of imbalances that are likely to have systemic effects, and also put in motion a process of consultation that can yield results in terms of policy coordination. At this point, I would like to emphasise the importance of broad based multilateral approaches to our efforts. Bodies such as the G-7 are no longer sufficient to meet the demands of the day. We need to ensure that any new architecture we design is genuinely multilateral with adequate representation from countries reflecting changes in economic realities.

The International Monetary Fund is the logical body to perform the task of multilateral surveillance of macro-economic imbalances and their relationship to financial stability. However, it is relevant to ask whether its systems and procedures are adequate to the task. Over the years, the Fund has become marginal to the task of policy analysis and consultations on macro-economic imbalances and related policies in the major countries. That task is now performed in other forums, though it is questionable whether it is being performed well. I believe we need a comprehensive review of the procedures of the IMF leading to recommendations on governance reform

which would enable the Fund to perform the role of macro-economic policy coordination.

An important element of longer term reform is to restructure the representation in the governance levels of the Fund to reflect the current and prospective economic realities. Quota reform is the normal way to effect a change in voting power but it has been contentious and incremental, and what has been achieved thus far has fallen far short of what is needed. The Board of Governors of the IMF should be explicitly charged with exploring alternative modalities to achieve a more legitimate representation.

Looking ahead, we also have to pay attention to the many regulatory gaps in the financial system which allowed the development of excess leverage and the risks associated with it. It is obvious that we need better systems of risk management and better regulation and supervision, especially of institutions that have a global reach and are dealing in financial instruments that are exceedingly complex. Managers of financial institutions, credit rating agencies and regulators have to do a much better job. The structure of incentives in the system has to be aligned to this end. We also need to examine whether the existing forums of regulators that are there are adequate and cover the entire gamut of regulatory and supervisory activities that are required.

These are technical issues that should be tackled in the specialized forums dealing with financial stability, notably the Basle Committee on Banking Supervision and the Financial Stability Forum. However, both these bodies need to have broader representation than they do at present. International coordination on regulatory issues would be more easily achieved if the principal forums where these issues are discussed were seen to be more representative. Broad basing the present representation in these forums is much easier to achieve and I hope this Summit will give a clear signal in this direction. It will certainly build confidence in our intention over the longer term to achieve significant reform in the governance of the global financial system.

Given the fact that this financial crisis has affected growth prospects across the board, we also need to examine the present structures of trade and development finance to consider how to ensure greater stability in these flows in the face of difficult situations such as the current one. This issue could be examined by the expert group I have referred to or by separate group focusing on this issue. Its work could lead to the design of appropriate international mechanisms and instruments for maintaining and enhancing these flows in future.

The convening of this Summit has raised expectations in many circles that we will work to produce a new Bretton Woods II. The world has certainly changed sufficiently to need a new architecture, but this can only be done on the basis of much greater preparation and consultation. We can however signal that we are serious about starting a process that will, in time, produce an architecture suited to the new challenges and vulnerabilities facing the world economy and reflective of the changes that have taken place in the economic structure. We must also give the world a clear signal of our resolve to take specific coordinated action to handle the current crisis in a manner which restores confidence and which also responds to the needs of developing countries. We need to ensure that the processes we set in motion today safeguard and promote the welfare of our future generations.

057. Declaration issued by leaders of the Group of Twenty countries, at the end of their initial meeting in Washington to discuss the Global Financial crisis.

Washington (D. C.), November 15, 2008.

1. We, the Leaders of the Group of Twenty, held an initial meeting in Washington on November 15, 2008, amid serious challenges to the world economy and financial markets. We are determined to enhance our cooperation and work together to restore global growth and achieve needed reforms in the world's financial systems.
2. Over the past months our countries have taken urgent and exceptional measures to support the global economy and stabilize financial markets. These efforts must continue. At the same time, we must lay the foundation for reform to help to ensure that a global crisis, such as this one, does not happen again. Our work will be guided by a shared belief that market principles, open trade and investment regimes, and effectively regulated financial markets foster the dynamism, innovation, and entrepreneurship that are essential for economic growth, employment, and poverty reduction.

Root Causes of the Current Crisis

3. During a period of strong global growth, growing capital flows, and prolonged stability earlier this decade, market participants sought

higher yields without an adequate appreciation of the risks and failed to exercise proper due diligence. At the same time, weak underwriting standards, unsound risk management practices, increasingly complex and opaque financial products, and consequent excessive leverage combined to create vulnerabilities in the system. Policy-makers, regulators and supervisors, in some advanced countries, did not adequately appreciate and address the risks building up in financial markets, keep pace with financial innovation, or take into account the systemic ramifications of domestic regulatory actions.

4. Major underlying factors to the current situation were, among others, inconsistent and insufficiently coordinated macroeconomic policies, inadequate structural reforms, which led to unsustainable global macroeconomic outcomes. These developments, together, contributed to excesses and ultimately resulted in severe market disruption.

Actions Taken and to be Taken

5. We have taken strong and significant actions to date to stimulate our economies, provide liquidity, strengthen the capital of financial institutions, protect savings and deposits, address regulatory deficiencies, unfreeze credit markets, and are working to ensure that international financial institutions (IFIs) can provide critical support for the global economy.
6. But more needs to be done to stabilize financial markets and support economic growth. Economic momentum is slowing substantially in major economies and the global outlook has weakened. Many emerging market economies, which helped sustain the world economy this decade, are still experiencing good growth but increasingly are being adversely impacted by the worldwide slowdown.
7. Against this background of deteriorating economic conditions worldwide, we agreed that a broader policy response is needed, based on closer macroeconomic cooperation, to restore growth, avoid negative spillovers and support emerging market economies and developing countries. As immediate steps to achieve these objectives, as well as to address longer-term challenges, we will:
 - Continue our vigorous efforts and take whatever further actions are necessary to stabilize the financial system.

- Recognize the importance of monetary policy support, as deemed appropriate to domestic conditions.
- Use fiscal measures to stimulate domestic demand to rapid effect, as appropriate, while maintaining a policy framework conducive to fiscal sustainability.
- Help emerging and developing economies gain access to finance in current difficult financial conditions, including through liquidity facilities and program support. We stress the International Monetary Fund's (IMF) important role in crisis response, welcome its new short-term liquidity facility, and urge the ongoing review of its instruments and facilities to ensure flexibility.
- Encourage the World Bank and other multilateral development banks (MDBs) to use their full capacity in support of their development agenda, and we welcome the recent introduction of new facilities by the World Bank in the areas of infrastructure and trade finance.
- Ensure that the IMF, World Bank and other MDBs have sufficient resources to continue playing their role in overcoming the crisis.

Common Principles for Reform of Financial Markets

8. In addition to the actions taken above, we will implement reforms that will strengthen financial markets and regulatory regimes so as to avoid future crises. Regulation is first and foremost the responsibility of national regulators who constitute the first line of defense against market instability. However, our financial markets are global in scope, therefore, intensified international cooperation among regulators and strengthening of international standards, where necessary, and their consistent implementation is necessary to protect against adverse cross-border, regional and global developments affecting international financial stability. Regulators must ensure that their actions support market discipline, avoid potentially adverse impacts on other countries, including regulatory arbitrage, and support competition, dynamism and innovation in the marketplace. Financial institutions must also bear their responsibility for the turmoil and should do their part to overcome it including by

recognizing losses, improving disclosure and strengthening their governance and risk management practices.

9. We commit to implementing policies consistent with the following common principles for reform.
 - Strengthening Transparency and Accountability: We will strengthen financial market transparency, including by enhancing required disclosure on complex financial products and ensuring complete and accurate disclosure by firms of their financial conditions. Incentives should be aligned to avoid excessive risk-taking.
 - Enhancing Sound Regulation: We pledge to strengthen our regulatory regimes, prudential oversight, and risk management, and ensure that all financial markets, products and participants are regulated or subject to oversight, as appropriate to their circumstances. We will exercise strong oversight over credit rating agencies, consistent with the agreed and strengthened international code of conduct. We will also make regulatory regimes more effective over the economic cycle, while ensuring that regulation is efficient, does not stifle innovation, and encourages expanded trade in financial products and services. We commit to transparent assessments of our national regulatory systems.
 - Promoting Integrity in Financial Markets: We commit to protect the integrity of the world's financial markets by bolstering investor and consumer protection, avoiding conflicts of interest, preventing illegal market manipulation, fraudulent activities and abuse, and protecting against illicit finance risks arising from non-cooperative jurisdictions. We will also promote information sharing, including with respect to jurisdictions that have yet to commit to international standards with respect to bank secrecy and transparency.
 - Reinforcing International Cooperation: We call upon our national and regional regulators to formulate their regulations and other measures in a consistent manner. Regulators should enhance their coordination and cooperation across all segments of financial markets, including with respect to cross-border capital

flows. Regulators and other relevant authorities as a matter of priority should strengthen cooperation on crisis prevention, management, and resolution.

- Reforming International Financial Institutions: We are committed to advancing the reform of the Bretton Woods Institutions so that they can more adequately reflect changing economic weights in the world economy in order to increase their legitimacy and effectiveness. In this respect, emerging and developing economies, including the poorest countries, should have greater voice and representation. The Financial Stability Forum (FSF) must expand urgently to a broader membership of emerging economies, and other major standard setting bodies should promptly review their membership. The IMF, in collaboration with the expanded FSF and other bodies, should work to better identify vulnerabilities, anticipate potential stresses, and act swiftly to play a key role in crisis response.

Tasking of Ministers and Experts

10. We are committed to taking rapid action to implement these principles. We instruct our Finance Ministers, as coordinated by their 2009 G-20 leadership (Brazil, UK, Republic of Korea), to initiate processes and a timeline to do so. An initial list of specific measures is set forth in the attached Action Plan, including high priority actions to be completed prior to March 31, 2009.

In consultation with other economies and existing bodies, drawing upon the recommendations of such eminent independent experts as they may appoint, we request our Finance Ministers to formulate additional recommendations, including in the following specific areas:

- Mitigating against pro-cyclicality in regulatory policy;
- Reviewing and aligning global accounting standards, particularly for complex securities in times of stress;
- Strengthening the resilience and transparency of credit derivatives markets and reducing their systemic risks, including by improving the infrastructure of over-the-counter markets;
- Reviewing compensation practices as they relate to incentives for risk taking and innovation;

- Reviewing the mandates, governance, and resource requirements of the IFIs; and
 - Defining the scope of systemically important institutions and determining their appropriate regulation or oversight.
11. In view of the role of the G-20 in financial systems reform, we will meet again by April 30, 2009, to review the implementation of the principles and decisions agreed today.

Commitment to an Open Global Economy

12. We recognize that these reforms will only be successful if grounded in a commitment to free market principles, including the rule of law, respect for private property, open trade and investment, competitive markets, and efficient, effectively regulated financial systems. These principles are essential to economic growth and prosperity and have lifted millions out of poverty, and have significantly raised the global standard of living. Recognizing the necessity to improve financial sector regulation, we must avoid over-regulation that would hamper economic growth and exacerbate the contraction of capital flows, including to developing countries.
13. We underscore the critical importance of rejecting protectionism and not turning inward in times of financial uncertainty. In this regard, within the next 12 months, we will refrain from raising new barriers to investment or to trade in goods and services, imposing new export restrictions, or implementing World Trade Organization (WTO) inconsistent measures to stimulate exports. Further, we shall strive to reach agreement this year on modalities that leads to a successful conclusion to the WTO's Doha Development Agenda with an ambitious and balanced outcome. We instruct our Trade Ministers to achieve this objective and stand ready to assist directly, as necessary. We also agree that our countries have the largest stake in the global trading system and therefore each must make the positive contributions necessary to achieve such an outcome.
14. We are mindful of the impact of the current crisis on developing countries, particularly the most vulnerable. We reaffirm the importance of the Millennium Development Goals, the development assistance commitments we have made, and urge both developed and emerging economies to undertake commitments consistent with

their capacities and roles in the global economy. In this regard, we reaffirm the development principles agreed at the 2002 United Nations Conference on Financing for Development in Monterrey, Mexico, which emphasized country ownership and mobilizing all sources of financing for development.

15. We remain committed to addressing other critical challenges such as energy security and climate change, food security, the rule of law, and the fight against terrorism, poverty and disease.
16. As we move forward, we are confident that through continued partnership, cooperation, and multilateralism, we will overcome the challenges before us and restore stability and prosperity to the world economy.

Action Plan to Implement Principles for Reform

This Action Plan sets forth a comprehensive work plan to implement the five agreed principles for reform. Our finance ministers will work to ensure that the taskings set forth in this Action Plan are fully and vigorously implemented. They are responsible for the development and implementation of these recommendations drawing on the ongoing work of relevant bodies, including the International Monetary Fund (IMF), an expanded Financial Stability Forum (FSF), and standard setting bodies.

Strengthening Transparency and Accountability

Immediate Actions by March 31, 2009

- The key global accounting standards bodies should work to enhance guidance for valuation of securities, also taking into account the valuation of complex, illiquid products, especially during times of stress.
- Accounting standard setters should significantly advance their work to address weaknesses in accounting and disclosure standards for off-balance sheet vehicles.
- Regulators and accounting standard setters should enhance the required disclosure of complex financial instruments by firms to market participants.
- With a view toward promoting financial stability, the governance of the international accounting standard setting body should be further enhanced, including by undertaking a review of its membership, in

particular in order to ensure transparency, accountability, and an appropriate relationship between this independent body and the relevant authorities.

- Private sector bodies that have already developed best practices for private pools of capital and/or hedge funds should bring forward proposals for a set of unified best practices. Finance Ministers should assess the adequacy of these proposals, drawing upon the analysis of regulators, the expanded FSF, and other relevant bodies.

Medium-term actions

- The key global accounting standards bodies should work intensively toward the objective of creating a single high-quality global standard.
- Regulators, supervisors, and accounting standard setters, as appropriate, should work with each other and the private sector on an ongoing basis to ensure consistent application and enforcement of high-quality accounting standards.
- Financial institutions should provide enhanced risk disclosures in their reporting and disclose all losses on an ongoing basis, consistent with international best practice, as appropriate. Regulators should work to ensure that a financial institution's financial statements include a complete, accurate, and timely picture of the firm's activities (including off-balance sheet activities) and are reported on a consistent and regular basis.

Enhancing Sound Regulation

Regulatory Regimes

Immediate Actions by March 31, 2009

- The IMF, expanded FSF, and other regulators and bodies should develop recommendations to mitigate pro-cyclicality, including the review of how valuation and leverage, bank capital, executive compensation, and provisioning practices may exacerbate cyclical trends.

Medium-term actions

- To the extent countries or regions have not already done so, each country or region pledges to review and report on the structure and

principles of its regulatory system to ensure it is compatible with a modern and increasingly globalized financial system. To this end, all G-20 members commit to undertake a Financial Sector Assessment Program (FSAP) report and support the transparent assessments of countries' national regulatory systems.

- The appropriate bodies should review the differentiated nature of regulation in the banking, securities, and insurance sectors and provide a report outlining the issue and making recommendations on needed improvements. A review of the scope of financial regulation, with a special emphasis on institutions, instruments, and markets that are currently unregulated, along with ensuring that all systemically-important institutions are appropriately regulated, should also be undertaken.
- National and regional authorities should review resolution regimes and bankruptcy laws in light of recent experience to ensure that they permit an orderly wind-down of large complex cross-border financial institutions.
- Definitions of capital should be harmonized in order to achieve consistent measures of capital and capital adequacy.

Prudential Oversight

Immediate Actions by March 31, 2009

- Regulators should take steps to ensure that credit rating agencies meet the highest standards of the international organization of securities regulators and that they avoid conflicts of interest, provide greater disclosure to investors and to issuers, and differentiate ratings for complex products. This will help ensure that credit rating agencies have the right incentives and appropriate oversight to enable them to perform their important role in providing unbiased information and assessments to markets.
- The international organization of securities regulators should review credit rating agencies' adoption of the standards and mechanisms for monitoring compliance.
- Authorities should ensure that financial institutions maintain adequate capital in amounts necessary to sustain confidence. International

standard setters should set out strengthened capital requirements for banks' structured credit and securitization activities.

- Supervisors and regulators, building on the imminent launch of central counterparty services for credit default swaps (CDS) in some countries, should: speed efforts to reduce the systemic risks of CDS and over-the-counter (OTC) derivatives transactions; insist that market participants support exchange traded or electronic trading platforms for CDS contracts; expand OTC derivatives market transparency; and ensure that the infrastructure for OTC derivatives can support growing volumes.

Medium-term actions

- Credit Ratings Agencies that provide public ratings should be registered.
- Supervisors and central banks should develop robust and internationally consistent approaches for liquidity supervision of, and central bank liquidity operations for, cross-border banks.

Risk Management

Immediate Actions by March 31, 2009

- Regulators should develop enhanced guidance to strengthen banks' risk management practices, in line with international best practices, and should encourage financial firms to reexamine their internal controls and implement strengthened policies for sound risk management.
- Regulators should develop and implement procedures to ensure that financial firms implement policies to better manage liquidity risk, including by creating strong liquidity cushions.
- Supervisors should ensure that financial firms develop processes that provide for timely and comprehensive measurement of risk concentrations and large counterparty risk positions across products and geographies.
- Firms should reassess their risk management models to guard against stress and report to supervisors on their efforts.

- The Basel Committee should study the need for and help develop firms' new stress testing models, as appropriate.
- Financial institutions should have clear internal incentives to promote stability, and action needs to be taken, through voluntary effort or regulatory action, to avoid compensation schemes which reward excessive short-term returns or risk taking.
- Banks should exercise effective risk management and due diligence over structured products and securitization.

Medium -term actions

- International standard setting bodies, working with a broad range of economies and other appropriate bodies, should ensure that regulatory policy makers are aware and able to respond rapidly to evolution and innovation in financial markets and products.
- Authorities should monitor substantial changes in asset prices and their implications for the macroeconomy and the financial system.

Promoting Integrity in Financial Markets**Immediate Actions by March 31, 2009**

- Our national and regional authorities should work together to enhance regulatory cooperation between jurisdictions on a regional and international level.
- National and regional authorities should work to promote information sharing about domestic and cross-border threats to market stability and ensure that national (or regional, where applicable) legal provisions are adequate to address these threats.
- National and regional authorities should also review business conduct rules to protect markets and investors, especially against market manipulation and fraud and strengthen their cross-border cooperation to protect the international financial system from illicit actors. In case of misconduct, there should be an appropriate sanctions regime.

Medium -term actions

- National and regional authorities should implement national and international measures that protect the global financial system from

uncooperative and non-transparent jurisdictions that pose risks of illicit financial activity.

- The Financial Action Task Force should continue its important work against money laundering and terrorist financing, and we support the efforts of the World Bank - UN Stolen Asset Recovery (StAR) Initiative.
- Tax authorities, drawing upon the work of relevant bodies such as the Organization for Economic Cooperation and Development (OECD), should continue efforts to promote tax information exchange. Lack of transparency and a failure to exchange tax information should be vigorously addressed.

Reinforcing International Cooperation

Immediate Actions by March 31, 2009

- Supervisors should collaborate to establish supervisory colleges for all major cross-border financial institutions, as part of efforts to strengthen the surveillance of cross-border firms. Major global banks should meet regularly with their supervisory college for comprehensive discussions of the firm's activities and assessment of the risks it faces.
- Regulators should take all steps necessary to strengthen cross-border crisis management arrangements, including on cooperation and communication with each other and with appropriate authorities, and develop comprehensive contact lists and conduct simulation exercises, as appropriate.

Medium -term actions

- Authorities, drawing especially on the work of regulators, should collect information on areas where convergence in regulatory practices such as accounting standards, auditing, and deposit insurance is making progress, is in need of accelerated progress, or where there may be potential for progress.
- Authorities should ensure that temporary measures to restore stability and confidence have minimal distortions and are unwound in a timely, well-sequenced and coordinated manner.

Reforming International Financial Institutions

Immediate Actions by March 31, 2009

- The FSF should expand to a broader membership of emerging economies.
- The IMF, with its focus on surveillance, and the expanded FSF, with its focus on standard setting, should strengthen their collaboration, enhancing efforts to better integrate regulatory and supervisory responses into the macro-prudential policy framework and conduct early warning exercises.
- The IMF, given its universal membership and core macro-financial expertise, should, in close coordination with the FSF and others, take a leading role in drawing lessons from the current crisis, consistent with its mandate.
- We should review the adequacy of the resources of the IMF, the World Bank Group and other multilateral development banks and stand ready to increase them where necessary. The IFIs should also continue to review and adapt their lending instruments to adequately meet their members' needs and revise their lending role in the light of the ongoing financial crisis.
- We should explore ways to restore emerging and developing countries' access to credit and resume private capital flows which are critical for sustainable growth and development, including ongoing infrastructure investment.
- In cases where severe market disruptions have limited access to the necessary financing for counter-cyclical fiscal policies, multilateral development banks must ensure arrangements are in place to support, as needed, those countries with a good track record and sound policies.

Medium-term actions

- We underscored that the Bretton Woods Institutions must be comprehensively reformed so that they can more adequately reflect changing economic weights in the world economy and be more responsive to future challenges. Emerging and developing economies should have greater voice and representation in these institutions.

- The IMF should conduct vigorous and even-handed surveillance reviews of all countries, as well as giving greater attention to their financial sectors and better integrating the reviews with the joint IMF/World Bank financial sector assessment programs. On this basis, the role of the IMF in providing macro-financial policy advice would be strengthened.
- Advanced economies, the IMF, and other international organizations should provide capacity-building programs for emerging market economies and developing countries on the formulation and the implementation of new major regulations, consistent with international standards.

058. Statement by Minister of State E. Ahamed at the Plenary Session of the Follow-up International Conference on Financing for Development to Review the Implementation of the Monterrey Consensus.

Doha (Qatar), November 30, 2008.

Mr. President,

Excellencies,

Ladies and Gentlemen,

At the outset, I would like to thank His Highness the Emir and the Government of Qatar for the warm hospitality extended to us and for the excellent arrangements made in hosting this very important Conference. I would also like to express my appreciation for the UN Secretary General, the President of the General Assembly and their teams.

Mr. President

We are grateful for the words of sympathy and solidarity that many of you have expressed for my country in the wake of the dastardly terrorist attack on Mumbai. These attacks were well orchestrated and well planned. This is not possible without a strong institutional and financial support from outside.

I hope that this conference will send out a strong message that not only the perpetrators but also the organisers, financiers and supporters of terrorism will be brought to justice urgently. We would also urge an urgent adoption of the Comprehensive Convention on International Terrorism that has been pending for long at the UN.

Stamping out terrorism is also essential for social cohesion and safety and security in all our societies. These are, in-fact, essential preconditions for development.

Mr. President,

In 2002 at Monterrey, we made a renewed commitment of ensuring predictable and additional financing to developing countries for their development efforts.

Today at the half-way mark to our target date of 2015, it is clear that many developing countries, and the world as a whole, will not be able to achieve the Millennium Development and other Internationally Agreed Goals.

The main reason is the lack of delivery on the global partnership. There has been a drop from 0.31% of gross national income in 2006 to 0.28% in 2007, far less than the commitment of 0.7% of GNI made over 30 years ago. OECD figures also show a disappointing drop in total development assistance by 8.4% in real terms in 2007, on top of a 5.1% drop in 2006. It is high time that we stop making commitments after commitments and instead deliver on commitments.

Mr. President,

Our Conference is extremely timely given the magnitude of the financial and economic crisis that we are facing today. Developing countries were not the cause of the financial crisis, but may become its worst victims. The choking of normal credit will lead to lower capital flows and foreign direct investment to developing countries. Their export abilities will also be hit.

Much of the world's growth in the past several years has been due to growth in developing countries and any slowdown of this growth would have serious consequences for the world economy. If we are to prevent a slide back and ensure that Millennium Development Goals are achieved, developed countries will have to see that FDI, trade and infrastructure development in developing countries is not slowed down.

Mr. President,

International private capital flows to developing countries have increased since Monterrey though we should remember that there continues to be a net outflow of resources from developing to developed countries with the figure having reached almost US\$ 800 billion in 2007.

Given today's financial turmoil, more intensive efforts have to be made to ensure that capital flows to developing countries, including private flows, do not shrink. In these circumstances, ODA would have a more important role in development financing and there is an urgent need to scale up ODA.

There is also an imperative to put in place counter-cyclical policies by promoting infrastructure investment and investing in green and clean technologies. "Investment in infrastructure is today perhaps the best signal for reviving private investment, including FDI, tomorrow" is what our Prime Minister, Dr. Manmohan Singh, recently noted. The World Bank, International Finance Corporation and regional development banks have a special role in this.

Our focus must also be on ensuring that developing countries enjoy the proper economic and policy space to allow them to grow rapidly, unfettered by conditionalities. We must guard against protectionist tendencies and erection of trade and economic barriers. The global partnership should assist in capacity and institution building as well as transfer of technology.

Mr. President,

Our efforts to use trade as a catalyst for promoting development must yield results that ensure that development is at the heart of the outcome. For India, the livelihood interest of millions of our vulnerable subsistence farmers is of critical importance.

Mr. President,

As we meet here the UN Framework Convention on Climate Change is convening in Poznan. It is important that the negotiations under the UNFCCC respect the principle of common but differentiated responsibilities in letter and spirit and move towards an ambitious and equitable outcome. The outcome should recognise an equal right for all to the global resource of the atmosphere. Developing countries must be able to give their people a better life and cope with their huge adaptation needs.

The developed countries must deliver on their green-house gases reduction commitments. They must also commit support for developing countries with capacity building, technology and new and additional finance for addressing climate challenges without detracting from development finance commitments.

Mr. President,

The current economic crisis has brought about a clear recognition of the mismatch between the realities of today and the existing global architecture of international governance. The institutions created at Bretton Woods must have a greater voice, role and effective participation of developing countries reflecting current realities. We welcome the moves initiated in this direction. And, at the United Nations, too, the democracy deficit is no longer sustainable.

This requires genuine reform of the Security Council, which must encompass expansion in both permanent and non-permanent categories of membership reflecting contemporary realities.

Mr. President,

At this half-way stage to the target date for the Millennium Development Goals, we must ensure their attainment across the globe. The response to the current economic and financial crisis, which threatens to roll-back some of the hard-won development gains in developing countries, has shown that with the requisite political will, the world has tremendous capacity to mobilize large resources at short notice. We hope that at this Conference we will witness the same zeal of galvanized action for the good of all humankind.

Thank you.

059. Speech by External Affairs Minister Pranab Mukherjee at the 103rd Annual Session of Punjab, Haryana and Delhi Chamber of Commerce & Industry on "Integrating Rural and Urban India- Inclusive Growth".

New Delhi, December 17, 2008.

Shri L.K. Malhotra, President PHD Chamber of Commerce & Industry

Shri Krishan Kalra, General Secretary,

Distinguished Guests,

Ladies & Gentlemen,

I deem it a great privilege to be invited as the Chief Guest at the 103rd Annual Session of this prestigious institution, the PHD Chamber of Commerce and Industry. The Chamber holds the distinction of being one of the illustrious and oldest in the country. I also take this opportunity to congratulate the distinguished persons and enterprises who are being awarded by the Chamber for making outstanding contributions in different fields and achieving excellence. The topic of my address this evening "Integrating Rural and Urban India- Inclusive Growth" is indeed interesting and central to the challenges of development that our country faces today.

When we look back at the achievements made by our country, during the last more than six decades, we can feel legitimately proud about the difference that can be seen in the economic and social fabric of our country. Indeed, the country has undergone a positive and healthy transformation in all the critical areas of human activity and prosperity is very much evident even at the grass roots.

What is more, the opening up of Indian economy to global competition, spurred by the liberalization process and a progressive dismantling of controls since 1991, has catapulted India on a fast growth track - from a third world nation to a potential emerging world economic power. No wonder, economists are predicting a world order wherein our country would emerge as an economic power before the second half of the 21st century.

For us in the government, sustained economic growth remains a high priority. However, we also recognize that what matters is not just how fast a country grows, but also how it grows. We have to work towards making growth more inclusive so that the gains of economic growth and modern technology

are transmitted to the lowest strata of our society. And, one important pillar of any strategy for such inclusive growth is by strengthening rural- urban linkages and integrating rural and urban India.

We also realize that, despite our best efforts, a significant divide continues to exist between rural and urban India. This poses a threat to the social, economic and political stability of the country. We have to reverse this trend. We have to bridge and ultimately eliminate this gap. In this context, the major challenge for our economy is that of balancing our growth process with the glaring gaps that prevail between the cities and the villages. Therefore, it is important to ensure that growth is inclusive and equitable and intimately linked to the growth objective and attainment of one may not be possible without the attainment of the other. It is also true that sustained high growth rates may not be sustainable if they do not address the problems of urban-rural disparity and the lack of mobility of those employed in agriculture to productive jobs in industry.

We are aware that the elimination of abject poverty from India would be possible only through economic rejuvenation of our rural areas. Hence it is our endeavour- indeed our mission- to ensure that the economic conditions and lifestyle of our rural brethren are improved. We have to ensure that the agriculture sector grows by at least 4% per annum over a longer period of time. The Debt Waiver Scheme announced this year amounting to more than Rs. 71, 000 crores will benefit more than 4 crore small, marginal and other farmers and help to boost up agriculture.

Ladies & Gentlemen,

The Common Minimum Programme of the UPA government seeks to resolve the widening disparities between the rural and urban areas. Besides, the Eleventh Five Year Plan too has inclusive growth and rural rejuvenation as its central theme and resources are accordingly being allocated for the purpose. All this has helped our government to take numerous initiatives to close the gap between the cities and the countryside in quick time.

Among the numerous programmes launched by the Government for rural uplift, I would consider Bharat Nirman, conceived in 2005, as a major initiative of the government to unlock the developmental potential in the rural hinterland. It is a four year time-bound business plan for achieving the identified goals in six selected areas of rural infrastructure. The scheme aims to provide electricity to the remaining 1,25,000 villages and to 23 million households; to connect the remaining 59,461 habitations with all weather roads and construct 1,46,185

km of new rural roads network; to provide irrigation to an additional 10 million hectares; and connect all villages with telephones. It is estimated that out of the total projected investment of Rs. 14,40,602 crore to be incurred by the Centre and the States in the Eleventh Plan, Rs. 4,39,392 crore (or 30.5 per cent) would be spent exclusively towards improvement of rural infrastructure. The targets are, indeed, ambitious. But I am hopeful that with active participation of the State Governments and the people, the scheme would deliver on time.

Since the launch of Bharat Nirman in 2005 till early this year, over 20,830 habitations have been connected by all weather roads, over 45,000 villages provided electricity under Rajiv Gandhi Grameen Vidyutikaran Yojana, over 45 lakh houses constructed for the rural poor, and more than 3.8 million hectares of land brought under irrigation. Number of rural telephone connections has more than doubled and tariffs have fallen dramatically. Only 12,000 villages remain to be connected by telephone. To provide mobile telephones and broadband connectivity for Internet and other modern telecom facilities in rural areas, a massive scheme for creation of rural telecom infrastructure has been taken up.

Our Government has also approved a Special Accelerated Road Development Programme for the Northeast to improve about 8,737 km of roads. In the first phase of the project, works are in progress involving 2,304 km of roads. The norms of coverage of villages under Pradhan Mantri Gram Sadak Yojana have been revised to ensure coverage to hundreds of additional habitations in the Northeast, hilly and inaccessible areas of the country.

There are some concerns about the momentum in recent years in the development of rural electrification. Over 80,000 villages still do not have electricity connection. The Rajiv Gandhi Grameen Vidyutikaran Yojana is to ensure electrification of all villages by the year 2009. Once this is done, we should move rapidly to arrange availability of electricity to all households. Needless to say, much of our efforts are geared to augment electricity generation from all available sources. With more than 50% of our energy requirements met by coal and fossil fuels, and the current fluctuations in the prices of oil and gas, given our energy requirements for the next 20-25 years, we have come to the conclusion that there is no alternative to developing our nuclear energy sources. Today we have an installed power generating capacity of 1,60,000 MW. However, the actual generation is 1,38,000 MW constituting 89,000 MW thermal, 35,000 MW hydro, 10,000

MW renewable sources and 4,000 MW nuclear as of November 2007. Our projected requirement is 800,000 MW by 2030-31.

Indicators of human development such as literacy and education, and the maternal and infant mortality rates, show steady improvement, but they also suggest that the progress is slow and we continue to lag behind. The literacy rate in rural India is also catching up with that of urban areas aided by schemes like Sarva Shiksha Abhiyan. While the literacy rate has gone up from 18.3% in 1951 to 64.8% in 2001, the number of illiterate persons still exceeds 200 million, making India the country with the largest number of illiterate persons in the world.

Taken together with our initiative to guarantee rural employment, through the National Rural Employment Guarantee Scheme, and the initiative to improve rural health, through National Rural Health Mission, it should be clear that our Government is indeed giving a 'New Face to Rural India'. That we have moved so quickly in delivering on that commitment is a testimony to our sincerity. No Government in this country has launched such a massive programme of rural development and transformation in such a short period of time for inclusive growth of the country. Over three crore people are being provided employment annually in 330 districts covered under NREGA and many more will benefit with expansion of the programme to all the 604 districts in the country from April this year.

Ladies & Gentlemen,

As I said economic growth cannot be the only objective for national planning and needed over the years, development objectives are being defined not just in terms of increases in GDP or per capita income but broader in terms of enhancement of human well being. This includes the expansion of economic and social opportunities for all individuals and groups and greater participation in decision-making. The delivery of essential social services at the grassroots level is a major causative factor in unequal development. Much higher levels of human development can be achieved even with the given structure of the economy, if only service delivery is improved. In keeping with this, Panchayats have been given the central role in implementation and monitoring of all rural development programs.

I am glad to note that over the years, the private sector has also taken keen interest in bringing prosperity within the rural domain. Many firms have voluntarily undertaken excellent work in the countryside. They have adopted villages, built schools, undertaken health and other welfare programmes

and assisted rural youth in acquiring market oriented skills. Some of the initiatives taken by the corporate India have been trend setters for unleashing rural India's growth potential to help connect our villages with urban developments.

All this shows that rural development is not the agenda of the government alone. Involvement in rural areas affords many attractive business opportunities, if we adopt the approach of public-private partnership. It is also a win-win situation for trade and industry. For example, food processing, storage and handling of grains, marketing of the products of village industries, especially handicrafts, are all areas where greater private investment and management expertise can be profitably employed. Another area where the government, private sector, and rural communities can work together is in increasing both production and productivity in agriculture. This can be achieved through collaboration between the corporate sector and rural cooperatives. This is especially necessary in the early completion of ongoing irrigation projects, for which the Government's resources are limited. We also need to encourage private investment in wasteland development, social forestry, plantations, and improved management of dry land farming, animal husbandry, and fisheries.

Our government has started to give a major boost to self-help groups, supported by micro-credit from banks. Women's self-help groups have especially worked wonders. I would like the private sector to support these micro-enterprises with suitable technology transfer and marketing. Two other areas where public-private partnership is both urgently needed and can yield very good results are healthcare and education. Over the past sixty years, the Government has created a vast network of primary healthcare centres, and primary and secondary schools in rural areas. These sectors further require active participation of people outside the government.

In conclusion, I would like to say that there would be many more areas where debates and discussions would be important if we are to go forward for real broad based achievement in rural uplift and thereby integrating rural with urban India. We have, as Robert Frost said "promises to keep" and we must keep them, even if there are "many miles to go".

Thank you.

060. Address by Prime Minister Dr. Manmohan Singh at the International Conference on Development, Freedom and Welfare.

New Delhi, December 19, 2008.

When I look at the glittering audience with such powerful intellects seated in this Hall, I am wondering what am I doing here. But it's a rare occasion for me to be present here to release a book which celebrates the life and work of my good friend Amartya Sen. I am therefore delighted to join this glittering gathering to celebrate the enormous intellectual achievements of my good friend and one time fellow student Professor Amartya Sen, Nobel Laureate, Bharat Ratna. As Amartya mentioned, we have known each other since the days when we both were students at Cambridge. I certainly have always felt that Amartya even in those days gave one the impression that here is an individual who is going to make a lot of difference to the way people think about their problems and he has lived up to that expectation. Our paths diverged thereafter but I have watched with great admiration as he went on to climb the dizzying heights of economic theory, followed by forays into esoteric fields of moral philosophy, ethics and logics and with occasional illuminating excursions into history. More recently, he has also descended into the humdrum plains of development policy to study issues which are the focus of attention of the development community in general and are certainly the subject of daily debate in India and indeed in most parts of the developing world and that is as it should be. When I was a student at Cambridge, A.C. Pigou's 'Economics of Welfare' was the book which made a great deal of impact on me and there is a quote from Pigou's opening chapter about what economics is about which if I remember correctly reads something like this - "when we study economics, our impulse is not the philosopher's impulse, knowledge for the sake of knowledge but for the healing that knowledge may help to bring." And then going on to quote Carlyle, Pigou says, "Wonder says Carlyle is the beginning of philosophy. It is not wonder, Pigou adds but the social enthusiasm which revolts against the joylessness of withered life and disorderliness of mainstreams that is the main inspiration of economic science. Distinguished friend has been one of the greatest economist, one of the greatest philosophers and his life and work bear testimony to what Pigou said economy should be about.

It is a matter of great pride for all of us in India that Amartya's career as a teacher began in India, first at the Jadhavpur University, much of it later at the Delhi School of Economics where he and I were colleagues together

and where he first began to explore Welfare economics and Social choice theory. Since then he has held academic positions in some of the most distinguished Universities in the world. Though quintessentially a global citizen, Amartya remains both at heart, and in citizenship, an Indian. He has told me that he is still carrying an Indian passport despite all the difficulties that are associated with being an Indian when you travel abroad. It is therefore especially appropriate that this international conference in his honour is being held in India and I thank Kaushik Basu and Professor Kanbur for having given concrete shape to this idea.

I would like to take this opportunity to welcome all Amartya's friends and admirers who have come from different parts of the world to be here today.

Henry Kissinger is reported to have once observed that academic squabbles are as vicious as they are because the stakes are so low! This is not really true. Which ideas win out in the end is not a low stake activity. It has a huge impact on how we live our lives. Ideas matter enormously. As John Maynard Keynes in the General Theory in the last chapter said so eloquently and I quote :

"....the ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood... Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economist. Madmen in authority, who hear voices in the air, are distilling their frenzy from some academic scribbler of a few years back. I am sure that the power of vested interests is vastly exaggerated compared with the gradual encroachment of ideas."

The theme of this conference is development, freedom and welfare. As our Republic enters its 60th year I must emphasise the historical importance of the Indian experience in this area. India consists of over a billion people, seeking their social upliftment, their political empowerment and their economic betterment within the framework of a liberal, a plural and a secular democracy. This is a truly remarkable endeavour by any measure.

The global community, I sincerely believe, has a great stake in the success of Indian experiment. I venture to suggest that this experiment deserves more credit than it usually secures, especially from our fellow economists! We are all mesmerized by numbers and graphs. These are relevant to any evaluation of the human experience. But they do not capture the essence of human existence. We do not live to eat, we eat to live.

Development and welfare are not the end-all and be-all of human endeavour. Freedom is. And freedom has many manifestations. Economic, social, political, intellectual, religious and so on. Pursuing development and seeking welfare within the framework of a liberal democracy are not an easy journey for a poor country like ours. Many nations started this journey with us and drifted away. Some chose not to walk this path, others were denied that opportunity.

India's achievement in this dimension has global relevance even today. In a world where intolerance is on the rise, in a world where bigotry is on the rise, in a world where narrow nationalisms challenge universal values, in a world where ideologies of exclusion challenge the inclusiveness of the human spirit, more voices must speak for freedom and democracy. Even if such freedoms are partial and such democracies are flawed.

I do not deny that our democracy has its faults. Amartya values its' argumentative aspect, others more impatient to see movement at times deplore it. Personally I feel what is important about our democracy is not so much the argumentativeness, but its ability to build consensus. Building consensus in a plural society is itself a great human and social achievement. I suggest to this August audience.

India's experiment in democracy has been captured by that famous motto, "unity in diversity". It is a motto that captures our civilisational inheritance. It is a motto that created our nation. It is a motto that will have to guide the world in this troubled 21st Century.

All human challenges today have become global challenges. The unfortunate fact is that while our problems have become global, our responses remain national or, at best, regional. One reason for this could be the inherent weakness of global institutions. Another could be the enduring strength of national interests. Consider the area of economic policy making, a subject that many of you here have been interested in for a lifetime. Why have global institutions failed? What can we do to repair them, to strengthen them, to make them more broad-based?

I am often amazed by the jealousy with which nations guard their control over international institutions even as they speak of the virtues of globalization and democracy! The time has come, I believe, for the global polity to catch up with the times and address the challenges posed by the evolving global economy.

Even as we urge the global community to recognize the global nature of the challenges we face, and urge them to work with us, we assure the world and our own people that we will not be found wanting as a nation in addressing the challenges at hand. Good governance, development and security are the least we can deliver to our people.

The debate on globalization has become too straight-jacketed and divided between those who seek only global solutions and those who seek national ones. It has become divided between those who remain obsessed with the ideologies of the market and those who adhere to the ideologies of Statism.

We in India have long rejected such stereotypes and such ideological straight-jacketing of policies. We have walked the pragmatic Middle Path, and will continue to do so. We must learn to walk on both legs.

The response of developed countries to the challenges of our times, be it the financial crisis or climate change or the menace of terrorism, shows that they have no monopoly of good ideas. We in the developing world wish to work with the developed, but we have to find our own ways to deal with these challenges. The imperatives of development, of the well-being of our people, and the logic of democratic politics dictates all this. We are, after all, answerable to our people.

I am glad that we are today celebrating the achievements of Amartya Sen, who has written persistently about openness, about freedom and the advancement of the poor wherever they reside, whatever their colour or religion. He has reminded us of the intellectual collaborations that we once had with China, of the scholars from distant lands who came to our own Nalanda University more than a thousand years ago and of the open courts of Ashoka and Akbar. And in that spirit let me say that we all are truly proud of Amartya Sen's achievements not just for India but for humanity at large. I wish Amartya a long and purposeful life and wish your conference all success. For Amartya I would say the Urdu couplet : *'Tum Zinda Raho Hazar baras, har baras ke din ho pachhas hazaar'*.

You live a thousand year; each year has fifty thousand days.

061. Remarks of External Affairs Minister at a Panel Discussion to honour Prof. Amartya Sen, Noble Laureate.

New Delhi, December 20, 2008.

Distinguished Guests,

It is an honour to preside over this Panel Discussion on the theme Vision for a New South Asia. The panelists for this session are all very distinguished persons, who are highly respected in India and among the South Asian fraternity. Yesterday and today, we have heard great minds who have all come together to celebrate the 75th birthday of Nobel Laureate Amartya Sen through the sharing of ideas on development, freedom and welfare - all of which have been Amartya's lifelong search.

Interestingly this panel will talk about a 'new' South Asia, suggesting thereby that the 'old' South Asia is either dead or dying. At one level, it is true that there has been dramatic and truly momentous political developments in some countries of South Asia, especially Bhutan, Maldives and Nepal. All of us in South Asia applaud these developments. However, if a 'new' South Asia is to emerge, I believe that there would need to be a change in mindsets in the first instance.

If we were to identify, as sovereign nations, the one single thing that is critical to our national interests, I would say that it is freedom or the absence of insecurity.

Security has many dimensions and I do hope it would be possible for the panelists to explore these aspects in some depth during their presentations. Let us take the element of economic security. Without economic security can there be freedom? Today, much of South Asia is characterized by high rates of economic growth and yet, it remains as amongst the poorest regions in the world. There are almost 450 million persons who live below US\$ 1 per day. The prevalence of extreme poverty and human deprivation reflects the acute income inequality and disparity prevalent in the region. Statistically there has been progress in terms of poverty reduction but the countries in the region have a long way to go before they can attain the Millennium Development Goals (MDGs) by 2015. Unless we can guarantee economic security or development for our people, a 'new' South Asia will not emerge. Indeed, economic security or the freedom from hunger, destitution and poverty is the only path towards dignity and development.

Our government is committed to pursuing policies of inclusive growth because we believe that when the benefits of growth are shared equitably, growth will be transformed into development. Economic security is, thus, the primary focus of our government. At the same time, we have consciously sought to find ways and means through which the positive performance of the Indian economy could usher in 'shared prosperity' in the region. We believe, quite pragmatically, that 'shared prosperity' is mutually advantageous. As a result, during India's chairmanship of SAARC, we consciously tried to infuse dynamism in the SAARC process in a non-reciprocal manner.

Another element of security may be loosely termed as 'political freedom'. In a recent paper, Professor Kanti Bajpai has argued that democracy and democratization are vital for peace in South Asia. India believes it is the sovereign right of any people to decide on the kind of government they would like, whether democratic or military. We have seen a fresh wave of democracy sweep over many parts of South Asia and these are encouraging signs. However, genuine democracy does not come about simply by holding an election but rather through a process of democratization that makes the elected representatives accountable and more importantly, in ensuring that there does not exist a separate and de facto centre of power that is actually pulling the puppet strings. The pretense of democracy is not equivalent to democratization. We do not believe that it is for us to advocate how other countries should be governed but we would, most certainly, like to know whom we should deal with vis-à-vis another government; in other words, who runs the show?

While discussing a 'new' South Asia, can we forget the plural character of the region? India alone is home to every great religion in the world and we are proud of our secular and plural heritage. It is a heritage we will not abandon or forsake for it is the cornerstone of idea that is India. Security of all religious faiths is, thus, critical to the vision of a 'new' South Asia.

Finally, we need to focus on the aspect of physical security. Less than a month ago, India was held hostage to a dastardly terrorist attack in the city of Mumbai. Across the globe, the faces of the terrorists have been seen. The deaths of the innocent people, the wanton loss of life and property, were not accidental or unintended as is sometimes referred to as collateral damage. On the other hand, this was cold and calculated murder. One of the terrorists, who has been captured alive has given us a chilling accounts of his handlers. A few months earlier, the Indian embassy in Kabul was the

target of a terrorist attack. The impunity with which these attacks are carried out is possible only because of the safety the handlers have been assured. For as long as this continues, we will remain mired in the 'old' South Asia.

I am confident that the eminent panelists and the discussions that follow will try and explore the vast canvas that the theme of the panel opens up before us.

062. Inaugural Address by External Affairs Minister Pranab Mukherjee at Heads of Mission Conference.

New Delhi, December 22, 2008.

Dear Ambassadors,

It is my pleasure to inaugurate this first conference of all our Heads of Missions. The timing of this conference is most opportune. The world is in the midst of transition covering both political and economic spheres. Political transitions are underway in countries of our neighbourhood as also in the world's leading power. The global economic crisis shows no sign of an ending soon. Issues of energy, environment, food security, and water, to name a few, are becoming more complex. Above all, the effects of the processes of globalization are throwing up new challenges; but, they also provide opportunities for our national endeavours. We have to ensure that our interests and security are safeguarded and promoted. As a stakeholder in the international system, we need to manage the strategic shifts that are underway to maintain our stability and security and bring prosperity to our people.

Before I share my thoughts with you on how we should play a role in shaping these outcomes, I would like to use this opportunity to mention some of our achievements in the past four and a half years. In this period not only we have had significant diplomatic successes but we have also been able to make good progress in transforming our systems and way of functioning so that we are able to respond better to the global developments. If I were to list out the main achievements these would include:

- (i) Relations with neighbours: We live in a difficult neighbourhood. Each of our neighbours is undergoing a domestic transition. It is heartening

to note that most of these transitions are proceeding smoothly and have led to the spread of democracy. Our relations with each of our neighbours, apart from Pakistan are better than before. Both Nepal and Bhutan have new democratically elected governments and Bangladesh is soon going to hold its national elections. It is also a matter of some satisfaction that we have been a factor for stability and peace in the region and our economic growth is having an impact beyond our borders. There is a realization among most of our neighbours, of the increased opportunities and the benefits of partnering with us.

- (ii) Energisation of SAARC: During our chairmanship we have been able to move SAARC from a declaratory phase to an implementation phase and launch several initiatives including the SAARC Food Bank, SDF and the South Asia University.
- (iii) Relationship with major powers: Today our relations with all the world's major powers are much deeper and stronger than before. We are engaged in establishing strategic partnerships and expanding the scope and depth of our economic and strategic interaction with different countries, groupings and regions - whether it is the US, Russia, China, Japan, EU, South East Asia, Central Asia, IBSA or many others with whom we are developing a fruitful and active dialogue. Our relations with Africa got a major fillip with the first India-Africa Summit this year. The successful completion of the Civil Nuclear Initiative is a major diplomatic achievement. It is the first time that we have been able to move the international system to change long established rules in our favour. From being a target of the technology denial regimes we are now regarded as a partner.
- (iv) Passport/Visa services: The Passport Sewa project should result in better and efficient passport services to our fellow citizens in a comfortable environment. By the end of 2009 we should be able to issue new passports in 3 days and do all other miscellaneous services in a day. We have also been able to outsource visa work in 29 missions which has resulted in better use of available manpower and also better service to people.
- (v) As regards the functioning of the Ministry also there have been several new initiatives and milestones. Cabinet has approved 514 new posts which will be created in a phased manner over the next

10 years. This additional manpower should help us in dealing with our ever increasing responsibilities arising from greater engagement with the world. The work on a new state of the art building for the Ministry 'Jawahar Lal Nehru Bhawan' is progressing smoothly. When we next meet for such a conference it will be in that building. The new housing complex in Chankyapuri is almost complete and this should help to relieve the housing problem for our officers when they return to Headquarters. We are undertaking major construction projects in Beijing, Tokyo, Kathmandu and Singapore. We are also working to improve and strengthen the security of our missions abroad so that we can avoid incidents like the terrorist bombing of our mission in Kabul. The Ministry is processing a proposal to classify our missions in different categories depending upon threat perception and to provide them with requisite number of professionally trained security guards and security equipment.

This is just a brief listing of some of what we have done. The real indicator of our success and achievement in diplomacy is the fact India is being called upon to assume an increasingly demanding role on the global stage.

Dear Ambassadors,

I had mentioned in the beginning that the world today is in transition. This is evident in our immediate neighbourhood as well as in the larger global arena.

In our neighbourhood we have continued with our efforts to deepen engagement, either bilaterally or multilaterally and even by assuming a built-in asymmetry in responsibilities. An objective assessment shows that this policy has yielded results except with Pakistan. The recent terrorist attack on Mumbai was unprecedented both in terms of its scale and audacity. This and the series terrorist incidents preceding it including the attack on our embassy in Kabul, where we lost our colleagues indicate that terrorism emanating out of Pakistan is acquiring an increasingly dangerous dimension and continues to threaten peace and stability in this region and beyond.

We have so far worked at several levels. At the international level we have sought the support of the international community to put pressure on Pakistan to deal effectively with the terrorism. We have highlighted that the infrastructure of terrorism in Pakistan has to be dismantled permanently. We are not saying this just because we are affected but because we believe that it will be good for the entire world and also for Pakistani people and society. This terrorist infrastructure in Pakistan is

the greatest terrorist danger to peace and security of the entire civilized world. There has been some effort so far by the international community but this is not enough. Much more needs to be done and the actions should be pursued to their logical conclusion. We need effective steps not only to bring those responsible for the Mumbai attacks to justice, but also to ensure that such acts of terrorism do not recur. Unfortunately Pakistan's response so far has demonstrated their earlier tendency to resort to a policy of denial and to seek to deflect and shift the blame and responsibility. We expect civilian Government of Pakistan to take effective steps to deal with elements within Pakistan who still continue the use of terrorism as an instrument of state policy. We have so far acted with utmost restraint and are hopeful that international community will use its influence to urge Pakistani Government to take effective action. While we continue to persuade the international community and Pakistan we are also clear that ultimately it is we who have to deal with this problem. We will take all measures necessary as we deem fit to deal with the situation.

The international financial and economic crisis presents another set of transitional challenges for us. From our perspective, we need to see how we can manage the crisis and also place ourselves in a position so that we can play a role in any future global financial or political structure. The challenge for us is to shape a set of policies encompassing both the security and foreign dimension such that we can ensure an external environment conducive to India's transformation and continued development.

Dear Ambassadors,

You have the experience and are well versed in the craft of diplomacy. However I wish to point out some facets which will require particular attention, given the transitional global political and economic environment that we now find ourselves in.

We have today a multiplicity of actors on the global firmament, including think-tanks, NGOs and the media. These actors are exercising a significant level of influence. During the civil nuclear cooperation discussions, we saw how a concerted effort was made to unsettle negotiations, by portraying a narrow and distorted view of the negotiations. Therefore, even though these actors may exercise varying degrees of influence and hold views which may be antithetical, there is no alternative but to take cognizance and engage with them. This engagement can be at various levels in its intensity and range. In the coming years, the crafting of sound policies will also depend on the influence we are able to bring to bear and the way in which

we manage these processes and actors.

In this context, our soft-power is an asset we need to utilize with a greater degree of cohesiveness and with an outcome oriented approach. We have scholarships and mid-career training programmes, we offer defence cooperation and related technical programmes. A vast amount of money is spent on these programmes. Unlike some other countries, we have till date eschewed monetizing these programmes. Perhaps, we may now need to conduct a more realistic assessment and undertake an audit of the utility of these programmes, of these tools of soft-power at our disposal. The database of participants can be augmented not only by annual ITEC days but perhaps by promoting an alumni of graduates of Indian institutes in your countries. We should capitalize on the existing goodwill, in creative ways, and I expect our Missions to assist in this task.

Our chanceries and facilities for those seeking passport, visa and other consular services represent our public face and need a special mention. The maintenance and upkeep of these facilities should be a priority. At the same time we should endeavour to provide services comparable to best international standards. As I noted earlier we have made some progress in this regard. I hope that this will continue.

The Indian Diaspora is an asset. They are not only affluent in many countries and are also influential, being well integrated into their local communities. The efforts of previous years to engage them, has proven to be beneficial and they can be a source of strength. We need to continue to nurture them.

On the economic dimension, India's economy has proven to be both outward looking, competitive and resilient. Our companies are no longer shy in exploring new opportunities and our manufacturing is setting new standards and earning a healthy reputation. This can be utilized to enhance our reach and effectiveness in other countries.

The larger process of globalization has unintended consequences. There is the accelerated interaction, due to the speed and spread of the electronic media. This has severely compressed the time available for decision-making. We have to be aware of this in our work both in Headquarters and in Missions. We must be clear in our analysis and in our presentation of options. The transitions underway globally also makes it harder for us to arrive at assessments but we should gear ourselves to discerning the different strands, particularly the underlying currents which are influencing policy

making. The fluidity of the situation provides us an opportunity, to fashion new frameworks to enhance our interest.

To conclude, it is not merely the structure of the international system that is changing at a rapid pace. The challenges themselves are rapidly evolving. Traditional approaches must make way to more forward looking approaches of cooperative solutions. We should prepare to play a leading role in shaping the emerging world, by preparing long term strategies as an influential and respected member of the international community.

You will over the next three days consider many aspects of our global interaction. I wish you success in your deliberations and look forward to your conclusions which I will discuss in the concluding session on the 24th.

Thank you.

063. Press Release issued by the Prime Minister's Office on Dr. Manmohan Singh's address at the Conference of Indian Heads of Mission.

New Delhi, December 23, 2008.

Prime Minister today addressed the Conference of Indian Heads of Mission organized by the Ministry of External Affairs.

Prime Minister emphasized that India's foreign policy should be an extension of our enlightened national interests. The biggest challenges which the country faced were the removal of poverty, disease and ignorance. The removal of poverty and emancipation of our people should be given the pride of place in India's foreign policy. India's diplomatic efforts should be geared to removing obstacles which stand in the way of achieving these objectives. Particular attention needed to be paid to ensuring food security, the management of water resources, energy security and overcoming technology denial regimes.

Prime Minister noted that globalization had come to stay, and interdependence among nations was today a fact of life. The implication of this was that the destinies of nations were increasingly interlinked. India was a country that was not well endowed with natural resources on a per capita basis, and therefore India would have to be a major trading nation of the world. Indian diplomacy should be geared to ensuring an open and transparent multilateral trading system, and to overcoming barriers to Indian trade.

Prime Minister referred to the international security environment, and said that threats such as terrorism and piracy required a well thought out strategy. India sought peace and stability in its neighbourhood. The situation was however worrisome. Non-state actors were practicing terrorism aided and abetted by state establishments. The Mumbai terrorist attacks were an attack on India's ambitions to emerge as an economic power. India would not accept a situation where terrorism is used as an instrument to cripple India's economy or the values it stands for.

In conclusion, the Prime Minister said that India was destined to become a major economic and knowledge power which was at peace with itself. India's diplomatic efforts should be geared in this direction and reflect the aspirations of its people.

**064. Press Release issued by the Ministry of External Affairs
on the Conference of Heads of Indian Missions abroad.**

New Delhi, December 24, 2008.

A Conference of Heads of Indian Missions abroad was held in New Delhi on 22-24 December, 2008. The Heads of Missions (HoMs) were received by the President and Vice-President and were addressed by the Prime Minister. The Conference was inaugurated by the External Affairs Minister. The Minister of State for External Affairs interacted with the HoMs during the Conference.

Minister of Commerce and Industry; Minister of Overseas Indian Affairs; Minister for Agriculture, Food and Public Distribution and Consumer Affairs; Deputy Chairman, Planning Commission; Chairman, Chiefs of Staff Committee; National Security Adviser, as well as Secretaries of various Ministries addressed the HoMs.

The sessions covered the entire spectrum of issues concerning our foreign policy including politics, security and defence, economic and cultural issues, as well as challenges of food and energy security and the environment. The recent developments involving Pakistan were also discussed. During the Conference, the HoMs also interacted with the leaders of Indian industry.

The Conference also discussed issues of institutional efficiency and coherence, and measures for even more effective work by Indian Missions abroad.

065. Interview of Foreign Secretary Shivshankar Menon with Kalyani Shankar for All India Radio.

New Delhi, December 31, 2008¹.

Kalyani Shankar: (KS): Welcome to this programme, Mr. Shankar Menon. If you look at your crystal bowl, what do you see for the country in 2009 ?

Shiv Shankar Menon: (SSM): Well, I have to say because I think 2008 has been a year of so much change. And so many major changes in external relations, in the external environment that I think I would expect that it is a pace of change will be a little quieter. If you look at it, in the last year, we had, all our neighbours have changed their governments. Whether Bangladesh, Pakistan, Bhutan, had its first democratic elections, Nepal, Except Sri Lanka, Afghanistan and India. Next year, I think there will be. You had a world economic crisis of unprecedented proportions. So, that environment is changed. You, for the first time last year you managed to re-write the rules of international nuclear trade and diplomacy in your favour, you changed the international system in your favour. A huge change. So if you look at that kind of big change, systemic change, I think, and most of the major parts also are going through some changes or the other. I would hope that 2009 will be not quite so exciting. So interesting. I don't think the nature of change will be as that pleasing. But I think certainly, change is inevitable. And if you look at our economy, it is still growing. It is one of the few economies which is still growing and growing quite fast in the world. If you look at the way our society is changing, our needs from the rest of the world also are changing, the way we engage with the rest of the world. Today as we evolve into some kind of knowledge economy, the ways in which we deal with other countries is also changing tremendously. Our economic engagement is much more than ever before. So I would see most in next year, I would expect to be a continuation of that process. Of that change in phase and how you will deal with the rest of the world.

KS: A little will be more of economic diplomacy than...:

SS: I think, there will be a lot of than. I think partly. Well, first half of the year I suppose we will have our own domestic politics will keep us quite busy with elections and so on. So I think, but the normal business of India with

1 The interview was recorded on December 31 and broadcast on January 1, 2009.

the rest of the world will go on. And I think, that is, I think, the beauty of a system like us. That we will go on doing it. One big issue which I think Mumbai, the attack on Mumbai, which is a real concern for the next year. Israeli terrorism and international terrorism, which springs from the situation in Pakistan really, that is where the source of these elements attacked us from Pakistan. And that is going to be a major concern in 2009.

KS: So you will have to devise the big plan how to deal with it ?

SSM: Well, I think it is a national effort . It is not just an external affairs problem or home ministry problem. So therefore, I think it is really something that we have to deal with as a nation as a whole. Just as I think the world economic crisis also is a challenge to all of us, it is not one, not just commerce ministry or the. So I think that is the difference.

KS: Mr. Menon, there is one confusion in the minds of the people about the possibility of the war with Pakistan. Is it our government, sometimes Ministers and even government officials, sometimes you get the feeling that all options are open. Then again, there is a contradictory statement saying military option is also open. Then one says it is not open. Same thing is happening with Pakistan. Then Gen. Kyani says something that we will reply in five minutes. And then they say that they are talking in a folked tongue. You know once something they say, Zardari says something . So this is creating a lot of confusion. Are we going for a war or are we getting ready for a war or just rhetoric?

SSM: Well, I can speak very clearly for atleast government of India. (a) We have no quarrel with the people of Pakistan. We have a quarrel with those who did Mumbai and who did the series of terrorist attacks on India, Indian interests, which you have seen over the years. And there was Kabul Embassy was bombed on the 7th July, 2008. If you look at each of the cities- Jaipur, Delhi, Ahmedabad- all of them have been bombed, Bangalore. This series of attacks and Mumbai is really the most horrific. It is the whole new scale of it and that is really the most horrific of the series. We certainly have a quarrel with those people. And we do feel that those people who did this kind of dastardly act, they should be brought to Indian justice. They must feel the full forces of the law. And that not just we, but the world has the obligation to do this and Pakistan certainly has an obligation because all these are coming from Pakistan. There is clear proof in the Mumbai case. Now in order to do that, in order to make sure that the perpetrators of the attacks face Indian justice. And to make sure that Pakistan

will take credible action to stop such attacks, terrorists attacks out of Pakistan, we will do whatever is necessary. So when people say all our options are open, we will do whatever is necessary and so on. This is what they mean. We do not seek war. We will not move troops. We have not done any mobilization. A lot of propaganda comes out of Pakistan saying India is doing this and India is doing that. Frankly, I mean, they like boy who cry wolf. You know, they will be crying wolf for so long . I think the world also realizes by now, how much freedom to place by what they say. They will like to convert and divert attention from what is essentially a problem of terrorism coming out of Pakistan into an India-Pakistan crisis. So, here are two nuclear armed states. Then you can move the focus, then you tell, no no please come, deal with this and so on. They would try to shift the focus and divert attention. But frankly that is not going to work. They have tried that before. But we will not allow that to work. But let us say we must do whatever we must to protect our own people. That we will do.

This was an attack on India after all. And there has been a series of attacks on India. So we will do whatever we want. We don't want war. We have not done anything that but we will protect our people, we have a duty.

KS: Mr. Menon I don't ever support the possibility of a nuclear adventure from Pakistan. Is there a danger of the Pak nuclear installations falling into the hands of the militants which is what the Americans fear, I think? AQ Khan, you know, was under house arrest. He says that it is not possible. Do you believe this?

SSM: Well, he also said they that were not proliferating when they did. He ran a whole clandestine programme which he denied for many years, when they were actually doing this. He actually spread nuclear technology to all kinds of countries, sold it all over the place, ran a clandestine network. Now whether you want to believe somebody like that, I don't know. Certainly we worry about the possibility and I think it is something the world should worry about. Not just us. The fact that we don't know about the security of the nuclear weapons in Pakistan. Certainly their doctrines for use are offensive. They actually calculate on how to use nuclear weapons as war fighting weapons. That is part of their military doctrine. So certainly that that is theirs. We have declared a no first use policy. We will not be the first. Pakistan has not. Pakistan so far has refused to when we have asked them to. So they regard them as offensive weapons that they could use. So given that, I think it is natural, we have to think about it, we have to plan for it, we have to work on that basis.

KS: Are we ready to face such an eventuality?

SSM : We will do whatever we can. Whatever we have to do, we will do.

KS: Why is it despite India mobilizing the international support on the Mumbai terror attack, it is unable to make Pakistan take action against the perpetrators of the Mumbai terror attack?

SSM: Well, it depends on how you look at the situation. Quite frankly, I think the world today is much more united and has played much more pressure than ever before in this particular case. And certainly the world had made it clear whether it is by proscribing the Jamaat-d-Dawa at the United Nations adding them to the list of terrorists organizations, or whether it is not just expressions of sympathy when the actual cooperation that we receive from other countries what they have done, told Pakistan and so on. I think it is quite clear. Problem actually arises from the situation in Pakistan and the nature of the situation there. Where there are so many actors and all of them and in different stages, different kinds of relationship with each other. And whether it is a question of capacity or will, we don't know. But the fact is that Pakistan authorities have the responsibility for what happens in their territories. They regard themselves as a state, they have to do something about this. And I think the world is trying very hard to make sure that they do. I think, it is too early to say, yes they have, they haven't.

They promised various things. Our problem is that we have heard so many contradictory things, whether it is action against Masood Azar, first we were told by their Defence Minister that he has been arrested, then we were told by the Foreign Minister, no, he is in custody. Within three hours after that the same Foreign Minister told us no, no, he is at large, we don't know where he is. You know, whether it is action against Jamaat-ut-Dawa or, they say that they have done something, they have banned it, proscribed it, but their website is still being upgraded.

KS: Money is also going into their bank?

SSM: Money is going in, all kinds of things are happening. For all, you know, they have now started up entering new names, it looks like. So frankly, what we see is contradictory. Some things are done. Nowhere near enough. But some things are being done. But it is hard to

say that there is a consistent pattern. There is a perpetual tendency to go back into the Pakistan habit of denial, saying, no, no, we have nothing to do with this. Which is what has happened every time when we have given

evidence in the past that we have gone through the process. They have said, Oh! we should have joined anti-terror mechanism so on we set one up and we gave them evidence. Now they say, we want joint-commission. Why do we need another institution? We have an institution. They should make it work. But our experience so far has not been good. So we will keep at it and try and get Pakistani compliance with their international obligations and with the commitments that they made to us at various stages. President Musharraf had assured us and then President Zardari assured us. On the 24th of September 2008, President Zardari said he would not allow the territory of Pakistan to be used for terrorist attacks on India in any manner, no territory under Pakistani control will be allowed to be used. But it is happening.

KS: Well, I can understand they are not listening to India. But Pakistan is the child of the United States and U.S. is sending signals. Even today, Condoleezza Rice has said that Lakhvi has to be handed over to the Indians. But nothing is happening. So, what is the problem?

SSM: I can't read their minds. I mean, frankly, whether they do it because of us, whether because of thatI am interested in the results. And they must take credible action both against perpetrators of these attacks but also to guarantee that there are no attacks, no terrorists attacks out of Pakistan.

KS : At least friends of Pakistan like Saudis or Chinese, are they trying to tell them to do something.

SSM : I certainly hope so. I think they are hearing it from everyone because the rest of the world does not approve of this kind of terrorism or the export of terrorism. And certainly all their friends should be telling exactly as you said as they need to take real credible action.

KS: But Saudi Minister was here and then Chinese Foreign Minister also spoke to our Foreign Minister. Did you tell them about the evidence which we have.

SSM: We had told them and you heard what the Saudi Foreign Minister said. He said it is a cancer, it must be cut out.

KS: The same words were used by Zardari also immediately afterwards.

SSM: So, it is clear. I think the world is united on this, in its condemnation of the terrorism.

KS: What is your assessment of the political situation in Pakistan since you had been the High Commissioner there ? Does the civilian government have any control over the ISI and the army or do you see army taking over once again if the government is not able to survive.

SSM: I don't think there is any diplomatic answer to this. As Indian Foreign Secretary, I don't want to comment on their internal affairs because it immediately becomes part of their own internal dialogue, their own internal disputes, arguments, whatever they have and I don't want to become part of their domestic political process. That is really their business.

KS: But is the government strong enough, is it able to deliver, that is what I mean.

SSM: I am interested in what they do in terms of, as I said, they can take real action against the perpetrators of these terrorist attacks and they can also take credible action which guarantees that there will be no terrorist attacks on us or the rest of the world out of Pakistan. That is important. And they need to do this. Then we will regard them as credible. But I am not interested in their general conditions and the temperature, you know, whatever. That does not for me to certify.

KS: Do you see, I mean is it correct to say that they are moving their forces from Afghanistan to the eastern side?

SSM: We have seen some limited, very limited, movements of troops in Pakistan, but so far it has been very limited.

KS: So there is nothing to worry about.

SSM: We will naturally have to prepare for everything.

KS: How do you see the US-Asia policy after the new President takes over on January 20th. Will there be much change and how do you see Indo-US relations, as a second part of it and also there are talks of Bill Clinton becoming the envoy for Jammu & Kashmir ?

SSM: We are looking for very much to actually working with the new US Administration. We have worked with the transition team and it has been a very smooth transition actually. We went in early-December to Washington DC and spoke to them about what our interests are, what we think we can do and there was very positive responses. You know, President-elect Obama had written to PM actually when we were in the US in September

itself and had at that stage pledged his cooperation. I think there is a widespread understanding in the US on both sides whether Democrats or Republicans and we have managed successfully to transform the relationship over the last few years. We were only able to do the civil nuclear initiative because there was bipartisan support. It was not only one side of the House or the other. So, therefore, for us actually the relationship now has sufficient critical mass that it will continue and can develop. I think, now we are cooperating in several fields and several fields which are important to our own development, whether it is education, all these areas. Today, I think Indians are the single largest foreign student community in the US is, well over 90,000. And there are so many things we can do together. It is a natural sort of linkage, whether high technology, whether in other fields. We will look at it, energy, you know every field that you mention, there is scope and we have started working together. So, frankly I look forward to a much deeper engagement. I think the period of big new initial breakthroughs may be over, we have done all that. And now we have actually reached level where we can now build on what we have done in the last few years. It is a very different relationship from what it was before. And I think it really is a transformed partnership now.

KS : You say you had talked to the transition team and explained what you wanted. Could you tell us what are the things which you expect the US to do.

SSM: Well, as I said, most of it is a question of building on what we have done. Some areas you mentioned yourself, in space we can do more, high technology we can do much more and on the economic side we can do much more. This year's forum has made various recommendations, we implement those. Education is one, already doubled the size of the Nehru-Fullbright Fellowship programme. So we will increase that further. There is a whole set of things we can do. When you look at energy dialogue, climate change, these are all areas where there is a lot we can do together. So actually what we did was to go through that with them and all these cases, actually they were as interested as we were, in moving these things forward. So, what I anticipate, as I said there is no big dramatic breakthrough because we have already done that part. But we reached a level where now can build on what we had.

KS: And what about Bill Clinton ? Did you get any hint about ...?

SSM: We have seen a lot of articles, statements and so on. But, I don't

think we need to comment on all that until they sort of actually come to power and they then decide how to do their business. How they do their business, is their business.

KS: But his priority would not be South Asia. ?

SSM: I am not really sure. I think the economy, world economy, getting the US economy going again, I think that is going to be a major priority. It is also the subject which interests us greatly. Naturally, for us the more connected we are to the rest of the world, this is a globalised world. While we might be partially insulated from the effects of the global slowdown, we will suffer some of the effects, not on just the credit side, but in terms of export markets, outsourcing. All these issues that really concern us. So we will naturally be very interested in working with the new Administration on these. So, actually our priorities match, if you look at it.

KS: We also have election in the next four months, I don't think anything much can happen in the country.

SSM: The other issue which has tremendous scope is really counter-terrorism. That is something also which is very important to both of us.

KS: So, the first test is whether Pakistan delivers the perpetrators or not?

Mr. Menon, you mentioned about the nuclear deal. It is almost three years, you people have worked very hard to get it through. So after that, past two months, nobody has heard anything about the nuclear deal. What is happening ?

SSM: The real hard work is going on, detailed concrete work. We have said that once we put in place all these enabling agreements, which is the bilateral civil nuclear cooperation agreement which we signed and we have now ratified on 6th of December, we exchanged. So it is in force. We did the Safeguards Agreement with the IAEA and we hope to sign that very soon, bringing that into force. We got NSG clearance. So once you have enabling framework, within that now you have to do the detailed commercial discussions, for the reactors, for all the actual cooperation. That is something that firms have to do. So that is really what has been happening. In NPCIL, Nuclear Power Corporation of India Ltd., and their foreign partners. We have done the same with the US, we have done it with France, we have signed with Russia as well and they are talking, negotiating. DAE is also talking and negotiating with other partners as well. So, now it is really the

detailing and the actual implementation which you will see. So, it does not attract may be the same kind of headlines, same political attention. But this is the bit that is really meaningful.

KS: How long it will take for something concrete, somebody signed with any of these countries?

SSM: Many of those things are actually doing already. What I will do, I will ask BAE to tell you how far they have got. But they are actually moving forward quite rapidly.

KS: Mr. Menon, just now we have completed Jammu & Kashmir elections and there is going to be a new Chief Minister Omar Abdullah. The elections have been very peaceful and the record turnout. And these are very important for this country as well as even the world looking at Kashmir. How come that it has not got the kind of notice which it deserved. Is it the failure of the diplomatic community and why has India not able to sell Kashmir successfully?

SSM : I think that is partly “good news is no news”. May be, that is part of the problem. But the fact is that those who need to know, those who matter. No. 1 people who matter are the people of J&K. They have spoken with a very clear voice. By coming out in huge numbers, by voting, they have made it clear what bothers them, what interests them. Their interest is governance, roll issues and that they have faith in the democratic process, that it will be fair and free and it was. I think that is clear. I think the rest of the world has also noticed. And I think they have seen how it has happened. How people have chosen, what they have chosen to do. Obviously, the enemies of peace in J&K, the people with guns, the people across the line whom I would not like this and so on, they are not going to say “oh what a great victory”. This is against their interests presumably. But I think even they will read the writing on the wall. I think they should know that the people of J&K have spoken and spoken for peace, for governance, for development, for progress in J&K. And I can't believe this sentiment is not shared throughout the erstwhile State of J&K. And I am sure it is, I think it is a very useful example for people to see. Now, where we take it from here, really depends on the political process. We have always argued that it is the political process. It is giving people a chance to realize their potential through a normal democratic political process. That is the important thing and that is what India represents. That is what India offers, that is what India refers, a chance for people to express themselves democratically and

to determine their own future. And that is exactly what happened in J&K. They have chosen their own leaders, chosen to speak with them and they will now go about the business of developing their own lives and realizing their potential. So I think, frankly, the message has gone home. And in a sense, this is good news and if you don't see huge play in the headlines and so on, it is because I said "man bites dog is news". This is the way life should be. So it is not news.

KS: I can understand Pakistan keeping mum about this, but I have not seen any statement from the US or UK.

SSM: I think they all welcomed it. I have seen it has been very welcoming, and certainly the media coverage abroad has been very good.

KS : Then, the other key question is that elections were very peaceful in Jammu & Kashmir. What do you make of it, why it is because Pakistan is already facing internal trouble, because of that. But that does not go well with the way the Mumbai terror attacks have taken place. I can't reconcile to both. So what exactly could be the reason ?

SSM: I think the people of J&K, not just in these elections, but for several years now, have made it clear that they have a very low opinion of men with guns, of the people who came and try to force them into various directions. And they made it clear over time, so I think it is quite clear that anybody who sponsors men with guns in J&K, it is actually counter-productive. And there is tremendous unpopularity attached to this idea of men with guns coming and determining their lives. I think that is exactly what they proved again in the election. So I think the most important thing is what the people want.

There is still infiltration or there was until the Passes were closed by snow. There was until, quite late. And there was quite a step up in infiltration actually during this period. But the fact is that the combination of the security forces and the people, without people you cannot do anything. That combination I think worked.

KS: How much of international impact will there be on the successful elections of Jammu & Kashmir.

SSM: I think the world will certainly notice it. Ultimately, as you know, over the last few years, this has been an issue of our own domestic politics, our own governance and so on. And also the process of setting in place certain measures across the LOC, alongwith Pakistan to make people's lives

easy. So travel and all that became easier. And I think that has gone through, I mean people are saying quite clearly this is what we want. We want better lives, we want all the practical things that matter. But the world has not really in that sense for the last few years, not been that engaged or involved in this issue.

KS: During American elections, I think Kashmir was talked about by both.

SSM: I think we notice every reference. It was a big issue in their election.

KS: Mr. Menon, Pakistan Foreign Minister has said two things in his National Address on Tuesday. One is de-escalation, the other was ...

SSM: We can't de-escalate if we have not escalated. I don't know if he wants us to escalate first. Because we have not escalated. As I said, we are exactly where we were in an army peaceful configuration. We run exercises every winter, there were exercises going on but that is not a big surprise to Pakistan or anyone else. So, there is no question of our de-escalating. And I think he said something about air bases. What we are doing is normal, the standard. We are not the ones who have moved planes, they have been flying their aircraft over their cities creating a sense of panic. War hysteria in Pakistan has been built up, passing resolutions saying we must defend Pakistan or so on. I don't know against whom, against themselves or presume. It is not against us certainly, we are not doing anything like that. As I said, our goal is clear. This is not some big India-Pakistan crisis which some of them might like to create this impression. This is about terrorist attacks on India from Pakistan. That is what the issue is and that is what they need to concentrate on and do something about it.

KS: The second thing which the Foreign Minister talked about, was peace process. He said this should continue, may be it is at the prompting of the Chinese Foreign Minister or the Saudis, I don't know.

SSM: They have said it consistently that we must not stop the process. Let me make it very clear, the precondition of this whole process was an atmosphere free of violence and was started in 2004 January 6, when President Musharraf assured us that would be no terrorism in any manner from any territory under Pakistan's control against India. And it was repeated by President Zardari in September. So without that, we don't see how this process can just go along and act as if nothing has happened. This did happen and it happened from Pakistan.

KS: But now the entire thing has halted, right?

SSM: Right now, it has entirely.

KS: The other neighbour, Bangladesh, they have had a successful election.

SSM: They had a very good election.

KS : How do you look at it, What is going to be the future of Bangladeshis.

SSM: We are glad to see that democracy has been restored after a two-year pause. We are very glad that they have moved forward and we are glad that it was a peaceful, calm election where people got their chance to express their will and they did so in overwhelming numbers, I think in some places the turnout was over 80%. It is really quite remarkable those numbers. So, we are very happy. We are looking forward to working with the new democratically elected government. This is a government with whom we share values, we have very close and intimate relationship with Bangladesh. Of various kinds, both geography, history everything makes for that relationship. So we are looking forward very much to working with them.

KS: Sheikh Hasina is supposed to be a friend of India.

SSM: I would like to think that everybody is a friend of India. I don't want to single anybody out. But certainly we are looking forward to working with her.

KS: Will terrorism be one of the major things ?

SSM: It will be one of the issues, but I think we have to recognize that Bangladesh has a very vibrant polity, civil society and that there is much more life in Bangladesh than just this one issue, which is an issue and it is an issue for them also. She herself has suffered from grenade attack, you remember. It is an issue for Bangladesh, it is an issue with us and certainly we look forward to working with them to deal with it. But there are other issues. There are many constructive issues also where we can do things together. On the economy, there is so much we can do together because we are linked with each other. We can certainly do lots of other things that is available for both countries to do.

KS: Mr. Menon, the Tamil Nadu Chief Minister has been appealing to the Centre to talk to the Sri Lankan Government about ceasefire. Is any progress in it? Can we do anything?

SSM: I think we have spoken to the Sri Lankan Government and to all

concerned actually, except to LTTE whom we regard as a terrorist organization, making it clear that we think that they need to find some kind of solution within the framework of united Sri Lanka where all the communities are comfortable. The humanitarian effects in the war we have tried to enumerate. In fact, we are the one country who has managed to send material for shelter and so on into the LTTE-occupied areas through the UN and the UNHCR and the ICIRC. They have carried out relief supplies, we have sent relief supplies to the people throughout. So we try to take care of humanitarian aspects. We are also urging the Sri Lankan Government to do something in a political framework for a settlement. As far as the war itself is concerned, I think the Sri Lankan Government has made it clear that they would be ready to ceasefire if the LTTE were to lay down their weapons. But that, of course, they are not ready yet and unless there is some agreement between two of them, because it takes two to ceasefire, I think it is very hard to see that happening right away. We will continue to work with Sri Lanka, with the government, with all communities in Sri Lanka, to try and make sure that at least civilian casualties and civilian hardship is minimized to the extent possible. You know, the conflict has gone on for many many years, it is not something new and it is not something so easy to solve.

KS: Then what does Mr. Karunanidhi want? He wants a ceasefire, right?

SSM: He has asked for a ceasefire, but he has also asked for humanitarian effects for us to work to minimize the humanitarian effects which we are doing. We have worked with the Tamil Nadu Government actually to get relief supplies there. It is a real problem but we will continue to work with all concerned and all those we can work with.

Thank you very much.

CLIMATE CHANGE & ENVIRONMENT

066. Joint Declaration of France and India on the fight against global warming.**New Delhi, January 25, 2008.**

Please see Document No.615

**067. Inaugural Address by Prime Minister Dr. Manmohan Singh at the Delhi Sustainable Development Summit.****New Delhi, February 7, 2008**

I am delighted to welcome all the Heads of Government and distinguished representatives of various countries who are all here today. Delhi is unusually cold, for the time of the year, but I do hope the warmth of our hospitality will make your visit a very comfortable and memorable one.

I compliment my friend Dr Pachauri for the tenacity with which he has been organizing this very important annual summit on sustainable development for several years now. This Delhi Summit has become an important event in the annual calendar for all those who are committed to finding a globally acceptable and socially inclusive solution to the problems of climate change and outlining pathways to sustainable development.

I believe that the good work of institutions like TERI, groups like yours and individuals like Dr Pachauri have created the necessary 'climate for change' on climate change. Societies all over the world are challenging their governments to do something, to do it now and do it right. I assure you that India would be in the forefront of that effort.

This effort by TERI is a glowing example of that emerging trend of thought leadership that brings together ideas and people from across the world to collectively engage in this new struggle of human imagination over human predicament. The environmental crisis that manifests as climate change makes us realise that we have a common predicament. It is a collective human crisis but, if imaginatively handled, it offers a collective opportunity to reinforce human solidarity in the face of natural forces.

I have often said that the Indian approach to such global problems is defined by the ancient Sanskrit saying, "Vasudhaiva Kutumbakam" - the Whole World is One large Family. In his very first address to the nation as India's first Prime Minister, Jawaharlal Nehru said, "Peace has been said to be indivisible; so is freedom, so is prosperity now, and so also is disaster in this One World that can no longer be split into isolated fragments". These were the words of Jawaharlal Nehru on the eve of India's Independence on 15th August, 1947.

So we take our responsibility seriously. The Prime Minister's Council on Climate Change is now working on a National Plan of Action for Climate Change. Even as we engage internationally in creating a global strategy to address climate change we would in parallel, work on local, sub national and national action to meet the challenges of climate change. The impact of climate change falls differently on people and the poor are the worst hit. They have the least resources to cope. Action on climate change can then become an action for poverty reduction to reduce the vulnerabilities of the poor people everywhere.

We need technology innovations for reduction of energy use by industry and other user sectors. We need massive action for afforestation, drought proofing and flood protection. We need to act to protect our coastal areas. We need action to protect the glaciers that feed our river systems. A whole gamut of development action needs to be planned and funded. Our 11th Five Year Plan which has been launched this year has articulated strategies in many of these areas for our Nation.

Our National Plan of Action on Climate Change will be released in June later this year. An area that needs immediate attention is that of public transport. We have asked the Planning Commission to come up with a comprehensive policy in this regard.

We need to create knowledge partnerships across countries to collaborate on climate change action. India has decided to link all academic institutions that work on climate change on a national knowledge net and also identify key knowledge institutions that become centres of excellence in climate change related research. We are also considering setting up a Venture Capital Fund to promote green technologies.

At the international level we will continue to engage with all nations to strengthen global initiatives in the area of climate change. At the last G-8 Summit at Heiligendamm I made a commitment on behalf of India on carbon

emissions. India is prepared to commit that our per capita carbon emissions will never exceed the average per capita emissions of developed industrial countries. Moreover, as developed countries take measures to bring down their per capita carbon emissions, our threshold would come down too. This is our solemn commitment.

I am sure participants at this Summit will endorse India's stand because you are all concerned about poverty eradication and reducing global disparities in income and wealth. We cannot continue with a global development model in which some countries continue to maintain high carbon emissions, while the development options available for developing countries get constrained.

We therefore need to ensure an acceptable standard of living for all our people but would choose a sustainable path for that development. Climate justice must, therefore, inform all efforts at international collaboration in act of human solidarity. This then becomes an opportunity for a new global compact. Such a compact has to be based on the well-established principle of common but differentiated responsibility so ably articulated in the United Nations Framework Convention on Climate Change. This was reiterated at the recent conference in Bali.

By "climate justice" we mean a fair, equitable and transparent global regime for technology transfers. It is in the interests of people living in developed and developing countries to facilitate such transfers. We in the developing world desperately need access to environment friendly technologies, especially in energy, transportation, manufacturing and agriculture. Such technology transfer provides new opportunities for resource transfers to countries for adaptation. Nations of the world will have to engage in the next two years to create a consensus on a new architecture for cooperation that involves both finance and technology support to countries for adaptation.

When we felicitated Dr. R.K. Pachauri on the Nobel Prize to the Climate Change Panel, I had said that I would like TERI to present before the people of our country a global vision on energy security. What is it that we must do and must not do to address the challenge of energy security. What are the technology choices available and what public policy choices do we have that will enable Governments to address the challenges we face in making clean and affordable energy available to all our people. Can we afford persisting with the distortions that have long crept in to our

energy pricing policies? Are we contributing to environmental degradation through some of our energy pricing policies? Are we encouraging over use of resources through misdirected subsidies? What are the long term costs of the short term benefits we seek from such policies? Are we hurting our future energy security by shirking the responsibility to grapple with the political challenges at hand? We need a much wider national debate on such issues.

I sincerely hope that Summits like these will encourage such a public debate. I would like to see larger participation in these events of our young people, especially from our political parties. I would like our young people to be more vocal on these issues. After all, tomorrow is theirs. If the youth of today do not worry about tomorrow, who will then? I assure you that we in Government of India are seized of the matter and India will adopt a responsible and forward looking stance, aimed at promoting sustainable development. I look forward to being appraised of the conclusions of your Summit. I wish your deliberations all success.

068. Extract relevant to Climate Change from the President's Address to Joint Session of the Parliament.

New Delhi, February 25, 2008

* * * *

45. My Government acted with urgency on the issue of climate change and set up a Prime Minister's Council on Climate Change to plan and implement appropriate strategies for mitigating and adapting to climate change. A comprehensive National Action Plan on Climate Change is under preparation. India is willing to ensure that its per capita emissions shall at no time exceed the average per capita emissions of developed countries. At the Bali Conference on Climate Change, India constructively engaged with the international community to launch a comprehensive process on long-term cooperative action to deal with this issue in accordance with the provisions and principles of the UN Framework Convention on Climate Change. The River Conservation Programme will be revamped to focus on cleaning of major rivers. An Earth Science

Organisation Council has been created to guide policies of the newly created Ministry of Earth Sciences. A state of the art Tsunami Warning System has been commissioned.

069. Speech of Special Envoy of Prime Minister for Climate Change Shyam Saran on 'Climate Change - From Back Room to Board Room - What Indian Business needs to know about India's approach to Multilateral negotiations on Climate Change'.

Mumbai, April 21, 2008.

I wish to thank the Ministry of External Affairs and the Confederation of Indian Industry (CII) for inviting me to address this distinguished gathering of business and industry leaders on the subject of Climate Change. Of course, CII itself has done an excellent job by bringing out an extremely informative publication recently, entitled "Building a Low-Carbon Economy." I wish to pay special tribute to Shri Jamshyd Godrej, Chairman of the CII Mission for Sustainable Growth and Climate Change, for taking the initiative in alerting Indian business and industry to the issues that are on the table and more important, both the challenges and opportunities likely to emerge in the coming years as the world comes to term with this new and existential threat to its very survival. For there is no doubt any more that the risks emanating from climate change, caused by anthropogenic greenhouse gas emissions, are real and serious and unless addressed expeditiously could have catastrophic consequences, perhaps even in our own lifetime, and that the worst suffering would be visited upon precisely those least able to cope, that is, the poor and disadvantaged across the globe, but particularly those residing in the developing countries.

How does India respond to this threat, despite the knowledge that its own contribution would probably make only a modest difference? Our total emissions are only a fraction of the global figure - just 4% compared to 20% for the U.S. and 16% for China. If you take per capita figures, then the differences are even more stark. India emits about 1.1 tonnes of CO₂ per capita while the corresponding figure for the U.S. is more than 20 tonnes.

Furthermore, the energy intensity of India's economy has been consistently declining and today, we are able to deliver 8% plus annual growth with only 4% increase in energy consumption. This trend is likely to continue and could even accelerate if government and industry were able to work together on improving industry standards in a host of energy intensive sectors.

For India, the most important argument in favour of adopting climate friendly technologies and embracing an environmentally sustainable strategy of growth stems from a very compelling and practical reality i.e. unless we are able to develop economically viable and new sources of energy, energy will become a major constraint on our growth. If we continue to rely on fossil fuels to underpin our growth, and fossil fuels become increasingly more scarce and expensive, as oil has already become, there is little doubt that our ability to sustain high levels of growth of our economy over the medium and medium to long-term, could face severe constraints. Therefore, even if there were no climate change argument, we would still need to evolve an energy strategy that, over time, would involve a shift from fossil fuels to non-fossil fuels, non-renewable sources of energy to renewables, and conventional to non-conventional sources of energy. Such a strategy would, by definition, also be climate friendly.

There is no escape from the reality that as India develops, its consumption of commercial energy is bound to increase. Therefore, realistically speaking, even with continuing decline in the energy intensity of GDP growth, carbon emissions will rise in the years to come, before they flatten and decline as new and hopefully renewable sources of energy kick in. It is to our advantage to build a low-carbon Indian economy and to be even ambitious in this regard. But this is a national effort dictated by our own growth choices. When it comes to multilateral negotiations on dealing with climate change, the dynamics are different.

India's stand in international negotiations, as also that of most developing countries, is based on the simple principle - "The polluter pays". If we consider the period between 1850-2000, cumulative CO₂ emissions will show how the available carbon space is currently occupied. The U.S. leads with 30%, the EU-25 with 27.2%, China with 7.3% and India with only 2%. It is for this reason of historical responsibility that in the UNFCCC, negotiated in 1992, it was agreed by consensus that emission reductions would only be required of the developed countries. The ensuing Kyoto Protocol formalized this understanding by setting targets for emission reductions

by so-called Annex I countries, or developed countries during the first commitment period lasting up to 2012, with the promise of even deeper cuts in the subsequent commitment period post-2012. The explicit understanding has all along been that developing countries would not be required to undertake legally binding mitigation targets. Their mitigation efforts, according to UNFCCC, will have to be fully compensated through transfer of financial resources and technical know-how from developed countries.

Therefore whatever action we take domestically to pursue sustainable development, let it be clearly understood that there is no legal obligation on the part of India, under existing international instruments, to take on binding emissions reduction obligations, now or in the post 2012 period.

I say this, because considerable and sometimes deliberate confusion has been sown in the minds of our civil society and business and industry through the use of terms such as "post-Kyoto regime" or negotiation of a "new international framework for climate change" or a "post-2012 climate treaty." What we are currently engaged in are multilateral negotiations within the existing UNFCCC and its Kyoto Protocol. The principles underlying these agreements have been reaffirmed most recently at Bali in November 2007. What is currently being negotiated is (i) fresh emission targets that the developed countries must adopt - post 2012 in the second commitment period under the Kyoto Protocol; and (ii) an Action Plan that would enable the more effective implementation of the objectives of the UNFCCC, including through measurable reportable and verifiable action on the transfer of financial resources and technology from developed to developing countries.

There is a persistent attempt on the part of the several developed countries to avoid their legal obligations under the UNFCCC and the Kyoto Protocol, by advancing a wholly fresh set of arguments. We will need to be particularly alert in this respect. Let me deal with some of the major arguments one by one:

- (i) Countries like the U.S., Japan and some EU countries have begun using the argument that so long as so-called "major emitters" like China and India, remain outside the emissions reduction regime, their own efforts will make little difference to the global goal of reducing and stabilizing anthropogenic CO₂ emissions. China can speak for itself but India certainly does not consider itself to be a

major emitter though it is a major economy. Neither the total volume of our CO₂ emissions nor our per capita emissions today, would qualify us in that category. Nor is it justifiable to simply extrapolate current emissions trend to arrive at conclusions for 30 or 40 years hence. The major emitters today, as also those historically most responsible for cumulative emission levels, continue to be the developed countries.

- (ii) The U.S. President has recently been reported as saying that the U.S. cannot be expected to agree to emissions reductions unless India and China undertake similar obligations. He also argued that doing so will result in U.S. industries and jobs moving out to countries that do not have emission reduction commitments and would in any case not lead to global mitigation. We reject this argument.

First, it ignores what we call the "legacy" aspect i.e. the historical responsibility for cumulative emissions.

Second, it brings in extraneous considerations of industrial competitiveness and employment that is completely contrary to the principle of equity that underlies the historic Rio compact which is enshrined in the UNFCCC. To accept the U.S. argument is to accept what I call the NPT Approach to Climate Change - that is, I get to keep what I have because I got here first. You have to stay where you are because you are a latecomer. This is precisely what has been done in the nuclear domain.

- (iii) There is another important distinction we must maintain when discussing carbon emissions. This is a distinction between what I would call "lifestyle emissions" and "survival emissions". Reducing emissions that require an adjustment in affluent lifestyles and reduction of waste, for example, cannot be equated with reducing emissions which may impact on the already low levels of livelihood of people in developing countries. Capping or reducing emission levels in India may mean that 600 million Indians who do not have access to electricity today, must be permanently denied this very basic energy service. Should this be put on the same level as putting a speed limit on Germany's autobahns, which could result in major energy savings, or a gasoline tax in the U.S., which will have a minimal impact on the already high standards of living in those countries?

- (iv) In recent months, countries like Japan, supported by the U.S., have advocated a "sectoral approach" to reducing carbon emissions. The idea is to identify high energy intensity industries like power, steel, cement, transportation and building and construction and to set uniform global efficiency norms and lower carbon emission standards for each sector. It is argued that this bottoms-up approach would be more logical and practical than setting of top-down national targets for each country. Now, as developing countries, we do not have any problem with our developed country partners adopting a range of measures, including sectoral measures, to set and to reach their overall national targets. We would also welcome any collaboration with advanced countries to improve our own efficiency standards, exchange best practices and bring about technological upgradation in our own industries. This can be done bilaterally or multilaterally. Unfortunately, the sub-text is that internationally binding norms for specific sectors must also cover major economies or so-called "major emitters" like India. The justification given is that if major developing economies were to be excluded then there would be a competitive disadvantage to industry in the developed world. Their costs will go up as they upgrade and retool their existing units. The developing countries, not having to meet these norms, will have lower costs in addition to lower wages.
- (v) This argument, deceptively reasonable, again violates the very basis of the UNFCCC. The UNFCCC did not qualify the responsibilities of the developed and developing countries with extraneous considerations such as maintaining inter-se competitiveness. Nor is there any reference to maintaining a so-called level playing field. The UNFCCC was itself designed to address a grossly unlevel playing field, already stacked heavily against the developing countries. Now there is a barely disguised attempt to overturn this very basic equity principle through so-called sectoral approaches.
- (vi) There is a very real danger that in adopting sectoral standards among themselves, the developed countries would use the competitiveness argument to put up protectionist tariffs against products from developing countries. This must be resisted at all costs.

Let me now turn to issues relating to the transfer of financial and technological resources from developed to developing countries to enable the latter to pursue environmentally sustainable strategies of growth. This, again, is a

fundamental principle underlying the UNFCCC and has been reiterated in the recent Bali Action Plan. The transfer of such financial and technological resources are not conditioned by any mitigation actions to be taken by recipient countries. In actual fact, the record on this score has been dismal, and with an economic down-turn looming large on the horizon, the prospects are not very encouraging. India has argued for additionality of funds for climate change related activities in developing countries. For technology transfer, we have argued that since climate-friendly technologies are in the nature of public goods, addressing an urgent global challenge, the IPR regime in respect to such technologies must be adjusted to enable them to be adopted by developing countries at affordable prices. A global Climate Change Venture Capital Fund could be set up, which could purchase patents on such technologies and enable their transfer to developing countries. We have also suggested an international collaborative effort among major developed and developing countries to promote new climate friendly technologies. This could be called CLEAN-NET. Unfortunately, none of these proposals have received a serious response from the developed countries.

At a recent meeting, an argument was made that developing countries should institute a zero-tariff regime for a designated list of "green goods" and also create an investment-friendly regime to enable companies possessing green technologies to invest in such countries. Again, one has to be careful in dealing with such propositions. They can distort trading patterns, detract from the legal obligations which developed countries have in respect of transfer of finance and technology and introduce considerations of trade competitiveness which do not belong to the domain of climate change.

Let me summarize India's negotiating position on Climate Change:

- (i) The UNFCCC remains the multilateral, legally binding instrument available to the international community to deal with the challenge of Climate Change. Its principles and objectives continue to be fully valid and must govern all our future activities on this subject. The Bali Action Plan has removed any ambiguity on this count.
- (ii) The Kyoto Protocol to the UNFCCC will remain in force post-2012. What is under negotiation is the setting of emission reduction targets by developed country parties in the second commitment period which commences in 2012. The Kyoto Protocol does not expire in 2012,

nor are developing countries expected to take on reduction commitments in post-2012 period.

- (iii) The responsibility to support sustainable development strategies in developing countries, through the transfer of financial resources and technology from developed countries, is not linked to any conditionalities.
- (iv) While developed countries are free to adopt sectoral approaches as a means to achieve their national emission reduction targets, there cannot be an imposition of industry-wide norms on a global basis, nor recourse to arguments about maintaining trade competitiveness or a level playing field.

Does this mean that India is not prepared to make its own contribution to meeting the challenge of Climate Change, as responsible player in the international community?

While we insist that all parties to the UNFCCC and its Kyoto Protocol fulfill their legal obligations under these instruments, we have made a number of positive and forward looking proposals:

- (i) In the G8+G5 Summit at Heilengendamm, Germany, last year, Prime Minister, Dr. Manmohan Singh made an extremely important proposal. He gave a public assurance that while India's carbon emissions will inevitably rise in the short and medium term as we pursue accelerated growth, we would ensure that at no time would our per capita carbon emissions exceed the average of the developed countries' per capita emissions. The Prime Minister was thus responding to two related complaints frequently voiced by our developed country partners - first, that India is not prepared to accept any current or future limitation on its carbon emissions, and second, that its efforts are not commensurate with what it expects the industrialized countries to do. By giving an assurance that our per capita emissions would never exceed the average per capita emissions of the developed world, we have responded to the first complaint; we have accepted a limit on our emissions. We have, however, linked this limitation to the scale of effort that the developed countries are themselves prepared to put in. The more ambitious they are, the lower the limit that India would be prepared to accept. Thus, there is an inbuilt mutuality of incentive. Further, by insisting

on the per capita standard, we maintain the equity principle. In the long-term there would have to be convergence of per capita emissions globally.

- (ii) We have agreed to play an active role in the CDM market, which can and is playing an important role in enabling the developed countries to meet their emission reduction targets under the Kyoto Protocol, even while transferring, though as yet in a limited manner, climate-friendly technologies to developing countries. India has the largest portfolio of CDM projects to date, and this is a major opportunity for Indian industry. Our effort in multilateral negotiations is to ensure that the CDM mechanism continues beyond 2012 and in a more expanded form.

Irrespective of what happens in international negotiations on Climate Change, it is important that we evolve and pursue a strategy of environmentally sustainable development, for reasons of our own vital national interests. An India which is heavily dependent on fossil fuel imports to sustain its high level of growth, is an India which will be increasingly vulnerable. In the short to medium-term there may be few alternatives to fossil fuels and our strategy must, therefore, be to secure such supplies from a diversity of sources to ensure predictability as well as affordability. We can also increase supplies of energy by further improving energy efficiency standards, through technological up-gradation, improved management and adoption of best international practices. A Vice-President of Dow Chemicals recently said - "..... improving energy efficiency is the cheapest and most renewable fuel of all." We will need to accelerate the development of renewable and non-conventional sources of energy including nuclear energy, wind energy, bio-mass and solar energy.

We are in the process of formulating India's National Action Plan on Climate Change. It is likely to be released in June this year. In a very real sense, this Action Plan really constitutes a Strategy for Sustainable development. It will include major national level missions, such as a Solar Mission, a National Solid Waste Management Plan, a nation-wide effort to create a huge carbon sink of afforested land of an additional 6 million hectares, a Water Conservation mission and the adoption of international best practices and efficiency norms for a range of key industries. All these are seen as public-private partnerships, where government action must be supported and supplemented by private sector, by civil society and the country's citizenry at large. Climate Change is everyone's business and can only be

tackled by mobilizing all our available creative and organizational energies.

India's business and industry is, I am glad to say, ahead of the curve in recognizing the challenge and gearing itself to deal with it effectively. The CII publication on "Building a Low Carbon Economy" contains many useful recommendations. Several are very much in line with Government's own thinking on the subject. The idea of a domestic market which could catalyse higher efficiencies industry-wide is something worth exploring. The provisions of the Energy Conservation Act would certainly lend themselves to a possible market-based approach in achieving efficiency norms that are being formulated by the Bureau of Energy Efficiency in consultation with business and industry. We need to discuss this further.

I would like to conclude this presentation on a note of optimism. India can play a leadership role on the subject of Climate Change, because it has its own particularities. It is heir to a civilizational legacy which places high value on the preservation of the environment and the maintenance of ecological balance. We look upon Nature, instinctively, as a source of nurture, not as a force to be subdued. This is a very powerful asset. India also has a wider spectrum of choice precisely because we are not already locked into a specific pattern of development. We can chart our own course, if we so choose. In making our choices, we must always observe Gandhiji's wise dictum: The earth has enough to meet our needs, but will never have enough to satisfy our greed.

070. Press Release of the Prime Minister's Office on the Prime Minister's call for financial mechanism to promote transfer of environment friendly technologies for developing countries.

New Delhi, March 31, 2008.

The Prime Minister Dr. Manmohan Singh said here today that the international community should consider creating financial mechanisms that will promote environment friendly technologies, transfer of such technologies to developing countries and promote environmentally sustainable development to deal with the challenge of Global Warming and Climate Change. The Prime Minister expressed these views at a meeting to discuss a Strategy Paper on Climate Change prepared by Lord Nicholas Stern, I.G. Patel Professor at the London School of Economics. Dr. Stern endorsed the Prime Minister's proposals made at the G8 Summit at Heiligendamm, Germany, last year. He commended India's efforts to understand and address the challenge of Climate Change. The Government is presently awaiting the National Action Plan on Climate Change to be drawn up by the Prime Minister's Council on Climate Change.

The meeting was attended by the Union Finance Minister, the Union Minister for Science & Technology, the Deputy Chairman, Planning Commission, Mr. Nandan Nilekani, Dr. Nitin Desai, Dr. Kirit Parekh and officials of the Prime Minister's Office and Ministry of Environment & Forests.

071. Speech of Special Envoy of the Prime Minister Shyam Saran on "India's Perspective on Climate Change" at the Indian School of Business.

Hyderabad, May 30, 2008.

Mr. Rangnekar, Deputy Dean of the Indian School of Business, Members of the Faculty, dear students, ladies and gentlemen,

As Mr. Rangnekar said, I have only recently been made Chief Negotiator for Climate Change issues. This is, of course, an extremely complicated subject and I must confess to you that I am still in a learning mode. I hope I can learn something from you this evening, because though climate change is complicated, it is a subject that concerns all of us. It is not something that can be left merely to a small group of people in smokey rooms trying to negotiate international treaties. It has, without exaggeration, the potential of completely transforming the environment in which we live in.

I would like to thank to the Indian School of Business for giving me this opportunity to interact with you on what is a very important, cross cutting issue. The ISB has justifiably earned an enviable reputation in nurturing creative entrepreneurship and professional management in India. I sincerely believe that an awareness and understanding of major global issues confronting us today are really indispensable to sound business planning and marketing strategies. I was going to make a brief presentation on why Indian business should be concerned about climate change and what the risks and opportunities are, specially relating to India as we strive to tackle climate change. I had made a presentation earlier in Mumbai at the Confederation of Indian Industry, I hope that presentation will be circulated to you because that puts, in a nutshell, what kinds of negotiating strategies India is following and why. But I will stray from the script and try to give you a sense of what is the issue we are really facing.

To begin with there is science, and science says that due to the accumulation of green house gases, in particular, carbon-di-oxide, in the earth's atmosphere, the earth is warming up. The temperature all over the world is on a rising trend and the greater the rise in temperature the greater the impact on climatic factors. This has a huge impact. For example, we find that the Himalayan glaciers are beginning to recede. In fact, in some places they are beginning to recede at an accelerated pace. Most of our rivers are snow fed. If the Himalayan glaciers melt, then we are going to

end up with our perennial rivers becoming seasonal rivers. Try to imagine what impact that would have in terms of agricultural production and livelihood of the populations living in the Indo Gangetic plain.

There is also the danger, which is now being studied, of the big ice masses in the Arctic region, Antarctica, and Greenland, cracking up and also melting. If this phenomenon continues then we may see the rise of sea levels up to 5 to 6 metres. What will happen to the large number of island territories in the world? In India also we have island territories, like the Andaman & Nicobar Islands. We have low-lying coastal plains that are densely populated. This would mean a loss of a huge habitat in our own country. Therefore, we have to be concerned about climate change.

Climate change does not just mean freakish weather. It means much more than that. If we don't tackle this issue on an urgent basis, the future for our children and of our grandchildren is really going to be very difficult. So, science is more or less clear today that global warming is taking place and that there is an impact on climatic factors.

Having said that, the problem really is that climate change cannot be dealt with only on a national basis. By its very nature it is a cross cutting issue. It is a global phenomenon. Even if I make a contribution by cutting say, my carbon emissions, it may make no difference at all, if others also do not join in the same carbon cutting exercise. There is the concept of external economies which you all must be aware of. The external economies factor works from both a negative point of view and a positive point of view. That is, if I take action, which ameliorates climate change, the benefit of that action is not just for me. The entire globe shares the benefit. Conversely, if somebody is spewing CO₂ and other green house gases into the atmosphere, then the negative impact is not only for that country but for other countries as well. This is a classic example of an issue which is truly global in dimension and can only be tackled if there is cooperation amongst all the countries in the world. We may complain about who is responsible and who is not, but at the end of the day, unless there is a willingness to collaborate to deal with this phenomenon of climate change, we are not really going to get very far. That is the reality staring us in our face. When I go as a negotiator to multinational fora, I have to keep in mind that this is a global phenomenon and I have to carry everybody along with me as we try to tackle it, because without that we will not be able to do much. However, if collaboration on a global scale is required, then what do we do in terms of practical action?

This is where we as a developing country start with an uneven playing field. Why do I say that? As I mentioned to you, the reason why global warming is taking place is the accumulation of green house gases in the atmosphere. It is the accumulated impact of industrialization and production processes, which has been taking place at least since the industrial revolution. So, if you take a time span of say 1850 up to the year 2000, during that period, virtually the entire carbon space has been used up by the industrialized countries.

If you say global warming must not go beyond 2 degrees centigrade, which is all that the planet can really afford, that limits the carbon there can be in the atmosphere. If it goes beyond that, the temperatures will rise further. That puts a quantitative limitation on what I call carbon space. Because of the fact that we are latecomers to the process of industrialization and to the process of development, we are finding that much of that space, maybe 70 to 80% of that space, is already occupied by industrialized countries. Maybe 26% or 27% is occupied by the United States. If you count the OECD countries, maybe they occupy another 25-30%, so the industrialized countries are really occupying most of that space. At this point of time, if a certain global limitation is made, then I am left with a very small space. The real challenge for us is to insist that, as we embark on a path of economic development, even if we use sustainable policies, our carbon emissions will rise. There is no way that we can escape that. 600 million people in this country do not have access to commercial energy. If you are going to start providing commercial energy to larger and larger number of people in our country, there is no way that you can avoid an increase in carbon emissions. So, even if you adopt sustainable development, the carbon emissions will initially go up and up, then perhaps stabilize and then eventually, hopefully, it will come down. What does that mean? Unless some of the carbon space is ceded to us by those who have been responsible for the accumulation of green house gases in the atmosphere, there is a constraint put on us. Equity demands that we should enjoy the same right to development as those in developed countries.

In 1992 the UN Framework Convention on Climate Change (UNFCCC) was adopted. It is a consensus document, it is a treaty to which all the countries of the world have actually given their adherence to. It recognizes a very fundamental principle, and that is the principle of equity. It says that - since the developed, industrialized countries are primarily responsible for the accumulation of green house gases in the atmosphere, it is they

who must take action to reduce these green house gases. In the subsequent Kyoto Protocol of the UNFCCC, they agreed that with reference to their 1990 level of emissions, they would undertake specific reductions on a national basis, up to the year 2012. The reduction targets are limited to the developed industrialized countries alone. It is very important to know that no such responsibility, no such obligation was put on developing countries and for a very good reason. Because the principle of equity recognizes that we are not responsible for the kind of situation we are facing.

Does this mean that developing countries like India have no responsibility at all? Far from it. What the developing countries committed themselves to in 1992 was that the pattern of economic development that they would adopt would be a pattern of sustainable economic development. What does sustainable economic development mean? Sustainable economic development means that, number one, we have to adapt to climate change that has already taken place. We will need resources to be used for adaptation. You have large areas that have become arid, so unless you have drought resistant crops, unless you have arid zone agriculture, your food supply is going to be affected. Because there is a change in climatic pattern, there is freakish weather, there are disasters. Therefore, your economic development has to be disaster resistant. There are a number of adaptation measures you have to take if you want to go on a path of sustainable development. Also important is to go on a path of development which over a period of time, relies less and less on carbon based energy. So, the carbon profile of your economy, over a period of time, must decline.

It also recognizes, and this is a key element in the convention, that in order to enable developing countries to shift to a path of sustainable development, the developed countries have a responsibility and a legal obligation to provide additional finance as well as technology. If you want to enable the developing countries to also bring about a mitigation of CO₂ emissions, it can only happen if the necessary finance and technology are made available to them by the developed countries. This is the basic agreement, which was arrived at in the 1992 UN Framework Convention on Climate Change. As you can see what is really critical here is the recognition of the principle of equity. These are the parameters within which the negotiations are taking place.

But what are the challenges we are facing in these negotiations? The challenges we are facing are that the developed countries do not really wish to bring about a radical change in their production patterns, and much

more important, in their consumption patterns, because it is costly. If you want to adopt new technologies there is a cost to be paid. If you are going to retool your existing industry to make them more efficient and make them less carbon dependent, you have to use capital for that. So, there is a resistance to making those kind of investments. There is also a resistance to bringing about a change in the consumption patterns. This is where there is a whole debate about how to deal with lifestyle emissions, which is essentially a consequence of a high and affluent standard of living and with survival emissions, such as providing commercial energy to the people of India, which also will involve emissions. Are we going to put them both at the same level? Obviously, we can not.

There is a resistance on the part of the industrialized countries to consider seriously a change in their production and consumption patterns. They are saying that even if we actually bring about a reduction in carbon emissions it is not going to really help. Countries like India and China are growing so rapidly that the incremental increase in carbon emissions from these economies, will neutralize what we do, therefore the focus has to be on these emerging economies, not on us. There is an attempt to shift the debate away from the principles that underlie the UN Framework Convention on Climate Change. We don't buy that argument, of course, you will immediately see the fallacy of that argument, because you are looking at where I will be 20 years later, on business as usual basis, but you are not prepared to do what you need to do on where you already are. The OECD countries have 10 tonnes per capita, the Americans have 20 tonnes per capita, India has 1.1 tonne per capita carbon emissions, that is the difference between the countries. There can be really no argument that if there has to be an effort made to reduce carbon emissions we know where it should come from. There is a subtle attempt to say, yes, yes, we are prepared to do whatever we need to do but, you know, unless these major economies like India and China, also join, we are not really going to make an impact on the global problem - basically trying to hide behind that and not really bringing about the necessary changes in their own production and consumption patterns.

There is another argument. I mentioned to you that even if we have to shift to a path of sustainable development, this is dependent upon the transfer of financial resources, a transfer of technology from the developed countries to the developing countries. Since 1992, if you look at the record, there has been virtually no transfer of either finance or technology, certainly not enough to meet the scale of the problem that we are facing. We are once

again trying to deal with this in the negotiations that are currently taking place. But now, another aspect has come in and this is something that Indian business has to be particularly alert about. Our developed country partners say: We are talking about transfer of technology, unfortunately, most of this technology is in the hands of the private sector in our countries. If you really want such transfer to take place then what you really need to do is to have a congenial investment environment in your country so that it is worth the while of a company to come and invest in it. If capital is required in order to bring about the establishment of these climate friendly industries, the best way is to make it easy for investments to come into your country. Sounds very reasonable, but this is not really the approach which is there in the UNFCCC. UNFCCC does not talk about this.

Another argument is to say that if we have to undertake retooling of our industries, if we have to invest money in climate friendly technologies, the additional cost will mean that the competitiveness of our industry will be undermined because if you are not willing to make the same investments then you have an advantage. There will no longer be an even playing field. This is the sectoral approach, which countries like Japan and United States are trying to introduce. They are saying, let us forget about national targets, why don't we set new targets for energy intensive industries like iron and steel, transportation, cement, power production and say that these are the norms that have to be observed worldwide. Those who do not achieve these norms, those who do not retool their industry up to that level, who do not use technology up to that level, they would have to pay a carbon tariff.

Let's take the subject of competitiveness. Green is now becoming a new instrument for protectionism and this will of course impact greatly on countries like India. We have been saying that we have started with an uneven playing field to begin with and therefore to bring this argument into the climate change debate is completely unacceptable. These are major deviations from the principles that have been laid down in the original UN Framework Convention on Climate Change. Unless these are resisted and unless we keep to the original compact of the UNFCCC we will be in difficulties. So, these are the challenges one faces as a negotiator.

Let me now give you a sense of where we are so far as the national effort is concerned.

As I said, even though we are not ready to accept any kind of legal obligations to reduce our emissions because of the stage of development

we are in today, does that mean we have the right to spew as much CO₂ in the atmosphere as we wish? No, certainly not. Unless we are willing to bring about, for our own benefit, a progressively lower carbon profile of the Indian economy there will be adverse consequences for the welfare of our own people. You can already see the health consequences of this kind of situation. The second thing is, which is very important, that today you are in a situation where there is a very big market pressure on fossil fuels. The price of oil is going through the roof, natural gas is becoming more scarce. If we do not wish to have energy becoming a major constraint on our growth, we have to adopt a strategy that, over a period of time, allows us to move from our reliance on fossil fuels to non fossil fuels. We have to make a strategic shift from non-renewable sources of energy to renewable sources of energy. Unless we do that, energy is going to become a major constraint for us. Even from the point of view of maintaining a high level of economic growth and development, it is very important that we make that shift. It also implies that whatever savings we can make through raising energy efficiency levels will also add to our energy resources. One of the major priorities that we have is how do we improve efficiency, particularly in energy intensive industries. Whatever be the dynamics in the international negotiations there are a set of priorities, there are a set of compulsions that we will continue to have as far as our national policy goes.

What I would like to mention here is that we are currently in the midst of formulating India's national action plan on climate change. This is going to be a major policy document and will likely be released in a couple of weeks from now, some time in June. While it is called national action plan on climate change, essentially it is a plan for sustainable development.

This is not only an issue of climate change we are looking at it. It is to pursue sustainable development in an ecologically sound manner. We are talking about both adaptation to climate change which has already taken place or climate change which is likely to take place in the coming years, and secondly, mitigation. How do we reduce the carbon profile of the Indian economy over a period of time? What will this national action plan contain? In fact, there are a whole series of measures we have to take in terms of adaptation as well as for mitigation; we are going to focus particularly upon a few key issues.

As I said, unless we bring about that strategic shift from non-renewable sources to renewable sources, it is difficult to see how we can have

sustainable development. In the national action plan, we are going to focus upon some key areas, and one of the key areas is solar energy. There is a recognition that if there is something that is plentifully available in the country, that is sunshine, very intense sunshine, so we need to be able to tap into it. So far we have R&D in solar energy, we have tried to popularize solar energy by subsidizing solar applications. We are now looking at a pooling of both intellectual resources, technical and scientific resources and financial resources, so that within a time frame of say the next 10 to 15 years we can make solar energy a major component of our energy mix.

The action plan is also going to look at some of the very key challenges that we are facing today. There is going to be a major focus on the Himalayan ecology. We don't know enough about the phenomenon of glacier melting, how much of it is due to the normal cyclical patterns of climate change and how much of it is due to anthropogenic emissions. There will be a major effort to build up a very detailed knowledge base on the Himalayan ecology, on the coastal plains, on our island territories, with which we can intervene and prevent adverse consequences of climate change.

We will also be looking at the whole area of energy efficiency. This is an area which will be a major opportunity for business in the years to come. Perhaps you are aware of the Energy Conservation Act of 2001. This Energy Conservation Act of 2001 has identified nine energy intensive areas - Cement, paper and pulp, iron and steel, power production, and so on. The Energy Efficiency Conservation Act stipulates that these are the areas where the Bureau of Energy Efficiency in the Ministry of Power will be setting norms for benchmarking progress in improving energy efficiency.

We have found that, in many of the cases, improvement in energy efficiency is actually self-financing. For example, if you introduce advanced lighting systems in commercial buildings, if you bring about changes in the insulation pattern of buildings, you can save a lot of electricity. The amount of money you save as a result of reduction in power consumption more than pays for the investment you are making in these efficiency-enhancing methods. And this we find across the board in many industries. The problem really is, unlike many developed countries, we don't have a large number of energy service companies. Energy service is not only the energy audit of your industry or of your building but also a whole spectrum of solutions for improving energy efficiency and also provide a financial package for making these changes. In India, most banks are not familiar with this kind of work,

because they are looking for conventional methods of financing where you require collaterals. Here, there is no collateral available, you are paying through savings that occur. So, unless you find financial solutions which can provide money for this kind of technological upgradation, it is very difficult to scale up energy service companies. This is a major industry that can grow in India today. In fact, there is an Asian Development Bank study, which has made an estimate that even current business for energy services is to the order of Rs. 14,000 crores. That is quite a significant figure. I hope this is one of the areas where we will be able to focus our attention. We will try to see if we can scale up our efforts in this regard.

The other elements that we will be looking at in the plan is water stress, and water recycling. One of the consequences of intensive economic development is the scarcity of water. We are encouraging industries to become either water neutral or water positive as a worthwhile goal. Water stress also has major implications for agriculture. In agriculture we have wasteful forms of irrigation. We are looking at drip irrigation, furrow irrigation, so that you can conserve the limited supply of water resources that you have and have more productive agriculture. The reason I am explaining all this to you is that whatever be the position that we take in international negotiations, it doesn't mean that we are not prepared to do anything on our own as far as national effort is concerned. In fact a major, very ambitious plan is going to be adopted for sustainable economic development in this country.

Finally, I want to mention something which will be of interest to you. In this action plan we are making this not just a focus of government action. We have decided to welcome public private partnerships, this is a very important feature, not only public private partnerships but also community involvement. Climate change is a challenge we face not only as business, not only as government, but as ordinary citizens of this country. If we are able to mobilize the energies of our entire citizenry this is going to have a major impact on whether we are successful or not in terms of sustainable development. This will mean many outreach activities; we need to educate people, we need to make people aware, we need to have mechanisms in which we can involve industries, involve citizen groups in dealing with climate change.

Business and industry will have a major role to play in helping us tackle climate change. What we need is entrepreneurial solutions to many of the challenges that we are facing. To give you an example, a major priority for

us is to extend commercial energy services to the vast population of India which lives in rural areas. When we are talking about emissions, we forget about this mass of people, because their emissions are very low. Besides, their energy requirements gets pushed to the background because we are so focused on industrialization, we are so focused on urban based development; it sometimes falls off the radar screen.

One of the very important contributions that business can make, especially young people in business can make, is to develop models to make provision of these kinds of commercial energy services in as sustainable a manner as possible. Technologies are there, solutions are there, it is a question of how we bring all these together in a model which makes economic sense. I think for India and for India's younger generation, that is the big challenge. We can't have a two track India, we can't have an India which is galloping at a very fast pace in its urban areas, and have a vast sea of humanity still mired in poverty, this itself is not sustainable. As Mrs. Gandhi used to say, poverty is the worst polluter. Unless we deal with the requirements and challenges of rural India, and the vast mass of humanity that lives in the outlying areas, much of what we are talking about in terms of sustainable development will be quite meaningless. This is the challenge that our entrepreneurs will have to tackle. The government alone cannot deal with this. I leave that thought with you.

Thank you very much indeed for your attention.

072. Remarks of Prime Minister Dr. Manmohan Singh while releasing the National Action Plan on Climate Change.**New Delhi, June 30, 2008.**

It is my pleasure to welcome you all on the occasion of the formal launch of India's National Action Plan on Climate Change. With this launch, the Government has fulfilled its solemn commitment to announce the National Plan by the middle of this year. This reflects the importance we attach to mobilizing our national energies in meeting the challenge of climate change. Without a careful long-term strategy, climate change may undermine our development efforts, with adverse consequences, across the board, on our people's livelihood, the environment in which they live and work and their personal health and welfare. It is also a challenge which encompasses the interests of both present and future generations. We have the moral responsibility to bequeath to our children a world which is safe, clean and productive, a world which should continue to inspire the human imagination with the immensity of the blue ocean, the loftiness of snow-covered mountains, the green expanse of extensive forests and the silver streams of ancient rivers. This is a world which we hold in trust, a world which has created and nurtured life for countless generations. Today, climate change, generated by the cumulative accumulation of greenhouse gas emissions in the atmosphere, through human economic activity, threatens our planet. There is a real possibility of catastrophic disruption of the fragile life-sustaining ecological system that holds this world together. Science is now unequivocal on this assessment.

India has a civilizational legacy which treats Nature as a source of nurture and not as a dark force to be conquered and harnessed to human endeavour. There is a high value placed in our culture to the concept of living in harmony with Nature, recognizing the delicate threads of common destiny that hold our universe together. The time has come for us to draw deep from this tradition and launch India and its billion people on a path of ecologically sustainable development. Our people have a right to economic and social development and to discard the ignominy of widespread poverty. For this we need rapid economic growth. But I also believe that ecologically sustainable development need not be in contradiction to achieving our growth objectives. In fact, we must have a broader perspective on development. It must include the quality of life, not merely the quantitative accretion of goods and services. Our people want higher standards of living, but they also want clean water to drink, fresh air to breathe and a green

earth to walk on. The National Action Plan we announce today really incorporates India's vision of sustainable development and the steps we must take to implement it.

The Plan encompasses a very broad and extensive range of measures. That is how it should be since the challenge we face is both complex and cross-cutting in nature. Nevertheless, we have decided to focus our national energies on Eight National Missions which will be pursued as key components of our strategy for sustainable development. These include National Missions on Solar Energy, on Enhanced Energy Efficiency, on Sustainable Habitat, on Conserving Water, on Sustaining the Himalayan Ecosystem, on creating a "Green India", on Sustainable Agriculture and finally, on establishing a Strategic Knowledge Platform for Climate Change. Our vision is to make India's economic development energy-efficient. Over a period of time, we must pioneer a graduated shift from economic activity based on fossil fuels to one based on non-fossil fuels and from reliance on non-renewable and depleting sources of energy to renewable sources of energy. In this strategy, the sun occupies center stage, as it should, being literally the original source of all energy. We will pool our scientific, technical and managerial talents, with sufficient financial resources, to develop solar energy as a source of abundant energy to power our economy and to transform the lives of our people. Our success in this endeavour will change the face of India. It would also enable India to help change the destinies of people around the world. In pursuing this and other ambitious goals, I believe we have the greatest assets in the wisdom, creativity and enterprise of our people. The Plan intends to go beyond government to draw upon these assets.

In pursuing the National Action Plan, we are conscious that we live in an age of rapid change and uncertainty. Thus the Plan is not a fixity. It is meant to evolve and change in the light of changing circumstances, developments in science and technology and in the global regime that is currently being fashioned through multilateral negotiations.

Climate Change is a global challenge. It can only be successfully overcome through a global, collaborative and cooperative effort. India is prepared to play its role as a responsible member of the international community and make its own contribution. We are already doing so in the multilateral negotiations taking place under the UN Framework Convention on Climate Change. The outcome that we are looking for must be effective. It must be fair and equitable. Every citizen of this planet must have an equal share of

the planetary atmospheric space. Long term convergence of per capita emissions is, therefore, the only equitable basis for a global compact on climate change. In the meantime, I have already declared, as India's Prime Minister, that despite our developmental imperatives, our per capita GHG emissions will not exceed the per capita GHG emissions of the developed industrialized countries. This should be testimony enough, if one was needed, of the sincerity of purpose and sense of responsibility we bring to the global task on hand.

The National Action Plan owes its appearance to the wisdom, expertise and dedication of a large number of people. I must thank all the members of the Prime Minister's Council on Climate Change, and in particular Shri Kapil Sibal, Minister of Science & Technology, Dr. Chidambaram, Principal Scientific Advisor to the Government and Shri Shyam Saran, Special Envoy of the Prime Minister for Climate Change who oversaw the final drafting of the Plan. My own Ministry, the Ministry of Environment and Forests, played a seminal role in all our deliberations, under the leadership of Shri Meena, Minister of State. I must also record my appreciation of the contributions of the Ministries of Power, New and Renewable Energy and the Planning Commission. The Plan should be the subject of national debate. It will evolve and improve through a much wider interaction than has been possible so far. The Government, for its part, intends to move quickly to establish the various National Missions and come up with detailed plans for execution of specific projects. We would welcome international cooperation to supplement and support our national effort.

I wish to conclude by recalling Mahatma Gandhi's sagacious message not only to the people of India, but to the world at large: The earth has enough resources to meet the needs of people, but will never have enough to serve their greed. This is the spirit which must underlie any strategy for sustainable development.

Thank you.

073. Report on Prime Minister meeting the press on board his special flight to Sapporo, Japan for the G-8 Outreach Summit.

July 7, 2008.

Prime Minister Manmohan Singh on board his flight to Japan emphatically said that India would not accept any targets that may be set by international bodies reducing its carbon emissions. He expected climate change and curbing carbon emissions were going to be major issues¹ at the Outreach meeting in Japan. He said, "Our position has been made very clear...India cannot, by any stretch of the imagination, be regarded as a major polluter of greenhouse gases.... Our contribution to global emissions is less than 4 per cent. On per capita basis it is among the lowest - an average of 1.2 tonnes.For us the topmost priority is development." He however added that India had independently brought out a national plan to deal with climate change.

"I had said that India's per capita emissions of greenhouse gases will never exceed the average of the developed countries, and therefore if the developed countries make deeper cuts, that will be an incentive for us to move at a faster pace," he emphasised.

¹ Before Prime Minister's departure for Japan, the media speculated that he should expect immense pressure upon India and other developing countries at the conference for commitments to quantified reductions in greenhouse gas (GHG) emissions in the post-Kyoto period after 2012. Notwithstanding Prime Minister's statement at the last G-8 Summit at Heiligendamm in 2007 that the per capita emissions of India would at no time exceed that of developed countries, the developed countries, the U.S. in particular, had been insisting on a definitive shift from this qualitative premise to quantified reduction targets. India's National Action Plan on Climate Change (NAPCC) which was launched on June 30 too seeks only a qualitative shift towards a low carbon developmental path.

076. Interview by Special Envoy of Prime Minister on Climate Change Shyam Saran to the Climate Group Newsletter.

New Delhi, July 10, 2008.

What do you think is needed for a successful outcome at Copenhagen? What key pieces need to come together for agreement ?

The key pieces are spelt out in the Bali Action Plan itself. We need to agree on a Long Term Vision and on practical steps to enhance the implementation of the 4 pillars of the Bali Action Plan. These are mitigation, adaptation, supported by finance and technology, which must be part of a comprehensive package. Furthermore, a successful outcome must be based on equity, as enshrined in the UNFCCC principle of "common but differentiated responsibilities and relative capabilities".

As India pursues sustainable development, its per capita GHG emissions will at no point exceed those of the developed countries.

India's per capita emissions fall well below the global average. What is the best way to create an international agreement that will enable India to decouple future economic growth from emissions growth? What role will India play in reaching such an agreement? What role will the international community play?

The Prime Minister of India has already declared that as India pursues sustainable development, its per capita GHG emissions will at no point exceed those of the developed countries. This is a major contribution by India to the global effort to deal with climate change. It also reflects our view that eventually there has to be a global convergence of per capita GHG emissions. This is the only equitable basis on which existing atmospheric space can be shared. India's position in this regard has drawn a positive response from countries like the UK, France and Germany. We are prepared to work with the international community to give this convergence principle a practical shape.

To be successful, international negotiations must arrive at a climate agreement that is both effective and equitable. How can countries achieve similar effectiveness and equity within their internal climate policies and strategies?

"India recycles over 70 per cent of its waste, while this figure is only 30 per cent in the US and less than 50 per cent in Germany". All countries must pursue ecologically sustainable policies at home, though their circumstances may be different. This means sustainable patterns of both production and consumption, including sustainable lifestyles. For example, India recycles over 70 per cent of its waste, while this figure is only 30 per cent in the US and less than 50 per cent in Germany. There must also be a recognition that there is a difference between what I would call lifestyle emissions and survival emissions and these cannot be equated. If we provide basic energy services to the rural poor in India, that will inevitably result in higher emissions. But this cannot be equated to higher emissions as a result of high speed limits, or no speed limits at all, on highways in Europe.

How will India reconcile the need for both adaptation and mitigation?

"We believe that development is the best form of adaptation." When we talk of sustainable development, it implies both adaptation to climate change that has already taken place and is expected to take place in the foreseeable future. It also includes mitigation through the adoption of a strategy that, over time, moves the country to a growth pattern progressively less reliant on fossil fuels. We believe that development is the best form of adaptation. It is only with higher incomes that it becomes possible to increase resilience to changes in climatic patterns and unexpected climatic events. In agriculture, this includes the development of drought resistant crops, arid zone agricultural practices and shorter growth cycles. Therefore, adaptation is being built into our overall development strategies. This will go hand in hand with mitigation-related measures, such as the promotion of renewable energy sources and increased energy efficiency.

As a net importer of primary energy, how will India balance the dual imperatives of climate security and energy security?

In a world of rising prices of oil and natural gas, it is becoming increasingly apparent that if India does not wish energy to become a constraint on its ability to deliver high levels of growth, (which is also a must for successful adaptation), then it must make a deliberate and graduated shift to renewable energy. In the meantime, it must conserve energy and increase efficiency in energy-intensive sectors. Thus, promoting energy security will, as a consequence, deliver Climate Change benefits as well. This is the strategy which underlies India's National Action Plan on Climate Change due to be

released shortly.

An international climate agreement could establish flows of funds to developing economies which would fast exceed ODA flows. What international institutions are needed to ensure these funds are effective, and that they reach the intended targets?

"Concessional lending under the World Bank, for example, cannot be a substitute for a financing mechanism under the UNFCCC itself." It is our view that these financing mechanisms are best placed within the multilateral UNFCCC regime, so that they are managed by the State Parties themselves. This will ensure that the use of the funds is not donor-driven, reflecting the priorities of the developed countries alone. The funds should be utilized in accordance with the priorities and requirements of the developing countries. Concessional lending under the World Bank, for example, cannot be a substitute for a financing mechanism under the UNFCCC itself.

What big opportunities exist for India in the move to a low carbon economy?

Indian business and industry is already ahead of the curve in recognizing and exploiting the opportunities inherent in the shift to a more climate-friendly growth strategy. India is one of the leaders in wind energy and there will be a renewed focus on solar energy applications in the Climate Change Plan. Improving energy efficiency in energy intensive sectors such as power, steel and cement, offers major opportunities to Energy Service Companies. An ADB Study has estimated the current market in India for ESCOs alone at about US \$3.5 billion.

077. Speech by Special Envoy of Prime Minister on Climate Change Shyam Saran on climate change: "Climate Change: Will India's Growth Story Confront a New Constraint?"

New Delhi, July 26, 2008.

Mr. Chairman, Dr. Kirit Parikh, distinguished guests, ladies and gentlemen,

I wish to thank the Public Diplomacy Division of the Ministry of External Affairs and the India International Centre for inviting me to speak on a subject that is becoming, increasingly, of critical importance to India's economic prospects. There are two ways in which climate change could impact on our economic development.

Firstly, there will be additional costs due to the unavoidable need to adapt to climate change that has already taken place, and will inevitably take place, as a result of the cumulative and continuing accumulation of greenhouse gases (GHG) in the atmosphere. The economy will need to be made more resilient to face unpredictable weather patterns. It will have to evolve more thermal resistant crops and botanical strains. There may be severe water stress both for agriculture and human consumption. There may be health consequences due to the spread of viral and bacterial strains in higher temperatures and more humid conditions. The poorer the country, the greater the risks and, therefore, greater the costs of adaptation. Even currently, it is estimated that India is already spending about 2.5% of its GDP on adaptation and this percentage is likely to go up significantly in the coming years.

Secondly, there will be costs to be incurred if concerns over climate change compel a significant and accelerated shift in the energy mix of the country, away from the current reliance on fossil fuels to non-fossil fuels. The patterns of economic activity, in agriculture, industry and sciences, will need to undergo a transition which will require investments in new technologies and equipment. The economic and social development of the country and the prospects of eradicating poverty within a generation, would be seriously and adversely impacted.

Let me also emphasize at this point that ability to adapt to climate change is also linked to the level of development. Richer and more advanced states are better equipped to cope with climate change than are poorer countries. Therefore, development is the best form of adaptation, even if development in a developing country results, in the foreseeable future, to an increase in its GHG emissions.

There is much talk in our civil society today of the urgency of India taking on commitments to reduce its GHG emissions. Some argue that it is developing countries like India which will be worst affected by climate change and hence should take the lead in significantly reducing its GHG emissions. Some of our friends, both in Europe and North America also argue that unless countries like India and China take on ambitious commitments to reduce their GHG emissions, their own efforts will not yield the results we all hope for in mitigating climate change. Let us examine these arguments in the light of science and on the basis of equity.

Climate Change is taking place not as a result of current GHG emissions but as a result of cumulative accumulation of greenhouse gases in the global atmospheric space, as a result of anthropogenic activity, mainly fossil-fuel based industrial activity over the past 200 years. True, current emissions are adding to this accumulation on an incremental basis. But looked at in a comprehensive perspective, the total stock of GHG in the atmosphere, in particular CO₂ emissions, is almost entirely the responsibility of developed, industrialized countries. Even if one were to take 1900 as the baseline and calculate cumulative emissions upto 2004, the U.S. share in global cumulative CO₂ emissions is 28.03%, of Russia 7.85%, of Germany 6.47%, of Japan 4.02%, of China 8.37 and of India, only 2.44%. If you use the per capita basis, which is the only truly equitable standard, then differences are even more stark. The U.S. leads with 1733.3 metric tonnes between 1900 and 2004, Canada is second with 1250.4, the UK with 1111.2, Germany with 985.4, Australia with 921.5 and Poland with 686.9 metric tonnes per capita. For China, the comparable figure is 87.3 and for India 39.2 metric tonnes. In fact, among 21 top countries by per capita cumulative emissions, India is at the bottom of the ladder. (These figures are based on the Carbon Dioxide Information Analysis Centre of the U.S. Department).

Against this backdrop, whatever be the stabilization targets for CO₂ emissions, that is considered essential for mitigating climate change, there will be a corresponding carbon space which will need to be equitably shared among different countries in the world. It is clear from the figures that I

have placed before you that equity demands that CO₂ emissions, which constitute the most significant part of GHG emissions, must be drastically reduced by the developed, industrialized countries, even while those of developing countries like India will inevitably rise, at least in the foreseeable future. If developing countries like India must mitigate their CO₂ emissions, then the costs involved must be fully compensated for, by the developed countries, and the required technology transfer must take place in the nature of public goods. This is based on the simple principle: The Polluter Pays.

In fact, what I am saying here today, has already been accepted by consensus in the UN Framework Convention on Climate Change, adopted in 1992 at Rio de Janeiro. The Convention recognized the historical responsibility of the developed countries for the phenomenon of climate change taking place. It is for this reason that only developed countries were expected to take on emission reduction targets and not developing countries.

An argument is sometimes advanced that in 1992, the rapid growth of emerging economies like China, India, Brazil and others, had not been foreseen. The situation, today, is different and, therefore, requires new measures. In fact, the UNFCCC clearly anticipated that, as developing countries pursue their goals of economic and social development, their emissions would inevitably rise.

As for current emissions, again India has no reason whatsoever to be on the defensive. I refer to the Climate Score Cards brought out by WWF and prepared by Ecofys, on the eve of the recently concluded Hokkaido G8 and G8 + G5 Summits. If you look at current emissions per capita in tonnes of CO₂ equivalent, the figures are revealing. Canada has 23 tons, Germany 12, Japan and the UK 11 each, Russia 15 and the United States 24 tons per capita. China, by contrast has 5.5 and India only 1.7 tons per capita. Even in the macro terms, India lags far behind the U.S., for example, accounting for only 4% of global emissions as against 20% for the U.S. And despite their commitments in the UNFCCC to reduce CO₂ emissions by 6.2% in 2012 compared to 1990, most developed countries have in fact recorded a significant rise instead. This is because fossil fuel consumption is rising everywhere. In the 1990-2005 period, US emissions have risen by 19%, Japan's by 22% and even the EU 15 by 7.8%. If you consider incremental CO₂ emissions on a per capita basis in select countries during 1990-2005, then the U.S. leads with 3.2 tonnes, China follows with 2.3 tonnes, Japan with 1.7, the EU 15 by 0.7 and India with only 0.5 tonnes.

Therefore, it is absurd to talk of India being a "free-loader" or being given a pass. The problem is elsewhere.

I have gone into some detail in this regard because we must not accept a global climate change regime which is inequitable and imposes unfair economic burden on us as a developing country. Climate Change will become a constraint on India's growth story if we do not work together with other developing countries to ensure a global regime that takes into account historical responsibility, recognizes the overriding imperative of economic and social development and the eradication of poverty and is based on the principle that each citizen of the globe has an equal entitlement to the global atmospheric space.

Despite history and equity being on our side, we have not avoided our responsibilities as enlightened global citizens. The Prime Minister has committed India to never exceeding, during our development process, the per capita emission of developed countries. This is a major contribution to the global effort to deal with climate change.

I have so far argued that our negotiating strategy must be directed towards an outcome that does not constrain India's growth prospects by limiting our energy choices through emissions reduction commitments. I have also demonstrated that adaptation costs to India, as a result of current and prospective climate change, will be increasingly significant. In multilateral negotiations, our effort is to ensure funding of adaptation costs through an Adaptation Fund. However, even if there were no climate change constraints on India, would our energy security still be assured? In the next part of my presentation, I will touch upon this aspect briefly.

According to Report of the Expert Committee on Integrated Energy Policy, India's energy requirements will rise dramatically from the current period to 2030-31. It assumes a population size of 1.4 billion against 1.1 billion currently. It is assumed that in order to meet our minimal economic and social developmental goals, in particular to eradicate poverty within a generation, our primary energy supply must grow 3 to 4 times current levels and electricity supply achieve 5 to 7 times current consumption. Power generation must rise from a current level of about 1,60,000 megawatts to about 8,00,000 megawatts in 2030-31. Meeting this level of energy requirement necessitates the pursuit of all available fuel options and forms of energy. After analyzing current production and consumption trends and likely import patterns, the Report envisages the following:

- The dependence on coal, which is currently 51% may decline to about 45% in 2030-31, but nearly 2/3rd of the coal may need to be imported.
- Oil forms about 36% of our current energy mix, but this may decline to about 24% in 2030-31, but the level of imports may rise from 70% at present to perhaps 90% in 2030-31.
- Natural gas currently meets about 8.8% of our energy needs and this is likely to go up to 23% in 2030-31 on the strength of both domestic and imported supplies.
- Hydropower constitutes a little over 2% of our total energy profile currently and is unlikely to change very much by the year 2030-31, despite there being over 150,000 MW of potential hydro-power potential in the country.
- Nuclear Energy contributes only 1.5% towards our total energy mix but is expected to go up to 6.3% in 2030-31, but only if nuclear commerce with the rest of the world can be resumed and if India is enabled to import both nuclear reactors and uranium fuel.
- On current indications, without a major effort on R&D, renewables may only constitute about 6% of our energy mix in 2030-31.

What does this analysis tell us? If the energy mix remains more or less the same over the next 25 years, the overwhelming proportion of our energy needs will be met by coal, oil and natural gas. If over 66% of our coal, 90% of our oil and nearly 60% of our natural gas requirements have to be imported, India's energy security is going to be severely undermined. If, as is now obvious, there will be a growing gap between demand and supply of oil, gas and coal over the next decades, we will be confronted with much higher costs of energy supply. This is already happening, most dramatically in the case of oil, but also significantly in the case of natural gas and coal. And, therefore, even if there were no climate change argument, considerations of energy security alone would suggest a medium to long-term strategy of moving away from reliance on fossil fuels to non-fossil fuels, from non-renewables to renewables and from conventional sources to non-conventional sources of energy. And this shift, would, as a beneficial consequence, bring about major climate change gains as well, both for India as well as for the world.

It is this realization of the inter-linkage between climate change and energy

security which underlies the strategy of sustainable development outlined in India's National Action Plan on Climate Change, which was released by the Prime Minister on June 30 this year. The National Action Plan gives priority to Eight National Missions. In terms of my presentation today, I would refer to two, which directly impact on energy security. The first is the pride of place given to Solar Energy among the missions, as an inexhaustible and renewable source of energy. We have to be ambitious in pursuing this National Mission because if we are able to come up with applications which are convenient and cost-effective, then there would be no energy constraint on our growth. There would also not be any climate change constraint either.

The second mission relates to Energy Efficiency. India has done rather well in virtually halving the energy intensity of its growth since the 1970s, from over 0.30 kgoe (Kg of oil equivalent) per US\$ of GDP (PPP) to 0.19 kgoe currently. This is equivalent to the OECD average. This can, however, be further improved by about 25%-30% bringing us closer to the 0.12 kgoe, which is currently the best in the world. In coal-based thermal power plants, efficiency can be increased from the current 30.5% to 39% or more. The implementation of the Energy Conservation Act of 2001 and the Building Code of 2005, would bring about significant improvements in energy efficiency in most high energy-intensive sectors. The Integrated Energy Policy has an interesting concept of a "Negawatt", comprising the saving of energy through conservation, which has higher value than a Megawatt of newly generated energy. This is because in terms of a unit of energy saved, the costs of generation and transmission are all avoided.

There is little doubt that with the civil nuclear energy initiative back on track after the recent vote in Parliament, we may look forward to a major expansion in nuclear power generation in the period upto 2030-31. Domestic availability of uranium can only fuel 10,000 MW of nuclear energy for about 40 years. But India has very substantial reserves of thorium which can sustain a much larger and more sustainable nuclear power production. However, for that to happen fertile thorium needs to be converted into fissile material. Dr. Homi J. Bhabha, the father of India's nuclear programme, envisaged a 3-stage process, consisting of the setting up of uranium-based Pressurized Heavy Water Reactors in the first stage, leading up to the establishment of Fast Breeder Reactors in the second stage, based on plutonium reprocessed from spent fuel of the first stage and finally, reactors based on Uranium 233-Thorium 232 cycle in the third stage. Here thorium would be used as blanket material in Fast Breeder Reactors to produce

Uranium 233 to fuel the third stage. While we have reached a degree of maturity in the first stage, the prototype 500 MW capacity FBR is currently under construction to launch the second stage. The pace of development of nuclear power is constrained by the rate at which plutonium can be bred and thorium converted to fissile material. The larger the scale of the first stage, the sooner can the third stage attain criticality, since adequate amounts of plutonium could be bred from the spent fuel of the uranium based reactors. In the optimistic scenario, contained in the Integrated Energy Policy document, nuclear energy could constitute about 63,000 MW in 2030-31 and over 275,000 MW in 2050. This would effectively make India energy-independent for the long-term.

Therefore, the civil nuclear energy initiative, far from being a distraction from the 3-stage indigenous nuclear energy programme, would actually contribute to its earlier realization and on a much larger scale than originally envisaged, based on domestic supplies of uranium.

What, therefore, are our conclusions?

Firstly, we must negotiate to establish a global climate change regime that does not restrict our energy options, nor imposes on us the costs of adjustment to a low-carbon economy. We are not in a position to meet these costs of adjustment unless these are fully covered by transfers of finance and technology from developed countries.

Secondly, even while we ensure that we keep our energy options open, we must recognize that India's energy security necessitates a graduated shift from fossil fuels to non-fossil fuels, such as nuclear, and from non-renewables to renewables, such as solar energy and bio-mass. The high and rising costs of oil, gas and coal and our increasing dependence on their imports, necessitates such a shift, and the sooner we achieve this, the better it is. Our ability to do this will also be greatly enhanced through international collaboration which we welcome. India's strategy for achieving energy security will also become its answer to the challenge of climate change, with benefits both for India itself and for the world.

Thank you.

078. Speech by Special Envoy of the Prime Minister on Climate Change Shyam Saran “From Bali to Copenhagen – Tackling Climate Change with Renewable Solutions”.

Ljubljana (Slovenia), September 1, 2008.

India welcomes the opportunity to share with this prestigious Forum, its vision for tackling Climate Change as a collaborative Global Mission.

1. Such a Global Mission requires us to recognize that what we face, as humanity, is an extraordinary challenge and this requires an extraordinary response. While there is talk of Climate Change being an extraordinary challenge, what we have seen so far in multilateral negotiations, is best described as “under-ordinary”.
2. An extraordinary response cannot be delivered by a traditional negotiating process, which is by its nature, adversarial, in which each negotiating partner or a group of negotiating partners, seeks to safeguard and advance its own perceived self-interest and the result is usually a least common denominator outcome. This may be appropriate for less challenging areas such as trade or even security-related issues. A least common denominator outcome to the Bali Process will not be appropriate to the elemental challenge that Climate Change poses to collective humanity.
3. What we need is a collaborative approach based on a common and shared vision, but one which can only succeed if it incorporates the principle of equity and fairness.
4. As India sees it, the Copenhagen Outcome must be based on the principle that each citizen of the globe has an equal entitlement to the global atmospheric space. This is similar to the principle recognized, for example, in the Outer Space Treaty, that Outer Space “shall be the province of all mankind”. Therefore, our objective should be to aim eventually for a per capita convergence of greenhouse gas emissions.

The Prime Minister of India has solemnly declared that even while India pursues its economic and social development goals, it will not permit its per capita GHG emissions to exceed, at any point of time, the average per capita emissions of developed countries.

5. A successful outcome, which is equitable, must take into account historical responsibility. It is not current levels of emissions alone which are responsible for climate change. Climate change is taking place as a consequence of accumulated GHGs in the atmosphere, as a result of several decades of carbon-based industrialization in the developed world. Therefore, as the UNFCCC itself acknowledges, it is the developed countries who occupy the limited carbon capacity of the earth's atmosphere, who must achieve urgent and significant reductions in their emissions.
6. Developing countries have the responsibility to engage in sustainable development but their emission reductions will be the result of sustainable development, not the other way around. This is an important distinction. To enable enhancement of sustainable development in developing countries, there has to be support in terms of technology transfer and financial resources.
7. What developed and developing countries together need to achieve is an accelerated and substantial shift from fossil fuels to non-fossil fuels and from non-renewable sources to renewable sources of energy. There must be a global plan to change the very nature of growth, from one based on carbon that has remained virtually unchanged since the dawn of the industrial revolution to one based on clean and renewable sources of energy. This radical and in a sense revolutionary shift is the extraordinary response required to an extraordinary challenge. We are prepared to be a part of this global effort, but I repeat, this must be on the basis of equitable burden-sharing.
8. India has announced its own National Action Plan on Climate Change on June 30, 2008. It is, in essence, our own strategy for sustainable development. It is based on the recognition that both in terms of energy security and tackling climate change, India must achieve a graduated shift from reliance on carbon-based fossil fuels to non-fossil fuels and from non-renewable to renewable sources of energy. Therefore, the pride of place has been given to a National Solar Mission to promote the use of the sun's energy, which is available plentifully in tropical India. There is also a focus on other renewables such as bio-mass and bio-fuels as also nuclear energy. We would welcome international collaboration to accelerate the implementation of this strategy.

9. The extraordinary nature of the global challenge of climate change also leads us to recommend other collaborative agreements on technology transfer, technology collaboration and financing instruments. If there are current patented technologies, whether from the developed or developing countries, whose widespread diffusion would make a significant impact on climate change, then let us acquire these patents through a global fund and make them available widely as public goods. We as a developing country, are prepared to contribute to such a fund in accordance with our economic capacity.
10. Similarly, we must put in an unprecedented effort in collaborative R&D to generate technological innovations that are cost-effective and convenient. This too, can be financed through a Global Venture Fund to which we are also prepared to contribute, and whose results similarly could widely be diffused as public goods.
11. There is no doubt that the financing required to achieve a substantial shift from a carbon-based economy to a renewables-based economy, will be of an unprecedented scale. Given the current economic gloom world-wide, this may seem unrealistic. I would, however, argue that deploying resources to tackle the global challenge of climate change, is itself a means of “energizing” the world economy. It will unleash a veritable surge of innovation, enterprise and development unmatched in history.
12. The capital required must be deployed nationally as well as on a multilateral basis to support sustainable development in developing countries. The location and disbursement of these funds are best achieved through the UNFCCC framework itself rather than in a traditional donor-driven approach, where the priorities of developing countries tend to be ignored. This will require a mind-set change both among developed and developing countries. Financing for climate change should not be seen as another form of ODA but rather payments for ‘entitlements’ of developing countries under an equitable global regime.
13. India is prepared to work actively and constructively for an ambitious, equitable and effective outcome from Copenhagen.

INDIA'S FOREIGN RELATIONS - 2008

SECTION - III

**CIVIL NUCLEAR ENERGY
COOPERATION**

082. Extract relevant to the India's Nuclear Cooperation Agreement with the United States, from the Media briefing by Foreign Secretary Shivshankar Menon on Prime Minister's visit to China.

New Delhi, January 11, 2008.

*

*

*

*

Question: There have been some reports about us facing stumbling blocks as far as the negotiations with IAEA are concerned. Could you throw some light on that aspect? Would our Prime Minister be talking to the Chinese Premier about the next steps on the deal - support from Chennai at NSG?

Foreign Secretary: As far as the IAEA is concerned, we had three rounds of discussions. We finished one round last week and we hope to do another round in the middle of January in Vienna where we hope to wrap it up. The discussions are proceeding smoothly and they will continue, we hope, to a rapid and satisfactory conclusion. On the subject of civil nuclear cooperation between India and China, we have worked together in the past in this area. In fact, China at one stage had supplied some low enriched uranium fuel for Tarapur as well in the early 1990s. We have worked together and we would hope to work together with China, like we would with other friendly countries, when the way is clear. Now we have raised the subject before with China during previous visits, as you know. I think you were the one who actually asked the question when President Hu Jintao was here in November, 2006. We will certainly raise the subject again. We have been in touch with them in between as well and we have explained to them what we see as the potential and the importance of civil nuclear energy cooperation between us and the rest of the world¹.

1 Mr. Menon separately told journalists on the same day that India was hopeful of concluding an India-specific safeguards agreement with the International Atomic Energy Agency (IAEA) by the end of this month. "We hope to do another round [with the IAEA] in the middle of January in Vienna. We hope to wrap it up. The discussions are proceeding smoothly." "The discussions are proceeding rapidly. We hope to reach a satisfactory conclusion," he added. Asked whether India would seek China's support for the civil nuclear deal during Prime Minister Manmohan Singh's Beijing visit beginning on January 13, Mr. Menon said, "we have not actually come to that point. When it comes to the NSG, we will ask for unconditional exemption by its members." He pointed out that both countries had cooperated in the nuclear sector in the past with China supplying low enriched uranium for the Tarapur nuclear facility in the 90s. "We would like to work with China... we have raised the subject and have been in touch with them and explained the benefits of civil nuclear cooperation between India and rest of the world," he said.

Question: What can we get from China in this?

Foreign Secretary: I think that is something that the experts will have to sit and work out.

* * * *

Question: Just a follow-up on the NSG question. Has China at all made a statement or made it clear that they are going to support India-specific changes to NSG guidelines?

Foreign Secretary: I do not think that we have actually come to that point. We have not asked anybody, 'Please stand up now and say where you stand on this and will you support this change and that change'. We have not actually come to that point. When it comes to the NSG we will then go and ask all our friends to do so, to support an unconditional NSG exemption for civil nuclear energy cooperation with India by NSG members.

* * * *

Question: Are you confident that China will not stand in the way of India's nuclear ambitions?

Foreign Secretary: I will let the Chinese speak for themselves.

083. Extract relevant to Civil Nuclear Energy Cooperation from the interview of External Affairs Minister Pranab Mukherjee with Karan Thapar for the CNN-IBN/TV-18.

New Delhi, January 13, 2008.

* * * *

Interviewer: Foreign Minister, there is a widespread perception that after the Congress Party's substantial defeat in Gujarat and Himachal Pradesh and given the unchanging attitude of the Left parties, it is only a matter of time before the Government accepts that they cannot take the nuclear deal to completion. Would you accept that?

External Affairs Minister: You are fully aware of the fact that we are engaged in discussions with the Left parties and the UPA Chairperson appointed a small group to iron out the differences. Several rounds of discussions have taken place. We have not yet been able to completely iron out the differences. Of course, there was agreement to initiate discussions with IAEA for India-specific safeguards arrangement which are currently going on. As per the decision of the last meeting which we had on 16th of October, we are to show them the agreed text of the India specific safeguards arrangement which our negotiators will enter into with the IAEA authorities. After that, the Left parties and the UPA partners in the UPALeft Coordination Committee will decide what course of action they will take.

Interviewer: I understand that. The reason I sounded cautious, if not skeptical, is Prakash Karat has gone on record at the end of December to say that the Left parties do not want the Government to complete the agreement. Debabrata Biswas, the General Secretary of the Forward Bloc, in fact had said that the only reason the Left gave you permission to go to the IAEA was so that you could have an honourable exit.

External Affairs Minister: The fact of the matter is that various interpretations are coming and I am not going to comment on that. We are aware of the position stated by various Left parties from time to time. Despite that we are talking with each other. The current discussions in which our negotiators are engaged with them IAEA Technical Team are as per the decision taken in the meeting of the Left- UPA Coordination Committee.

Interviewer: Quite right. Outside that Committee, A.B. Bardhan says that the Parliament majority shown in the last session is against the deal and you are honour-bound to abandon it.

External Affairs Minister: The fact of the matter is various political parties have expressed their views inside Parliament and outside, and it is known. Yes, in speeches the Members had expressed their views but the issue was not framed before the Members. As per the parliamentary practice, there was no scope of ascertaining the opinion of the House on the discussion because the discussion took place under a rule in which this is not required and this is not relevant.

Interviewer: You are saying something very important. You are saying, therefore, that discussion in the House in December does not constitute a sense of the House against the deal.

External Affairs Minister: I am not saying that because we did not seek the sense of the House. When somebody asked if we were not going to take the sense of the House, I told him that as per the commitment of the Prime Minister I will come to the House when the entire process is complete. The process has not yet been completed and the Government did not seek the opinion of the House.

Interviewer: That is your position, not Karat's.

External Affairs Minister: Whoever might have said it, as per the parliamentary practice there is a definitive way to ascertain the view of the Parliament and that was not done in this case deliberately, with the consent of everyone.

Interviewer: Do you think your Left allies will accept that?

External Affairs Minister: What they will accept and what they will not shall have to be discussed by us and we are discussing.

Interviewer: This is the problem. Let me quote what A.B. Bardhan says. He says, "The sense of the House is that the majority of the Members are opposed to the deal". You are disagreeing with that. You have got a problem.

External Affairs Minister: I am not disagreeing that majority of the Members did not speak against the deal. The fact of the matter is that majority of the Members who participated in the discussion expressed their views against Government proceeding further. That point is all right. What I am disputing is your contention that it was the opinion of the Parliament which was sought in that debate. It was a discussion. Normally in parliamentary language in these discussions the issue is not talked out; the

House does not express its views.

Interviewer: Okay. You have very clearly put the Government's position. The Left may agree or not, that is their prerogative. Let me put something else to you. Has your ability or your willingness to take the deal to conclusion been affected by defeat in Gujarat and Himachal Pradesh elections? Have you lost the political leeway?

External Affairs Minister: No. When we began the negotiations various political parties expressed their views against this deal. The discussion which we had in the Parliament recently was not the first one. On every major development in this deal we came to Parliament. We suo motu initiated discussions and the Members expressed their views.

Interviewer: But Gujarat and Himachal may have changed the landscape. Do you still have the capacity, you have the leeway?

External Affairs Minister: That is a different thing. I do not have the capacity if the Government becomes a minority Government. I made it quite clear that we would not like to proceed with the deal if the Left parties withdraw support from the Government.

Interviewer: But can a Government damaged by Gujarat pursue it?

External Affairs Minister: Please try to understand this. Defeat or success in an election in a provincial Assembly in a federal structure like ours does not matter in this sense because there was no referendum on this issue in the Gujarat election. Gujarat election was fought completely on different issues.

Interviewer: So you are saying Gujarat is irrelevant.

External Affairs Minister: A success in Gujarat election would not have added to the Government's capacity nor has it reduced the Government's capacity now because not a single Member has been added or deducted from the existing strength of the various political parties in Parliament. It has nothing to do with this deal.

Interviewer: In which case let us then come to the talks you are having with the IAEA. Has the IAEA accepted India's Separation Plan, and in particular have they accepted that India wants the capacity to take corrective measures if there is any disruption in fuel supplies? Have they accepted that?

External Affairs Minister: The talks are still going on. I would not like to comment on what is appearing in the newspaper because I do not have that luxury. I shall have to go through the text word by word as and when it is finalized. When it will be available to us I will share it with the Left parties and the country will come to know it.

Interviewer: Let me, for the audience's sake, flag up two issues that are critical for India and ask you whether you believe progress is being made. The first critical issue is India wants reflected in the safeguards agreement its negotiated position with America that it can have lifetime supplies of fuel. The IAEA it seems is reluctant to do this because they do not want to set a precedent. Have you got over that?

External Affairs Minister: You are placing the cart before the horse, Karan. I am concerned on three matters, not on two.

Interviewer: Which are?

External Affairs Minister: I am concerned about (1) the assured fuel supply; (2) India should have the right to build up strategic reserves in case of unintended disruption in the supply of fuel, and (3) India's strategic programme should be pursued independently and it should not be affected in any way. I would expect that these concerns get adequately reflected in the India-specific safeguards arrangements. That is why we are talking of India-specific safeguards arrangement, which is different from other safeguards arrangements. Unless I have the text on all issues, I would not like to make any comment in between.

Interviewer: The only problem is that newspapers have revealed that the IAEA may be prepared to reflect your concerns in a preamble or in a separate statement but not in the operative part of the text.

External Affairs Minister: I have neither seen the preamble nor the articles of the agreement. So, it is not possible for me to comment and I would not like to make a comment in between unless I see the text.

Interviewer: Okay. Is satisfactory progress being made or are you facing resistance?

External Affairs Minister: This is a question which is to some extent hypothetical and is some sort of a value judgment. I have no scope of indulging in this type of speculative questions and answers because as

Government of the day I shall have to approve it or I shall have to reject it, as the Board will have to approve it or the Board will have to reject it.

Interviewer: Absolutely. Governments of the day always sound optimistic. They send out a message to the people that progress is being made. I have in front of me a Minister who refuses to talk about progress, who refuses to suggest that it is being made even incrementally. Therefore, I have to ask you this. Are you covering up for problems with the IAEA? Are you meeting resistance which is why you cannot be more positive?

External Affairs Minister: There is no question of covering up anything. I am just stating the fact. The fact is that we are having negotiations and I am happy with the way the negotiations are going on. As to whether it will address all our concerns or not, unless I get the agreed text it is not possible for me to make any comment.

Interviewer: But it sounds, from the way you are answering, that there is a possibility it may not address all your concerns. Otherwise, you would not raise that possibility.

External Affairs Minister: No, I am not saying that. This is your own interpretation.

Interviewer: Okay. Assuming you get a satisfactory outcome from the IAEA, are you confident that you can get a clean and unconditional clearance from the NSG?

External Affairs Minister: How can I say that unless it goes to NSG? In NSG there are 45 countries and all these 45 countries have their different views. Therefore, we will try. That is why repeatedly I am saying on the floor of the House and outside that there are three stages. To just say, 'you accept it or you reject it' even before we reach near the goalpost is absolutely irrelevant.

Interviewer: The reason I brought up the NSG is because now it is becoming clear, and I am sure that your officials have told you this, that countries like Austria and Netherlands could possibly insist upon an NSG right of return in the event that India carries out further nuclear tests. That would be a major obstacle. Does it worry you?

External Affairs Minister: In these issues I am not to be guided merely by what information or advice I get from outside. Sometime back Austrian Foreign Minister visited India. I had a discussion with her and she made

quite clear their position in respect of nuclear proliferation. They say that they are against any sort of nuclear proliferation. So, naturally these views may get reflected in the meeting of the NSG. But the fact of the matter is, how could I comment on what stand, what individual country will take when the agreed text is not even before the Board?

Interviewer: All right, I understand that. Then let me put it like this. Do you have a date in mind by when you would like the deal to go back to the US Congress so that it gets passed whilst President Bush is still in office?

External Affairs Minister: We will try but it does not depend on me because what is required first of all is that one stage we have passed and that is the 123 agreement. Text has been agreed and initialed. Second is India-specific safeguards arrangement. It will have to be approved by the Board as per the USA's requirement. Then the third stage is NSG agreement. All these three documents will have to be placed on the table of the Congress and they will remain there for 90 days or so after which the US Congress will take it up. Therefore, these procedures have to be followed.

Interviewer: So, you cannot be sure Bush will still be in office.

External Affairs Minister: I do not know. That is why I am saying that it is difficult for me to point out as to at what point of time it will be approved by the US Congress.

Interviewer: In which case let me put it this way. If operationalisation slips beyond the American elections - which could easily happen - and if the new President is a Democrat - which is perhaps very likely - does it worry you that the new Administration may want to seek changes in the 123 to India's disadvantage?

External Affairs Minister: So many 'ifs' you are talking of.

Interviewer: But very likely 'ifs', not hypothetical.

External Affairs Minister: It is likely and it is equally unlikely. The fact of the matter is, if you look at the pattern of the voting in Congress both in the House of Representatives and the Senate, this particular Bill received overwhelming majority and bipartisan support. Therefore, I am not going to make any comment on whether a Republican President will support it fully or a Democratic President will oppose it. We will have to see as and when things happen. Let us not presume. That is your prerogative. That is not my prerogative.

Interviewer: Let us not presume but it also sounds as if you are saying, 'I am keeping my fingers crossed. I am hoping for the best.'

External Affairs Minister: Thank you.

Interviewer: And that is what you are saying, aren't you? You are keeping your fingers crossed.

External Affairs Minister: I always keep my fingers crossed because unless I achieve every objective, unless I cross every stage, how can I say that it is going to be implemented, it is going to be approved. We do not have that luxury.

Interviewer: Mr. Mukherjee, if India were to put the deal on hold because of domestic political compulsions, what do you believe will be the reaction of the Bush Administration?

External Affairs Minister: We are in discussion with each other. They understand our political difficulties and the ground realities there as we understand the political situation prevailing there.

Interviewer: You are saying they will accept?

External Affairs Minister: Everybody is to await the outcome of these negotiations, and particularly after the IAEA stage we shall have to go to the NSG stage.

Interviewer: And what would be the impact of India pulling out, on our ambition to become a permanent member of the United Nations Security Council and our desire to be recognized as a major international player?

External Affairs Minister: As far as the role of India in the international field is concerned, India is playing an important role in the international arena from the very beginning of its Independence. Therefore, I do not know what you mean by that. If you talk of the permanent membership of the Security Council, there are so many stages which have to be overcome and ...

Interviewer: You are saying this will have no impact on it?

External Affairs Minister: You are talking of just catching a train which is yet to arrive at the platform. As far as the expansion of ...

Interviewer: I am talking of a train waiting at the platform which you miss because you do not have the guts to get on. That is what I am talking about.

External Affairs Minister: No, that is not the point. As far as the Security Council is concerned, the discussion in the open-ended Working Group appointed by the UN General Assembly President is still continuing. There are various formations. Various ideas are there.

Interviewer: But will anyone recognize India as a legitimate member?

External Affairs Minister: The claim for permanent membership of the Security Council is nowhere visible. There is no question of arriving at the platform.

Interviewer: I put it to you that if India backs out of the nuclear deal it will have lost credibility and face internationally, and it will not be considered by people as a legitimate claimant ...

External Affairs Minister: That is your assumption. I do not share your assumption.

Interviewer: A lot of your retired Foreign Secretaries say this.

External Affairs Minister: That has nothing to do with it. The question is that if you fail to implement or operationalise a major international deal, it has some adverse impact. But it has nothing to do with the permanent membership of the Security Council as there is no guarantee that even if this agreement is fructified we will get our seat as a permanent member in the Security Council.

Interviewer: If you get a satisfactory outcome from the IAEA but the Left do not permit you to go to the next stage, will you defy the Left to secure the deal or will you sacrifice the deal to appease the Left?

External Affairs Minister: This is an absolutely hypothetical question.

Interviewer: Of course, it is. But it happens very quickly.

External Affairs Minister: It is a totally hypothetical question. Before I went to IAEA the position was. "No, you do not proceed further". From that position we have improved somewhat and we have gone to the IAEA.

Interviewer: So, you think you can push the Left incrementally.

External Affairs Minister: It is not a question of pushing in or pushing out. It is a question of accepting the ground reality as and when it unfolds itself. Let us wait, first let us have the agreed text. Let us discuss with the Left

leaders in the Committee and wait for the outcome of it.

Interviewer: And let us keep our fingers even more tightly crossed.

At that point when you are smiling, pleasure talking to you Minister.

External Affairs Minister: Thank you.

084. Report on Prime Minister's interaction with the media party on board the special flight from Beijing to New Delhi on the question of Chinese support for India - US Nuclear Cooperation Agreement in the Nuclear Suppliers' Group.

January 16, 2008.

On New Delhi's request to Beijing for support for its case in the Nuclear Suppliers' Group (NSG) for an India-specific waiver for the implementation of the Indo-U.S. civil nuclear cooperation, Prime Minister Manmohan Singh told journalists: "I cannot say I have got a firm, definite answer but my own feeling is that the relationship of trust and confidence is now establishing, and we are succeeding in that. When the issue comes before relevant agencies, I do not think China will be an obstacle. I can't say I have an assurance today."

(This is based on the report appearing in The Hindu on January 17, 2008)

085. Address of Special Envoy of Prime Minister Shyam Saran on “India and the Nuclear Domain” at the India International Centre.

New Delhi, February 18, 2008.

Ever since India and the United States declared their intention to resume bilateral cooperation in civilian uses of nuclear energy on July 18, 2005, there has been a national debate on India's place in the nuclear domain, both civilian and strategic. This debate is welcome. It enables public opinion to be educated on what has hitherto remained a relatively esoteric field. In this connection, may I commend the IIC for sustaining this initiative in the public domain. Attention has been focused on the significance of nuclear energy to our achieving energy security. There has also been a scrutiny of our strategic weapons programme and how that relates to our national security. These are important issues and need sober and objective reflection based on reliable information.

In the course of this debate, we have also drifted away from what has been, for decades, independent India's conviction that it must lead the way towards a non-violent, equitable and peaceful world, a world free from the shadow of mass annihilation.

My objective today will be, as someone associated with the negotiations on the Indo-US civil nuclear agreement, to endeavour to explain the original motivation behind the initiative and its implications for our strategic programme. I will also touch upon the issue of nuclear disarmament and explain why, in the current international context, it is a goal that India should advocate with renewed vigour.

Let me share with you the mandate which Prime Minister gave to us as negotiators when we took up this initiative with the United States. Since 1974, India had been the target of an increasingly selective, rigorous and continually expanding regime of technology-denial, not only in the nuclear field but encompassing other dual use technologies as well. It was our aim to seek the dismantlement of these inequitable regimes, which would become progressively more detrimental and significantly impact upon India's maturing economy, as its key sectors, required constant technological upgradation.

In pursuing this objective, we were acutely aware of the following:

- (i) The multilateral technology-denial regimes whose targeting of India we sought to end such as the Nuclear Suppliers' Group (NSG) and the Missile Technology Control Regime (MTCR) would require the United States to take the initiative as the principal initiator and leader of these regimes, and also because it remains the world's pre-eminent source of new and innovative technologies.
- (ii) Since our PNE in 1974, technology denial was first limited to nuclear-related technologies and then progressively expanded to cover a growing range of dual-use technologies. For this historical reason, it was clear to us that unless we tackled the nuclear issue, we would not be able to obtain access to other useful technologies. It is only by turning the nuclear key that we would be able to open the door to enter global trade in dual use and sophisticated technologies.

There was another important consideration behind the initiative we took in July 2005. We were becoming increasingly aware that we would face a progressively more depleted market for conventional energy resources. Concerns over climate change would act as a further constraint on us. We had to adopt a strategy of diversifying our energy mix, with a graduated shift from fossil fuels to non-fossil fuels, from non-renewable to renewable sources of energy and from conventional to non-conventional sources of energy. Nuclear energy occupies a key place in this strategy and for good reasons. Despite the technology denial regimes which we had to contend with, our scientists had succeeded in putting in place a comprehensive, sophisticated and innovative nuclear industry, with a highly trained manpower able to sustain a major expansion in nuclear power. Our constraints in this regard were availability of domestic uranium and a technological capability still limited to smaller capacity reactors of about 700 MW, when the world was moving to 1600 MW reactors. If we were to envisage a major expansion in nuclear power in the medium term, to say 60,000 MW plus by the year 2030, then import of higher capacity reactors and uranium fuel, would be necessary.

This in no way detracts from the continued pursuit of Dr. Bhabha's visionary 3-stage nuclear energy development programme, which may yield significant results in the longer term. But in the short and medium-term, a significant expansion of nuclear power is only possible if the constraints we face on import of uranium and of large-capacity reactors, are removed.

Furthermore, it is not really correct to put indigenous development and international collaboration as antithetical to one another. In fact

they are integrally linked. Each cycle of international collaboration prepares the ground for higher level of indigenous development. A higher level of technological sophistication then enables a much more discriminatory and productive new cycle of technological collaboration and eventually partnerships. Let us not forget that Dr. Bhabha himself vigorously promoted international cooperation in nuclear energy which enabled India to lay the foundation of our current nuclear programme. He was, in his time, one of the most highly respected scientists among the international nuclear community.

Let me repeat, the mandate to the negotiators was:

- (i) to seek the dismantlement of the multilateral technology denial regimes targeting India;
- (ii) to seek an accelerated development of our nuclear power generation capability to enable a significant contribution to India's energy security in an environmentally sustainable manner.

The negotiators were also given a firm guideline: in seeking to achieve the above objectives, we should not accept any limitation whatsoever on our strategic weapons programme, which must remain inviolate and fully autonomous. In practical terms, this implied that

- (i) our strategic weapons programme would be outside the purview of any international safeguards regime or any form of external scrutiny;
- (ii) our ability to further develop and produce such weapons would not be constrained in any manner; and
- (iii) we would retain our legal right to conduct a nuclear test should that, at any time in the future, be deemed necessary in our over-riding national interest.

The negotiating team was further instructed to ensure that India's indigenous R&D programme i.e. the 3-stage long-term nuclear development strategy envisioned by Bhabha, would also proceed uninhibited and not be subject to external scrutiny. It was felt that this being a programme which had major potential for commercial exploitation of thorium-based nuclear energy in the future, we ought to safeguard its integrity for the present.

The July 18 Joint Statement incorporated a series of reciprocal commitments. On India's side, there was reaffirmation of some existing

commitments, such as continuing a moratorium on nuclear testing and participating in multilateral negotiations on a Fissile Material Cut Off Treaty. There was acknowledgement of steps already taken by India as part of its responsibilities under UNSC resolution 1540 and under the already concluded Next Steps in Strategic Partnership. These relate to strengthening controls on the export of sensitive technologies including reprocessing and enrichment technologies. These controls provided assurance to our partners that whatever we received under international cooperation would not be diverted to third countries. The new element was our commitment to separate our civilian from military nuclear facilities and offer the former voluntarily for IAEA safeguards. This was necessary in order for us to give our international partners the assurance that whatever we would receive as technology or equipment for our civilian facilities would not be diverted to benefit our strategic programme. This was, to our mind, a legitimate expectation on part of the international community. Nevertheless, we reserved to ourselves the right to determine which facilities would be designated as civilian; further the separation process would be carried out in graduated steps upto 2014 so as to avoid any dislocation in our nuclear industry.

What India obtained, reciprocally, in return, was a U.S. commitment to adjust its own laws so as to permit full civil nuclear energy cooperation with India, which is bilateral; and also a commitment to work with friends and allies to bring about a change in international, multilateral regimes, such as the NSG, to enable the international community to also engage India in full civil nuclear energy cooperation, which is multilateral. With the U.S. delivering on these commitments, India would become fully integrated into the global nuclear energy market after a gap of over 40 years. And this, it would be able to achieve without accepting any limitation or constraint on its strategic weapons programme. In this regard, the negotiators fulfilled the mandate given to them by the Prime Minister.

The July 18 Joint Statement was then translated into more elaborate and specific arrangements in a Separation Plan, presented to Parliament in March 2006 and in the text of a bilateral cooperation agreement, or the so-called 123 Agreement, between India and the U.S., concluded in July 2007.

In working out these arrangements, the mandate given to the negotiators was to stay within the parameters of the July 18 Joint Statement and to ensure that there would be no repeat of the Tarapur experience. In practical terms this meant ensuring that there would never again be a threat of

reactor operations being disrupted due to a suspension of fuel supplies. We would also need to ensure that India has the right to reprocess foreign origin spent fuel. In both these respects, the U.S. aided Tarapur nuclear facility had suffered and this hung over the negotiations as a negative legacy. There had been U.S. unilateral suspension of fuel supplies, just as there had been a refusal to allow India to reprocess spent fuel, which kept accumulating as hazardous waste, which the U.S. was also not willing to take back.

This is the background to the multi-layered fuel supply assurances which were spelt out in the Separation Plan, and incorporated in toto in the 123 Agreement. This is also the reason why India was prepared to engage in difficult and sometimes frustrating negotiations to ensure its upfront entitlement to reprocess foreign origin spent fuel. Eventually, the U.S. side agreed to India's demand.

The negotiators have been criticized by some for having agreed to permanent IAEA safeguards on its civilian facilities. Our position right from the outset had been that we have no problem with permanent safeguards provided there are permanent supplies of fuel. The multi-layered fuel supply assurances are unique in international nuclear negotiations and include India's right to take "corrective measures", should any disruption still occur despite these assurances. India's entitlement to build strategic reserves of fuel for its civilian reactors, to last the lifetime of such reactors, is also unique. Frankly, I do not think that we could have secured any better safeguards for our interests.

Criticism has been leveled at various provisions of the Hyde Act and it is argued that irrespective of what the 123 Agreement may say, we would be subject to the several onerous provisions of the Act.

Let me clarify that the operative heart of the Hyde Act, incorporates three permanent and unconditional waivers from relevant provisions of the U.S. Atomic Energy Act of 1954. In layman terms, the Hyde Act allows the U.S. Administration to engage in civil nuclear cooperation with India, waiving the following requirements:

- (i) that the partner country should not have exploded a nuclear explosive device in the past; this waiver is necessary because India exploded a series of nuclear explosive devices in May 1998;

- (ii) that the partner country must have all its nuclear facilities and activities under full-scope safeguards; this waiver is necessary because India has a strategic programme which would not be subject to international safeguards; nor would its indigenous R&D programme; and
- (iii) that the partner country is not currently engaged in the development and production of nuclear explosive devices; this waiver is required precisely because there is no freeze or capping of India's strategic weapons programme. It is an acknowledgement that we will continue to develop and produce additional strategic weapons.

Irrespective of what else the Hyde Act may contain, these 3 permanent and unconditional waivers are extremely significant because they acknowledge that India has an ongoing strategic programme. No restraint on this programme is envisaged as a condition for engaging India in civil nuclear energy cooperation. This is a significant gain for India and should not be lost sight of. Just juxtapose this with the UNSC Resolution 1172 of June 6, 1998, which called upon India to stop, roll-back and eliminate its strategic programme and join the NPT as a non-nuclear weapon state.

There are, of course, several extraneous and prescriptive provisions in the Hyde Act which we do not agree with and in negotiating the 123 Agreement we have been more than careful to exclude such provisions. If the U.S. Congress considers the 123 Agreement, as currently drafted, as being in contravention with their own understanding of the Hyde Act, the agreement would be voted down. That would be the end of the matter. If, however, the U.S. Congress does approve the 123 Agreement, then this would confirm that the provisions of the Agreement are what would govern the commitments of the two sides.

While there has been intense focus on the Indo-US bilateral agreement, much of the commentary on the subject has lost sight of the multilateral regime whose adjustment in favour of India is what we are aiming at. Our objective is not merely to seek the U.S. as a partner. Our objective is to enable India to have a wide choice of partners in pursuing nuclear commerce, and high technology trade. But we cannot attain this objective without the U.S. taking the lead on our behalf. Yes, Russia and France are countries which are friendly to India and extremely keen to engage in nuclear commerce with us. However, there should be no doubt that neither they nor others will make an exception for India unilaterally unless the Nuclear Suppliers' Group adjusts its guidelines in the same manner as the U.S. is

prepared to do. Whatever be the reservations that have been expressed about our relations with the U.S., no other friendly country, member of the NSG has the necessary standing to lead the process of opening up the existing multilateral regime to accommodate India. The U.S. is in a unique position precisely because it initiated these restrictive regimes in the first place and also because it remains the pre-eminent source of new sensitive technologies.

The process we are engaged in will face several challenges ahead even if the controversies at home were somehow resolved. We still await the finalisation of the India-specific safeguards agreement with the IAEA. Thereafter, the NSG will meet to consider exempting India from its current guidelines. These guidelines, like pre-Hyde Act U.S. legislation, require that its members engage in civil nuclear energy cooperation only with countries that have all their nuclear facilities and activities under full scope safeguards. It is our expectation that there would be a fairly simple and clean exemption from these guidelines, without any conditionalities or even expectations regarding India's conduct in future. Finally, the U.S. Congress has to vote to approve the 123 Agreement. Only when these separate landmarks have been achieved, can we really have the practical possibility of resuming civil nuclear energy cooperation with the international community.

I am certain that you will agree that this initiative of the Prime Minister represents a significant and unprecedented effort to expand India's choices, create a more conducive and supportive international environment to advance India's developmental goals and mark the emergence of India as a major global player, in a rapidly transforming international landscape.

What enabled India to even attempt such a major and pathbreaking initiative? Would it not have been wiser and more prudent to engage in an incremental pursuit of more limited gains which would, cumulatively, and hopefully add up to something significant eventually? Let me try and address these very relevant questions.

In pursuing this initiative in 2005, India took advantage of a significant change in international, including U.S. and Western perceptions of India. This change can be traced to the following developments:

- (i) Fifteen years of accelerated and sustained economic growth, coupled with the steady globalisation of the Indian economy, marked the emergence of India as an economic power-house, even as its

democratic structures gave it a reputation for political stability. The prospects for continued and steady growth of India's economy made it an indispensable partner for countries across the globe.

- (ii) A globalising world found itself confronted with a number of trans-national, cross-cutting issues such as international terrorism, drug trafficking, global pandemics and the twin challenges of energy and climate change. In seeking solutions to such global challenges, the active involvement of India as a large, populous and continental sized economy, has become indispensable. This is another reason why India's global profile has increased.
- (iii) India had emerged as a country with significant defence capabilities and has an enviable record of activism in UN peacekeeping. In December 2005, its swift response to the Tsunami disaster and its ability to extend significant assistance to affected countries also demonstrated its capabilities to contribute to maritime security and help deal with natural disasters and;
- (iv) Despite a 4-decade effort to put India in a technological corral and constrain its nuclear and space capabilities, Western countries led by the U.S., had failed to achieve their objective. Technology denial may have slowed down India's development in some respects, but on the other hand, India was now a country with a wide-range of sophisticated and sensitive technologies, isolating which made no sense, particularly at a time when engaging India promised much more by way of political and economic gains, not the least by partnering its outstanding scientists in the collaborative development of cutting edge technologies such as the International Thermo Nuclear Energy Reactor (ITER) project. India was able to get a clear message across to the world - you cannot continue to treat India as a target, even as you seek to engage it as a partner.

India was able to move with a sense of confidence to leverage the above favourable developments not merely to seek an upgradation in its relations with key regional and global players but to mobilize them collectively to reflect India's emergence in multilateral regimes. These had so far excluded India such as the UN Security Council or worse, targeted it as an adversary like the Nuclear Suppliers' Group.

In pursuing this objective, India was able to also take advantage of the fact that post-Cold War, as a result of the increasing globalisation of the world

economy and the emergence of transnational, cross-cutting issues, the international landscape was characterized by the presence of a cluster of major powers, who were compelled to collaborate as much as to compete with one another. The potential for military competition and conflict between them was constrained by the increasing interdependence of their economies. India could, therefore, upgrade its relations with all major powers, without this becoming a competitive zero-sum game which was the hall-mark of the bipolar Cold war. One may characterize this as a strategy of global de-hyphenation. It was our assessment that this favourable international constellation could change and therefore, we needed to take advantage of this window of opportunity so as to fix our diplomatic gains for the long-term. There are already some changes such as renewed tensions between the U.S. and Russia, and there may be further changes down the road. The international environment for India may not be as propitious as it has been during the past few years.

It is legitimate to expect that Government would not do anything to compromise the autonomy of its strategic programme. However, the strategic programme that we are talking about is one based on our own nuclear doctrine. This incorporates the concept of a deterrent which is credible at a minimum level of nuclear and delivery assets. There is also a non-first use pledge, which implies that those assets must survive a first strike and retain retaliatory capability. The need for a triad of forces, including a submarine based deterrent, derives from this. This also imposes requirements for secure and survivable command, control and communication systems. While we strive to retain strategic autonomy for the future, it is equally important that we ensure as expeditiously as possible, that all the elements of our credible minimum deterrent are in place. We should also examine what is the likely role of nuclear weapons in terms of ensuring India's security. The traditional concept of nuclear deterrence is with reference to States and that is how we have defined our deterrent as well. However, even in this respect, our nuclear doctrine affirms India's conviction that its security would be enhanced, not diminished, if we were able to achieve a world free of nuclear weapons. It is this conviction which underlines our continued advocacy of nuclear disarmament. While asserting our right to a nuclear deterrent, we should not forget this other dimension of our security posture.

In fact, recent developments have made nuclear disarmament, compelling and urgent and India is well-placed to lead a global effort in pursuit of this objective. The nature of the dangers which nuclear weapons pose has

dramatically intensified with the growing risk that such weapons may be acquired by terrorists or Jihadi groups who could threaten to use, or worse, even utilize such weapons to carry out attacks against targets which may be located anywhere in the world. No country, including India, is safe from such attack. The mounting concern over the likelihood that, in a situation of chaos, Pakistan's nuclear assets may fall into the hands of Jihadi elements, fired by the ideology of extremism and mindless violence, underscores how real this danger has become. While States may be deterred by nuclear weapons, terrorist or Jihadi groups cannot. How do you threaten nuclear retaliation against such non-State actors?

The danger posed by proliferation of nuclear weapons to non-State actors is of a different and more threatening dimension than that from proliferation to additional States. A different approach is required, based on a new global consensus, but which in fact would be more effective in dealing with proliferation in all its aspects.

India has all along argued that as long as the world is divided between those who possess nuclear weapons and those who do not, there will always be a strong incentive for countries outside the club to seek to enter it. Recent experience indicates that the NPT and technology denial regimes may delay the emergence of new nuclear weapon states. They are unlikely to prevent it. As long as there exists such motivation among states, there will inevitably be a clandestine market for nuclear technology and material, as demonstrated by A.Q. Khan's nuclear super-market. If such a clandestine market continues to flourish, as it does even today, the danger of nuclear explosives or fissile material and technical know-how enabling the manufacture of nuclear weapons, falling into the hands of non-state actors, such as Jihadi groups, will continue to haunt our world. India has to be deeply concerned about the danger it faces, as do other states, from this new and growing threat.

The elimination of a clandestine, world-wide market in nuclear know-how, material and possibly, even nuclear explosives, can only be achieved by returning to what India had proposed as a grand-bargain, when it sponsored negotiations on a Non-Proliferation Treaty in 1965. India had proposed that non-nuclear weapon states should commit themselves to never developing or acquiring nuclear weapons, in return for a legal and time-bound commitment by nuclear weapon states to eliminate their arsenals. Today, as a nuclear weapon state, India is in a unique position, to take the lead in resurrecting the original grand bargain, because the danger of nuclear terrorism today threatens to engulf all states, including nuclear weapon states.

On January 4, 2007, Messrs George Schultz, William J. Perry, Henry A. Kissinger and Sam Nunn, put nuclear disarmament back on the international agenda, in an article they jointly wrote in *The Wall Street Journal*. They have now followed up their original initiative with a second article in the same newspaper, which appeared on January 15, 2008. What has led these Cold War veterans, to espouse the cause of nuclear disarmament? Why have they now seen it fit to quote approvingly from Rajiv Gandhi's Action Plan for Nuclear Disarmament of 1988, when at that time most Western governments dismissed it as fantasy?

The disturbing new element in dealing with nuclear weapons is precisely the danger that they could fall into the hands of non-state actors, against whom no deterrence could work. However, for Messrs Shultz and his compatriots, nuclear disarmament is still a distant goal, while in the meantime, they suggest graduated steps to reduce nuclear arsenals and reliance on them, more rigorous controls over the spread of sensitive technologies and a further strengthening of the current non-proliferation regime. They continue to rely on an asymmetrical approach, in which states with nuclear weapons and with advanced nuclear technology, would be treated differently than those who did not possess them. India is today in a position to take the initiative of Shultz and Co. forward, towards framing a new global consensus, which brings the goal of nuclear disarmament from a distant destination, "the top of a very tall mountain", as they call it, to being accepted as an urgent and compelling mission. India understands the danger from nuclear weapons and has suffered from the clandestine proliferation of nuclear weapons in its neighbourhood. It has also been a victim of terrorism for several decades. It is perhaps the best placed to fashion a global consensus on achieving nuclear disarmament as an urgent objective, not only because of the mass-destruction character of these weapons, but also because their link with international terrorism, poses a global threat. A multilaterally negotiated treaty which prohibits the development, production and use of nuclear weapons, on the model of the Chemical Weapons Convention, is within our grasp. Elaborate verification and intrusive monitoring methods that would be required to ensure compliance, would only be accepted if they are universally applicable.

India was justified in exercising its nuclear weapons option at a time when nuclear disarmament seemed all but abandoned by the existing nuclear weapon states. Its security was also being threatened by clandestine

proliferation in its own neighbourhood, without any remedial action being taken at the international level. In a world, populated by states producing and deploying nuclear weapons, India's strategic autonomy must be safeguarded. However, we must not forget that despite being a nuclear weapon state, India remains convinced that its security would be enhanced, not diminished, if a world free of nuclear weapons were to be achieved. Today, the country's security is further threatened by the risk of proliferation to non-state actors and terrorist groups. So also is the security of all other states, nuclear weapon and non-nuclear weapon states alike. It is only through the urgent and complete elimination of nuclear weapons that it may be possible to minimize, if not entirely dispel the threat of nuclear terrorism by non-state actors. Therefore, even as we work to strengthen our credible minimum deterrent, we ought to take a fresh initiative to realize Rajiv Gandhi's vision of a non-violent world, free from the scourge of nuclear weapons.

086. Extract relevant to Nuclear Energy Cooperation with the United States from the Statement of External Affairs Minister Pranab Mukherjee in the Lok Sabha on Foreign Policy Related Issues.

New Delhi, March 3, 2008.

Hon. Members would also be aware that we are currently engaged in negotiations with the International Atomic Energy Agency to arrive at an agreed text of an India-specific Safeguards Agreement. The conclusion of such an agreement will enable the Nuclear Suppliers' Group to amend its guidelines for civil nuclear commerce in favour of India. This will open the door to civil nuclear cooperation with various countries, including Russia, United States of America, France, UK, etc., with many of whom the necessary enabling bilateral agreements for such trade have been discussed and are in various stages of finalisation. This development will signify, finally, an end to the unfair technology denial regimes and sanctions that India has been faced with for over three decades. We will continue to seek broad political consensus within the country to take forward our engagement on this issue with other countries.

In this context, Members' attention may have been drawn to some statements by United States officials regarding the applicability of the Hyde Act to Indo-US civil nuclear cooperation. Let me take this opportunity to reiterate that the Hyde Act is an enabling provision that is between the executive and the legislative organs of the United States Government. India's rights and obligations regarding civil nuclear cooperation with the United States arise only from the bilateral 123 Agreement that we have agreed upon with the United States¹.

1. Reacting to the above statement of EAM the Polit Bureau on the same day issued a statement and said "the statement draws attention to "some statements by US officials" regarding the applicability of the Hyde Act to the Civilian Nuclear Cooperation and asserts that the Hyde Act is applicable only to the US side and India's rights are protected in the bilateral 123 agreement. The US official concerned is none other than the US Secretary of State, Condoleezza Rice, who told the House of Representatives Foreign Affairs Panel on February 14 that: "We will support nothing with India in the NSG that is in contradiction to the Hyde Act. It will have to be completely consistent with the obligations of the Hyde Act". This has been the consistent position of the United States administration regarding the applicability of the Hyde Act. It has become the practice for the Indian government to reiterate that the Hyde Act has no relevance for India and it is not applicable to us. No one else believes this to be so. Neither the Hyde Act nor the 123 agreement which has been drafted within the framework of the Hyde Act provisions meet the assurances given by

On March 19, the External Affairs Minister replied to a Short Duration Discussion in the Rajya Sabha on his above Statement and said:

Sir, in respect of the Civil and Nuclear Deal, I did not deliberately spell it out because I have nothing to spell out now. During the last debate I had said that there were three processes. One process was that there should be India-Specific Safeguards Agreement with the IAEA. That negotiation has been going on but it has not been inked and initialled. After that, it will go to the Board; after the Board approves it, it will go to the Nuclear Suppliers Group; then, the Nuclear Suppliers Group will have to amend its guidelines; after the guidelines are amended in the NSG, all these documents will have to go to the US Congress for its ratification. Thereafter, the question of its operationalisation will arise. So, what is happening in between? Certain talks are going on. It has not yet been concluded. There has been an advancement. But as and when the IAEA Board approves the India Specific Safeguards Agreement, I assure the hon. Members of Parliament that we will come back. But before that, what should I report to you? Every time we discuss this issue whenever there has been any major development.

Shri Sitaram Yechury: You can tell them if they want to know the information that you are telling us, then let them join the UPA. ..(Interruptions)..

Shri Pranab Mukherjee: I mentioned it why we did not agree to the Joint Parliamentary Committee. You may like it or you may not like it, but I strictly adhere to and my party strictly adhered to the constitutional position. There never before we have subjected the international agreement as such. Any legislation arising out of international agreement will have to be approved by the Parliament; any legislation to implement the international agreement, if it is a Central legislation, will have to be approved by Parliament, but not the agreement as such. Therefore, we consider that it is not the appropriate forum. But whenever there will be any major development in respect of this agreement, we will come and share the information with you. I think, since July 2005, five times we have discussed the Civilian Nuclear Agreement with the Members of Parliament. In respect of the UPA-Left

the Prime Minister in his August 2006 statement to Parliament. It is ironical that the statement to parliament says that the government will continue to "seek" a broad political consensus within the country. The government should first respect the majority opinion expressed by parliament when the 123 agreement was discussed in the Winter session of 2007. The government should acknowledge that its stand on the nuclear deal does not have the support of parliament. There is no political consensus and hence it should not proceed further with the agreement."

Coordination Committee, I told it quite clearly that this is an internal arrangement because they are supporting us and I am to carry conviction with them.

Therefore, I am sharing certain information with them and if you are interested, next time when Parliament will meet, I will be too glad to share that information with you. Since this is just a short Session of three weeks or so, there will be no major development. But I can assure my good friend, Mr. Ahluwaliaji, and others that whenever out of three stages if any stage is complete, I will come and share that information with the House. As the Prime Minister committed, when the entire process is going to be over, if it is over and if we go to that stage, then in that case, surely, we will come and seek the opinion of the Parliament. That is Prime Minister's commitment here. Standing here, he made this commitment. But let that stage come. Now what the Leader of the Opposition says, I do not subscribe to that view that either you mend it or you end it because we are in a stage where neither we can end it nor we can mend it. We are in the process of dialogue with our supporters. Thank you.

For full text of the two documents please see Document Nos.19 And 23.

087. Address of Vice President M. Hamid Ansari at the Inauguration of the 18th World Congress of International Physicians for the Prevention of Nuclear War (IPPNW).

New Delhi, March 9, 2008.

I am happy to be here at the inauguration of the 18th World Congress of International Physicians for the Prevention of Nuclear War. The pioneering work of the organisation and its efforts for peace, health and development need no mention here; it has been awarded the Noble Peace Prize. Conferences of this nature help in better understanding of the causes of armed conflict, especially from a public health perspective, and build grassroots awareness of the immense health and environment consequences of nuclear war. The involvement of students and youth as part of these conferences brings in the much-needed dimension of spreading awareness among the future decision makers.

Ladies and Gentlemen

This distinguished audience needs no reminding that the first resolution of the UN General Assembly of 24th January, 1946 was adopted unanimously and sought the elimination of atomic weapons and all other major weapons adaptable to mass destruction from national armaments and the control of atomic energy to ensure its use only for peaceful purposes. The horrors of the use of nuclear weapons have convinced all responsible nations that elimination of nuclear weapons is necessary. The International Court of Justice had in its advisory opinion of 8 July 1996 concluded that "there exists an obligation to pursue in good faith and bring to a conclusion negotiations leading to nuclear disarmament in all its aspects under strict and effective international control". The nuclear disarmament discourse has been enriched by the contributions of the Non-Alignment Movement, various members States including India and even the community of Non-Governmental Organisations.

While there is agreement on the principle, the practical means and approaches necessary for realising this vision have been the subject of much debate and divergence of opinion. It was India that first proposed an end to nuclear testing in 1954. The principles for a Nuclear Non-Proliferation Treaty (NPT) were first proposed by India in 1965. India eventually refused to sign the NPT when it became clear that, instead of addressing the central objective of universal and comprehensive non-proliferation, the treaty only

legitimized the continuing possession and multiplication of nuclear stockpiles by those few states possessing them.

I am reminded of what the Late Prime Minister Shri Rajiv Gandhi said in a speech before the United Nations. He argued: "We cannot accept the logic that a few nations have the right to pursue their security by threatening the survival of mankind...nor is it acceptable that those who possess nuclear weapons are freed of all controls while those without nuclear weapons are policed against their production. History is full of such prejudices paraded as iron laws: That men are superior to women; that white races are superior to the coloured; that colonialism is a civilizing mission; (and) that those who possess nuclear weapons are responsible powers and those who do not are not."

Ladies and Gentlemen

India aspires for a world that embodies this vision of Late Shri Rajiv Gandhi, of a non-violent world, free from the scourge of nuclear weapons. We have always held that progress towards nuclear disarmament will require mutual confidence in the international community to conclude universal, non-discriminatory and verifiable prohibitions on nuclear weapons leading to their complete elimination. We believe that the following elements constitute actionable and concrete steps towards achieving nuclear disarmament and have placed them for debate before the international community:

1. Reaffirmation of the unequivocal commitment of all nuclear-weapon States to the goal of complete elimination of nuclear weapons;
2. Negotiation of a convention on the complete prohibition of the use or threat of use of nuclear weapons.
3. Negotiation of a nuclear weapons convention prohibiting the development, production, stockpiling and use of nuclear weapons and on their destruction, leading to the global, non-discriminatory and verifiable elimination of nuclear weapons with a specified time frame.

Ladies and Gentlemen

An op-ed in The Wall Street Journal of 15th January, 2008 by George Shultz, William Perry, Henry Kissinger and Sam Nunn has again focused on nuclear disarmament noting that the spread of nuclear weapons know-how and material has brought us to "a nuclear tipping point". They

emphasised the need for a global dialogue that includes non-nuclear and nuclear nations to discuss, among other issues, "turning the goal of a world without nuclear weapons into a practical enterprise among nations, by applying the necessary political will to build an international consensus on priorities". Yet, it is worth noting, that six decades after Hiroshima and Nagasaki, the focus of international efforts is still on "applying the necessary political will to build an international consensus on priorities". It is a measure of the distance we need to travel to realise the vision of universal nuclear disarmament.

Ladies and Gentlemen

The theme of the Congress, 'Peace, Health and Development', is timely.

I wish the Congress all success.

088. Media Report on the meeting of External Affairs Minister Pranab Mukherjee with the U. S. President George W. Bush.

Washington, March 25, 2008.

External Affairs Minister Pranab Mukherjee told journalists in Washington that India would not move forward on the civilian nuclear deal with the U.S. until a political consensus was achieved within the country. The government was making efforts to evolve a "meeting ground" with the Left parties, supporting the ruling coalition from outside and opposed to the deal. "If we are able to evolve a consensus then it will be possible to hasten the process [of taking the deal forward]," External Affairs Minister told reporters.

Mr. Mukherjee, who met President George W. Bush at the White House for 35 minutes and Secretary of State Condoleezza Rice on March 24¹, said the UPA government was "interested" in pursuing the deal and it was aware of the time frame suggested by members of the U.S. Congress but certain issues were yet to be resolved. Conveying to Mr. Mukherjee Washington's desire to take the deal forward, Ms. Rice had said it was a "landmark agreement which is good for both sides....we will continue to work on that agreement." "Let us see. Events have their own momentum," Mr. Mukherjee said to a question when he expected the political process in India to be hastened. "The UPA government is trying to work out a meeting ground between it and a section of its supporters [to evolve consensus]," said Mr. Mukherjee.

He said: "There is opposition from the Left and the BJP to the nuclear deal and therefore we have to take into account that ... if it is subsequently not honoured by the next government it would lead to an embarrassing situation for the country."

1 Prior to the meeting, the White House Spokesman said the President was "excited" about meeting Mr. Mukherjee and discussing the range of bilateral issues, including the civilian nuclear deal. "There are lots of different things to talk about. We have a broad and deep relationship with India on a variety of issues, including the civilian nuclear agreement... And I'm sure they'll talk about other things as well," the official said. Mr. Mukherjee separately had a one-on-one dinner meeting with Ms. Rice. Ms. Rice said at a media interaction that their meeting was basically confined to regional issues of interest to the two sides and that a "lot more" was slated to be discussed, including the civilian nuclear agreement. "We will continue to work on that agreement," Ms. Rice said later. "The Indians are now in a process of working with the IAEA and we will follow that progress and we will have further discussions on that matter," she said.

He said although India had finalised the language of the safeguards text with the IAEA it was difficult to indicate at this juncture a time frame by when the nuke deal could be wrapped up.

"Our government is interested in ratifying the [nuclear] agreement since we are energy-deficient. There is an overall consensus [in India] that nuclear technology is important," he said.

089. Interview of External Affairs Minister Pranab Mukherjee with the Weekly Outlook on India - U. S. Nuclear Cooperation Agreement.

New Delhi, March, 2008.

(External affairs minister Pranab Mukherjee has the unenviable job of forging a consensus on the Indo-US nuclear deal, especially vis-a-vis the Left. Extremely careful not to upset the coalition's fragile balance of interests, he spoke to Seema Sirohi on the difficult path ahead. Excerpts:)

What is the next step on the nuclear deal?

We'll have to discuss the India-specific safeguards arrangements with the Left. I can't tell what I'll discuss with them.

Is the draft almost final?

A draft is a draft. When it is final, it would be final. Government approval would be needed.

My approval is not the government's approval.

Any more meetings with the IAEA?

It will depend on how things develop.

Would you include something the Left leaders suggest?

That I can't tell you.

So when you go to Washington...

That's absolutely bilateral. It has nothing to do with the IAEA. Of course, it may come up in the discussion. India's relations with the US are not dependent on one issue-civil nuclear cooperation.

The fact that the deal is taking longer than envisaged...

It can't be helped. We will have to get the Left's support because they are supporting the government. And if the government does not exist, how can there be an agreement? So we shall have to carry them with us, if possible.

And if that is not possible?

Then I don't know what will happen. Then the Congress leadership, the UPA leadership will have to take a final view.

Do you think talk of an early election is premature?

Nobody is talking of elections now except journalists.

The PM sought the BJP's support for the nuclear deal. Are you hopeful?

I have neither hope nor disappointment. We are trying to evolve a consensus and first the consensus will be with the supporting parties because that is of primary importance for which the Left-UPA mechanism was created. Then we shall try to evolve a larger consensus. If it is possible, fine, if it is not, then what can we do?

But the Left is not in a mood to compromise.

That is your conjecture. I'm talking to them on certain specific issues. I have clarified to them our perceptions of the 123 agreement. I have explained our perception of the Hyde Act. It is not that they have agreed with all our views. But we are stating our positions and they are stating theirs.

What could be a face-saver for the Left?

No, no. I'm not concerned with face-saving. We are engaged in discussion. If it materialises, it materialises. If it doesn't, it doesn't.

If it doesn't materialise?

No, no. No question of 'if'. I have not come to that conclusion. I can't tell you what the party will do if it doesn't materialise.

Is it possible for a minority government to sign an agreement?

I checked up with them that are you ready? They said no, how it is possible? How could it be because the next incumbent government may not agree to it? That's the compulsion for us. A minority government cannot, need not and should not sign a major agreement like this.

Are you optimistic on the NSG process?

That's a value judgement. I go by facts. If it happens, it happens.

You're giving very existential answers.

What do you expect me to do? I am in the government.

Both the PM and the Congress party president said in October that the survival of the government is more important than the deal.

That position is still there. What the Congress president says is the final word of the party and what the prime minister says is the final word of the government.

But there seems to be a flurry of activity now related to the deal...

They never said that we have stopped the activity.

Fair enough. But the timeline is getting tighter.

But we never started with a fixed timeline. We did not say this is the time by which I shall complete. I'm just telling you that we're trying.

Is it possible for you to get support from other parties?

We have got the stated positions on the floor of Parliament. A large number of parties have opposed it, including the Left. Still we are in conversation with them to see if some way is possible. My optimism or my pessimism is irrelevant here.

090. Inaugural Address by Prime Minister Dr. Manmohan Singh at the International Conference: "Towards a World Free of Nuclear Weapons".

New Delhi, June 9, 2008.

Welcome to New Delhi. We take great pride in hosting this International Conference on a subject that touches upon the very survival of humankind.

Twenty years ago, on this day, our former Prime Minister, Shri Rajiv Gandhi addressed the Third Special Session on Disarmament of the UN General Assembly.

Speaking on the theme of "A World Free of Nuclear Weapons" he introduced an Action Plan calling on the international community to negotiate a binding agreement on general and complete disarmament. At the heart of the Action Plan was a commitment to eliminate all nuclear weapons in three stages by 2010.

Rajiv Gandhi believed that disarmament, in particular nuclear disarmament, was essential to usher in a safe and non-violent world. He had a deep insight into the nature of evolution of technology, its potential for advancing human welfare as also for unleashing destruction. In this context he was acutely aware of the power of the atom. He wished that it should never again be used for destructive purposes.

The Rajiv Gandhi Action Plan was a comprehensive exposition of India's approach towards global disarmament and continuity in our thinking. It symbolized the continuity in our thinking since 1954, when India pioneered the call for a complete ban on nuclear testing. The essential features of the Action Plan continue to remain valid even today.

A review of developments since 1988 presents a mixed picture on how far the world has moved to realise the vision of Rajiv Gandhi. On the one hand, the end of the Cold War has created an opportunity for the world to move away from the dangerous doctrines that were based on the precept of Mutually Assured Destruction. Greater engagement and realization of the inter-dependent nature of global security among major powers has created new space for action on disarmament. In 1993, the Conference on Disarmament was able to finalise the Chemical Weapons Convention, a multilateral, non-discriminatory and internationally verifiable treaty aimed at eliminating an entire category of weapons of mass destruction by a fixed date, namely 2012.

On the other hand, the painful reality is that the goal of global disarmament, based on the principles of universality, non-discrimination and effective compliance, still remains a distant one.

Even more disturbing, however, is the emergence of new threats and challenges to global security. I refer to the growing risk that nuclear weapons may be acquired by terrorists or those driven by extreme ideologies; the increasing danger of non-state actors, accessing nuclear materials and devices; the development of new weapon systems based on emerging technologies which pose challenges to space security and provide new roles for nuclear weapons; and the weakening of multilateralism even as bilateral arms control processes falter in shifting strategic landscapes.

The threat of climate change and global warming itself raises a range of security concerns, especially for us in the developing world.

India, which has witnessed rapid economic growth in the last few years, and is poised for even higher growth rates in the future, needs a peaceful international environment so that we can focus our resources on improving the lives of our people. We seek a world in which power flows through the empowerment of people, and from the strength and resilience of our economy, our society, our institutions and our values.

Our energy needs will continue to rise in the foreseeable future. We do not have the luxury of limiting our options of energy sources. We therefore wish to create an international environment in which nuclear technology is used not for destructive purposes but for helping us meet our national development goals and our energy security.

India is fully aware of its responsibilities as a nuclear weapon state. We have a declared doctrine of no first-use that is based on credible minimum deterrence. We have in place strict controls on export of nuclear and fissile related materials and technology. India has no intention to engage in an arms race with anyone. Above all, India is fully committed to nuclear disarmament that is global, universal and non-discriminatory in nature. The pursuit of this goal will enhance not only our security but the security of all other countries.

These objectives cannot be achieved through partial methods and approaches. The only effective form of nuclear disarmament and elimination of nuclear weapons is global disarmament. Nuclear weapons know no boundaries. Even today the nuclear arsenals in possession of the major

powers are enough to destroy the world many times over. In this scenario it is not possible to "regionalize" nuclear disarmament.

It is in keeping with this approach that India has recently submitted a Working Paper on Nuclear Disarmament to the UN General Assembly, containing initiatives on nuclear disarmament. We hope to stimulate a debate and promote consensus on the way forward. These proposals have also been submitted before the Conference on Disarmament in Geneva. They are a set of practical measures for working towards the goal of a nuclear weapons free world. We do not wish to exclude other measures that may contribute to achieving this goal nor do we hold that there is a rigid hierarchy among these steps and a specific sequencing for their implementation. The measures we suggest include:

- Reaffirmation of the unequivocal commitment of all nuclear weapon States to the goal of complete elimination of nuclear weapons;
- Reduction of the salience of nuclear weapons in security doctrines;
- Adoption of measures by nuclear weapon States to reduce nuclear danger, including the risks of accidental use of nuclear weapons;
- Negotiation of a global agreement among nuclear weapon States on 'no-first-use' of nuclear weapons;
- Negotiation of a universal and legally-binding agreement on non-use of nuclear weapons against non-nuclear weapon States;
- Negotiation of a Convention on the complete prohibition of the use or threat of use of nuclear weapons; and
- Negotiation of a Nuclear Weapons Convention prohibiting the development, production, stockpiling and use of nuclear weapons and on their destruction, leading to the global, non-discriminatory and verifiable elimination of nuclear weapons with a specified timeframe.

These proposals retain the spirit and substance of the Rajiv Gandhi Action Plan. We hope that other states will agree to a dialogue on these proposals, and will join us in committing to nuclear disarmament. That is the critical first step - a commitment, preferably a binding legal commitment through an international instrument, to eliminate nuclear weapons within a time bound framework. In parallel with this general commitment to nuclear

disarmament, we need strengthened non-proliferation commitments such as on denying nuclear material, technology and equipment to terrorists. Pending global nuclear disarmament, all states must ensure that they do not allow proliferation of sensitive technologies into dangerous hands.

India is ready to add its own weight and voice to the global debate on nuclear disarmament with a view to crafting such a consensus on disarmament and non-proliferation. We need a collective approach anchored in a universal partnership that is supported by non-governmental communities and public opinion.

I wish your deliberations all success.

091. Valedictory Address by the Vice President M. Hamid Ansari at the International Conference: "Towards a World Free of Nuclear Weapons."

New Delhi, June 10, 2008.

To deliver a valedictory address is to begin with twin apprehensions: that whatever is to be said has been said, or that what is going to be said may be outrageously at variance with what has been said!

In either case, the speaker would be deprived of what Dr. Samuel Johnson termed 'frigid tranquillity'.

For being in this interesting position, I have to thank an old and dear friend!!

I

Any discussion necessitates clarity about concepts. In terms of the theory of statecraft, war has always been considered an instrument of policy. Pursuit of war necessitates weapons, defined as tools to gain advantage over an adversary. Improvement in the quality of weapons, and invention of new ones, is a logical outcome of the human trait to seek excellence, for success in subduing a political and military adversary by inflicting unacceptable damage.

The impulse to invent weapons of mass destruction, including nuclear weapons, was part of this process. Each new weapon system also propelled assessment of its implications in tactical and strategic terms. Both processes were accelerated in the second half of the 20th century.

Every invention, apart from its novelty, has to prove its utility. Mass destruction in the Spanish civil war was vividly depicted by Picasso's Guernica; less than a decade later, it was typified by London and Dresden. In the case of the nuclear weapon, the utility was brutally demonstrated at Hiroshima and Nagasaki. The scale of destruction there propelled consideration of the implications of the new weapon.

An early recognition came in the shape of the Baruch Plan of June 1946. It was rejected by the Soviet Union for reasons that were evident. In 1948, General Omar Bradley told an American audience that "the only way to win an atomic war is to make certain it never starts".

None appreciated the implications better than the scientists. In July 1955

the signatories of the Russell-Einstein Manifesto spoke "not as members of this or that nation, continent, or creed, but as human beings, members of the species Man, whose continued existence is in doubt".

Ladies and Gentlemen

The venue of this conference is important; so is its timing. India has been an ardent advocate of prohibition on the production and use of nuclear weapons. Jawaharlal Nehru in 1954 spoke of the fear that "would grow and grip nations and peoples and each would try frantically to get this new weapon or some adequate protection from it." Prime Ministers of India proposed prohibition in 1978 and again in 1982. In 1988 Rajiv Gandhi sought "not a marginal adjustment in the machinery of nuclear confrontation, nor a partial or temporary scaling down of the arms race", but "a world which is rid of nuclear weapons". His Action Plan for a World Free of Nuclear Weapons was comprehensive in its scope, passionate in its appeal, and clinical in its reasoning and analysis.

The idea was considered utopian.

Despite this, and in the initial euphoria at the end of the Cold War, the global momentum for a less unpleasant world led to the conclusion of the universal and non-discriminatory Chemical Weapons Convention, with its intricate and intrusive verification mechanism. Significantly, however, the argument for outlawing it was not extended to nuclear weapons.

In regard to matters nuclear, the world has witnessed changes over the past decade and a half. This audience is knowledgeable about it. India herself has emerged as a nuclear weapons state.

On one side it is argued that the imperative of realism leaves no option but to accept the reality. On the other, those distressed over the fraying of world order and apprehensive of the "normative cost of silence" advocate a more assertive approach. "This is a time", writes Professor Richard Falk in his recent book *The Costs of War*, "when realism and idealism are increasingly fused in their call for a future world order based on law and justice, but this cannot be made to happen without the engagement of the peoples of the earth acting as detribalized citizens without borders."

Three questions arise:

- Is the logic of 'realism' unassailable?
- Does it hold good for the world of tomorrow?

- Has the argument for disarmament, and particularly for nuclear disarmament, ceased to be relevant for the survival of the human species?

The case for the possession of nuclear weapons needs to be assessed in strategic, legal, political, financial, developmental and environmental terms. This would unavoidably widen the ambit of discourse.

In the first place and according to the Federation of American Scientists, the global stockpile of nuclear warheads today remains at more than 20,000. Of these, more than 10,000 warheads are considered operational, of which a couple of thousand are on high alert, ready for use on short notice. The approach is premised on the doctrine of deterrence; the latter, however, remains inherently unstable, prone to human error or folly; the probability of the annihilation of the human race through the use of these weapons thus remains high, and must be considered unacceptable.

Secondly, nuclear armament ends up being, in its implications, anti-poor and anti-development. Stephen Schwartz, in his 1998 book 'Atomic Audit' on the comprehensive cost of the US nuclear weapons programme, has estimated that the US spent around \$6 trillion in total. The arms race led the former Soviet Union to the point of exhaustion and disintegration. The resource drain of other nuclear-weapon states would be equally high in proportionate terms. This level of spending by nuclear weapon states cannot but deny national resources for developmental or other purposes for public welfare.

Thirdly, the development, production, stockpiling and use of nuclear weapons results in immense, irreversible and unforeseen damage to the environment. As far back as 1987, the Report of the World Commission on Environment and Development, (known as the Brundtland Report), affirmed that "among the dangers facing the environment, the possibility of nuclear war is undoubtedly the gravest". It noted that the "whole notion of security as traditionally understood in terms of political and military threats to national sovereignty must be expanded to include the growing impacts of environmental stress"; it concluded that "there are no military solutions to 'environmental insecurity'."

Fourthly, there have been fundamental changes in the nature of conflict and of the structure of international relations. Conflict in the post-Cold War era has acquired new characteristics: it is not classical inter-state conflict; it is fuelled by identity based factors and issues of economic and social

justice; and there is a drastic increase in the role of non-state actors. Weapons of mass destruction that were fashioned for inter-state conflict and their associated strategic deterrence doctrines premised on state behaviour have little relevance for the new reality.

II

Ladies and Gentlemen

The case for possession and use of nuclear weapons stands dented and lends credence to the need to re-think its fundamentals. Any endeavour on this basis must necessarily be rooted in legality and morality and be capable of demonstrating the advantages emanating from it.

How is this elusive goal to be attained? In exploring options, we need to remember that the community of nations has put in place agreements to outlaw chemical and biological weapons.

The question of legality poses problems. On a reference from the UN General Assembly on "threat or use of nuclear weapons", the International Court of Justice gave an Advisory Opinion in July 1996. It decided that in customary or conventional international law there is neither an authorisation nor a prohibition of the threat or use of nuclear weapons. While it opined that such a threat or use would be contrary to the rules of international law applicable to armed conflicts, it noted that the current state of international law does not permit the Court to conclude definitively whether such threat or use would be lawful or unlawful in an extreme circumstance of self-defence, in which the very survival of a state would be at stake.

The distinguished audience here is cognizant of the UN General Assembly resolutions passed each year by a large majority reaffirming that "any use of nuclear weapons would be a violation of the Charter of the United Nations and a crime against humanity" as declared in its resolution 1653 (XVI) of 24 November 1961.

This reveals the desire of a very large section of the international community to move forward along the road to complete nuclear disarmament.

On the other hand, we have the annual re-affirmation of the Chapter VII Security Council Resolution 1540 of 2004 stating that proliferation of nuclear weapons "constitutes a threat to international peace and security".

Put together, we get two sets of assertions:

1. use of nuclear weapons is a crime against humanity;
2. proliferation of nuclear weapons is a threat against international peace and security.

Between the two ends of this spectrum, falls the question of production, possession and threat to use of nuclear weapons. It is an irony of Realpolitik that these have so far not been perceived to constitute a threat to international peace and security.

The ICJ addressed but did not resolve a critical question: Would a higher priority be accorded to the survival of the state if the survival of humanity itself were at stake?

A Dissenting Opinion summed up the legal dilemma: "The case as a whole presents an unparalleled tension between State practice and legal principle". "When it comes to the supreme interests of State", it noted, 'the Court discards the legal progress of the Twentieth Century, puts aside the provisions of the United Nations Charter of which it is the principal judicial organ, and proclaims, in terms redolent of Realpolitik, its ambivalence about the most important provisions of modern international law".

This impasse was reflected most recently in the Report of the UN Disarmament Commission on April 25, 2008 at the end of its Three Year Cycle of Deliberations. Releasing the Report, the Chairman of the Commission said that even set against the relatively low expectations, the results were meagre. "There was a stark contrast between the state of the world and the cooperation of the United Nations Member States in the Commission. Therefore, the credibility question is inescapable, and in time, each and every one of us should be able to answer it".

The only way to resolve the impasse is to do it on a different plane. The modern state system is premised on the model emanating from the Peace of Westphalia. The reality of the sovereign state today, however, is very different from its theory. In 1991 Javier Perez de Cuellar had called upon the international community to help develop a "new concept, one which marries law and morality".

Such an effort of bringing together law and morality would help initiate the process of resolving the dilemma highlighted by the ICJ in its Advisory Opinion. The process would then take us back to the Russell-Einstein

Manifesto's focus on the human being: "Remember your humanity, and forget the rest. If you can do so, the way lies open to a new Paradise; if you can not, there lies before you the risk of universal death."

To transform vision into reality, a plan and a timetable on the pattern of the Rajiv Gandhi Action Plan would be essential. We have seen that, hitherto, nuclear disarmament has become almost synonymous with nuclear non-proliferation. A change would be possible only through such an Action Plan.

For much too long, ladies and gentlemen, the question of disarmament has remained in the exclusive domain of states and their experts. Is it not time now to open a window or two to let in the fresh breeze of global public opinion? We are aware of the beneficial results produced by such an approach in other areas that transcend state sovereignty.

Given the immobility of the current disarmament process, a new methodology may be worth a try.

Thank you.

092. Remarks by Finance Minister P. Chidambaram at the International Energy Ministers' Meeting.

Jeddah, June 22, 2008.

Your Excellencies, Ministers from Oil-Producing and Consuming Countries, Distinguished Delegates, Ladies and Gentlemen.

2. We are gathered here under extraordinary circumstances and I speak to you today with a heavy heart and a sense of foreboding. Let me begin by thanking H.E. Mr. Ali I. al-Niami, Minister of Petroleum and Mineral Resources, Kingdom of Saudi Arabia, for providing us a platform at this critical juncture in the Global Energy Dialogue.
3. I represent a country that has over 1.1 billion people; that began a long and arduous journey of development; and that has, in recent years, rediscovered its inner strengths and acquired the capacity to end poverty. I speak for a country that, along with 189 nations, adopted the Millennium Declaration and set 2015 as the year for achieving the Millennium Development Goals.
4. I speak with great anguish because the goals that we have set for ourselves are in grave peril.
5. Oil prices threaten to wipe out the economic gains made by developing countries in recent years. The irrational escalation in oil prices is the cause of diversion of scarce resources from education, health and other social sector schemes. Three weeks ago, India passed on barely 9 per cent of the required price increase to consumers: the result is that inflation measured by wholesale prices has crossed 11 per cent. We are sorry to note that even oil producing countries such as Indonesia, Russia, Saudi Arabia and Venezuela face double-digit inflation rates ranging from 10.5 per cent to 29.3 per cent.
6. How did this situation come about? And how may we overcome what appear to be formidable challenges?
7. Let me focus on some key areas and imperatives from the perspective of developing economies like India.
 - a. Questions have been raised about the fundamentals of the oil industry. There is a need for the oil industry to re-assert its

leadership in price formation and not remain passive spectator of speculation and paper trading in oil. The global hydrocarbon community must address this situation through appropriate supply-side responses and calm the oil markets.

- b. Today, the vulnerability of the supply chain to temporary supply disruptions stands exposed. Global oil consumption grew by 1.1% or 1,000,000 barrels per day in 2007 whereas the global oil production fell by 130,000 barrels per day. Spare capacity, across the supply chain, has dwindled considerably. This has added to risks and uncertainty. Hence, the need to fast-track development of oil resources.
- c. As per the estimates of the International Energy Agency (IEA), our future oil and gas needs call for massive investments of the order of US\$ 10 trillion by the year 2030. Such fund mobilization can be achieved. Fresh investments are not materializing perhaps because of anticipated fall in demand. This is plainly wrong. The cyclical behaviour of oil markets is amply established and we know that oil production provides attractive returns in the long run. High oil prices have improved the balance sheets of oil-producing nations and companies. It would be reasonable, therefore, to expect oil producers to fund capacity expansion.
- d. Respectfully, we reject the suggestion that rising demand is the cause of spiraling oil prices. Surely, demand and supply dynamics can not explain what has happened over the last 12 months. How is it that oil prices were US\$70 a barrel in August 2007 and how is it that they have doubled when there has been no dramatic change in demand? The causes for the current pandemonium in oil prices lie elsewhere: in unregulated over-the-counter markets and futures trading in oil.
- e. There is ample evidence that large financial institutions, pension funds, hedge funds etc. have channelized billions of dollars - nay, trillions of dollars - into commodity investments and commodity derivatives. It is common knowledge that these financial transactions are unregulated and highly opaque. The demand for oil generated by these funds is purely speculative

demand. In our view, the time has come for producers - especially OPEC - and consumers to wrest control over oil trading from the hands of the speculators.

- f. The only way forward is for the both producers and consumers to find common ground. We have a proposal that will instill mutual confidence. We propose that we adopt a Price Band Mechanism. Consuming countries must guarantee that oil prices will not fall below an agreed level and producing countries must guarantee that oil prices will not rise above a guaranteed level. In the band between these two levels, let prices be determined by market forces. This is the only way to shelter the world from volatility and unpredictability in oil prices.

Excellencies,

8. We firmly believe that the current level of international oil prices is in the interest of neither the oil-producing countries nor the consuming countries. If the global economy slows down or slips into a recession due to high oil prices, that will eventually hurt all of us. Therefore, in our enlightened self-interest, we must take concerted action to address the present situation.
9. We welcome this energy dialogue and promise to remain engaged always.
10. I appeal to you in the name of development; I appeal to you on behalf of all developing countries to seize the moment. Let us put our heads together and find the way forward to normalize the oil markets and to move towards a future in which energy is available, accessible and affordable for all on a sustained basis.

Thank you.

**093. Joint Statement issued at the end of India-Australia
Foreign Ministers' Framework Dialogue.**

Canberra, June 23, 2008.

Please see Document No.338.

094. Press Release of the Prime Minister's Office on the meeting of the National Security Advisor M. K. Narayanan with the leaders of the Samajwadi Party on the Civil Nuclear Cooperation Agreement with the United States.

New Delhi, July 2, 2008.

The National Security Adviser, Mr. M.K. Narayanan, had a meeting with leaders of the Samajwadi Party, Shri Ram Gopal Yadav and Shri Amar Singh, earlier to-day, during which the latter had sought certain clarifications with regard to the Civil Nuclear Cooperation Agreement between India and the United States¹.

Among the main issues raised by Shri Amar Singh were:

- (i) Whether by entering into this deal, the sovereignty of decision-making in regard to India's foreign policy would be compromised. It was clarified to Shri Amar Singh that the Civil Nuclear Cooperation Agreement did not and would not affect the autonomy of decision-making in regard to foreign affairs in any manner. India had always followed an independent foreign policy. Under no circumstances, would this position undergo a change, the least of all in the context of the Civil Nuclear Cooperation Agreement. India has always

¹ The meeting between NSA and the Samajwadi leaders took place to clear the misperceptions that the latter had about the Agreement to enable it to extend its support to the Agreement and the UPA Government. The Chairman of the Samajwadi Party Mulayam Singh told the media that it "will not do anything that will harm the national interest or strengthen communal forces". The Samajwadi Party and the United Progressive Alliance (UPA) came closer as the Left Parties supporting the UPA Government drifted away from the alliance on the question of support to the Government on the Nuclear deal. A couple of days earlier Prime Minister Manmohan Singh keen to proceed with the India Specific Safeguards Agreement with the IAEA had offered to place before Parliament the entire civilian nuclear deal and to abide by the House, provided his government was allowed to complete the process of negotiations with the International Atomic Energy Agency (IAEA) and the Nuclear Suppliers' Group (NSG). "I have said it before. I will repeat it again that you allow us to complete the process. Once the process is over, I will bring it before Parliament and abide by the House," he said on the side-lines of a function at his residence on June 30. "I am not asking for something that the government should not be doing. I am only saying you allow me to complete the negotiations. I agree to come to Parliament before I proceed to operationalise [the deal]. What can be more reasonable than this," the Prime Minister asked. Insisting that "all that I want is the authority to proceed with the process of negotiations through all stages like the IAEA and NSG that will not tie down the hands of the country," Dr. Singh noted that the BJP and the Left parties would have an opportunity to discuss the deal in Parliament. "If Parliament feels you have done some wrong, so be it," he said.

regarded its strategic autonomy in these matters as sacrosanct. Related to this was the question raised by Shri Amar Singh whether the nuclear deal would impinge on our relations with Iran. It was clarified that our relations with Iran were time-honoured and civilisational in nature and no outside influence or pressure could force India to deviate from this path. India and Iran have recently taken several initiatives, including one relating to the Iran-Pakistan-India gas pipeline. The pipeline epitomizes the nature and importance of the relationship, something that was strongly re-inforced during the visit of President Ahmadinejad to Delhi in April. There have been other meetings between our Ministers and officials and their Iranian counterparts. The National Security Adviser has just returned after a very productive meeting with Iranian leadership, and also had a meeting with President Ahmedinejad, at which apart from economic issues like the IPI pipeline, certain other and related matters were discussed. India is not under any pressure, nor can it be pressurized to follow a course of action that is not dictated by our enlightened self-interest.

- (ii) Another important issue that was raised by the SP leaders was whether the nuclear deal would undermine our nuclear sovereignty, specially with regard to our strategic nuclear programme. It was clarified, and the Prime Minister has reiterated this on many previous occasions, that the deal would not in any way impinge on our strategic programme. This is an agreement for Civil Nuclear Cooperation. The purpose of the Agreement is to enable full civil nuclear energy cooperation between Parties and concerns nuclear reactors and all aspects of the associated nuclear fuel cycle. It caters for the development of a strategic reservoir of nuclear fuel to guard against disruption of supplies over the lifetime of India's reactors, and for advanced R&D in Nuclear Sciences. The 123 Agreement with the United States contains a specific mention that the Agreement would not affect un-safeguarded nuclear activities, i.e. activities involving our strategic programme which are not under safeguards. It also underscores that the Agreement would be implemented in a manner that does not hinder or otherwise interfere with any activities involving the use of nuclear material, information or technology and military nuclear facilities produced, acquired or developed by them independent of the Agreement for their own purposes.

- (iii) A question was also raised about the Hyde Act passed by the US Congress and its impact on the 123 Agreement arrived at between India and the United States. A careful reading of the provisions of the 123 Agreement would make it clear that substantive rights and obligations under the Agreement are not affected by the national laws of the parties. It is the 123 Agreement and its provisions that indicate the obligations of both sides. The 123 Agreement clearly over-rides the Hyde Act and this position would be clear to anyone who goes through the provisions.
- (iv) Other clarifications were sought on the right to re-process and the right to test and the provisions under which the United States would determine its cooperation with India. Great care was taken while finalizing the 123 Agreement to arrive at provisions which are satisfactory from India's point of view. The Agreement, hence, specifically grants consent to re-process or otherwise alter in form or content nuclear material transferred pursuant to the Agreement. India has agreed to establish a new national re-processing facility dedicated for re-processing nuclear material under IAEA Safeguards. There is nothing in the Agreement which places an embargo on India's right to carry out a nuclear test if it thinks this is necessary in India's supreme national interest. To meet the contingency (raised by the Hyde Act) that the United States might terminate its cooperation with India if it carried out a nuclear test, a very elaborate consultation process has been included in the 123 Agreement. The consultations would go into the relevant circumstances; take into account the specific requirements leading to a test; whether there had been a change in the security environment which required this; and/or whether this was a response to similar actions by other States which could impact on India's national security. Furthermore, it is stated in the Agreement that the two parties recognized that exercising the right of return would have profound implications for their relations and that both parties should take into account the potential negative consequences of such termination of on-going contracts and projects.
- (v) A reference was again made to the Agreement between India and the International Atomic Energy Agency for the application of Safeguards to Civilian Nuclear facilities. The salient features of the Draft Agreement (which are yet to be finalized), reflect the key understandings relating to fuel supply assurances, strategic fuel reserves and corrective measures. Provisions have been included

that make it clear that India is offering its civilian nuclear facilities voluntarily for safeguards and keeping in view these assurances. Most importantly, the Agreement provides for the filing of a declaration, based on its sovereign decision, and only when India determines that all conditions conducive to the objectives of the Civil Nuclear Cooperation Agreement and concomitant arrangements have been fulfilled. This ensures that India would retain the right till the very end before putting any of its reactors under safeguards.

- (vi) A major principle underlined in the Agreement with the IAEA is that the IAEA shall implement safeguards in a manner that do not hinder or otherwise interfere with any activity involving the use by India of nuclear material or technology developed by India independent of this Agreement for its own purposes.

095. Extract relevant to Civil Nuclear Cooperation with the United States from the Special Media Briefing by Foreign Secretary Shivshankar Menon on Prime Minister's visit to Japan to attend G-8 Summit.

New Delhi, July 4, 2008.

Official Spokesperson (Shri Navtej Sarna): Welcome to this briefing by the Foreign Secretary on Prime Minister's visit to the G-8 Summit in Japan. After Foreign Secretary has spoken we will do the questions in our usual fashion.

* * * *

Foreign Secretary (Shri Shivshankar Menon):

Question: When is the meeting scheduled with the US President?

Foreign Secretary: On the 9th.

Question: On the nuclear deal front, are we going to ...(Inaudible)... Secondly, all these countries which are going to G-8 happen to be also members of the NSG. Are we going to be asking for their support? How do you see it in terms of NSG ...(Inaudible)...

Foreign Secretary: We have been in touch with all the countries. We have spoken to the NSG as well. At previous meetings of the NSG we have been in contact with them and that would continue. As soon as we have a decision on going to the IAEA Board of Governors, I will let you know.

Question: American Congressman Gary Ackerman said yesterday that though they would not have ...(Inaudible)... session and all that of the US Congress, after pushing so much if it does not go to the US Congress, how do you take that?

Foreign Secretary: Frankly, I have always avoided all your questions, you all know this, about what is the timeframe, which day will this happen, which day will that happen. I do not want to get into that. We want to go ahead with it. We will do our best to go ahead with it as soon as we can.

* * * *

Question: Will the Prime Minister of India talk to President George W. Bush on the possibilities of getting support from the NSG at the G-8 Summit?

Foreign Secretary: I think that is a discussion that we have had before. I think the US is committed under the July 18, 2005 Joint Statement to get us an exemption from the NSG and they have committed themselves to helping us to achieve that.

Question: *Sir, is the Prime Minister, during his visit to Japan, likely to meet the officials of the IAEA?*

Foreign Secretary: *There is unlikely to be any body from the IAEA in Japan during this summit. As far as I remember DG, IAEA did not come even the last year at Helligendamm.*

Question: I want you to confirm if all bilateral meetings will be organized in Toyako or in Sapporo.

Foreign Secretary: Some of the bilaterals are on the 8th in Sapporo.

Question: Which ones are they?

Foreign Secretary: I think with those who are staying in Sapporo, like with Mexico, with China, with Republic of Korea, the Indonesia. I think these are the ones that are likely to be on the 8th. The UN Secretary-General's probably is also on the 8th. We are actually still slotting all these moving pieces.

Question: Will the Prime Minister be meeting leaders of the NSG also?

Foreign Secretary: I think many of the leaders who are there are members of the Nuclear Supplier Group. I have not done the tally but I think most of them are members of the Nuclear Suppliers Group.

Thank you.

(Text in italics in translated from Hindi text)

096. Extract relevant to Civil Nuclear Cooperation from Media Briefing by Foreign Secretary on board Prime Minister's Special Flight on the meeting between Prime Minister and U.S President while returning From G8 + O5 Summit at Hokkado, Japan.

July 9, 2008.

Foreign Secretary (Shri Shivshankar Menon): I presume you have all seen, heard what PM and President Bush said just after the meeting. It was a good meeting. They reviewed the bilateral relationship. Both sides expressed satisfaction at the transformation in the relationship over the last few years, and at the various areas in which we are cooperating from space to agriculture to education where we have just, as you know, signed the agreement for the new Nehru Fulbright Fellowships.

They reviewed the entire range of the relationship, the economic relationship which is growing rapidly; and they also discussed civil nuclear cooperation. Prime Minister informed President Bush that we were going ahead with the initiative. President Bush informed Prime Minister that the subject had been discussed among the G8 as well yesterday. I think that finds reflection in the Chairman's Summary which issued at the end of the day today when the Japanese Prime Minister spoke to the press. I do not know if you have seen the text¹. (para IV under the heading Political Issues) Maybe it is simpler if we circulate it. In the Chairman's Summary there is a separate heading which says "civil nuclear cooperation with India" and says "we look forward to working with India, the IAEA, the NSG and other partners to advance ..." etc. In fact that is a subject which came up in all the bilateral meetings that Prime Minister had, maybe with one exception, where we informed them of Government of India's intention to proceed with the initiative and got positive responses from most, if not all, of the leaders we raised it with.

1 Extract from Chair's Summary Hokkaido Toyako, 9 July 2008
We met at Hokkaido Toyako to address key challenges we face today. We adopted the G8 Hokkaido Toyako Summit Leaders Declaration and three independent statements on Global Food Security, Counter-Terrorism and Zimbabwe.
Civil Nuclear Cooperation with India: We look forward to working with India, the International Atomic Energy Agency, the Nuclear Suppliers Group and other partners to advance India's non-proliferation commitments and progress so as to facilitate a more robust approach to civil nuclear cooperation with India to help it meet its growing energy needs in a manner that enhances and reinforces the global non-proliferation regime.

There was some discussion in Prime Minister's meeting with President Bush also about the Doha Round and the need for a rule-based system. Prime Minister said again that from our point of view the key issue is really subsistence farmers in India and making sure that their interests are protected in whatever the shape of the understanding; and there was understanding expressed for that. There will be a Ministerial meeting during the WTO to negotiate this further on the 21st of this month. So, they said they will see what was possible at that meeting.

President Bush expressed condolences for the bombing of the Embassy in Kabul; asked about it. There was renewed determination expressed on both sides to fight terrorism and not to allow this sort of an incident to divert us from the task of reconstructing Afghanistan and working with the Afghan people to give them livelihood strategies which are practical and which work.

*

*

*

*

Question: ... Mr. Bush any details, where, when, how, what? And on the other side, as far as Mr. Bush is concerned, were there any assurances about NSG? Apart from speaking with G8 leaders, has he been speaking with other NSG leaders? What does he have to say really about the NSG bit and anything else?

Foreign Secretary: I think that stage of who will do what, I think, was in July 2005, if you look at the July 18 statement, it says quite clearly that the US will help us in the NSG. So, they did not go into that kind of thing. At that level both sides are committed to it; both sides are taking it forward; they will work to it.

Question: As far as Australia is concerned, they had some reservations about supplying nuclear fuel to us. During the discussions, was there any development in that regard?

National Security Advisor (Shri M.K. Narayanan): No, there is no reference to uranium. We have not reached the stage of uranium. We have to get clearances from the NSG before that. The Australian side, as the Foreign Secretary said, were extremely positive about the thing but uranium did not come into the picture. Just to clarify what was said about President Bush, I think President Bush has made no secret of the fact that he is fully committed to the deal and he will do what they have to do in the matter.

Question: ...You were mentioning about the summing up by the Chairman of the G8 among other things. But you said that G8 has agreed to work for the civil nuclear deal with NSG and ...(Inaudible)... My question is, we know that among the G8 members seven were on board, only Japan was not on board. Have they come on board?

Foreign Secretary: I will give you the same answer I gave you yesterday. As a result of all these conversations I do not anticipate that any of the countries we spoke to will be a problem.

National Security Advisor: No country gave us a negative response.

Foreign Secretary: Nobody gave us a negative response.

Question: What about China?

National Security Advisor: Ditto.

Foreign Secretary: "As a result of these conversations I do not think ...", I will give you the same line again.

National Security Advisor: It covers all the countries we have spoken to. I think we have said it all. No country gave us a negative response.

Foreign Secretary: I think that is clear.

Question: That does not mean that all countries gave a positive response.

Foreign Secretary: Listen, we cannot go around telling you word-by-word what happens in confidential diplomatic conversations. We have told you the situation and I think you can take that and live with it.

Question: As you said, Sir, Prime Minister Fukuda in his Presidential Address at the end said that the G8 countries will be cooperating with India on this issue. What does this specifically mean?

Foreign Secretary: I think you have to ask him. The G8 has said, and the Chairman of the G8 has said, that they are ready to cooperate in civilian nuclear energy with India ...

Question: It is not clear.

Foreign Secretary: It is clear. If you read it, you will see the text. We will give you the copies of the text.

*

*

*

*

Question: Inclusion of civilian nuclear initiative in the G8 statement, you called that the biggest takeaway for India from this G8 meeting. Would that

be a shared perception of all those countries other than G8 members who are in the NSG?

Foreign Secretary: I can only speak for the countries that we spoke to and those who have spoken out in public. All the G8 members obviously are on board. They have expressed themselves in the statement which you will see. I cannot speak for them. They have spoken themselves. All the other countries that we have spoken to, we have got positive responses.

Question: You call that the biggest takeaway for India from this meeting?

Foreign Secretary: I am not getting into that because we did several things in this meeting. We discussed bilateral relations which each of these countries; we talked about climate change; we talked about the state of the world economy; we also did this; we also did food security. I am not going to say this is more important than the other. Each of these things is crucial for us and for the world. I do not think we need to say that one thing is more important than the other. The fact is that, yes, they have expressed themselves quite clearly.

097. Joint Media Briefing by National Security Advisor M.K. Narayanan, Foreign Secretary Shivshankar Menon, Secretary (DAE) & Chairman, Atomic Energy Commission Anil Kakodkar and Director (SPG), DAE Dr. R.B. Grover on the conclusion of the India Safeguard Agreement with the IAEA.

New Delhi, July 12, 2008.

National Security Advisor (Shri M.K. Narayanan): Ladies and gentlemen of the press, I think we shall dispense with all the formalities because I know you would like to hear what Dr. Kakodkar and Dr. Grover have to say. However, I wish to say that the idea of having this kind of a panel is primarily to clarify and explain any of the doubts that still exist in the minds of most of you about the Safeguards Agreement and where we stand on this issue.

As far as possible we are trying to keep the politics out of it. The technicalities and the technical aspects are reasonably esoteric. I know Siddharth wrote a very good piece today in *The Hindu*. But I presume there are some people ignorant like me who would like to be sort of informed as to what really the Safeguards Agreement stands for, what it means, and what it has meant for us in terms of the effort that we have put in.

If there are any side issues which arise as a result of the discussion, Foreign Secretary and I would then intervene. But I would request that please use your time usefully, if I might say so, because I think it is not often that you get the Chief Negotiator for the Safeguards Agreement Dr. Grover, or for that matter Dr. Kakodkar to be with us all on the same panel. Let us avoid grandstanding; let us avoid very clever questions; and just try to seek information. We will be as candid as possible; we promise to be as honest because I think there is a lot of that we need to get from the press in trying to explain to the country why the Safeguards Agreement is important from the point of view of the civil nuclear initiative that is being attempted.

With this I would leave the floor open for questions. You can direct the questions primarily to Dr. Kakodkar and Dr. Grover in terms of, as I said, the principal item that we are discussing today, viz., the Safeguards Agreement with the IAEA.

Question: *How is this Safeguard Agreement better and different from other such agreements and how will India benefit from it?*

Chief Negotiator (Dr. R.B. Grover): This particular agreement is for the civilian nuclear facilities in India. This has a Preamble and the main text can be broadly divided in three parts, i.e., General Considerations, Safeguards Procedures, and Miscellaneous Aspects where we cover various issues related to implementation, finance, visa-related issues and so on. As you might have seen from the Safeguards Agreement, right in the Preamble we have embedded several important concepts. We start with issues like sovereign and inalienable right of India to carry out nuclear research and development activities for the welfare of its people. We talked about expanding international cooperation on a stable, reliable and predictable basis. We also have mentioned about the relevance of Indo-US understandings which are mentioned in quite a detail there. Of course, it is about civil nuclear cooperation with all other member states of the Agency.

If we see Safeguards Procedures, they are based on the way safeguards are carried out. They follow the relevant guidance documents which have been adopted by the Board of Governors for this purpose. It is embodied in a document called Infirc-66. The General Considerations in the beginning stem from specific Indian requirements. You might have noticed that General Considerations are in the initial part where we have Basic Undertakings, General Principles, Items Subject to this Agreement, Declaration and Notification, Provision of Information to the Agency. These are specific to India and that is what makes it an India Specific Agreement. Normally, if we have 66 types of Safeguards Agreement, they are specific to a facility. We have similar agreements with regard to the reactors under construction at Kudankulam. We have Safeguards Agreement for reactors at Tarapur - TAPS-I and TAPS-II. But, though Safeguards Procedures are based on Infirc-66, this is an umbrella agreement and it will be applicable to all the civilian nuclear facilities in India, those civilian nuclear facilities which we declare as per Article 13 and subsequently notify as per Article 14. All these provisions make it India specific.

Then we go to the third part where miscellaneous issues are indicated. They include agency inspectors, how to give them visa, physical protection, system of accounting and control, finance, non-compliance and cooperation, interpretation and application of agreements, and settlement of disputes, and with the definitions. This is the general structure.

I can go on but I think it would be better if you ask questions. If I start doing this, there will not be any time for you to ask questions.

Question (Parul Malhotra, CNN-IBN): Sir, this question is open to any of you who might choose to answer. I just want to understand the reference to uninterrupted fuel supply and the right to take corrective measures etc., which find reference in the Preamble. Does the Preamble have legal sanctity in case the need arises? Why was it necessary to have this reference in the text? Why was it necessary for India to have this mentioned in the text?

Secondly, what is it about this agreement that makes it India-specific?

Foreign Secretary: On the issue of legal sanctity of the preamble and whether there is a distinction, there is the 1969 Vienna Convention on the Law of Treaties which deals with exactly these questions. Article 31 of that says that the Text includes the preamble and annexes. So, when you come to General Principles, general rules of interpretation of the treaty, these are actually part of the treaty. In this particular case it is made even more clear because you will see at the end of the preamble it says, "Now, therefore, taking into account the above, India and the Agency have agreed ...". So, frankly, this distinction that some people have drawn really does not matter and has no legal effect; there is no legal distinction. Also, in the text itself parts of the preamble are described as essential basis for India's agreement to accepting safeguards on certain facilities.

National Security Advisor: I think the link between the preamble and the text has been very clearly brought out, if you read the entire text. I do not think it was necessary, but we made it doubly sure that nobody could draw any kind of erroneous conclusions about this. So, I think the connection between the preamble and the text, even if that may not be necessary, has been very clearly made. I think that is one of the strongest points in the agreement because the entire text flows from, as the Foreign Secretary just now said, "taking into account the following", because it stands on that one basic pillar.

Dr. Grover: To answer the second part of your question, IAEA has certain templates with regard to going in for safeguards. Infirc-66 type template is the one which is meant for those states which have not signed NPT. That is the category to which India belongs. There have been some reports in the press where they have said that this is an agreement for non-nuclear weapon states. That is not the case. Infirc-66 template is for non-NPT

states. No qualification with regard to having nuclear weapons or not having nuclear weapons. We have followed with regard to safeguards procedure, this particular template. But what all the agreements, which have been executed so far as per this template, do is write certain clauses and make reference to 66 and are applicable only to a particular facility. Here what we have done is we have tried to include whatever our requirements were in the Preamble, in the General Considerations, continuing till about Article 22. All those considerations specific to India are embedded. And it is applicable to all the facilities which we declare as civilian and notify to the Agency. So, this is a unique feature which has been attempted for the first time. This is a standalone document. It does not make reference to Infirc-66 anywhere. That makes it India-specific. It is for the first time that this particular procedure has been followed because our requirements were of that kind and they have been reflected fully here.

Chairman, Atomic Energy Commission: I think the point to recognize really is, as Dr. Grover said, this is an umbrella agreement applicable to the civilian nuclear facilities that India declares to be civilian and also to recognize the fact that it applies to only to civilian facilities. There is a non-hindrance provision which in fact explicitly says that it has nothing to do with the rest of the Indian programme. So, in that sense it is quite India-specific.

Question (Manish Chand, IANS): Sir, assurances about uninterrupted fuel supplies which are incorporated in the document appear more like a statement of intent. It does not clarify how the Government is planning to ensure that Tarapur fiasco is not repeated. Could you tell us how the Government is planning to actually put together this entire arrangement so that India's safeguarded nuclear reactors will have uninterrupted fuel supply?

Chief Negotiator: Let us first say that IAEA is not the agency which supplies fuel. IAEA is the agency through this particular Safeguards Agreement one has to create those conditions which help us to proceed further for importing fuel and using it in our reactors. Fuel supply assurances have to be embedded when we go in for imported reactors at that stage. Suppose the way we have gone in for Russia, we are setting up two reactors in technical collaboration with Russia at Kudankulam. In that particular agreement, fuel supplies for the lifetime operation of the reactors are embedded. What we have done in this agreement is we have made provision that we can have that kind of strategic fuel reserve and use it

when we want for the lifetime operation of the reactors. IAEA cannot give us fuel. It sort of creates a bank and we have to fill that account as and when we want to fill it by getting fuel from other sources. If you particularly see here, I will give a specific reference. This is again an India-specific feature here. You go to 11F where we have said any facility and said for storing nuclear material. So, safeguards have to be applied to that particular fuel which we import and that provision we have built in here. In the preambular paragraph we had listed all the conditions. So, we have created a total framework and now we will have to go in for agreements with fuel suppliers which will help us in the lifetime operation of the fuel.

Chairman, Atomic Energy Commission: Any supply agreement has to be between the supplier and us. So, we will have to build in, as we have been doing always, strong commitments on the part of the supplier to continue, whether it is fuel or spares or whatever. Now, with regard to the foreign supply, it has been our policy right from day one that whatever comes from outside we have been putting under IAEA safeguards. In this Safeguards Agreement we have very strongly connected such cooperation agreements with other countries and the supply commitments with the supplier countries with our going in for safeguards with IAEA. For example, there is a statement, "an essential basis of India's concurrence to accept agency safeguards under an India-specific safeguards ..." and then it talks about the fuel supply agreements. So there is this linking which has been done, which says that we are going in for the IAEA safeguards because we are also talking about the supply agreements where the continuity is built in. And then we can develop it legally from that point onwards.

Question (Pallava Bagla, NDTV): I have two questions. Could you specify very clearly whether India will be in a position to withdraw reactors or facilities which we put under safeguards as part of this umbrella agreement? Secondly, taking forward a question which was there, can you elaborate a little more on the corrective measures?

Chief Negotiator: Let us hope that the whole process will move in a way that whatever commitments we enter with other countries and other countries enter with us, will be honoured, and there will not be any requirement where there is a fuel supply disruption and we have to go in for withdrawal of reactors from safeguards. But supposing that kind of a situation arises, we have made a mention right in the preambular paragraph as to why we are going in for this safeguards agreement. We have also indicated right in the main text, Article 4, where we say "the application of

safeguards under this agreement is intended to facilitate implementation of relevant bilateral and multilateral arrangements". And these arrangements will be fuel supply arrangements. Then we say, under 13, that we will go in for determination by India that all conditions conducive to accomplishment of the objectives of this agreement are in place. So, it is explicitly stated as to how we will proceed further with the implementation of this agreement. The fuel supply, we have to determine, yes. Those assurances are in place. Once they are in place and subsequently there is some deviation, then, if you see, we are providing as a first step for a kind of reporting to the IAEA, which is under 52C, where is a disruption of operation of facilities in the Annex on account of material violation. Now, we have entered into a fuel supply agreement; there is a material violation that we made provision first for reporting in 52C and then after we report, this kind of provision should help us in such a situation.... (inaudible).....will help us to take whatever steps(inaudible)... conditions will not arise.

Chairman, Atomic Energy Commission: First we are talking about the sustained fuel supply. Then we are talking about the stockpile which is sufficient for the lifetime operation of the reactors. Then we are talking about, if in spite of all that there are difficulties, of course, implementing corrective measures. In this agreement, as you heard, if there is a disruption in supply we would report to the Agency and we have all these linkages built in. So, we can also start our process. The point to notice is the discontinuity in the operation of the reactor cannot happen suddenly because we are talking about several layers. So, we will have enough time to kind of force correction on the part suppliers themselves. Because we will have the stockpile, we can carry on. So, there is no question of disruption of the reactors. So, as we have been always saying, we are talking about the permanent safeguards on the basis of permanent supplies. The question of corrective measures, which has been built in, essentially arises if this understanding is breached. That is the point.

Question (Pallava Bagla, NDTV): Sir, my question was very simple. Can we withdraw or not? You gave me all round and round, but did not tell me whether we can withdraw. Simply tell me whether we can withdraw.

Chairman, Atomic Energy Commission: The response has to be always calibrated. I am not talking about a response to your question. The corrective measures or corrective actions that India would take, it would depend on what is the disturbance, what is the threat to continued operation of the reactor. It is a thing which India can decide at respective point of time. I describe corrective measures as unspecified sovereign actions.

Question: Does it include legal measures?

Chairman, Atomic Energy Commission: It includes everything. There is no restriction.

Question (Smita Sharma, IBN7): *Two questions, one is to Dr. Kakodkar. Sir, there are two points that are being raised as objections by the scientific community. One is, since we are talking about the fuel supply, it does not speak of in perpetuity. So, what about reactors that we might build in future? Does that also come into the picture? And the nuclear status not being accorded to India. Mr. Narayanan, if you could please answer, going back to 123, because there is still an ongoing debate about 123 being bound by Hyde Act. To a layman or in categorical terms if you could say, if India nuclear test fires tomorrow, what happens to the deal?*

Chairman, Atomic Energy Commission: I thought in terms of fuel supply I have clarified already in sufficient detail.

Question: How do you see the future reactors?

Chairman, Atomic Energy Commission: The question is, any reactor that India declares as civilian, it will be first of all an Indian sovereign decision. One of the test for declaring, or making such a declaration, is that the reactor should be eligible for supplies, or the reactor should be eligible for the full civil nuclear cooperation. So, that linkage will always be there whether it is for the present reactor or a future reactor. This is a part of the understanding that if something is declared as civilian, it has to be eligible for the external civil nuclear cooperation. So, that defines everything. With regard to your second question, first of all let us be clear, we are a nuclear weapon state. We know that, and the world knows that. These definitions of nuclear weapon state and non-nuclear weapon state are definitions embedded in NPT. We are not a party to NPT. So, I do not think we should worry too much about those definitions. The fact is, we are talking about opening up of civil nuclear cooperation fully recognizing that this cooperation domain is restricted to the civilian facilities that India so declares and also recognizing that there is a part of the programme which is outside this. So, the strategic programme is completely insulated. Now, we have a nuclear weapons programme and that programme is insulated from this. So, what more is necessary? Certainly we do not have to really be so attracted towards NPT definitions because we are not a part of NPT.

National Security Advisor: The experts have been speaking. I do not know, I do not understand why there is still such a big question mark about

fuel supply assurances. Subject to correction by Dr. Kakodkar and Dr. Grover, hopefully this India Specific Safeguards Agreement with the IAEA will facilitate the processes by which we can get foreign fuel. If I understand it right, every reactor that will come will need a specific contract for the supply of foreign fuel. If I understood right, for the next forty years if you have a contract the contract remains and you have a stockpile. So, if somebody wants to disrupt that, at that point I do not know what he is going to achieve. If for some arcane reason it becomes necessary to do that, we have corrective measures. So, I think the issue of fuel supply assurances, unless I have missed out something on this, does not seem to be the issue here. I think Dr. Kakodkar said very pithily, if there is no perpetual supply there is no perpetuity of the safeguards. But taking the thing off this kind of what I would call the semantics, I think if we have an IAEA safeguards agreement, and if a foreign supplier comes with a reactor, then we have a fuel supply agreement with him, and we have the right to go in for a stockpile. There may be a cost to it, I do not deny, but I do not think the cost would be as high as 150 dollars a barrel or 200 dollars a barrel and the kind. So, I think that is not basically an issue to the extent that it seems to be being made out. I think that is what we wanted to clarify to this audience.

I will come to your second question. The same question is being asked over and over again and so I thought I will try and put it in as much of a layman's language as I can, provided I am right in what I have said.

Chairman, Atomic Energy Commission: You are absolutely right.

National Security Advisor: Now, the issue is, in the 123 agreement there is no reference to the Hyde Act. There is a reference to cessation of cooperation. It may be under any number of circumstances. What we have done in the 123 agreement, I think it is Article 14 if I remember right, is that the circumstances under which a cessation of cooperation has been sort of induced(inaudible)...the security scenario in the neighbourhood, etc., would be taken into consideration. So, it is in that context that the thing has been done. The Hyde Act is a US Act. The Separation Plan that we had was primarily an Indian document. The 123 is an India-US document, and hopefully the IAEA will be an international document. I think we have gone step by step in moving up the ladder in this matter.

Question (Royden D'Souza, Headlines Today): Dr. Kakodkar, two questions to you. In 2006 when I interviewed you I asked you about the transfer of technology that India could do to other third world countries,

especially Southeast Asia. What provisions are there for transfer of technology under this Safeguards Agreement with the IAEA? This also pertains to reactors that we might build in this interim period because we have a specialty in smaller reactors that we could export to other countries.

Second question is with regards to reactors that we build with our own homegrown technology - the FBTR, Kamini, BFBR, Hot Cell Facilities, other research, and fuel fabrication facilities. What assurances do we have that this technology will not be tapped into by the IAEA or any other country because the IAEA inspectors would like to have access to these also?

Chairman, Atomic Energy Commission: The export of any nuclear items or dual use items from NSG members are governed by NSG guidelines. As you know, India has been maintaining a very tight export control right from day one. So we had no difficulty in harmonizing our export control guidelines with the NSG guidelines. So, we have a strong export control in place. Within that framework we are free to export the nuclear items to countries who may wish to buy. As far as this safeguards agreement is concerned, this is a safeguards agreement for safeguarding facilities in India that we may ask IAEA to safeguard. So, whatever we will export to country 'x', we will insist on that country to subject that to IAEA safeguards. But that will be governed by safeguards agreement between that country and the IAEA. I hope I am clear about this.

With regard to your question about protecting the IPR as it were, as I mentioned the decision of what we declare as civilian and what as not is our own sovereign choice and this is very well stated, established and embedded in all documents. At this moment there is no question of putting FBTR or Fast Breeder Reactors under safeguards. So, that question does not arise. Even so, the Draft Safeguards Agreement does provide for protection of our commercial interest. It is already embedded there. Safeguards inspection, one must understand, is restricted to ensuring that there is no diversion of nuclear material. It is a detailed procedure. You have to define and envelop key measuring points and things like that. So, there is no obligation in terms of sharing the technology. It can be done. When we work out the detail we have to write the details in such a manner that IAEA is satisfied about non-diversion, and we are satisfied about protection of our own IPR also. The point is we have long experience about implementing IAEA safeguards. We have been doing it since Tarapur days, and there has been never any difficulty of this kind. So, I think that issue does not arise.

Question: This question could be answered by either Mr. Menon or Mr. Narayanan. I want to know how things will unravel in the next few months till the President of the United States signs the document. Out of the 45 NSG members, how many of them have given an assurance to us that they will support us, and how many are likely to create some problem or the other? Are they in single digit or more than that? Of course, Mr. Menon has said something about China not likely to create any problems when it comes up for a hearing at the NSG. So, what are the things we are planning to do to persuade people who are not exactly very enthusiastic about this to neutralize their opposition and see that we have no problems to get through the NSG?

Foreign Secretary: I hope the things do not unravel! I do not expect them to unravel. I do not think that is the word I would use for the future. But what we expect next is really that we go to the IAEA Board whenever it decides to meet. If they approve the Safeguards Agreement, then the NSG considers a clean, unconditional exemption for India from the guidelines. There is a fair amount of commonality to the composition. I think 19 members of the IAEA Board are also members of the NSG. We have spoken to the NSG informally; we have met the members also in the past. In previous NSG meetings we have been briefing them about where we are. Our impression as a result of these conversations with the various members and as a result also of various outreach activities that we have undertaken - one cannot predict the future; I mean I cannot say what will happen on that day; we are not astrologers here - is that we would hope that there would not be any hindrance in this process going through smoothly. It will certainly be our endeavour by contacting various countries and working with them. One good sign recently was, you saw the G8 Chairman's Statement at the end of the meeting where he endorsed robust civil nuclear cooperation with India. We have to keep working at this obviously as the process proceeds, and we will have to see once it becomes clear we will talk to all our friends around the world.

Question: Sir, I would like to ask this question to Mr. Narayanan. Could you give us the sequence of events on which date precisely did India move the draft agreement at the IAEA to the Board and then subsequent actions?

National Security Advisor: Why is this question being asked of me? But anyway, I think the Board was moved on the 8th, if I remember right, of this month soon after the Left Front said that they did not wish to have the meeting which had been scheduled on the 10th of this month. The idea

earlier had been that the External Affairs Ministry who is the Chief Interlocutor on behalf of the UPA could meet up with the Left Coordination Committee meeting. That would have been the final meeting according to the schedule that had been drawn up at which the findings of both sides would be discussed and after that they were supposed to come back to the Government. For reasons which are now well known, the Left decided not to wait for the 10th, and on the 7th night or 8th morning announced that they were going to withdraw support from the Government and they were planning to go to the President on the 9th. Therefore, the necessity of waiting for another meeting with the Left in case they had some other constructive suggestions to add to the draft which was on the anvil did not exist. So, a decision was taken after consultation that we will move the IAEA Board on the 8th so that enough time was available to the Board to have the papers circulated and whatever discussions they needed for the Board of Governors meeting which we hope would be towards the end of this month. I do not know, that is up to the Board. So, that is the sequence.

Question: They were to withdraw support on 8th but they went to the President only on the 9th. You requested the IAEA ...

National Security Advisor: Our commitment was not about withdrawal of support or giving support. Our commitment was that we would wait till the last meeting was held before we went to the Board in case the Left had something to say. Since they said they had nothing further to say and their next step was that they were going to withdraw support, little purpose was seen in keeping this issue hanging. The issue of support, lack of support, withdrawal of support, was not the issue.

Question: But, Sir, you had already initialled the document on the 7th and by that time the Left parties had said nothing.

National Security Advisor: Who said we had initialled anything on the 7th?

Question: Dr. Kakodkar went on record saying that the Draft was initialled on the 7th.

Foreign Secretary: Just to make it clear, a negotiator initials a document in token of that being the document that he has finalized. That is what it means. Initialling a document only means that a document is initialled by both the negotiators as to prove that this is the document we have agreed. That is it. That is all it constitutes. When you negotiate a document, you

finalise a document, you want to be sure that you both have the same text, that you know what you have agreed. So, when a negotiator initials a document that is all it does. It is in token of that being the document that has been agreed.

Question: But the Government would not initial until there was concurrence.

Question: Why did you initial on the 7th when you had already frozen the text a while ago? Have not you frozen it a while ago? Was it frozen on the 7th and, therefore, initialled on the 7th?

National Security Advisor: Let us get the facts straight. A formal letter to the Board signed by the Indian member on the Board of Governors was sent on the 8th evening, after the Left had already announced. That is where the matter is. That is the formal declaration saying that we are going to the Board of Governors.

Question: The question is to the NSA. A lot has been said about the need for India to keep its options open for future nuclear tests. But there is a point of view that nowadays over-ground tests or underground tests or undersea tests are no longer required, and in fact these tests can be done in the laboratory. What is your take on that?

National Security Advisor: My take on that is that I ask Dr. Kakodkar to answer this question because if it is in a laboratory, quite clearly he is the man or Dr. Grover as the case may be.

Chairman, Atomic Energy Commission: As you are all aware, it is the stated policy of the Government that the R&D in strategic area would continue, and that includes everything that is done in the laboratory. All of you are also aware that the Government has voluntarily declared a moratorium on nuclear tests. So, that is the position as of now.

Question: If a laboratory test is conducted, will it be considered violative of the voluntary moratorium?

Chairman, Atomic Energy Commission: No, moratorium deals with explosive nuclear tests.

Question: This is a very simple question. There is some confusion. Only a few days ago the Science and Technology Minister said that once the Safeguards Agreement is approved in the IAEA Board of Governors

meeting, it will go to NSG and then it will go to US Congress; and only when it is approved there, the Safeguards Agreement will be signed by the Government of India. Is that true?

National Security Advisor: The sequence that has been drawn up is that after the IAEA Board of Governors endorses or approves the agreement rather, and NSG then gives us a clean exemption. Then the United States had said that they would like the agreement to go to the US Congress for an up-down vote. We are at liberty to sign this maybe even three years later, as Dr. Grover explained in great detail. We are at liberty to file a declaration at a moment when we think it is necessary and when we believe that all the conditions that we think appropriate have been completed. So, the question is as to when and where we will. But quite clearly we categorically require an affirmative report in the IAEA. We also require a clean exemption from the NSG. Those two are cardinal aspects. The US Congress would help the US to then enter into a nuclear trade with us and help us in our nuclear scene. Having helped us, we are all equally keen that the US should be part of the wider nuclear trade. When we will go in for a declaration, when we will finalise it, will depend on Dr. Kakodkar and company being sure that all the necessary conditions that we think are appropriate and have been fully fulfilled.

Question: This question is directed to any of the members present here. In case of a dispute between the two parties, who is the arbitrator? Where does it get solved? I think it mentions that the matter would be resolved between the two parties concerned. The question specifically is, is there any international tribunal to which the matter can be referred or is it a matter of negotiation between the two parties?

The second question is more of an opinion based one. At what rate can we get power? At what unit rate can power generation be done after this civil nuclear cooperation is signed?

Chief Negotiator: If you see, in the Safeguards Agreement there is a section on long-term plans where we have clearly listed that this issue will be first discussed with the Board authorities, and the procedure is indicated here. And then we also say, I think it is in Article 10, "Nothing in this agreement affects other rights and obligations of India under international law". So, these two together will help us to ensure that in case there is any dispute we are able to resolve that dispute.

National Security Advisor: If I might introduce a certain amount of levity into the proceedings, we have not yet signed a prenuptial agreement on this question.

Chairman, Atomic Energy Commission: As you correctly observed, at what rate can we set up new nuclear power plants. It really depends on how things evolve. That is one part. But if you look at it from the other end, as to at what rate the Indian infrastructure would allow nuclear power stations to be set up. I am sure all of you are aware that today we are building six power stations simultaneously. There was a time when we were building nine power stations simultaneously, and all of them completing construction in time. So, it looks to me that taking up construction of ten, twelve units simultaneously is well within the Indian industrial infrastructure capability. If there is a need, it can be even higher. So, I do not think there is any serious limitation in terms of the rate at which the Indian system can absorb, particularly in the context of strong, dire necessity of addition of electricity generating capacity in the country.

Now, to come back to the other side that what rate we will get it. You know these negotiations are complex issues. Several issues have to be handled; several things have to be tied up; and that does take time. It is not as if this is done and we will be able to finalise these negotiations just like that. They have to be gone through in each one of the cases. So, that will add some initial delay. But more than that it is very difficult to predict. But you get some idea of the upper bound and the lower bound.

Question: A very quick question to Dr. Kakodkar. Sir, if you have initialled the text on the 7th of July, does that mean that the negotiations were carrying on till the 7th? Why did you initial it on the 7th? The other question is on the story in The Hindu a few days ago which said that the IAEA had no problem if the text was shared with other parties. And one of the things that the Left has been saying is that why did not you share the text? So, if you could just answer my questions, Sir.

Chairman, Atomic Energy Commission: Let us recognize that just like any other negotiation this negotiation also has been a long drawn affair. There have been several discussions taking place till the last moment. When everything was known to be satisfactory, once the two negotiators come to an understanding that yes everything has been done you initial it. I only gave a factual information that it was initialed on the 7th.

With regard to your second question, I think this has been already said.

Foreign Secretary: There is a simple answer to it. Until a text is finalized you cannot share it. No negotiating text is made public. It is not fair to your negotiating partner until it is finalized; nor is it fair to the process itself. You are still negotiating the text. So, it is just not done until it is finalized. We told you when it was finalized.

Question: It was finalized on the 7th, Sir. You went public with the document on the 10th.

Foreign Secretary: We have answered that.

Question: But it has been said that it is a confidential document between Government of India and IAEA Board and cannot be shared with anybody. Why then was it made public?

Foreign Secretary: It is not confidential with the IAEA Board until it is put to the Board. It has not been put to the Board before the end of the 8th. So, I think there is complete confusion in your mind. It is a negotiating text. A negotiating text cannot be made public until it is finalized. Once it is finalized, the negotiators' initial in token of that being the text they have agreed, full stop. On the 8th evening, we asked them to go to the Board, as the NSA made it clear. So, please do not confuse a very simple process.

Question: What kind of role can we expect the Indian private companies to play in nuclear power generation, Sir?

Question: If I may I add to that, just the other day you went to the Cabinet asking for a lot of land for existing power stations. So, clearly are you looking forward to sort of broadening that? Do you have in mind the fact that we want to have a lot of plants?

Chairman, Atomic Energy Commission: The Atomic Energy Act as it exists now permits the nuclear power generation business to be done by a Government company; and the definition of a Government company is one in which there is 51 per cent shareholding of the Central Government. That position stays. We, of course, want to expand the nuclear power generation capacity. So, it is an ongoing process where we keep identifying more and more sites and also look at the possibility of adding new power units at the existing sites. As a part of this process, because

land acquisition and all takes time, we are creating possibilities. It is a kind of a delegation where NPCIL can once the Government approves the site - first the site has to be approved by the Government - go ahead and acquire the land. We are, of course, interested in adding more capacity. So, we are looking at, as I said earlier, adding more units at the existing sites as well as looking at new sites. That is an ongoing activity. If you identify a site today, by the time you start construction there may be two, three or sometimes even four years' gap. So, you have to prepare for that much in advance.

Question: Sir, the US Congress breaks for the August recess very soon. We have to go through the Safeguards Agreement at the IAEA; and then you have to go to the NSG. Are you confident of making it at the US before the Bush regime becomes a lame duck government? Will we be able to see the India-US civilian nuclear deal finally?

Foreign Secretary: We do *Nishkam karma* (*selfless duty*).

(text in italics is translated from Hindi text)

098. Interaction of Prime Minister Dr. Manmohan Singh with Senior Journalists on the question of Safeguards Agreement with the IAEA.

New Delhi, July 15, 2008.

The Prime Minister interacted with a few senior journalists at his residence here today. The conversation covered the current political and economic situation and the issues pertaining to civil nuclear energy and the proposed Safeguards Agreement with the International Atomic Energy Agency.

The Prime Minister outlined the steps taken by the government to sustain the growth momentum and curb inflation, in the face of external pressures on account of rising crude oil prices. He also referred to the various initiatives taken by the government to make the growth process socially inclusive, including the measures taken to insulate the poor to the extent possible from inflation. He outlined the initiatives being taken to boost agricultural production and farmers' welfare.

Referring to opportunities for international cooperation in civil nuclear energy, in addressing the challenge of energy security and high technology development, the Prime Minister said the IAEA safeguards agreement will enable India to cooperate in civil nuclear energy development with all the 45 member countries of the Nuclear Suppliers Group, including USA, Russia, France and China. He said that concluding the agreements would end the era of nuclear apartheid against India. He said the agreement will in no way impinge on our strategic programme, which is entirely outside the purview of the IAEA safeguards agreement.

Stating that India would never allow any extraneous interference in the conduct of our independent foreign policy, the Prime Minister said that India would continue to seek good relations with all our Asian neighbours.

The Prime Minister expressed confidence that the people of India understood the significance of the initiatives being taken by the UPA Government and endorse them.

099. Excerpts from the interview of Chairman of the Atomic Energy Commission Dr. Anil Kakodkar with *the Hindu*.

Mumbai, July 18, 2008.

Question: The DAE is putting reactors under safeguards in perpetuity as a reciprocal measure or a quid pro quo for uninterrupted fuel supplies to those reactors. How is the uninterrupted fuel supply incorporated in the India-Specific Safeguards Agreement (ISSA) that you have concluded with the IAEA secretariat?

Dr. Kakodkar: Basically, you should understand that this safeguards agreement that we have developed with the IAEA has a background. The background is the civil nuclear cooperation that we have negotiated with the U.S., Russia, and France. Particularly that part of the understanding with the U.S., where we have agreed that we will identify some of our facilities as civilian facilities and that they will be placed under safeguards with an India-specific safeguards agreement with the IAEA. This also spells out that the facilities which are not identified as civilian will have no external hindrance of any sort.

So we are talking about the ISSA, which is an umbrella-document restricted to facilities that India identifies as civilian. Our identifying any facility as civilian is conditional on that facility benefiting from full civil nuclear cooperation. This will mean that the reactors we identify as civilian and place under safeguards under the ISSA will receive full, assured fuel supply from outside. We also have incorporated provisions for building up a stockpile [of fuel] to last for the full operating life of the reactors and our own ability to take corrective measures. So our agreeing to permanent safeguards is on the basis of permanent supplies [of fuel].

Question: Why are the corrective measures unspecified in the ISSA? Why have you not explicitly spelt them out? What corrective steps will India take if the fuel supply is cut off?

Dr. Kakodkar: The corrective measures are what I describe as unspecified sovereign actions. We can decide [them] at the appropriate point of time.

Question: The corrective measures that we can take and the strategic fuel reserve that we can build up find mention only in the preamble to the ISSA. There is a fear that this will lack teeth because they are not mentioned in the operative part of the ISSA. Why did you not include them in the operative part?

Dr. Kakodkar: That is not correct. I think that if we go by international law, it specifies that any agreement has to be seen as a whole. More specifically, the ISSA preamble is tightly linked with the operative portion.

Question: If India were to conduct a nuclear test, it will attract the Hyde Act of the U.S. and the fuel supply for the reactors will be cut off. So what are the corrective measures that you will take?

Dr. Kakodkar: As far as we are concerned, we are governed by the bilateral civil nuclear cooperation that we have negotiated.

Question: With Russia, the U.S. and France?

Dr. Kakodkar: I am talking about the U.S. I am talking about the 123 nuclear agreement that we have negotiated with the U.S. There is no mention of [nuclear explosive] tests in that text.

Question: The ISSA does not grant us full, civil nuclear cooperation, which means that we will not get the technologies for reprocessing the spent fuel and uranium enrichment. How are you going to face this problem? Under the agreement with the U.S. for the first two Tarapur reactors, we had the right to reprocess the spent fuel from those two imported reactors. But we could never enforce that right with the U.S.

Dr. Kakodkar: The safeguards agreement is an agreement between India and the IAEA, which was established at India's request and it will apply to facilities that India will identify as civilian and ask the IAEA to safeguard. The ISSA covers reactors as well as fuel cycle facilities, including reprocessing.

Question: You have said that the indigenous reactors that we put under safeguards are entitled to receive fuel supplies from abroad and that they would be under permanent safeguards. If that fuel supply is cut off and we use our own fuel, will those reactors continue to be under safeguards in perpetuity?

Dr. Kakodkar: No, no. First of all, we would have built up a stockpile. There is no chance of stoppage of reactors because the stockpile will be available.

During that time [if the fuel supply stops], we can take necessary action.

Question: You told me earlier that the India-Specific Safeguards Agreement should recognise India as a nuclear weapon State. Does it recognise India as a nuclear weapon State?

Dr. Kakodkar: First of all, the title of the ISSA is that it is an agreement for India's "civilian nuclear facilities." Further, the text of the agreement provides for non-hindrance to facilities and activities which are not covered by the safeguards agreement. This clearly means that while the safeguards agreement is only for civilian facilities, India is free to pursue its own domestic development, including the development of its strategic areas.

Question: The Hyde Act makes the specific requirement of "safeguards to be in perpetuity...in accordance with the IAEA document of GOV/1621 of August 20, 1973." The ISSA also invokes GOV/1621, which makes it clear that the reactors we put under safeguards will be under safeguards in perpetuity even if we use domestic fuel for them.

Dr. Kakodkar: GOV/1621 is about supplied materials and supplied facilities. As part of the cooperation agreement with other countries, we will ensure that the fuel is stockpiled to meet the lifetime requirement of our reactors.

Question: If the IAEA Board of Governors clears the ISSA, what do you expect from the Nuclear Suppliers Group? You said earlier that you wanted clean, unconditional exemptions from the NSG.

Dr. Kakodkar: We expect clean, unconditional exemptions for nuclear commerce with India.

Question: The Department of Atomic Energy has agreed to put even research facilities and heavy water plants under safeguards. How are they different from the nuclear power reactors coming under safeguards?

Dr. Kakodkar: As I told you, whatever we identify as civilian must also benefit from unrestricted, international cooperation. The research that we carry out in our autonomous research and development institutions should benefit from an environment of unrestricted scientific collaboration. When we declare something as civilian, the condition for that is that it should benefit from international civil nuclear cooperation. Our autonomous R and D institutions should benefit from unrestricted international scientific collaboration. We should also recognise that the activities of these institutions are irrelevant from the point of view of safeguards.

Question: You are the father of thorium reactor technology in India. You said in Bangalore recently that if India could import 40,000 MWe of nuclear power between 2012 and 2020, we can wipe out the gap between the demand and the supply of power by 2050 - by building more fast breeder reactors using the spent fuel arising from these imported reactors. But you

also said that thorium does not have properties that allow for faster growth of power generation. Media commentators have alleged that this amounts to India abandoning its third stage of building thorium-fuelled reactors.

Dr. Kakodkar: Right from the beginning all the way up to now, there is absolutely no contradiction between my statements on thorium utilisation strategies.

These are based on detailed analyses and they remain valid. [Dr. R.] Ramachandran's article in *Frontline* (August 1, 2008) is either from a result of lack of understanding or misinterpretation. The three-stage nuclear power development programme based on domestic efforts remains a priority activity and would be implemented unhindered.

To optimise the benefits of thorium utilisation, the timing of the introduction of thorium has to be judiciously planned. In any case, it has to follow significant build-up of nuclear power generation capacity through deployment of fast breeder reactors. The point to realise is the fact that India's electricity requirements are growing faster. The gap between electricity demand and supply that can be managed on indigenous resources is widening and it would exceed 400,000 MWe by 2050.

The question that one needs to address is how soon we can bridge this gap through the growth potential that is possible with fast reactors. Clearly, this necessitates emphasis on deployment of fast breeder reactors with the shortest possible doubling time. The timing of the introduction of thorium needs to be adjusted such that the demand-supply gap is bridged at the earliest and at the same time, we derive full benefit of the vast energy potential of our thorium resources for centuries to come.

The import of 40,000 MWe of power as an additionality [to the domestic nuclear power programme] bridges not only this gap by 2050 but it would avoid the necessity of import of much larger fossil energy resources and at the same time enable earlier deployment of thorium, meeting the objectives stated above.

The point is even after we pursue the domestic three-stage nuclear power programme, which we will pursue on a priority basis in any case, there will be a gap of 400,000 MWe. If we introduce thorium earlier, this gap will become larger and the three-stage programme will become smaller. On the other hand, if we can get this 40,000 MWe from outside [by importing

reactors], we can bridge this gap, and at the same time, we can advance the deployment of thorium.

Question: Is the DAE delaying the start of the construction of the indigenous 700 MWe Pressurised Heavy Water Reactors (PHWRs) and the criticality of the three new PHWRs of 220 MWe each at Rajasthan and Kaiga for want of uranium?

Dr. Kakodkar: It is true that presently there is a mismatch in the demand and supply of indigenous natural uranium. But things are about to start improving now. The capacity factor of the reactors is about to start improving. This is because the production [of yellow cake from uranium] from the mill at Turamdih in Jharkhand will start coming in now. We are working on the uranium mining and milling project at Tummlapalle in Andhra Pradesh. I am hopeful about the Meghalaya uranium project. There are also other sites. Our efforts for increasing the domestic production of uranium are continuing.

100. Joint Press Statement issued on the India - U. S. Civil Nuclear Energy Cooperation initiative.**Washington, July 20, 2008.**

Under Secretary of State for Political Affairs R. Nicholas Burns and Foreign Secretary Shivshankar Menon held four days of meetings in Washington July 17-20, 2007, on the U.S.-India Civil Nuclear Cooperation Initiative, including talks on the bilateral agreement for peaceful nuclear cooperation, also known as the 123 agreement.

In addition, National Security Advisor M.K. Narayanan and Foreign Secretary Menon met with Vice President Cheney, Secretary Rice, Secretary Gates, and with the U.S. National Security Advisor Stephen J. Hadley.

The discussions were constructive and positive, and both Under Secretary Burns and Foreign Secretary Menon are pleased with the substantial progress made on the outstanding issues in the 123 agreement. We will now refer the issue to our governments for final review.

Both the United States and India look forward to the completion of these remaining steps and to the conclusion of this historic Initiative.

101. Extract relevant to proposed discussion with the IAEA on civil nuclear energy from the Media Briefing by Foreign Secretary Shivshankar Menon on his discussions with Pakistan Foreign Secretary.

New Delhi, July 21, 2008.

* * * *

Question: ...(Inaudible)...

Foreign Secretary: I will tell you. I called on the DG of the IAEA; I called on the Chairman of the Board of Governors; I met with Permanent Representatives or the representatives of the members of the Board of Governors and the NSG member states. In each of these cases I answered questions; also spoke to them about the importance of the civil nuclear initiative and the resumption of civil nuclear cooperation between India and the other countries in the world both to meet our energy needs but also as a clean source of energy. If we want sustainable development as a contribution of the environment it makes sense for us to do so. There were some questions about the safeguards agreement and we answered I think most of those because the negotiators of that agreement were with me - Dr. Grover from the DAE, Venkatesh Verma from our Mission in Geneva. We answered their questions. Came away with the impression that, as I have said to you before, that the support for the initiative is increasing. There are clearly some countries who will still have doubts, worries, misgivings. We will talk to them and work that out with them.

Question: On the first of August if the Board of Governors clears the Safeguards Agreement, what is the timeframe for the subsequent developments? When are you going to ask the Germans to call a meeting of the NSG? Do we get into the act? How does it unfold?

Foreign Secretary: Frankly, I do not know. We are not members of the NSG and it is not for us to either ask for a meeting or call it. This is something they will do. Under the July 18, 2005 Joint Statement with the US, the US will approach the NSG and do this. In the meantime we are in touch with the members of the NSG. Part of the briefing was for the NSG members, and we answered their question, and we pointed out to them how a resumption of civil nuclear cooperation with India is in our interest and in theirs. The precise timetable, when they will call the meeting, how they will consider it, that we did not get into quite frankly. We will leave that to those who do these things.

Question: The members already have a draft agreement circulated among the NSG members. Do we know if they have already circulated it?

Foreign Secretary: I think what is doing the rounds is the draft exemption. But there are several drafts, I think, in play because this is the first time ever there will be such an exemption. So, different people have different ideas. Now they have to now sit and work it out and see. We have made it clear that from our point of view what we expect is a clean and unconditional exemption which permits nuclear trade with India under IAEA safeguards but otherwise permits nuclear trade with India. This is important that it be clean and unconditional because by its very nature nuclear trade is something that demands decisions, investments for forty, sixty years. Those kinds of decisions, investments, and commitments require a clean, unconditional view of the future.

Question: ...(Inaudible)...coming here?

Foreign Secretary: We are looking at possible dates in August but we have not yet fixed it.

Question: Sir, would you please brief us about the EAM's telephonic conversation with US Secretary of State?

Foreign Secretary: I do not think I have anything for you on that yet.

Question: When you walked out of the IAEA meeting, you looked very pleased. What was the cause for your pleasure?

Foreign Secretary: First you tell me I look different and she says I look pleased. You guys tell me what do I look like?

Question: You are speaking differently.

Foreign Secretary: I am speaking differently?

*

*

*

*

Question: Are you going to brief the EU as well on the Safeguards Agreement or is it the IAEA Secretariat?

Foreign Secretary: On the 25th the IAEA Secretariat is briefing all member states of the IAEA. Maybe they do something separately for the EU.

Question: But you are not going back to Vienna.

Foreign Secretary: I am not going back to Vienna. But they are doing a

briefing for all member states on the 25th on the technical aspects of the Safeguards Agreement.

Question: ...(Inaudible)... ninety day period for which the Bill has to lie on the floor. Have they told you anything about it? Are they willing to waive it? Is there a way around?

Foreign Secretary: Frankly, what happens in American internal procedures is for the US to handle. So, we do not want to get into this about when does the clock start; how many days; which clock; where, etc. Frankly, that is their business and I think we will leave it to them.

Question: What is your sense? Will it get past this Congress?

Foreign Secretary: I have never got into timelines. For the last two years you have asked me this question in different forms and I have consistently avoided timelines because every timeline you have heard or mentioned has shifted. So, I do not want to get into this of yes, it will happen on this day or that day. We will make our best effort and we will do it as quickly as we can. I think it is best to leave it at that.

Question: Mr. Menon, Mr. Boucher has today said that even if the Indian Government becomes a minority government, the US will go ahead with the deal. How do you respond to that?

Foreign Secretary: I think it is hypothetical.

**DEBATE IN THE LOK SABHA
ON THE MOTION OF CONFIDENCE IN THE
COUNCIL OF MINISTERS**

JULY 21-22, 2008

**EXTRACTS RELEVANT TO CIVIL NUCLEAR
ENERGY COOPERATION**

102. Speech of Prime Minister Dr. Manmohan Singh while introducing the Motion of Confidence in the Council of Ministers in the Lok Sabha:

New Delhi, July 21, 2008.

The Prime Minister (Dr. Manmohan Singh): Mr. Speaker, Sir, with your permission, I beg to move :

"That this House expresses its confidence in the Council of Ministers."

Mr. Speaker, Sir, today, our Government completes four years and two months in office. For the past couple of decades we have become used to Governments being forced to seek a Vote of Confidence within months of being in office. If we are here after a tenure of over four years, the credit for this should go to all the Leaders of the United Progressive Alliance (UPA); to the leadership of the UPA Chairperson, Shrimati Sonia Gandhi; and to the wise and visionary leaderships of Shri Jyoti Basu, Shri Harkishan Singh Surjeet, and Dr. M. Karunanidhi. They were all the architects of our coalition Government. It is their wisdom and sagacity that has helped me and our Government function for these four years. ... (Interruptions)

Mr. Speaker: Please keep quiet. You will get full opportunity.

... (Interruptions)

Dr. Manmohan Singh: Mr. Speaker, Sir, I regret that this Session of Parliament has been convened at this time when the attention of the Government has been on the economy, particularly, on the control of inflation and on implementing programmes for the welfare of our people, particularly, our farmers. This exercise, I submit, Sir, was wholly avoidable. I had repeatedly assured all political parties including the Left Parties that if the Government have been allowed to complete the negotiations with the International Atomic Energy Agency (IAEA) on its safeguard agreement, and after the decision of the Nuclear Suppliers Group (NSG) I would myself come to Parliament and seek its guidance before operationalizing the Civil Nuclear Energy Cooperation Agreement, which we intended to enter into. This was my solemn assurance.

Mr. Speaker, Sir, hon. Members are aware that the specific developments which necessitated this Vote of Confidence is the withdrawal of support by the Left parties on the issue of our initiative of seeking international cooperation in the development of civil nuclear energy. The intimation of withdrawal of this support came to me while I was in Japan attending the Meeting of the G-8. As soon as I came back, I sought an appointment with Her Excellency the President

and I offered to submit myself to the Vote of Confidence in Parliament as soon as possible. This Session is being convened in fulfilment of that obligation.

Sir, I seek the support of this House today on the basis of our entire record in office over the past four years. The responsibility given to me when I assumed office as Prime Minister required that I should act at all times and on all matters in the interests of this nation. I would like to assure this august House and through this House the people of India that every single decision, every policy initiative we have taken was taken in the fullest confidence that we are doing so in the best interests of our people and our country.

In all that we have done, we have been inspired by the legacy of our glorious freedom struggle, and the pledge of Rajiv Gandhi that our mission is to prepare our country to face the challenges of the 21st century.

Mr. Speaker, Sir, I, therefore, welcome this opportunity for this House to review our acts. I have no doubt that the people of India, when they consider what we have done, will reaffirm their confidence in us, in our Government, and in the Indian National Congress, which is the oldest, the most experienced and, I believe, the most patriotic political party of this great country.

Mr. Speaker, Sir, it is the legacy of our freedom struggle which has sustained this Government. In my conduct as Prime Minister, I have also been inspired by the famous invocation of great Guru Gobind Singh¹ Ji, and I reiterate what Guru Gobind Singh Ji has said enjoining us to perform our duty.

*Deh shiva bar ah mohair
Shubh Karman te kabhun na daroon
Na daron aarse, jab jae laron
Nische ker apni jeet karon.
Ar sikh hoon apne hii mun ko,
Ahe lalich hoon gun tu uchrn
Jab aav ki audh nidhan bane,
Att hi run main tub jujh maron.*

[O Lord Shiva, give me thy blessings
That I never refrain from righteous deeds;
May I fight without fear all foes in life's battle
With confidence and courage claiming victory;
May my highest ambition be singing thy praises,
And may thy glory be grained in my mind;
When this mortal life reaches its limits,
May I die fighting with limitless courage

103. Speech of Leader of the Opposition in the Lok Sabha and Bharatiya Janata Party Leader L. K. Advani in the Lok Sabha on the Motion of Confidence in the Council of Ministers.

New Delhi, July 21, 2008.

Shri L.K. Advani: Hon. Speaker, Sir, I rise to oppose the Motion just now moved by the Prime Minister. Obviously, even though he said that this would be an opportunity for the House to consider the totality of this Government's performance during the last four years, not merely on the issue on the basis of which this Government has been reduced to a minority, but the totality of the performance of this Government would be debated today and tomorrow.

* * * *

Let me, at the outset, say that the focus, first of all, in the House should be why this debate has become necessary. Normally, the issue of the nuclear deal was going on for two years. It was last August, in 2007, that for the first time I got an impression that the Government had now made up its mind to part company with the Left, when a Correspondent of a Kolkata daily was asked to publish prominently on the front-page that so far as the US-India Nuclear Deal is concerned, the Government has taken a decision which is non-negotiable and if the Left does not approve of it, they are free to do what they want. At that point itself, I felt that what has happened all of a sudden. But that stage continued from August last till today as a result of which I had often to say that to me it appears that the Government is paralyzed; there is nothing else excepting the deal that is being talked of.

When the Prime Minister just now said that this was a time when we should have addressed problems of inflation, prices, which are affecting the common man instead of having this, I feel surprised that it is for nearly one year that this controversy over the nuclear deal has been going on between the Government and the Left. Frankly, let me, at the outset, say that I do not agree with the Left, on many matters we differ very widely, but on this particular matter, I would say that if the Government has become destabilized today and this kind of Confidence Vote had to be sought from the Parliament exactly, as he said, four years and two months later after it took charge - it was on the 22nd of May, 2004 that this Government was sworn-in - it faces today the likelihood of being voted out. ... (Interruptions)

Mr. Speaker: He is the Leader of the Opposition. Do not interrupt him.

Shri L. K. Advani: I have said, "Likelihood of being voted out", and no one can take objection to that. After all, there are people who are making assertions that this is going to happen; so many votes are going to be cast this way or that way. I have not said that. The possibility and the likelihood of being voted out cannot be denied by anyone.

It is like saying, as I have said again and again, that the UPA Government today is like a patient in the ICU room. If anyone talks about that patient, the first question naturally asked is, "Is he going to survive or not?" ... (Interruptions)

Mr. Speaker: Mr. Athawale, I will not permit this. Please take your seat. This type of interruption is not permitted.

... (Interruptions)

MR. Speaker: I am trying my best.

Shri Harin Pathak: We have not disturbed the Prime Minister.

Mr. Speaker: I appeal to all sections again. When the Leader of Opposition is speaking, there should be no disturbance in the House.

... (Interruptions)

Mr. Speaker: I am asking him. I have told him. What are you doing? I will be very strict. This is a solemn debate. Hon. Leader of Opposition is speaking. I appeal to all hon. Members to show courtesy to the House and to the hon. Leader of Opposition. This is not proper. If you do not develop the art of listening, how can you reply? You must listen to the other's side and then give your replies.

Shri L.K. Advani: Sir, therefore, I start with saying that this situation has not been brought about by the Opposition; not by the NDA; not even by the Leftists with whom I disagree otherwise. Today, this particular Confidence Motion is being debated just a few months before the General Elections are due where the people will get an opportunity of deciding whether this Government should continue or not, even if it survives tomorrow. ... (Interruptions)

Mr. Speaker: Please. What is this going on, I do not know. This much of patience is not there.

Shri L. K. Advani: The reason is that situation has been invited for itself by the Government itself. Mr. Prime Minister, I am sorry to say, by you personally. When you started that particular The Telegraph interview last year, you started it. After having started it, why say that only because of this particular distraction - I saw a statement of yours which called this a 'particular distraction' - you are not able to deal with prices, you are not able to deal with the issues of the common man? Please do not say that.

We have not destabilized the Government. Even the Communists had been prolonging the whole matter trying to find a way out. You invented the device of a Joint UPA-Left Committee and you had your senior-most Minister Pranab Mukherjee preside over it. That senior-most Minister assured that Committee that you will go to the IAEA with our safeguards only after you had taken their consent. Today we are told that you had said that you would go there and you would go to the NSG, and then come back to them. I do not know! They will be able to say that. I have seen so many statements categorically assuring them as well as the country that we must not go there until this has happened. So much so that even in respect of this Confidence Motion Shri Pranab Mukherjee himself publicly said that before taking a vote of confidence from the House, the Government would not go to the IAEA, and that he was saying that after having spoken to the Prime Minister on phone. This is what he said. And suddenly we found that the draft had been sent there.

When this Committee and the Leftists asked him to let them see the draft, he said, "It is classified. You cannot see it". The members of the IAEA from the other countries of the world can see it but not the Indian Parliament! Therefore, someone asked, "Who has classified it? Is it the Government of India? Is it the IAEA? Is it Washington? Who has classified it? We want to know?" All these questions had been there.

Therefore, I am saying, please don't blame anyone else for having had this kind of Session. At least in my memory, there has never been a Session like this before. It is the first time in the history of the Indian Parliament a Special Session of two days just to discuss whether this minority Government should be allowed to continue or not. Therefore, don't blame anyone else. If anyone is to be blamed, it is your Government. In a way, you personally, and of course, the Congress Party President, without her approval, you would not be able to take a single step. ... (Interruptions)

MR. SPEAKER: What are you doing?

Shri L.K. Advani: Of course, we, in the Opposition, would like to defeat the Government on the floor of the House. But I draw distinction between defeating and destabilizing. It is not in our nature to destabilize an elected Government. It is not in our nature, you may do it; you have done it with Chandra Shekhar; you have done it with Deve Gowda; you have done it with I.K. Gujral; and you have done it with Vajpayee in 1999 when we were defeated just by one vote, and that too a vote of a person who had ceased to be an MP, and became a Chief Minister in another State. Therefore, I am drawing a distinction between defeating a Government and destabilizing the Government.

Mr. Speaker: Hon. Members, your speakers will be disturbed, if you cannot listen to them.

... (Interruptions)

The Minister of Urban Development (Shri S. Jaipal Reddy): Would you yield, Mr. Advani? ... (Interruptions)

Shri L.K. Advani: No. ... (Interruptions)

Mr. Speaker: Unless he yields.

... (Interruptions)

Shri L.K. Advani: Otherwise, everyone of your speakers will not be allowed to speak. ... (Interruptions)

Mr. Speaker: Do not record anything except the statement of the Leader of the Opposition. Nothing will be recorded.

(Interruptions) ... (Not recorded)

Mr. Speaker: I am doing it. I am not sitting quiet.

... (Interruptions)

Mr. Speaker: I am again and again requesting all sides of the House, please have a proper discussion. You have every right to reply to any speech of the hon. Members. I am not stopping anybody on the either side so long as it is parliamentary. He has said nothing unparliamentary so far. How can you disturb him? Once or twice, you can ask for his permission to yield. If he yields, you can put a question. Otherwise, you cannot. This is a

well-established parliamentary norm. Please follow that. I earnestly appeal to you all.

... (Interruptions)

Mr. Speaker: Shri G.V. Harsha Kumar, don't do that. I will ask you to go out. Why are you doing this?

... (Interruptions)

Mr. Speaker: How can you hold the House to ransom?

... (Interruptions)

Shri L.K. Advani: Indeed, Mr. Speaker, Sir, I can claim to have seen all the Prime Ministers since Independence; almost all the Governments since 1947 or rather since 1950, after the enactment of the Indian Constitution - first as a journalist from the Press Gallery, and later, as a political activist and since nearly four decades as a Member of Parliament. I can say that I have seen short-lived Governments; I have seen instable Governments; but I have never seen a Government so paralyzed for such a long time.

There is nothing else except the Deal; there is nothing else except the continuous meetings between the Left and the Government; and making everyone think - will it survive or will it not survive. Nowadays it is said that the nuclear deal is in the best interest of the nation and they have been making an appeal again and again to me and my Party saying that we talk about the national interest and so, why we are not supporting the Deal. My answer is that if the Government really thought that this was very important, then why is it that their Common Minimum Programme did not even mention it and why is it that even the manifesto of the Congress Party did not even mention it? What has happened? Has it become suddenly very important?

Mr. Prime Minister, sometimes, I feel that the Deal is not a deal between two sovereign countries; it seems to me to be a kind of an agreement between two individuals and if one of the individuals happens to be the Prime Minister of our country, he thinks that nothing else is more important than to fulfil this agreement. Frankly, Mr. Prime Minister, it does not give me happiness to find that a Deal is being gone into in a way which makes India a junior partner in the agreement.

I do not want the world to be a unipolar world as it has become now. No. It must be a multipolar world and in that multipolar world, I want to see India as the principal pole; and in order to be a principal pole, you cannot agree

that these countries are nuclear weapon States whereas India is permanently a non-nuclear weapon State; and this is in the agreement. This is not only in the agreement, but also even in the proposed draft sent to the IAEA; it is on the basis of a chapter which relates to the non-nuclear weapon States.

My colleague in the other House, Shri Arun Shourie has made an elaborate and a very detailed study of it and he has written so much about it; I do not want to go into it because I feel that today's issue is not the nuclear Deal so much as why this Government had been reduced to a minority and whether the manner in which it is trying to become a majority today by accumulating votes is really right - and on that basis the House should decide on the motion that has been moved by the Prime Minister - or not.

My complaint is that the UPA Government, the present Prime Minister and the Congress chief do not believe in the so-called coalition dharma. Shri Vajpayee was the head of the NDA. I do not know how many of you know that in this country, among the political parties, perhaps the BJP, the earlier Jan Sangh, has been the only one which consistently, since the 1960s, after China became a nuclear power and had its first blast at Lop Nur, has been saying that we should decide on India also becoming a nuclear weapon State; this is since 1964.

So, when in 1998 we formed the NDA, most of our colleagues and most of our partners in the NDA were not of the same view. None of them had this particular item in their manifesto. But we discussed it with them. They said that they did not agree with some of our other points in the manifesto of BJP, but so far as making India a nuclear weapon State is concerned, they agreed with it. Therefore, they had no objection in including it in the Common Minimum Programme which we described as the National Agenda for Governance. Only after they agreed, we went ahead with it. This is what I would describe as 'following the coalition dharma'. Having done it, Shri Vajpayee who was sworn in on the 19th March 1998, did not take even two months to complete the task that he had undertaken; and on the 11th May, we had the Pokhran.

These are all facts which are necessary to understand. My stress is that if the coalition dharma had been followed this Motion would not have been necessary. They could have continued in a state of paralysis right up to the elections. What was the difficulty!

Sir, they have their own problems. They are not very eager to face elections. At the same time they did not destabilize you. They were willing to allow you to continue but you invited it for yourself and having invited it, please do not call it a distraction. It is a part of the Constitutional Parliamentary system. Every Government must be in a position to prove its majority in the Lok Sabha. It is certainly an irony that for the first time the Prime Minister himself would not be able to vote for his own Motion.

The Minister of External Affairs: (Shri Pranab Mukherjee): Did Shri I.K. Gujral vote for the Confidence Motion? Did Shri Devegowda vote for the Confidence Motion?

Shri L.K. Advani: I am not talking about Shri Gujral or Shri Devegowda.... (Interruptions)

Mr. Speaker: Please do not disturb your Leader. He is speaking on an important debate.

Shri L.K. Advani: Mr. Prime Minister, you should not have gone to the IAEA stealthily in this manner. It is said that it is on auto-pilot. Formally from the Government side, it is planted in a newspaper that whether they sink or survive the Deal is done. This is the news item published in a newspaper. I do not know. I would expect on this occasion the Government to enlighten us whether this is true that now the Parliament has become irrelevant; whether the Indian Parliament gives a Vote of Confidence to the Government or not.... (Interruptions) We are discussing it but even before the discussion began a news item appeared in a newspaper. Should I quote it exactly? I think everybody knows it. Authoritative sources from the Government told The Telegraph - once again The Telegraph was chosen - that sink or survive, the Deal is done. It was told that whether this Government wins the Confidence Vote or not, the Deal is done. It will go on auto-pilot. My own feeling is it is not true. My own feeling is that the Government of America, the Congress of America particularly, will not disregard the fact whether the UPA Government, which is a party to this Deal, is in Office, commands the confidence of the Parliament or not. It would be important to America which is also a democracy.

Let me at this point say that we are not against nuclear energy. Very often it is being projected that if we are against the Nuclear Deal it means that we are against the nuclear energy. No, we are not. We are not against our very close relationship with America. I may differ from the Communists on this issue. We have no objection to having strategic relationship with

America, Russia or Japan. These are issues on which I would think that a country like India, which is the largest democracy in the world, should have a very close relationship with the strongest democracy of the world, that is America. So far as BJP and NDA are concerned, we are not at all opposed to having a relationship with America. But irrespective of how strong or how powerful the other country is, we would never like India to become party to an Agreement which is unequal.

My charge is that this particular Deal makes us subservient partner in the Deal. Very often, the Government spokesmen have been saying that the Hyde Act does not apply to us and immediately an American spokesman comes out with a statement that it fully applies. If you want, I can read what the Hyde Act says. The Hyde Act does not only impose curbs on our nuclear options and nuclear autonomy but it imposes curbs even on our foreign policy. How our Iran policy should be conducted that also is dictated by the Hyde Act. I am not going into that. The Government's stand is that Hyde Act does not apply to us. I do not agree with that. If three times discussions in both the Houses of Parliament are any index, the majority of the Members of this House did not agree with the interpretation of the nuclear deal by the Government. There were occasions when almost the entire Opposition walked out in protest. These things have happened.

So, today is not the occasion when we are discussing the Deal itself. In fact, on the very first occasion I said that the Constitution of India does not provide that an international agreement should be approved by Parliament as in many countries this practice is there. Even in America, it has to be passed by the American Congress. Here we do not have such a provision. But after this experience with the nuclear deal, I am of the view -- if the Government agrees - that the Constitution be amended so that in certain cases relating to security and in certain cases relating to the integrity of the country, the Parliament's approval must be sought before entering into a Deal.

I some time feel worried when some of our neighbours say that Arunachal Pradesh is ours, some of our neighbours say that this part of Kashmir is ours, etc. Who knows one day an international agreement may be signed in which we may be taken for granted just as today for all practical purposes the nuclear deal that is proposed to be signed means that Shrimati Indira Gandhi may have done Pokhran-I and Vajpayeeji may have done Pokhran-II but here after there will be no Pokhran-III and Pokhran-IV... (Interruptions).

Mr. Speaker: Please do not record it. Without my permission, nothing will be recorded.

(Interruptions) ... (Not recorded)

Shri L.K. Advani: Please do not justify what you are doing by saying that Vajpayeeji himself had said that he voluntarily abdicates the right to have another test. Let me point out, we have had Pandit Nehru who was never in favour of making India a nuclear weapon State. We have had Morarji Desai who was never in favour of having India a nuclear weapon State but both of them were never agreeable to sign an NPT which was discriminatory and unequal and only putting curbs on us. Shrimati Indira Gandhi was the first Congress Prime Minister to undertake Pokhran test and successfully that was Pokhran-I in 1974 shortly after America had sent its nuclear fleet to the Bay of Bengal during the Indo-Pak war of 1971. These are the known facts. Therefore, it is that we had objected to it. Therefore, it is that we had reservation about it. Therefore, it is that we have all along maintained that if the people of the country vote NDA again to power, we will renegotiate this Deal. We have not said that we will scrap it. We said that we will renegotiate this Deal to make it a Treaty between equals so that there are no constraints on our strategic options and no constraint on our strategic autonomy.

Mr. Prime Minister, let me recall that immediately after the Joint Statement with President Bush, two days after that, on the 20th July 2005, you had a Press Conference in Washington and in that a journalist asked you, I have the transcript with me, 'Mr. Prime Minister, do you see any resistance coming forward from your allies and the Opposition in putting the new Indo-US policy to practice and will you seek a Parliamentary consensus or approval to the new direction you seem to be taking in foreign policy? I would quote what Dr. Manmohan Singh said on the 20th of July in reply to this question, he said:

"Well, the Parliament in our country is sovereign. It goes without saying that we can move forward only on the basis of a broad national consensus."

This was the reply given by Dr. Manmohan Singh in Washington... (Interruptions) Is there a broad consensus? The vote tomorrow is no sign of a broad consensus. If the vote is there, the vote is for whether this Government should continue or not. I for one do not mind it at all because I know what is going to happen after two to three months... (Interruptions)

In the other House so many times a demand was made as to why not a sense of the House be taken. This demand was made many times. But the Government refused to do it always saying that an international agreement is not put to Parliament. Parliament cannot force us to do anything in respect of an international agreement. But I am quoting the hon. Prime Minister. The hon. Prime Minister had said it. Having said that I would like to ask him, are you satisfied that there is a consensus in Parliament about this nuclear deal? There is not. At least I do not recall the hon. Prime Minister having convened a single All-Party Meeting on this issue. He had All-Party Meetings on all other issues; only on this issue there was no All-Party Meeting. My own party was of the view that he had given assurances in both the Houses and it should be the function of a Joint Parliamentary Committee to examine whether those particular assurances had been fulfilled while agreeing to this 123 Agreement. Therefore, a Joint Parliamentary Committee should be formed. The Government refused to do it. The Government did not do it and what it did instead was a UPA-Left Committee was formed and that UPA-Left Coordination Committee had certainly been asking for assurances of these kinds and when those assurances were violated, they withdrew support. We said that if they withdrew support, then this Government will not have a majority because the UPA without the 61 or 62 Members of the Left did not constitute a majority. This Government was formed only when the Left supported it from outside and the moment they withdraw support, this Government has been reduced to a minority and a minority Government has no right to move ahead with any international agreement until it first proves its majority... (Interruptions)

Every spokesman from America while interpreting this particular Act, this particular deal has emphasized that by this deal, the biggest advantage America gets is that India would be a part of the Non-proliferation regime and perhaps Dr. Manmohan Singh has no objection to becoming a part of this Non-proliferation regime. I do not know. But I do know this that what when the Vajpayee Government had its Pokhran II, our severest criticism came in the Rajya Sabha where Dr. Manmohan Singh was the Leader of the Opposition and it came from him. He criticized us.

I have gone through the proceedings of Rajya Sabha of that day and there were sharp exchanges between my old colleague in the Rajya Sabha, late Shri K.R. Malkani and Dr. Manmohan Singh on that issue. Perhaps he feels that it is not in our national interest to have a nuclear weapon state. It may be his opinion.

The Prime Minister (Dr. Manmohan Singh): Sir, I think the hon. Leader of Opposition has made the charge again and again that when I spoke on behalf of the Congress Party on 1998 Pokhran test, I was opposed to the test that I was arguing for Non-Proliferation Test. Let any objective minded person read that speech and if he can substantiate what Mr. Advani is saying, I leave it to the good sense of the House.

Mr. Speaker: Generally, we do not refer to what happens in the other House. I request Mr. Advani not to refer to that.

Shri L.K. Advani: I will ask some of my colleagues to refer to that.

Mr. Speaker: Generally, we do not quote the other House. And you know that very well.

Shri L.K. Advani: But the Prime Minister has denied it.

Mr. Speaker: You may just give a gist of it.

Shri L.K. Advani: I have already given the gist of it. I have not only given the gist but I have also mentioned that there were sharp exchanges between my colleague, late Shri K.R. Malkani and him.

DR. MANMOHAN SINGH: The sharp exchange was whether we should worry about the sanctions or not. I said that we are all opposed to sanctions and we must prepare our country to face the challenge of sanction.

Shri L. K. Advani: And we did share it so far as the sanction part is concerned.

Mr. Speaker: Therefore, there is no difference on that point.

Shri L.K. Advani: Yes, there is no difference on it.

These days, this Government's performance on the aam aadmi's front, like kimtei (price rise), bijli, sadak and paani has been so dismal. They thought that in the name of nuclear deal they would be able to tell the people that if only the deal was done, they would have power and electricity in every household. Because of this opposition to the deal, they would be denied light and there would be darkness all around. I have seen statements made that once the deal is destroyed, darkness will descend on India. Please do not make any statement of that kind. You just give us the figures like if at all this deal goes through, when we will get nuclear power, how many years hereafter we will get it, at what price and how much power, etc.

Is it not true that today only 3 per cent nuclear energy is provided and even after this deal is done, executed and implemented, the total amount of nuclear energy available to India would be just 6 per cent and the remaining 94 per cent has to come from other sources? So, let us not try to delude the Indian people by saying that we are trying to give energy security to the country by this deal. So, if to some extent, our national security is somewhat contained in so far as nuclear blasts are concerned, it should be accepted. We do not agree with this. We think that this is trying to deceive the people. Please do not do it. Even otherwise, on the power front, the performance of this Government has been very dismal. If I were to go into statistics, the Common Minimum Programme which the Left Parties have to take note of, says that they will provide electricity for all within five years. Four years and two months are completed. "All" means there are six lakh villages in the country out of which 2,30,000 are unelectrified villages and so far as households are concerned, there are 7.8 crore un-electrified households.

We had promised to give all of them electricity in five years. The performance is known. It is very dismal and very poor. On the sadak front, on the pani front and on all fronts, the performance is very poor. If anyone asks me what is the biggest achievement of the NDA regime, in fact, I would say that it was sadak. The highways, the gram sadak yojana and the Golden Quadrilateral were the most significant achievements of our Government. It is because of those highways, that our Khanduri ji acquired a reputation which has benefited him all his life. On the fronts of bijli, sadak and pani, the performance of this Government is miserable. Do not try to cover it up by saying that nuclear deal will give electricity to every household. This Government is not able to fix the problems of the common man. ... (Interruptions)

104. Extracts from the Speech of External Affairs Minister Pranab Mukherjee while speaking in the Lok Sabha on the Motion of Confidence in the Council of Ministers.

New Delhi, July 21, 2008.

The Minister of External Affairs (Shri Pranab Mukherjee): Mr. Speaker, Sir, I rise to support the Motion moved by hon. Prime Minister Dr. Manmohan Singh, "That this House expresses its confidence in the Council of Ministers" headed by him. Why should this House express its confidence in the Council of Ministers? ... (Interruptions)

*

*

*

*

Shri Pranab Mukherjee: I find my good friend, Prof. Malhotra, is present here, though the Leader of the Opposition is not here to listen to me. As I would expect, you have very correctly pointed out that not only the Members of the Lok Sabha, or the Members of the other House are witnessing this debate, but also the whole country is witnessing this debate.

Mr. Speaker: Let there be no running commentary or whisperings here. Please go out, if you want to talk.

Shri Pranab Mukherjee: Therefore, I join you in appealing as the Leader of the House to all the Members concerned that every one of us have our own perspective and we should have the full freedom in expressing our views which may not be acceptable to others, but everyone should try to express his view in his own way and in the way he likes.

Therefore, I rise to support this motion moved by the Prime Minister and also to place the matters in proper perspective about the civil nuclear agreement.

I have personal reservations about describing this Civil Nuclear Cooperation Agreement as some sort of a deal. This is an agreement. Through these exercises we want to have civil nuclear cooperation with the international community, the entire international community and particularly the 45 countries that have competence to enter into civil nuclear trade, who have constituted the NSG. Therefore, I would like to put forward my perception for the hon. Members of this House. It is entirely for them to accept it or to reject it; or to partly accept it or to partly reject it because that is the basic

principle. But before that I would like to correct certain facts; it is not a question of any theory but certain bare facts.

*

*

*

*

If you have to score a point, you score but please be sure Mr. Leader of the Opposition of the fact, in your over-enthusiasm even you went to the extent of saying two Prime Ministers - when he mentioned - who did not want nuclear weapons - Morarji Desai and Pandit Jawaharlal Nehru. In your over-enthusiasm, you said, even they refused to sign the Nuclear Non-Proliferation Treaty. May I most respectfully submit, Sir, Mr. Nehru died in 1964; Nuclear Non-Proliferation Treaty came into existence in 1970. Therefore, a dead man cannot express his opinion whether he decided to sign the NPT or not. I come to these aspects. You have taken credit for them. Yes, I know, as your Party from 1960 talked of nuclear weaponsiation. We did not. We firmly believe and still we believe nuclear weapon is not a weapon to win the battle; nuclear weapon is nothing but total disruption and destruction of the civilization. And that is why, most respectfully, I would like to submit Mr. Speaker, that Indiraji in 1974 had conducted the Pokhran-I tests. In 1989, Rajiv Gandhi, the young Prime Minister, addressed the Disarmament Conference. What did he say?

It was one of the brilliant speeches that he delivered in the United Nations. Recently we had an international conference. We had circulated that speech. It was one of the masterpieces. I would like to quote a few things only. His ultimate appeal to the nuclear weapon States, the international community, was that India is just turning screw drivers, as our technology from the nuclear weapon States; we are capable and competent to weaponize, but we are saying that we will keep our options open. That is the international phrase from 1974, till May 1998, the Indian Prime Ministers and Foreign Ministers used; they said "we shall keep our options open". You chose to close that option, and you did it.

Did you believe seriously that within two months, you had become so-competent that you were ready for the second test, if everything was not ready? Therefore, let us not, in our anxiety, distort the facts. Yes, let us base our arguments on the basis of facts. ... (Interruptions)

Mr. Speaker: You may take your seat. Nothing is to be recorded.

(Interruptions) ... (Not recorded)

Mr. Speaker: Do not record.

(Interruptions) ... (Not recorded)

Shri Pranab Mukherjee: Another point is this. Whether they will re-negotiate and whether they will have re-negotiation on the equal terms or not, I am not going to that aspect to speculate, because what would happen in future nobody knows and only when it happens, ordinary mortals like us can judge what is happening, not on the commitment that we are going to do this and going to do that. Or sometimes, we draw our conclusions from what has happened in the past, because that is on record.

To me, there is a record; we have, after the second Pokhran test, the recorded speech of the then Prime Minister, in the General Assembly of the United Nations. We have, on record, the signed article by the then Foreign Minister, in one of the important international journals. These are on records. From these records we find that we are de facto going to sign CTBT; it is a matter of time to put it de jure. Therefore, we will re-negotiate; yes, we wanted to assure the House. These are the records - something has come in print. The principal negotiator, on behalf of the USA with our Foreign Minister, Strobe Talbott - the book is available; it is in the market. Here it is - if somebody wants it, can have a look; my colleague Shri Anand Sharma is giving me - it is on record, page after page, what has happened is written there. Therefore, surely people will judge what is the performance of yours, what did you do and what you have done.

Having said that, Mr. Speaker, it was not my intention to score points by cutting this side of the argument or that side; my intention is to say 'decide yourselves'; Prime Minister has given you the chance - each and every Member present here; I am quite confident that they will apply their minds; as per conscience and as per judgements, they will exercise their rights when we ask them to do so at the end of the debate.

Before that, both sides will try to place their cases and I am doing it with all honesty at my command and at my disposal. A lot of things have been said, not today; I did not have the privilege of being a Member and sharing the floor of this House with many hon. colleagues, but within the Parliamentary premises, I have spent almost four decades, in the other

I do not remember, Mr. Speaker, Sir, any other Foreign Policy issue which has been debated so intensively, so extensively as this Civilian Nuclear Cooperation Agreement. Prime Minister visited the United States of America in 2005. A Joint Statement was issued on 18th July, 2005. If my dates are incorrect, I would like to be corrected but if I remember right it was 18th July, 2005. It was debated on 25th July here itself. Whenever there has been any major development it has been debated here. Joint Statement

has been debated. Separation Plan has been debated in February-March 2006. In August in the other House - I would not refer to the other House but it is known to everybody - the Prime Minister gave point-by-point reply when my Left friends raised points 1 to 9. The Prime Minister had assured on all the nine points and the Member concerned himself said that he was satisfied. I am not to indulge in imagination, it is also on record in the printed volumes of Rajya Sabha.

Shri Tarit Baran Topdar: (Communist Party of India - Marxist): Thereafter came the Hyde Act.

Shri Pranab Mukherjee: Yes, I understand and appreciate your point that after that the Hyde Act was passed. After the Hyde Act we said that this is to be taken into account. I am coming to that aspect. I am giving the entire details. I will not hide anything and that is why I have sought the indulgence of hon. Speaker. Do not try to be smart enough to find... (Interruptions)

Mr. Speaker: Let us not do these things. We are having a serious discussion. Do not try to be smart enough to be coining on a particular word.

Shri Pranab Mukherjee: Most respectfully, Mr. Speaker, Sir, I would like to submit that after that there were some developments and we were having negotiations with our colleagues. UPA Chairperson took some initiative. After Hyde Act there was a debate in both the Houses in the Winter Session of Parliament. There were seven debates in this regard and the last debate took place in the last Winter Session of 2007. When the Hyde Act was passed, on the very same day I reacted saying that there are prescriptive provisions in respect of Hyde Act which are not applicable to us and we will not accept it. What does it mean? It means that we will not accept it. On these issues anywhere if they want to impose the conditionalities of Hyde Act or anywhere if they want to link their cooperation with reference to Hyde Act, that will be the breaking point. 123 Civilian Cooperation Agreement is on the Website. You may please examine it. I would request my Left friends to forget about their own interpretation of the implication. Do they find anywhere the mention of the word Hyde Act in 123 Agreement?

Prof. Vijay Kumar Malhotra (Bharatiya Janata Party): But there has been a mention of the national laws of America.

Shri Pranab Mukherjee: Shri Malhotra, that is your implication and your interpretation. I will come to that. You are free to hold your interpretation.

ISSA, India Specific Safeguard Agreement, is also on the website. Why

did they submit this document to my Left colleagues? In the UPA-Left Committee I would explain to it, maybe later. But the point which I am trying to develop right now is that we do agree that there are prescriptive provisions in Hyde Act which are unacceptable to us under any circumstances. We can never compromise our independent foreign policy. It is the basic inherent strength of ours. That is why, I will take the pain to explain to my colleagues who have supported us so long. The Chairperson herself and the Prime Minister himself have stated that we have done a lot of good work over the last four years. With an emphasis, I would like to say that we have done a lot of good work. it is not 8 per cent to 9 per cent. For four years, the GDP growth is nine per cent plus. It is not less. After many years, this year we have reached 4.5 per cent growth in agriculture... (Interruptions)

Mr. Speaker: Please do not record anything.

(Interruptions) ... (Not recorded)

*

*

*

*

Shri Pranab Mukherjee: Mr. Speaker, Sir, we are saying that we would not accept prescriptive provision. That is why, we have scrupulously avoided these two documents. We suggested our negotiator that please be very careful. It should not be there.

I was telling about this mechanism which we built up. When they said that they are concerned, then with the initiative of the Chairperson of the UPA and the Prime Minister, we met. First, we met at my residence. I am in good contact and in touch with them all along this period since our coalition Government was installed. As Leader of the House, it was my responsibility. We had been in touch constantly. There was no dearth of communication and everybody shared our opinion very frankly. Then with her and the Prime Minister's intervention, it was decided that a mechanism will be constituted. On 30th August, we announced that a mechanism would be established and a committee will be constituted. The Chairperson will nominate the committee. Thereafter we will start. The mandate of the Committee was to address the concerns of the Left Parties on the impact of the Hyde Act, impact of 123 Agreement and the impact on both India's independent foreign policy and our three-stage civil nuclear programme which we had accepted long ago. These concerns of the Left Parties will be addressed by this committee. Thereafter, the findings of the committee will be taken into account before the operationalisation of the civil nuclear

cooperation. Please remember these are the words which were used. The text was drafted by myself and one of the important Left leaders. As he is a Member of the other House, I am not mentioning his name. Both of us read it jointly. The operative part was that to finalize the findings of the committee, the findings would be submitted to the Chairperson of the UPA. It is because this mechanism was established by the UPA Chairperson. Sir, it was not a Parliamentary Committee appointed by you.

It was not a Government Committee appointed by the Prime Minister. It was a political mechanism appointed by the Chairperson, UPA. Therefore, it was our responsibility to submit the findings of the Committee to the UPA Chairperson and thereafter it was the responsibility of the Government to take this into account before operationalisation of the Cooperation Agreement.

We had nine meetings. In the first six meetings we addressed the concerns of them which have been elaborated and even in the published document which Shri Salim was showing to us, many of those notes and correspondences were reproduced there. After that some problem arose in November, 2007. We told them, look IAEA is an organisation which has been established by India itself. India is one of the founding members of IAEA. Out of 35 Governors, India has 10 permanent Governors. It is known as the Board of Governors of the IAEA and India has 10 permanent Governors on the Board of Governors of the IAEA. So, it is our own organisation. They were expressing concerns on three major issues, firstly, how IAEA can assure of un-interrupted fuel supply? Secondly, is the Government sure that IAEA is going to recognise the Government's Separation Plan and strategic programmes? Thirdly, is the Government sure that if there be a disruption in the fuel supply, can the Government get some remedy from IAEA? We said that all these concerns will be adequately addressed once we finalise this document. Then again, with the intervention of the Chairperson, UPA it was decided that we would go to the IAEA and after it is being initialled - initialled what? It is not the document, but the agreed text, to freeze the text, the language of the text, not acceptance. These are done by the negotiators who are the employees of the Principal. Here Principal is the Government of India and the Principal is the IAEA. Questions have been raised as to why we have not given the text when the text was finalised. It was not given. We explained the reasons to them not once but in three meetings. It was said that we will give the outcome. We will explain them the substantive provisions. We could not give the text

because in various countries there are various methods of treating documents. In our country what we say confidential is something that is a secret document; a privileged document; a classified document, a restricted document. IAEA used the phrase restricted and de-restricted. The IAEA officials said that they cannot bind any sovereign country with their documents. They bind themselves. It is the understanding. It is commonsense that when they are binding themselves, our Government do not. That is why the Chairperson of the UPA appointed on behalf of the UPA all Ministers as members because she knew that when we shall have to share the information, some of the information are to be based on classified document. Therefore, we told them that we shall have to wait and when it is circulated as an agenda for the approval of the Board of Governors, the text will be available. We have made the text available. The moment this arrangement collapsed, then all of you are aware as to what happened and I need not mention that. Please remember that, before rushing into conclusions, that there are time differences between India and Geneva, between Geneva and the USA.

MD. Salim (Communist Party of India - Marxist): The times of those are ahead of us.

Shri Pranab Mukherjee: They are beyond and therefore, they will be advance. When Shri Karat read out his letter to me, the last line of it read that time has come to withdraw support and thereafter he announced that they were going to the hon. President to submit the list.

The Indian time was 12.30 but the time in Vienna was 9 a.m.... (Interruptions) I am not going into that. Whatever has happened has happened subsequent to that but not before that. So, there is no question of betrayal in any way. Whatever has happened has happened after that.

MD. Salim (CPI-Marxist): So, the document was not classified.

Shri Praanab Mukherjee: The document was classified by ourselves. We did it. We did it ... (Interruptions)

*

*

*

*

Shri Pranab Mukherjee: That is the normal practice. Prof. Malhotra, you are too senior and I am not going into the merits of it. ... (Interruptions)

Mr. Speaker: Unless he yields, I cannot allow you.

... (Interruptions)

Shri Pranab Mukherjee: It is a fact that even an important agreement like the existing Indo-Soviet Friendship Treaty, Parliament came to know of it after 25 years in 1970 when it was announced that an agreement has been signed. I am not going into the merits of the constitutional provisions. But from 26th January, 1950, till today, this is the position. Mr. Advani had the opportunity to see it as the Home Minister, as Deputy Prime Minister, when he appointed a Commission to have a relook at the constitutional provisions. I do not know why it did not occur to him at that point of time to give this particular provision to the Commission which was appointed, which was presided over by a retired Chief Justice of the Supreme Court. It appears to me a lacuna. Why this belated wisdom?

Shri L.K. Advani (BJP): Because of this experience.... (Interruptions)

Shri Pranab Mukherjee: Most respectfully I would like to submit that even before that, the Leader of Opposition had a similar agitation on the WTO agreement. After that, he came to power. Even before that, he had various reservations and he was one of the important leaders in the other House who formed coalition with the then CPI(M) leader in that House to frustrate that Bill and after that, you know that we lost in Geneva. Subsequently, with our support, the same deal, with only some cosmetic changes, you had to pass when you were in the Government. Most respectfully, I would like to submit, if I would be in the Parliament, I would see what type of great new deal you will bring for this country. Let us wait for the future. I am not going into that. ... (Interruptions)

Mr. Speaker, Sir, I would not take much time of the House. But I would like to point out certain other substantive issues which have been stated very eloquently. Firstly, why you are going in for this civil nuclear cooperation? What great facilities we will get out of it? Today, we are having our total power generation capacity as 1,45,000 megawatt. I need not explain why power is needed. Power is needed for everything. Everybody knows it. The point is, whatever we are saying like power will be available, etc. is true or whether it is fiction, today our installed capacity is 1,44,565 megawatts.

What are the projections for the future? I am not talking of remote future. I am talking of near future that is 2030, just 23 years from right now. By 2030, the energy deficit would be 1,50,000 megawatts. If we go a little longer, that is by 2050, our energy deficit would be 4,12,000 megawatts. When these figures are worked out, we take into account thermal power, coal, petrol and diesel, hydel power, and non-conventional energy sources

like wind, solar, etc. Even after their fullest exploitation, that would be the deficit.

If we take the nuclear power on board, as per some studies, if we start the work on that today or if we initiate action now, to produce 40,000 megawatts of energy in the period of eight years from 2012 to 2020, we will be able to reduce the energy deficit from 4,12,000 megawatts to only 7,000 megawatts in 2050. ... (Interruptions)

In 2030, that means within 22 years, we will be able to reduce it by 1,50,000 megawatts. That is the deficit. 1,00,000 megawatts will be made up and only 50,000 megawatts will remain.

Now, let us go back a little bit to see what had happened in one of the advanced countries. Charles de Gaulle was the President of France in 1948. After the devastation of Second World War, the visionary leader thought that if he wants to build up France, it will require civil nuclear energy. He started the work in 1948. But there was strong anti-nuclear energy lobby and there was a lot of resistance in France itself. Charles de Gaulle did not continue for long time. But they went on working despite the strong anti-nuclear energy lobby. The first oil crisis came in 1973. From 1974 they started building up their nuclear energy programme. Today, from 1974, within 34 years, 79 per cent of their energy comes from nuclear. People are asking why America is not doing it; why Russia is not going in a big way for nuclear energy. It is not for me to answer. It is for them to answer that. But one simple reason comes to my mind. They are floating on oil. Primary source of energy in those countries is much more than what it is compared to India. Primary source of energy in our country is much less. Take, for instance, coal. If we have to derive energy from coal, by 2050 we shall have to import 1.6 billion tones of coal.

All the capacities of the ports today will be totally utilised to load and unload coal. Therefore, we shall have to build up the capacities of the ports also. This is one factor.

The second factor is hydel resources. Our hydel resources are located in such places at the initial stage that even if we have massive plantation programme at the initial stage, massive destructions of woods would be needed which will be strongly resisted by the environmentalists. Leave these factors. What is happening in Uttarakashi is that on the river, water running down the current, energy efforts, the hydel power build up is getting resistance from the environmentalists. All of us are fully aware. Our

Government felt, their Government felt and it is not just suddenly felt. We are here for the last four years. Before four years, they were in power for six years. Uranium mining in Jadugoda or uranium mining in Meghalaya was not that simple.

To score a debating point, you can say it. But if they refuse to accept it, what pinch they felt when they wore that shoe, only God can help them and I cannot help. But here we are feeling the pinch. That is why we want it. I must congratulate the hon. Prime Minister that he has taken a visionary approach to have the Civil Nuclear Cooperation Agreement. Pandit Jawaharlal Nehru started this programme in 1948. Eminent scientists starting from Homi Bhabha to Vikram Sarabhai and we have the companion of that great Scientist, Dr. Raja Ramanna, I had the privilege of working with him in the Rajya Sabha. All of them made significant contributions. That is why, today, our scientists and engineers can do this miracle. It is not merely getting the energy. This cooperation will open the door of 30 years' isolation - from 1974 till date - of our nuclear technology. I would not use the word 'apartheid' but sometimes strong words are being used. That is going to be broken and that is the advantage.

Why should we go to NSG? It is because unless we go to NSG, our friends in Russia, our friends in France and even our friends in other countries cannot agree to have this. The NSG and IAEA clearance are the two clearances that can be described in common man's language as passport and visa. Whether I travel or not it depends on me. But if I do not have a passport, I cannot even apply for the visa. If I do not have the visa, I cannot enter into that country. These are the passports and visas. Please let us have these passports and visas. Then, we will decide whether we will travel or not and if we travel, what would be our destination of the travel. If you want to decide that, no, you will be denying, it is for the collective wisdom of the Members of the Parliament, those who are representing 70 crore voters. They will take the decision, not me, not merely my words. I can just place my case. I can place my case on behalf of the Government. You are the ultimate masters and you have to decide whether you will accept it or not. But this much I can tell, most respectfully that whatever judgement you give, we will accept it with due respect to you. But before the judgement, in delivering the judgement, I would surely like to plead my case to convince the hon. judges of this highest court of the public opinion. Therefore, please have the patience. What would be the position if the motion is rejected?

The Government will go. Anyway, the Government will have to seek the mandate, as the Leader of the Opposition has said, after six months or seven months or eight months if it survives. If it does not survive, it does not survive. But what would be the impact of it? This is a pointed question to my Left friends. You may debate with me. You may challenge me. But search your heart and ask yourselves this question. Do you feel this is the issue on which the Government should be brought down - a Government which has been able to maintain a nine per cent GDP growth over a period of four years? I have some figures with me.... (Interruptions)

105. Extract from the Speech of Minister of Shipping, Road Transport and Highways and Leader of Dravida Munnetra Kazhagam (DMK) T. R. Baalu on the Motion of Confidence in the Council of Ministers.

New Delhi, July 21, 2008.

Shri T.R. Baalu: On behalf my Party DMK under the able leadership of our beloved leader, Dr. Kalaignar Karunanidhi¹, I rise to support the Confidence Motion moved by the Prime Minister of India, Dr. Manmohan Singh.

At the same time, as I have mentioned on previous occasions, on behalf of our party leader, I gratefully observe and record in this august House the support and help rendered by our hon. Friends from Leftist parties. A friend in need is a friend indeed. Of course, as far as this issue is concerned, they may differ with us, but I do not think this phenomenon will continue forever. Definitely, my friends, especially my Leftist friends, will always support us in all issues except this issue because ideologically they differ with us. That is what I feel. Your support to this Government is always needed and not only your support, but the support of other friends like SP, who have joined us a few days back, is also needed equally. We need everybody's support not only to pass this motion but also in the days to come. That means we are going to win the Confidence Motion. My dear friends in the Opposition have mentioned something about some of the things which are pending in the Supreme Court, a sub judice matter. I do not want to answer to that. As requested by the hon. Speaker, I do not want to enter into that subject matter. First of all, I should assure you about that, as Shri Devendra Prasad Yadav has given a befitting reply five minutes back.

This issue of nuclear power is very important. Why do we need power in any developing nation? It is just to see that the development is taking place day in and day out. Not only that, but we need power coupled with infrastructure. That infrastructure can be sub divided once again into social infrastructure and physical infrastructure. All these things should form part of our development. What is the power requirement today? It is 6,08,400 million units. Only 5,54,248 million units are available. So, there is a shortfall of 54,556 units. It is about 9 per cent of our total requirements. Nuclear energy's contribution is only 3700 MW. We should have achieved 10000 MW in 2000 itself. But that has not happened. By 2020, we need 20,000 MW of nuclear power. Why has this not happened? What is the reason?

In this area, as far as nuclear power energy is concerned, why the nation could not develop this nuclear option? It is because subsequent implements and technology are not available and equipments are not available. Because of this reason, NSG countries are not in a position to supply these to India because of its sanctions. There was no bilateral agreement. There was no investment by IAEA and NSG. Why are we relying on the nuclear power alone? This is the question. As any shrewd businessman or shrewd professional should go for product-mix in any industry, we should also go for product-mix. So, as far as the power is concerned, we should go for hydro power.

We have to go for wind energy, we have to go for coal energy and we have to produce power with all fossil fuels. The last option is nuclear power, but we should not miss this opportunity. We have to have a product mix of various things as far as power generation is concerned. All the options are essential for our country with a population of 112 crores. That is why we need nuclear power. To have nuclear power we require raw material, we need uranium and allied substances for our existing reactors and also for the new reactors to be established in due course of time.

Hence, in July, 2005 when Dr. Manmohan Singh met Mr. George Bush, the President of the United States of America, he entered into a dialogue. This dialogue is not a new one. The genesis of this dialogue lies in the Nehruvian era. When Pandit Jawaharlal Nehru was the Prime Minister of India, he initiated this dialogue. That dialogue has been renewed now. That is all. The genesis lies there. It is not a new one. But at the same time, when our great late lamented leader of this country Mrs. Indira Gandhi went in for Pokhran-I nuclear explosion in 1975 this dialogue was frozen. After that, Dr. Manmohan Singh has chosen to revive that dialogue when he met Mr. Bush in 2005. After the dialogue this bilateral agreement was signed. This agreement says that this is an agreement for cooperation between the Government of India and the Government of the United States of America concerning peaceful uses of nuclear energy.

Sir, this agreement is not at the cost of our indigenous three stage nuclear programme. It is not at the cost of the autonomy of our strategic nuclear programme and not at the cost of our research and development activities. Our Government remains committed to all this. It provides for full nuclear energy cooperation covering nuclear reactors, associated reactors, fuel cycle and enrichment including reprocessing. It provides for nuclear trade and transfer of nuclear material, equipment, components and related

technologies and cooperation. Then it contains no provision that mandates scrutiny of our weapons programme or any unsafeguarded nuclear facility. The last one is, the provision does not affect India's right to conduct nuclear test in any manner. The last one is more important.

My friends from the Opposition said that India is going to be subservient to America. Where is the question of our being subservient to America? Our country never agreed to any diktat of any foreign country and we have never compromised with our foreign policy. The foreign policy of India is consistent with our national interests and nobody can meddle with that, whether Shri Atal Bihari Vajpayee or Dr. Manmohan Singh, nobody can meddle with that. Our foreign policy is constant and we cannot change it.

Sir, the 123 Agreement between India and the United States of America would put an end to technology denial regime against India that have been in place for more than three decades and end India's nuclear isolation. This is more important. There will be no more isolation and because of this isolation for the past 30 years we are not having access to nuclear fuel to our reactors or any new nuclear technology. That is why our nuclear energy development was stagnant all these years and we could not produce nuclear power up to the maximum capacity.

Each and every Opposition Member definitely knows these constraints very well. But at the same time, because of politics, they want to play a role and that role is being enacted today and tomorrow.

106. Excerpts from the speech of Finance Minister P. Chidambaram in the Lok Sabha while participating in the debate on the Motion for Confidence in the Council of Ministers.

New Delhi, July 22, 2008.

* * * *

Sir, this debate naturally turns on an agreement that we have signed with the US. ... (*Interruptions*) We should remember that India has signed agreements not with just one country. It has signed agreements with more than one country. We have signed an agreement with the US, we have signed an agreement with France, and we have signed an agreement with Russia. As the Minister for External Affairs has said, we need to cross two stages before we can operationalize any of these agreements. The first is the safeguards agreement with the IAEA, and the second is the waiver from the NSG.

Questions were asked about the 123 Agreement and the Hyde Act. Let me explain in terms which I understand, and I would earnestly request the hon. Members to just lend me their ears for a couple of minutes. These are not very complicated legal issues.

In 1954, the U.S. adopted the Atomic Energy Act. That Act prohibits the US from cooperating on nuclear matters with any country until certain conditions are fulfilled. Section 123 authorizes the President of the US to exempt the proposed agreement from the conditions. That is why, this agreement is called '123 Agreement'. The Hyde Act was passed in 2006 and it became the law in December, 2006. Please mark the date. The 123 Agreement text was agreed between India and the US on August 1, 2007.

So, the 123 Agreement is an agreement after the Hyde Act came into force. In the US, it is a well-accepted Constitutional principle, well enshrined that while passing a Bill into law, the President may issue a signed statement asserting his Constitutional prerogative powers and refusing to abide by any provisions of the US Act.

We are not concerned with the provisions of the US Act nor are we concerned with what the US President said. That is their domestic matter. But the fact is that the US President issued a signed statement when he signed the Hyde Act into law. Six months later, we agreed on the text of

the 123 Agreement. The question is, what is the status of the 123 Agreement. In the US, the status is quite clear. Every US commentator, every US newspaper, every analyst has said that the 123 Agreement is not inconsistent with the Hyde Act because, according to the White House, when properly construed, the later 123 Agreement nearly fleshes out the details for the US-India Nuclear Cooperation, and the 123 Agreement dwells upon the exceptions carved out in the Hyde Act, and once the Congress approves the 123 Agreement, that Agreement and that Agreement alone, will delineate the specific rights and responsibilities of the US and India as a prevailing law that governs and controls the Agreement.

Now, look at it from our point of view. That was the US interpretation; that is the interpretation, which I rely upon because that is the way the US looks at it. The 123 Agreement alone will delineate the rights and responsibilities of the parties. Let us look at it from the Indian law point of view. The 123 Agreement is, according to Article 2.5-- and I urge you to read it -- "to enable full civil nuclear energy cooperation between the parties." Please underline the words 'to enable'. It is an agreement to enable full civil nuclear energy cooperation between the parties. It contemplates such cooperation on an industrial scale or a commercial scale. Under Article 16, the Agreement enters into force on a date on which the parties will exchange diplomatic notes, informing each other that they have completed all applicable requirements. The legal status of the 123 Agreement is that it has not yet entered into force. It will enter into force after India and the United States notify each other; and they can do so only after completing all applicable requirements. It is, therefore, an enabling agreement. And, even after it enters into force, you would have to enter into further agreements for industrial or commercial scale cooperation in nuclear energy.

The next question is: How do you interpret under our law and international law, the 123 Agreement and any earlier agreements? Article 16.4 of the 123 Agreement says: "The Agreement shall be implemented in good faith and in accordance with the principles of international law." Please underline that. The Agreement shall be interpreted and implemented in accordance with the principles of international law. Under the customary international law as well as the Vienna Convention on the Law of Treaties, any party may not invoke the provisions of its internal law as justification for its failure to perform a Treaty. The 123 Agreement is a Treaty. The Hyde Act is an internal law. You cannot invoke the Hyde Act in order to refuse to perform your obligations under a Treaty.

And further more, when the 123 Agreement is ratified by the US Congress, it is up or down vote, when it is ratified by the US Congress, it will be the last expression of the Legislature on the subject and under the principle, which is known to every lawyer, the last expression of the Legislature will prevail over any earlier law passed by the same Legislature... *(Interruptions)*

Shri Rupchand Pal: I know it may not be.... *(Interruptions)*

Shri P. Chidambaram: I am not yielding because I have to complete this part.

Besides, under Article VI(2) of the US Constitution, all treaties made or which shall be made under the authority of the United States shall be the supreme law of the land. In any view of the matter, the Hyde Act does not bind India. It cannot interfere with the implementation of 123 Agreement. The 123 Agreement alone will delineate the rights and responsibilities between India and the US. It will be the last expression of the Legislature, and under the Vienna Convention, we are bound only by the 123 Agreement.... *(Interruptions)*

Mr. Speaker: Just a minute.

... *(Interruptions)*

Mr. Speaker: Do not record.

(Interruptions) ... 1

Mr. Speaker: Nothing is being recorded.

I would have given you opportunity to seek clarification but you are not listening.

(Interruptions) ...1

Mr. Speaker: Very well. When we go to the people, the people will decide.

... *(Interruptions)*

... *(Interruptions)*

Mr. Speaker: Lawyers are for that purpose. You do not know it. You have never faced it. I have faced it.

Shri P. Chidambaram: The UPA-Left Committee held nine meetings between September 11, 2007 and June 6, 2008. At the fourth meeting on

October 9, 2007, the CPI(M)'s Members noted that the Left Parties were not opposed to a safeguards agreement on principle just as they have not been opposed to the separation plan.

Their objection continued to be to the 123 Agreement. This issue was discussed at the fifth meeting on October, 22, 2007 and at the sixth meeting on November, 16, 2007. At the sixth meeting, after the exchanges, it was decided that the impact of the provisions of the Hyde Act and the 123 Agreement on the IAEA Safeguards Agreement would have to be examined, and since it required talks with the IAEA Secretariat for working out the text of an India-Specific Safeguards Agreement, the Government will proceed with the talks and the outcome will be presented to the Committee. That is precisely what this Government has done.

It went to the IAEA Secretariat for talks. It agreed upon a text. It froze that text. We came back to the Committee on March, 17, May 6 and June 25, and we have reported the outcome of the talks to the Committee. We have done nothing in a non-transparent manner.... *(Interruptions)*

Mr. Speaker: Nothing will be recorded.

(Interruptions) ... 1

Shri P. Chidambaram: We have done it in the most transparent manner. We have taken everybody on board and we have told them that this is the outcome of the talks, and now the text is available. The ISSA text is available. The ISSA text will clearly show..... *(Interruptions)*

Mr. Speaker: Nothing will go on record.

(Interruptions) ... 1

Shri P. Chidambaram: Mr. Salim, please sit down.

None of my comrades were members of the Committee. We know what happened in the Committee. We have said the ISSA text will be made available on the same day it is circulated officially to the Members of the IAEA Board. When we decided to go forward and circulate it to the Members of the IAEA Board, on the same day it was made available in India.... *(Interruptions)* The text is now available in India.... *(Interruptions)*

Sir, they cannot interrupt every time.

... *(Interruptions)*

Mr. Speaker: Hon. Members, you have made your position very clear. Now, let him say.

... *(Interruptions)*

Mr. Speaker: Instead of shouting, why do you not speak? Your leader will be speaking .

... *(Interruptions)*

Mr. Speaker: I am sure, he will make these points. Unnecessarily do not get agitated. Do not get agitated too much. It will not help.

... *(Interruptions)*

Mr. Speaker: Your leader will be speaking. You give all your points to him.

... *(Interruptions)*

Shri P. Chidambaram: Sir, I listened to Mr. Salim patiently yesterday. I think he will show me the courtesy of listening to me today. ...
(Interruptions)

Mr. Speaker: Yes, that is right.

... *(Interruptions)*

Shri P. Chidambaram: Please listen first.

Sir, the short question is - does India want to end the nuclear isolation which we find ourselves in since 1974, more so since 1998? What did the hon. Prime Minister Shri Vajpayee say in the United Nations General Assembly? I quote. After referring to the tests he said : "These tests do not signal a dilution of India's commitment to the pursuit of nuclear disarmament. Accordingly, after concluding this limited testing programme, India announced" - India, the Government of Mr. Vajpayee announced - "a voluntary moratorium on further underground nuclear test explosions".

"We conveyed our willingness to move towards a de jure formalization of this obligation in announcing a moratorium. India has already accepted the basic obligation of the CTBT. India is now engaged in discussions with our key interlocutors on a range of issues including the CTBT. We are prepared to bring these discussions to a successful conclusion so that the entry into force of the CTBT is not delayed beyond September, 1999."

Then he came to this House and made a statement on 15th December, 1998. He says : "This House will be reassured that in the assessment of our scientists this stand" - that is converting our voluntary moratorium into a de jure obligation - "does not come in the way of our taking such steps as may be found necessary in future to safeguard our national security. It also does not constrain us from continuing with our R&D programmes nor does it jeopardise in any manner the safety and effectiveness of our nuclear deterrent in the years to come."

"In addition to the talks between Shri Jaswant Singh and Mr. Strobe Talbott" - they did have talks Mr. Malhotra, may be you forgot; the Prime Minister confirms that they had talks - "we have had detailed exchanges with France and Russia. Discussions have also taken place with UK and China at the level of Shri Jaswant Singh and at official level with Germany and Japan as well as with other non-nuclear weapon States. I have been in regular correspondence with President Clinton. President Clinton has also expressed to me his desire for a broad-based relationship with India that befits the two largest democracies of the world. I have fully reciprocated these sentiments. Indeed, our ongoing dialogue with the United States is geared towards that end. I am confident this House will want to wish it all success".

What has this Government done? It has taken the dialogue forward. Today we have the 123 Agreement. The question is that, and I will conclude on this note. ... (*Interruptions*)

Md. Salim: Two wrongs cannot make it correct. ... (*Interruptions*)

Shri P. Chidambaram: Do we want to come out of nuclear isolation? ...

(*Interruptions*) Mr. Salim, this is important.

Do we want to come out of the nuclear isolation? Sir, in this connection, I want to share with this House what China is doing. China's electricity today is produced, 80 per cent from fossil fuel such as coal and 18 per cent from hydro power. Two per cent of China's electricity comes from nuclear power. Mainland China has eleven nuclear power reactors in commercial operation. Six are under construction and several more are about to start construction. Additional reactors are planned including some of the world's most advanced to give a six-fold increase in nuclear capacity, to at least 50,000 megawatt by 2020 and then - this is important - a further three to four fold increase to 1,20,000 to 1,60,000 megawatt of electricity by 2030. The

country aims to become self-sufficient in reactor design and construction as well as other aspects of the fuel cycle.

Moves to build nuclear power in China commenced in 1970 and the industry has now moved towards a steady development phase. Technology is being drawn from France, Canada and Russia with local development based largely on the French element. The latest technology acquisition has been from the US and France. A country contributing two per cent nuclear energy towards total electricity ... *(Interruptions)*

Shri Rupchand Pal: You cannot compare India with China. ... *(Interruptions)*

Shri P. Chidambaram: We cannot because there are some people in this country who do not want India to catch up with China, who do not want India to go ahead of China. There are some people who want China to become an economic super power but India should never become an economic super power. ... *(Interruptions)*

Mr. Speaker: Just a second, Mr. Minister.

... *(Interruptions)*

Mr. Speaker: You sit down.

... *(Interruptions)*

MR. Speaker: Md. Salim, you have spoken, so far as I remember, without much interruption. You are a very senior Member.

... *(Interruptions)*

Shri P. Chidambaram: Sir, I have no hesitation in saying ... *(Interruptions)*

Mr. Speaker: Please sit down. Shri Chowdhury, please sit down.

... *(Interruptions)*

Mr. Speaker: Just a minute. Again, I am requesting let us follow some decorum of debates.

... *(Interruptions)*

Mr. Speaker: Would you keep quiet?

... *(Interruptions)*

Mr. Speaker: I am saying that your leader will be speaking. Let him take up these points. At least, you are not showing to be a disciplined party.

... (*Interruptions*)

Shri P. Chidambaram: Sir, I have no hesitation in saying that I do not envy China. I want to emulate China. I want India to be an economic power and economic super power.

Sir, when we talk about India, we should talk about only countries which are as large and as complex as India and that is China. We cannot talk about countries which are smaller than India or poorer than India. We must aspire to greater heights. Our ambitions must be large. When we talk about growth, we say that growth is a necessary condition not a sufficient condition. Let me give you some examples. ... (*Interruptions*) Sir, China, for instance, has 29 million hectares under rice cultivation. ... (*Interruptions*)

Mr. Speaker: Do not record anything except the speech of Minister.

(*Interruptions*) ...1

Shri P. Chidambaram: China has 29 million hectares under rice cultivation. India has 43 million hectares under rice cultivation. China produces 6.26 metric tonnes per hectare. The world average is 4.08 metric tonnes per hectare. India produces 2.1 metric tonnes per hectare. China has 23.4 million hectares under wheat while India has 25 million hectares under wheat. China produces 4.42 metric tonnes per hectare. The world average is 2.79 metric tonnes per hectare. India produces 2.72 metric tonnes per hectare. When I say we must grow, we must grow more wheat; we must grow more paddy; and we must emulate the best in the world.

China produces 419 million tonnes of steel. India produces 44 million tonnes of steel. China produces 2,482 million tonnes of coal. India produces 427 million tonnes of coal. China generates 2,834 megawatt hour of electricity; India does 726 megawatt hour. When I say we must grow, we must produce more coal, produce more steel and generate more electricity. That is the only way we can bring economic justice to the people of this country.

Let me conclude by saying that BJP ... (*Interruptions*)

Mr. Speaker: Do not record anything.

(*Interruptions*) ...1

* Not recorded.

Shri P. Chidambaram: The BJP and NDA seem to agree that we should end our nuclear isolation. After all these interruptions, no one is clear about the stand of the Left Parties. Let the two groups ... *(Interruptions)*

Yet the two groups ... *(Interruptions)*

Md. Salim: Sir, Mr. Chidambaram stands on the Left's support. ... *(Interruptions)*

Mr. Speaker: I express my strongest displeasure. We are following certain tactics, which I can only condemn. I can only condemn whosoever follows these things.

... *(Interruptions)*

Mr. Speaker: I am condemning these things.

... *(Interruptions)*

Shri P. Chidambaram: Yet the two Groups are voting together against this Motion of Confidence. ... *(Interruptions)*

Shri N.N. Krishnadas: (PALGHAT): No, it is against you personally. ... *(Interruptions)*

Mr. Speaker: Mr. Krishnadas, please take your seat. Please sit down.

... *(Interruptions)*

Mr. Speaker: Nothing is being recorded. Do not record anything.

(Interruptions) ...1

Mr. Speaker: Please take your seat. Nothing else will be recorded.

(Interruptions) ...1

Shri P. Chidambaram: The NDA has no problem with a strategic relationship with the US. The Left Parties are ideologically opposed to any partnership -- strategic or otherwise -- with the US. Yet the two Groups are voting together against this Motion of Confidence. ... *(Interruptions)*

The NDA believes, as I listen to them, that India should become a nuclear weapon State, whereas the Left Parties have always been opposed to

* Not recorded.

nuclear weapons and nuclear weaponisation. Yet the two Groups are voting together against this Motion of Confidence. ... *(Interruptions)*

Md. Salim: Your Prime Minister went to the Bhishma Pitamah for his support. ... *(Interruptions)*

Shri P. Chidambaram: The NDA says that if it comes to power, God forbid, it will renegotiate the Agreement. The Left Parties say that they will do everything possible to scuttle the Agreement now and for ever. Yet the two Groups are voting together against this Motion of Confidence. ... *(Interruptions)*

Sir, I doubt *(Interruptions)*

Mr. Speaker: You should take lessons from them. They have not disturbed the House. Why should you be disturbed?

... *(Interruptions)*

Shri P. Chidambaram: I doubt if in the history of India's Parliament we have seen anything more bizarre than these two Groups voting together against the Motion of Confidence. ... *(Interruptions)*

Let me conclude by saying *(Interruptions)*

Mr. Speaker: It is going beyond limit.

... *(Interruptions)*

Mr. Speaker: You cannot have a running commentary in the House.

... *(Interruptions)*

Shri N.N. Krishnadas: You were the victim in 1997. ... *(Interruptions)*

Mr. Speaker: You have made your point. Your Leader will speak on it.

... *(Interruptions)*

Mr. Speaker: Mr. Krishnadas, I think that I will have to take some action. Do not think that you are glorifying yourself or your Party.

... *(Interruptions)*

Shri N.N. Krishnadas: Yes, I am glorifying my Party. ... *(Interruptions)*

Mr. Speaker: Yes, I know it, but it is in this undisciplined manner.

... *(Interruptions)*

Mr. Speaker: You are behaving in this undisciplined manner.

... *(Interruptions)*

Mr. Speaker: Please do not think that I will allow this to continue on any side. Whichever is the side will have to face the consequences.

... *(Interruptions)*

Shri P. Chidambaram: Yesterday, from the Speaker's Chair, you welcomed

... *(Interruptions)*

MR. SPEAKER: We are talking of ourselves as the largest democracy in the world. This is how we are behaving!

... *(Interruptions)*

Shri P. Chidambaram: Yesterday, from the Speaker's Chair, you welcomed one of the youngest Members of Parliament. There are millions of young boys and girls, and young men and women out there who are looking towards this Parliament and looking to the future.

We can make our future; the future is in our hands. We can make our future, if we decide to have the vision and the farsightedness that can take this country forward. In the late 1980s and in the early 1990s, my beloved leader, Shri Rajiv Gandhi, followed by Shri Narasimha Rao and Dr. Manmohan Singh blazed a new path which made India a stronger economy than what it was 15 years ago. Today, this Government under Dr. Manmohan Singh's leadership is charting out a new path which will end India's nuclear isolation, which will pave way for India becoming an economic super-power.

I ask this House to give a resounding vote of confidence to the Prime Minister.

107. Excerpts relevant to Nuclear Energy Cooperation Agreement from the Speech of Congress Leader Rahul Gandhi while participating in the debate in the Lok Sabha on the Motion of Confidence in the Council of Ministers.

New Delhi, July 22, 2008.

Shri Rahul Gandhi: Mr. Speaker, Sir, thank you for letting me speak on behalf of the Government. Yesterday, while I was thinking about what I would say in this House, I came to a simple conclusion. I decided that it is important at this point not to speak as a Member of a political Party, but to speak as an Indian. I also decided... *(Interruptions)*

Mr. Speaker: These comments are unfortunate. Nobody has any respect in this House. This is most objectionable. It is of bad taste.

... *(Interruptions)*

Mr. Speaker: Shri Shahnawaz Hussain, you are a young man, please allow another young man to speak..... Do not make such snide remarks.

... *(Interruptions)*

MR. SPEAKER: You are disturbing your own speaker.

... *(Interruptions)*

I decided, as I said, that I would not speak as a member of a political party but I would speak as an Indian.

An Hon. Member: All are Indians.

Shri Rahul Gandhi: I completely agree with you that you are also an Indian and you should also speak as an Indian. I would go further to say that you do speak as an Indian and I do not doubt that. So, I decided that what I would do is that I would take a step that a lot of our politicians normally do not do.

I decided that I will make a central assumption in my speech. The assumption is that everybody in this House, regardless of which party they come from, whether they come from the BJP or the Shiv Sena or the Samajwadi Party or the BSP or the Congress Party, speak in the interest of the nation. So, I would like to say that this is the assumption that I will make throughout my speech.

Yesterday, I thought about why we are meeting here today, why is it that this House needs to meet and I came to the conclusion that we are meeting because there is a serious problem in India and the problem is our energy security.

An Hon. Member: It is poverty.

Shri Rahul Gandhi: Poverty is directly connected to energy security and I will explain how. ... *(Interruptions)*

In my speech, I will explain to the hon. Member as to how poverty is directly connected to energy security. Once again, I would request everybody to give me ten minutes and to listen to me for ten minutes. That is all I ask for.

Three days ago, I went to Vidarbha and there, I met a young lady who has three sons. The young lady, Sasikala, a landless labourer, lives with Rs. 60 a day. Her husband who goes to work in a field nearby earns Rs. 90 a day and with the total earning that they make, they have put their three children in a private school. I spent an hour with these people. They live in a slum. I spoke to the sons and I spoke to the mother. The eldest son dreams of becoming a Collector, the middle son dreams of becoming an engineer and the younger son wants to do a private job. When I asked Sasikala as to whether she thinks that her children will be successful or not, she looked at me and said "Absolutely". As I was walking out of the House, I noticed that there was no electricity in the house. I told the children that when I was small, I used to study in the evening and how do they study.

The children pointed towards a little lamp, a brass lamp that was there. They said, "We study using that lamp." This problem of energy security reflects itself everyday with all of us; it reflects itself among the poor, like in the house of Sashikala; it reflects itself with industry; and it reflects among all Indians.

Mr. Speaker: If any hon. Member does not want to hear his speech, you can go out. This running commentary is horrible.

... *(Interruptions)*

Shri Rahul Gandhi : Energy effects India; energy effects India's growth; and energy is responsible for allowing us to grow at nine per cent and that growth is responsible for allowing us to create programmes to help poor, like those the BJP has done, like the PMGSY; and like those the Congress has done, like the NREGP and guaranteed education.

The point that I am making here is if we do not secure our energy supply into the future, growth will stop and we will not be able to fight poverty which is something that every single Member of this House wants to do.

I have said what the problem is. I would go back to Vidharba to see what the solution could possibly be. I would go to the house of another young lady called Kalawati, who had nine children. *(Interruptions)*

Mr. Speaker: Shri Rahul Gandhi, carry on please.

Shri Rahul Gandhi: I would go back to Vidharba, to the house of Kalawati. ... *(Interruptions)*

I would go to the house of Kalawati. I am glad you find that funny. But Kalawati is a person whose husband committed suicide. So, I would urge you to respect her. I would take you to the house of Kalawati, which I also visited three days ago. Kalawati is a woman with nine children whose husband committed suicide three years ago. Her husband committed suicide because he was dependent on only one crop, the cotton crop. When I asked Kalawati as to why her husband committed suicide, her answer was that he was dependent on only one source of income. ... *(Interruptions)* ...¹

Mr. Speaker: Strike it out. Not to be recorded.

... *(Interruptions)*

Shri Rahul Gandhi: I asked Kalavati as to what did you do. Kalavati responded by telling me that I diversify ... *(Interruptions)*

Mr. Speaker: I think the Parliament of India is reaching its lowest position - Nadir!

... *(Interruptions)*

You pose to be very intelligent. Please sit down. I will note down your name. You will feel what happens.

... *(Interruptions)*

Mr. Speaker: Nothing will go on record.

(Interruptions) ...¹

Mr. Speaker: I am requesting the hon. Member to control.

* Not recorded.

... *(Interruptions)*

Mr. Speaker: You have to go out for a while.

... *(Interruptions)*

Mr. Speaker: So what? Have you got a right to disturb? You please take your seat.

... *(Interruptions)*

Mr. Speaker: You are not his informer. Please carry on.

... *(Interruptions)*

Mr. Speaker: If any Member speaks without my permission, it will not go in the record.

(Interruptions) ...1

Mr. Speaker: Shri Pranab Mukherjee as the Leader of the House, Prof. Vijay Kumar Malhotra, I am going to fix a time for the voting. There will be no more discussion. You please tell me when will it suit you?

... *(Interruptions)*

Mr. Speaker: I think let us fix the time.

... *(Interruptions)*

The Minister of External Affairs (Shri Pranab Mukherjee): After his speech is over, they can say whatever they want to say. ... *(Interruptions)*

We listened to Shri Brajesh Pathak when he was speaking yesterday. I will request the hon. Members from the BSP to please resume their seats and allow this debate to continue. ... *(Interruptions)* Yesterday you spoke and today if the hon. Speaker permits you, you can speak. So kindly resume your seat and let his speech be over. Let the debate continue and thereafter we will decide as to when we will have the voting. Why are you disturbing unnecessarily in the midst of the debate? Please allow the debate to continue. ... *(Interruptions)*

Shri Rahul Gandhi: Sir when I asked Kalavati ... *(Interruptions)*

* Not recorded.

Mr. Speaker: Suddenly my hon. friend here has stood up. I do not know anything about what is happening. Anybody can stand up, anybody will disturb and whatever they want to say, they will say! There is no question of decorum, no rule and no procedure. I think the time has come when Members of this Parliament should face the electorate so that the country can give their verdict about these Members as to what they are doing here. Shri Rahul Gandhi, yes, please carry on.

... *(Interruptions)*

Shri Rahul Gandhi: When I asked the widow lady as to how she resolves her problem, she said that instead of sowing one crop, she now sows three crops. She told me how she bought two buffaloes and now has milk as a source of income. She also told me, most importantly, that she dug a little pond which she fills with water and uses as an insurance policy when it does not rain.

So, the answers to our energy problem lie in... *(Interruptions)*

Mr. Speaker: Nothing is being recorded.

(Interruptions) ...1

MR. SPEAKER: Do not record one word.

(Interruptions) ...1

... *(Interruptions)*

Mr. Speaker: I do not know anything.....

... *(Interruptions)*

Mr. Speaker: What is going on in this House?

... *(Interruptions)*

* * * *

Interruption...

Shri Rahul Gandhi: I spoke to two poor families. One of them was called Mrs. Kala... *(Interruptions)* Mrs. Kala said that she had diversified her income sources and she has used that to stabilize her family and bring up her nine children.

Sir, at the very least, nuclear energy is going to act like Mrs. Kala's

pond and it is going to act as an insurance policy for this country in times of need. At its maximum, nuclear energy is going to act like Mrs. Kala's main crop.

So, the problem is that the way our nuclear industry is positioned today, it is going to do neither. It is neither going to act as an insurance policy nor is it going to act or have the potential to act as a fundamental source of energy. And, the reason it is not going to do so is because the hands of our scientists, the hands of our establishment are tied; they are tied because they do not have fuel on one hand, and on the other hand they do not have investment and technology.

Sir, I am very proud to say that our Prime Minister Shri Manmohan Singhji has recognized both the problem and a potential solution. But it would be unfair of me not to accept that Shri Vajpayee also saw the problem and also, in his time, worked on the solution.

(Interruptions)

Now, I have stated and all of us know that there is a problem with regard to our energy security in this country, and that we need to think about it in the long term. It is a problem that all of us need to solve working together.

As I said, senior leaders have also established that the way forward is diversification and reliance on more than one source of energy, a balanced portfolio that includes nuclear, hydrocarbon, solar and wind among others.

But, Sir, it is not enough to identify a problem and a potential solution. The magic of what Shri Manmohan Singhji is doing is that within the problem, he has identified an opportunity that is significantly larger than the problem itself. The opportunity our Prime Minister has identified is based on a simple fact. It is based on the fact that over the next 30-40 years, two countries are going to use the largest bulk of new energy that comes on line. These countries - China and India - have the ability to define the way the world's energy moves.

Sir, what I am suggesting is that instead of looking at our energy problem as a problem, we start to look at our energy usage as an opportunity. Like a big buyer who goes to any market, we have the ability to shape the global energy industry, and energy is like no other industry in the world. Energy, as I said earlier, is used everywhere, in everything and in every

aspect of economic and social life. Energy has destroyed nations and it has built nations.

Our old opponent, the British, grew to their prominence because they control coal. The United States today controls hydrocarbons. It has a large emphasis on hydrocarbons, and we all know how powerful they are. What I am suggesting is that we start to think like a big country, like a powerful country. Instead of worrying about how the world will impact us, we start worrying about how we will impact the world.

Many years ago, this country embarked on a path which many people did not believe in. We developed an industry called, IT industry and the telecom industry. Very few people believed at that time that India would ever play a major role in this industry. Very few people believed that the computer would have anything to do with empowering the poor and with changing the way this country worked. Yet, today all of us together see the impact of the computer. We see the revolutionary impact that IT and communications has had on this country, and it is important that we do not forget this. It is important that we do not forget this because I believe we are at the cross roads, very similar to the cross roads we were at when the decision on IT was to be made.

The decision here is not about three per cent energy or seven per cent energy. It is not about India's usage of nuclear energy. If we look at the big picture here, it is about whether India can become a global power in a type of energy that is going to be very important in the future. We all know the problems caused by hydrocarbons. We know about pollution.

Earlier, one of the Members asked me to point out what is the connection between energy and poverty. We know the link between us depending on hydrocarbons and prices in India today. Sir, when we think about energy, when we think about nuclear energy, we must think about the poorest in the country. Contrary to what most people believed, when we thought about IT in this country, we were thinking about the poor in this country. It is something that is hard to cross because it is counterintuitive. But one must not underestimate the connections between industry, between energy and between the poor.

Sir, I have taken a lot of time. So, I do not want to go on for ever. But I

want to make one last submission. I am very happy this House is now listening to.

The difference between a powerful country and a country that is not powerful and does not have a similar impact on the world stage is that the powerful country thinks about how it will impact the world. The country that is not so powerful thinks about how the world will impact it.

Sir, it does not matter which Government runs this country. Many Governments will run this country in the future. But it does matter how we think about our position in the world. What is important is that we stop worrying about how the world will impact us, we stop being scared about how the world will impact us and we step out and worry about how we will impact the world.

Sir, as I said earlier, I speak today not as a Congress person or a Congressman but as an Indian. I would like to say two other things before I conclude. The first is that we are all building this country together. We might have different views about how this country should be built. We might have different opinions on what we should do. But essentially we sit in this room together and we have to solve our problems together. This is what differentiates us and this is what gives us our true power that any voice can be heard in this room, that any voice can disrupt any other voice in this room. I am being serious. It is uncomfortable for me. But I am very proud of it that every voice can be heard in this country.

I would like to conclude by saying two things. The first thing is that we must never, ever let fear be our guide. We must never take decisions based on the fear of the unknown or what is going to happen if we act. We must only act with one rule and that is courage. The second thing I would like to say is that we are a country of a billion people; 70 per cent of us are young. I am old for this country; I am much above the average age. It is important to realise that this country is brimming with confidence and brimming with self-belief. Another point we must never forget when we take decisions as leaders in this country is that we have to believe in that, in our people and we have to have confidence in what we are capable of doing. We have to have confidence in what they are doing.

I think these are guides not only for Congress leaders, these are guides for

every single Indian that when you do act, whoever you are, whatever opinion you have, act with courage and act with confidence. With that, together, we can change this country and impact the world.

To conclude, I would like to support our hon. Prime Minister and like to say that he has shown tremendous courage and confidence in the Indian people and I would also like to say and I say this as a youngster from this Party and as a youngster from that Party and all those other Parties that it does not matter what happens here today. What matters is that we start working together and we together try to solve the problems of this country.

I would like to support the motion of the hon. Prime Minister. Thank you very much.

108. Speech of Basu Deb Acharia, member Communist Party of India (Marxist) in the Lok Sabha while participating in the debate on the Motion of Confidence in the Council of Ministers.

New Delhi, July 22, 2008.

Shri Basu Deb Acharia: Sir, I rise to oppose the Confidence Motion moved by the hon. Prime Minister.... *(Interruptions)*

Mr. Speaker: Silence please.

Shri Basu Deb Acharia: Yesterday, when the Leader of the House, Shri Pranab Mukherjee spoke, he gave some figures. But those figures were not correct. He said that on the day when the left parties withdrew support, on that day when the Samajwadi Party extended its support to the Government, the UPA had the majority and that the number was 276. This is what he said. The UPA has 220 Members. If we add the Members of the Samajwadi Party, it comes to 265. So, the Government is still in minority. It is a minority Government. I would like to know from the Government whether a minority Government can go ahead with the deal. While intervening, the Finance Minister, Shri P. Chidambaram said that by withdrawing support and by opposing the Confidence Motion, we are joining hands with the BJP. In fact, when we met the President, when we submitted the list and the letter, we demanded that the Government should go in for Confidence Motion.

Let me remind the hon. Minister of Finance, Shri P. Chidambaram. He was in the House and he was in the Opposition in 1990 when there was a National Front Government headed by Shri Vishwanath Pratap Singh.

Sir, Shri Advaniji started his rath yatra from Somnath to Ayodhya. Throughout the country, the communal atmosphere was created and hundreds of people were killed. The communal riot took place in many parts of the country. Sir, when Shri Advaniji was arrested in Bihar and he was not allowed to proceed to Ayodhya, the BJP withdrew support. When Shri Vishwanath Pratap Singh was the hon. Prime Minister, he was fighting against the communalism. He did not surrender at that point of time. At that point of time, the Congress joined hands with the BJP and toppled that Government and thus destabilisation was created. Sir, this was repeated again. *(Interruptions)*.

The Minister of Science and Technology and Minister of Earth Sciences (Shri Kapil Sibal): Do you remember that you were there with the BJP? ... *(Interruptions)*

Shri Basu Deb Acharia: You joined hands with the BJP and toppled the Government. ... *(Interruptions)* Sir, it was again repeated in 1997 when Shri H.D. Devegowda was the hon. Prime Minister and the Government was destabilized by the Congress. Subsequently, when Shri I.K. Gujral became the Prime Minister, this Congress joined hands with the BJP to topple the I.K. Gujral Government. ... *(Interruptions)* Today they are saying that we are joining hands with the BJP to vote against the Confidence Motion moved by the hon. Prime Minister.

Sir, in 2004 Lok Sabha elections, the mandate of the people was not in favour of any political combination. But the people of this country had given a clear mandate and that mandate was for the change of the policy, change of the outlook and change of the attitude.

Sir, the Left Parties supported this Government because of our commitment to fight back communal forces, to protect and strengthen India's secular heritage, to defend the peoples' unity and rights of the minorities which have been under attack and severely eroded during the BJP led NDA.

Sir, we will not forget what happened in Gujarat in 2002. We supported this Government because of our deep concern against 'shining India' economic policies. Now they are again referring to 'feel good factor' and 'shining India' growth rate which was there in 2003 and 2004.

The BJP used to say that. The Lok Sabha was dissolved. Election was held. The people of this country voted them out. The Congress Government is again following the same path which the BJP Government, the NDA Government was following. The Shining India economic policies were destroying the lives and livelihood of the people. That is why, we insisted on a Common Minimum Programme to bring relief to the people. The major issues of the Common Minimum Programme are yet to be implemented. But today instead of the Common Minimum Programme of the UPA, it is the Common Minimum Programme of the Bush Administration to bring India into a strategic embrace that the Government is implementing.

You cannot fight the communal forces by compromising the nation's sovereignty. You cannot fight the communal forces by following pro-imperialistic economic policies which have led to huge price rise and

widespread disparities among the people.

The Finance Minister very eloquently gave the figures in regard to growth in various sectors - in agriculture, food production, production of pulses and others. There is GDP growth but he has not mentioned about the condition of the people which is deteriorating. When there is growth to the extent of 9 per cent, what is the Government claiming in its Report? It is not our Report. It is the Report of the Committee constituted by this Government. The Committee, in its last Report submitted to the Government, has stated that 77 per cent of the population of our country is to depend on only Rs.20. We have 46 billionaires. One year back, there were 26 billionaires. Within one year, the number of billionaires increased to 46 whereas 77 per cent of the population is to depend on only Rs.20. This is not our Report but the Report of the Committee constituted by the UPA Government.

Today, inflation has already touched 12 per cent. Prices of almost all the essential commodities are rising. The Government is not in a position to contain and control the prices. The livelihood of the people of our country has become miserable. The family budget has increased. There has not been any increase in their wages and earnings whereas there has been an increase in the prices of almost all the essential commodities.

We have made several suggestions. I would like the Prime Minister to place before this House the facts. When there was the Left-UPA Coordination Committee which continued for two years, we made a number of suggestions to contain the price rise. We made four suggestions. One is: strengthening and universalisation of the Public Distribution System....
(Interruptions)

Mr. Deputy Speaker: Please conclude now.

Shri Basu Deb Acharia: I have just started.

Mr. Deputy Speaker: I am sorry. Please conclude.

Shri Basu Deb Acharia: I have not yet come to the nuclear deal which is the main issue. ... (Interruptions) I will come to it within a minute. Please give me some more time.

Mr. Deputy Speaker: You started your speech at 3.31p.m.

Shri Basu Deb Acharia: Public distribution system had to be strengthened and universalized. That has not been done.

Mr. Deputy Speaker: Mr. Salim, this is not a meeting place.

Shri Basu Deb Acharia: Forward and futures trading which was introduced by the NDA Government on all commodities has not been withdrawn. For several times, the prices of petroleum products have been increased instead of reducing the duty and cess, abolishing import parity which was introduced by the earlier Government. The Government has failed to take concrete measures to control and contain the prices of essential commodities. Farmers are committing suicide and it is still continuing. The crisis for agricultural sector is accentuating. No concrete measures have been taken by this Government to ameliorate the sufferings of the poor people of this country. Why have we withdrawn the support from this Government?

Mr. Deputy-Speaker: Mr. Acharia, your party has already finished. Please conclude now.

Shri Basu Deb Acharia : The Government was formed on the basis of the Common Minimum Programme.

(Interruptions)

Shri Basu Deb Acharia: What we said was that we did not want anything from this Government. We did not join them even. We had extended our outside support, but what we were demanding that the UPA Government should concentrate on implementation of pro-poor programmes under Common Minimum Programme. In regard to foreign policy, nowhere it has been stated that we will have strategic relations with the United States of America. We are not anti-America. We are not blindly opposing America. We want good relations with America, but there is a difference between good relations and strategic relations. When NDA was in power, they diluted our non-alignment policy. We have seen when Iraq was attacked; I had been to Iraq 15 days before Iraq was attacked. I was there for seven days. When we demanded in this very House to pass a resolution to condemn the attack on Iraq, we had to stall this House at least for three days. Then the resolution was adopted, for the first time, in language of Hindi, and not in English. The word 'condemn' was not used, but the word 'deplore' was used.

Sir, when Shri Atal Bihari Vajpayee was the Prime Minister of India, he agreed to send troops to Iraq. At that time, the Congress Party and the Left Parties were in the Opposition and because of our opposition he could not send troops to Iraq. So, we had the apprehension. Although strategic relation was mentioned in the Draft Common Minimum Programme, we did not agree to it and then it was removed from it.

Mr. Deputy-Speaker: Please conclude now.

Shri Basu Deb Acharia: Sir, I am coming to the main point.

Mr. Deputy-Speaker: You have taken more time. What can I do?

Shri Basu Deb Acharia: Sir, everybody has spoken for half-an-hour. Please give me 7-8 minutes. I will finish.

Mr. Deputy-Speaker: No, I am giving you only two or three minutes more. You conclude within that time.

Shri Basu Deb Acharia: Sir, it was stated in the Common Minimum Programme:

"The UPA Government will pursue an independent foreign policy, keeping in mind its past traditions. This policy will seek to promote multi-polarity in world relations and oppose all attempts at unilateralism.

The UPA Government will give the highest priority to building closer political, economic and other ties..."

The phrase 'strategic relation' has been mentioned nowhere in the Common Minimum Programme.

Sir, when the Joint Statement of Dr. Manmohan Singh and Mr. George Bush was made, the dialogue process started and there was an attempt to have strategic relations with the United States of America. At that time, what did we find? We found that in the case of Iran, not once, but twice the representative of the Government of India, at the behest of USA, voted against Iran. Our representative supported the Resolution moved by USA. At that time, there was a widespread protest throughout the country in Mumbai, Lucknow and other places. In Lucknow, a huge rally was organized in which the Samajwadi Party President Shri Mulayam Singh Yadav and leaders of Left Parties participated and addressed the rally. I have the

copy of the fiery speech of Shri Mulayam Singh Yadav. What happened to this party now?

(Interruptions)

Mr. Speaker: Mr. Basu Deb Acharia, you address the Chair and please try to conclude quickly.

Shri Basu Deb Acharia: When this nuclear deal was conceived and the draft of the Hyde Act was prepared, we expressed nine concerns. It is a fact that while replying to the debate in the Rajya Sabha - there was a debate in this House also on a subsequent date - the Prime Minister gave an assurance that all our concerns would be properly addressed. The Hyde Act was enacted in December, 2006. What we found was that our hopes were belied.

The assurances went haywire. Then subsequently a mechanism was evolved. A joint committee was formed. What was the outcome of the joint committee? The resolution which was adopted in the first meeting of the Left-UPA joint committee was that the operationalisation of the Deal would depend on the outcome of the findings of this committee.

I would like to know from the hon. Prime Minister whether the committee has come to any conclusion. How could the Committee come to any conclusion? On 16th of November, there was a written understanding that the Government wanted to go to the IAEA to start negotiations and it was assured that the Government would proceed only after the text of the Agreement is placed before the committee and if the committee agrees, then only the government would go to IAEA and then NSG.

Mr. Deputy Speaker: Thank you.

Shri Basu Deb Acharia: Sir, I have not completed.

Mr. Deputy-Speaker: What can I do? You have taken more than sufficient time.

(Interruptions)

Shri Basu Deb Acharia: When the committee met in the month of June, the Agreement was not shown to the committee. Without showing the text of the Agreement, how can the committee come to any conclusion? The committee was told that it was a classified document. The same day, from the IAEA, it was stated that there was no restriction and the Government can circulate this text.

On 8th July, in a Press Conference, the hon. External Affairs Minister stated that the Government would not go to IAEA before it takes the vote of confidence. The day he made the statement, the Prime Minister announced and the Government went to the IAEA. If this is not betrayal, then what is this? This is not only a betrayal and insult to us but also to the nation.

What is being said here? *Shri Laluji said, we need power. I want to know, what amount of power we will get. Ramgopalji said we have coal deposits for 30 years. We have 230 billion tonnes of proven deposit. It will continue for 200 years.*

Yesterday the External Affairs Minister said we don't have enough ports to import from abroad. By the end of Twelfth Five Year Plan, we have to import only 71 million tonnes. Shri Pranab Mukherjee said yesterday that we will have deficit of 4 lakh MW of electricity by 2030. How can this deficit of 4 lakh MW be reduced to 30,000 MW with only 40,000 MW of nuclear power? We will have to spend \$ 200 billion.

We are comparing with China. I will have to reply to what they have said. They said - it is a very serious thing - that we are opposing the deal at the behest of China... *(Interruptions)*

Mr. Deputy-Speaker: Will you conclude or not?

Shri Basu Deb Acharia: When China pressurized us to sign NPT, to sign CTBT, we opposed it. Our Party, the Communist Party of India (Marxist), opposed it. We said that NPT and CTBT are discriminatory; we cannot agree to that.... *(Interruptions)*

Mr. Deputy-Speaker: Now, nothing will go on record.

*(Interruptions) ...**

(Text in italics is translated from Hindi)

109. Extract from the Speech of Prime Minister Dr. Manmohan Singh -- Reply to the debate in the Lok Sabha on the Motion of Confidence in the Council of Ministers.

New Delhi, July 22, 2008.

* * * *

I say in all sincerity that this session and debate was unnecessary because I have said on several occasions that our nuclear agreement after being endorsed by the IAEA and the Nuclear Suppliers Group would be submitted to this august House for expressing its view. All I had asked our Left colleagues was: please allow us to go through the negotiating process and I will come to Parliament before operationalising the nuclear agreement. This simple courtesy which is essential for orderly functioning of any Government worth the name, particularly with regard to the conduct of foreign policy, they were not willing to grant me. They wanted a veto over every single step of negotiations which is not acceptable. They wanted me to behave as their bonded slave. The nuclear agreement may not have been mentioned in the Common Minimum Programme. However, there was an explicit mention of the need to develop closer relations with the USA but without sacrificing our independent foreign policy. The Congress Election Manifesto had explicitly referred to the need for strategic engagement with the USA and other great powers such as Russia.

In 1991, while presenting the Budget for 1991-92, as Finance Minister, I had stated: No power on earth can stop an idea whose time has come. I had then suggested to this august House that the emergence of India as a major global power was an idea whose time had come.

Carrying forward the process started by Shri Rajiv Gandhi of preparing India for the 21st century, I outlined a far reaching programme of economic reform whose fruits are now visible to every objective person. Both the Left and the BJP had then opposed the reform. Both had said we had mortgaged the economy to America and that we would bring back the East India Company. Subsequently both these parties have had a hand at running the Government. None of these parties have reversed the direction of economic policy laid down by the Congress Party in 1991. The moral of the story is that political parties should be judged not by what they say while in opposition but by what they do when entrusted with the responsibilities of power.

I am convinced that despite their opportunistic opposition to the nuclear agreement, history will compliment the UPA Government for having taken another giant step forward to lead India to become a major power centre of the evolving global economy. Jawaharlal Nehru's vision of using atomic energy as a major instrument of development will become a living reality.

What is the nuclear agreement about? It is all about widening our development options, promoting energy security in a manner which will not hurt our precious environment and which will not contribute to pollution and global warming.

India needs to grow at the rate of at least ten per cent per annum to get rid of chronic poverty, ignorance and disease which still afflict millions of our people. A basic requirement for achieving this order of growth is the availability of energy, particularly electricity. We need increasing quantities of electricity to support our agriculture, industry and to give comfort to our householders. The generation of electricity has to grow at an annual rate of 8 to 10 per cent.

Now, hydro-carbons are one source of generating power and for meeting our energy requirements. But our production of hydro-carbons both of oil and gas is far short of our growing requirements. We are heavily dependent on imports. We all know the uncertainty of supplies and of prices of imported hydro-carbons.

We have to diversify our sources of energy supply.

We have large reserves of coal but even these are inadequate to meet all our needs by 2050. But more use of coal will have an adverse impact on pollution and climate. We can develop hydro-power and we must. But many of these projects hurt the environment and displace large number of people. We must develop renewable sources of energy particularly solar energy. But we must also make full use of atomic energy which is a clean environment friendly source of energy. All over the world, there is growing realization of the importance of atomic energy to meet the challenge of energy security and climate change.

India's atomic scientists and technologists are world class. They have developed nuclear energy capacities despite heavy odds. But there are handicaps which have adversely affected our atomic energy programme. First of all, we have inadequate production of uranium. Second, the quality of our uranium resources is not comparable to those of other producers.

Third, after the Pokharan nuclear test of 1974 and 1998 the outside world has imposed embargo on trade with India in nuclear materials, nuclear equipment and nuclear technology. As a result, our nuclear energy programme has suffered. Some twenty years ago, the Atomic Energy Commission had laid down a target of 10000 MW of electricity generation by the end of the twentieth century. Today, in 2008 our capacity is about 4000 MW and due to shortage of uranium many of these plants are operating at much below their capacity.

The nuclear agreement that we wish to negotiate will end India's nuclear isolation, nuclear apartheid and enable us to take advantage of international trade in nuclear materials, technologies and equipment. It will open up new opportunities for trade in dual use high technologies opening up new pathways to accelerate industrialization of our country. Given the excellent quality of our nuclear scientists and technologists, I have reasons to believe that in a reasonably short period of time, India would emerge as an important exporter of nuclear technologies, and equipment for civilian purposes.

When I say this I am reminded of the visionary leadership of Shri Rajiv Gandhi who was a strong champion of computerization and use of information technologies for nation building. At that time, many people laughed at this idea. Today, information technology and software is a sunrise industry with an annual turnover soon approaching 50 billion US dollars. I venture to think that our atomic energy industry will play a similar role in the transformation of India's economy.

The essence of the matter is that the agreements that we negotiate with USA, Russia, France and other nuclear countries will enable us to enter into international trade for civilian use without any interference with our strategic nuclear programme. The strategic programme will continue to be developed at an autonomous pace determined solely by our own security perceptions. We have not and we will not accept any outside interference or monitoring or supervision of our strategic programme. Our strategic autonomy will never be compromised. We are willing to look at possible amendments to our Atomic Energy Act to reinforce our solemn commitment that our strategic autonomy will never be compromised.

I confirm that there is nothing in these agreements which prevents us from further nuclear tests if warranted by our national security concerns. All that we are committed to is a voluntary moratorium on further testing. Thus the nuclear agreements will not in any way affect our strategic autonomy. The

cooperation that the international community is now willing to extend to us for trade in nuclear materials, technologies and equipment for civilian use will be available to us without signing the NPT or the CTBT.

This I believe is a measure of the respect that the world at large has for India, its people and their capabilities and our prospects to emerge as a major engine of growth for the world economy. I have often said that today there are no international constraints on India's development. The world marvels at our ability to seek our social and economic salvation in the framework of a functioning democracy committed to the rule of law and respect for fundamental human freedoms. The world wants India to succeed. The obstacles we face are at home, particularly in our processes of domestic governance.

I wish to remind the House that in 1998 when the Pokharan II tests were undertaken, the Group of Eight leading developed countries had passed a harsh resolution condemning India and called upon India to sign the NPT and CTBT. Today, at the Hokkaido meeting of the G-8 held recently in Japan, the Chairman's summary has welcomed cooperation in civilian nuclear energy between India and the international community. This is a measure of the sea change in the perceptions of the international community our trading with India for civilian nuclear energy purposes that has come about in less than ten years.

Our critics falsely accuse us, that in signing these agreements, we have surrendered the independence of foreign policy and made it subservient to US interests. In this context, I wish to point out that the cooperation in civil nuclear matters that we seek is not confined to the USA. Change in the NSG guidelines would be a passport to trade with 45 members of the Nuclear Supplier Group which includes Russia, France, and many other countries.

We appreciate the fact that the US has taken the lead in promoting cooperation with India for nuclear energy for civilian use. Without US initiative, India's case for approval by the IAEA or the Nuclear Suppliers Group would not have moved forward.

But this does not mean that there is any explicit or implicit constraint on India to pursue an independent foreign policy determined by our own perceptions of our enlightened national interest. Some people are spreading the rumours that there are some secret or hidden agreements over and above the documents made public. I wish to state categorically that there

are no secret or hidden documents other than the 123 agreement, the Separation Plan and the draft of the safeguard agreement with the IAEA. It has also been alleged that the Hyde Act will affect India's ability to pursue an independent foreign policy. The Hyde Act does exist and it provides the US administration the authorization to enter into civil nuclear cooperation with India without insistence on full scope safeguards and without signing of the NPT. There are some prescriptive clauses but they cannot and they will not be allowed to affect in any way the conduct of our foreign policy. Our commitment is to what has been agreed in the 123 Agreement. There is nothing in this Agreement which will affect our strategic autonomy or our ability to pursue an independent foreign policy. I state categorically that our foreign policy, will at all times be determined by our own assessment of our national interest. This has been true in the past and will be true in future regarding our relations with big powers as well as with our neighbours in West Asia, notably Iran, Iraq, Palestine and the Gulf countries.

We have differed with the USA on their intervention in Iraq. I had explicitly stated at a press conference at the National Press Club in Washington DC in July 2005 that intervention in Iraq was a big mistake. With regard to Iran, our advice has been in favour of moderation and we would like that the issues relating to Iran's nuclear programme which have emerged should be resolved through dialogue and discussions in the framework of the International Atomic Energy Agency.

I should also inform the House that our relations with the Arab world are very good. Two years ago, His Majesty, King Abdullah of Saudi Arabia was the Chief Guest at our Republic Day. More recently, we have played host to the President of Iran, President of Syria, the King of Jordan, the Emir of Qatar and the Emir of Kuwait. With all these countries we have historic civilisational and cultural links which we are keen to further develop to our mutual benefit. Today, we have strategic relationship with all major powers including USA, Russia, France, UK, Germany, Japan, China, Brazil, Nigeria and South Africa. We are Forging new partnerships with countries of East Asia, South East Asia and Africa.

CONCLUSION

The Management and governance of the world's largest, most diverse and most vibrant democracy is the greatest challenge any person can be entrusted with, in this world. It has been my good fortune that I was entrusted with this challenge over four years ago. I thank with all sincerity the Chairperson of the UPA, the leaders of the Constituent Parties of the UPA

and every member of my Party for the faith and trust they reposed in me. I once again recall with gratitude the guidance and support I have received from Shri Jyoti Basu and Sardar Harkishen Singh Surjeet.

I have often said that I am a politician by accident. I have held many diverse responsibilities. I have been a teacher, I have been an official of the Government of India, I have been a member of this greatest of Parliaments, but I have never forgotten my life as a young boy in a distant village.

Every day that I have been Prime Minister of India I have tried to remember that the first ten years of my life were spent in a village with no drinking water supply, no electricity, no hospital, no roads and nothing that we today associate with modern living. I had to walk miles to school, I had to study in the dim light of a kerosene oil lamp. This nation gave me the opportunity to ensure that such would not be the life of our children in the foreseeable future.

Sir, my conscience is clear that on every day that I have occupied this high office, I have tried to fulfill the dream of that young boy from that distant village.

The greatness of democracy is that we are all birds of passage! We are here today, gone tomorrow! But in the brief time that the people of India entrust us with this responsibility, it is our duty to be honest and sincere in the discharge of these responsibilities. As it is said in our sacred texts, we are responsible for our actions and we must act without coveting the rewards of such action. Whatever I have done in this high office I have done so with a clear conscience and the best interests of my country and our people at heart. I have no other claims to make.

110. Interview of External Affairs Minister Pranab Mukherjee with Amit Baruah of the daily *Hindustan Times*.

New Delhi, July 23, 2008.

(External Affairs Minister Pranab Mukherjee looked relaxed during the course of an exclusive interview with HT's Amit Baruah after Tuesday's confidence vote. He was hopeful, but cautious about India completing the rest of the steps in implementing the civil nuclear deal with the United States. Excerpts:)

Will the Nuclear Suppliers Group prove a tougher nut to crack than getting the confidence vote through Parliament as far as the civil nuclear deal is concerned?

Parliament was difficult in the sense because there was a combination of all (issues)...but it became easier with the withdrawal of the Left Parties. Within an hour, the Samajwadi Party extended its support to the UPA government. But then we did simple arithmetic and found out that the government has a majority. But efforts were made; we were keeping our fingers crossed that everything goes through.

But, NSG is definitely more difficult in the sense that consensus is needed and 45 countries are there. Some of them have very strong belief in non-proliferation; not any other reason.

With every (NSG) country, India has excellent relations, but some have strong ideological positions - their total opposition to any expansion of nuclear weapons' states - whether de facto or de jure.

We will have to overcome this. It will take time, but with the cooperation of our friends, we should be able to overcome this hurdle.

When do you think the NSG might convene a meeting?

It's difficult for me to provide an exact time schedule, but if on August 1 we receive the approval of the IAEA board of governors, then after the declaration of documentation and other things, some of our friendly countries will have to move the NSG for amending the guidelines so that India can participate in international trade in nuclear materials. I think it may take one or two meetings.

But you are hopeful?

We are trying to do our best. In all 45 (NSG) countries, our missions are active...there are regular channels of foreign office consultations. Some bilateral visits are also taking place.

Will you be able to convince NSG countries that the 123 agreement is only for civil nuclear cooperation?

That is our effort. What are we saying? Let us be plain and simple. As far as your cooperation is concerned, it is totally for peaceful purposes. We will not misuse it - our (non-proliferation) record is impeccable.

Though we are not signatories to the Nuclear Non-proliferation Treaty, all the vital obligations of the NPT have been voluntarily accepted and implemented by us since 1974.

Through our indigenous efforts, we have developed (our nuclear capability). And, we did not go through the AQ Khan route. At the same time, we enforced strict controls...there is no nuclear trade with any country.

But, as far as our strategic programmes are concerned, it will depend on our threat perception. And, this is our threat perception, not that of others. A sovereign country formulates its own perceptions and, accordingly, it formulates policies, programmes and implements these.

There (in the strategic programme), we will neither seek any assistance, nor do we expect any assistance from anyone.

We want a clean exemption from the NSG. Suppose, the Group says that India's nuclear trade would be ended should it test another nuclear device?

All this are hypothetical questions. We want a clean exemption because (in) certain areas, for instance in the 123 and the India-specific safeguards' agreement texts, we made it quite clear that there is no reference to the Hyde Act or any other prescriptive provisions...

We have clear perceptions of what we mean by 'clean'. Unless we get the other sides' story, how can I react to it?

Do India and the United States need to formally sign the 123 agreement?

Formal signature will be required. The (123) text has been frozen; the US will have to finalise the Presidential declaration. Then, in their Congressional

programme, it will be an up or down resolution.

So, there will not be much debate - there will be either rejection or acceptance. But it will depend on them. After this, the question of formal signatures will arise.

Under the 123 agreement, India will have to negotiate an additional protocol with the IAEA. Will that process start soon?

How can it start soon? We will have to go stage by stage.

Will India now be able to move forward on issues like the defence logistics supply agreement that had been put on hold on account of opposition by the Left parties?

Every issue is independent. One need not be linked with the other; nothing was held back because of political compulsions. Sure, we tried our best to carry conviction with our colleagues in the Left parties because they were our valued supporters.

But, at the same time, there are some issues the government of the day decides. These issues have been discussed on a number of occasions. We have our own perceptions. And, that is an area where there is divergence of views. Unless divergence is brought to convergence, these issues cannot be sorted out immediately.

111. Press Release of the High Commission of India in Pretoria on the visit of Minister of State Anand Sharma to South Africa as Special Envoy of the Prime Minister to canvass support for Civil Nuclear Energy Cooperation initiative.

Pretoria, July 29, 2008.

Mr. Anand Sharma, Minister of State for External Affairs, arrived in South Africa today (29 July) as the Special Envoy of the Prime Minister of India to garner support for the civil nuclear cooperation initiative. In this context, he called on H.E. Mr. Thabo Mbeki, President of the Republic of South Africa, at the Presidential Residence in Pretoria this evening. The meeting assumes significance in view of the forthcoming IAEA Board of Governors meeting on August 1, 2008.

2. Minister Sharma handed over a letter from Prime Minister Dr. Manmohan Singh to President Mbeki. They had a wide-ranging discussion on bilateral relations in general and the civil nuclear cooperation initiative in particular. They also discussed President Mbeki's forthcoming state visit to India during the 3rd IBSA Summit in October 2008.
3. Minister Sharma sought South Africa's support in light of India's historic relationship with South Africa and multi-sectoral strategic partnership between the two countries. The President assured the Special Envoy of South Africa's support and complete understanding of India's quest for energy security and reiterated the stated position with respect to the matters before the IAEA Board as well as the Nuclear Suppliers Group(NSG).
4. Minister Sharma is covering four major African countries as the Special Envoy of the Indian Prime Minister. Earlier this week we had secured similar assurances of support from President John Kufuor of Ghana and President Umaru Yar'Adua of Nigeria. Later this week he is scheduled to meet Prime Minister Meles Zenawi of Ethiopia.

112. Introductory Statement by the Director General, IAEA to the Board of Governors of the IAEA.

Vienna, August 1, 2008.

I am pleased to put before you the draft Agreement with the Government of India for the Application of Safeguards to Civilian Nuclear Facilities. As the Secretariat has already provided an extensive briefing on this, I will emphasize just a few points.

The text before you is an INFCIRC/66-type safeguards agreement based on the Agency's standard safeguards practices and procedures. These 66-type agreements are not comprehensive or full-scope safeguards agreements. They are concluded in accordance with Article III.A.5 of the Agency's Statute and provide for the application of safeguards to specific facilities or other relevant items. In the case of the draft before you, it is an "umbrella agreement", which provides for any facility notified by India to the Agency in the future to become subject to safeguards. The draft also envisages the possibility of applying current Agency safeguards in India under this new agreement by suspending, subject to agreement by the relevant parties, the application of safeguards under existing agreements. The "umbrella" nature of this agreement provides a more efficient mechanism for ensuring that safeguards requirements can be met. It satisfies India's needs while maintaining all the Agency's legal requirements. Such an "umbrella" approach could also be used for the conclusion of other 66-type safeguards agreements. As you can see from India's Plan, which has been circulated for the information of all IAEA Member States, a total of 14 reactors are envisaged to come under Agency safeguards by 2014. I should note that the Agency already applies safeguards to six of these 14 reactors under existing 66 type agreements with India. We expect to start implementing the agreement at new facilities in 2009. Facilities will be notified by India to the Agency in stages and the Secretariat will keep you informed when facilities are submitted for safeguards.

As with other safeguards agreements between the Agency and Member States, the agreement is of indefinite duration. There are no conditions for the discontinuation of safeguards other than those provided by the safeguards agreement itself. The termination provisions contained in the agreement are the same as for other 66-type agreements. Naturally - as with all safeguards agreements - this agreement is subject to the general rules of international law. Therefore, the agreement should be read as an

integral whole. The preamble provides for contextual background and safeguards are implemented in accordance with the terms of the agreement.

Finally, I should note that India and the IAEA have already begun discussions on an additional protocol to the draft safeguards agreement.

**113. Press Statement of Director General of the IAEA
Mohamed ElBaradei after the adoption of the India
Safeguards Agreement.**

Vienna, August 1, 2008.

"The Board of Governors this afternoon adopted by consensus the agreement to apply safeguards to civilian nuclear facilities in India. I believe the agreement is good for India, is good for the world, is good for non-proliferation, is good for our collective effort to move towards a world free from nuclear weapons. What the agreement does is bring India closer to the debate on our ultimate goal, which is the goal of the Nuclear Non-Proliferation Treaty (NPT) - to establish a world free from nuclear weapons.

"I have always maintained that if we were to move forward toward strengthening non-proliferation to reduce the nuclear weapons arsenal, toward moving to a world free from nuclear weapons, that dialogue has to be universal and inclusive. We cannot exclude from that debate India or Pakistan or Israel - the three countries who remain outside the NPT. These represent 20% of the world's population and they have to be included.

"India committed itself to harmonize its laws on export controls with those of the supplier group. That's very important because one of our main goals continues to be that nuclear material will not fall into the wrong hands.

"India has 1.1 billion people. They need a tremendous amount of electricity for development. India is the fifth largest consumer of energy, and will be the third largest consumer of energy by 2030. The option of not making full use of nuclear energy is to continue to rely even more heavily on coal and gas and oil, with the impact of course on climate change. Allowing India to make full use of nuclear energy and state of the art technology, is also

again good for the world. It ensures safety, security and development.

"I look at the agreement from a big picture, and the big picture is that I hope the agreement will reignite the debate on nuclear disarmament. It would hopefully create a new environment of partnership - and not of isolation - that will bring India together. A concrete result of that would be a comprehensive moratorium by all States that have nuclear weapons not to test at any time in the future, until the Comprehensive Test-Ban Treaty comes into force, which I hope will happen soon.

"I hope it will also lead to a moratorium on production of any nuclear material for weapons purposes, until we have the Fissile Material Cut-off Treaty in force.

"The India Safeguards Agreement could have, if properly implemented, a lot of positive implications, development implications, security implications, non-proliferation implications, and arms control implications. I have been supporting the agreement from day one and am very happy today that I see that my judgment has been certified by the Board in approving the agreement by consensus."

114. Statement by Prime Minister Dr. Manmohan Singh on the decision of the IAEA Board of Governors to approve the India Specific Safeguards Agreement.

Colombo¹, August 1, 2008.

I am delighted to hear that the IAEA Board of Governors has decided today by consensus to approve the India Specific Safeguards Agreement. This is an important day for India, and for our civil nuclear initiative for the resumption of India's cooperation with our friends abroad.

The civil nuclear initiative is good for India and good for the world. As we move forward towards our goal of sustainable development and energy security, the peaceful uses of atomic energy will play an increasingly important role.

I am grateful to the members of the IAEA Board of Governors, to our partners and friends abroad, and in particular, to the USA, for making this important step in the IAEA possible.

The DG of the IAEA, Dr. El Baradei, has played a significant role and we look forward to working with him and his Agency in implementing this agreement.

I am deeply appreciative of the historic significance of this milestone in our cooperation with the IAEA and the international community in peaceful uses of atomic energy.

1 The Prime Minister was in Colombo in connection with the SAARC Summit.

115. Extract relevant to Civil Nuclear Energy Cooperation Agreement with the U.S from the Media Briefing by Foreign Secretary Shivshankar Menon at the SAARC Summit in Colombo after the Board of Governors of the IAEA had approved the India Safeguards Agreement.

Colombo, August 1, 2008.

(At the outset the Foreign Secretary read the Prime Minister's statement - Please see Document No.114.)

* * * *

Question: Now that India has crossed this important milestone in the IAEA, how difficult is the next step at the NSG.....

Foreign Secretary: Well, I can only say that we will give it our best effort just as we did at each stage of this process. I think we are convinced that what we are doing is, as Prime Minister has said good for India, good for the world. Therefore, we will do our best to see that we move through the next steps in the future.

Question: What constitutes clean exemption at NSG.....unconditional exemption?

Foreign Secretary: I think we have made it clear that what we would expect in order to move forward is a clean, unconditional exemption. I don't want to get into, you know, what would constitute clean, whether this clean means any other word which you might find. But, we have been consistent in saying this right through. Quite frankly, for us, the exemption is important because this would enable us to resume full civil nuclear cooperation with the rest of the world, with members of the NSG and we are looking forward to that prospect.

* * * *

Question: Germany has called a meeting of the NSG in Vienna. Can you confirm that and after that what are the next steps?

Foreign Secretary: I can't confirm because we are not NSG members. So nobody sends us the notice. But the fact is yes we hear from the NSG members that a plenary meeting of the NSG has been called on 21st/22nd of August. We are not in the room, by the way, we are not members of the

NSG, so, that is why I don't want to confirm it formally. But, the fact is, yes, we believe a meeting has been called and that they will consider the exemption for India. We will work with the NSG members. We have been in touch with them now for some time, as you know and we will work with them to try and get a clean, unconditional exemption. Thereafter, once the NSG clears we look forward to entering into the specific detailed agreements that we will need to do with individual partner countries whether they are inter-governmental agreements like the 123 with the US which needs US domestic processes to be complete which includes Congress or whether there are inter-governmental agreements with other States who are willing to work with us in this area. And then, after that, the next step is really the actual contracts for material, equipment, reactors whatever. So, there is a fair amount of detailing still to be done in this process before you actually come to the stage of placing a commercial order and shipping it. What we are doing here is creating the international enabling environment within which such transfers can take place. One big step has been taken today in having a Safeguards Agreement which is an umbrella agreement into which we can bring various arrangements that we will enter into with our partners. The NSG would be the next big step.

Question: Is the meeting in Vienna?

Foreign Secretary: I am not sure. I will check and let you know.

116. Media¹ Report on the Statement made by the Chairman of the Atomic Energy Commission Anil Kakodkar at the IAEA after the adoption of the Safeguard Agreement with India.

Vienna, August 1, 2008.

In a statement right after the Indian safeguards agreement was approved by the Board of Governor of the IAEA, Atomic Energy Commission Chairman Anil Kakodkar pledged India's support to the further strengthening of the IAEA's role "in promoting international cooperation and the peaceful use of nuclear energy."

India, he said, "looked forward to cooperating with the Agency to facilitate the implementation of [the safeguards] agreement in accordance with the provisions of this agreement which, as the Director-General has pointed out, should be read as an integral whole."

Dr. Kakodkar noted that the safeguards text approved had been negotiated by India and the IAEA "also using the guidance documents adopted by the Board for the purposes of concluding and implementing Infcirc/66 type agreements."

The safeguards agreement "speaks for itself," he said, adding, "we see no difficulty in implementing this agreement on the basis of what is stated therein." India, he stressed, "will implement this agreement in strict accordance with its provisions."

Describing India's capabilities in the civilian nuclear sphere, the chairman said nuclear energy had an important role to play in fulfilling the country's long-term need for electricity.

He also stressed the positive impact India would have on the global climate change once the doors for international civilian nuclear cooperation were opened for it. "We live in an interdependent world and we share the common global concerns on the need to tackle the problem of greenhouse gas emissions and global warming. Nuclear energy, which is recognised today as a clean and environmentally-friendly source of energy that can meet

1 The report is based on the report carried by *the Hindu* on August 2, 2008.

the twin challenges of sustainability and climate change, is indispensable to addressing our common energy future."²

2 The next day Dr. Kakodkar in an interview to *the Hindu* while still in Vienna, described the "clean and unconditional exemption" from the Nuclear Suppliers Group as being of "crucial importance" to the successful implementation of the Indo-U.S. nuclear agreement. Any conditions to the contrary "would literally take away with one hand what has been given with the other." The NSG "guidelines apply to non-nuclear weapons states (NNWS). So our preference is for the NSG to simply say that these guidelines do not apply to India. If they are unwilling to say that, at a minimum, the requirement of full-scope safeguards and other prescriptive elements in the guidelines that are intended for NNWS must be waived for India." Describing the NSG guidelines as a "weave meant for non-nuclear weapon states," Dr. Kakodkar said there were "references and requirements here and there" and India has to be careful that "such conditions do not come in even indirectly." "If you read the NSG guidelines as a whole, right at the top, it says these prescriptions are for non-nuclear weapons states. There is an enunciation of the requirement that countries must accept full-scope safeguards. There is language about what happens if one of these states tests, there is restrictive language on enrichment and reprocessing (ENR) equipment, and so on." Asked about the sort of conditions India was being asked to accept, the AEC chairman said the U.S. had still not given India its proposals. "Of course, we are very clear that there cannot be any linkage with nuclear tests," he said. India was committed to its voluntary moratorium "but just as in the 123 agreement with the U.S., there cannot be any explicit linkage to nuclear testing as a condition in the NSG," he added. Nor should there be any advice or suggestion that India must join the NPT or accept the conditions that non-nuclear weapon states are subject to. The NSG had to realise India cannot be treated as an NNWS. "I am not interested in labels like the NPT definition of a nuclear weapon state because we are what we are," said Dr. Kakodkar. "But certainly we don't want the other label to be attached to us either." India, Dr. Kakodkar stressed, "should be treated as it is." After all, it has concluded agreements on nuclear commerce with Russia and France, and even with the U.S. "Are any of these elements present in those agreements? So our view is that all these things in the NSG are extraneous. Tomorrow, if the political situation changes, all these things can create difficulties." In the very first draft of proposed changes to the NSG guidelines circulated in March 2006, the U.S. had inserted a line that NSG members would "continue to strive for the earliest possible implementation" of full-scope safeguards on Indian nuclear facilities." That draft, said Dr. Kakodkar, "has been thrown out. It no longer exists." But he expressed concern about the delay in the final framing of the proposed guideline changes. "We don't want a situation where there is some kind of *fait accompli* and we don't have time to examine things." Asked whether India would walk away if the NSG failed to provide a clean and unconditional waiver, Dr. Kakodkar said, "Why not?" He described the India-specific safeguards agreement (ISSA) as something that would remain a useful achievement. We have six reactors that are already under separate safeguards. All of them can be subsumed under the ISSA. And as and when someone wants to cooperate with us, everything else can be brought into this as well. The NSG guidelines are there for the suppliers but if someone wants to trade with India, the ISSA is useful." The safeguards agreement creates a "distinctive class for India," he said, because it is the "first multilateral instrument that recognises there is a nuclear programme in the country which remains outside the civil programme.....So I believe the ISSA is useful by itself, though our intention is not to remain there but to go beyond and start cooperation."

117. Agreement between the Government of India and the International Atomic Energy Agency for the Application of Safeguards to Civilian Nuclear Facilities.

RECOGNIZING the significance India attaches to civilian nuclear energy as an efficient, clean and sustainable energy source for meeting global energy demand, in particular for meeting India's growing energy needs;

WHEREAS India is committed to the full development of its national three-stage nuclear programme to meet the twin challenges of energy security and protection of the environment;

WHEREAS India has a sovereign and inalienable right to carry out nuclear research and development activities for the welfare of its people and other peaceful purposes;

WHEREAS India, a State with advanced nuclear technology, wishes to expand civil nuclear cooperation for its national development;

WHEREAS India is desirous of further expanding cooperation with the International Atomic Energy Agency (hereinafter referred to as "the Agency") and its Member States with the objective of the full development and use of nuclear energy for peaceful purposes, on a stable, reliable and predictable basis;

WHEREAS India supports the role of the Agency in the promotion of the safe and peaceful uses of nuclear energy as set forth in the Statute of the Agency (hereinafter referred to as the "Statute");

WHEREAS India and the Agency have long standing cooperation in various aspects of the Agency's activities;

RECOGNIZING that such cooperation between India and the Agency must be carried out with full respect for the objectives of the Statute and with due observance of the sovereign rights of India;

WHEREAS the Statute authorizes the Agency to apply safeguards, at the request of the parties, to any bilateral or multilateral arrangement, or at the request of a State to any of the State's activities in the field of atomic energy and, in this context:

Noting the relevance for this Agreement of the understandings between India and the United States of America expressed

in the India-U.S. Joint Statement of 18 July 2005, in which India, inter alia, has stated its willingness:

- to identify and separate its civilian and military nuclear facilities and programmes in a phased manner;
- to file with the Agency a declaration regarding its civilian nuclear facilities (hereinafter referred to as "the Declaration");
- to take a decision to place voluntarily its civilian nuclear facilities under Agency safeguards;

Noting also for the purposes of this Agreement that:

- India will place its civilian nuclear facilities under Agency safeguards so as to facilitate full civil nuclear cooperation between India and Member States of the Agency and to provide assurance against withdrawal of safeguarded nuclear material from civilian use at any time;
- An essential basis of India's concurrence to accept Agency safeguards under an India-specific safeguards agreement (hereinafter referred to as "this Agreement") is the conclusion of international cooperation arrangements creating the necessary conditions for India to obtain access to the international fuel market, including reliable, uninterrupted and continuous access to fuel supplies from companies in several nations, as well as support for an Indian effort to develop a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India's reactors; and
- India may take corrective measures to ensure uninterrupted operation of its civilian nuclear reactors in the event of disruption of foreign fuel supplies;

WHEREAS India is desirous of expanding civil nuclear cooperation with other Member States of the Agency;

WHEREAS the conclusion of this Agreement is intended to facilitate the broadest possible cooperation between India and Member States of the Agency in the peaceful uses of nuclear energy and ensure international participation in the further development of India's civilian nuclear programme on a sustained and long-term basis;

RECALLING that the Agency in accordance with its Statute and safeguards system must take into account, in the implementation of safeguards in India, the need to avoid hampering the peaceful uses of nuclear energy, economic and technological development or international cooperation in the field of peaceful uses of nuclear energy; respect health, safety and physical protection and related security provisions in force in India; and take every precaution to protect commercial, technological and industrial secrets as well as other confidential information coming to its knowledge;

WHEREAS the frequency and intensity of activities described in this Agreement shall be kept to the minimum consistent with the objective of effective and efficient Agency safeguards;

WHEREAS India has requested the Agency to apply safeguards with respect to items subject to this Agreement;

WHEREAS the Board of Governors of the Agency (hereinafter referred to as the "Board") acceded to that request on;

NOW THEREFORE, taking into account the above, India and the Agency have agreed as follows:

I. GENERAL CONSIDERATIONS

A. BASIC UNDERTAKINGS

1. India undertakes that none of the items subject to this Agreement, as defined in paragraph 11, shall be used for the manufacture of any nuclear weapon or to further any other military purpose and that such items shall be used exclusively for peaceful purposes and shall not be used for the manufacture of any nuclear explosive device.
2. The Agency undertakes to apply safeguards, in accordance with the terms of this Agreement, to the items subject to this Agreement, as defined in paragraph 11, so as to ensure, as far as it is able, that no such item is used for the manufacture of any nuclear weapon or to further any other military purpose and that such items are used exclusively for peaceful purposes and not for the manufacture of any nuclear explosive device.

B. GENERAL PRINCIPLES

3. The purpose of safeguards under this Agreement is to guard against withdrawal of safeguarded nuclear material from civilian use at any time.

4. The application of safeguards under this Agreement is intended to facilitate implementation of relevant bilateral or multilateral arrangements to which India is a party, which are essential to the accomplishment of the objective of this Agreement.
5. Bearing in mind Article II of the Statute, the Agency shall implement safeguards in a manner designed to avoid hampering India's economic or technological development, and not to hinder or otherwise interfere with any activities involving the use by India of nuclear material, non-nuclear material, equipment, components, information or technology produced, acquired or developed by India independent of this Agreement for its own purposes.
6. The safeguards procedures set forth in this document shall be implemented in a manner designed to be consistent with prudent management practices required for the economic and safe conduct of nuclear activities.
7. In implementing safeguards, the Agency shall take every precaution to protect commercial and industrial secrets. No member of the Agency's staff shall disclose, except to the Director General and to such other members of the staff as the Director General may authorize to have such information by reason of their official duties in connection with safeguards, any commercial or industrial secret or any other confidential information coming to his knowledge by reason of the implementation of safeguards by the Agency.
8. The Agency shall not publish or communicate to any State, organization or person any information obtained by it in connection with the implementation of safeguards in India, except that:
 - (a) Specific information relating to such implementation in India may be given to the Board and to such Agency staff members as require such knowledge by reason of their official duties in connection with safeguards, but only to the extent necessary for the Agency to fulfil its safeguards responsibilities;
 - (b) Summarized lists of items being safeguarded by the Agency may be published upon decision of the Board; and
 - (c) Additional information may be published upon decision of the Board and if all States directly concerned agree.

9. In the light of Article XII.A.5 of the Statute, safeguards shall continue with respect to produced special fissionable material and to any materials substituted therefor.
10. Nothing in this Agreement shall affect other rights and obligations of India under international law.

II. CIRCUMSTANCES REQUIRING SAFEGUARDS

A. ITEMS SUBJECT TO THIS AGREEMENT

11. The items subject to this Agreement shall be:
 - (a) Any facility listed in the Annex to this Agreement, as notified by India pursuant to paragraph 14(a) of this Agreement;
 - (b) Any nuclear material, non-nuclear material, equipment and components supplied to India which are required to be safeguarded pursuant to a bilateral or multilateral arrangement to which India is a party;
 - (c) Any nuclear material, including subsequent generations of special fissionable material, produced, processed or used in or by the use of a facility listed in the Annex or in or by the use of any nuclear material, non-nuclear material, equipment and components referred to in paragraph 11(b);
 - (d) Any nuclear material substituted in accordance with paragraph 27 or 30(d) of this Agreement for nuclear material referred to in paragraph 11(b) or 11(c) of this Agreement;
 - (e) Any heavy water substituted in accordance with paragraph 32 of this Agreement for heavy water subject to this Agreement;
 - (f) Any facility other than a facility identified in paragraph 11(a) above, or any other location in India, while producing, processing, using, fabricating or storing any nuclear material, non-nuclear material, equipment or components referred to in paragraph 11(b), (c), (d) or (e) of this Agreement, as notified by India pursuant to paragraph 14(b) of this Agreement.
12. The scope of this Agreement is limited to the items subject to this Agreement as defined in paragraph 11 above.

Declaration

13. Upon entry into force of this Agreement, and a determination by India that all conditions conducive to the accomplishment of the objective of this Agreement are in place, India shall file with the Agency a Declaration, based on its sovereign decision to place voluntarily its civilian nuclear facilities under Agency safeguards in a phased manner.

Notifications

14.
 - (a) India, on the basis of its sole determination, shall notify the Agency in writing of its decision to offer for Agency safeguards a facility identified by India in the Declaration referred to in paragraph 13, or any other facility to be determined by India. Any facility so notified by India to the Agency will be included in the Annex, and become subject to this Agreement, as of the date of receipt by the Agency of such written notification from India.
 - (b) Should India, on the basis of its sole determination, decide to import or transfer any nuclear material, non-nuclear material, equipment or components subject to this Agreement to any facility or other location in India provided for in paragraph 11(f) of this Agreement, it shall so notify the Agency. Any such facility or location so notified by India pursuant to this sub-paragraph shall become subject to this Agreement as of the date of receipt by the Agency of such written notification from India.
15. India shall notify the Agency of the receipt of any nuclear material, non-nuclear material, equipment and components referred to in paragraph 11(b) of this Agreement within four weeks of the arrival in India of such nuclear material, non-nuclear material, equipment and components.

Provision of Information to the Agency

16. In the event that India's notification pursuant to paragraph 14(a) of this Agreement relates to a facility subject to Agency safeguards under another Safeguards Agreement or Agreements in India at the time of entry into force of this Agreement, India shall provide the Agency, along with the relevant notification, such information as is

required pursuant to the other Safeguards Agreement or Agreements as relates to any nuclear material, non-nuclear material, equipment and components subject to safeguards there under.

17. With respect to any other facility listed in the Annex pursuant to paragraph 14(a) of this Agreement, India shall provide the Agency, within four weeks of the relevant notification, with:
 - (a) a list of all nuclear material at each such facility; and
 - (b) where relevant, and if required pursuant to a bilateral or multilateral arrangement to which India is party, information relating to:
 - (i) Any nuclear material, non-nuclear material, equipment and components supplied to India for production , processing, storage or use in such facility;
 - (ii) Any nuclear material, including subsequent generations of special fissionable material, produced, processed or used in or by the use of such facility or in or by the use of any nuclear material, non-nuclear material, equipment and components supplied to India for production, processing or use in such facility.
18. Each notification pursuant to paragraph 15 of the Agreement shall include all information relevant to the nuclear material, non-nuclear material, equipment and components so notified, including the facility or location where the nuclear material, non-nuclear material, equipment and components so notified will be received.
19. The information provided by India pursuant to paragraphs 16, 17 and 18 of this Agreement shall specify, inter alia, to the extent relevant, the nuclear and chemical composition, physical form and quantity of the nuclear material; the date of shipment; the date of receipt; the identity of the consigner and the consignee; and any other relevant information, such as the type and capacity of any facility (or parts thereof), components or equipment; and the type and quantity of non-nuclear material. In the case of a facility or other location subject to this Agreement, the information to be provided shall include the type and capacity of that facility or location, and any other relevant information.

20. India shall thereafter notify the Agency by means of reports, in accordance with this Agreement, of any nuclear material, non-nuclear material, equipment and components referred to in paragraph 11(b), (c), (d) or (e) of this Agreement. The Agency may verify the calculations of the amounts and/or quantities of such nuclear material, non-nuclear material, equipment and components, and appropriate adjustments shall be made by agreement between India and the Agency.
21. The Agency shall maintain an inventory of items subject to this Agreement. The Agency shall send a copy of the inventory it maintains with respect to such information to India every twelve months and also at any other times specified by India in a request communicated to the Agency at least two weeks in advance.

B. SAFEGUARDS UNDER OTHER AGREEMENTS

22. The application of Agency safeguards under other Safeguards Agreements concluded by India with the Agency and in force at the time of entry into force of this Agreement may, subject to agreement by the Parties to such other Safeguards Agreements and following notification by India of the relevant facilities pursuant to paragraph 14(a), be suspended while this Agreement is in force. The application of safeguards under this Agreement to nuclear material, non-nuclear material, equipment or components subject to safeguards under such other Agreements shall commence as of the date of receipt by the Agency of India's notification. India's undertaking not to use items subject thereto in such a way as to further any military purpose, and its undertaking that such items shall be used exclusively for peaceful purposes and shall not be used for the manufacture of any nuclear explosive device, shall continue to apply.

C. EXEMPTIONS FROM SAFEGUARDS

General Exemptions

23. Nuclear material that would otherwise be subject to safeguards shall be exempted from safeguards at the request of India, provided that the material so exempted in India may not at any time exceed:
 - (a) 1 kilogram in total of special fissionable material, which may consist of one or more of the following:

- (i) Plutonium;
- (ii) Uranium with an enrichment of 0.2 (20 %) and above, taken account of by multiplying its weight by its enrichment;
- (iii) Uranium with an enrichment below 0.2 (20 %) and above that of natural uranium, taken account of by multiplying its weight by five times the square of its enrichment;
- (b) 10 metric tons in total of natural uranium and depleted uranium with an enrichment above 0.005 (0.5%);
- (c) 20 metric tons of depleted uranium with an enrichment of 0.005 (0.5 %) or below; and
- (d) 20 metric tons of thorium.

Exemptions Related to Reactors

24. Produced or used nuclear material that would otherwise be subject to safeguards because it is being or has been produced, processed or used in a reactor which has been supplied wholly or substantially under a project agreement, submitted to safeguards under a safeguards agreement by the parties to a bilateral or multilateral arrangement or unilaterally submitted to safeguards under a safeguards agreement; or because it is being or has been produced in or by the use of safeguarded nuclear material, shall be exempted from safeguards if:
 - (a) It is plutonium produced in the fuel of a reactor whose rate of production does not exceed 100 grams of plutonium per year; or
 - (b) It is produced in a reactor determined by the Agency to have a maximum calculated power for continuous operation of less than 3 thermal megawatts, or is used in such a reactor and would not be subject to safeguards except for such use, provided that the total power of the reactors with respect to which these exemptions apply in any State may not exceed 6 thermal megawatts.
25. Produced special fissionable material that would otherwise be subject to safeguards only because it has been produced in or by the use of safeguarded nuclear material shall in part be exempted from

safeguards if it is produced in a reactor in which the ratio of fissionable isotopes within safeguarded nuclear material to all fissionable isotopes is less than 0.3 (calculated each time any change is made in the loading of the reactor and assumed to be maintained until the next such change). Such fraction of the produced material as corresponds to the calculated ratio shall be subject to safeguards.

D. SUSPENSION OF SAFEGUARDS

26. Safeguards with respect to nuclear material may be suspended while the material is transferred, under an arrangement or agreement approved by the Agency, for the purpose of processing, reprocessing, testing, research or development, within India or to any other Member State or to an international organization, provided that the quantities of nuclear material with respect to which safeguards are thus suspended in India may not at any time exceed:
 - (a) 1 effective kilogram of special fissionable material;
 - (b) 10 metric tons in total of natural uranium and depleted uranium with an enrichment 0.005 (0.5 %);
 - (c) 20 metric tons of depleted uranium with an enrichment of 0.005 (0.5 %) or below; and
 - (d) 20 metric tons of thorium.
27. Safeguards with respect to nuclear material in irradiated fuel which is transferred for the purpose of reprocessing may also be suspended if the State or States concerned have, with the agreement of the Agency, placed under safeguards substitute nuclear material in accordance with paragraph 30(d) of this Agreement for the period of suspension. In addition, safeguards with respect to plutonium contained in irradiated fuel which is transferred for the purpose of reprocessing may be suspended for a period not to exceed six months if the State or States concerned have, with the agreement of the Agency, placed under safeguards a quantity of uranium whose enrichment in the isotope uranium-235 is not less than 0.9 (90%) and the uranium-235 content of which is equal in weight to such plutonium. Upon expiration of the said six months or the completion of reprocessing, whichever is earlier, safeguards shall, with the agreement of the Agency, be applied to such plutonium and shall cease to apply to the uranium substituted therefor.

28. Under conditions specified in the Subsidiary Arrangements, the Agency shall suspend safeguards with respect to any parts of the facilities listed in the Annex which are removed for maintenance or repair.

E. TERMINATION OF SAFEGUARDS

29. The termination of safeguards on items subject to this Agreement shall be implemented taking into account the provisions of GOV/1621 (20 August 1973).
30. Nuclear material shall no longer be subject to safeguards under this Agreement after:
- (a) It has been returned to the State that originally supplied it (whether directly or through the Agency), if it was subject to safeguards only by reason of such supply and if:
 - (i) It was not improved while under safeguards; or
 - (ii) Any special fissionable material that was produced in it under safeguards has been separated out, or safeguards with respect to such produced material have been terminated ; or
 - (b) The Agency has determined that:
 - (i) It was subject to safeguards only by reason of its use in a principal nuclear facility which has been supplied wholly or substantially under a project agreement, submitted to safeguards under a safeguards agreement by the parties to a bilateral or multilateral arrangement or unilaterally submitted to safeguards under a safeguards agreement;
 - (ii) It has been removed from such a facility; and
 - (iii) Any special fissionable material that was produced in it under safeguards has been separated out, or safeguards with respect to such produced material have been terminated; or
 - (c) The Agency has determined that it has been consumed, or has been diluted in such a way that it is no longer usable for

any nuclear activity relevant from the point of view of safeguards, or has become practicably irrecoverable; or

- (d) India has, with the agreement of the Agency, placed under safeguards, as a substitute, such amount of the same element, not otherwise subject to safeguards, as the Agency has determined contains fissionable isotopes:

- (i) Whose weight (with due allowance for processing losses) is equal to or greater than the weight of the fissionable isotopes of the material with respect to which safeguards are to terminate; and

- (ii) Whose ratio by weight to the total substituted element is similar to or greater than the ratio by weight of the fissionable isotopes of the material with respect to which safeguards are to terminate to the total weight of such material;

provided that the Agency may agree to the substitution of plutonium for uranium-235 contained in uranium whose enrichment is not greater than 0.05 (5.0 %); or

- (e) It has been transferred out of India under paragraph 33(d) of this Agreement, provided that such material shall again be subject to safeguards if it is returned to India; or

- (f) The terms of this Agreement, pursuant to which it was subject to safeguards under this Agreement, no longer apply, by expiration of this Agreement or otherwise.

31. If India wishes to use safeguarded source material for non-nuclear purposes, such as the production of alloys or ceramics, it shall agree with the Agency on the circumstances under which the safeguards on such material may be terminated.

32. Safeguards shall be terminated on a facility listed in the Annex after India and the Agency have jointly determined that the facility is no longer usable for any nuclear activity relevant from the point of view of safeguards. Safeguards on non-nuclear material, equipment and components subject to this Agreement may be terminated as and when the non-nuclear material, equipment or components have been returned to the supplier or arrangements have been made by the

Agency to safeguard the non-nuclear material, equipment or components in the State to which it is being transferred, or when India and the Agency have jointly determined that the non-nuclear material, equipment or component in question has been consumed, is no longer usable for any nuclear activity relevant from the point of view of safeguards or has become practicably irrecoverable. Safeguards may be terminated on heavy water upon India's placing under safeguards as substitute the same amount of heavy water of equivalent or better heavy water concentration.

F. TRANSFERS

33. No safeguarded nuclear material shall be transferred outside the jurisdiction of India until the Agency has satisfied itself that one or more of the following conditions apply:
- (a) The material is being returned, under the conditions specified in paragraph 30(a) of this Agreement, to the State that originally supplied it; or
 - (b) The material is being transferred subject to the provisions of paragraph 26 or 27 of this Agreement; or
 - (c) Arrangements have been made by the Agency to safeguard the material in the State to which it is being transferred; or
 - (d) The material was not subject to safeguards pursuant to a project agreement and will be subject, in the State to which it is being transferred, to safeguards other than those of the Agency but generally consistent with such safeguards and accepted by the Agency.
34. India shall notify the Agency of its intention to transfer within its jurisdiction any nuclear material, non-nuclear material, equipment or component subject to this Agreement to any facility or location in India to which paragraph 11(f) applies and shall provide to the Agency, before such transfer is effected, the necessary information to enable the Agency to make arrangements for the application of safeguards to such nuclear material, non-nuclear material, equipment or component after its transfer. The Agency shall also be given the opportunity as early as possible in advance of such a transfer to review the design of the facility for the sole purpose of determining that the arrangements provided for in this Agreement can be effectively

applied. India may transfer the nuclear material, non-nuclear material, equipment or component only after the Agency has confirmed that it has made such arrangements.

35. India shall notify the Agency of its intention to transfer any nuclear material, non-nuclear material, equipment or component subject to this Agreement to a recipient which is not under the jurisdiction of India. Except as provided for in paragraph 30(a) of this Agreement, such nuclear material, non-nuclear material, equipment or component shall be so transferred only after the Agency has informed India that it has satisfied itself that Agency safeguards will apply with respect to the nuclear material, non-nuclear material, equipment or component in the recipient country. Upon receipt by the Agency of the notification of transfer from India and the confirmation of receipt by the recipient country, safeguards on such nuclear material, non-nuclear material, equipment or component shall be terminated under this Agreement.
36. The notifications referred to in paragraphs 34 and 35 of this Agreement shall be made to the Agency sufficiently in advance to enable it to make the arrangements required before the transfer is effected. The Agency shall promptly take any necessary action. The time limits for and the contents of these notifications shall be set out in the Subsidiary Arrangements.

III. SAFEGUARDS PROCEDURES

A. GENERAL PROCEDURES

Introduction

37. The safeguards procedures to be applied by the Agency are those specified in this Agreement, as well as such additional procedures as result from technological developments, and other procedures as may be agreed to between the Agency and India. The safeguards procedures set forth below shall be followed, as far as relevant, with respect to any item subject to this Agreement.
38. The Agency shall conclude with India Subsidiary Arrangements concerning the implementation of the safeguards procedures referred to above. The Subsidiary Arrangements shall also include any necessary arrangements for the application of safeguards to any item subject to this Agreement, including such containment and

surveillance measures as are required for the effective implementation of safeguards. The Subsidiary Arrangements shall enter into force no later than six months after entry into force of this Agreement.

Design Review

39. The Agency shall review the design of principal nuclear facilities, for the sole purpose of satisfying itself that a facility will permit the effective application of safeguards.
40. The design review of a principal nuclear facility shall take place at as early a stage as possible. In particular, such review shall be carried out in the case of:
 - (a) An Agency project, before the project is approved;
 - (b) A bilateral or multilateral arrangement under which the responsibility for administering safeguards is to be transferred to the Agency, or an activity or facility unilaterally submitted by India, before the Agency assumes safeguards responsibilities with respect to the facility;
 - (c) A transfer of safeguarded nuclear material to a principal nuclear facility whose design has not previously been reviewed, before such transfer takes place; and
 - (d) A significant modification of a principal nuclear facility whose design has previously been reviewed, before such modification is undertaken.
41. To enable the Agency to perform the required design review, India shall submit to it relevant design information sufficient for the purpose, including information on such basic characteristics of the principal nuclear facility as may bear on the Agency's safeguards procedures. The Agency shall require only the minimum amount of information and data consistent with carrying out its responsibility under this section. It shall complete the review promptly after the submission of this information by India and shall notify the latter of its conclusions without delay.
42. If the Agency wishes to examine design information which India regards as sensitive, the Agency shall, if India so requests, conduct the examination on premises in India. Such information should not

be physically transmitted to the Agency provided that it remains readily available for examination by the Agency in India.

Records

43. India shall arrange for the keeping of records with respect to principal nuclear facilities and also with respect to all safeguarded nuclear material outside such facilities. For this purpose India and the Agency shall agree on a system of records with respect to each facility and also with respect to such material, on the basis of proposals to be submitted by India in sufficient time to allow the Agency to review them before the records need to be kept.
44. All records shall be kept in English.
45. The records shall consist, as appropriate, of:
 - (a) Accounting records of all safeguarded nuclear material; and
 - (b) Operating records for principal nuclear facilities.
46. All records shall be retained for at least two years.

Reports

General Requirements

47. India shall submit to the Agency reports with respect to the production, processing and use of safeguarded nuclear material in or outside principal nuclear facilities. For this purpose, India and the Agency shall agree on a system of reports with respect to each facility and also with respect to safeguarded nuclear material outside such facilities, on the basis of proposals to be submitted by India in sufficient time to allow the Agency to review them before the reports need to be submitted. The reports need include only such information as is relevant for the purpose of safeguards.
48. All reports shall be submitted in English.

Routine Reports

49. Routine reports shall be based on the records compiled in accordance with paragraphs 43 to 46 of this Agreement and shall consist, as appropriate, of:

- (a) Accounting reports showing the receipt, transfer out, inventory and use of all safeguarded nuclear material. The inventory shall indicate the nuclear and chemical composition and physical form of all material and its location on the date of the report; and
 - (b) Operating reports showing the use that has been made of each principal nuclear facility since the last report and, as far as possible, the programme of future work in the period until the next routine report is expected to reach the Agency.
50. The first routine report shall be submitted as soon as:
- (a) There is any safeguarded nuclear material to be accounted for; or
 - (b) The principal nuclear facility to which it relates is in a condition to operate.

Progress in Construction

51. The Agency may request information as to when particular stages in the construction of a principal nuclear facility have been or are to be reached.

Special Reports

52. India shall report to the Agency without delay:
- (a) If any unusual incident occurs involving actual or potential loss or destruction of, or damage to, any safeguarded nuclear material or principal nuclear facility;
 - (b) If there is good reason to believe that safeguarded nuclear material is lost or unaccounted for in quantities that exceed the normal operating and handling losses that have been accepted by the Agency as characteristic of the facility; or
 - (c) Disruption of operation of facilities listed in the Annex on account of material violation or breach of bilateral or multilateral arrangements to which India is a party.
53. India shall report to the Agency, as soon as possible, and in any case within two weeks, any transfer not requiring advance notification that

will result in a significant change (to be defined by the Agency in agreement with India) in the quantity of safeguarded nuclear material in a principal nuclear facility. Such report shall indicate the amount and nature of the material and its intended use.

Amplification of Reports

54. At the Agency's request, India shall submit amplifications or clarifications of any report, in so far as relevant for the purpose of safeguards.

Inspections

General Procedures

55. The Agency may inspect any items subject to this Agreement.
56. The purpose of safeguards inspections under this Agreement shall be to verify compliance by India with this Agreement and to assist India in complying with this Agreement and in resolving any questions arising out of the implementation of safeguards.
57. The number, duration and intensity of inspections actually carried out shall be kept to the minimum consistent with the effective implementation of safeguards, and if the Agency considers that the authorized inspections are not all required, fewer shall be carried out.
58. Inspectors shall neither operate any facility themselves nor direct the staff of a facility to carry out any particular operation.

Routine Inspections

59. Routine inspections may include, as appropriate:
 - (a) Audit of records and reports;
 - (b) Verification of the amount of safeguarded nuclear material by physical inspection, measurement and sampling;
 - (c) Examination of principal nuclear facilities, including a check of their measuring instruments and operating characteristics; and

- (d) Check of the operations carried out at principal nuclear facilities.
60. Whenever the Agency has the right of access to a principal nuclear facility at all times, it may perform inspections of which notice as required by paragraph 4 of the Inspectors Document need not be given, in so far as this is necessary for the effective application of safeguards. The actual procedures to implement these provisions shall be agreed upon between India and the Agency.

Initial Inspections of a Principal Nuclear Facility

61. To verify that the construction of a principal nuclear facility is in accordance with the design reviewed by the Agency, an initial inspection or inspections of the facility may be carried out:
- (a) As soon as possible after the facility has come under Agency safeguards, in the case of a facility already in operation; and
 - (b) Before the facility starts to operate, in other cases.
62. The measuring instruments and operating characteristics of the facility shall be reviewed to the extent necessary for the purpose of implementing safeguards. Instruments that will be used to obtain data on the nuclear materials in the facility may be tested to determine their satisfactory functioning. Such testing may include the observation by inspectors of commissioning or routine tests by the staff of the facility, but shall not hamper or delay the construction, commissioning or normal operation of the facility.

Special Inspections

63. The Agency may carry out special inspections if:
- (a) The study of a report indicates that such inspection is desirable; or
 - (b) Any unforeseen circumstance requires immediate action.
- The Board shall subsequently be informed of the reasons for and the results of each such inspection.
64. The Agency may also carry out special inspections of substantial amounts of safeguarded nuclear material that are to be transferred outside the jurisdiction of India, for which purpose India shall give

the Agency sufficient advance notice of any such proposed transfer.

B. SPECIAL PROCEDURES FOR REACTORS

Reports

65. The frequency of submission of routine reports shall be agreed between the Agency and India, taking into account the frequency established for routine inspections. However, at least two such reports shall be submitted each year and in no case shall more than 12 such reports be required in any year.

Inspections

66. One of the initial inspections of a reactor shall if possible be made just before the reactor first reaches criticality.
67. The maximum frequency of routine inspections of a reactor and of the safeguarded nuclear material in it shall be determined from the following table

Whichever is the largest of: (a) Facility inventory (including loading); (b) Annual throughput; (c) Maximum potential annual production of special fissionable material (Effective kilograms of nuclear material)	Maximum number of routine inspections annually
Up to 1 More than 1 and up to 5 More than 5 and up to 10 More than 10 and up to 15 More than 15 and up to 20 More than 20 and up to 25 More than 25 and up to 30 More than 30 and up to 35 More than 35 and up to 40 More than 40 and up to 45 More than 45 and up to 50 More than 50 and up to 55 More than 55 and up to 60 More than 60	0 1 2 3 4 5 6 7 8 9 10 11 12 Right of access at all times

68. The actual frequency of inspection of a reactor shall take account of:
- (a) The fact that India possesses irradiated fuel reprocessing facilities:
 - (b) The nature of the reactor; and
 - (c) The nature and amount of the nuclear material produced or used in the reactor.

**C. SPECIAL PROCEDURES RELATING TO SAFEGUARDED
NUCLEAR MATERIAL OUTSIDE PRINCIPAL NUCLEAR
FACILITIES**

Nuclear Material in Research and Development Facilities

Routine Reports

69. Only accounting reports need be submitted in respect of nuclear material in research and development facilities. The frequency of submission of such routine reports shall be agreed between the Agency and India, taking into account the frequency established for routine inspections; however, at least one such report shall be submitted each year and in no case shall more than 12 such reports be required in any year.

Routine Inspections

70. The maximum frequency of routine inspections of safeguarded nuclear material in a research and development facility shall be that specified in the table in paragraph 67 of this Agreement for the total amount of material in the facility.

Source Material in Sealed Storage

71. The following simplified procedures for safeguarding stockpiled source material shall be applied if India undertakes to store such material in a sealed storage facility and not to remove it therefrom without previously informing the Agency.

Design of Storage Facilities

72. India shall submit to the Agency information on the design of each sealed storage facility and agree with the Agency on the method and procedure for sealing it.

Routine Reports

73. Two routine accounting reports in respect of source material in sealed storage shall be submitted each year.

Routine Inspections

74. The Agency may perform one routine inspection of each sealed storage facility annually.

Removal of Material

75. India may remove safeguarded source material from a sealed storage facility after informing the Agency of the amount, type and intended use of the material to be removed, and providing sufficient other data in time to enable the Agency to continue safeguarding the material after it has been removed.

Nuclear Material in Other Locations

76. Except to the extent that safeguarded nuclear material outside of principal nuclear facilities is covered by any of the provisions set forth in paragraphs 69 to 75 of this Agreement, the following procedures shall be applied with respect to such material (for example, source material stored elsewhere than in a sealed storage facility, or special fissionable material used in a sealed neutron source in the field).

Routine Reports

77. Routine accounting reports in respect of all safeguarded nuclear material in this category shall be submitted periodically. The frequency of submission of such reports shall be agreed between the Agency and India, taking into account the frequency established for routine inspections; however, at least one such report shall be submitted each year and in no case shall more than 12 such reports be required in any year.

Routine Inspections

78. The maximum frequency of routine inspections of safeguarded nuclear material in this category shall be one inspection annually if the total amount of such material does not exceed five effective kilograms, and shall be determined from the table in paragraph 67 of this Agreement if the amount is greater.

D. PROVISIONS FOR REPROCESSING PLANTS

Introduction

79. Additional procedures applicable to the safeguarding of reprocessing plants are set out below.

Special Procedures

Reports

80. The frequency of submission of routine reports shall be once each calendar month.

Inspections

81. A reprocessing plant having an annual throughput not exceeding 5 effective kilograms of nuclear material, and the safeguarded nuclear material in it, may be routinely inspected twice a year. The reprocessing plant, having an annual throughput exceeding 5 effective kilograms of nuclear material, and the safeguarded nuclear material in it, may be inspected at all times. The arrangements for inspections set forth in paragraph 60 of this Agreement shall apply to all inspections to be made under this paragraph. It is understood that for plants having an annual throughput of more than 60 effective kilograms, the right of access at all times would be normally be implemented by means of continuous inspection.
82. When a reprocessing plant is under Agency safeguards only because it contains safeguarded nuclear material, the inspection frequency shall be based on the rate of delivery of safeguarded nuclear material.
83. India and the Agency shall cooperate in making all the necessary arrangements to facilitate the taking, shipping or analysis of samples, due account being taken of the limitations imposed by the characteristics of a plant already in operation when placed under Agency safeguards.

Mixtures of Safeguarded and Unsafeguarded Nuclear Material

84. India and the Agency may agree on the following special arrangements in the case of a reprocessing plant which has not been supplied wholly or substantially under a project agreement, submitted to safeguards under a safeguards agreement by the parties to a bilateral or multilateral arrangement or unilaterally submitted to safeguards under a safeguards agreement, and in which safeguarded and unsafeguarded nuclear materials are present:

- (a) Subject to the provisions of sub-paragraph (b) below, the Agency shall restrict its safeguards procedures to the area in which irradiated fuel is stored, until such time as all or any part of such fuel is transferred out of the storage area into other parts of the plant. Safeguards procedures shall cease to apply to the storage area or plant when either contains no safeguarded nuclear material; and
- (b) Where possible, safeguarded nuclear material shall be measured and sampled separately from unsafeguarded material, and at as early a stage as possible. Where separate measurement, sampling or processing are not possible, the whole of the material being processed in that campaign shall be subject to the safeguards procedures set out in Part III.D of this Agreement. At the conclusion of the processing the nuclear material that is thereafter to be safeguarded shall be selected by agreement between India and the Agency from the whole output of the plant resulting from that campaign, due account being taken of any processing losses accepted by the Agency.

E. PROVISIONS FOR CONVERSION PLANTS, ENRICHMENT PLANTS AND FABRICATION PLANTS

Introduction

- 85. Additional procedures applicable to conversion plants and fabrication plants are set out below. This terminology is synonymous with the term "a plant for processing or fabricating nuclear material (excepting a mine or ore-processing plant)" which is used in paragraph 117 of this Agreement.
- 86. In the event that India decides to offer an enrichment plant in the future as a facility subject to this Agreement, the Agency and India shall consult and agree on the application of the Agency's safeguards procedures for enrichment plants before any such facility is added to the Annex.

Special Procedures

Reports

- 87. The frequency of submission of routine reports shall be once each calendar month.

Inspections

88. A conversion plant or a fabrication plant which has been supplied wholly or substantially under a project agreement, submitted to safeguards under a safeguards agreement by the parties to a bilateral or multilateral arrangement, or unilaterally submitted to safeguards under a safeguards agreement, and the nuclear material in it, may be inspected at all times if the plant inventory at any time, or the annual input, of nuclear material exceeds five effective kilograms. Where neither the inventory at any time, nor the annual input, exceeds five effective kilograms of nuclear material, the routine inspections shall not exceed two a year. The arrangements for inspections set forth in paragraph 57 of this Agreement shall apply to all inspections to be made under this paragraph. It is understood that, for plants having an inventory at any time, or an annual input, of more than 60 effective kilograms, the right of access at all times would normally be implemented by means of continuous inspection. Where neither the inventory at any time nor the annual input exceeds one effective kilogram of nuclear material, the plant would not normally be subject to routine inspection.
89. When a conversion plant or a fabrication plant which has not been supplied wholly or substantially under a project agreement, submitted to safeguards under a safeguards agreement by the parties to a bilateral or multilateral arrangement or unilaterally submitted to safeguards under a safeguards agreement contains safeguarded nuclear material, the frequency of routine inspections shall be based on the inventory at any time and the annual input of safeguarded nuclear material. Where the inventory at any time, or the annual input, of safeguarded nuclear material exceeds five effective kilograms the plant may be inspected at all times. Where neither the inventory at any time, nor the annual input, exceeds five effective kilograms of safeguarded nuclear material, the routine inspections shall not exceed two a year. The arrangements for inspection set forth in paragraph 60 shall apply to all inspections to be made under this paragraph. It is understood that, for plants having an inventory at any time, or an annual input, of more than 60 effective kilograms, the right of access at all times would normally be implemented by

means of continuous inspection. Where neither the inventory at any time nor the annual input exceeds one effective kilogram of nuclear material, the plant would not normally be subject to routine inspection.

90. The intensity of inspection of safeguarded nuclear material at various steps in a conversion plant or a fabrication plant shall take account of the nature, isotopic composition and amount of safeguarded nuclear material in the plant. Safeguards shall be applied in accordance with the general principles set forth in paragraphs 4 to 8 of this Agreement. Emphasis shall be placed on inspection to control uranium of high enrichments and plutonium.
91. Where a plant may handle safeguarded and unsafeguarded nuclear material, India shall notify the Agency in advance of the programme for handling safeguarded batches to enable the Agency to make inspections during these periods, due account being also taken of the arrangements under paragraph 92 of this Agreement.
92. India and the Agency shall cooperate in making all the necessary arrangements to facilitate the preparation of inventories of safeguarded nuclear material and the taking, shipping and/or analysis of samples, due account being taken of the limitations imposed by the characteristics of a plant already in operation when placed under Agency safeguards.

Residues, Scrap and Waste

93. India shall ensure that safeguarded nuclear material contained in residues, scrap or waste created during conversion or fabrication is recovered, as far as is practicable, in its facilities and within a reasonable period of time. If such recovery is not considered practicable by India, India and the Agency shall cooperate in making arrangements to account for and dispose of the material.

Safeguarded and Unsafeguarded Nuclear Material

94. India and the Agency may agree on the following special arrangements in the case of a conversion plant or a fabrication plant which has not been supplied wholly or substantially under a project agreement, submitted to safeguards under a safeguards agreement by the parties to a bilateral or multilateral arrangement or unilaterally submitted to

safeguards under a safeguards agreement, and in which safeguarded and unsafeguarded nuclear material are both present:

- (a) Subject to the provisions of sub-paragraph (b) below, the Agency shall restrict its safeguards procedures to the area in which safeguarded nuclear material is stored, until such time as all or any part of such nuclear material is transferred out of the storage area into other parts of the plant. Safeguards procedures shall cease to be applied to the storage area or plant when it contains no safeguarded nuclear material; and
- (b) Where possible, safeguarded nuclear material shall be measured and sampled separately from unsafeguarded nuclear material, and at as early a stage as possible. Where separate measurement, sampling or processing is not possible, any nuclear material containing safeguarded nuclear material shall be subject to the safeguards procedures set out in Part III.E of this Agreement. At the conclusion of processing, the nuclear material that is thereafter to be safeguarded shall be selected, in accordance with paragraph 96 of this Agreement when applicable, by agreement between India and the Agency, due account being taken of any processing losses accepted by the Agency.

Blending of Nuclear Material

- 95. When safeguarded nuclear material is to be blended with either safeguarded or unsafeguarded nuclear material, the State shall notify the Agency sufficiently in advance of the programme of blending to enable the Agency to exercise its right to obtain evidence, through inspection of the blending operation or otherwise, that the blending is performed according to the programme.
- 96. When safeguarded and unsafeguarded nuclear material are blended, if the ratio of fissionable isotopes in the safeguarded component going into the blend to all the fissionable isotopes in the blend is 0.3 or greater, and if the concentration of fissionable isotopes in the unsafeguarded nuclear material is increased by such blending, then the whole blend shall remain subject to safeguards. In other cases, the following procedures shall apply:

- (a) Plutonium/plutonium blending: The quantity of the blend that shall continue to be safeguarded shall be such that its weight, when multiplied by the square of the weight fraction of contained fissionable isotopes, is not less than the weight of originally safeguarded plutonium multiplied by the square of the weight fraction of fissionable isotopes therein, provided however that:
 - (i) In cases where the weight of the whole blend, when multiplied by the square of the weight fraction of contained fissionable isotopes, is less than the weight of originally safeguarded plutonium multiplied by the square of the weight fraction of fissionable isotopes therein, the whole of the blend shall be safeguarded; and
 - (ii) The number of fissionable atoms in the portion of the blend that shall continue to be under safeguards shall in no case be less than the number of fissionable atoms in the originally safeguarded plutonium;
- (b) Uranium/uranium blending: The quantity of the blend that shall continue to be safeguarded shall be such that the number of effective kilograms is not less than the number of effective kilograms in the originally safeguarded uranium, provided however that:
 - (i) In cases where the number of effective kilograms in the whole blend is less than in the safeguarded uranium, the whole of the blend shall be safeguarded; and
 - (ii) The number of fissionable atoms in the portion of the blend that shall continue to be under safeguards shall in no case be less than the number of fissionable atoms in the originally safeguarded uranium;
- (c) Uranium/plutonium blending: The whole of the resultant blend shall be safeguarded until the uranium and the plutonium constituents are separated. After separation of the uranium and plutonium, safeguards shall apply to the originally safeguarded component; and
- (d) Due account shall be taken of any processing losses agreed upon between the State and the Agency.

IV. AGENCY INSPECTORS

97. The provisions of paragraphs 1 to 10 and 12 to 14, inclusive, of the Inspectors Document shall apply to Agency inspectors performing functions pursuant to this Agreement. However, paragraph 4 of the Inspectors Document shall not apply with regard to any facility or to nuclear material to which the Agency has access at all times. The actual procedures to implement paragraph 60 of this Agreement shall be agreed to between the Agency and India.
98. The relevant provisions of the Agreement on the Privileges and Immunities of the Agency (INFCIRC/9/Rev.2) shall apply to the Agency, its inspectors performing functions under this Agreement and to any property of the Agency used by them in the performance of their functions under this Agreement.

V. PHYSICAL PROTECTION

99. India shall take all suitable measures necessary for the physical protection of the facilities and nuclear material subject to this Agreement, taking into account the recommendations made in Agency's document INFCIRC/225/Rev.4, as may be amended from time to time.

VI. SYSTEM OF ACCOUNTING AND CONTROL

100. India shall establish and maintain a system of accounting for and control of all items subject to safeguards under this Agreement, in accordance with provisions to be set out in the Subsidiary Arrangements.

VII. FINANCE

101. India and the Agency shall each bear any expense incurred in the implementation of their responsibilities under this Agreement. The Agency shall reimburse India for any special expenses, including those referred to in paragraph 6 of the Inspectors Document, incurred by India or persons under its jurisdiction at the written request of the Agency, if India notified the Agency before the expense was incurred that reimbursement would be required. These provisions shall not prejudice the allocation of expenses attributable to a failure by either India or the Agency to comply with this Agreement.

102. India shall ensure that any protection against third party liability, including any insurance or other financial security, in respect of a nuclear incident occurring in a facility under its jurisdiction shall apply to the Agency and its inspectors when carrying out their functions under this Agreement as that protection applies to nationals of India.

VIII. NON-COMPLIANCE

103. If the Board determines in accordance with Article XII.C of the Statute of the Agency that there has been any non-compliance by India with this Agreement, the Board shall call upon India to remedy such non-compliance forthwith, and shall make such reports as it deems appropriate. In the event of failure by India to take full remedial action within a reasonable time, the Board may take any other measures provided for in Article XII.C of the Statute. The Agency shall promptly notify India in the event of any determination by the Board pursuant in this regard.

IX. COOPERATION, INTERPRETATION AND APPLICATION OF THE AGREEMENT AND SETTLEMENT OF DISPUTES

104. The Agency and India shall cooperate to facilitate the implementation of this Agreement.
105. At the request of either India or the Agency, there shall be consultations about any question arising out of the interpretation or application of this Agreement. India and the Agency shall endeavour to settle by negotiation any dispute arising from the interpretation or application of this Agreement. India shall have the right to request that any question arising out of the interpretation or application of the Agreement be considered by the Board. The Board shall invite India to participate in the discussion of any such question by the Board.
106. In the event of any question or questions arising from the implementation of this Agreement, the Agency shall provide India with an opportunity to clarify and facilitate the resolution of such questions. The Agency shall not draw any conclusions in connection with the question or questions until India has had an opportunity to provide clarifications.

X. FINAL CLAUSES

107. India and the Agency shall, at the request of either of them, consult about amending this Agreement.
108. This Agreement shall enter into force on the date on which the Agency receives from India written notification that India's statutory and/or constitutional requirements for entry into force have been met.
109. This Agreement shall remain in force until, in accordance with its provisions, safeguards have been terminated on all items subject to this Agreement, or until terminated by mutual agreement of the parties to this Agreement.

XI. DEFINITIONS

110. "Agency" means the International Atomic Energy Agency.
111. "Board" means the Board of Governors of the Agency.
112. "Campaign" means the period during which the chemical processing equipment in a reprocessing plant is operated between two successive wash-outs of the nuclear material present in the equipment.
113. "Conversion plant" means a facility (excepting a mine or ore-processing plant) to improve unirradiated nuclear material, or irradiated nuclear material that has been separated from fission products, by changing its chemical or physical form so as to facilitate further use or processing. The term conversion plant includes the facility's storage and analytical sections. The term does not include a plant intended for separating the isotopes of nuclear material.
114. "Director General" means the Director General of the Agency.
115. "Effective kilograms" means:
 - (i) In the case of plutonium, its weight in kilograms;
 - (ii) In the case of uranium with an enrichment of 0.01 (1 %) and above, its weight in kilograms multiplied by the square of its enrichment;
 - (iii) In the case of uranium with an enrichment below 0.01 (1 %) and above 0.005 (0.5 %), its weight in kilograms multiplied by 0.0001; and

- (iv) In the case of depleted uranium with an enrichment of 0.005 (0.5 %) or below, and in the case of thorium, its weight in kilograms multiplied by 0.00005.
116. "Enrichment plant" means a plant for separating the isotopes of nuclear material.
117. "Facility" means, for the purposes of this Agreement:
- (i) A "principal nuclear facility", which means a reactor, a plant for processing nuclear material irradiated in a reactor, a plant for separating the isotopes of a nuclear material, a plant for processing or fabricating nuclear material (excepting a mine or ore-processing plant) or a facility or plant of such other type as may be designated by the Board from time to time, including associated storage facilities, as well as a critical facility or a separate storage installation;
 - (ii) A research and development facility as defined in paragraph 127 of this Agreement;
 - (iii) Any location where nuclear material in amounts greater than one effective kilogram is customarily used;
 - (iv) A plant for the upgrading of heavy water or a separate storage installation for heavy water.
118. "Fuel fabrication plant" means a plant to manufacture fuel elements or other components containing nuclear material and includes the plant's storage and analytical sections.
119. "Improved" means, with respect to nuclear material, that either:
- (i) The concentration of fissionable isotopes in it has been increased; or
 - (ii) The amount of chemically separable fissionable isotopes in it has been increased; or
 - (iii) Its chemical or physical form has been changed so as to facilitate further use or processing.
120. "Inspector" means an Agency official designated in accordance with the Inspectors Document.
121. "Inspectors Document" means the Annex to the Agency's document GC(V)/INF/39.

122. "Nuclear material" means any source or special fissionable material as defined in Article XX of the Statute.
123. "Produced, processed or used" means any utilization or any alteration of the physical or chemical form or composition, including any change of the isotopic composition, of nuclear material;
124. "Project agreement" means a safeguards agreement relating to an Agency project and containing provisions as foreseen in Article XI.F.4.(b) of the Statute.
125. "Reactor" means any device in which a controlled, self-sustaining fission chain-reaction can be maintained.
126. "Reprocessing plant" means a facility to separate irradiated nuclear materials and fission products, and includes the facility's head-end treatment section and its associated storage and analytical sections. This term is synonymous with the term "a plant for processing nuclear material irradiated in a reactor" which is used in paragraph 117 of this Agreement.
127. "Research and development facility" means a facility, other than a principal nuclear facility, used for research or development in the field of nuclear energy.
128. "Statute" means the Statute of the Agency.
129. "Throughput" means the rate at which nuclear material is introduced into a facility operating at full capacity.
130. "Unilaterally submitted" means submitted by India to Agency safeguards.

DONE at Vienna, on the day of 2008¹, in duplicate, in the English language.

For the Government of India

**For the International Atomic
Energy Agency**

¹ The draft was approved by the IAEA Board of Governors on August 1, by consensus, calling for application of IAEA safeguards to Indian civilian nuclear facilities. Termed an "umbrella" arrangement, it will allow India to add facilities over time to be placed under IAEA safeguards. The agreement is set to enter into force once the IAEA receives notification that India's statutory and/or constitutional requirements have been met. In his address to the Board, Dr. El Baradei stated that the IAEA would begin to implement

ANNEX

LIST² OF FACILITIES SUBJECT TO SAFEGUARDS UNDER THE AGREEMENT BETWEEN THE GOVERNMENT OF INDIA AND THE INTERNATIONAL ATOMIC ENERGY AGENCY FOR THE APPLICATION OF SAFEGUARDS TO CIVILIAN NUCLEAR FACILITIES

	FACILITY OFFERED FOR SAFEGUARDS BY INDIA	DATE OF RECEIPT OF NOTIFICATION

the new Safeguards Agreement in 2009, with the aim of bringing a total of 14 Indian reactors under Agency safeguards by 2014. The IAEA currently applies safeguards to six Indian nuclear reactors under safeguards agreements concluded between 1971 and 1994. The text of the safeguards agreement was finalized after several rounds of consultations conducted between India and the IAEA which began in November 2007. The draft agreement was circulated to Board Members last month. Dr. El Baradei also announced that the IAEA and India are currently in dialogue concerning an Additional Protocol Agreement.

Before the document became public, the Atomic Energy Commission Chairman Anil Kakodkar on July 10 told a press conference in Mumbai that the draft was a broad umbrella agreement that recognised India's "autonomous and indigenous" nuclear programme, free from any safeguard. The non-hindrance provision in the draft excluded from the safeguards any Indian activity using Indian research, know-how, material and components independently for its own purpose, Dr. Kakodkar pointed out. This was a de facto recognition of India as being a nuclear weapon state, free to pursue its own atomic weapons development with no interference from the IAEA. It was not a comprehensive safeguards agreement. But, as its title suggests, it was about safeguards to civilian nuclear facilities. Dr. Kakodkar clarified that the safeguards were applicable only to those facilities India would declare voluntarily as civilian. What was civilian and what was not would be the decision of the Government of India. India's three-stage nuclear power programme would be implemented and there would be no compromise on that. The new opportunities would bring in additional ties. He said that the agreement allowed India to stockpile nuclear material to meet the lifetime fuel requirement of imported reactors, reprocess the spent fuel and follow its closed fuel cycle programme to get the full benefit of the imported fuel.

2 India filed a copy of its plan for the separation of civilian and military nuclear facilities with the International Atomic Energy Agency as part of the process for getting its safeguards agreement approved by the nuclear watchdog's Board of Governors on August 1. The

document - as tabled in Parliament by Prime Minister Manmohan Singh on 11 March 2006 - was published on July 25 by the IAEA secretariat as Infirc/731 and circulated to all member states. In a 'note verbale' included with the plan, the Permanent Mission of India in Vienna said it was the "government of India's intention to move forward in accordance with the provisions of the [India-specific safeguards agreement] 85 after its entry into force." According to media reports the decision to file the plan was taken in view of the question raised by a number of IAEA members in briefings by India and the Secretariat about the fact that the draft safeguards agreement did not list any specific facilities to be safeguarded. As per the provisions of the draft, only those Indian facilities listed in the annex will be subject to Agency safeguards. The annex was left blank at the time of finalizing to be filled only after India negotiated fuel supply arrangements for each facility to be safeguarded and file a separate declaration and notification to that effect at some point in the future. During the briefing conducted by the Secretariat for IAEA members on July 25, countries such as Canada asked when and how this annex would be populated. The circulation of the Indian separation plan which listed 14 specific thermal power reactors to be offered for safeguards between 2006 and 2014 was intended to clear the air on this issue. The report quoted by daily *The Hindu* said that "the July 25 briefing was a "smooth affair" with Secretariat officials providing clarifications on a number of issues to a handful of member states. Among the countries which had queries were Canada, Norway, Ireland and Sweden. One of the clarifications sought was on the meaning of "corrective measures." According to officials, the Secretariat staff noted that these measures are meant to ensure the uninterrupted supply of fuel for the reactors India offers for safeguards "and are not to be confused with termination conditions, which are spelt out in paragraphs 29 and 32 of the safeguards agreement and which are standard." There were no separate queries on termination." The report further said the Pakistani representative asked only one question about the danger that the Indian agreement could "set a precedent" for other non-parties to the Nuclear Non-proliferation Treaty (NPT). The Secretariat replied that it would be a "good precedent," since the concept of an "umbrella agreement" for multiple facilities was an improvement over separate Infirc/66 agreements for standalone facilities.

118. Interview of Chairman, Atomic Energy Commission Anil Kakodkar with the fortnightly magazine Frontline.

August 2 - 15, 2008.

The DAE is putting reactors under safeguards in perpetuity as a reciprocal measure for uninterrupted fuel supply. How is uninterrupted fuel supply incorporated in the ISSA?

Basically, you should understand that this safeguards agreement has a background. The background is the civil nuclear cooperation that we have negotiated with the United States, Russia and France, particularly that part of the understanding with the U.S., where we have agreed that we will identify some of our facilities as civilian facilities and that they will be placed under safeguards with an India-Specific Safeguards Agreement with the IAEA. This also spells out that the facilities, which are not identified as civilian, will have no external hindrance of any sort.

So we are talking about an ISSA, which is an umbrella document that is restricted to facilities that India identifies as civilian. Our identifying any facility as civilian is conditional to that facility benefiting from full, civil, nuclear cooperation. This will mean that the reactors we identify as civilian and place under safeguards will receive full, assured fuel supply from outside. We have also incorporated provisions for building up a stockpile [of fuel] to last for the full operating life of the reactors and our own ability to take corrective measures. So our agreeing to permanent safeguards is on the basis of permanent supplies.

Why are the corrective measures unspecified in the ISSA? Why have you not spelt them out? What corrective steps will India take if the fuel supply is cut off?

The corrective measures are what I describe as unspecified sovereign actions. We can decide [them] at the appropriate point of time.

The corrective measures that we can take and the strategic fuel reserve that we can build up find mention only in the preamble to the ISSA. There is a fear that since this aspect is not mentioned in the operative part it will not be enforceable. Why was this not included in the operative part?

That is not correct. I think that if we go by international law, it specifies that any agreement has to be seen as a whole. More specifically, the ISSA preamble is tightly linked with the operative portion.

If India were to conduct a nuclear test, it would attract the provisions of the Hyde Act and the fuel supply for the reactors would be cut off. What are the corrective measures planned?

As far as we are concerned, we are governed by the bilateral civil nuclear cooperation that we have negotiated.

With Russia, the U.S. and France?

I am talking about the U.S. I am talking about the 123 nuclear agreement that we have negotiated with the U.S. There is no mention of [nuclear] tests in that text.

The ISSA does not grant us full, civil nuclear cooperation, which means that we will not get the technologies for reprocessing the spent fuel and for enriching uranium. How are you going to face this problem? Under the agreement with the U.S. for running the Tarapur reactors we had the right to reprocess the spent fuel. But we could never enforce that right.

The safeguards agreement is an agreement between India and the IAEA, established at India's request and will apply to facilities that India will identify as civilian and ask the IAEA to safeguard. The ISSA covers reactors as well as fuel cycle facilities, including reprocessing.

You have said that the indigenous reactors that we put under safeguards are entitled to receive fuel supplies from abroad and that they will be under permanent safeguards. If that fuel supply is cut off and we use our own fuel, will those reactors continue to be under safeguards in perpetuity?

No, no. First of all, we would have built up a stockpile. There is no chance of stoppage of reactors because the stockpile will be available. During that time [if the fuel supply stops], we can take necessary action.

You have told me that the safeguards agreement should recognise India as a nuclear weapon state. Does it recognise India as a nuclear weapon state?

First of all, the title of the ISSA is that it is an agreement for India's "civilian nuclear facilities". Further, the text of the agreement provides for non-hindrance to facilities and activities, which are not covered by the safeguards agreement.

This clearly means that while the safeguards agreement is only for civilian facilities, India is free to pursue its own domestic development, including the development of its strategic areas.

The Hyde Act makes the specific requirement of "safeguards to be in perpetuity... in accordance with the IAEA document of GOV/1621 of August 20, 1973". The ISSA also invokes GOV/1621, which makes it clear that the reactors we put under safeguards will be under safeguards in perpetuity even if we use domestic fuel...

GOV/1621 is about supplied materials and supplied facilities. As part of the cooperation agreement with other countries, we will ensure that the fuel is stockpiled to meet the life-time requirement of our reactors.

If the IAEA Board clears the ISSA, what do you expect from the Nuclear Suppliers Group? You had earlier said you wanted clean, unconditional exemptions from the NSG.

We expect clean, unconditional exemptions for nuclear commerce with India.

The DAE has agreed to put even research facilities and heavy water plants under safeguards. How are they different from the nuclear power reactors coming under safeguards?

As I told you, whatever we identify as civilian must also benefit from unrestricted, international cooperation. The research that we carry out in our institutions should benefit from an environment of unrestricted scientific collaboration. When we declare something as civilian, the condition for that is that it should benefit from civil nuclear cooperation. We should also recognise that the activities of these institutions are irrelevant from the point of view of safeguards.

You said in Bangalore recently that if India could import 40,000 MWe of nuclear power between 2012 and 2020, we can wipe out the gap between the demand for and the supply of power by 2050 by building more fast breeder reactors using the spent fuel arising from these imported reactors. But you also said that thorium does not have properties that allow for faster growth of power generation. Media commentators have alleged that this amounts to India abandoning its third stage of building thorium-fuelled reactors.

Right from the beginning all the way up to now, there is absolutely no contradiction between my statements on thorium utilisation strategies. These are based on detailed analyses and they remain valid. The three-stage nuclear power development programme based on domestic efforts remains a priority activity and would be implemented unhindered.

To optimise the benefits of thorium utilisation, the timing of the introduction of thorium has to be judiciously planned. In any case, it has to follow significant build-up of nuclear power generation capacity through the deployment of fast breeder reactors. The point to realise is that India's electricity requirements are growing fast. The gap between demand and supply that can be managed on indigenous resources is widening and it would exceed 400,000 MWe by 2050.

The question that one needs to address is how soon we can bridge this gap through the growth potential that is possible with fast breeder reactors. Clearly, this necessitates emphasis on deployment of fast breeder reactors with the shortest possible doubling time.

The timing of the introduction of thorium needs to be adjusted in such a way that the demand-supply gap is bridged at the earliest, and at the same time we derive full benefit of the vast energy potential of our thorium resources for centuries to come.

The import of 40,000 MWe of power as an additionality [to the domestic nuclear power programme] would bridge not only this gap by 2050 but would avoid the necessity of import of much larger fossil energy resources and at the same time enable earlier deployment of thorium, meeting the objectives stated above.

The point is, even after we pursue the domestic three-stage nuclear power programme, which we will pursue on a priority basis in any case, there will be a gap of 400,000 MWe. If we introduce thorium earlier, this gap will become larger and the three-stage programme will become smaller. On the other hand, if we can get this 40,000 MWe from outside [by importing reactors], we can bridge this gap, and at the same time, we can advance the deployment of thorium.

Is the DAE delaying the start of the construction of the indigenous 700 MWe Pressurised Heavy Water Reactors and the criticality of the three new PHWRs of 220 MWe each at Rajasthan and Kaiga for want of uranium?

It is true that at present there is a mismatch in the demand and supply of indigenous natural uranium. But things are about to start improving now. The capacity factor of the reactors is about to start improving. This is because the production [of yellow cake from uranium] from the mill at Turamdih in Jharkhand will start coming in now.

We are working on the uranium mining and milling project at Tummlapalle in Andhra Pradesh. I am hopeful about the Meghalaya uranium project. There are also other sites. Our efforts for increasing the domestic production of uranium are continuing.

What is your reaction to the UPA government winning the trust vote?

We can now take the next step. The safeguards agreement has to be discussed in the IAEA Board.

Are you confident that the IAEA Board of Governors will approve the ISSA?

Let us see.

If the IAEA Board approves the ISSA and the NSG relaxes its guidelines and permits its members to have nuclear commerce with India, what is the time-frame in which you expect to reap the benefits? When can you start importing the reactors?

I can't hazard a guess.

You mentioned that under international law, the preamble has the same force as the operative part. Could you explain?

It is the Vienna law. There is a particular section in that law which clearly talks about the preamble being part of the overall agreement and has to be taken into account. There is an explicit mention like that. Over and above that, the preamble in the ISSA is tightly coupled to the operative part. Towards the end of the preamble, it has words to the effect, "Now...therefore... taking into account the above..." and so on, and then the operative part starts. Even otherwise, if you go by the international law, there is an explicit mention that the preamble is integral to the main part.

You mentioned that India agreed to put some of its reactors under permanent safeguards on the basis of the reactors receiving permanent supplies of fuel from abroad. The first two units of the Rajasthan Atomic Power Station are using indigenous natural uranium

as fuel although they are under permanent safeguards. How do you explain this?

As part of the new framework, we do expect that RAPS 1 and 2 should start receiving fuel from outside because they are under safeguards.

Why is there no arbitration clause?

There are provisions that they will be discussed with the IAEA Board of Governors. There are built-in provisions where we can take them to the Board. If there is a disruption, we can report to the Board.

Disruption of fuel supply?

Any kind of disruption, we can report... to the Board of Governors. There is a provision that it will be implemented according to the international law.

Is it true that the 123 agreement was already on auto-pilot? So it did not matter even if the UPA government had lost the trust vote.

No. Nothing goes on auto-pilot. Every step has to be taken because we are, after all, a party to it.

119. Extract from the interview of National Security Advisor M. K. Narayanan with Karan Thapar in the TV programme Devil's Advocate on CNN-IBN channel.

New Delhi, August 31, 2008.

(Hello and welcome to Devil's Advocate. In a special two-part interview with the National Security Advisor M K Narayanan, I shall today discuss the the crisis in the Kashmir Valley and the Indo-US nuclear deal.)

* * * *

Indo-US Nuclear Deal

Karan Thapar: Do you believe that the last Nuclear Suppliers Group (NSG) meeting in Vienna represented a delay, a setback or a debacle for the Indo-US nuclear deal?

M K Narayanan: It is clearly not a debacle. I do not think it was a setback. It was a pause in the programme. But we were prepared for this because we had been told that it might be necessary to have two rounds before we could finalise something, which was mutually satisfactory.

Karan Thapar: As you prepare for the second meeting on September 4, which is just six days away, are you confident you can get clean exemption from the NSG, or have your confidence levels somewhat dipped?

M K Narayanan: We have gone through these efforts many times. There are periods when you are highly elated and sometimes you feel rather despondent. I think after the discussions on the India-specific safeguard agreement, which took place in Vienna, we have a good idea of where other countries stand vis-à-vis India. In the first round, many of the concerns were suitably dealt with but some still remain. I think our problem with the NSG is primarily that we are not members of the NSG and therefore, we have to depend entirely on other countries to put forward our case. But I must say that countries like the United States, Russia, France, the UK and a number of others have done Herculean efforts, and I think we are nearing the goal.

Karan Thapar: Are you optimistic? You don't sound it by your tone.

M K Narayanan: No, I am optimistic but I don't want to allow my optimism to override caution.

Karan Thapar: Now we are speaking on Friday evening. You are six days away from the next NSG meeting. Has India been shown the new amended draft exemption?

M K Narayanan: This is work in progress. I can't tell you exactly where we are on this question.

Karan Thapar: Except for the fact that you are here on Friday evening, then there is weekend coming up, then it will be Monday and then just three days will be left. If you haven't been shown the draft exemption, isn't it running very close?

M K Narayanan: No. We are running close but I don't think we have much of a problem on that.

Karan Thapar: So you are confident that your concerns will be taken care of even though you can't admit whether you've seen the draft exemption or not?

M K Narayanan: There is a constant dialogue that is going on between Delhi and Washington. So, we are fully aware of what is going on.

Karan Thapar: There are three principal concerns that have been flagged. The first is simply to do with how extensive will the rewrite of the exemption be. Are you anticipating a very comprehensive (review), or are you hoping for cosmetic changes or something in between the two?

M K Narayanan: We have sort of already flagged our concerns. Those concerns are well known. I think most of the countries recognised the validity of our concerns. There are some countries who, I think, are ideologically committed to the concepts or ideas of non-proliferation and hence tend to take a very hard-line position. I think it is really a question of convincing them that India, with its impeccable record of non-proliferation has always stood, if necessary, for the universal nuclear disarmament and is the right candidate for universal nuclear commerce.

Karan Thapar: That I fully understand. But are you saying that this means you will accept only cosmetic changes rather than anything more substantial?

M K Narayanan: There is no question of cosmetic or otherwise. What we are asking is that there are certain issues, which have been drawn in red lines by us because those are the commitments, which have been made by our Prime Minister.

Karan Thapar: And, on those red lines you can't give way?

M K Narayanan: On those red lines we can't because that's what we have told Parliament. These are sacrosanct. If these are not met we cannot endorse the agreement.

Karan Thapar: The press has highlighted three concerns. The first is the requirement that some NSG countries are talking about a condition wherein the exemption will terminate if India were to carry out further nuclear testing. Is there any way it could be reflected in the new, amended exemption, or would it be a deal breaker in any shape or form for India?

M K Narayanan: I think you should give some credit to creative diplomacy in these matters. I presume that we will find a way out of it. It is difficult to say but I think it should be possible for us to surmount some of these obstacles.

Karan Thapar: You mentioned creative diplomacy. Could you accept the form of language that is used in the 123 agreement, if it were to be used in this new NSG draft. In the 123 agreement, there is no actual mention of the specific word 'nuclear testing'. Could that formulation suffice for you?

M K Narayanan: We have always said that testing is a word that we find difficult to adjust with. Not because of anything else but because Parliament has mandated us to do so. Testing would be difficult for us. So, we will find ways around it.

Karan Thapar: Leave testing apart, but is the rest okay?

M K Narayanan: We are clear that whatever we finally agree to with the NSG countries, it will be something we can sell to Parliament.

Karan Thapar: I think you have hinted a sort of formulation, the 123 language which doesn't mention testing could be acceptable provided it is acceptable to others.

M K Narayanan: I hope that we can move forward on some of these issues.

Karan Thapar: Second condition mentioned by the NSG countries is that the exemption should exclude Enrichment and Reprocessing (ENR) technologies. Given that India has its own ENR technologies, can you live with that exclusion or would that be a deal break?

M K Narayanan: In case of the US, they have certain conditions about allowing the Enrichment and Reprocessing technologies to the countries but in the case of NSG, our case is different. We say that what we are asking the NSG does not have a ban on Enrichment and Reprocessing technologies. There is a broad ban, which the NSG has on many items with India, which includes any kind of nuclear commerce and related matters. What we are saying is that if you are giving us exemption on those items, please give us exemption because unlike the laws in the US none of the countries in the NSG have a ban imposed in their countries.

Karan Thapar: Don't introduce a specific ban for India in this exemption?

M K Narayanan: Definitely, we don't want ourselves to be singled out for this. What we have made clear - and this is what all of us talked about - is if any country does not wish to give us Enrichment and Reprocessing technologies and still wishes to have nuclear commerce, we'll draw up our guidelines according to that. What we don't want is each country's individual predilections forming a huge package of items in the NSG exemptions.

Karan Thapar: Quite right, let the NSG not take a position on this issue, let individual countries approach them to do it. Finally, there is also a demand for what is called a periodic review of India's compliance. Is that acceptable to you in any shape or form?

M K Narayanan: No, we believe this is uncalled for. We have put all our cards on the table. We have been as transparent as anyone else and are willing to make our case before the NSG. So we don't understand what is the need for a review. Principally not because of anything else, but this is a civil nuclear cooperation agreement. It involves commerce, it involves people investing money, and countries investing money; it is a long-term agreement. They are putting money for 30 to 40 years, so if you have a review at the end of three years and somebody says that oh well this shouldn't be done then nobody is going to invest in this agreement.

Karan Thapar: I understand, you make your position very clear on the testing issue, the ENR technology issue and the periodic review concern. But does America agree with your positions or do they have question marks or still do they have doubts about your positions?

M K Narayanan: This question should probably be addressed to the US, but we have carried conviction to them, to the maximum extent possible. They understand where we come from and that they would help us in the matter.

Karan Thapar: Let's focus little on the US' role. Do you believe that Washington did enough to prevent the naysayer from pushing amendments or do you think that in fact Washington did not take as hard line as you would have liked it to have taken?

M K Narayanan: This is a dangerous question you have asked me but let me make the point. When we were negotiating with the US, it was easier because the US knew what it could give and what it could not give. We recognised that the US is the world power. Militarily and economically it is one of the dominating countries in the world but even they have some limits. There is always a case of doing better. It is like preparing for examinations. Somebody could always say that you could have prepared more. I personally think that tremendous effort has been made by the US to help us in this matter, as have countries like France, Russia and others, where they could have done even more. But even after the first round is over, they are very actively involved. So frankly speaking, I have no complaints to make.

Karan Thapar: You are not criticising them, you are accepting that they made terrific efforts but you are holding up the possibility that they could have done more?

M K Narayanan: Like in everything else, could I have made a better case before all these people but I have just been cautious so that somebody would pick up and say x, y and z. In as much as they have done in most other cases, they have done here as well.

Karan Thapar: There is a view in the press that the American Ambassador's repeated assertion that India's requirement or insistence on unconditional exemption is both inappropriate and provocative. There has also been a position taken about how would Berman, the Chairman of the House Representatives, Foreign Affairs Committee actually telling Condoleezza Rice not to go ahead with exemptions that would in some way circumvent the Hyde Act. Has all of that been unhelpful?

M K Narayanan: No, I think the American ambassador in New Delhi has been an extremely positive factor.

Karan Thapar: So, the press has wrongly picked on him?

M K Narayanan: I think they have a love-hate relationship with prominent US diplomats. I have interacted with Ambassador Mulford for the last four years very closely and I think he has done a tremendous job. Few

ambassadors would have put as much effort as he has done. Yes, sometimes the statements he makes make people a little annoyed and upset but I think much the same can be said about me. So it's the part of the course.

Karan Thapar: Let me put it like this: if the NSG were to grant you a clean exemption on September 4 or 5, but if the chairman of the NSG alongside were to make a statement listing a prescriptive list of suggestions - they are not conditions but suggestions - could India live with that?

M K Narayanan: I presume it would be the Chairman's prerogative to make of what he says and what he likes but as long as they are not laid down as conditions, we have talked in terms of a clean exemption, an unconditional exemption. We have not said that there should be no whisper about what anybody wishes to say. We are not behaving like 16-year-olds and recognise that countries have problems. If the Chairman is making a statement, which reflects, to some extent, some of those points, may be. But as long as it does not inhibit us from what we believe is a clean and unconditional exemption, (it's okay).

Karan Thapar: Has India made it clear to countries like Austria, Switzerland, New Zealand, some of the Scandinavian countries (like) Ireland that if they insisted on imposing unacceptable conditions, it would have damaging impact on their bilateral relationships with New Delhi?

M K Narayanan: No, as far as I am aware, we have not done any arm-twisting in this case. For that matter, several countries - Russia for instance - has actually offered to help us with Austria. So they are doing most of the talking. I don't think we have tried what I would call unscrupulous or underhand methods to pressurise.

Karan Thapar: But you are not suggesting that the Austrians, the Irish or the Swiss could think they could impose conditions which you cannot accept and that there would be no damage to the bilateral relationships?

M K Narayanan: Then, you should ask them. But I don't think we are making that the touchstone for a relationship. It is important, I presume that if someone were friendly with us, they would certainly get a benefit over somebody who is less friendly with us.

120. Response by the Official Spokesperson in relation to the news item in *Washington Post*¹ of September 3, 2008 on the Civil Nuclear Energy Cooperation Agreement with the United States.

New Delhi, September 3, 2008.

- i) Government's attention has been drawn to this news report;
- ii) We do not, as a matter of policy, comment on internal correspondence between different branches of another government;
- iii) We will be guided solely by the terms of the bilateral agreement between India and the United States, the India Specific Safeguards Agreement and the clean waiver from the NSG, which we hope will be forthcoming in the meeting of the NSG on September 4-5, 2008;
- iv) Insofar as the issue of testing is concerned, our position is well known. We have a unilateral moratorium on testing. This is reflected in the India-US Joint Statement of July 18, 2005.

¹ *Washington Post* in its issue of September 3 carried a letter released by Chairman of the House Foreign Relations Committee of the US Congress from the State Department giving certain clarifications on the implementation of the India-US Civil Nuclear Energy Cooperation Agreement. (For text see Appendix-I to this Section) Separately in an interview with NDTV, Anil Kakodkar, Chairman of the Atomic Commission said "India knew of the existence of the document but not its contents, adding he said, "I didn't know it was going to be released." He said he had gone through the document. "To me, it seems to be specific responses to a set of specific questions. The quick reading tells me that it actually doesn't take away anything from what we have been saying here in India." He said the American document makes no difference to the 123 agreement. Standing by the deal he said it was a win-win preposition. "India's situation is quite unique: Large population, rapid growth, shortage of energy. Deal is good for India, good for the world."

121. Statement by External Affairs Minister Pranab Mukherjee reiterating India's position on the Civil Nuclear Initiative.

New Delhi, September 5, 2008.

To reiterate India's stand on disarmament and nonproliferation, EAM has made the following statement¹:

A Plenary meeting of the Nuclear Suppliers Group to consider an exception for India from its guidelines to allow for full civil nuclear cooperation with India is being held in Vienna from September 4 - 5, 2008.

India has a long-standing and steadfast commitment to universal, non-discriminatory and total elimination of nuclear weapons. The vision of a world free of nuclear weapons which Shri Rajiv Gandhi put before the UN in 1988 still has universal resonance.

We approach our dialogue with the Nuclear Suppliers Group and all its members in a spirit of cooperation that allows for an ongoing frank exchange of views on subjects of mutual interest and concern. Such a dialogue will strengthen our relationship in the years to come.

Our civil nuclear initiative will strengthen the international non-proliferation regime. India believes that the opening of full civil nuclear cooperation will be good for India and for the world. It will have a profound positive impact on global energy security and international efforts to combat climate change.

India has recently submitted a Working Paper on Nuclear Disarmament to the UN General Assembly, containing initiatives on nuclear disarmament. These include the reaffirmation of the unequivocal commitment of all nuclear weapon States to the goal of complete elimination of nuclear weapons; negotiation of a Convention on the complete prohibition of the use or threat of use of nuclear weapons; and negotiation of a Nuclear Weapons Convention prohibiting the development, production, stockpiling and use of nuclear weapons and on their destruction, leading to the global, non-discriminatory and verifiable elimination of nuclear weapons within a specified timeframe.

We remain committed to a voluntary, unilateral moratorium on nuclear

¹ The Statement of the EAM came in the background of discussions in the NSG at Vienna on September 4, where some countries expressed some doubts about India's commitment to non-proliferation.

testing. We do not subscribe to any arms race, including a nuclear arms race. We have always tempered the exercise of our strategic autonomy with a sense of global responsibility. We affirm our policy of no-first-use of nuclear weapons.

We are committed to work with others towards the conclusion of a multilateral Fissile Material Cut-off Treaty in the Conference on Disarmament that is universal, non-discriminatory and verifiable.

India has an impeccable non-proliferation record. We have in place an effective and comprehensive system of national export controls, which has been constantly updated to meet the highest international standards. This is manifested in the enactment of the Weapons of Mass Destruction and their Delivery Systems Act in 2005. India has taken the necessary steps to secure nuclear materials and technology through comprehensive export control legislation and through harmonization and committing to adhere to Missile Technology Control Regime and Nuclear Suppliers Group guidelines.

India will not be the source of proliferation of sensitive technologies, including enrichment and reprocessing transfers. We stand for the strengthening of the non-proliferation regime. We support international efforts to limit the spread of ENR equipment or technologies to states that do not have them. We will work together with the international community to advance our common objective of non-proliferation. In this regard, India is interested in participating as a supplier nation, particularly for Thorium-based fuel and in establishment of international fuel banks, which also benefit India.

India places great value on the role played by the IAEA's nuclear safeguards system. We look forward to working with the IAEA in implementing the India-specific Safeguards Agreement concluded with the IAEA. In keeping with our commitment to sign and adhere to an Additional Protocol with respect to India's civil nuclear facilities, we are working closely with the IAEA to ensure early conclusion of an Additional Protocol to the Safeguards Agreement.

122. Statement by Prime Minister Dr. Manmohan Singh on the final outcome of the meeting of the Nuclear Suppliers Group granting India the waiver to enable India to enter into full nuclear trade.

New Delhi, September 6, 2008.

We welcome the decision earlier today of the Nuclear Suppliers Group to adjust its guidelines to enable full civil nuclear cooperation with India. This is a forward-looking and momentous decision. It marks the end of India's decades long isolation from the nuclear mainstream and of the technology denial regime. It is a recognition of India's impeccable non-proliferation credentials and its status as a state with advanced nuclear technology. It will give an impetus to India's pursuit of environmentally sustainable economic growth.

I thank the United States and other member countries of the Nuclear Suppliers Group for the role they have played in ensuring this outcome. The opening of full civil nuclear cooperation between India and the international community will be good for India and for the world. We look forward to establishing a mutually beneficial partnership with friendly countries in an area which is important for both global energy security as well as to meet the challenge of climate change.

123. Statement by Minister of External Affairs Pranab Mukherjee on the final outcome of the meeting of the Nuclear Suppliers Group.

New Delhi, September 6, 2008.

I have requested all of you to gather here so that I can personally inform you about the latest developments and the final outcome of the meeting of the Nuclear Suppliers Group (NSG) which concluded in Vienna a short while ago.

2. You have all been monitoring the developments in Vienna very closely. I am happy to inform you that the NSG have adopted a statement on civil nuclear cooperation which will enable India to resume full civil nuclear cooperation with the international community to meet its energy and developmental requirements. We welcome this decision and thank the Members of the NSG. You will appreciate that this also constitutes a major landmark in our quest for energy security.
3. The process, which has culminated in the NSG adopting a clean waiver, commenced 3 years ago with the initiative of Prime Minister Dr. Manmohan Singh and President George Bush through the 18th July 2005 Joint Statement. The IAEA adopted an India Specific Safeguards Agreement on August 1 2008. For this, our deepest appreciation and thanks are due to the Director General of the IAEA, Dr. Mohammed El Baradei and all the Members of the IAEA.
4. This decision will open a new chapter in India's cooperation with other countries in peaceful uses of nuclear energy. We look forward to working with our international partners in realizing the full potential of mutually beneficial cooperation that this decision entails. It is a development of major significance to global energy security and would also be a contribution to meeting the challenges of climate change.
5. The journey has not only been long but required several steps to be taken sequentially including intense bilateral negotiations with the Members of the IAEA and NSG. I am happy to inform you that the final outcome fully meets our expectations and is consistent with Government policy and the national consensus on disarmament and non-proliferation. The NSG waiver is a unique development that has been achieved in accordance with commitments given to Parliament and the people of India, and is consistent with India's national interest.

6. I would like to take the opportunity to place on record Government's deep appreciation in particular for the untiring efforts of the United States, France, United Kingdom and Russia throughout this process, and also the support received from the present and previous Chairs of the NSG - Germany, South Africa and Brazil.
7. I would like to thank in particular President Bush and Secretary of State Rice for their personal commitment and contribution to this process.
8. My personal appreciation also for the untiring efforts of our negotiators and for all my colleagues in the Cabinet as well as in the Department of Atomic Energy and the Ministry of External Affairs who made this possible.
9. This landmark achievement is the direct outcome of the vision, personal commitment and guidance provided by Prime Minister Dr. Manmohan Singh.

Atomic Energy Commission (AEC) Chairman Anil Kakodkar described the Nuclear Suppliers Group's (NSG) waiver to India as "an acceptable arrangement which meets our requirements." In an interview from Mumbai on Sunday, he called the waiver "a breakthrough." Asked whether the waiver had any bar on India conducting nuclear tests, he said, "The point is our legal rights [to conduct nuclear tests] have been preserved. If you test, there will be reactions. But we have preserved our legal rights [to conduct a nuclear test]." Answering a question in what way the waiver was a breakthrough, he replied that first it opened up international civil nuclear commerce for the country and second, India had so far faced embargo regimes in accessing nuclear reactors and technology from other countries. (The embargoes would be lifted). "There is now the recognition that India, on the civilian nuclear side, can deal with the international community; and on the strategic side, we can maintain our strategic programmes. In terms of recognition, it is a breakthrough," he said. Third, the waiver would "very significantly contribute to India's nuclear power growth." To a query whether the nation received "a clean and unconditional waiver," which he always insisted on, he said, "There are no new conditions." Will the waiver lift the ban on India receiving enrichment and reprocessing technologies from other countries? "The NSG has policies and guidelines on export of enrichment and reprocessing technologies. There is no specific targeting of India." The entire exercise was about granting exemptions to India to have civil nuclear commerce with other countries. "I m glad it worked out ultimately," he said. Asked whether he was disappointed with China's attitude at the NSG meet in Vienna, he said, "We would have certainly expected a more positive approach [from China]. Ultimately, the question is we have to take into account all kinds of ...their policies. They have to deal with issues in a particular manner and we have to take them into account."

The Indian National Congress, the main party in the ruling United Progressive Alliance on September 7 hailed the NSG decision to provide a waiver to India stating that it is a unique development that confers de facto nuclear power status to the country. Terming it

as the "greatest event in the 20th-21st century," party chief spokesperson M. Veerappa Moily said countries that were hostile to India after New Delhi conducted nuclear tests and the P-5 (permanent five members of the U.N. Security Council) had agreed to the waiver. "We have become P-6. It is a historical event," he said. Mr. Moily said all the lobbies that worked against India had failed and said this was the best deal done ever by any country. He praised Prime Minister Manmohan Singh as the architect behind this agreement. Party president Sonia Gandhi gave steadfast support to the deal, he said. Senior leader and Union Minister Kapil Sibal said the waiver showed India's time had come. He said the development must also be seen as a ruling milestone for the advent of global solution for challenges the world faced in the form of energy security and global warming. Party spokesperson Manish Tiwari said 34 years after India conducted nuclear tests that it entered the nuclear club safeguarding its strategic autonomy. He said the deal would take the country forward and meet its growing requirements of energy, something that every person in every village related to.

Leading business chambers reacted positively to the Nuclear Suppliers Group (NSG) waiver. In a statement, the Federation of Indian Chambers of Commerce and Industry said it was confident that the nuclear deal with Washington would be beneficial to India in many ways. Foremost, it would enable India to get fuel for all its nuclear reactors, which have been running to almost half the capacity. Secondly, it would facilitate induction of latest technology in this sector. Thirdly, the country would witness massive investments in generation of nuclear power. Finally, this would go a long way in resolving India's massive need for power for its development.

The Associated Chambers of Commerce and Industry of India described the waiver as a resounding victory for India. Assocham president Sajjan Jindal said UPA chairperson Sonia Gandhi, Prime Minister Manmohan Singh and External Affairs Minister Pranab Mukherjee deserved praise. Chandrajit Banerjee, Director General of the Confederation of Indian Industry, said: "Today's development is a major confidence-building move for the international community to engage with India especially in high technology trade and will provide opportunity for Indian manufacturers to supply spares and components to the global manufacturers of nuclear power plants besides providing business opportunities for Indian power plant construction companies."

S.K. Jain, Chairman and Managing Director, Nuclear Power Corporation of India Limited (NPCIL), on September 6 said the NSG waiver would "definitely and clearly provide India with a level-playing field" in building nuclear power plants and obtaining the nuclear fuel, natural uranium, from abroad. "We will be equal partners in the global nuclear supply chain." Mr. Jain said: "We had always felt we did not have a level-playing field for the source of nuclear energy and there were constraints that dictated the pace of our nuclear power programme. We felt shackled and stifled. The initiatives taken by the Government of India for the past three years have now made us part of the international nuclear community. We can now speed up our nuclear power programme." He called the NSG waiver "a momentous event" for the entire nuclear industry in India. "Not only the NPCIL but also the nuclear industry were hoping expectantly for this day to arrive." With the NSG waiver, India could import Light Water Reactors (LWRs) and enriched uranium to fuel them. Besides, India could buy natural uranium for its indigenous Pressurised Heavy Water Reactors (PHWRs) of 220 MWe each that the country had agreed to put under the International Atomic Energy Agency's safeguards. "So we will be in a position to accelerate our own PHWR programme and set up imported LWRs with a capacity of 1,000 MWe each and above," Mr. Jain said. On the Kudankulam Nuclear Power Project in Tamil Nadu, where two LWRs of 1,000 MWe each from Russia are under construction, the NPCIL Chairman said work was progressing fast so that the procedure for the first unit's criticality including loading the enriched uranium fuel bundles into the reactor would start by 2008-end. "We are hoping that some electricity from the first unit will flow into the grid by March 2009. The second unit will also be started up in 2009."

Mr. Brajesh Mishra, former National Security Advisor said the waiver granted by the Nuclear Suppliers Group gives India "lots of advantages". His understanding of what was agreed upon at the NSG meeting in Vienna was that it was "based on the 123 draft agreement between India and the United States" and "there was nothing beyond this" in the waiver. The development would open up nuclear commerce which India had been denied for decades." It was "a good development" for India. Mr. Mishra categorically said the NSG waiver made "no prohibition on testing [of a nuclear weapon by India]." He differed with the Bharatiya Janata Party on this crucial issue. Besides giving India access to nuclear energy, the deal would bring India and the U.S. closer, he said. It would give India "many advantages" in terms of access to high technology and nuclear energy.

The Samajwadi Party, described the NSG waiver for India's nuclear commerce as a great victory for the country and said it would help in its development. "India needs development and not nuclear bombs," SP general secretary Amar Singh said soon after the NSG approved the waiver in Vienna. Mr. Singh criticised the Opposition parties for "beating about the bush." Quoting the former President, A.P.J. Abdul Kalam, he said India required no more nuclear tests as the previous two tests had proved that the country was a nuclear-capable state. Nationalist Congress Party spokesman D.P. Tripathi also welcomed the news, saying it was expected. "This consensus is going to be the basis for wider international consensus," he said.

There was discordant voice too. The Bahujan Samaj Party president and U.P. Chief Minister Mayawati accused the Congress-led UPA government of deliberately concealing facts and conditions relating to the nuclear deal. She expressed the apprehension that the nuclear deal with the U.S. would compromise the country's independent foreign policy and mean India's entry to the discriminatory Nuclear non-Proliferation Treaty (NPT) regime through the back door. The BSP leader alleged that the deal was being hurried through without taking the people and major political parties into confidence and asserted that it was against national interest. She said that the ground work for the deal had been done during the BJP regime at the Centre and charged the Congress with only following the footsteps of the BJP-led NDA government.

124. Press Release issued by the Ministry of External Affairs on the telephone conversation between Prime Minister Dr. Manmohan Singh and President Bush.

New Delhi, September 6, 2008.

Prime Minister Dr. Manmohan Singh and President Bush today spoke to each other on telephone. The Prime Minister thanked President Bush for his role in taking forward the civil nuclear initiative and the decision by the Nuclear Suppliers Group to adjust its guidelines to enable full civil nuclear cooperation between India and the international community. The two leaders expressed their belief that mutually beneficial relations between India and the United States were in the interest of their peoples, and were on a path of steady consolidation and multifaceted expansion, to which both leaders reiterated their commitment¹.

¹ Regarding the follow up action for ratification of the Agreement by the Congress, the Spokesperson for the National Security Council Gordon Johndroe said in Washington on September 8 that President George W. Bush was "hopeful" of being able to push the Indo-U.S. nuclear deal through Congress before his term ends in January next year, the White House said on September 8. "We will work with Congress to get this agreement approved. We are hopeful," he said. Terming the waiver granted to India by the 45-member Nuclear Suppliers Group (NSG) as a "huge step" in the relationship between the U.S. and India, U.S. Secretary of State Condoleezza Rice complimented the role played by the Indian government. Speaking to journalists in Algiers on September 6, Ms. Rice said India showed a lot of leadership skills in Vienna, where everybody took everyone else's concerns seriously and found the ways to bridge it. "I just wanted to come back and say how pleased I am to have received the news of the conclusion of the NSG discussions, and therefore, the passing of an exemption for India. This is an important step forward. I have to say that India showed a lot of leadership." "We got lot of help from the Indian government to make this possible, but also from a number of delegations that worked very closely with us. And I think that it is a really very big step forward for the non-proliferation framework."

125. Media Briefing by Spokesperson of the Chinese Ministry of Foreign Affairs on removal of nuclear trade restrictions on India by the Nuclear Suppliers' Group.

Beijing, September 8, 2008.

On September 6, the Nuclear Suppliers Group (NSG) adopted a statement on civilian nuclear cooperation with India, deciding to lift nuclear trade ban on the country. Do you have any comment?

China believes that all countries are entitled to make peaceful use of nuclear energy, and conduct international cooperation in this regard. Meanwhile, relevant cooperation should be conducive to safeguarding the integrity and efficacy of the international nuclear non-proliferation regime.

China has been taking part in relevant meetings within the Nuclear Suppliers Group in a responsible and constructive manner. On September 6, NSG discussed civilian nuclear cooperation with India and issued a statement on the basis of negotiated consensus, deciding to lift nuclear trade ban on the country.

China hopes that the decision will contribute to peaceful use of nuclear energy and international cooperation on nuclear non-proliferation¹.

1 It was widely known that there was reluctance on the part of China to facilitate an exemption for India at the NSG. Media reports said that this attitude of China ruffled feathers in New Delhi and the Indian side made its displeasure known through a demarche. Media report said that a senior government official from the Ministry of External Affairs spoke to the Chinese ambassador in India on September 6 to let the Chinese know that they had not kept their promise of playing a constructive role at the Nuclear Suppliers Group meeting. The Indian side believed that China, in a very subtle manner, egged on smaller countries to sabotage the India-US nuclear deal. "There was a definite attempt to delay the proceedings to another round of talks with full knowledge that any such move would scuttle the deal," said an official. Finally, as the smaller countries were weaned away one by one, China probably fell in line because it did not want to stand alone in denying India the waiver and also because of the pressure mounted by the US. While it has been suggested that President George Bush called up his counterpart Hu Jintao, the western media reported that it was actually secretary of state Condoleezza Rice's conversation with Chinese foreign minister Yang Jiechi which did the trick. Meanwhile, external affairs minister Pranab Mukherjee on September 7 ducked queries about whether or not the Indian side would convey its displeasure to Jiechi when the latter was due to arrive in New Delhi the next day on a 3-day visit. "I would not like to comment on what role was played by which country. This is their internal matter. Every country has a right to express its sovereign will. So far as Yang's visit to India is concerned, he is our distinguished guest. I welcome him," said Mukherjee. However the National Security Advisor M K

126. Remarks to the media by Official Spokesperson on developments relating to the civil nuclear initiative.

New Delhi, September 11, 2008.

In view of the public interest in developments relating to our civil nuclear initiative, I can inform you that following the NSG statement which enables civil nuclear cooperation by NSG members with India, Government is taking steps to realize commercial cooperation with foreign partners in this field. We have informed the USA about our intent to source state of the art nuclear technologies and facilities based on the provisions of the 123 Agreement from the US. Government is also moving towards finalizing bilateral agreements with other friendly partner countries such as France and Russia. While actual cooperation will commence after bilateral agreements like the 123 Agreement come into force, the Nuclear Power Corporation of India has already commenced a preliminary dialogue with US companies in this regard¹.

Narayanan said that India would convey its displeasure to China. Reporting the NSG waiver, 'People's Daily' said that Cheng Jingyem, head of the Chinese delegation, pointed out that it was Beijing's hope that the decision made by the NSG would stand the test of time and contribute to the goal of nuclear non-proliferation and peaceful use of atomic power. "It is also China's hope that NSG will equally address the aspirations of all parties for the peaceful use of nuclear power while adhering to the nuclear non-proliferation mechanism," the daily said. Media reports reporting the visit of the Chinese Foreign Minister to New Delhi said that during the talks New Delhi slammed Beijing for being unwilling to support its entry into the Nuclear Suppliers' Group (NSG), though there was no official word about the talks. However NSA Mr. Narayanan reportedly said: "We were rather disappointed because the Chinese suddenly jumped into the arena supporting -- they didn't say anything themselves -- the naysayers". "We will of course express some kind of disappointment... saying that we expected more from them," he said.

¹ The clarification became necessary because of speculation that India would like to wait for the signing of the 123 Agreement with the United States before entering into any nuclear commercial cooperation with any other country.

127. Response by Official Spokesperson to news report regarding the Civil Nuclear Initiative.

New Delhi, September 12, 2008.

The Government of India does not comment on domestic political processes in the US or other countries.¹

In working with the US in civil nuclear cooperation India will be guided by the 123 Agreement alone.

The text of the India-US 123 Agreement has been agreed upon by the Governments of India and the United States. It is a public document. The rights and obligations of both India and the US are clearly spelt out in the terms and provisions of the 123 Agreement. Once this Inter-Governmental Agreement enters into force, the Agreement would become a legal document in accordance with well-recognised principles of international law and the Law of Treaties.

India-US civil nuclear cooperation will be carried out on the basis of the respective rights and obligations of the two sides as contained in the Agreement. By doing so, the Government will ensure that India's rights are fully protected.

1. The spokesperson was responding to media reports that U.S. President George Bush had in his statement to the Congress said that the American commitment on reliable supply of nuclear fuel was not legally binding. Pointing out that the rights and obligations of both countries are clearly spelt out in the 123 Agreement, India maintained that once this Inter-Governmental pact entered into force, it would become a legal document in accordance with well-recognised principles of international law and the Law of Treaties. This implied that New Delhi believed that the political commitment for uninterrupted supply of fuel would then get translated into a legally binding commitment. "In Article 5 (6), the Agreement records certain political commitments concerning reliable supply of nuclear fuel given to India. Agreement does not, however, transform these political commitments into legal binding commitments because the agreement, like other U.S. agreements of this type, is intended as a framework agreement," said Mr. Bush's statement.

128. Information Circular Issued by the IAEA to Circulate the Communication dated 10 September 2008 received from the Permanent Mission of Germany to the Agency regarding a "Statement on Civil Nuclear Cooperation with India".

Vienna, September 19, 2008.

The Agency has received a communication dated 10 September 2008 from the Permanent Mission of Germany, forwarding a letter from the Chairman of the Nuclear Suppliers Group (NSG) to the Director General attached to which was a "Statement on Civil Nuclear Cooperation with India" adopted by the NSG.

As requested in the communication, the attachment is herewith circulated for information.

Communication of the Chairman of the Nuclear Suppliers Group to the IAEA on Waiver of Civil Nuclear Trade with India

1. At the extraordinary Plenary Meeting on 6th September 2008, the Participating Governments of the Nuclear Suppliers Group decided that they:
 - a. Desire to contribute to the effectiveness and integrity of the global non-proliferation regime, and to the widest possible implementation of the provisions and objectives of the Treaty on the Non-Proliferation of Nuclear Weapons;
 - b. Seek to avert the further spread of nuclear weapons;
 - c. Wish to pursue mechanisms to affect positively the nonproliferation commitments and actions of all states;
 - d. Seek to promote fundamental principles of safeguards and export controls for nuclear transfers for peaceful purposes; and
 - e. Note the energy needs of India.
2. Participating Governments have taken note of steps that India has voluntarily taken with respect to the following commitments and actions:

- a. Deciding to separate civilian nuclear facilities in a phased manner and to file a declaration regarding its civilian nuclear facilities with the IAEA, in accordance with its Separation Plan (circulated as INFCIRC/731);
 - b. Concluding negotiations with the IAEA and obtaining approval by the Board of Governors on 1 August 2008 for an "Agreement between the Government of India and the IAEA for the Application of Safeguards to Civilian Nuclear Facilities," in accordance with IAEA standards, principles, and practices (including IAEA Board of Governors Document GOV/1621);
 - c. Committing to sign and adhere to an Additional Protocol with respect to India's civil nuclear facilities;
 - d. Refraining from transfer of enrichment and reprocessing technologies to states that do not have them and supporting international efforts to limit their spread;
 - e. Instituting a national export control system capable of effectively controlling transfers of multilaterally controlled nuclear and nuclear-related material, equipment and technology.
 - f. Harmonizing its export control lists and guidelines with those of the Nuclear Suppliers Group and committing to adhere to the Nuclear Suppliers Group Guidelines; and
 - g. Continuing its unilateral moratorium on nuclear testing, and its readiness to work with others towards the conclusion of a multilateral Fissile Material Cutoff Treaty.
3. Based on the commitments and actions mentioned above, as reiterated by India on September 5, 2008, and without prejudice to national positions thereon.

Participating Governments have adopted and will implement the following policy on civil nuclear cooperation by Participating Governments with the IAEA-safeguarded Indian civil nuclear program:

- a. Notwithstanding paragraphs 4(a), 4(b) and 4(c) of INFCIRC / 254 / Rev.9 / Part 1, Participating Governments may transfer trigger list items and/or related technology to India for peaceful

purposes and for use in IAEA safeguarded civil nuclear facilities, provided that the transfer satisfies all other provisions of INFCIRC/254/Part 1, as revised, and provided that transfers of sensitive exports remain subject to paragraphs 6 and 7 of the Guidelines.

- b. Notwithstanding paragraphs 4(a) and 4(b) of INFCIRC/254/Rev.7/Part 2, Participating Governments may transfer nuclear-related dual-use equipment, materials, software, and related technology to India for peaceful purposes and for use in IAEA safeguarded civil nuclear facilities, provided that the transfer satisfies all other provisions of INFCIRC/254/Rev.9/Part 2, as revised.
 - c. At each Plenary, Participating Governments shall notify each other of approved transfers to India of Annex A and B items listed in INFCIRC/254/Part 1, as revised. Participating Governments are also invited to exchange information, including about their own bilateral agreements with India.
 - d. With a view to intensification of dialogue and cooperation with India, the Chairman is requested to confer and consult with India and keep the Plenary informed of these consultations.
 - e. Participating Governments will maintain contact and consult through regular channels, including the Consultative Group and Plenary, for the purpose of considering matters connected with the implementation of all aspects of this Statement taking into account relevant international commitments or bilateral agreements with India. In the event that one or more Participating Governments consider that circumstances have arisen which require consultations, Participating Governments will meet, and then act in accordance with paragraph 16 of the Guidelines.
4. In order to facilitate India's adherence to INFCIRC/254/ Part 1 and 2 and to remain current in its implementation of the Guidelines, the NSG Chair is requested to consult with India regarding changes to and implementation of the Guidelines and inform the Plenary of the outcome of the dialogue with India. Consultations with India

regarding proposed amendments will facilities their effective implementation by India.

5. Upon request by Participating Governments, the Chairman is requested to submit this Statement to the IAEA Director General with a request that it be circulated to all Member States.

129. Media Briefing by Foreign Secretary Shivshankar Menon on the visit of Prime Minister Dr. Manmohan Singh to the USA and France and by Secretary (West) on the India-EU Summit.

New Delhi, September 19, 2008.

Please see Document No.558.

130. Extract from the Interview of External Affairs Minister Pranab Mukherjee with the Chennai based daily *the Hindu*.

September 22, 2008

Will the Prime Minister be in a position to sign the 123 Agreement during his American visit?

It depends on the [U.S.] Congress. Whatever has to be done from our side we have done. Now it is for them to decide: How the President and the Administration will be able to get it done through the Congress. There is bipartisan support but the Congress has its own way of functioning. It is difficult to predict. It is possible, the Prime Minister will be there till the 26th. He is going to Washington on the 25th. So let us hope.

Regardless of its passage through the Congress, do we see a problem what President Bush said about fuel supplies not being legally binding and how do we get around this difference in interpretation?

Our position is very clear. We have some agreed texts, including the 123 Agreement. Of course, unless it is ratified by the U.S. Congress it is not a legal document. But we have presumed it to be a legal document, that is why we have sought the ratification of that document. We do not like any amendment because it was an agreed text. That is the way all international negotiations take place. That you agree upon the language, initial the text and thereafter it goes through the ratification process. We do hope it will be possible to have the ratification, as the language has been agreed upon and has been initialled - the 123 and two other documents, the India-specific safeguards agreement and the NSG clearance.

There is a view by some, including by Ambassador Lalit Mansingh, that now that the President has himself declared that these are not legally binding assurances, it would be demeaning for the Prime Minister to sign such an agreement.

I don't subscribe to that view. So far as we are concerned, we have made it quite clear that and it has been mentioned in the text of the agreement also. I would not like to go into this argument at this stage because this language has been initiated, debated, discussed and then agreed upon. It is just not that some draft has cropped up suddenly and somebody has initialled it. It is a negotiated draft and when it is approved, ratified by the

U.S. Congress, thereafter, our procedures are also there. The cabinet will have to ratify it. Depending on the "observations" is not sufficient; it is their internal matter. We do not comment on their internal matter. When we discuss in Parliament, many members express their views. Nobody is expected to make any comment. When we take a decision in the Cabinet, what transpires in the Cabinet is exclusively our matter, not of somebody else. Therefore, in what way their internal decision-making process takes place and what transpires between one wing of the administration and another wing of the administration, is as per their Constitutional practice. It is their process.

What would be the political and commercial value of an agreement where the other side is telling you in advance that fuel supply assurances are not legally binding?

I told you this is an enabling provision. After that when we buy the reactors, we will enter into the commercial agreement. These details will be worked out in framework of this agreement.

So we are not seeing it as an act of bad faith or good faith?

No. We are taking it as it is. Up to now there is the 123 Agreement language. In what form we will have the ratification, that will have to be seen.

131. Extract from the Interview of External Affairs Minister Pranab MUKherjee with Ms. Kalyani Shankar for the All India Radio on the India - US Civil Nuclear Energy Cooperation.

New Delhi, September 22, 2008.

Interviewer (A): Welcome to this programme, Mr. Pranab Mukherjee. For the past two years, the entire focus of the government and all the political parties have been on the Indo-US nuclear deal. The deal is now at a very crucial stage with the NSG is discussing it now, 4th and 5th. By 5th I think we will know the results. So what do you think? Will the NSG clear it or how far is India ready to accommodate the changes?

Pranab Mukherjee (PM): Now NSG is meeting from tomorrow and the outcome of their meeting will be known to us at the end of the meeting on 5th. Therefore, there is no room of speculation. What to do with the outcome, we shall have to wait for the outcome. We have already stated what is our commitment. We cannot go beyond our commitment to Parliament, commitment made by the Prime Minister and commitment made by ourselves. Therefore, whatever we have committed to it, it will have to be achieved within that.

A: So what you mean is that if anything is suggested beyond that India will come with that?

PM: We have seen the draft for which amendment is sought for. Wherever is sought for, and that draft if it is agreed by the NSG is OK.

A: And could you tell us what is in the draft?

PM: No, how can I. It is being considered by them.

A: And how far India is ready to accommodate the changes? The changes which had been given to you in the draft and you are accepting those?

PM: We are committed to our commitment to Indian Parliament. Therefore, we have tried to meet our commitment made by our Prime Minister, made by me, in all the documents which we have entered into in connection with the Civil Nuclear Cooperation. Whether it is 123 agreement between India and USA or India's specific safeguards

agreement with IAEA and also in the draft which has been circulated by the United States of America to the NSG countries.

A: If the NSG clears which most probably might, is there enough time for the US Congress to clear it also because you have to go for the 123 also by that time?

PM: That will depend on the calander of the US Congress.

A: That will be in September end I think 26th or something.

PM: I don't know because what calander they will fix, it is for the US Congress to decide.

A: But, is there enough time suppose on 5th if it is cleared?

PM: It will depend on what type of calander and what time schedule they have. They are to decide, not we.

A: OK. The United States is in the midst of elections. And November 19th is their polling day. And after that, January 20th of next year the new President will take over. Where do you see the Indo-US relations going, whoever becomes President?.

PM: Our relationship with USA is strategic relationship. It is steadily improving irrespective of whoever occupies White House. Improvement of Indo-US relationship has a strong bipartisan support. Therefore, I do feel that whoever occupies the office of President after the election, our relationship between India and USA will steadily develop.

A: Even if by any chance, NSG doesn't clear it. Even then. That has nothing to do with the relationship with USA

PM: Our relationship is not uni-dimensional or uni-directional. We have relationship on many other area. It is a part of it.

THANK YOU, VERY MUCH

132. Statement by Chairman of the Atomic Energy Commission Anil Kakodkar at the 52nd General Conference of the International Atomic Energy Agency.

Vienna, October 1, 2008.

Mr. President,

Allow me at the outset to congratulate you on behalf of my Government, and my own behalf, on your election as the President of the 52nd General Conference of the International Atomic Energy Agency. I am sure that under your able Presidentship, and with the support of your team and the Secretariat of the Agency, this General Conference will be able to accomplish the tasks before it.

I also take this opportunity to welcome the entry of the Sultanate of Oman, the Kingdom of Lesotho and Independent State of Papua New Guinea to the membership of the International Atomic Energy Agency (IAEA).

I would also like to compliment Dr. Mohamed ElBaradei, Director General on his able stewardship of the International Atomic Energy Agency for yet another year. Through his tireless efforts, he has guided the work of the Agency so that it can be better prepared to face contemporary challenges and also realize the immense opportunities that lie ahead.

Mr. President, this has been a remarkable year for India in the field of nuclear energy. The approval by consensus of the Agreement for the Application of Safeguards to Civilian Nuclear Facilities by the IAEA Board of Governors on 1st August, 2008 (GOV/2008/30), and the Statement on Civil Nuclear Cooperation issued by the Nuclear Suppliers Group (INFCIRC/734) on 6th September, 2008 have created conditions for India to make an even bigger contribution to the growth of international civil nuclear cooperation. Here we would like to acknowledge the contribution and assistance of our close friends in the international community who have made it possible.

While development of such cooperation will contribute to the strengthening of India's energy security, India is also looking forward to enhance its assistance to friendly countries. India has an ongoing programme on 220 MWe PHWRs, a reactor system that is competitive in terms of capital costs, safety performance and unit energy cost. This system is well suited to the needs of countries with small electricity grids, especially those in the developing world.

Today we have reached a critical point in global development efforts, which is marked by a huge increase in the energy requirements of emerging economies, unfulfilled developmental aspirations of a vast majority of the global population and the serious threat that our planet faces in terms of climate change. According to the Inter Governmental Panel on Climate Change, "warming of the climate system is unequivocal, as is now evident from observations of increases in the global average air and ocean temperatures, widespread melting of snow and ice and rising global average sea level". It is, therefore, clear that as we work towards meeting enhanced energy requirements, we need to realize this not in the business as usual mode but with much greater dependence on nonfossil energy sources. Such an approach is necessary as a part of climate change mitigation strategies, as well as for sustainability of available energy resources.

As an example here, I might mention that, as per the estimates made by our Planning Commission, India's share of incremental world supply of fossil fuels could rise from a low of 13% in the most energy efficient scenario to a high of 21% in the coal dominant scenario by 2031-32. India has, therefore, accorded high priority to realizing a significantly larger share for nuclear power in our overall electricity generation. Rapid development of nuclear energy has the viable potential for making the necessary energy available for sustainable development of the world at large.

India has been practicing a comprehensive programme in atomic energy covering the entire fuel cycle in respect of uranium, plutonium and thorium based fuels. While the three stage development of our nuclear programme is dictated by our prime longterm objective of realizing energy independence on the basis of our vast thorium resources, our understanding and experience with thorium clearly reveals several benefits of the thorium fuel cycle, particularly in heavy water reactors, in terms of proliferation resistant nuclear energy production as well as efficient fissile plutonium disposal which may also be of interest to other countries. We are organizing a side event this Friday that would highlight the role of Thorium in this regard in some detail.

Mr. President, I would now like to present a few highlights from Indian nuclear power programme, which has by now clocked 285 reactor years of safe and economic nuclear power generation. A new national record for continuous power operation was achieved by the Kaiga - 2 reactor by

registering 529 days of uninterrupted run during August 2006 to January 2008. In addition to the seventeen operating reactors, three 220 MWe Pressurised Heavy Water Reactors, two 1000 MWe Light Water Reactors and one 500 MWe Prototype Fast Breeder Reactor (PFBR) are currently in advanced stages of construction. An important milestone of erection of the 13.5m diameter safety vessel into the reactor vault of PFBR was reached in June 2008. I am also happy to inform you that the MoX fuel for PFBR, which is being irradiation tested in the Fast Breeder Test Reactor at Kalpakkam, has now reached a burn-up of 80,000 megawatt days per tonne of heavy metal. The initial construction activities related to Fast Reactor Fuel Cycle Facility that would recycle the PFBR fuel have commenced. The programme of development of metallic fuels that would enable shorter doubling time of fast reactor capacity is moving on course. We are also pursuing pre-project activities for four 700 MWe PHWRs and development of a new uranium mine at Tumallapalle.

A new critical facility for validating the physics design of the thorium based Advanced Heavy Water Reactor core, as well as for investigation of core lattices based on various fuels, moderator materials and reactivity control devices is now operational at the Bhabha Atomic Research Centre and is being used for various experiments for the purpose. The design of a new multi-purpose research reactor is progressing well and studies are currently underway to incorporate features in the design for its possible coupling to a lead-bismuth-eutectic spallation neutron source driven by a 650 MeV proton beam. The 3rd generation high level waste vitrification melter based on cold crucible technology has been in regular operation. Based on the operational feedback, a new melter has been designed and is under manufacture. An industrial electron beam irradiator based on 10 MeV RF-L1NAC has been commissioned. This machine is capable of delivering an electron beam over a 100 cm x 5 cm area in air for various materials processing applications. A 1:4 size model of our 540 MWe PHWR containment has been constructed to conduct experimental studies on various failure modes of the containment up to its ultimate load capacity. An international round-robin exercise has been organized using the results of these experiments that will enable bench marking of various computer codes for analysis of containment behaviour under accident conditions. Similarly, there are other major round robin exercise activities being pursued in India covering large RCC structures, tsunami effects, atmospheric dispersion, etc. We would welcome participation of interested research

groups in these exercises. INDUS II, the 2.5 GeV Synchrotron at Raja Ramanna Centre for Advanced Technology at Indore has reached its full energy level with a number of experimental beam lines operational. The Superconducting Cyclotron at Variable Energy Cyclotron Centre, Kolkata has also been commissioned with an internal beam.

India has also played an important role in several international projects that help further fundamental nuclear research. We are happy that the LHC has been completed and would start producing valuable experimental results as soon as the initial teething troubles are overcome. We value our participation in the ITER project which is important in terms of the long-term energy needs of the world. India is also participating in FAIR and many other mega-science projects.

Mr. President, I am also happy to inform this august gathering that in the area of cancer treatment, the indigenously developed telecobalt machine, Bhabhatron, is increasingly being sought after by cancer hospitals. Nine Bhabhatrons have already been installed and more are currently under manufacture. On the nuclear agriculture front, 8 new mutant varieties were notified by the Central Government for commercial cultivation during the year. This takes the total mutant varieties developed in BARC to 35.

As a member of the IAEA's INPRO activity right since its inception, we are glad to note the progress made during recent years. India is a participant in eight of the twelve Collaborative Projects under INPRO Phase - II. The collaborative projects, particularly in the fields of water cooled reactors, fast reactors, high temperature reactors, and thorium utilization, have been offering an unique opportunity for the participating Member States to jointly work towards taking these technological approaches forward, to fulfill the needs of the future and to cater to enhancement of the volume, reach and range of deployment of nuclear energy in the world. It is rather ironic that this important technological activity, which is at the core of a holistic solution to global access to nuclear energy in a safe, secure and sustainable manner, is still not a part of regular budget of the Agency. We once again stress on the need to provide full budgetary support to the INPRO activities, which we believe would be a most efficient and sustainable use of the Agency resources in meeting its objectives according to its Statute.

Mr. President, human development has primarily resulted from creative thinking and actions based on observations of things around us. Science

and Technology has played a major role in this evolution. At the current crucial juncture, when the ability to access the vast energy potential of the atom by all is the need of the hour to prevent widening of disparities, fears arising out of the destructive power of atom are preventing wider access. Several proposals for solutions are on the table. While one needs out of box ideas to make progress, it is clear that S&T based solutions are the ones that are likely to be most successful. Among all agencies in the UN family, the IAEA is uniquely placed in this respect as it has the necessary S&T resources with global representation. What we need is to emphasise S&T approaches to such solutions and INPRO is a case in point.

While we recognize the importance of nuclear power development world wide, we also need to take into account the factors that have constrained its growth. The number of countries that have taken up construction of a new power reactor has remained stagnant at 33 since the year 1985. However, there are ambitious plans now for expanding the nuclear power generating capacity in many countries and several countries have plans to build their first nuclear plant in the near future. Clearly, the required infrastructure needs to be in place in a timely manner to service this nuclear renaissance. One of the crucial elements of the infrastructure is the availability of trained human resources. Fortunately in India we have a robust programme for manpower development that is in existence for over five decades now. In keeping with the spirit of international cooperation, we would like to offer to train foreign young scientists in our Nuclear Training School, that regularly conducts a one-year orientation course for engineering graduates and science post-graduates, on mutually agreed terms.

As members of a responsible global community, we need to understand the issues that inhibit access to nuclear power and find solutions for their resolution. Clearly there are issues concerning human resources, capable infrastructure, safety regulation and security. What we need is a balanced approach which maximizes development and minimizes risks. The International Atomic Energy Agency, through its more than five decades of scientific and professional work, has established itself as a credible organization that fulfils its mandate as enshrined in its Statute. With its strong science base and rich experience, the Agency is in a unique position to identify and promote holistic technological solutions that are optimum,

that minimize constraints and are accessible to all.

The Director General's bold initiative last year to set up the Commission of Eminent Persons (CEP) for going into the nature and scope of IAEA's programme upto 2020 and beyond is highly commendable. The Report clearly brings out the need for a greater role for the Agency in piloting global development through the use of atomic energy which appears almost-inevitable today. While the Report does cover all relevant dimensions, especially the need for enhanced resources through regular budget, perhaps it could have been more balanced. The Report, however, does not provide many practical ideas and strategies to enable new entrants to access the benefits of nuclear energy. We would have been happier to see the focus of the Report on such and other related aspects within the scope of Agency Statute rather than on aspects outside. The CEP report alone, as it stands, cannot be the basis for IAEA's future. Clearly, more work needs to be done. However, we welcome this opportunity provided by the release of the Report to generate constructive and practical ideas as to how the renaissance of the nuclear industry could benefit all countries, the developing countries in particular.

Mr. President, on 30th October, 2008 we would enter the birth centenary year of the founder of atomic energy programme in India, the late Dr. Homi Jehangir Bhabha. I am also happy to inform that during this Bhabha Centenary Year, and also to mark the Silver Jubilee Celebrations of the Indian Atomic Energy Regulatory Board, we will be hosting the IAEA International Conference on Topical Issues in Nuclear Installation Safety, that is scheduled to be held in Mumbai during 17-21 November, 2008. As part of a year long Homi Bhabha Birth Centenary programme, we are planning to organize an international conference on "Peaceful Uses of Atomic Energy" and it will be our privilege if we can do this in cooperation with IAEA. As many of you are aware, Dr. Bhabha was among the early group that worked on shaping IAEA and in fact was instrumental in having its headquarters located in Vienna. Incidentally Dr. Homi Bhabha was also the President of the 1 st Geneva Conference on "Peaceful Uses of Atomic Energy"

Mr. President, in the march of human civilization every age and era is defined by a significant achievement; the use of fire, the invention of the wheel, locomotion through steam, the realization of power of the atom and the internet. We have now reached the final frontier. In this age we are at the threshold of the most exciting of possibilities - the power to understand

and manipulate matter in the service of mankind. But this possibility will become a reality only if the nations of the world, and in particular the scientific community, come together and join hands in a manner not seen in the past. We are hopeful that the international nuclear community working together as one family within the framework of the IAEA, will not let this opportunity pass and take giant leaps towards harnessing nuclear power for the benefit of the entire humanity.

Thank you, Mr. President

**133. Joint Press Interaction of External Affairs Minister
Pranab Mukherjee and US Secretary of State Dr.
Condoleezza Rice.**

New Delhi, October 4, 2008.

Please see Document No.573.

134. Remarks by U S Secretary of State Condoleezza Rice and External Affairs Minister Pranab Mukherjee at the signing of the U.S.-India Civilian Nuclear Cooperation Agreement.

Washington (D. C), October 10, 2008.

Moderator: Good afternoon, ladies and gentlemen. My name is Raymond Martinez. I am the U.S. Deputy Chief of Protocol. The United States Secretary of State and the External Affairs Minister of the Republic of India will be signing the Agreement for Cooperation between the Government of the United States of America and the Government of India Concerning Peaceful Uses of Nuclear Energy, also known as the 123 Agreement between the United States and India.

This document, the product of over a year of intense negotiations, is the capstone of an eight-year-long effort to take the bilateral relationship between the United States and India to a higher level. We welcome all of you to witness this historic event; in particular, our distinguished guests representing the Government of India.

Ladies and gentlemen, please welcome now the Secretary of State.

Secretary Rice: Thank you very much. Thank you. Ladies and gentlemen, this is truly an historic occasion, and I want to thank all of you for joining us here. But most of all, I want to thank my friend and colleague, Foreign Minister Mukherjee, who flew all the way here from New Delhi to do this signing. Thank you very, very much.

I also want to thank the members of the Indian delegation for traveling for this special day. I want to thank, obviously, the negotiators, the teams that have put this together, and our two very fine ambassadors. Thank you.

On behalf of President Bush and all of us here at the State Department, welcome to Washington, because without your personal dedication and relentless hard work, we would not be here today.

Many thought this day would never come, but doubts have been silenced now. The agreement we are about to sign is unprecedented and it demonstrates the vast potential partnership between India and the United States, a potential that, frankly, has gone unfulfilled for too many decades

of mistrust, and now potential that can be fully realized. The world's largest democracy and the world's oldest democracy, drawn together by our shared values and, increasingly, by our many shared interests, now stand as equals, closer together than ever before.

That we do so now is due to one factor and one factor alone: statesmanship; the courage in democratic statesmanship, both in New Delhi and in Washington. Prime Minister Singh literally risked his political future for this agreement, and then remade his government to gain the support that he needed. And President Bush first saw the potential and the need for transforming the U.S.-India partnership all the way back in 1999 when he was still the Governor of Texas, and he's made it one of his highest priorities.

That is what democratic leaders do. They deal with the world as it is, but they lay out a vision of the world as it could be, a vision of a new, better reality; and they lead their nations to expand the scope of the possible. I know I speak for my friend, Foreign Minister Mukherjee, when I say how honored we are to serve such leaders and to play the roles that we have in helping to shape this diplomatic triumph for both our nations.

Let no one assume, though, that our work is now finished. Indeed, what is most valuable about this agreement is how it unlocks a new and far broader world of potential for our strategic partnership in the 21st century, not just on nuclear cooperation but on every area of national endeavor.

And so today, we look to the future, a shared future in which both our nations together rise to our global responsibilities and our global challenges as partners. Let us use this partnership to shape an international order in which all states can exercise their sovereignty securely, responsibly, and in peace. Let us use this partnership to tackle the great global challenges of our time: energy security and climate change, terrorism and violent extremism, transnational crime and the proliferation of weapons of mass destruction. Let us use this partnership to protect and promote our common values: human rights and human dignity, democracy, liberty, and the rule of law for people who are diverse in background but joined together in spirit and aspirations. And let us use our partnership to drive a new social justice agenda for the 21st century by promoting good and uncorrupt governance, by expanding free and fair global trade, by advancing health and education, and supporting the millions and millions of people who are striving to lift themselves out of poverty.

India and the United States can do all of this and more together. There is so much that our two great nations will achieve in this new century. And with the conclusion of this civil nuclear agreement, our partnership will be limited

only by our will and our imagination. India and the United States have taken on an extremely difficult challenge. We've met it. We've succeeded together. Now, I believe there is nothing that we cannot do together.

Thank you.

Moderator: Ladies and gentlemen, please welcome the External Affairs Minister of the Republic of India.

Minister Mukherjee: Your Excellency, Dr. Condoleezza Rice, Secretary of State of the United States of America, honorable members of the U.S. Congress, distinguished secretaries of the U.S. Administration, excellencies, friends of India who have joined us today.

I thank the Secretary of State Dr. Condoleezza Rice for her gracious remarks.

Today is an important day for the India-U.S. relations, for global united security, and for our common endeavor to promote sustainable development while addressing environmental challenges. In signing the agreement between India and the United States of America for cooperation on peaceful uses of nuclear energy, we have brought to fruition three years of extraordinary effort by both our governments. This agreement is one more visible sign of the transformed relationship and partnership that our two countries are building together. In doing so, we implement a vision and understandings reached in July 2005, March 2006, by President George Bush and Prime Minister Dr. Manmohan Singh.

Both India and the United States have now completed all of our internal procedures to be able to sign this path-breaking agreement. We have particularly noted and welcome the strong bipartisan support which with the U.S. Congress endorsed the agreement. We see this bipartisan support as a vote for stronger India-U.S. cooperation to the mutual benefit of our people.

The signing of this agreement has also been preceded by the unanimous approval by the IAEA Board of Governors of the related safeguards arrangement and by the consensus decision of the 45-member Nuclear Suppliers Group to enable cooperation by its members in peaceful uses of nuclear energy with India.

The significance of the agreement is that it is the first step to civil nuclear cooperation and trade between India and the U.S. This is an agreement about civil nuclear cooperation, and reflects a careful balance of rights and obligations. The agreement has been passed by the U.S. Congress without any amendments. Its provisions are now legally binding on both sides once

the agreement enters into force. We look forward to working with the U.S. companies on the commercial steps that will follow to implement this landmark agreement.

It is also the first step to India's cooperation with the rest of the world in civil nuclear energy. By reinforcing and increasing the nuclear element in our country's energy needs, which is so vital to sustainable growth rate. Nuclear power will directly boost industrial growth, rural development, and help us to expand every vital sector of our economy.

It is also (inaudible) India to respond with her global partners to the challenges of climate and global warming by strengthening her economic growth and sustainable development. The wide-ranging initiatives announced by Prime Minister Dr. Manmohan Singh and the U.S. president in July 2005 and March 2006 have led to a transformed relationship between our two countries.

Our engagement and productive bilateral dialogue include clean and efficient energy, high technology, defense, space, education, agriculture, science and technology, civil aviation, infrastructure development, and information technology, to name just a few. These will, I am sure, again gain momentum with the signing of this agreement. We look forward to working with the U.S. in promoting nonproliferation, containing and fighting pandemic, climate change, ensuring food security, cooperating in disaster relief management, and other regional and global initiatives.

Excellencies, ladies and gentlemen, allow me to take this opportunity to express my deep appreciation and gratitude to each and every person who has made this day a reality. To the President George Bush of the United States of America, who steadfastly believed in this outcome and actually made it happen, to his Secretary of State Madame Condoleezza Rice who has spared no effort in working with my government on challenging details and who was instrumental in the positive outcome of the negotiations and the finalization of the text of the agreement - (applause) - and to the U.S. Congress, who gave this agreement with India their strong bipartisan support. The enthusiasm and support of the Indian-American community sustained us through this process and theirs was an invaluable cooperation.

Thank you, ladies and gentlemen.

134-A. The Agreement for Cooperation between The Government of India and The Government of the United States of America concerning peaceful uses of nuclear energy.

Washington (D.C.), October 10, 2008.

The Government of India and the Government of the United States of America, hereinafter referred to as the Parties,

RECOGNIZING the significance of civilian nuclear energy for meeting growing global energy demands in a cleaner and more efficient manner;

DESIRING to cooperate extensively in the full development and use of nuclear energy for peaceful purposes as a means of achieving energy security, on a stable, reliable and predictable basis;

WISHING to develop such cooperation on the basis of mutual respect for sovereignty, non-interference in each other's internal affairs, equality, mutual benefit, reciprocity and with due respect for each other's nuclear programmes;

DESIRING to establish the necessary legal framework and basis for cooperation concerning peaceful uses of nuclear energy;

AFFIRMING that cooperation under this Agreement is between two States possessing advanced nuclear technology, both Parties having the same benefits and advantages, both committed to preventing WMD proliferation;

NOTING the understandings expressed in the India - U.S. Joint Statement of July 18, 2005 to enable full civil nuclear energy cooperation with India covering aspects of the associated nuclear fuel cycle;

AFFIRMING their support for the objectives of the International Atomic Energy Agency (IAEA) and its safeguards system, as applicable to India and the United States of America, and its importance in ensuring that international cooperation in development and use of nuclear energy for peaceful purposes is carried out under arrangements that will not contribute to the proliferation of nuclear weapons or other nuclear explosive devices;

NOTING their respective commitments to safety and security of peaceful uses of nuclear energy, to adequate physical protection of nuclear material and effective national export controls;

MINDFUL that peaceful nuclear activities must be undertaken with a view to protecting the environment;

MINDFUL of their shared commitment to preventing the proliferation of weapons of mass destruction; and

DESIROUS of strengthening the strategic partnership between them;

Have agreed on the following:

ARTICLE 1 - DEFINITIONS

For the purposes of this Agreement:

- (A) “By-product material” means any radioactive material (except special fissionable material) yielded in or made radioactive by exposure to the radiation incident to the process of producing or utilizing special fissionable material. By-product material shall not be subject to safeguards or any other form of verification under this Agreement, unless it has been decided otherwise by prior mutual agreement in writing between the two Parties.
- (B) “Component” means a component part of equipment, or other item so designated by agreement of the Parties.
- (C) “Conversion” means any of the normal operations in the nuclear fuel cycle, preceding fuel fabrication and excluding enrichment, by which uranium is transformed from one chemical form to another - for example, from uranium hexafluoride (UF₆) to uranium dioxide (UO₂) or from uranium oxide to metal.
- (D) “Decommissioning” means the actions taken at the end of a facility’s useful life to retire the facility from service in the manner that provides adequate protection for the health and safety of the decommissioning workers and the general public, and for the environment. These actions can range from closing down the facility and a minimal removal of nuclear material coupled with continuing maintenance and surveillance, to a complete removal of residual radioactivity in excess of levels acceptable for unrestricted use of the facility and its site.
- (E) “Dual-Use Item” means a nuclear related item which has a technical use in both nuclear and non-nuclear applications.

- (F) "Equipment" means any equipment in nuclear operation including reactor, reactor pressure vessel, reactor fuel charging and discharging equipment, reactor control rods, reactor pressure tubes, reactor primary coolant pumps, zirconium tubing, equipment for fuel fabrication and any other item so designated by the Parties.
- (G) "High enriched uranium" means uranium enriched to twenty percent or greater in the isotope 235.
- (H) "Information" means any information that is not in the public domain and is transferred in any form pursuant to this Agreement and so designated and documented in hard copy or digital form by mutual agreement by the Parties that it shall be subject to this Agreement, but will cease to be information whenever the Party transferring the information or any third party legitimately releases it into the public domain.
- (I) "Low enriched uranium" means uranium enriched to less than twenty percent in the isotope 235.
- (J) "Major critical component" means any part or group of parts essential to the operation of a sensitive nuclear facility or heavy water production facility.
- (K) "Non-nuclear material" means heavy water, or any other material suitable for use in a reactor to slow down high velocity neutrons and increase the likelihood of further fission, as may be jointly designated by the appropriate authorities of the Parties.
- (L) "Nuclear material" means (1) source material and (2) special fissionable material. "Source material" means uranium containing the mixture of isotopes occurring in nature; uranium depleted in the isotope 235; thorium; any of the foregoing in the form of metal, alloy, chemical compound, or concentrate; any other material containing one or more of the foregoing in such concentration as the Board of Governors of the IAEA shall from time to time determine; and such other materials as the Board of Governors of the IAEA may determine or as may be agreed by the appropriate authorities of both Parties. "Special fissionable material" means plutonium, uranium-233, uranium enriched in the isotope 233 or 235, any substance containing one or more of the foregoing, and such other substances as the Board of Governors of the IAEA may determine or as may be agreed

by the appropriate authorities of both Parties. "Special fissionable material" does not include "source material". Any determination by the Board of Governors of the IAEA under Article XX of that Agency's Statute or otherwise that amends the list of materials considered to be "source material" or "special fissionable material" shall only have effect under this Agreement when both Parties to this Agreement have informed each other in writing that they accept such amendment.

- (M) "Peaceful purposes" include the use of information, nuclear material, equipment or components in such fields as research, power generation, medicine, agriculture and industry, but do not include use in, research on, or development of any nuclear explosive device or any other military purpose. Provision of power for a military base drawn from any power network, production of radioisotopes to be used for medical purposes in military environment for diagnostics, therapy and sterility assurance, and other similar purposes as may be mutually agreed by the Parties shall not be regarded as military purpose.
- (N) "Person" means any individual or any entity subject to the territorial jurisdiction of either Party but does not include the Parties.
- (O) "Reactor" means any apparatus, other than a nuclear weapon or other nuclear explosive device, in which a self-sustaining fission chain reaction is maintained by utilizing uranium, plutonium, or thorium or any combination thereof.
- (P) "Sensitive nuclear facility" means any facility designed or used primarily for uranium enrichment, reprocessing of nuclear fuel, or fabrication of nuclear fuel containing plutonium.
- (Q) "Sensitive nuclear technology" means any information that is not in the public domain and that is important to the design, construction, fabrication, operation, or maintenance of any sensitive nuclear facility, or other such information that may be so designated by agreement of the Parties.

ARTICLE 2 - SCOPE OF COOPERATION

1. The Parties shall cooperate in the use of nuclear energy for peaceful purposes in accordance with the provisions of this Agreement. Each Party shall implement this Agreement in accordance with its

respective applicable treaties, national laws, regulations, and license requirements concerning the use of nuclear energy for peaceful purposes.

2. The purpose of the Agreement being to enable full civil nuclear energy cooperation between the Parties, the Parties may pursue cooperation in all relevant areas to include, but not limited to, the following:
 - a. Advanced nuclear energy research and development in such areas as may be agreed between the Parties;
 - b. Nuclear safety matters of mutual interest and competence, as set out in Article 3;
 - c. Facilitation of exchange of scientists for visits, meetings, symposia and collaborative research;
 - d. Full civil nuclear cooperation activities covering nuclear reactors and aspects of the associated nuclear fuel cycle including technology transfer on an industrial or commercial scale between the Parties or authorized persons;
 - e. Development of a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India's reactors;
 - f. Advanced research and development in nuclear sciences including but not limited to biological research, medicine, agriculture and industry, environment and climate change;
 - g. Supply between the Parties, whether for use by or for the benefit of the Parties or third countries, of nuclear material;
 - h. Alteration in form or content of nuclear material as provided for in Article 6;
 - i. Supply between the Parties of equipment, whether for use by or for the benefit of the Parties or third countries;
 - j. Controlled thermonuclear fusion including in multilateral projects; and
 - k. Other areas of mutual interest as may be agreed by the Parties.

3. Transfer of nuclear material, non-nuclear material, equipment, components and information under this Agreement may be undertaken directly between the Parties or through authorized persons. Such transfers shall be subject to this Agreement and to such additional terms and conditions as may be agreed by the Parties. Nuclear material, non-nuclear material, equipment, components and information transferred from the territory of one Party to the territory of the other Party, whether directly or through a third country, will be regarded as having been transferred pursuant to this Agreement only upon confirmation, by the appropriate authority of the recipient Party to the appropriate authority of the supplier Party that such items both will be subject to the Agreement and have been received by the recipient Party.
4. The Parties affirm that the purpose of this Agreement is to provide for peaceful nuclear cooperation and not to affect the unsafeguarded nuclear activities of either Party. Accordingly, nothing in this Agreement shall be interpreted as affecting the rights of the Parties to use for their own purposes nuclear material, non-nuclear material, equipment, components, information or technology produced, acquired or developed by them independent of any nuclear material, non-nuclear material, equipment, components, information or technology transferred to them pursuant to, this Agreement. This Agreement shall be implemented in a manner so as not to hinder or otherwise interfere with any other activities involving the use of nuclear material, non-nuclear material, equipment, components, information or technology and military nuclear facilities produced, acquired or developed by them independent of this Agreement for their own purposes.

ARTICLE 3 - TRANSFER OF INFORMATION

1. Information concerning the use of nuclear energy for peaceful purposes may be transferred between the Parties. Transfers of information may be accomplished through reports, data banks and computer programs and any other means mutually agreed to by the Parties. Fields that may be covered include, but shall not be limited to, the following:
 - a. Research, development, design, construction, operation, maintenance and use of reactors, reactor experiments, and decommissioning;

- b. The use of nuclear material in physical, chemical, radiological and biological research, medicine, agriculture and industry;
 - c. Fuel cycle activities to meet future world-wide civil nuclear energy needs, including multilateral approaches to which they are parties for ensuring nuclear fuel supply and appropriate techniques for management of nuclear wastes;
 - d. Advanced research and development in nuclear science and technology;
 - e. Health, safety, and environmental considerations related to the foregoing;
 - f. Assessments of the role nuclear power may play in national energy plans;
 - g. Codes, regulations and standards for the nuclear industry;
 - h. Research on controlled thermonuclear fusion including bilateral activities and contributions toward multilateral projects such as the International Thermonuclear Experimental Reactor (ITER); and
 - i. Any other field mutually agreed to by the Parties.
- 2. Cooperation pursuant to this Article may include, but is not limited to, training, exchange of personnel, meetings, exchange of samples, materials and instruments for experimental purposes and a balanced participation in joint studies and projects.
 - 3. This Agreement does not require the transfer of any information regarding matters outside the scope of this Agreement, or information that the Parties are not permitted under their respective treaties, national laws, or regulations to transfer.
 - 4. Restricted Data, as defined by each Party, shall not be transferred under this Agreement.

ARTICLE 4 - NUCLEAR TRADE

- 1. The Parties shall facilitate nuclear trade between themselves in the mutual interests of their respective industry, utilities and consumers and also, where appropriate, trade between third countries and either

Party of items obligated to the other Party. The Parties recognize that reliability of supplies is essential to ensure smooth and uninterrupted operation of nuclear facilities and that industry in both the Parties needs continuing reassurance that deliveries can be made on time in order to plan for the efficient operation of nuclear installations.

2. Authorizations, including export and import licenses as well as authorizations or consents to third parties, relating to trade, industrial operations or nuclear material movement should be consistent with the sound and efficient administration of this Agreement and should not be used to restrict trade. It is further agreed that if the relevant authority of the concerned Party considers that an application cannot be processed within a two month period it shall immediately, upon request, provide reasoned information to the submitting Party. In the event of a refusal to authorize an application or a delay exceeding four months from the date of the first application the Party of the submitting persons or undertakings may call for urgent consultations under Article 13 of this Agreement, which shall take place at the earliest opportunity and in any case not later than 30 days after such a request.

ARTICLE 5 - TRANSFER OF NUCLEAR MATERIAL, NON-NUCLEAR MATERIAL, EQUIPMENT, COMPONENTS AND RELATED TECHNOLOGY

1. Nuclear material, non-nuclear material, equipment and components may be transferred for applications consistent with this Agreement. Any special fissionable material transferred under this Agreement shall be low enriched uranium, except as provided in paragraph 5.
2. Sensitive nuclear technology, heavy water production technology, sensitive nuclear facilities, heavy water production facilities and major critical components of such facilities may be transferred under this Agreement pursuant to an amendment to this Agreement. Transfers of dual-use items that could be used in enrichment, reprocessing or heavy water production facilities will be subject to the Parties' respective applicable laws, regulations and license policies.
3. Natural or low enriched uranium may be transferred for use as fuel in reactor experiments and in reactors, for conversion or fabrication, or for such other purposes as may be agreed to by the Parties.

4. The quantity of nuclear material transferred under this Agreement shall be consistent with any of the following purposes: use in reactor experiments or the loading of reactors, the efficient and continuous conduct of such reactor experiments or operation of reactors for their lifetime, use as samples, standards, detectors, and targets, and the accomplishment of other purposes as may be agreed by the Parties.
5. Small quantities of special fissionable material may be transferred for use as samples, standards, detectors, and targets, and for such other purposes as the Parties may agree.
6. (a) The United States has conveyed its commitment to the reliable supply of fuel to India. Consistent with the July 18, 2005, Joint Statement, the United States has also reaffirmed its assurance to create the necessary conditions for India to have assured and full access to fuel for its reactors. As part of its implementation of the July 18, 2005, Joint Statement the United States is committed to seeking agreement from the U.S. Congress to amend its domestic laws and to work with friends and allies to adjust the practices of the Nuclear Suppliers Group to create the necessary conditions for India to obtain full access to the international fuel market, including reliable, uninterrupted and continual access to fuel supplies from firms in several nations.

(b) To further guard against any disruption of fuel supplies, the United States is prepared to take the following additional steps:
 - i) The United States is willing to incorporate assurances regarding fuel supply in the bilateral U.S.-India agreement on peaceful uses of nuclear energy under Section 123 of the U.S. Atomic Energy Act, which would be submitted to the U.S. Congress.
 - ii) The United States will join India in seeking to negotiate with the IAEA an India-specific fuel supply agreement.
 - iii) The United States will support an Indian effort to develop a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India's reactors.
 - iv) If despite these arrangements, a disruption of fuel supplies to India occurs, the United States and India would jointly convene

a group of friendly supplier countries to include countries such as Russia, France and the United Kingdom to pursue such measures as would restore fuel supply to India.

- (c) In light of the above understandings with the United States, an India-specific safeguards agreement will be negotiated between India and the IAEA providing for safeguards to guard against withdrawal of safeguarded nuclear material from civilian use at any time as well as providing for corrective measures that India may take to ensure uninterrupted operation of its civilian nuclear reactors in the event of disruption of foreign fuel supplies. Taking this into account, India will place its civilian nuclear facilities under India-specific safeguards in perpetuity and negotiate an appropriate safeguards agreement to this end with the IAEA.

ARTICLE 6 - NUCLEAR FUEL CYCLE ACTIVITIES

In keeping with their commitment to full civil nuclear cooperation, both Parties, as they do with other states with advanced nuclear technology, may carry out the following nuclear fuel cycle activities:

- i) Within the territorial jurisdiction of either Party, enrichment up to twenty percent in the isotope 235 of uranium transferred pursuant to this Agreement, as well as of uranium used in or produced through the use of equipment so transferred, may be carried out.
- ii) Irradiation within the territorial jurisdiction of either Party of Plutonium, uranium-233, high enriched uranium and irradiated nuclear material transferred pursuant to this Agreement or used in or produced through the use of non-nuclear material, nuclear material or equipment so transferred may be carried out.
- iii) With a view to implementing full civil nuclear cooperation as envisioned in the Joint Statement of the Parties of July 18, 2005, the Parties grant each other consent to reprocess or otherwise alter in form or content nuclear material transferred pursuant to this Agreement and nuclear material and by-product material used in or produced through the use of nuclear material, non-nuclear material, or equipment so transferred. To bring these rights into effect, India will establish a new national reprocessing facility dedicated to reprocessing safeguarded nuclear material under IAEA safeguards

and the Parties will agree on arrangements and procedures under which such reprocessing or other alteration in form or content will take place in this new facility. Consultations on arrangements and procedures will begin within six months of a request by either Party and will be concluded within one year. The Parties agree on the application of IAEA safeguards to all facilities concerned with the above activities. These arrangements and procedures shall include provisions with respect to physical protection standards set out in Article 8, storage standards set out in Article 7, and environmental protections set forth in Article 11 of this Agreement, and such other provisions as may be agreed by the Parties. Any special fissionable material that may be separated may only be utilized in national facilities under IAEA safeguards.

- iv) Post-irradiation examination involving chemical dissolution or separation of irradiated nuclear material transferred pursuant to this Agreement or irradiated nuclear material used in or produced through the use of non-nuclear material, nuclear material or equipment so transferred may be carried out.

ARTICLE 7 - STORAGE AND RETRANSFERS

1. Plutonium and uranium 233 (except as either may be contained in irradiated fuel elements), and high enriched uranium, transferred pursuant to this Agreement or used in or produced through the use of material or equipment so transferred, may be stored in facilities that are at all times subject, as a minimum, to the levels of physical protection that are set out in IAEA document INFCIRC 225/REV 4 as it may be revised and accepted by the Parties. Each Party shall record such facilities on a list, made available to the other Party. A Party's list shall be held confidential if that Party so requests. Either Party may make changes to its list by notifying the other Party in writing and receiving a written acknowledgement. Such acknowledgement shall be given no later than thirty days after the receipt of the notification and shall be limited to a statement that the notification has been received. If there are grounds to believe that the provisions of this sub-Article are not being fully complied with, immediate consultations may be called for. Following upon such consultations, each Party shall ensure by means of such consultations that necessary remedial measures are taken immediately. Such measures shall be sufficient to restore the levels

of physical protection referred to above at the facility in question. However, if the Party on whose territory the nuclear material in question is stored determines that such measures are not feasible, it will shift the nuclear material to another appropriate, listed facility it identifies.

2. Nuclear material, non-nuclear material, equipment, components, and information transferred pursuant to this Agreement and any special fissionable material produced through the use of nuclear material, non-nuclear material or equipment so transferred shall not be transferred or re-transferred to unauthorized persons or, unless the Parties agree, beyond the recipient Party's territorial jurisdiction.

ARTICLE 8 - PHYSICAL PROTECTION

1. Adequate physical protection shall be maintained with respect to nuclear material and equipment transferred pursuant to this Agreement and nuclear material used in or produced through the use of nuclear material, non-nuclear material or equipment so transferred.
2. To fulfill the requirement in paragraph 1, each Party shall apply measures in accordance with (i) levels of physical protection at least equivalent to the recommendations published in IAEA document INFCIRC/225/Rev.4 entitled "The Physical Protection of Nuclear Material and Nuclear Facilities," and in any subsequent revisions of that document agreed to by the Parties, and (ii) the provisions of the 1980 Convention on the Physical Protection of Nuclear Material and any amendments to the Convention that enter into force for both Parties.
3. The Parties will keep each other informed through diplomatic channels of those agencies or authorities having responsibility for ensuring that levels of physical protection for nuclear material in their territory or under their jurisdiction or control are adequately met and having responsibility for coordinating response and recovery operations in the event of unauthorized use or handling of material subject to this Article. The Parties will also keep each other informed through diplomatic channels of the designated points of contact within their national authorities to cooperate on matters of out-of-country transportation and other matters of mutual concern.

4. The provisions of this Article shall *be* implemented in such a manner as to avoid undue interference in the Parties' peaceful nuclear activities and so as to be consistent with prudent management practices required for the safe and economic conduct of their peaceful nuclear programs.

ARTICLE 9 - PEACEFUL USE

Nuclear material, equipment and components transferred pursuant to this Agreement and nuclear material and by-product material used in or produced through the use of any nuclear material, equipment, and components so transferred shall not be used by the recipient Party for any nuclear explosive device, for research on or development of any nuclear explosive device or for any military purpose.

ARTICLE 10 - IAEA SAFEGUARDS

1. Safeguards will be maintained with respect to all nuclear materials and equipment transferred pursuant to this Agreement, and with respect to all special fissionable material used in or produced through the use of such nuclear materials and equipment, so long as the material or equipment remains under the jurisdiction or control of the cooperating Party.
2. Taking into account Article 5.6 of this Agreement, India agrees that nuclear material and equipment transferred to India by the United States of America pursuant to this Agreement and any nuclear material used in or produced through the use of nuclear material, non-nuclear material, equipment or components so transferred shall be subject to safeguards in perpetuity in accordance with the India-specific Safeguards Agreement between India and the IAEA [*identifying data*] and an Additional Protocol, when in force.
3. Nuclear material and equipment transferred to the United States of America pursuant to this Agreement and any nuclear material used in or produced through the use of any nuclear material, non-nuclear material, equipment, or components so transferred shall be subject to the Agreement between the United States of America and the IAEA for the application of safeguards in the United States of America, done at Vienna November 18, 1977, which entered into force on December 9, 1980, and an Additional Protocol, when in force.

4. If the IAEA decides that the application of IAEA safeguards is no longer possible, the supplier and recipient should consult and agree on appropriate verification measures.
5. Each Party shall take such measures as are necessary to maintain and facilitate the application of IAEA safeguards in its respective territory provided for under this Article.
6. Each Party shall establish and maintain a system of accounting for and control of nuclear material transferred pursuant to this Agreement and nuclear material used in or produced through the use of any material, equipment, or components so transferred. The procedures applicable to India shall be those set forth in the India-specific Safeguards Agreement referred to in Paragraph 2 of this Article.
7. Upon the request of either Party, the other Party shall report or permit the IAEA to report to the requesting Party on the status of all inventories of material subject to this Agreement.
8. The provisions of this Article shall be implemented in such a manner as to avoid hampering, delay, or undue interference in the Parties' peaceful nuclear activities and so as to be consistent with prudent management practices required for the safe and economic conduct of their peaceful nuclear programs.

ARTICLE 11 - ENVIRONMENTAL PROTECTION

The Parties shall cooperate in following the best practices for minimizing the impact on the environment from any radioactive, chemical or thermal contamination arising from peaceful nuclear activities under this Agreement and in related matters of health and safety.

ARTICLE 12 - IMPLEMENTATION OF THE AGREEMENT

1. This Agreement shall be implemented in a manner designed:
 - a) to avoid hampering or delaying the nuclear activities in the territory of either Party;
 - b) to avoid interference in such activities;
 - c) to be consistent with prudent management practices required for the safe conduct of such activities; and

- d) to take full account of the long term requirements of the nuclear energy programs of the Parties.
- 2. The provisions of this Agreement shall not be used to:
 - a) secure unfair commercial or industrial advantages or to restrict trade to the disadvantage of persons and undertakings of either Party or hamper their commercial or industrial interests, whether international or domestic;
 - b) interfere with the nuclear policy or programs for the promotion of the peaceful uses of nuclear energy including research and development; or
 - c) impede the free movement of nuclear material, non nuclear material and equipment supplied under this Agreement within the territory of the Parties.
- 3. When execution of an agreement or contract pursuant to this Agreement between Indian and United States organizations requires exchanges of experts, the Parties shall facilitate entry of the experts to their territories and their stay therein consistent with national laws, regulations and practices. When other cooperation pursuant to this Agreement requires visits of experts, the Parties shall facilitate entry of the experts to their territory and their stay therein consistent with national laws, regulations and practices.

ARTICLE 13-CONSULTATIONS

- 1. The Parties undertake to consult at the request of either Party regarding the implementation of this Agreement and the development of further cooperation in the field of peaceful uses of nuclear energy on a stable, reliable and predictable basis. The Parties recognize that such consultations are between two States with advanced nuclear technology, which have agreed to assume the same responsibilities and practices and acquire the same benefits and advantages as other leading countries with advanced nuclear technology.
- 2. Each Party shall endeavor to avoid taking any action that adversely affects cooperation envisaged under Article 2 of this Agreement. If either Party at any time following the entry into force of this Agreement does not comply with the provisions of this Agreement, the Parties shall promptly hold consultations with a view to resolving the matter

in a way that protects the legitimate interests of both Parties, it being understood that rights of either Party under Article 16.2 remain unaffected.

3. Consultations under this Article may be carried out by a Joint Committee specifically established for this purpose. A Joint Technical Working Group reporting to the Joint Committee will be set up to ensure the fulfillment of the requirements of the Administrative Arrangements referred to in Article 17.

ARTICLE 14 - TERMINATION AND CESSATION OF COOPERATION

1. Either Party shall have the right to terminate this Agreement prior to its expiration on one year's written notice to the other Party. A Party giving notice of termination shall provide the reasons for seeking such termination. The Agreement shall terminate one year from the date of the written notice, unless 'the notice has been withdrawn by the providing Party in writing prior to the date of termination.
2. Before this Agreement is terminated pursuant to paragraph 1 of this Article, the Parties shall consider the relevant circumstances and promptly hold consultations, as provided in Article 13, to address the reasons cited by the Party seeking termination. The Party seeking termination has the right to cease further cooperation under this Agreement if it determines that a mutually acceptable resolution of outstanding issues has not been possible or cannot be achieved through consultations. The Parties agree to consider carefully the circumstances that may lead to termination or cessation of cooperation. They further agree to take into account whether the circumstances that may lead to termination or cessation resulted from a Party's serious concern about a changed security environment or as a response to similar actions by other States which could impact national security.
3. If a Party seeking termination cites a violation of this Agreement as the reason for notice for seeking termination, the Parties shall consider whether the action was caused inadvertently or otherwise and whether the violation could be considered as material. No violation may be considered as being material unless corresponding to the definition of material violation or breach in the Vienna Convention on the Law of Treaties. If a Party seeking termination

cites a violation of an IAEA safeguards agreement as the reason for notice for seeking termination, a crucial factor will be whether the IAEA Board of Governors has made a finding of non-compliance.

4. Following the cessation of cooperation under this Agreement, either Party shall have the right to require the return by the other Party of any nuclear material, equipment, non-nuclear material or components transferred under this Agreement and any special fissionable material produced through their use. A notice by a Party that is invoking the right of return shall be delivered to the other Party on or before the date of termination of this Agreement. The notice shall contain a statement of the items subject to this Agreement as to which the Party is requesting return. Except as provided in provisions of Article 16.3, all other legal obligations pertaining to this Agreement shall cease to apply with respect to the nuclear items remaining on the territory of the Party concerned upon termination of this Agreement.
5. The two Parties recognize that exercising the right of return would have profound implications for their relations. If either Party seeks to exercise its right pursuant to paragraph 4 of this Article, it shall, prior to the removal from the territory or from the control of the other Party of any nuclear items mentioned in paragraph 4, undertake consultations with the other Party. Such consultations shall give special consideration to the importance of uninterrupted operation of nuclear reactors of the Party concerned with respect to the availability of nuclear energy for peaceful purposes as a means of achieving energy security. Both Parties shall take into account the potential negative consequences of such termination on the on-going contracts and projects initiated under this Agreement of significance for the respective nuclear programmes of either Party.
6. If either Party exercises its right of return pursuant to paragraph 4 of this Article, it shall, prior to the removal from the territory or from the control of the other Party, compensate promptly that Party for the fair market value thereof and for the costs incurred as a consequence of such removal. If the return of nuclear items is required, the Parties shall agree on methods and arrangements for the return of the items, the relevant quantity of the items to be returned, and the amount of compensation that would have to be paid by the Party exercising the right to the other Party.

7. Prior to return of nuclear items, the Parties shall satisfy themselves that full safety, radiological and physical protection measures have been ensured in accordance with their existing national regulations and that the transfers pose no unreasonable risk to either Party, countries through which the nuclear items may transit and to the global environment and are in accordance with existing international regulations.
8. The Party seeking the return of nuclear items shall ensure that the timing, methods and arrangements for return of nuclear items are in accordance with paragraphs 5, 6 and 7. Accordingly, the consultations between the Parties shall address mutual commitments as contained in Article 5.6. It is not the purpose of the provisions of this Article regarding cessation of cooperation and right of return to derogate from the rights of the Parties under Article 5.6.
9. The arrangements and procedures concluded pursuant to Article 6(iii) shall be subject to suspension by either Party in exceptional circumstances, as defined by the Parties, after consultations have been held between the Parties aimed at reaching mutually acceptable resolution of outstanding issues, while taking into account the effects of such suspension on other aspects of cooperation under this Agreement.

ARTICLE 15 - SETTLEMENT OF DISPUTES

Any dispute concerning the interpretation or implementation of the provisions of this Agreement shall be promptly negotiated by the Parties with a view to resolving that dispute.

ARTICLE 16 - ENTRY INTO FORCE AND DURATION

1. This Agreement shall enter into force on the date on which the Parties exchange diplomatic notes informing each other that they have completed all applicable requirements for its entry into force.
2. This Agreement shall remain in force for a period of 40 years. It shall continue in force thereafter for additional periods of 10 years each. Each Party may, by giving 6 months written notice to the other Party, terminate this Agreement at the end of the initial 40 year period or at the end of any subsequent 10 year period.
3. Notwithstanding the termination or expiration of this Agreement or withdrawal of a Party from this Agreement, Articles 5.6(c), 6, 7, 8, 9,

10 and 15 shall continue in effect so long as any nuclear material, non-nuclear material, by-product material, equipment or components subject to these articles remains in the territory of the Party concerned or under its jurisdiction or control anywhere, or until such time as the Parties agree that such nuclear material is no longer usable for any nuclear activity relevant from the point of view of safeguards.

4. This Agreement shall be implemented in good faith and in accordance with the principles of international law.
5. The Parties may consult, at the request of either Party, on possible amendments to this Agreement. This Agreement may be amended if the Parties so agree. Any amendment shall enter into force on the date on which the Parties exchange diplomatic notes informing each other that their respective internal legal procedures necessary for the entry into force have been completed.

ARTICLE 17 - ADMINISTRATIVE ARRANGEMENT

1. The appropriate authorities of the Parties shall establish an Administrative Arrangement in order to provide for the effective implementation of the provisions of this Agreement.
2. The principles of fungibility and equivalence shall apply to nuclear material and non-nuclear material subject to this Agreement. Detailed provisions for applying these principles shall be set forth in the Administrative Arrangement.
3. The Administrative Arrangement established pursuant to this Article may be amended by agreement of the appropriate authorities of the Parties.

IN WITNESS WHEREOF the undersigned, being duly authorized, have signed this Agreement.

DONE in Washington (D.C.) this 10th day of October, 2008 in duplicate.

For the Government of India

(Pranab Mukherjee)
Minister for External Affairs
Government of India

For the Government of the
United States of America:

(Condoleezza Rice)
Secretary of State, Government of
United States of America

AGREED MINUTE

During the negotiation of the Agreement for Cooperation Between the Government of India and the Government of the United States of America Concerning Peaceful Uses of Nuclear Energy ("the Agreement") signed today, the following understandings, which shall be an integral part of the Agreement, were reached.

Proportionality

For the purposes of implementing the rights specified in Articles 6 and 7 of the Agreement with respect to special fissionable material and by-product material produced through the use of nuclear material and non-nuclear material, respectively, transferred pursuant to the Agreement and not used in or produced through the use of equipment transferred pursuant to the Agreement, such rights shall in practice be applied to that proportion of special fissionable material and by-product material produced that represents the ratio of transferred nuclear material and non-nuclear material, respectively, used in the production of the special fissionable material and byproduct material to the total amount of nuclear material and non-nuclear material so used, and similarly for subsequent generations.

By-product material

The Parties agree that reporting and exchanges of information on by-product material subject to the Agreement will be limited to the following:

- (1) Both Parties would comply with the provisions as contained in the IAEA document GOV/1999/19/Rev.2, with regard to by-product material subject to the Agreement.
- (2) With regard to tritium subject to the Agreement, the Parties will exchange annually information pertaining to its disposition for peaceful purposes consistent with Article 9 of this Agreement.

For the Government of India

(Pranab Mukherjee)
Minister for External Affairs
Government of India

For the Government of the
United States of America:

(Condoleezza Rice)
Secretary of State, Government of
United States of America

135. Press Conference of External Affairs Minister Pranab Mukherjee.

Washington (D. C), October 10, 2008.

Opening Remarks by the External Affairs Minister:

Ladies and Gentlemen of the media,

Earlier today, Secretary of State Dr. Condoleezza Rice and I signed the Agreement between the Government of India and the Government of the United States of America for Cooperation on Peaceful Uses of Nuclear Energy, which is also known as the 123 Agreement. This is a historic occasion. It marks the beginning of resumption of India's civil nuclear cooperation and trade with the US and with the wider international community.

As you know, India attaches great importance to this Agreement and to civil nuclear commerce with the international community. The increased share of nuclear energy in our energy mix will make a major positive contribution to our sustainable development and to meeting our objective of eradicating poverty. We, therefore, see this as a critical development for our economic growth and development. The Agreement is also important for global energy security as well as a contribution to global efforts to meet the challenge of climate change.

We are happy that the Agreement was passed without any amendments by large bipartisan majorities in both Houses of the US Congress. This reflects strong support for stronger India-US relations and for the transformation that these relations have undergone in the last few years.

The significance of this Agreement is that it is the first step to civil nuclear co-operation and trade between India and the USA. The Agreement reflects a careful balance of rights and obligations for both parties. We intend to implement this Agreement in good faith and in accordance with the principles of international law and I am confident that the US will also do the same.

It is also the first step to India's cooperation with the rest of the world in civil nuclear energy. By reinforcing and increasing the nuclear element in our country's energy mix, which is vital to sustain our growth rate, nuclear power will directly boost industrial growth, rural development and help us

to expand every vital sector of our economy. It also enables India to respond with her global partners to the challenges of climate change and global warming by strengthening her own economic growth and sustainable development.

The signing of this agreement has also been preceded by the unanimous approval by the IAEA Board of Governors of the related safeguards arrangements, and by the consensus decision of the forty-five member Nuclear Supply Group to enable cooperation by its members in peaceful uses of nuclear energy with India.

Today's signing would not have been possible if it were not for the sustained support and effort of the US Administration led by President Bush. Secretary of State Condoleezza Rice has been a pillar of strength through this process of realizing the joint vision of Prime Minister Manmohan Singh and President Bush. I would also like to take this opportunity to thank the numerous supporters of the agreement, particularly the Indian-American community in the US, whose unstinting help contributed immensely to achieving this successful outcome.

Thank you for your attention. I would be happy to answer your questions.

MR. Rahul Chhabra: The minister will now take a few questions. I just request you to identify yourselves and the organization you represent before posing the question.

Q: Minister, I'm - **Chidanand Rajghatta - of Times of India.** For some odd reason today, I feel the same way I did on the day I graduated because it was three years - for those of us who are not experts - it was three years of learning about nuclear physics, about, you know, arcane ways in which treaties and agreements are formed. But my question is this, Minister: How much of this agreement rests on interpretation? And in your vast experience as cabinet minister, can foreign relations - can trust be the basis of conducting foreign relations?

Minister Mukherjee: We are bound by the agreed text of 123 agreement, which is negotiated by the negotiators of two countries. And it is on the basis of the joint statement issued by President Bush and prime minister on 18th July, 2005, and also the joint statement of March, 2006. It's not merely a question of the interpretation. It's the question of the agreed text on which we are depending.

Thank you.

Q: Can I just follow up, sir? That agreed text, is it open to interpretation? That's my question, sir. And secondly, the question of trust - can foreign relations - can trust be the basis of conducting foreign relations? Because you did say that you hope that - you hope to follow it - follow that agreement in good faith.

Minister Mukherjee: I've already stated that we will implement this agreement in good faith. That clearly implies that we trust each other.

Q: Parameswaran from Agence France-Presse. Mr. Minister, how do you view the timing of the deal's takeoff against the backdrop of the current financial crisis that obviously is going to slice investments and foreign investments? Thank you.

Minister Mukherjee: This agreement is the culmination of three years of talks. The agreement has been signed when all the necessary formalities have been completed, including the ratification by U.S. Congress as required, as per the US. Constitution, and finally, by the assent to this law by the U.S. president. In between, certain developments have taken place. No doubt it will have its impact on the overall economic situation, but this is not particularly related to the Indo-U.S. civil nuclear cooperation, which is the subject of this agreement.

Thank you.

Q: Mr. Minister, Viola Gienger from Bloomberg News. You said today at the signing that the Congress approved this agreement with no amendments. But, of course, you're aware that their resolution of approval did have some clauses in it that they felt very strongly about. Are you rejecting the Congress' intent and intending to stick to only the language of the 123 agreement itself?

And the second question is: what will be the process now for signing the International Convention on Compensation for Nuclear Damage?

Minister Mukherjee: So far the first question is concerned, I'm aware of the procedure followed by U.S. Congress in legislation. Every country has its own process of legislation, as we have. We are bound by the agreement negotiated between the two sovereign countries and in this case it is the 123 agreement.

So far the question of the international convention to mitigate the liabilities arising out of the nuclear issues, we are in the process of completing the

formalities in our country and I do hope it will be possible for us to participate in the international convention in due course of time.

Q: Sarah Jacob, New Delhi Television. You said today that this agreement reflects a careful balance of rights and obligations. Can you expand on what exactly you mean by that and have all your concerns - India's concerns about fuel supply assurances and reprocessing - have those been met?

MINISTER MUKHERJEE: The text of the agreement if you go through, it has entrusted responsibilities and obligations on both sides. In my observation, I have pointed out that there is a balance between the obligations and the rights which we will comply with. Text of 123 Agreement provides the fuel supply assurance to India and it has been reiterated by the president's signing statement.

Thank you.

Q: Hi, Daniel Horner from Platts. Actually, following up on that last question, in President Bush's signing statement, he said that it does not change the fuel assurances in the 123 Agreement, but since the agreement was initialed last year, there've been a number of administration statements to Congress indicating some limitations on the fuel assurances, specifically indicating that it would stop if India conducted a nuclear test and under such a scenario the U.S. would not work with other countries to provide fuel to India. So given that, are you satisfied with what President Bush said in his signing statement about the fuel assurances, or are you still confident that the fuel assurances would continue or what is your view on that? Thank you.

Minister Mukherjee: As I mentioned, every country has its own way of internal mechanism of fulfilling the constitutional obligations and also the process of legislation. I would not like to make any comment for the process of legislation in U.S. Congress and their obligations on it.

As I indicated the fuel supply assurance is being provided in the text of 123 Agreement itself, in Article 5.6.

Q: Sir, Lalit Jha from New Delhi Television, online edition, ndtv.com. Sir, during this last one and a half year, did at any point of time you felt that the deal could not go ahead and when was that?

Minister Mukherjee: Of course in this long three years, there have been many moments of suspicion. Even on this issue government have to - I

mean, government of India had to face a trust motion in our house of representatives, house of people, Lok Sabha, and we won that trust motion. Therefore, there have been occasions when many a people doubted whether the agreement will finally see the light of the day. But ultimately it has been possible to achieve this success.

Thank you.

Q: Paul Eckart from Reuters news agency. Historically, India's neighbor Pakistan has tended to view gains by India as losses to Pakistan. Should the Pakistanis be concerned about this agreement? Do you have words to assuage any concerns they might raise? That's my first question.

And my second question more broadly, you talked about the desire in both countries for closer cooperation and ties, do you have a wish list of other areas that you would like to work with the United States in the coming years?

Minister Mukherjee: So far as apprehension of Pakistan is concerned, I can assure you we are determined to build up good relationships with Pakistan and, in fact, we are doing so through the mechanism of composite dialogue. We are addressing all the outstanding issues between our two countries. The recent statement issued after the meeting between Prime Minister Dr. Manmohan Singh and President Zardari, the statement issued by President Zardari is really encouraging and there is no reason of any apprehension by Pakistan. India's commitment to nonproliferation is second to none and we have - in my statement on 5th of September, I reiterated our continuation of voluntary moratorium which we declared in 1998.

In respect of the second question, I would like to suggest we are already expanding our cooperation in many areas, not merely in civil nuclear cooperation - this is the first - but in defense, in agriculture, in education, in science and technology, in all areas of major economic activities, we are having expanding cooperation with USA, and I have no doubt it will be possible to expand it further as a result of this agreement.

Thank you.

Q: Good evening, Mr. Mukherjee. This is **Natasha Israni with Times Now.** Two quick questions. One is in terms of bids for contracts in India, will the Americans be competing with the French? Are there any reassurances to the Americans that there're certain contracts that they'll be able to win and get in terms of investments in India?

And the second question is Pakistan is now pursuing a civilian nuclear deal with the U.S. or China, or would like such a deal. If that happens in the future, would India object to such a deal with either the U.S. or China?

Thank you.

Minister Mukherjee: So far first question is concerned, we are entering into civil nuclear cooperation with USA, France, Russia and these are essentially the commercial contracts and surely the commercial aspect will be taken into account. But we are aware of our expanding relationship with USA.

In respect of civil nuclear cooperation between Pakistan and USA, we would like to encourage civil nuclear cooperation, peaceful use of nuclear energy, as we believe every country has its right to use nuclear energy for peaceful purposes.

Thank you.

Q: Brajesh Upadhyay, BBC News. Minister, will the U.S. companies - will they get the preferential treatment when the tenders are floated the nuclear reactors, and when will the trade process actually begin?

Minister Mukherjee: I will not use the word "preferential treatment." What I have used these are the commercial transactions as and when the commercial transactions take place only can we comment on them.

Mr. K.P. Nayar from the Telegraph. You have been finance minister, you have been commerce minister, you have been external affairs minister twice where economic diplomacy is a big part of your work. What are the lessons that India can draw from the current global economic crisis? What needs to change in Indian economic policies as a result of the current economic crisis?

Minister Mukherjee: We are fully aware of the developments which have taken place, but recently cabinet in its meeting has addressed this issue. As the global economies are closely linked, it might have impact on every economy. Keeping in view the appropriate measures have already been taken by Reserve Bank of India and even today the finance minister, Mr. Chidambaram, has issued a statement outlining the measures which has been taken. This is an event to which we shall have to respond in the appropriate manner. If you have noticed, economic policies of India have undergone change with the changing world situation, keeping pace with it. It is not static. It has an inherent dynamism in it.

Thank you.

Q: Specifically on India-U.S. economic relations, what impact will this have?

Minister Mukherjee: India-U.S. economic relationship is expanding very fast. USA as an individual country is the single largest trading partner. Technical collaboration - we have the largest number of technical collaboration with U.S. companies. Keeping that in view, we shall have to make a hard assessment what adverse impact, if at all, would have on this development. It is too early to make any comment on it.

Q: Rajesh Srivatsava - from Voice of America. Just an specification on the follow up question. American companies are already expecting 30 percent of the whole business, that is, \$40-45 billion of business after nuclear deal. Have you worked on any such numbers?

Minister Mukherjee: As I've told you earlier in response to other questions, these are all commercial transactions which will take place as and when the commercial contracts have finalized in terms of value, in terms of other ingredients it's too early. These are all estimates, and if and when it materializes, the actual figures will be available to us.

Thank you.

Q: V. Krishna, Hindustan Times. If I may go back to the fuel supply assurances. Are the assurances political or are they legal?

Minister Mukherjee: As I mentioned about the particular section of an agreement which is signed. Thank you.

Mr. Krishna: Thank you. Thank you so much.

Minister Mukherjee: Thank you.

136. Suo Motu Statement by External Affairs Minister Pranab Mukherjee on "India's Civil Nuclear Energy Initiative" in Parliament¹.

New Delhi, October 20, 2008.

I rise to inform this august House about recent developments in our civil nuclear initiative. In the three months since this matter was last considered in Parliament, we have made considerable progress.

2. The India-specific Safeguards Agreement with the IAEA was approved unanimously by the IAEA Board of Governors on 1st August 2008. As approved, the Safeguards Agreement reflects the key understandings upon which our civil nuclear initiative is based and enables their implementation. We will bring the agreement into force and offer facilities for safeguards in a phased manner in accordance with the provisions of the Safeguards Agreement and in keeping with our Separation Plan.
3. On 6th September 2008 the Nuclear Suppliers Group (NSG) adopted a decision by consensus which enables its members to engage in full civil nuclear cooperation with India. This decision opens the door for India to resume civil nuclear cooperation with the international community to meet its energy and development requirements. As I had mentioned in my statement in this House last July, the IAEA approval and the NSG decision provide us the passport which allows us to engage in civil nuclear cooperation with our international partners. We are now in the process of getting visas by engaging with our international partners to negotiate and finalise bilateral cooperation agreements.
4. On September 30, 2008 we signed an Agreement for Cooperation in Civil Nuclear Energy with France during PM's visit to France. On October 10, 2008 I signed the Agreement for Cooperation between the Government of India and the Government of the United States of America concerning Peaceful Uses of Nuclear Energy (also known as the 123 Agreement), with the US Secretary of State Dr. Condoleezza Rice in Washington. We hope to sign a cooperation

¹ The statement was made in the Lok Sabha on October 20 and in the Rajya Sabha on October 23.

agreement with Russia when President Medvedev visits India in December later this year.

5. These agreements represent a careful balance of rights and obligations. Cooperation with our international partners will be carried out on the basis of the terms and provisions of these agreements. The agreements that we have signed with the US and France and will be signing with Russia provide for cooperation in various aspects of nuclear fuel cycle. They include the fuel supply assurances which are the basis of our civil nuclear initiative as well as our right to build our strategic fuel reserves, to ensure the uninterrupted operation of our civil nuclear reactors under IAEA safeguards. These Agreements and the India-specific safeguards Agreement also provide for India to take corrective measures if necessary. These are interlocking provisions which protect our rights fully.
6. It has also been ensured in these agreements that we have the right to reprocess the nuclear material that we obtain from our international partners. We will also be setting up a new national reprocessing facility and taking other steps necessary to operationalise these agreements and realize the full potential of the civil nuclear initiative.
7. All these agreements are fully consistent with India's national interest, with the assurances that PM had given to Parliament and that Government has made to the people of India. Taken together the India-specific Safeguards Agreement, the NSG decision and the bilateral cooperation agreements provide the basis for us to engage in international cooperation in civil nuclear energy on a long term and sustainable basis with interested international partners. We regard these decisions as a vindication and recognition of India's impeccable non-proliferation credentials. When the enabling bilateral cooperation agreements are brought into force they will provide the legal framework to negotiate and finalise commercial arrangements to source nuclear fuel for our strategic fuel reserve as well as other nuclear equipment and technologies covering the nuclear fuel cycle. We will honour our commitments and implement these agreements in good faith and in accordance with the principles of international law and have no doubt that our partners will similarly discharge their commitments and obligations.
8. In achieving this result the Government has ensured that they only relate to cooperation in civilian nuclear energy and that our strategic

programme and our indigenous research are not affected. Our three stage indigenous nuclear programme will continue as envisaged by Pt. Jawaharlal Nehru and Dr. Homi Bhabha. The bilateral cooperation agreements that we have signed with the US and France as well as the India-specific Safeguards Agreement include specific provisions which ensure that there will be no hindrance to our strategic programme and that we retain the freedom to take action with regard to our strategic programme even as we engage in international cooperation in civil nuclear energy.

Hon'ble Speaker Sir,

9. Allow me to use this opportunity to elaborate why Government considers this initiative a historic contribution to our nation building effort, in respect of energy, sustainable development, technology and other aspects.

First, it enhances our development options. We are all aware that the availability of clean, affordable and sustainable sources of energy is a critical requirement if we hope to maintain healthy economic growth and abolish poverty. Today, the shortage of energy hampers our efforts to rapidly develop our economy. Hon'ble members are well aware of the strain put on our economy and on the daily lives of the people by the rise in the global prices of crude oil earlier this year. We must develop and utilize energy sources which are clean and do not contribute to climate change or global warming. We are and will continue to develop renewable sources of energy such as bio-fuels, solar and wind energy as well as other sources like hydel power. Nuclear energy offers us an economically and environmentally viable alternative. With the international cooperation that is now available, we will be in a position to bring additional generating capacity through nuclear power into our energy mix. It will also help our indigenous nuclear programme to grow rapidly. Today we have about 4000 MW of installed capacity in nuclear power. Even the existing plants are operating at a much lower level than their capacity due to a shortage of uranium. With the opening up of international nuclear trade and commerce we will have new opportunities to expand our nuclear power capacity.

Today, our total power generation capacity is about 1,45,000 megawatts. If we wish to sustain an annual GDP growth rate of 9-

10%, then by 2030, our projected energy deficit would be 1,50,000 megawatts. If we go a little more in future, that is by 2050, our energy deficit would be 4,12,000 megawatts. In working out these figures, we have taken into account thermal power, coal, petrol and diesel, hydel power, and non-conventional energy sources like wind, solar, etc. Even after their fullest exploitation, the projected deficit would remain. Nuclear power is the only effective way to bridge this gap. As per some studies, if we start work today on nuclear power, to produce 40,000 megawatts of energy in the period of eight years from 2012 to 2020, then within 22 years, that is by 2030, we will be able to reduce the deficit to only 50,000 megawatts as against the deficit of 1,50,000 megawatts. Thereafter, we will be able to reduce the energy deficit in 2050 from 4,12,000 megawatts to only 7,000 megawatts.

Second, this initiative marks the end of the technology-denial regimes which have restricted India for over three decades. These developments are the beginning of a new chapter for India - of engagement as equal partners in civil nuclear energy cooperation with other countries. As we move forward it will help us to expand high technology trade with technologically advanced countries.

Third, it is an acknowledgement of the scientific and technological achievements of our scientists whose tireless efforts in the face of adverse conditions laid the basis for this initiative. It is their efforts that have made it possible for the world today to recognize India as a state with advanced nuclear technology. Hon'ble members are aware that the embargoes in the nuclear field that were in place against us had hampered the efforts of our scientists to fully participate in international exchanges. With this initiative they will be able to engage with their counterparts in exchange of scientific ideas and technical know-how and contribute to the global effort to deal with the world-wide challenges of energy security and climate change; and

Finally, the initiative is an acknowledgement of India's role as a responsible power in international affairs on global stage. It is for us to utilize this opportunity with confidence as we pursue our national interests.

Hon'ble Speaker Sir,

10. During the course of negotiations on the civil nuclear initiative questions were raised whether we would be able to maintain the independence of our foreign policy. As I have said on earlier occasions, let me reiterate once again that we will never compromise on our independent foreign policy. Our foreign policy will be determined at all times by our own assessment of our national interest. This initiative in no way constrains our ability to pursue an independent foreign policy. It does not in any way affects our strategic autonomy. In fact it does the opposite by increasing our foreign policy options. The NSG decision by opening up the possibility for us to engage in civil nuclear cooperation with other countries actually enhances our choices to engage as an equal partner with the international community. The ultimate objective of our foreign policy is to create conditions conducive to our growth so that we can meet our developmental objectives. In this respect I can say emphatically that this initiative creates more space for us to pursue a foreign policy which serves our national interest.
11. In conclusion, the civil nuclear initiative is a landmark achievement which not only allows us to meet our future energy requirements in a sustainable manner but is also one which acknowledges India's growing role in global affairs. I am sure that you all will agree with me that it is time for us to look ahead and move forward with confidence to occupy our new and well deserved position in the Comity of Nations.

137. Question in the Lok Sabha: "Indo - US Civil Nuclear Deal".**New Delhi, October 22, 2008.**

Will the Minister of External Affairs be pleased to state:

- (a) the salient features of the Indo-US Civil Nuclear Agreement and its present status;
- (b) the adverse impact, if any, in the event of India deciding to go for nuclear test(s) for security interests of the country;
- (c) whether India has also signed agreements with Russia and France for civilian use of nuclear energy;
- (d) if so, the details thereof; and
- (e) the details of the benefits that are likely to accrue as a result thereof ?

The Minister of External Affairs (Shri Pranab Mukherjee)

(a)-(e) A statement is placed on the Table of the House.

STATEMENT

- (a)-(b) The "Agreement for Cooperation between the Government of India and the Government of the United States of America Concerning Peaceful Uses of Nuclear Energy" was signed by External Affairs Minister and US Secretary of State on October 10, 2008 at Washington. The purpose of the Agreement is to enable civil nuclear energy cooperation between India and the United States covering nuclear reactors and aspects of the associated nuclear fuel cycle including enrichment and reprocessing. The Agreement contains a full reflection of the key understandings of the July 18, 2005 and March 2006 Joint Statements and our Separation Plan. The agreement enables the creation of a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India's reactors. The Agreement grants prior consent to reprocess nuclear material obtained through international cooperation, under IAEA safeguards. The Agreement specifically provides that India's strategic nuclear programme, three-stage Nuclear Programme and R&D activities will remain unhindered and unaffected.

There is no reference to testing in the bilateral agreement.

The Agreement provides for a multilayered consultation mechanism to protect our interests as regards uninterrupted operation of our reactors in case either party decides to terminate. The Agreement meets the concerns of both sides and fulfils all the assurances made by Prime Minister to Parliament on August 17, 2006.

- (c)-(d) Government have signed the "India-France Inter-Governmental Agreement on Civil Nuclear Cooperation" for cooperation in civilian use of nuclear technology with the Government of France, on September 30, 2008. The Government expect to sign a cooperation agreement with Russia later this year.
- (e) These agreements mark a resumption of nuclear trade and commerce with the international community. This will help us to increase the share of nuclear power in our energy mix, to reduce reliance on fossil fuels, and will contribute to our energy security. The conclusion of these agreements also marks an end to the technology denial regimes targetted against India, and will lead to an expansion of high technology trade in the future.

138. Speech of Prime Minister Dr. Manmohan Singh to mark the Birth Centenary of Dr. Homi Jahangir Bhabha.

Mumbai, October 30, 2008.

It gives me very great pleasure to launch the celebrations to commemorate the birth centenary of Dr Homi Bhabha. Over the next one-year, we will celebrate the far-sighted vision and scientific and intellectual legacy of Dr. Homi Bhabha. It was a vision that was shared and supported by Pandit Jawaharlal Nehru. These two great sons and intellectual giants of our country were the fathers of our atomic energy programme.

I thank Dr. Anil Kakodkar and all the scientists, engineers and officials of the Department of Atomic Energy for all the excellent work they have done. I congratulate the four distinguished scientists we are honouring today with Lifetime Achievement Awards. I wish each one of them still greater success in the years to come. They are truly role models for our future generations.

Dr. Bhabha's leadership of the atomic energy programme spanned 22 years. It began in 1944 with a letter he wrote to the Sir Dorabji Trust proposing the establishment of an institute devoted to fundamental research. He continued his work with passion and commitment right till his untimely death in an air accident in 1966.

Since the setting up of the Tata Institute of Fundamental Research in December 1945 we have come a long way. This has been possible because of the strong foundations laid by Dr Bhabha during his lifetime.

The three stage nuclear programme, based on a closed nuclear fuel cycle, was first outlined by Dr. Bhabha in a Conference on Development of Atomic Energy for Peaceful Purposes in India held as early as 1954 in New Delhi. It was based on self-reliance and sought to exploit our plentiful thorium reserves and our existing industrial capability.

The choice of Pressurised Heavy Water Reactors, PHWRs, for the first stage was guided by the industrial capability that existed in India at that particular time. The second stage is the Fast Breeder Reactor using plutonium fuel. The third stage is the development of advanced nuclear power systems for utilization of thorium.

Dr. Bhabha sought to achieve a balance between indigenous development and international cooperation. He negotiated the setting up of reactors at

Tarapur on a turnkey basis to demonstrate our willingness to take recourse to international trade in commercial nuclear power. But he also went ahead with the opening of uranium mines at Jadugoda in Singhbhum despite its seemingly unviable ore grade. That was at a time when uranium was available in the international market.

Thus we got a head start in nuclear power as well as our self-reliant three stage development with a robust and commercially successful first stage consisting of PHWRs that operated on natural uranium produced at Jadugoda.

The speed with which we can develop nuclear power is constrained by the availability of uranium. The initiative to open civil nuclear trade with the international community is a step towards accelerating the development of nuclear energy in the service of our country. This initiative will have far reaching effects on the growth of nuclear energy in India and I can say that it is a period of transition in our programme.

I warmly congratulate our scientists and diplomats on this spectacular achievement. It proves that when we put our mind to something, we can work unitedly and deliver the goods. It is with the same zeal and dedication that our scientific community has been working all along. The nation is proud of their impressive accomplishments.

The civil nuclear initiative is a good deal. It will open up new avenues of cooperation. The integrity of our 3rd Stage nuclear programme will not be affected. The autonomy of our Research and Development activity, including development of our fast breeder reactors and the thorium programme, in the nuclear field will remain unaffected. There will be no interference in any scrutiny of our strategic programme.

We are now working towards formalizing international cooperation with willing partners in the international community including the US, Russia, France, UK, Canada, Kazakhstan and others. The government will continue to provide its full support to continuation of all indigenous programmes.

As we develop and expand the nuclear power programme, I believe that we should redouble our efforts in promoting indigenous R&D and manufacturing capabilities and in the autonomous pursuit of the three stage nuclear programme and the strategic programme.

Ladies and Gentlemen,

We have mastered the PHWR technology through the efforts of our scientists and engineers. As we open up to new technologies from abroad, the Nuclear Power Corporation of India should continue to develop the market for these reactors both in India and abroad. I understand there is interest among a number of friendly countries in this regard. Our scientists and engineers have shown that they can compete with the very best in the world.

NPCIL will also play a major role in the rapid assimilation of Light Water Reactor technology and we expect that it will soon come to India.

It will be necessary for foreign energy firms to manufacture nuclear equipment in India. This will boost our manufacturing industry. Our industry has the capability to emerge as an important player in the global market for nuclear equipment.

The DAE should continue R&D on new reactor systems as well as the associated fuel cycle, including reprocessing of spent fuel. We look forward to the early start of the construction of the Advanced Heavy Water Reactor.

We should use the opportunities offered by international cooperation to accelerate our R&D programme. In the area of nuclear science and engineering, development in India has been taking place in isolation. Many innovations developed by our scientists may not have any parallels in other countries. Therefore, we can make an intellectual contribution to the global scientific community, benefiting ourselves from such exchanges.

India has contributed successfully towards the construction of the Large Hadron Collider built by CERN in Geneva. We are a party to the most advanced global project in the area of fusion science - ITER. India is also part of the advanced research reactor project being built in France, the Jules Horowitz Reactor. Clearly our capabilities particularly in nuclear science and engineering are being recognized the world over.

An expanded nuclear power programme cannot be sustained without high quality human resources. I recall coming to BARC on the occasion of the 50th Graduation Function of the BARC Training School set up by Dr. Homi Bhabha. I had said then that it is our scientists and engineers who have laid the building blocks of self-reliance in the field of nuclear science and technology and of India emerging as a knowledge economy. I sincerely

hope that the Homi Bhabha National Institute will carry forward the great intellectual legacy and vision of Dr Bhabha.

Ladies and gentlemen

In August 1955, Dr. Homi Bhabha said "For the full industrialization of the under-developed countries, for the continuation of our civilization and its further development, atomic energy is not merely an aid, it is an absolute necessity. The acquisition by man of the knowledge of how to release and use atomic energy must be recognized as the third epoch of human history."

Dr. Homi Bhabha spent his whole life in pursuit of this grand vision. He inspired a generation of scientists with his bold dreams and ambitions for the nation and his selfless service. He was a great scientific pioneer and a great builder of modern India.

We have now removed the restraints that have hindered the atomic energy programme in the past. If we show the same wisdom, pragmatism and foresight that Dr. Homi Bhabha did, I have no doubt that we will move ahead purposefully and substantially to realize his grand vision. I would like to assure the DAE fraternity of the full support of the Government of India in this very important national endeavour. I commend every one of you for your commitment to this great national enterprise.

Thank you.

139. Speech by Vice President M. Hamid Ansari at the Book Release Function of the book titled "India's Nuclear Policy" authored by Shri Bharat Karnad.

New Delhi, November 12, 2008.

This is a substantive book, authoritative and densely written with 158 pages of text and 875 end notes. Its subject can only be described as deadly serious. Professor Karnad, who needs no introduction to the strategic community, has done it with the same thoroughness that characterised his earlier tome, published in 2002. It will certainly provoke debate.

There has been and continues to be a good deal of informed, and even more uninformed, discussion on nuclear weapons in the global context. In the vocabulary of economics, a monopoly of possession gave way to an oligopoly. It resulted in a set of rules emanating from the game theory.

The assumptions and rules were disturbed when the nuclear weapons debate developed a regional context. The new arrivals, however, developed their own game theory. This, despite the sceptics, has held ground for over a decade.

The theological certitude of an earlier era has now given way to doubt in some quarters.

A third dimension however was bound to emerge, and did. It relates to cross-category interaction. What would happen when a player in the regional category has to interact in nuclear terms with a global player of the first category?

II

Prof. Karnad's focus is on 'the working of India's nuclear strategy and posture'. He takes on board India's doctrine of 'credible minimum deterrence' (CMD) and seeks to examine it in a 'militarily sustainable stance' and, as he puts it, 'with the nitty gritty of realising a credible, effective, and survivable thermonuclear force'. He develops this argument to show that the direction of India's nuclear strategy and posture, to quote him again, 'are headed clearly away from the minimalist notions of nuclear deterrence'.

Analysing this theorem in depth, he concludes that 'it is the indecisiveness and lack of will of the Indian political leadership to take hard national security decisions that is the weak link in the deterrence chain'.

Prof. Karnad's conclusion, based on scenario-building and war games in the strategic community, is even more specific: 'If India does not speedily close the gap in the size and quality of its strategic forces, which gap can

in a crisis be psychologically debilitating, China with its "stronger nuclear capability" will hold the whip hand'.

I find the scenario disturbing in terms of its assumptions.

The first of these relates to the doctrine of nuclear deterrence. There is a credible body of opinion that considers the doctrine a recipe for instability. Possession generates the impulse to further develop, and modernise, existing stock piles. This necessarily has a reaction leading to escalation.

Secondly, the emergence of actual or potential regional nuclear weapon powers is a reality. Each case has an impulse and a calculus of its own. Containment carries in itself the germs of a breakout, resulting in proliferation. It may thus result in the opposite of what is intended.

Thirdly, the conclusions about decision-making by the political leaders in a democracy are far too sweeping to be relevant. Competence or lack of it has a wider rationale and is not to be associated with a particular type of leadership. Democracies can be competent or incompetent; so can dictatorships including military dictatorships. Enough examples from recent and not-so-recent history can be cited for both types of situations. No segment of society has a monopoly of wisdom. Successful societies have invariably been examples of cooperative harmony.

Fourthly, the propensity to identify potential military adversaries has wider implications and, to my mind, should be eschewed. The world we live in is far too complex and far too rapid in its transformation to encourage definitive formulations. What Heraclitus said on flux has to be kept in mind. States have interests, not friends or enemies. These interests can be adjusted and reconciled.

Finally, the impact of globalisation on national security needs to be factored in. It affects state capacity and autonomy. We are currently witnessing the consequences of financial globalisation.

III

No discussion on national security can be uni-dimensional. The rationale for military security and weapons systems is one aspect of the matter. The real debate today is about human security and about non-military threats. Many of these are trans-national. The challenge is to develop both a psychological propensity and technological capability to respond to the latter. How would we develop a credible minimum deterrence to these? Would this not be a relevant priority for the strategist as the 21st century and its threats unfold?

APPENDICES

CIVIL NUCLEAR ENERGY COOPERATION

**STATEMENTS OF
THE UNITED STATES
OF AMERICA**

APPENDIX - I**Letter from the U.S. State Department to Chairman,
House Committee on Foreign Affairs.****Washington (D.C.), January 16, 2008.**

I am writing in response to your letter of October 5, '2007, concerning Congressional review of the recently initialed U.S.-India Agreement for peaceful nuclear cooperation (the "123" agreement).

The Department welcomes the opportunity to answer any questions that members of the Foreign Affairs Committee may have concerning the agreement. To that end, please find enclosed the Department's responses to the 45 Questions for the Record that you submitted with your letter.

Thank you for raising your concerns, as well as, those of the other members of your committee, on this important issue. Thank you also for your personal interest in, and support of, the overall Civil Nuclear Cooperation Initiative. We look forward to working with you to secure passage of the 123 Agreement when it is submitted to Congress.

(Jeffrey T. Bergner)

Assistant Secretary Legislative Affairs

**Questions for the Record submitted to Assistant Secretary Bergner
by Chairman Tom Lantos House Committee on Foreign Affairs October
5, 2007**

Question 1: What is the Administration's expectation regarding the likely economic benefits of this partnership, including India's purchase of U.S. nuclear fuel, reactors, and technology?

Answer : We are confident that this initiative will yield important economic benefits to the private sector in the United States. India currently has 15 operating thermal power reactors with seven under construction, but it intends to increase this number significantly. Meeting this ramp-up in demand for civil nuclear reactors, technology, fuel, and support services holds the promise of opening new markets for the United States. Indian officials indicate they plan to import at least eight 1000-megawatt power

reactors by 2012, as well as additional reactors in the years ahead. Studies suggest that if American vendors win just two of these reactor contracts, it could add 3,000-5,000 new direct jobs and 10,000-15,000 indirect jobs in the United States. The Indian government has conveyed to us its commitment to enable full U.S. participation in India's civil nuclear growth and modernization. At least 15 nuclear-related U.S. firms, including General Electric and Westinghouse, participated in a business delegation led by the Commerce Department in December 2006.

In addition, participation in India's market will help make the American nuclear power industry globally competitive, thereby benefiting our own domestic nuclear power sector. This initiative will permit U.S. companies to enter the lucrative and growing Indian market - something they are currently prohibited from doing. In addition, access to Indian nuclear infrastructure will allow U.S. companies to build reactors more competitively here and in the rest of the world - not just India.

Question 2: What scientific and technical benefits does the U.S. expect as a result of this agreement?

Answer : A successfully implemented civil nuclear cooperation initiative with India will allow scientists from both our nations to work together in making nuclear energy safer, less expensive, more proliferation-resistant, and more efficient. Newly forged partnerships in this area may also facilitate scientific advancement in the many facets of nuclear energy technology. Indian involvement in international for a such as the International Thermonuclear Experimental Reactor and the Generation-IV Forum can expand the potential for innovation in the future of nuclear energy, as well as the stake of emerging countries in developing cheaper sources of energy.

In addition, we could choose to allow India to participate in the future in the Department of Energy's Global Nuclear Energy Partnership and collaborate with other countries with advanced nuclear technology in developing new proliferation-resistant nuclear technology. Such interaction could only be contemplated subsequent to the completion of the civil nuclear cooperation initiative.

Question 3 : Does the Administration believe that the nuclear cooperation agreement with India overrides the Hyde Act regarding any apparent conflicts, discrepancies, or inconsistencies? Does this include provisions in the Hyde Act which do not appear in the nuclear cooperation agreement?

Answer : In his September 19 statement, Assistant Secretary Boucher twice made clear that "we think [the proposed 123 Agreement with India] is in full conformity with the Hyde Act." Indeed, the Administration is confident that the proposed agreement is consistent with the legal requirements of both the Hyde Act and the Atomic Energy Act. The proposed agreement satisfies the particular requirements of Section 123 of the Atomic Energy Act with the exception of the requirement for full-scope safeguards, which the President is expected to exempt prior to the submission of the agreement to Congress for its approval, as provided for in section 104 of the Hyde Act. The agreement is also fully consistent with the legal requirements of the Hyde Act.

Question 4 : Why are dual-use items for use in sensitive nuclear facilities mentioned in the proposed U.S.-Indian nuclear cooperation agreement, when such items are not transferred pursuant to an agreement for cooperation?

Answer : The Agreement provides for such transfers, consistent with the "full" cooperation envisaged by the July 18, 2005 Joint Statement. Article 5(2) of the 123 Agreement provides for such transfers by the Parties, however, only "subject to their respective applicable laws, regulations and license policies." It is not unusual for U.S. agreements for peaceful nuclear cooperation to provide for transfers of items that would in fact be transferred outside the agreement, if they are to be transferred at all. For example, many U.S. agreements, including the proposed U.S.-India Agreement, cover transfers of "components" and "information," even though such transfers would normally take place outside the agreement. Most importantly, it should be noted that while the proposed U.S.-India Agreement provides for transfer of the items-in question, as a framework agreement it does not compel any such transfers and as a matter of policy the United States does not transfer dual-use items for use in sensitive nuclear facilities.

Question 5 : Is it the intention of the U.S. government to assist India in the design, construction, or operation of sensitive nuclear technologies through the transfer of dual-use items outside the agreement? If so, how is this consistent with long-standing U.S. policy to discourage the spread of sensitive nuclear technology and with Section 103(a)(5) of the Hyde Act? Has the U.S. transferred such dual-use items to sensitive nuclear facilities in other cooperating parties and, if so, to which countries?

Answer : Consistent with standing U.S. policy, the U.S. government will not assist India in the design, construction, or operation of sensitive nuclear technologies through the transfer of dual-use items, whether under the Agreement or outside the Agreement. The United States rarely transfers dual-use items for sensitive nuclear activities to any cooperating party and no such transfers are currently pending.

Question 6: Does the Administration have any plan or intention to negotiate an amendment to the proposed U.S.-India agreement to transfer to India sensitive nuclear facilities or critical components of such facilities? If so, how would such transfers be consistent with the above-cited provision of the Hyde Act and the long-standing U.S. policy to discourage the spread of such technologies?

Answer : The Administration does not plan to negotiate an amendment to the proposed U.S.-India Agreement to transfer to India sensitive nuclear facilities or critical components of such facilities.

Question 7: Is it the intention of the Administration to transfer or allow the transfer of sensitive nuclear technology outside of the U.S.-India nuclear cooperation agreement? If so, how would such transfers be consistent with the Hyde Act and the long-standing U.S. policy to discourage the spread of such technologies?

Answer : Although the Hyde Act allows for transfers of sensitive nuclear technology under certain circumstances, it is not the intention of the Administration to transfer or allow the transfer of sensitive nuclear technology to India outside the U.S.-India Agreement for peaceful nuclear cooperation.

Question 8: What is the State Department's position regarding the manner by which an amendment to the proposed U.S.-India nuclear cooperation agreement would be submitted to the Congress? Because it would be an amendment to an exempted agreement, does the Administration agree that it would require a Joint Resolution of Approval before entering into force?

Answer: We would look at any future amendment on a case-by-case basis. Regarding the specific example discussed in the question, the Administration has no plan or intention to negotiate an amendment to the proposed U.S.-India agreement to transfer to India sensitive nuclear facilities or critical components of such facilities.

Question 9 : Would the U.S. limit any transfer of dual-use technology to India's enrichment and reprocessing facilities to those that were participants in a bilateral or multinational program to develop proliferation-resistant fuel cycle technologies?

Answer : As previously stated, it is not the intention of the U.S. government to assist India in the design, construction, or operation of sensitive nuclear technologies through the transfer of dual-use items, whether under the Agreement or outside the Agreement. India does not have any facilities that participate in a bilateral or multinational program to develop proliferation resistant fuel cycle technologies. If India were to develop such facilities, potential dual-use transfers could be considered only under the exceptions granted in the Hyde Act.

Question 10 : Why does Paragraph 4 of Article 10 of the U.S.-India agreement rely on an IAEA decision regarding the impossibility of applying safeguards rather than either party's judgment that the Agency is not or will not be applying safeguards? Would this permit a situation to arise in which there were a period of time during which safeguards might not be applied but the IAEA had not reached a conclusion that the application of safeguards was no longer possible?

Answer : Paragraph 4 of Article 10 addresses one situation - the same situation as is addressed in paragraph 4(a) of the Nuclear Suppliers Group Guidelines - in which fall-back, safeguards would be required because the International Atomic Energy Agency has decided that the application of Agency safeguards is no longer possible. It does not, however, constitute the fundamental basis provided by the Agreement for the application, if needed, of fall-back safeguards. That basis is provided by Paragraph 1 of Article 10, which states categorically that "[s]afeguards will be maintained with respect to all nuclear materials and equipment transferred pursuant to this Agreement, and, with respect to all special fissionable material used in or produced through the use of such nuclear materials and equipment, so long as the material or equipment remains under the jurisdiction or control of the cooperating Party."

This guarantee follows the formula prescribed by section 123(a)(1) of the U.S. Atomic Energy Act of 1954, as amended;. Taken together with paragraph 3 of Article 16 of the Agreement, it provides that safeguards in some form - International Atomic Energy Agency or other - must always be maintained with respect to all nuclear items in India subject to the Agreement

so long as they remain under the jurisdiction or control of India, irrespective of the duration of other provisions in the Agreement or whether the Agreement is terminated or suspended for any reason, precisely as section 123(a)(1) of the Atomic Energy Act requires.

Regarding the second part of the question, for the reasons just given, Paragraph 1 of Article 10 precludes there arising such a situation.

Question 11 : Why does the provision not call for rectifying measures, as in the Japan agreement? Why does it not call for the parties to immediately enter into arrangements which conform to safeguards principles and procedures of the Agency?

Answer : Different approaches to fall-back safeguards are possible, consistent with the requirement of section 123(a)(1) of the Atomic Energy Act. If for some reason International Atomic Energy Agency safeguards fail to be applied to nuclear items in India subject to the U.S.-India Agreement, the Parties of necessity must enter into arrangements for alternative measures to fulfill the requirement of paragraph 1 of Article 10.

Question 12: Have "appropriate verification measures" been discussed, defined, or otherwise outlined with Indian officials? If Indian officials have shared their views on appropriate verification measures, what are those views? Do U.S. and Indian views diverge and if so, how?

Answer : The United States has not discussed in detail with India what form "appropriate verification measures" might take if the International Atomic Energy Agency decides that it is no longer possible for it to apply safeguards as provided for by paragraph 2 of Article 10 of the U.S.-India Agreement. The United States has expressed its view to India that acceptable alternative measures in that case might range from an alternative safeguards arrangement with the International Atomic Energy Agency, to some other form of international verification. The Government of India has expressed its view that for purposes of implementing the U.S.-India Agreement, Agency safeguards can and should be regarded as being "in perpetuity." At the same time it fully appreciates that paragraph 1 of Article 10 of the Agreement does not limit the safeguards required by the Agreement to *Agency* safeguards.

Question 13 : In the U.S. view, how would potential appropriate verification measures provide effectiveness and coverage equivalent to that intended to be provided by safeguards in paragraph 1 of Article 10?

Answer : The "appropriate verification measures" referred to in paragraph 4 of Article 10 would be an alternative to International Atomic Energy Agency safeguards applied pursuant to the India-Agency safeguards agreement referenced in paragraph 2 of Article 10, the implementation of which in the normal course of events would satisfy the safeguards requirement of paragraph 1 of Article 10 with respect to India. If it were no longer possible for the Agency to apply safeguards to nuclear items subject to the U.S.-India.

Agreement in India, alternative verification measures agreed by the Parties would need to be carried out on some other international basis to maintain continuity of safeguards as required by paragraph 1 of Article 10. The United States would expect such measures to provide effectiveness and coverage equivalent to that intended to be provided by the India-Agency safeguards agreement referenced in paragraph 2 of Article 10, albeit without a necessary role for the international Atomic Energy Agency in their application.

Question 14: Which of the commitments that the United States made in Article 5 are of a binding legal character? Does the Indian Government agree?

Answer : The question quotes paragraph 6 of article 5, which contains certain fuel supply assurances that were repeated verbatim from the March 2006 separation plan. These are important Presidential commitments that the U.S. intends to uphold, consistent with U.S. law.

Question 15 : What is the definition of "disruption of supply" as used in Article 5? Do the U.S. and Indian governments agree on this definition?-

Answer : It is the understanding of the United States that the use of the phrase "disruption of fuel supplies" in Article 5.6 of the 123 Agreement is meant to refer to disruptions in supply to India that may result through no fault of its own. Examples of such a disruption include (but are not limited to): a trade war resulting in the cut-off of supply; market disruptions in the global supply of fuel; and the potential failure of an American company to fulfill any fuel supply contracts it may have signed with India. We believe the Indian government shares our understanding of this provision.

Question 16 : Would any of these commitments continue to apply if India detonated a nuclear explosive device? If so, under what circumstances?

Answer : As outlined in Article 14 of the 123 Agreement, should India detonate a nuclear explosive device, the United States has the right to cease all nuclear cooperation with India immediately, including the supply of fuel, as well as to request the return of any items transferred from the United States, including fresh fuel. In addition, the United States has the right to terminate the agreement on one year's written notice. (Notice of termination has to precede cessation of cooperation pursuant to Article 14). In case of termination, the commitments in Article 5.6 would no longer apply.

Question 17: Do the assurances in Article 5 require the United States to assist India in finding foreign sources of nuclear fuel in the event that the United States ceases nuclear cooperation with India?

Answer : Ceasing nuclear cooperation with India would be a serious step. The United States would not take such a serious step without careful consideration of the circumstances necessitating such action and the effects and impacts it would entail. Such circumstances would include, for example, detonation of a nuclear weapon, material violation of the 123 Agreement, or termination, abrogation, or material violation of International Atomic Energy Agency safeguards. The provisions in article 14 on termination of the agreement and cessation of cooperation would be available in such circumstances, and their exercise would render article 5.6 inapplicable. Moreover, such circumstances would likely be inconsistent with the political underpinnings of the U.S.-India Initiative upon which the commitments in article 5.6 were based.

Question 18 : How is this fuel supply assurance consistent with Section 103(a)(6) of the Hyde Act which states that it is U.S. policy to: "Seek to prevent the transfer to any country of nuclear equipment, materials, or technology from other participating governments in the Nuclear Suppliers Group or from any other source if nuclear transfers to that country are suspended or terminated pursuant to this title, the Atomic Energy Act, or any other United States "law"?

Answer : There is no inconsistency between the fuel supply assurances contained in Article 5 of the U.S.-India Agreement and section 103(a)(6) of the Hyde Act. Paragraph 6 of Article 5 of the U.S.-India Agreement records assurances given by the United States to India in March 2006. In particular, the United States conveyed its commitment "... to work with friends and allies to adjust the practices of the Nuclear Suppliers Group to create the

necessary conditions for India to obtain full access to the international fuel market, including reliable, uninterrupted and continual access to fuel supplies from firms in several nations," and "[i]f despite these arrangements a disruption of fuel supplies to India occurs, the United States and India would jointly convene a group of friendly countries ... to pursue such measures as would restore fuel supply to India."

These fuel supply assurances are intended to guard against disruptions of fuel supply to India that might occur through no fault of India's own. Instances of such a disruption might include, for example, a trade war resulting in the cut-off of supply, market disruptions in the global supply of fuel, or the failure of a company to fulfill a fuel supply contract it may have signed with India. In such circumstances the United States would be prepared to encourage transfers of nuclear fuel to India by other Nuclear Suppliers Group members.

The fuel supply assurances are not, however, meant to insulate India against the consequences of a nuclear explosive test or a violation of nonproliferation commitments. The language of Article 5.6(b), particularly in the context of Article 14, does not provide for any such insulation.

Question 19 : How are these provisions regarding a life-time strategic reserve for the operating life of India's safeguarded reactors consistent with subparagraph (10) of paragraph (a) of Section 103 of the Hyde Act, which states that: "Any nuclear power reactor fuel reserve provided to the Government of India for use in safeguarded civilian nuclear facilities should be commensurate with reasonable operating requirements?"

Answer : We do not read these provisions to be inconsistent. The parameters of the proposed "strategic reserve" and of India's capacity to acquire nuclear fuel for its reactors will be developed over time. Thus, it is premature to conclude that the strategic reserve will develop in a manner inconsistent with the Hyde Act.

Question 20 : Do the U.S. and India agree on the definition of reasonable reactor operating requirements for Indian reactors? If yes, what is it? If not, how do they disagree? Does the U.S. have an assessment of how much nuclear material would be required for a life-time strategic reserve for each safeguarded Indian power reactor that could receive fuel pursuant to the proposed agreement?

Answer : The U.S.-India Agreement does not define "reasonable operating

requirements," and the two governments have not discussed a definition. Any definition would have to take into account among other things the physical characteristics of the reactors, their expected operating cycles, their expected time in service, the likelihood of fuel supply disruptions over decades of operation, and many similar factors that are difficult to quantify in the abstract. We would expect that the actual amount of fuel put in the reserve would depend not only on the factors just mentioned, but also on such factors as availability of fuel in the market, price, Indian storage capacity, costs of storage, and similar practical considerations. The Agreement itself establishes neither a minimum nor a maximum quantity of nuclear material to be placed in India's reserve.

Question 21 : How are these assurances consistent with subparagraph (6) of paragraph (a) of Section 103 of the Hyde Act which states that it is U.S. policy to: "Seek to prevent the transfer to a country of nuclear equipment, materials, or technology from other participating governments in the Nuclear Suppliers Group or from any other source if nuclear transfers to that country are suspended or terminated pursuant to this title, the Atomic Energy Act of 1954 (42 U.S.C. 2011 et seq.), or any other United States law"?

Answer : Please see the response to Question 18.

Question 22 : What impact will these U.S. commitments of nuclear fuel supply to India have on the U.S. initiatives to discourage the spread of enrichment and reprocessing facilities?

Answer : We do not foresee any negative impact on these initiatives. India already possesses both types of facilities. We do not believe that the provision of fuel assurances to India will have any effect on our efforts to offer reliable access to nuclear fuel to persuade countries aspiring to develop civil nuclear energy to forgo enrichment and reprocessing capabilities of their own.

Question 23 : Have the Indians explained to the U.S. or to the International Atomic Energy Agency their definition of the term "an India-specific safeguards agreement?" If so, what is it?

Answer : The Indian government has not yet explained to the United States what it means by the term "India-specific" safeguards agreement. The Indian government has been in discussions with the IAEA regarding its safeguards agreement. However, these discussions have not concluded. The United

States remains confident that the safeguards agreement to be negotiated between India and the IAEA will address all of the concerns associated with the term "India-specific."

Question 24: Which provisions of INFCIRC/66/Rev.2 agreements provide for safeguards in perpetuity? Would these apply to civil nuclear reactors that a country such as India requests the IAEA to safeguard?

Answer : INFCIRC/66/Rev.2 is not a "model agreement" as is INFCIRC/153 (the basis for NPT safeguards agreements) - INFCIRC/66-type agreements are not as rigidly determined as Nuclear Nonproliferation Treaty safeguards agreements. Because INFCIRC/66-type agreements do not involve full-scope safeguards (safeguards applied to all nuclear material in a state), but have been aimed at the application of safeguards to specific supplied materials or facilities, the scope of safeguards application is delineated uniquely in each agreement.

This is generally done through the mechanism of a dynamic list of inventory items to which the agreement stipulates that safeguards must be applied. The main part of the inventory list contains facilities and material that are permanently under safeguards. The subsidiary part of the inventory list contains facilities that are temporarily under safeguards due to the presence of safeguarded material. There is a third section of the list that contains nuclear material on which safeguards are suspended or exempted (e.g., because the material has been diluted to the point where it is no longer usable, has been transferred out of the state, etc.). We would expect that the Indian safeguards agreement will be based on this general structure, and that the nuclear facilities India declares to be "civil" will be placed in the main (permanent safeguards) part of the inventory list. Also in the main part of the inventory would be nuclear material exported to India, and any nuclear material generated through the use of that material.

Consistent with International Atomic Energy Agency Board Document GOV/1621 (which is referenced in the Hyde Act, Sec. 104(b)(2)), the safeguards agreement should also contain language that ensures that: (1) the duration of the agreement is related to the period of actual use of the items in the recipient state; and (2) the rights and obligations with respect to safeguarded nuclear material shall apply until such time as the International Atomic Energy Agency terminates safeguards pursuant to the agreement (e.g. the material is no longer usable or has been transferred from the recipient state).

Question 25 : Has the Indian government provided U.S. officials with a definition of "corrective measures"? If so, what is it? Does it involve removing IAEA-safeguarded material from such safeguards in certain circumstances? If so, does the U.S. support the conclusion of an Indian agreement with the IAEA that provides for perpetuity of safeguards while at the same time making such perpetuity contingent on the invocation of "corrective measures?"

Answer : The Indian government has not provided the United States with a definition, of "corrective measures." Until a safeguards agreement is completed between India and the International Atomic Energy Agency and the issue of "corrective measures" is clarified, we cannot comment on the appropriateness of the agreement. However, we expect that the Indian government will implement in letter and in spirit its commitment to "safeguards in perpetuity," to which it agreed on March 2, 2006. As Secretary Rice stated during her testimony before the Senate Foreign Relations Committee on April 5, 2006, "We've been very clear with the Indians that the permanence of safeguards is the permanence of safeguards without condition."

Question 26 : Since India is not a party to the Nuclear Nonproliferation Treaty (NPT) and does not accept full-scope safeguards, does this long-term consent for reprocessing for India change U.S. policy for granting long-term consent to reprocessing and the use of plutonium? If so, what criteria will the U.S. now use to consider requests for reprocessing and the use of plutonium either on a case-by-case basis or for long-term advance programmatic arrangements?

Answer : The consent to reprocessing is contingent upon the construction of a new, dedicated reprocessing facility that will be under International Atomic Energy Agency safeguards. The criteria applied by the United States in considering the Indian request were the same as those applied in the earlier instances (EURATOM and Japan). They are that (1) the reprocessing will not be inimical to the common defense and security, and (2) the reprocessing will not result in a significant increase in the risk of proliferation beyond that which exists at the time the approval is requested, giving foremost consideration to whether the reprocessing will take place under conditions that will ensure timely warning to the United States of any diversion well in advance of the time at which the diverted material could

be transformed into a nuclear explosive device. These are the criteria for granting approval for reprocessing established by section 131 of the Atomic Energy Act.

Article 6(iii) of the Agreement provides that India and the United States must agree on "arrangements and procedures" under which the reprocessing will take place before India can physically reprocess any material subject to the Agreement. The Administration will ensure that the safeguards, physical protection and other measures to be set forth in the agreed "arrangements and procedures" will be both rigorous and consistent with the criteria described above.

Question 27 : What special challenges will the International Atomic Energy Agency (IAEA) face in safeguarding a reprocessing plant in a non-NPT state that does not have full- scope safeguards?

Answer : Assuming that, consistent with the terms of the 123 Agreement, India builds a new reprocessing plant dedicated to the processing of material under International Atomic Energy Agency safeguards, there would be little, if any, difference in the technical challenge of applying safeguards to such a facility as opposed to a comparable facility in a state with a comprehensive safeguards agreement. There are some differences under an INFCIRC/66 agreement in the state's record-keeping and material accounting reporting requirements, but these should not have an impact on safeguards effectiveness. The technical objectives and technical measures applied in the two cases would not differ in any significant way. In each case the International Atomic Energy Agency would seek to provide assurance that the declared material was not diverted, and that the facility was operated in the manner declared. The facility would be under uninterrupted safeguards, and the material entering, exiting, and resident in the facility would all be subject to safeguards. In the case of India, the Agency's safeguards conclusions would have to be limited to the civil facilities and materials under safeguards, and could not be extrapolated to apply to the nuclear program as a whole.

Question 28 : Will the U.S. insist that the safeguards agreement for the planned Indian reprocessing plant include all the safeguards procedures and approaches that the IAEA applies to the Rokkasho reprocessing facility in Japan, including state-of the-art, near-real-time accountancy and containment and surveillance?

Answer : U.S. policy is that safeguards should be applied to meet established technical standards of effectiveness, as efficiently as possible; that is the policy we pursue in the context of our bilateral agreements with other states such as Japan, and we would continue to pursue such a policy in discussions with India in connection with arrangements for reprocessing. The safeguards methods employed at the Rokkasho Reprocessing Plant are consistent with both International Atomic Energy Agency safeguards criteria, and with the results of a lengthy international cooperative effort to address the technical problems of safeguarding large reprocessing plants. We would expect the same approaches to apply to a new Indian reprocessing plant dedicated to processing safeguarded material. However, we cannot yet speculate that safeguards would be carried out in exactly the same manner, although containment, surveillance, and some sort of continuous material monitoring would certainly be involved. A new reprocessing plant may well be many years off, and safeguards technology constantly moves forward; by the time a new Indian plant is in operation, there will almost certainly be a new generation of surveillance and radiation measurement devices available, and lessons learned from Rokkasho safeguards.

Question 29 : Will the Administration submit any consent arrangements for Indian reprocessing to Congress as an amendment to the U.S.-India agreement for cooperation so that Congress will have a full 90 days to give adequate time to review its provisions? Or will the Administration submit these only as a subsequent arrangement under section 131 of the Atomic Energy Act, thereby allowing Congress only 15 days of continuous session for review of this complex issue?

Answer : Section 131 of the Atomic Energy Act provides explicitly for review and execution of subsequent arrangements related to the reprocessing of U.S. origin material. However, if proposed "arrangements and procedures" for reprocessing involved changes to provisions in the U.S.-India 123 Agreement, an amendment to the agreement would be required.

Question 30 : Why are the programmatic consent arrangements that the U.S. is proposing to India, a non-NPT signatory, much-less specific and rigorous than the procedures that the U.S. required of EURATOM and Japan?

Answer : The advance, long-term consent accorded to India in the U.S.-India Agreement by Article 6(iii) centers on a new Indian national

reprocessing facility that has not yet been designed, let alone built. Many relevant nonproliferation considerations that could readily be dealt with in the texts of the U.S.-Japan and U.S.-Euratom agreements (or in related documents) could not be dealt with immediately in the U.S.-India Agreement.

Nevertheless, the U.S.-India Agreement establishes as fundamental criteria that a new national reprocessing facility must be dedicated to reprocessing safeguarded nuclear material under International Atomic Energy Agency safeguards, and that any special fissionable material (i.e., plutonium) separated by the facility may only be utilized in national facilities under International Atomic Energy Agency safeguards. Further, it provides that the consent *does not become effective* until the United States and India consult and agree on arrangements and procedures under which activities at the new facility will take place.

Finally, Article 6(iii) provides that the arrangements and procedures must address nonproliferation considerations identical to those addressed in the procedures relating to the U.S.-Japan and U.S.-Euratom agreements (e.g. safeguards, physical protection, storage, environmental protection), as well as "such other provisions as may be agreed by the Parties." At the appropriate time the United States will consult with India for the purpose of agreeing on the requisite arrangements and procedures and will ensure that they are no less rigorous than those governing the U.S. consent arrangements with Japan and with EURATOM.

Question 31 : Why are there no notification procedures for adding new Indian facilities to the list of facilities that may use plutonium derived from U.S.-supplied fuel?

Answer : The procedures established by Article 7.1 of the U.S.-India Agreement whereby each Party records all facilities storing separated plutonium subject to the Agreement on a list and makes its list available to the other Party serve equally to notify to the other Party all facilities utilizing (or potentially utilizing) plutonium subject to the Agreement, since the plutonium-bearing fuel must first be located at the facility before it can be utilized. A similar approach is taken in the U.S.-EURATOM Agreement, where facilities formally notified as being added to a party's "Delineated Program" (Annex A) do not include utilization facilities; the latter are notified, as appropriate, when they are added to a "Storage" list as provided for by Article 8.3.

Question 32 : Will the United States insist that any plutonium and uranium recovered from the reprocessing of U.S.-origin fuel at the proposed dedicated Indian reprocessing facility be subject to IAEA safeguards and peaceful, non-explosive use assurances in perpetuity, including any such material recycled in Indian reactors?

Answer : Yes. Article 9, Article 10 and Article 16 of the U.S.-India Agreement guarantee this coverage.

Question 33 : Will the U.S. insist that any uranium or plutonium used in or produced through the use of U.S.-supplied material be subject to safeguards in perpetuity if such material is used in India's breeder reactors?

Answer : Yes, Article 10 of the US-India Agreement guarantees this coverage.

Question 34 : If India decides at some point in the future to reprocess spent breeder reactor fuel that contains U.S.-origin material, how will the U.S. ensure that it is subject to all the non-proliferation conditions and controls in the proposed agreement, including safeguards and consent rights?

Answer : Article 10.6 of the U.S.-India Agreement provides that "[e]ach Party shall establish and maintain a system of accounting for and control of nuclear material transferred pursuant to this Agreement and nuclear material used in or produced through the use of any material, equipment, or components so transferred." Article 10.7 provides that "[u]pon the request of either Party, the other Party shall report or permit the IAEA to report to the requesting Party on the status of all inventories of material subject to this Agreement." Thus, the United States will be able to track all nuclear material in India subject to the Agreement, including at India's breeder reactors (which would have to be brought under International Atomic Energy Agency safeguards before U.S. obligated nuclear material could be introduced to them), at India's new dedicated reprocessing facility (when built), and at any other Indian facility where U.S. obligated plutonium may be located. In tracking this material the United States will be able to ensure that all conditions and controls required by the Agreement, including International Atomic Energy Agency safeguards, are in fact being maintained.

Question 35 : In light of these requirements of U.S. law, why doesn't the proposed U.S.-Indian peaceful nuclear cooperation agreement contain an

explicit reference to the actions that would give the U.S. the right to terminate nuclear cooperation and to require the return of equipment and materials subject to the agreement, if India detonates a nuclear explosive device?

Answer : Article 14 of the proposed U.S.-India agreement for cooperation provides for a clear right for the U.S. to terminate nuclear cooperation and a right to require the return of equipment and materials subject to the agreement in all of the circumstances required under the Atomic Energy Act, including if India detonated a nuclear explosive device or terminated or abrogated safeguards (per section 123(a)(4) of the Act). Thus, it fully satisfies the relevant requirements of the Act.

Question 36 : Does the U.S. possess the right under Article 14, without any precondition or consent by India, to take back any and all U.S.-origin nuclear material or equipment provided to India pursuant to the nuclear cooperation agreement?

Answer : Under Article 14 of the proposed agreement, the U.S. would be able to exercise the right to require the return of material and equipment subject to the agreement after (1) giving written notice of termination of the agreement and (2) ceasing cooperation, based on a determination that "a mutually acceptable resolution of outstanding issues has not been possible or cannot be achieved through consultations." Thus, both of the actions that must be taken to exercise the right of return would be within the discretion of the U.S. Government, and both actions could be taken at once in the unlikely case that the U.S. believed that a resolution of the problem could not be achieved through consultations.

Article 14 does not require that the other party consent to the exercise of the right to terminate the agreement, the right to cease cooperation, or the right of return. Prior to the actual removal of items pursuant to the right of return, the parties would engage in consultations regarding, inter alia, the quantity of items to be returned, the amount of compensation due, and the methods and arrangements for removal. These consultations are a standard feature of right of return provisions and are included in all 123 agreements that the United States has signed with other cooperating parties.

Question 37 : Under what circumstances does the termination provision allow the United States to terminate cooperation with India? Does the U.S. have the unconditional right to cease cooperation immediately upon its determination that India has taken action that the U.S. believes constitutes grounds for termination of cooperation?

Answer : Like all other U.S. agreements for nuclear cooperation, the proposed U.S. India agreement is a framework agreement and does not compel any specific cooperation. Thus, a cessation of cooperation would not be inconsistent with the provisions of the agreement. Also, as in other agreements for cooperation, the proposed U.S.-India agreement provides specifically (in article 14) for a right to cease cooperation. Article 14 makes clear that the U.S. would have the right to cease cooperation immediately if it determined that India had taken actions that constituted grounds for such cessation and that a resolution of the problem created by India's actions could not be achieved through consultations. This is a reciprocal right that India enjoys as well. Article 14 does not elaborate the specific circumstances that might bring about such a formal cessation of cooperation. However, the provisions of article 14 underscore the expectation of both parties that termination of the agreement, cessation of cooperation, and exercise of the right of return would be serious measures not to be undertaken lightly.

Question 38 : Could the U.S. terminate cooperation pursuant to Article 14 of the nuclear cooperation agreement for reasons other than India's detonation of a nuclear explosive device or abrogating or violating a nuclear safeguards agreement? Does the government of India agree?

Answer : As noted in the previous answer, Article 14 of the U.S.-India Agreement does not elaborate the specific circumstances that might trigger a cessation of cooperation pursuant to that article. As explained in the answer to question 17, the Circumstances for possible termination would include, for example, detonation of a nuclear weapon, material violation of the 123 Agreement, or termination, abrogation, or material violation of a safeguards agreement. The provisions of Article 14 underscore the expectation of both parties that termination of the agreement, cessation of cooperation, and exercise of the right of return would be serious measures not to be undertaken lightly. We believe the language establishing these rights is clear and well understood by both countries.

Question 39 : Do the nonproliferation assurances and conditions in the proposed new agreement apply to the nuclear materials and equipment that the U.S. supplied for the Tarapur reactors, as well as the spent fuel from those reactors? If not, why?

Answer : The proposed U.S.-India Agreement would not apply retroactively to the spent fuel from the Tarapur reactors. The Atomic Energy Act does not require such retroactive application, but it does impose certain conditions

with respect to previously exported material before embarking on new cooperation (see section 127). The Administration believes it will be able to satisfy these requirements of the Atomic Energy Act.

Question 40: Does the U.S. continue to hold the position that India is legally obligated to adhere to the nonproliferation assurances and controls, including peaceful-use assurances, safeguards, consent to reprocessing and retransfer to their countries with respect to the nuclear equipment and materials that were subject to the expired 1963 agreement for cooperation? Does the Indian Government share the U.S. views?

Answer : The U.S. and India have maintained differing legal positions on the question of residual conditions and controls on nuclear material subject to the 1963 agreement following expiration of the agreement in 1993. However, India has agreed with the International Atomic Energy Agency on the application of safeguards to nuclear material from the Tarapur reactors. Moreover, the material is subject to the INFCIRC/66 Agreement. And the U.S. is confident that there would be consultations between the U.S. and India before any change in the status of the nuclear material (e.g., reprocessing).

Question 41: Will the Indian Government have any legal right to suspend or eliminate safeguards, reprocess U.S.-origin material, or otherwise take any action that would be prohibited under the proposed agreement after the termination by either party of the proposed?

Answer : Article 16 of the proposed U.S.-India Agreement expressly provides for the survival of essential rights and conditions on items subject to the agreement even after termination or expiration of the agreement, including inter alia with respect to the application of safeguards (article 10), reprocessing consent (article 6), and peaceful use (article 9).

Question 42 : Does the Administration agree with Prime Minister Singh that there will be no derogation of India's right to take corrective measure in the event of fuel supply interruption? Will any corrective measures that India might take involve any derogation of the U.S. nonproliferation assurances, rights, and controls that are set out in articles 5.6(c), 6, 7, 8, 9, and 10?

Answer : The language of article 16 clearly provides for the applicability of the referenced provisions to items subject to the proposed agreement even

after termination or expiration of the agreement. Until India has completed its safeguards agreement with the International Atomic Energy Agency and the parameters of "corrective measures" are known, we will not be in a position to speak definitively to the potential effect on other provisions of the proposed agreement. That said, it would not be consistent with the proposed agreement text for such corrective measures to detract from the applicability of the provisions referenced in article 16 to items subject to the proposed agreement, including after termination or expiration of the agreement.

Question 43 : What are the explicit linkages and interlocking rights and commitments that Prime Minister Singh was referring to? Do the U.S. and Indian governments agree on the definition of these linkages and interlocking rights and commitments? If not, how do they differ?

Answer : International agreements, by their nature, typically involve interlocking rights and commitments, and this is the case with our agreements for nuclear cooperation. The creation of a framework for nuclear cooperation is predicated on a set of rights and conditions that serve essential nonproliferation purposes. Beyond that, we can only say that the quoted statement is at a high level of generality, 'and we are not in a position to speak for the Indian government as to whether anything more specific was intended by these words.

Question 44 : What is the Administration's understanding of the Prime Minister's statement that India's reprocessing rights are "permanent"? Specifically, does it mean that the U.S. will not have the right to withdraw its consent to India's reprocessing of U.S. obligated nuclear material, even if the U.S. determines that the continuation of such activities would pose a serious threat to our national security or nonproliferation?

Answer : The U.S. has agreed to the reprocessing of U.S.-origin materials, to come into effect when the parties agree on "arrangements and procedures" and India establishes a new national reprocessing facility dedicated to reprocessing safeguarded material under IAEA safeguards. As with the arrangements governing reprocessing consents granted by the U.S. in connection with the Japan and EURATOM agreements, the proposed arrangements and procedures with India will provide for withdrawal of reprocessing consent. Such a right is also included in Article 14.9 of the U.S.-India Agreement.

Question 45 : In the conference report of the Hyde Act, Congress stated

that it intended for the United States to "seek agreement among Nuclear Suppliers Group members that violations by one country of an agreement with any Nuclear Suppliers Group member should result in joint action by all members, including, as appropriate, the termination of nuclear exports." Will the administration be seeking such a commitment when it proposes that the Nuclear Suppliers Group provide a nuclear trade rule exemption for India? If not, why not?

Answer : Paragraph 16 of the Nuclear Suppliers Group Guidelines for Nuclear Transfers (INFCIRC/254/Rev.8/Part 1) provides that suppliers should (1) consult if, inter alia, one or more suppliers believe there has been a violation of a supplier/recipient understanding; (2) avoid acting in a manner that could prejudice measures that may be adopted in response to such a violation; and (3) agree on "an appropriate response and possible action, which could include the 'termination of nuclear transfers to that recipient." Assuming the Nuclear Suppliers Group agrees by consensus to an exception for India, this guideline would apply in the case of any nuclear transfers by a Nuclear Suppliers. Group' supplier to India. The Administration believes that the existing provisions of paragraph 16 of the Guidelines serve the Congressional concerns expressed in the conference report on the Hyde Act, and therefore no further elaboration is needed in connection with the proposed exception for India.

APPENDIX - II

Draft Proposals of the United States for submission to the Nuclear Suppliers' Group for waiver of restrictions on nuclear trade by India: August 2008.

1. At the _____ plenary meeting on _____ the Participating Governments of the Nuclear Suppliers Group agreed that they:
 - a. desire to contribute to an effective non-proliferation regime and the widest possible implementation of the objectives of the Treaty on the Non-Proliferation of Nuclear Weapons
 - b. seek to limit the further spread of nuclear weapons
 - c. wish to pursue mechanisms to affect positively the non-proliferation commitments and actions of those outside the traditional nuclear non-proliferation regime
 - d. seek to promote fundamental principles of safeguards and export control for nuclear transfers for peaceful purposes
 - e. recognize the world's need for clean and reliable sources of energy for sustained growth and prosperity
2. In this respect, Participating Governments have taken note of steps that India has taken voluntarily as a contributing partner in the non-proliferation regime and they welcome India's efforts with respect to the following non-proliferation commitments and actions:
 - a. Deciding to separate its civilian nuclear facilities in a phased manner and file a declaration regarding its civilian nuclear facilities with the International Atomic Energy Agency
 - b. Conducting negotiations with the IAEA and obtaining approval of its Board of Governors regarding a Safeguards Agreement for application of safeguards to civilian nuclear facilities that is in accordance with IAEA standards, principles and practices (including Board of Governors document GOV/1621)
 - c. Committing to sign and adhere to an Additional Protocol with respect to India's civil nuclear facilities

- d. Refraining from transferring enrichment and reprocessing technology to states that do not already possess these
 - e. Having adopted a national export control system capable of effectively controlling transfers of multilaterally controlled nuclear and nuclear related material, equipment, and technology.
 - f. Harmonizing its export control lists with those of the Nuclear Suppliers Group and committing to adherence to NSG guidelines
 - g. Continuing its unilateral moratorium on nuclear tests and declaring its readiness to work with others towards conclusion of a multilateral Fissile Material Cut-off Treaty.
3. In view of the above, Participating Governments have adopted the following policy on civilian nuclear cooperation with the IAEA-safeguarded Indian civilian nuclear program
- a. Notwithstanding paragraphs 4(a), 4(b) and 4(c) of Infcirc/254 (Rev. 9) Part 1, Participating Governments may transfer trigger list items and/or related technology to India for peaceful purposes and for use in safeguarded civilian nuclear facilities provided that the transfer satisfies all other provisions of Part 1.
 - b. Notwithstanding paragraph 4(b) of the Part 2 guidelines, Participating Governments may transfer nuclear-related dual use equipment, etc. for peaceful purposes for use in civilian nuclear facilities under IAEA safeguards, provided that the transfer satisfies all other provisions of Part 2.
 - c. Participating Governments shall maintain contact and consult through regular channels on matters connected with the implementation of the Guidelines, taking into account relevant international commitments and bilateral agreements with India.
4. In order to facilitate the efforts of non-member adherents to Infcirc/254 Parts 1 and 2 to remain current in their implementation of the Guidelines, the NSG Chair is requested to review proposed amendments to the Guidelines with all non-member adherents on a non-discriminatory basis and solicit such comments on the amendments as a non-member adherent may wish to make.

Participation of India in the decisions regarding proposed amendments will facilitate their implementation by India.

5. The NSG Point of Contact is requested to submit this statement to the IAEA DG with a request that it be circulated to all Member States.

APPENDIX - III

Briefing by the Spokesperson of the US State Department on the publication of the State Department letter of January 16, 2008 to the Late Congressman Tom Lantos, Chairman of the Committee on Foreign Affairs of the House of Representatives on the civil nuclear cooperation with India.

Washington, September 4, 2008.

"I think, certainly, India's obligations under the ... 123 agreement are very clear and that the Indians have agreed to a moratorium on testing. And we expect that they will adhere to that commitment," State Department Deputy Spokesman Robert Wood said.

Asked if this response to the question whether a nuclear weapons test by India would trigger a suspension of supplies and technology from the US and other countries under the India-US nuclear deal did not indicate some ambiguity, he said: "What I'd encourage you to do is to read the agreement."

(The implementing 123 agreement which is awaiting Congressional approval does not mention nuclear testing at all. Article 14 does provide for termination for a material violation of the agreement itself or a violation an IAEA safeguards agreement, but it also provides for consultations to "consider carefully the circumstances that may lead to termination or cessation of cooperation".

The two sides have also "agreed to take into account whether the circumstances that may lead to termination or cessation resulted from a Party's serious concern about a changed security environment or as a response to similar actions by other States which could impact national security."

In the event of termination, the agreement gives the two sides "the right to require the return by the other Party of any nuclear material, equipment, non-nuclear material or components transferred under this Agreement and any special fissionable material produced through their use."

However, none of this is automatic and it would be for the US president of the day to determine how he chooses to exercise the right, US officials including Washington's then key negotiator for the deal, Nick Burns had explained following the finalisation of the agreement in July 2007.)

In reply to another question about concerns expressed by nuclear suppliers, Wood said: "... I don't want to get into all of the discussions that are ongoing about the agreement. Obviously, a number of countries have concerns about the agreement. And they've expressed those concerns. We have tried to give answers.

"The Indians have, as well. We'll continue to do so," he said noting that the Nuclear Suppliers Group (NSG) is currently meeting in Vienna to consider a revised US draft to exempt India from its bar on nuclear trade with countries that have not signed the nuclear Non-proliferation Treaty (NPT).

"But I don't think it serves the interests of any of us to talk about, you know, negotiations that are ongoing about it, except to say that this agreement is important," he said. "We think it contributes greatly to the global non-proliferation efforts."

"And we're going to continue to work with India and the other parties concerned with this agreement. And we hope to see, you know, coming out of the NSG an exception for India to its full-scope safeguards rule," he said, outlining the next steps.

"... I don't want to speculate on things, but if, you know, that agreement is approved by the Nuclear Suppliers Group, then I believe it has to go to India's parliament, it has to approve it, and we'll obviously go from there.

"But I really don't want to jump too far ahead, because we're still, again, in the Nuclear Supplier Group - that meeting is still going on. So we hope that there will be an exception made for India," he said.

Asked a second time if Washington did or did not have an agreement with

India that the supplies would be cut off in the event of a nuclear test by India, Wood repeated: "... India is engaged in a moratorium on testing. We want to see that moratorium continue. And that's our view with regard to that."

"I'm not saying that it's ambiguous, but I think it's very clear. The Indians understand what our views are with regard to nuclear testing. We've made them clear. And they understand those," he said, rejecting the suggestion that this is somehow ambiguous.

When pressed if Washington would cut off supplies, the senior State Department official said: "You're asking me to speculate on something, and I'm not going to do that. I'm just going to tell you exactly what our policy is. I'm just not going to speculate on anything."

Wood also answered a spate of questions over the release Wednesday of a Jan 16 "secret letter" by Howard L. Berman, Democratic chairman of the House Foreign Affairs Committee, suggesting the Bush administration had assured the US Congress that it would immediately terminate nuclear trade with New Delhi if it conducted a nuclear test.

The State Department's letter to Berman's predecessor, the late Tom Lantos, covered responses to 45 questions posed by members of Congress about the 123 agreement.

Denying a cover-up in seeking confidentiality for the letter, the spokesman said: "...our response to the Lantos letter was made public by Congressman Berman. And there was nothing...new in our response. It was basically a reiteration of US non-proliferation policy."

"There was no attempt to sort of, you know, cover up anything, if that's what you're implying. Not at all," Wood said, brushing off a suggestion that Washington took the confidentiality route to protect India's ruling coalition facing stiff opposition from its then Leftist allies.

"... I stand by what I just said. We've made very clear that, in that letter, what our non-proliferation is," the US official said. "... people have that interpretation, but that certainly was not the position of the United States government."

APPENDIX - IV

Press Conference of the U. S Ambassador David Mulford immediately after the NSG waiver.

New Delhi, September 9, 2008.

Ambassador Mulford: Good morning everybody, and thank you for coming to Roosevelt House.

This is one of these gatherings that we've had from time to time to keep you up to date with what's happening. As you all know, there's been a substantial shift by virtue of the fact that we've finally accomplished most of the goals that have been set since the civil nuclear deal was first declared by the President and the Prime Minister in July of 2005.

In fact, the initiative goes back to March of that year when Secretary Rice first indicated that the United States was willing to look at this initiative. As it was presented at that time, the President of the United States had indicated that the U.S. wished to help India in achieving its vision of becoming a world power and to that end would work to help remove some of the constraints on India's future growth, one of which was energy. An energy group was formed comprising five different segments. Among those was civil nuclear and that's where the original thrust came from. Then the declaration was made in Washington in July of '05, and you're well acquainted with all the steps that have been undertaken between then and now.

What I think is significant, first of all, is that this is a major accomplishment and triumph for India. It is a major accomplishment for the U.S. and India together. And it marks the end of India's years of isolation.

You've all seen now the full magnitude of the effort that was made in the Nuclear Suppliers Group, but that's only been the most visible aspect. Some weeks ago there were press reports that the United States wasn't doing enough, that it was sitting on its hands, all of which were completely false. More recently there have been press reports to the effect that when the Berman material was released that somehow the United States was working against this deal or subverting it. All of this is utterly and totally false, and I want to just underline it.

The effort that was made in the NSG goes back a long time. It's the biggest diplomatic effort I have witnessed during my years in government which go back to the early 1980s. The effort that was made at senior levels of the United States government later in the process is appropriate in a situation like this where you're working with 45 countries and you're gradually moving towards a consensus. The President of the United States, the Secretary of State, the National Security Advisor Mr. Hadley, Mr. Bill Burns, the Under Secretary for Political Affairs, the number three official in the State Department, all these people were hugely active in the final process and made direct phone calls and other contacts with many leaders around the world.

It was a subject of interest and discussion at the G8 in Japan. And there have been many other contacts over the months going back at least two or two and a half years in preparation for the ultimate need to accomplish this consensus. And a consensus of 45 countries in the kind of world in which we live is an extremely rare event, so I hope due respect is shown to this accomplishment.

We now are in the final phase where the 123 Agreement must be presented to the United States Congress. That process is ongoing at the moment, and we hope to get the legislation before the Congress in the next few days, and then we hope for action by the Congress in this Administration.

That concludes my opening remarks. I'd be happy to take questions.

Question: You were just discussing the second waiver that you will be seeking from the Congress before the 30 day limit. What are the chances of this passing? There have to be two amendments [Inaudible]. If you can also explain the process, to clarify it?

Ambassador Mulford: The legislation will be placed by the Administration before the Congress and only then will we begin to get a response out of the Congress about exactly how and whether in this session they will be willing to address this issue.

Question: Has it already been placed?

Ambassador Mulford: No, it has not yet been placed. That will happen very shortly, but it has not yet been placed.

Question: There has to be a Presidential Determination?

Ambassador Mulford: There are Presidential Determinations that need to be completed, and that work is going forward at the moment. As Minister Mukherjee mentioned, there are certain documents that are required to be done, and we're in the process of completing these, and we expect this to be accomplished in the next day or two.

Until the legislation is lodged with the Congress, we won't really have a definitive view of what their approach is going to be.

It is important to remember that in the United States form of government, the Congress is a separate and independent branch of government. The Congress is a sovereign body and it will decide itself how it is going to proceed.

You're aware that there is a rule in the Senate, a 30-day rule. That is a rule which traditionally can be waived, but if it is waived then it opens up the possibility of any single senator being able to filibuster against whatever the measure is, and that's not something that people want to open up to usually, so it's very seldom used. So, nobody knows at this point exactly what judgments will be forthcoming.

What one can say about the Congress is that it has a relatively small body of key leaders, and therefore it has been possible from time to time in the past for consultations with leadership that have resulted in quite flexible responses to things, and even changing rules or taking a special approach. So virtually anything is possible, but you have to begin the engagement process to find out exactly what might be.

That's as much as one can say about it until we've actually lodged the legislation. But an effort is already underway at senior levels in the Administration, once again, to dialogue with members of Congress on the leadership side to see what course may be adopted.

Question: The 123 Agreement that was agreed upon between the two countries, can it be amended?

Ambassador Mulford: No, in the Congress it's an up or down vote, so it will be on the basis of the 123 Agreement as it is. Again, nobody is quite able to judge yet what the attitude of Congressional leaders will be to an agreement which closely follows legislation that was voted on overwhelmingly by both parties in 2006. Will they want to review it in depth?

Will they say this meets the terms that were set out and therefore it will be a straight-forward process? It's hard to say until we get the legislation and have studied it.

Question: What is your view on China's role in this?

Ambassador Mulford: My view is that China in the end did the right thing. Period.

Question: Two questions. One, how confident is the administration that the Congress will approve? Second, I believe that the Government of India will take up the fuel supply issues with Washington. Have they done so yet?

Ambassador Mulford: On the first question, you'll have to await the judgment of Congress about whether and to what extent the 123 Agreement that actually is submitted in their view complies with the Hyde Act. That's a congressional judgment. It's their prerogative. It wouldn't be right for me to make their judgment for them. That's what they'll have to do in reaching an agreement about how they vote.

I'm confident and optimistic that the bipartisan majorities that we saw at the time of the votes are still intact. I think you could see that in the statements that Mr. McCain and Mr. Obama both made, so that would seem to still be a situation where the majorities are intact.

On the other question, I think it's important to go back on this fuel assurance question because one does keep reading about it in the newspapers here. It is a very straightforward issue. The fuel assurances are contained in the language of the 123 Agreement. Those words were negotiated by and signed off on by the President and the Prime Minister in March of 2006. They were employed word for word in the 123 Agreement. So those are the fuel assurances. There are no other fuel assurances. That is where you look to get your answer, and I don't know of anybody in New Delhi who is raising this issue with Washington.

Question: External Affairs Minister Mukherjee said yesterday that he would like to wait for the 123 Agreement before making bilateral agreements with other countries, but if the 123 doesn't make it through the U.S. Congress there are other countries like Russia, for example, or France, that are very keen to do nuclear business with India. How does the U.S. look at that?

Ambassador Mulford: You're asking me a speculative question. The situation is rather precisely as Mr. Mukherjee put it. So that's your answer.

Question: Could you give us the flavor of the conversation between President Bush and President Putin?

Ambassador Mulford: No. I'm not in a position to do that. We don't talk about the content of Presidential conversations with individual statesmen around the world.

Question: Was it the President who swung China's vote?

Ambassador Mulford: I wasn't there at the time, and I don't know the answer to that. I have already said they did the right thing in the end.

Question: Can you say who President Bush spoke to?

Ambassador Mulford: Maybe the White House would like to issue a long list, but I don't know that I would.

Question: The Prime Minister is going to Washington in September. Do you think the bilateral 123 agreement will be signed in Washington after the Congress acts if it goes through?

Ambassador Mulford: I don't know the answer to that. I'm presuming if it's passed by the Congress it's an opportunity certainly to sign it, but nothing has been decided and announced.

You can understand that, if you have worked and lived in Washington, to presume on the Congress is not something you do. The Congress is going to make its own decisions and move at its own pace and make its own decisions. Until they do that we're going to be respectfully waiting to see what their approach is, but there will be dialogue at senior levels in the administration with senior leadership in the Congress. It's already started.

Question: I wanted to ask you how you see overall U.S India political relations developing?

Ambassador Mulford: I see them as developing in a very positive fashion as they already have in the past four or five years. I think this development will continue. I think the civil nuclear accomplishment makes that easier and probably cements the relationship in a number of important ways.

Question: Will there be more defense cooperation?

Ambassador Mulford: I'm including that in the answer. I think we already have a very strong relationship in the defense area. It's been getting stronger. We expect that to continue. The Indian Defense Minister is in Washington today. We've seen all kinds of positive developments in that field since the visit of Mr. Mukherjee back in June of 2005 when he visited prior to a Prime Ministerial visit a few weeks later, and he signed the Defense Framework Agreement at that point. So developments over the last three years have been very positive and continue to be so.

Question: There is talk that China looking for a similar deal for Pakistan. How do you see this? Is there a possibility?

Ambassador Mulford: I don't think there is, no. No possibility.

Question: There has been, post NSG waiver, differing opinions about whether it's really got through with all that India and America wanted. Then you had the opposition in India saying it's look at the restrictions have been put on us, I think.

Can you just go over some of these things? What is it that makes you say it's clean?

Ambassador Mulford: The waiver that was granted is a clean waiver.

Question: When you say clean, what in your definition was that clean?

Ambassador Mulford: I never defined it. [Laughter].

Question: So how do you say it's clean?

Ambassador Mulford: It's a clean waiver. That's the great beauty of it.

Question: What were the key points that are put in that to make sure that wouldn't crimp the agreement that the U.S. and India have?

Ambassador Mulford: You have to ask the people who were involved. The consensus was achieved, the parties all agreed, and therefore I don't see that there's a problem. The waiver seems to me to be a straight forward, clean document. But as I've always said, I think you have to look at this deal not just in terms of that waiver, but in terms of all the surrounding elements of the deal.

There's the declaration that was made in July of 2005; there's the separation agreement that was negotiated between India and the United States. India's

separation agreement, I should say. There was the Hyde Act. There's the 123 Agreement. There's the IAEA Safeguards Agreement. There are elements of the presidential determinations that touch on various issues. There is the exemption itself. There will be a final vote in the U.S. Congress. One has to look at this thing, as indeed it is, which is a very large, broad-based initiative with many moving parts which has made it complex and difficult to manage over a long period of time.

But frankly, it's a great tribute to everybody who's been involved on both the Indian side and the U.S. side, and now more recently all the other countries that have been involved as well, that everybody has worked together to accomplish what is for India, and the world, a very significant event.

India is no longer isolated. India is able to deal with the United States in civil nuclear commerce as well as with the rest of the world. It has positive environmental implications for the world. It allows India to diversify its energy base. It permits India to develop energy sources that will promote its long-term growth. It will help India to become an increasingly important world power. It will provide electricity in a larger scale more efficiently, more cleanly and more cheaply to the people of India. It is a history-making event. I think one needs to keep it in that broad context.

Question: If this is still pending when the new government takes office how far back in the procedure do you have to go to resume that process, and how long will that take?

Ambassador Mulford: One cannot speak on behalf of a new Congress and a new Administration, but I think that having gotten to the point where the international consensus has been accomplished and the legislation has been presented to the U.S. Congress, the prospects for the content of this deal being preserved in its presentation to a new Congress are greatly enhanced.

Also because all the various steps have been accomplished now, there is very considerable prospect that the Congress would act much earlier than otherwise would have been the case if these things had not been done. I think one can at least take the view that as long as this level of accomplishment has been achieved and the legislation has been put before the Congress, there's every reason to think that in the new administration there would be a similar approach relatively early. But you cannot guarantee that.

Question: And how would you define relatively earlier?

Ambassador Mulford: I can't say exactly what the congressional schedule might be.

Question: Two to three months or two to three weeks?

Ambassador Mulford: I think it would be a longer period than that because it takes a long time for an administration to get set up, make its appointments, and deal with its first and most urgent business. I wouldn't want to comment.

Question: This is clearly a huge milestone for U.S.-India relations. What's next?

Ambassador Mulford: What's next? That's a good question, and I want to answer that in a very particular way because I have always tried to convey the vision of the United States that this relationship with India is a comprehensive relationship. It touches every aspect of life between the two countries. It's very heavily people to people. It's very heavily a civil, private sector relationship. And those elements of the relationship are growing on a regular basis. So if you look at things like health care cooperation, education, energy and various other areas besides civil nuclear. If you look at space cooperation, economic relations, foreign direct investment, USAID activities, you get some impression of the breadth of the interface.

Things have been going on in every single one of those fields. The United States Mission in India is now the largest Mission the United States has in the world. So while this has been going on every week, every month, with contacts and developments and programmatic cooperation, the civil nuclear issue has tended to take the oxygen out of most other things because there's been a sort of preoccupation with that.

What happens next is that we will now see a little more visibly the full breadth of the relationship, and I think and I hope there will be a focus on these things because they're so exciting and so much is being accomplished.

Question: Do you see more cooperation on the space technology?

Ambassador Mulford: I've always thought that in the areas where there are sensitive aspects of the relationship, usually high tech issues, defense

issues and other things, the civil nuclear relationship, once that is established, it is so central and so sensitive itself that it should have a knock-on effect that's positive into other areas.

I would expect that our capacity to move forward in other complex areas is enhanced because there is a continual building up of trust and confidence in each other, a willingness to change things, and relax old restrictions on both sides. Because it is really about building trust and cooperation on both sides of the ledger. This should enhance that process very significantly.

Question: Can you give some examples of restrictions, or objections which we had on both sides, which you'll see dissolving?

Ambassador Mulford: I think we will continue to see closer defense cooperation. There are a number of high tech issues that feature in that relationship. Those are presumably going to be easier to move forward and resolve with the confidence that's been built here. Compared, say, to if this deal had failed and everybody was unhappy about the fact that we hadn't completed it. That might have had a reverse affect. But I think the knock-on positive effect is going to be very significant.

Question: If the 123 Agreement is not approved in September, is there a likelihood of a special session in the next couple of months?

Ambassador Mulford: There is a history of what are called lame duck sessions of Congress in the United States, but they are strictly within the control of the leadership of the Congress to decide. Up until now, the leadership has not decided and announced that there will be a lame duck session. Quite the reverse, there have been rumors that there will not be. That's the present state of play.

The answer is, nothing has been said. Rumors say no, but it is a possibility and it could be announced at some point. So in a way it probably depends to some extent on how the election comes out.

But bear in mind that lame duck sessions of Congress in the past are usually called for fairly specific purposes, to deal with certain pieces of legislation. They are not simply open sessions. So if that happened, there would have to be both a decision to have a lame duck and also the understanding that this is something that would be considered.

Question: Two quick questions. Coming back to that Berman letter, you issued a statement after that letter came out saying that the Indian government always knew what was in it. Indian officials say that was not true. How would you respond to that? Secondly, if India wanted to begin civil nuclear trade with Russia or France right away, would that be okay with the U.S.?

Ambassador Mulford: I think Mr. Mukherjee answered that, and I already answered it. He's correct, that's the expectation as he's put it.

The other question was on the Berman letter. What I meant when I issued that statement was that there has been complete transparency between all the parties. I think it's important to understand that the letter that was produced was to Congressman Lantos, and it was at the request of Chairman Lantos and the committee. This is common. Whenever there's legislation in the U.S. or hearings or issues that come up, the Congress often asks the Executive Branch questions. Sometimes those are verbal questions in the form of testimony at hearings; or sometimes they're written requests. Often the written requests will come after testimony.

The answers to the questions that were produced by the State Department were not classified. They were not secret. One keeps reading in the press here they were secret. They were not secret. They were unclassified information. Under our form of government when we respond to questions to the Congress, that becomes the property of the committee. They decide if they're going to release it to the public or not. In this case Chairman Lantos decided not to at that time. Chairman Berman decided later that he would release it. But there is nothing in there that is new or unknown to the various parties who have been negotiating. The Indian government said so itself in its own statement.

Question: But Dr. Kokodkar also said they didn't know what was in those letters. My question is, your statement seemed to indicate that the government here did know what was in --

Ambassador Mulford: No, in a sense you're correct there. We did not take the questions at the time and give the material to the Indian government. What I meant to say is that the content of the material in there was known. There's nothing in there that isn't known to the Indian government. But the text of the answers was a matter between the State Department and the committee. It's strictly speaking a U.S. government

process, it's an internal process. It's not an external process. But the content of what was in there was nothing new for anybody.

Question: Will there be changes to the entities list with regard to India?

Ambassador Mulford: No. First of all you remember the NSSP initiative. That initiative had the affect through negotiations to remove the need for export licenses, as I remember, from being required on about 25 percent of the high tech items that were exported to India, to less than one percent. So a great deal has already been done there.

There are other areas of sophisticated technology involved in defense equipment where there is a releasability issue that is the subject of decisions in the U.S. administration over the specific type of equipment that's involved. And those are based partly on the laws, partly on procedures and policies. It's a very complex area. What I said before is I think you could see greater openness in that area going forward. That doesn't mean all the regulations disappear.

Thanks for coming.

APPENDIX - V

Message of U. S. President George W. Bush to the Congress seeking ratification of the Civil Nuclear Energy Cooperation Agreement with India.

Washington (D.C.), September 10, 2008.

I am pleased to transmit to the Congress, pursuant to section 123 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2153) (AEA), the text of a proposed Agreement for Cooperation Between the Government of the United States of America and the Government of India Concerning Peaceful Uses of Nuclear Energy. I am also pleased to transmit my written determination concerning the Agreement, including my approval of the Agreement and my authorization to execute the Agreement, and an unclassified Nuclear Proliferation Assessment Statement (NPAS) concerning the Agreement. (In accordance with section 123 of the AEA, as amended by title XII of the Foreign Affairs Reform and Restructuring Act of 1998 (Public Law 105-277), a classified annex to the NPAS, prepared by the Secretary of State in consultation with the Director of National Intelligence, summarizing relevant classified information, will be submitted to the Congress separately.) The joint memorandum submitted to me by the Secretary of State and the Secretary of Energy and a letter from the Chairman of the Nuclear Regulatory Commission stating the views of the Commission are also enclosed.

The proposed Agreement has been negotiated in accordance with the AEA and other applicable law. In my judgment, it meets all applicable statutory requirements except for section 123 a.(2) of the AEA, from which I have exempted it as described below.

The proposed Agreement provides a comprehensive framework for U.S. peaceful nuclear cooperation with India. It permits the transfer of information, non-nuclear material, nuclear material, equipment (including reactors) and components for nuclear research and nuclear power production. It does not permit transfers of any restricted data. Sensitive nuclear technology, heavy-water production technology and production facilities, sensitive nuclear facilities, and major critical components of such facilities may not be transferred under the Agreement unless the Agreement is amended. The Agreement permits the enrichment of uranium subject to it up to 20 percent in the isotope 235. It permits reprocessing and other alterations in

form or content of nuclear material subject to it; however, in the case of such activities in India, these rights will not come into effect until India establishes a new national reprocessing facility dedicated to reprocessing under IAEA safeguards and both parties agree on arrangements and procedures under which the reprocessing or other alteration in form or content will take place.

In Article 5(6) the Agreement records certain political commitments concerning reliable supply of nuclear fuel given to India Agreement does not, however, transform these political commitments into legally binding commitments because the Agreement, like other U.S. agreements of its type, is intended as a framework agreement.

The Agreement will remain in force for a period of 40 years and will continue in force thereafter for additional periods of 10 years each unless either party gives notice to terminate it 6 months before the end of a period. Moreover, either party has the right to terminate the Agreement prior to its expiration on 1 year's written notice to the other party. A party seeking early termination of the Agreement has the right immediately to cease cooperation under the Agreement, prior to termination, if it determines that a mutually acceptable resolution of outstanding issues cannot be achieved through consultations. In any case the Agreement, as noted, is a framework or enabling agreement that does not compel any specific nuclear cooperative activity. In the event of termination of the Agreement, key nonproliferation conditions and controls would continue with respect to material and equipment subject to the Agreement.

An extensive discussion of India's civil nuclear program, military nuclear program, and nuclear nonproliferation policies and practices is provided in the Nuclear Proliferation Assessment Statement (NPAS) and in a classified annex to the NPAS submitted to the Congress separately.

The AEA establishes the requirements for agreements for nuclear cooperation, some of which apply only to non-nuclear-weapon states (see AEA, section 123 a.). The AEA incorporates the definition of "nuclear-weapon state" from the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), which defines it to mean a state that has manufactured and exploded a nuclear weapon or other nuclear explosive device prior to January 1, 1967. Therefore India is a non-nuclear-weapon state for NPT and AEA purposes, even though it possesses nuclear weapons. The Agreement satisfies all requirements set forth in section 123 a. of the AEA except the requirement

of section 123 a.(2) that, as a condition of continued U.S. nuclear supply under the Agreement, IAEA safeguards be maintained in India with respect to all nuclear materials in all peaceful nuclear activities within its territory, under its jurisdiction, or carried out under its control anywhere (i.e., "full-scope" or "comprehensive" safeguards).

The Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006 (the "Hyde Act") established authority to exempt the Agreement from the full-scope safeguards requirement of section 123 a.(2) of the AEA, as well as certain other provisions of the AEA relating to supply under such an agreement, provided that the President makes certain determinations and transmits them to the Congress together with a report detailing the basis for the determinations. I have made those determinations, and I am submitting them together with the required report as an enclosure to this transmittal.

Approval of the Agreement, followed by its signature and entry into force, will permit the United States and India to move forward on the U.S.-India Civil Nuclear Cooperation Initiative, which Indian Prime Minister Manmohan Singh and I announced on July 18, 2005, and reaffirmed on March 2, 2006. Civil nuclear cooperation between the United States and India pursuant to the Agreement will offer major strategic and economic benefits to both countries, including enhanced energy security, an ability to rely more extensively on an environmentally friendly energy source, greater economic opportunities, and more robust nonproliferation efforts.

The Agreement will reinforce the growing bilateral relationship between two vibrant democracies. The United States is committed to a strategic partnership with India, the Agreement promises to be a major milestone in achieving and sustaining that goal.

In reviewing the proposed Agreement I have considered the views and recommendations of interested agencies. I have determined that its performance will promote, and will not constitute an unreasonable risk to, the common defense and security. Accordingly, I have approved it and I urge that the Congress also approve it this year.

GEORGE W. BUSH
THE WHITE HOUSE,
September 10, 2008.

APPENDIX - VI**Memorandum by U. S. President George W. Bush for the Secretary of State and the Secretary of Energy regarding the India - US Civil Nuclear Cooperation Agreement.****Washington (D. C.), September 10, 2008.**

SUBJECT: Proposed Agreement for Cooperation Between the Government of the United States of America and the Government of India Concerning Peaceful Uses of Nuclear Energy

I have considered the proposed Agreement for Cooperation Between the Government of the United States of America and the Government of India Concerning Peaceful Uses of Nuclear Energy, along with the views, recommendations, and statements of interested agencies.

I have determined that the performance of the Agreement will promote, and will not constitute an unreasonable risk to, the common defense and security. Pursuant to section 123 b. of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2153(b)), I hereby approve the proposed Agreement and authorize the Secretary of State to arrange for its execution.

In addition, pursuant to the authority vested in me by the Constitution and the laws of the United States of America, including the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006 (Public Law 109-401), I hereby determine that:

1. India has provided the United States and the IAEA with a credible plan to separate civil and military nuclear facilities, materials, and programs, and has filed a declaration regarding its civil facilities and materials with the IAEA;
2. India and the IAEA have concluded all legal steps required prior to signature by the parties of an agreement requiring the application of IAEA safeguards in perpetuity in accordance with IAEA standards, principles, and practices (including IAEA Board of Governors Document GOV/1621 (1973)) to India's civil nuclear facilities, materials, and programs as declared in the plan described in paragraph (1), including materials used in or produced through the use of India's civil nuclear facilities;
3. India and the IAEA are making substantial progress toward concluding an Additional Protocol consistent with IAEA principles, practices, and

policies that would apply to India's civil nuclear program;

4. India is working actively with the United States for the early conclusion of a multilateral treaty on the cessation of the production of fissile materials for use in nuclear weapons or other nuclear explosive devices;
5. India is working with and supporting United States and international efforts to prevent the spread of enrichment and reprocessing technology to any state that does not already possess full-scale, functioning enrichment or reprocessing plants;
6. India is taking the necessary steps to secure nuclear and other sensitive materials and technology, including through (A) the enactment and effective enforcement of comprehensive export control legislation and regulations; (B) harmonization of its export control laws, regulations, policies, and practices with the guidelines and practices of the Missile Technology Control Regime (MTCR) and the Nuclear Suppliers Group (NSG); and (C) adherence to the MTCR and the NSG in accordance with the procedures of those regimes for unilateral adherence; and
7. The NSG has decided by consensus to permit supply to India of nuclear items covered by the guidelines of the NSG.

I therefore hereby (1) exempt the proposed Agreement for Cooperation Between the Government of the United States of America and the Government of India Concerning Peaceful Uses of Nuclear Energy arranged pursuant to section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153) from the requirement of subsection 123 a.(2) of such section; (2) waive the application of section 128 of the Atomic Energy Act of 1954 (42 U.S.C. 2157) with respect to exports to India; and (3) waive with respect to India the application of:

- (A) subsection 129 a.(1)(D) of the Atomic Energy Act of 1954 (42 U.S.C. 2158(a)(1)(D)); and
- (B) section 129 of the Atomic Energy Act of 1954 (42 U.S.C. 2158) regarding any actions that occurred before July 18, 2005.

The Secretary of State is authorized and directed to publish this determination in the Federal Register.

GEORGE W. BUSH

APPENDIX - VII**Approval of the India - US Civil Nuclear Energy Cooperation Agreement by the U. S. President George W. Bush.****Washington (D. C.), September 11, 2008.**

The President is pleased to approve the U.S.-India Agreement for Peaceful Nuclear Cooperation (also known as the 123 Agreement). The conclusion of this agreement, which completes the U.S-India Civil Nuclear Cooperation Initiative, has been a priority for both President Bush and Prime Minister Singh, and strengthens the U.S.-India Strategic Partnership.

This historic achievement will bolster international nonproliferation efforts, provide economic and business opportunities in both countries, and help India address its growing energy needs in an environmentally responsible manner. The President looks forward to working with Congress to ensure passage on the agreement this year.

The President also looks forward to welcoming Prime Minister Singh to the White House on September 25, 2008, to strengthen the Strategic Partnership and build upon our progress in other areas of cooperation, such as agriculture, education, trade, and defense.

APPENDIX - VIII

Nuclear Proliferation Assessment Statement Pursuant to Section 123a of the Atomic Energy Act of 1954, as Amended, With Respect to the Proposed Agreement for Cooperation Between The Government of the United States of America and The Government of India Concerning Peaceful Uses of Nuclear Energy and submitted to the US Congress for Ratification of the 123 Agreement.

This Nuclear Proliferation Assessment Statement ("NP AS") relates to the proposed Agreement for Cooperation Between the Government of the United States of America and the Government of India Concerning Peaceful Uses of Nuclear Energy (the "Agreement"). The Agreement is being submitted to the President jointly by the Secretary of State and the Secretary of Energy for his approval.

Section 123a. of the Atomic Energy Act, as amended (the "Atomic Energy Act" or "the AEA"), provides that an NP AS be submitted by the Secretary of State to the President on each 'new or amended agreement for cooperation concluded pursuant to that section. Pursuant to section 123a., the NPAS must analyze the consistency of the text of the proposed agreement with all the requirements of the AEA, with specific attention to whether the proposed agreement is consistent with each of the criteria set forth in that subsection, and address the adequacy of the safeguards and other control mechanisms and the peaceful use assurances contained in the agreement for cooperation to ensure that any assistance furnished thereunder will not be used to further any military or nuclear explosive purpose.

With this statutory mandate in mind, this NPAS: (a) provides background information on India's civil nuclear program and the military nuclear program from which it is being separated (Part I); (b) describes the nature and scope of the cooperation contemplated in the proposed Agreement (Part II); (c) reviews the applicable substantive requirements of the AEA and the Nuclear Non-Proliferation Act of 1978 ("NNP A") and details how they are met by the proposed Agreement (Part III); (d) addresses additional relevant policy issues (Part IV); and (e) sets forth the net assessment, conclusions, views and recommendations of the Department of State as contemplated by section 123a of the AEA (Part V).

Introduction: The U.S.-India Civil Nuclear Cooperation Initiative

The U.S.-India Civil Nuclear Cooperation Initiative, of which the proposed U.S.-India Agreement for Peaceful Nuclear Cooperation is the central element, was announced in a Joint Statement by President Bush and Indian Prime Minister Manmohan Singh in Washington on July 18, 2005 ("Joint Statement"). For the United States the Initiative is premised on its contribution to U.S. national security interests by establishing a broad strategic partnership with India that encourages India's emergence as a positive force on the world scene. India is a rising global power and an important democratic partner for the United States. The United States and India are bound together by a strong congruence of interests and values. For example, the United States is seeking to work with India to win the global War on Terrorism, to prevent the spread of weapons of mass destruction and the missiles that could deliver them, to enhance peace and stability in Asia, and to advance the spread of democracy. In the context of this growing partnership, the United States and India issued a landmark Joint Statement in July 2005 to work toward full civil nuclear cooperation while at the same time strengthening global nonproliferation efforts.

India believes, and the United States agrees, that it needs nuclear power to sustain dynamic economic growth and to address its growing energy requirements in an affordable and environmentally responsible manner. The U.S. goal in the context of the Joint Statement is to provide India access to the technology it needs to build a safe, modern and efficient infrastructure that will provide clean, peaceful nuclear energy.

At the same time, India has clearly demonstrated over the past several years its desire to work with the United States and the international community to fight the spread of sensitive nuclear and other technologies. As part of an effort launched with India during the Administration's first term - the Next Steps in Strategic Partnership - India took a number of significant steps to strengthen export controls and to ensure that Indian companies would not be a source of future proliferation. Not only did India pledge to bring its export control laws, regulations, and enforcement practices in line with international export control standards, but it also passed an extensive export control law and issued an upgraded national control list that will help it achieve this goal. India is a signatory to the Biological and Toxin Weapons Convention and the Chemical Weapons Convention, and reports annually to the UN Register of Conventional Arms. In addition, India has become a party to the Convention on the Physical Protection of

Nuclear Material, ratified the International Convention for the Suppression of Acts of Nuclear Terrorism, and supports the IAEA Code of Conduct on Safety and Security of Radioactive Sources. India is also a partner in the Global Initiative to Combat Nuclear Terrorism. With respect to its UNSCR 1540 obligations, India has submitted a national report and two addenda to the Committee and currently is represented on the UNSCR 1540 Experts Committee.

With respect to strategic trade enforcement, India has bilateral customs cooperation agreements in place with a number of countries, including with the United States, and has announced its intent to join the Department of Homeland Security's Container Security Initiative. In addition, India participates in the Department of Energy's Megaports Initiative radiation portal monitor program and has deployed advanced scanners at seaports to screen container cargo for arms, explosives, WMD, and other contraband. India also has participated as an official observer of Proliferation Security Initiative regional interdiction exercises.

The additional nonproliferation commitments India has made as part of the Joint Statement go even further and will bring it into closer conformity with international nuclear nonproliferation standards and practices. While the United States will continue to work with India to encourage it to do more over time, India's implementation of its commitments will, on balance, enhance global nonproliferation efforts. The United States expects that the international nuclear nonproliferation regime will emerge stronger as a result.

Through the Joint Statement, India publicly committed to take the following important nonproliferation steps:

- Identify and separate its civilian and military nuclear facilities and programs and file a declaration with the International Atomic Energy Agency (IAEA) regarding its civilian facilities;
- Place voluntarily its civilian nuclear facilities under IAEA safeguards;
- Sign and adhere to an Additional Protocol with the IAEA with respect to its civilian nuclear facilities;
- Continue its unilateral moratorium on nuclear testing;
- Work with the United States for the conclusion of a multilateral Fissile Material Cut-Off Treaty (FMCT) to halt production of fissile material for nuclear weapons;

- Refrain from the transfer of enrichment and reprocessing technologies to states that do not have them, and support efforts to limit their spread; and
- Secure nuclear and missile materials and technologies through comprehensive export control legislation and through harmonization and adherence to the Missile Technology Control Regime (MTCR) and the Nuclear Suppliers Group (NSG) guidelines.

India's commitment to separate its civil and military facilities and place its civil facilities and activities under IAEA safeguards demonstrates its willingness to assume full responsibility for preventing proliferation from its civil nuclear program. It will also help protect against diversion of nuclear material and technologies to India's nuclear weapon program.

By adopting an Additional Protocol with the IAEA, India will commit to reporting to the IAEA on exports of all NSG Trigger List items. This will help the IAEA track potential proliferation elsewhere, and bolster U.S. efforts to encourage all states to adopt an Additional Protocol as a condition of supply.

By committing to adopt strong and effective export controls, including adherence to NSG and MTCR Guidelines, India will help ensure that its companies do not transfer sensitive weapons of mass destruction and missile-related technologies to countries of concern.

In July 2005, India took an important step by harmonizing its national control list with the NSG Guidelines and by adding many items that appear on the MTCR Annex.

India has also committed to work with the United States toward the conclusion of a multilateral FMCT, which, if successfully negotiated and ratified, will ban the production of fissile material for use in nuclear weapons or other nuclear explosive devices.

India's pledge to maintain its nuclear testing moratorium contributes to nonproliferation efforts by making its ending of nuclear explosive tests one of the conditions of full civil nuclear cooperation. Since to date Pakistan has test exploded nuclear weapons only in response to Indian nuclear tests, this commitment may help diminish the prospects for future nuclear testing in South Asia.

By committing not to export enrichment and reprocessing technology to states that do not already have such fully-functioning capabilities, India

will help the United States achieve its goal of preventing the further spread of such proliferation sensitive equipment and technology.

Each of these steps is significant. Together, they constitute a substantial shift in moving India into closer conformity with international nonproliferation standards and practices. Their successful implementation will help to strengthen the global nonproliferation regime.

On a reciprocal basis with India's commitments, the United States committed to work to achieve full civil nuclear cooperation with India. The proposed U.S.-India Agreement for Peaceful Nuclear Cooperation constitutes a core element of that commitment.

I. INDIA'S NUCLEAR PROGRAMS AND POLICIES

India's Energy Needs

India, a nation of more than one billion people today, with an economy growing in the range of 8 percent per year, faces real and growing energy needs. Substantial population growth, expanding industrial production, economic development, urbanization, and growth in transportation sector energy consumption are all driving strong energy demand. Between 1980 and 2001, demand increased by 208 percent. By contrast, China, often thought of as the world's next big energy consumer, saw a 130 percent increase over the same period. In 2003, India was the sixth largest consumer of energy in the world behind only the United States, China, Russia, Japan, and Germany.

To meet these growing demands, the Indian Government plans to double its capacity to produce electricity within the next seven years. At present, almost 55 percent of India's 127 gigawatt (GW) total installed energy generating capacity is derived from coal; roughly 26 percent from hydro-electric power; 11 percent from natural gas; and almost 5 percent from renewable sources. Just 3 percent of India's total power generation comes from nuclear energy.

Indian energy officials project that by 2031-32, roughly a quarter century from now, India will have a total energy requirement of 700 GW, of which the nuclear component is expected to comprise 63 GW, or approximately nine percent. India will also require large-scale infrastructure investments and upgrades, including transmission and distribution, as a result of a five-fold increase in electrical power consumption.

Nuclear Energy In India

India has a substantial and growing nuclear infrastructure. Its current capabilities span the nuclear fuel cycle. Indian nuclear facilities include various uranium processing capabilities (uranium mining and milling, copper mine tailing extraction, uranium conversion, fuel fabrication, enrichment); thermal and breeder reactors; research reactors; heavy water production facilities; and spent fuel reprocessing facilities. As of early 2007, the Nuclear Power Corporation of India, Ltd. (NPCIL) operated 16 power reactors, and an additional six are currently under construction. Bharatiya Nabhikiya Vidyut Nigam, Ltd. (Bhavini) operates a 40 MWe fast breeder test reactor and is currently building a 500 MWe prototype fast breeder reactor.

India's operating civil nuclear power plants currently have approximately 3,900 megawatts (MWe) of installed electricity generation capacity, based on the 14 pressurized heavy water reactors (PHWRs) and two boiling water reactors (BWRs) currently on-line. An additional four PHWRs, two light water reactors (LWRs), and the prototype fast breeder reactor (FBR) currently under construction should add an additional 3,380 MWe when operational, bringing the total installed nuclear energy generating capacity to approximately 7,280 MWe. Indian officials have stated their intent to increase the installed nuclear capacity to 20,000 MWe by 2020-a five-fold increase over present output and a goal that cannot be obtained absent substantial foreign assistance.

Over time, the Indian Government intends to increase the nuclear component of its energy output to approximately 20 percent of India's total energy production, thus significantly decreasing the growth in its reliance on fossil fuels. Senior officials in India's atomic energy establishment have indicated their desire to exceed the 20,000 MWe target through the accelerated import of high-unit capacity foreign reactors.

To this end, Indian officials have begun to discuss their long-term plans with American, Russian, French, and other potential vendors. In early 2007, India and Russia announced a statement of intent to field an additional four LWRs at Kudankulam, one of three planned "nuclear parks" set aside for international supply. While Russia is already supplying two LWRs at Kudankulam - a "grandfathered" arrangement dating to a time prior to establishment of the Nuclear Suppliers Group (NSG) full-scope safeguards export guideline - the expanded deal is predicated on positive NSG action to enable civil nuclear cooperation with India. American companies would

similarly like the chance to compete, on a level playing field, to supply India's civil nuclear program. The recent NSG decision by consensus to except India from the full-scope safeguards export condition is a principal enabling step for potential suppliers. Positive Congressional action on the proposed U.S.-India Agreement for Peaceful Nuclear Cooperation is an additional step necessary to open the Indian civil nuclear market to U.S. industry.

India's Three Stage (Thorium) Program

India has long sought to implement a three-stage nuclear power program to meet its growing energy needs. The Department of Atomic Energy (DAE) argues that in the context of India's "modest" uranium reserves but substantial thorium reserves, large scale deployment of nuclear energy is best realized through eventual use of thorium. According to a report issued by the IAEA, India has limited uranium reserves, consisting of approximately 54,636 tons of "reasonably assured resources," 25,245 tons of "estimated additional resources," 15,488 tons of "undiscovered conventional resources," and 17,000 tons of "speculative" resources.

India's known and recoverable uranium resources are insufficient to generate, on a sustainable basis, a capable civil nuclear energy program. According to NPCIL, India's uranium reserves are sufficient to generate perhaps 10,000 MW of electricity for 40 years. Together with India's current installed capacity, once the seven reactors currently under construction come on-line India's total installed nuclear capacity will rise to more than 70 percent of this sum. This is inadequate to meet India's energy requirements.

By contrast, India has roughly one-third of the world's known thorium reserves. Natural uranium is a source material that can be used in a nuclear reactor to produce energy through nuclear fission. Thorium must first be converted to a fissile material, uranium-233, in a reactor. For more than four decades DAE has sought to develop the capability to use thorium, based on a closed nuclear fuel cycle, for large-scale nuclear energy production. The three-stage program it has sought to implement involves: (1) natural uranium-fueled pressurized heavy water reactors (PHWRs); (2) fast breeder reactors using plutonium-based fuel; and (3) advanced nuclear power systems based on a thorium-uranium-233 cycle. In theory, DAE argues, breeder reactors, using plutonium produced through domestic uranium sources, could generate perhaps 500 GW of electricity.

Despite years of effort, however, India's three-stage program has advanced, slowly. India's Atomic Energy Commission projected in 1954 that India would achieve a target of 3 GWe by 1975 and 8 GWe by 1980; instead it hit 540 MWe through 1980, and produces roughly 3 GWe today. As noted above, India is also far short of achieving its goal of 20 GWe of installed capacity by 2020 or its projections that upwardly revise this target. While Indian officials continue to seek the long-term energy independence that, in principle, could be achieved through successful implementation of its three-stage nuclear program, in practice it is clear that India must import fuel, reactors, and other technologies that it has been denied for more than three decades under international export control policies to meet its nuclear electricity-generating targets. With the NSG decision to enable supply of Trigger List items to India, prospective international suppliers now have the ability to supply nuclear-related items to India for peaceful uses.

Civil vs Military

India's existing nuclear infrastructure is today largely unsafeguarded: only four (rising to six, once Kudankulam-1 and -2 come on-line) power reactors and related nuclear material are currently under International Atomic Energy Agency safeguards. This accounts for approximately 19 percent of India's total current nuclear energy output. India's existing nuclear infrastructure is today fundamentally intertwined, serving both civil and military or strategic purposes; the Indian government states that its strategic program is an "offshoot" of its research on civil nuclear power, and consequently "it is embedded in a larger undifferentiated programme." In the July 2005 U.S.-India Joint Statement, India committed to identify and separate its civil and military nuclear facilities and programs in a phased manner, placing the civil aspects under safeguards and an Additional Protocol with the IAEA. In this context, India has undertaken to ensure that any international civil nuclear cooperation would not be diverted from civil purposes or transferred to third countries without safeguards or on an otherwise unauthorized basis.

Overview of India's Separation Plan

The Indian government released its plan to separate India's civil and military nuclear facilities on March 7, 2006; it updated this document on May 11, 2006 and asked the IAEA to circulate it to Member States on July 25, 2008 (IAEA document INFCIRC/731). Because India's existing nuclear infrastructure is intertwined, identification of purely civil facilities and programs that have no strategic implications proved a significant

challenge. As its plan developed, the Indian government decided that the nature of the facility concerned, the activities undertaken in it, the national security significance of materials, and the location of the facilities were critical factors in determining what to declare as civilian. (In this context, India did not define or distinguish "military" from "strategic" facilities. The latter may include those having a military role, but also those having a role in India's three stage nuclear energy program.) Similarly, issues relating to fuel resource sustainability, technical design, economic viability, and smooth reactor operation were notable Indian decision criteria. The final plan released by the Indian government notes that India's approach to the separation of its facilities would be guided by the following principles:

- Credible, feasible, and implementable in a transparent manner;
- Consistent with the understandings of the July 18, 2005 Joint Statement;
- Consistent with India's national security and research and development requirements, as well as not prejudicial to India's three-stage nuclear program;
- Must be cost-effective in its implementation; and
- Must be acceptable to India's Parliament and public opinion.

Derived from these principles, India's plan:

- Includes in the civilian list "only those facilities to be offered for safeguards that, after separation, will no longer be engaged in activities of strategic significance";
- Requires a judgment on the overarching criterion of whether subjecting a facility to IAEA safeguards would impact adversely India's national security;
- Excludes a facility from the civilian list if it is located in a larger hub of strategic significance, even if it does not engage in activities of strategic significance; and accordingly
- Identifies only those facilities that India has determined not to be relevant to its strategic program.

Specifically, India parses its existing and developmental nuclear infrastructure as follows:

- **Thermal reactors:** India identifies as civil 14 thermal reactors, which according to the March 2006 Separation Plan were scheduled to be offered for safeguards between 2006 and 2014. These include the four existing foreign-supplied reactors (TAPS-I and -2 (the U.S.-supplied Tarapur reactors), RAPS-I and -2) and the two foreign-supplied reactors under construction (KK-I and -2). These also include eight indigenous PHWRs, each with a generating capacity of 220 MWe: RAPS-3, -4, -5 and -6, KAPS 1 and -2, and NAPS-I and -2. India further notes that safeguards will be applied in a phased manner consistent with its agreement with the IAEA. Eight indigenous PHWRs (TAPS-3 and -4, MAPS-I and -2, Kaiga- I, -2,-3 and -4) are to remain outside of safeguards.
- **Fast breeder reactors:** India opted to continue unsafeguarded operations at its operating fast breeder test reactor and also to exclude its prototype fast breeder reactor from safeguards. The fast breeder program is currently at the research and development stage and will take time to reach an advanced stage of development, according to India. India seeks to ensure that it does not face any external "encumbrances" in this process, and so chooses to exclude them from safeguards at this time. India and the United States could not engage in the type of nuclear fuel cycle cooperation authorized by the Hyde Act, the Atomic Energy Act, and the U.S.-India Agreement for Peaceful Nuclear Cooperation with regard to India's breeder reactors until India declared them "civil" and placed them under safeguards.
- **Future reactors:** India states that it will place under IAEA safeguards "all future civilian thermal power reactors and civilian breeder reactors," retaining for itself the right to determine such reactors as civilian. The United States and other potential suppliers to India have international, and in many cases domestic, legal and policy requirements to ensure that the types of items supplied under their agreements for peaceful nuclear cooperation serve exclusively the civil sector. All reactors, and the material that passes through them, supplied by the United States or by India's other international partners will by definition be "civil" and be subject to IAEA safeguards in perpetuity. While India retains the right to develop indigenous facilities

for either civil or military purposes in the future, the separation plan notes that all future thermal and breeder reactors declared "civil" will also be placed under safeguards. Because India seeks the maximum benefit from international cooperation, as a result of India's enduring and expanding energy requirements, and based on bilateral discussions, the United States expects the vast majority of future nuclear program growth to occur in India's civil sector.

- **Research reactors:** India will permanently shut down the CIRUS plutonium production reactor in 2010. It will also place the foreign-supplied fuel core from the APSARA reactor under safeguards in 2010. India has not declared as civil the Dhruva research reactor, the Advanced Heavy Water Reactor, and activities relating to naval nuclear propulsion at Kalpakkam.
- **Upstream facilities:** India's separation plan designates as civil the following specific facilities associated with the Nuclear Fuel Complex: the Uranium Oxide Plant (Block A); both the Palletizing and the Assembly Ceramic Fuel Fabrication Plants (Block A); the Enriched Uranium Oxide Plant; the Enriched Fuel Fabrication Plant; and the Gadolina Facility. The heavy water production plants at Thal, Tuticorin, and Hazira will also be designated as civil. While India does not consider them as "relevant for safeguards purposes", at a minimum India's Additional Protocol is expected to include them. India decided not to designate for civilian uses three additional heavy water production plants, as well as other Nuclear Fuel Complex facilities.
- **Downstream facilities:** India plans to continue the current policy of possible "campaign-mode" safeguards with respect to the Tarapur Power Reactor Fuel Reprocessing Plant (PREFRE). Moreover, both the Tarapur and Rajasthan "Away from Reactor" spent fuel storage pools will be made available for safeguards. India decided not to declare as civil its other spent fuel reprocessing facilities, as well as its indigenous uranium enrichment capability. Subsequent to India's March 2006 separation plan, the Indian government decided to pursue development of a new civil facility dedicated to reprocessing material under safeguards. Development of this facility (and agreement with the United States on arrangements and procedures related thereto) will be required to bring into effect the "programmatic consent" in Article 6 of the Agreement.

- **Research facilities:** Finally, India plans to declare as civil nine research facilities: the Tata Institute of Fundamental Research; the Variable Energy Cyclotron Centre; the Saha Institute of Nuclear Physics; the Institute for Plasma Research; the Institute of Mathematics Science; the Institute of Physics; the Tata Memorial Centre; the Board of Radiation and Isotope Technology; and the Harish Chandra Research Institute. India expects these civil facilities to play a "prominent role" in international cooperation. Other Indian nuclear and nuclear-related facilities-such as those in the Bhaba Atomic Research Center (BARC) or in the Indira Gandhi Center for Advanced Research (IGCAR)-were not declared as civil, presumably because they retain a military or strategic role.

The United States assesses India's plan to be credible, transparent, and defensible from a nonproliferation standpoint. When implemented, the total installed nuclear capacity under safeguards will rise from 19 percent today to 65 percent, a percentage that will increase to more than 80 percent as India further expands its civil infrastructure through foreign supply and indigenous development. Based on India's safeguards agreement with the IAEA (discussed below), appropriate safeguards will cover India's civil nuclear fuel cycle and provide strong assurances to supplier states that material and technology provided or generated through civil nuclear cooperation will not be diverted either to the military sphere or for unauthorized purposes. In addition, the total portion of India's spent fuel and plutonium stockpiles under safeguards will rise substantially over time (although the reprocessing consent in Article 6 of the U.S.-India Agreement for Peaceful Nuclear Cooperation, if and when the consent comes into effect, could increase modestly the quantity of separated civil plutonium stored in India).

II. NATURE AND SCOPE OF THE COOPERATION CONTEMPLATED BY THE PROPOSED AGREEMENT

Article 2(2) of the Proposed Agreement describes in general terms the kinds of cooperative activities envisaged. These are to take place in accordance with the provisions of the Agreement and each Party's applicable treaties, national laws, regulations, and license requirements and may include, but are not limited to, the following areas:

- Advanced nuclear energy research and development in areas agreed by the Parties;

- Nuclear Safety Matters.
- Facilitation of exchange of scientists for visits, meetings, symposia and collaborative research;
- Full civil nuclear cooperation activities covering nuclear reactors and aspects of the associated nuclear fuel cycle including technology transfer on an industrial or commercial scale between the Parties or authorized persons;
- Development of a strategic reserve to guard against any disruption of supply over the lifetime of India's reactors;
- Advanced research and development in nuclear sciences including biological research, medicine, agriculture and industry, environment and climate change;
- Supply between the Parties, whether for use by or for the benefit of the Parties or third countries, of nuclear material;
- Alteration in form or content of nuclear material as provided for in Article 6 of the Agreement;
- Supply between the Parties of equipment, whether for use by or for the benefit of the Parties or third countries;
- Controlled thermonuclear fusion including in multilateral projects; and
- Other areas of mutual interest as may be agreed by the Parties.

In Article 2(4) of the Agreement the Parties further delimit the scope of cooperation by affirming that the purpose of the Agreement is to provide for peaceful nuclear cooperation and not to affect the unsafeguarded nuclear activities of either Party. Nothing in the Agreement is to be interpreted as affecting the rights of the Parties to use for their own purposes nuclear material, non-nuclear material, equipment, components, information or technology produced, acquired or developed by them independent of any nuclear material, non-nuclear material, , equipment, components; information or technology transferred to them pursuant to the Agreement. The Agreement is to be implemented in a manner so as not to hinder or otherwise interfere with any other activities involving the use of nuclear material, non-nuclear material, equipment, components, information or technology and military nuclear facilities produced, acquired or developed

by them independent of the Agreement for their own purposes.

Article 2(3) of the Agreement specifically provides that the Parties may undertake transfers between themselves or their authorized persons of nuclear material, non-nuclear material, equipment, components and information.

Article 3(1) of the Agreement again specifically provides that information may be transferred between the Parties, and that such information may cover, but need not be limited to, the following fields:

- Research, development, design, construction, operation, maintenance and use of reactors, reactor experiments, and decommissioning;
- The use of nuclear material in physical, chemical, radiological and biological research, medicine, agriculture and industry;
- Fuel cycle activities to meet future world-wide civil nuclear energy needs, including multilateral approaches to which they are parties for ensuring nuclear fuel supply and appropriate techniques for management of nuclear wastes;
- Advanced research and development in nuclear science and technology;
- Health, Safety and environmental considerations related to the foregoing;
- Assessments of the role that nuclear power may play in national energy plans;
- Codes, regulations and standards for the nuclear industry;
- Research on controlled thermonuclear fusion including bilateral activities and contributions toward multilateral projects such as the International Thermonuclear Experimental Reactor (ITER); and
- Any other field mutually agreed by the Parties.

Article 3(2) provides that the above cooperation may include training, exchange of personnel, meetings, exchange of samples, materials and instruments for experimental purposes and a balanced participation in joint studies and projects.

Article 3(3) states that the Agreement does not require the transfer of any information outside the scope of the Agreement, or information that the Parties are not permitted under their respective treaties, national laws or regulations to transfer.

Article 3(4) provides that Restricted Data, as defined by each Party, shall not be transferred under the Agreement.

Article 4(1) provides *inter alia* for the Parties to facilitate nuclear trade between themselves in the mutual interests of their respective industry, utilities and consumers and also, where appropriate, trade between either Party and a third country of items obligated to the other Party.

Article A(2) provides *inter alia* that authorizations, including export and import licenses as well as authorizations or consents to third parties relating to trade, industrial operations or nuclear material movement, should be consistent with the sound and efficient administration of the Agreement and should not be used to restrict trade.

Article 5(1) provides that nuclear material, non-nuclear material, equipment and components may be transferred for applications consistent with the Agreement. Article 5(3) provides that natural or low enriched uranium may be transferred for use as fuel in reactor experiments and in reactors, for conversion or fabrication, and for other purposes as may be agreed to by the Parties. Article 5(1) provides also that any special fissionable material transferred shall be limited to low enriched uranium, except for "small quantities," which may be transferred pursuant to Article 5(5) for use as samples, standards, detectors and targets, and the accomplishment of other purposes as agreed by the Parties.

Article 5(4) provides that the quantity of nuclear material transferred under the Agreement shall be consistent with any of the following purposes: use in reactor experiments or the loading of reactors, the efficient and continuous conduct of such reactor experiments or operation of reactors for their lifetime, use as samples, standards, detectors and targets, and other purposes as the Parties may agree.

Article 5(6) records verbatim certain political assurances relating to reliable supply of nuclear fuel given to India by the United States in March 2006. The Agreement language does not have the effect of converting these political assurances into legally binding commitments because the

Agreement, like other U.S. agreements of its type, is intended as a framework agreement that does not compel specific exports.

Articles 5(2), 6-10, and 14 address the specific requirements of section 123a. of the AEA and are discussed in detail in part III below.

Article 11 provides that the Parties shall cooperate in following the best practices for minimizing the impact on the environment from any radioactive, chemical or thermal contamination arising from activities under the Agreement and in related matters of health and safety.

Article 12 contains additional provisions with regard to implementation of activities falling within the scope of the Agreement.

Article 13 provides for consultations at the request of either Party regarding implementation of the Agreement and the development of further cooperation in the field of peaceful uses of nuclear energy on a stable, reliable and predictable basis. It further provides that the Parties shall endeavor to avoid taking any action that adversely affects cooperation under Article 2, which is the general "Scope of Cooperation" Article.

Article 15 provides for dispute settlement through negotiations between the Parties.

Article 16 provides for the Agreement to have an initial duration of 40 years and to continue in force for additional periods of 10 years each, subject to a proviso that either Party may terminate the Agreement by giving written notice to the other Party six months prior to the close of a period. It also provides for continuation in effect of key nonproliferation provisions of the Agreement in the event of its termination.

Article 17 provides for the establishment of agreed-upon procedures to implement the terms of the Agreement.

The statutorily mandated nonproliferation conditions and controls contained in the Agreement are detailed and analyzed in the following section.

III. SUBSTANTIVE CONDITIONS

The proposed Agreement meets the applicable requirements of the Atomic Energy Act and the NNP A. Section 123a. of the Atomic Energy Act sets forth nine specific requirements that must be met in agreements for

cooperation. Sections 402 and 407 of the NNP A set forth supplementary requirements. The provisions contained in the proposed Agreement satisfy those requirements as follows:

(1) Application of Safeguards

Section 123a (1) requires a guaranty from the cooperating party that safeguards as set forth in the agreement for cooperation will be maintained with respect to all nuclear materials and equipment transferred pursuant thereto and with respect to all special nuclear material used in or produced through the use of such transferred nuclear materials and equipment, so long as the material or equipment remains under the jurisdiction or control of the cooperating party, irrespective of the duration of the other provisions in the agreement or whether the agreement is terminated or suspended for any reason.

This requirement is satisfied by Articles 10 and 16(3) of the Agreement. Safeguards are mandated by Article 10(1) on "all nuclear material and equipment transferred pursuant to this Agreement and with respect to special fissionable material used in or produced through the use of such nuclear material and equipment, so long as the material or equipment remains under the jurisdiction or control of the cooperating party." Article 10(2) provides that nuclear material and equipment transferred from the U.S. to India and "any nuclear material used in or produced through the use of nuclear material, non-nuclear material, equipment or components so transferred shall be subject to safeguards *in perpetuity* in accordance with" the India-IAEA safeguards agreement, which was recently approved by the IAEA Board of Governors.

Article 16(3) provides the assurance that, notwithstanding the termination or expiration of the Agreement or the withdrawal of a Party from the Agreement, the safeguards required under Article 10 shall "continue in effect so long as any nuclear material, non-nuclear material, by-product material, equipment or components subject to [Article 10] remains in the territory of the Party concerned or under its jurisdiction or control anywhere, or until such time as the Parties agree that such nuclear material is no longer usable for any nuclear activity relevant from the point of view of safeguards." In addition, Article 10(4) provides that both countries shall consult regarding appropriate verification measures in the event that the application of IAEA safeguards is no longer possible.

(2) Full-Scope Safeguards

The requirement for full-scope safeguards as a condition of cooperation mandated by section 123a.(2) is to be exempted pursuant to section 104 of the Hyde Act (the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006, Public Law 109-401).

(3) Peaceful Use

The requirement of-section 123a.(3) of the AEA for a guaranty against explosive or military uses of nuclear materials and equipment transferred and special nuclear material produced through the use of such items is met by Article 9 of the Agreement, which provides that:

Nuclear material, equipment and components transferred pursuant to this Agreement and nuclear material and by-product material used or produced through the use of any nuclear material, equipment, and components so transferred shall not be used by the recipient Party for any nuclear explosive device, for research on or development of any nuclear explosive device or for any military purpose.

(4) Right of Return

Section 123a.(4) of the AEA requires a stipulation that, in the event of a nuclear detonation by a non-nuclear weapon state cooperating party or termination or abrogation of an IAEA safeguards agreement by such a party, the United States shall have a right to the return of any nuclear materials and equipment transferred pursuant to the agreement for cooperation and any special nuclear material produced through the use of such transferred items. This requirement is met by Article 14 of the Agreement, which provides a right of return regarding "any nuclear material, equipment, non-nuclear material or components transferred under this Agreement and any special fissionable material produced through their use" (Article 14(4)). The procedure for exercising this right of return is as follows:

- Pursuant to Article 14(1), either Party has the right to terminate the Agreement on one year's written notice to the other Party;
- The Party seeking termination has the right to cease further cooperation if it determines that "a mutually acceptable resolution of outstanding issues has not been possible or cannot be achieved through consultations" (Article 14(2));

- Either party may exercise the right of return "following the cessation of cooperation" as provided for in Article 14(2) and "on or before the date of termination" as provided for in Article 14(1).

Thus, the right of return provided for in Article 14 of the Agreement fully satisfies the requirements of section 123a.(4) in terms of the items subject to the right of return and the circumstances under which it may be exercised.

(5) Retransfer Consent

Section 123a.(5) of the AEA requires a guaranty by the cooperating party that any material, Restricted Data, and production or utilization facility transferred pursuant to the agreement "or any special nuclear material produced through the use of any such [facility or material] will not be transferred to unauthorized persons or beyond the jurisdiction or control of the cooperating party" without prior U.S. consent. This requirement is met by Article 7(2) of the Agreement. (The transfer of Restricted Data is precluded by Article 3(4) of the Agreement.)

(6) Physical Security

The requirement of section 123a.(6) of the AEA for a guaranty that adequate physical security will be maintained with respect to any nuclear material transferred pursuant to an agreement of cooperation and any special nuclear material used in or produced through the use of nuclear material, production facility or utilization facility transferred pursuant to the agreement is met by Article 8 of the Agreement.

(7) Enrichment / Reprocessing / Alteration Consent Right

Section 123a.(7) of the AEA requires a guaranty that "no material transferred pursuant to the agreement for cooperation and no material used in or produced through the use of any material, production facility, or utilization facility transferred pursuant to the agreement will be reprocessed, enriched or (in the case of plutonium, uranium 233, or uranium enriched to greater than 20 per cent in the isotope 235, or other nuclear materials which have been irradiated) otherwise altered in form or content without the prior approval of the United States."

In Article 6, the Parties provide mutual consent for enrichment up to 20 percent in the isotope 235 of uranium subject to the Agreement. The Parties also provide mutual consent to reprocessing and alteration in form or content of nuclear material subject to the Agreement, except that to bring this right

into effect in the case of India, India must establish a new national reprocessing facility dedicated to reprocessing safeguarded nuclear material under IAEA safeguards *and* both Parties must agree on arrangements and procedures under which the reprocessing or other alteration in form or content will take place in the new facility, including provisions with respect to the application of IAEA safeguards to all facilities concerned with these activities, as well as provisions relating to physical protection, storage, environmental protection, and use of any separated special fissionable material only in national facilities under IAEA safeguards. Article 14(9) provides that the above "arrangements and procedures" are subject to suspension by either Party in exceptional circumstances, as defined by the Parties, after consultations as specified in that paragraph. (Since Article 14 is not among those continuing in effect if the Agreement as a whole were to be terminated (Article 16(3)), a Party intending to suspend the "arrangements and procedures" under Article 6 would need to do so, prior to termination of the Agreement itself.)

Article 6 also satisfies section 402(a) of the NNPA, which states that, except as specifically provided in any agreement for cooperation, no source or special nuclear material exported from the United States after the date of the NNPA may be enriched after export without the prior approval of the United States for such enrichment.

(8) Storage Consent Right

The requirement of section 123a.(8) of the AEA for a guaranty of a right of prior U.S. approval over facilities for the storage of specified nuclear materials is met by Article 7(1).

(9) Sensitive Nuclear Technology

The requirement of section 123a.(9) pertains to situations that may result when sensitive nuclear technology is transferred pursuant to a section 123 agreement for cooperation. Article 5(2) of the Agreement provides that sensitive nuclear technology shall only be transferred under the Agreement if provided for by an amendment to the Agreement, and Article 5(2) further provides that sensitive nuclear facilities and major critical components thereof shall only be transferred under the Agreement if provided for by an amendment to the Agreement. Accordingly, the requirement in section 123a.(9) is not relevant to the proposed Agreement, and the requirement in section 402(b) of the NNPA precluding the transfer of major critical components of facilities for uranium enrichment, nuclear fuel reprocessing,

or heavy water production unless an agreement for cooperation "specifically designates such components as items to be exported pursuant to [such] agreement" is also satisfied.

Environmental: Article 11 of the proposed Agreement provides that the Parties "shall follow the best practices for minimizing the impact on the environment from any radioactive, chemical or thermal contamination arising from peaceful activities under this Agreement," thereby satisfying section 407 of the NNPA.

Proportionality: For the purpose of implementing rights specified in Articles 6 and 7 of the proposed Agreement, "produced" special nuclear material is defined in terms of proportionality in the Agreed Minute to the Agreement. Thus, if U.S. nuclear material is used in a non-U.S. reactor, the special nuclear material produced will be attributed to the U.S. in the proportion of the U.S. nuclear material to the total amount of nuclear material used, and similarly for subsequent generations. It has been our consistent view that sections 123 and 127 of the AEA allow this concept of proportionality to be used in determining the reasonable application of U.S. consent rights. Indeed, all of the agreements negotiated since the enactment of the NNPA in 1978 contain a similar proportionality provision.

The proposed Agreement thus satisfies all the substantive requirements specified for agreements for cooperation by the AEA and the NNPA, with the exception of section 123a.(2), from which it is to be exempted.

IV. OTHER NONPROLIFERATION POLICY ISSUES

1. Safeguards

Full-Scope versus INFCIRC/66 safeguards

A non-nuclear weapons state party to the NPT is required to have in place a "full-scope" safeguards agreement, applicable to all nuclear material and activities in the state. Such an agreement, based on IAEA document INFCIRC/153, has historically been considered the gold standard of safeguards. Such full-scope safeguards, in conjunction with an assessment that a state's political situation was consistent with adherence to nonproliferation norms, was seen as meeting the safeguards standard for the NPAS. More recently, the United States and others have indicated that they consider that the new safeguards standard should be a full scope safeguards agreement with an Additional Protocol. Whereas the 153-based safeguards agreement focuses on declared material and facilities, the

Additional Protocol provides the IAEA with additional information and access, to provide increased assurance of the absence of *undeclared* activities.

For a non-nuclear weapon state party to the NPT, safeguards are required to be able to detect in a timely manner, and thereby deter, the diversion of one weapons-quantity (called by the IAEA a "significant quantity") of nuclear material from declared facilities. Clearly, the diversion of even one weapons-quantity of material by a NNWS NPT party would have very serious implications, both in terms of regional stability and damage to the nonproliferation regime. The IAEA has therefore adopted standards for timeliness of detection consistent with the detection of one weapons-quantity of material within a time approximately equal to that needed to convert that material into weapons-usable form; this was deemed to provide time for political action. There are no such quantitative standards for implementation of the Additional Protocol, as activities related to detecting undeclared activities do not lend themselves to quantification and are somewhat dependent on external sources of information.

Because India is not an NPT signatory, the Indian safeguards agreement is not based on INFCIRC/153, but on another document, INFCIRC/66, discussed further below. The context in which safeguards will be applied in India differs importantly from that of a NNWS NPT signatory. India has already acquired nuclear weapons, has a fully capable nuclear weapons complex, all of the technical expertise necessary to produce weapons-grade materials, and a large stockpile of nuclear material that is outside of the safeguards agreement. The facilities retained by India outside the agreement constitute the full nuclear fuel cycle, including heavy water reactors, advanced reactors, uranium and plutonium fuel fabrication plants, and reprocessing plants.

In short, India's non-civil facilities already include every capability likely to exist among the facilities declared as civil; indeed, it is unlikely that India would chose to offer a facility as civil if it were needed for military purposes. India thus would have no apparent incentive to divert material, equipment, or technology from its declared civil sector to military uses. Its non-civil sector already possesses the necessary capabilities, and a diversion would risk a strong reaction from the U.S. and other nuclear cooperation partners.

India has committed to negotiating an Additional Protocol "with respect to its civilian facilities" with the IAEA. The IAEA's standard "Model Additional Protocol" (INFCIRC/540) was designed as an enhancement of an INFCIRC/

153-type safeguards agreement, and to apply to the state as a whole. Thus there are bound to be important differences between the Indian AP and the Model AP. It is not clear yet what the provisions of the Indian AP will be, but it will probably provide some additional information or access to the facilities declared as civil, enhancing somewhat the effectiveness of safeguards at civil facilities. Because India will obviously have undeclared activities that are outside the scope of the safeguards agreement, the primary function of its Additional Protocol will not in general be the same as that of the Model Additional Protocol (that of detecting undeclared nuclear activities).

The safeguards agreement between India and the IAEA is based on INFCIRC/66, the Agency's approved safeguards system for states not party to the NPT. INFCIRC/66 predated the NPT and is entitled "the Agency's Safeguards System." It is not, like INFCIRC/153, a model safeguards agreement, but contains language that 66-based safeguards agreements draw on, either verbatim or by reference. These agreements can be seen as comprising two components.

One component includes the sections on the mechanics of safeguards such as procedures, reports, inspections, exemptions, termination, transfers, and procedures for various facility types. These are generally drawn from INFCIRC/66 itself; this is the case with the Indian agreement. The technical safeguards methods provided for under an INFCIRC/66-based agreement are based on this standard language, and will be no different than those used in other safeguards agreements. We would expect that safeguards would be applied to an Indian heavy water reactor, for example, using the same technology and techniques applied to a heavy water reactor elsewhere. Some states, including Canada and Japan, are under the regime the IAEA calls "integrated safeguards" because they have an Additional Protocol in force, and because the IAEA has drawn a formal conclusion regarding the absence of undeclared activities in those states. Integrated safeguards allow the IAEA some additional flexibility in its safeguards activities, and some reductions in the intensity of inspections. We do not anticipate that such integrated safeguards would be applicable to India, because the IAEA will not be in a position to draw the relevant conclusion regarding undeclared activities. In particular, safeguards goals for timeliness and significant quantity described above are expected to apply to India, with no reductions in the frequency or extensiveness of inspections.

Safeguards on Facilities

There are also sections in the safeguards agreement identifying the scope of application of safeguards: what items the IAEA will actually inspect. This section is necessarily unique to each INFCIRC/66-based agreement; generally it names specific facilities being offered for safeguards; and describes how safeguards obligations follow material and subsequent generations of material used in or produced by that facility. In the case of the Indian safeguards agreement, no facilities or materials are offered for safeguards initially. The agreement provides that India will place a facility under safeguards in a two-step process:

- First, after entry into force of the agreement, India must "file with the Agency a Declaration, based on its sovereign decision to place voluntarily its civilian nuclear facilities under Agency safeguards in a phased manner" (para. 13); and
- Second, "India, on the basis of its sole determination, shall notify the Agency in writing of its decision to offer for Agency safeguards a facility identified by India in the Declaration referred to in paragraph 13, or any other facility to be determined by India. Any facility so notified by India to the Agency will be included in the Annex" (para. 14).

In the first step, the facilities in the declaration are expected to be those in the Indian Separation Plan, circulated to the IAEA Board of Governors as INFCIRC/73I. The Separation Plan indicates that India will identify and offer for safeguards in a phased manner a number of facilities, including 14 power reactors and other facilities listed in the document. The declaration under paragraph 13 does not allow the Agency to start inspections. This can only happen after a subsequent notification under paragraph 14.

Once such a facility is notified and placed in the Annex, safeguards cannot terminate on it without a joint determination by the IAEA and India (para. 32):

"Safeguards shall be terminated on a facility listed in the Annex after India and the Agency have jointly determined that the facility is no longer usable for any nuclear activity relevant from the point of view of safeguards."

Although the safeguards agreement includes preambular language noting India's ability to take "corrective measures" to ensure uninterrupted operation of India reactors, both the U.S. and the IAEA have concluded that the preambular language establishes the historical context of the agreement and does not affect the obligations quoted above, which are contained in the agreement's operational provisions.

The safeguards agreement allows for the possibility that safeguards could be temporarily placed on a facility not on the Annex by virtue of the fact that safeguarded material was placed in the facility (para. 11f). This is foreseen in the Indian separation plan, which indicates that an Indian reprocessing plant could be safeguarded "in campaign mode." The proposed U.S.-India agreement for cooperation stipulates that reprocessing of U.S.-obligated material will take place only in a new reprocessing facility dedicated to processing material under IAEA safeguards, subject to "arrangements and procedures" that must be agreed upon by the United States; such a facility would have to be subject to safeguards in perpetuity. It is U.S. policy not to allow export to facilities temporarily under safeguards.

Safeguards on Material

The safeguards agreement requires safeguards on material as provided for in paragraph 11:

11. The items subject to this Agreement shall be:
 - (a) Any facility listed in the Annex to this Agreement ...
 - (b) Any nuclear material, non-nuclear material, equipment and components supplied to India which are required to be safeguarded pursuant to a bilateral or multilateral arrangement to which India is a party;
 - (c) Any nuclear material, including subsequent generations of special fissionable material, produced, processed or used in or by the use of a facility listed in the Annex or in or by the use of any nuclear material, nonnuclear material, equipment and components referred to in paragraph 11 (b);

As in all safeguards agreements, there is standard termination and suspension language that allows for material to cease being safeguarded under certain conditions; for example, if it has been diluted in a way that makes it no longer usable. The termination provision includes standard

language (paragraph 30(d)) that would allow India to remove from safeguards the *Indian indigenous* uranium in spent fuel that had been used to fuel a reactor that was under safeguards in the Annex. In order to do so, India would have to separate out (by reprocessing) the plutonium in the spent fuel, which *would* remain subject to safeguards because it was produced in a reactor listed in the Annex (11 (c) above). The uranium remaining after irradiation and reprocessing would be lower in U-235 than the fresh fuel that went into the reactor to begin with, and thus less attractive for any nuclear purpose. It is unlikely that India would go to such extraordinary lengths to remove from safeguards material less attractive than what it voluntarily placed under safeguards in the first place. India's ability to withdraw such material in the situation described is, however, in accordance with Agency standards, principles, and practices.

Other Safeguards Considerations

One difference between a full-scope safeguards agreement under INFCIRC/153 and an INFCIRC/66-based agreement is that substitution of non subject material for subject material by India is allowed (paras. 11(d), 27, 30(d)), provided the Agency agrees, and provided the amount and quality of the substituted material is at least equivalent to that of the material being substituted for. The obligations on the original material transfer to the substituted material, so there is no net impact from a nonproliferation perspective. Substitution provisions are a standard element of INFCIRC/66 and substitution is widely used in nuclear commerce.

A second difference is that the agreement allows for, but does not require, safeguards on heavy water and pieces of equipment. Such safeguards are not part of INFCIRC/153 safeguards at all; heavy water is not a "nuclear material." They are needed in this safeguards agreement because existing safeguards agreements for facilities in India have such requirements. In addition, this agreement permits, but does not require, these existing safeguards agreements to be suspended in favor of the new agreement.

2. Potential for Increase in Availability of Indian Indigenous Nuclear Material for Military Use as a Result of Transfers to India for Civil Use

It has been suggested that supplying nuclear fuel to India for civil purposes could assist India's nuclear weapon program by allowing India to use more of its limited domestic supply of uranium exclusively for weapon purposes. The Executive Branch has no evidence indicating that India plans to use

additional domestic uranium resources in its nuclear weapons program as a consequence of implementing the Civil Nuclear Cooperation Initiative.

Moreover, the amount of fissile material available for potential weapons use is a function not just of the amount of natural uranium available, but also of factors such as overall fuel cycle capabilities, including the capacity to produce plutonium in reactors and to separate the plutonium through reprocessing. In this regard, under the Civil Nuclear Cooperation Initiative several indigenous Indian reactors, which in theory have been available to support military programs, will be placed under safeguards and no longer be available for this purpose.

As previously noted, India has substantial, albeit limited, domestic uranium reserves, estimated by the IAEA to be about 95,000 metric tons, a complete functioning fuel cycle, and demonstrated competence with nuclear technologies. Limits on India's capacity to process uranium ore currently constrain domestic uranium production, but new capacity should be on line in the next several years. In short, India is capable of maintaining and expanding its existing nuclear arsenal within the limits of its indigenous resources and capabilities. This will be the situation whether or not India is supplied externally with fuel for civil nuclear power.

Finally, India's stated policies indicate a posture of restraint rather than a Cold War-style, unconstrained build up of its nuclear stockpile and forces. India has long indicated that it seeks a so-called "credible minimum deterrent," and it has articulated a no-first-use policy for nuclear weapons. India has also committed to work with the United States to achieve a multilateral Fissile Material Cut-Off Treaty that would cap material available for weapons. On March 30, 2006, then Foreign Secretary Saran publicly reiterated that India "remains committed to a credible minimum deterrent. If our posture so far has been one of restraint and responsibility - not disputed even by our critics - there is no reason why we should suddenly change now." The United States will continue to urge India to maintain a posture of strategic restraint and to further strengthen its nonproliferation commitments within the context of the U.S.-India strategic partnership.

3. Physical Protection and Safety

India has been a member of the International Convention on the Physical Protection of Nuclear Materials since March 12, 2002; a member of the International Convention on Nuclear Safety since March 31, 2005; and a member of the International Convention on the Suppression of Acts of

Nuclear Terrorism since it entered into force on July 7, 2007. It has thus undertaken a legal obligation to adhere to the terms of all three of these conventions. There are no cases known to the Executive Branch of fissile material being lost, diverted, or stolen in India.

4. Previous U.S.-India Peaceful Nuclear Cooperation (Tarapur)

An earlier U.S.-India agreement for peaceful nuclear cooperation, signed at Washington August 8, 1963, entered into force October 25, 1963, and expired by its terms October 25, 1993. Under that agreement, known informally as the "Tarapur Agreement," the United States initially supplied reactor units one and two at India's Tarapur site, together with low enriched uranium (LEU) fuel to operate them. (Whereas other U.S. nuclear cooperation agreements have been "framework" agreements requiring no specific transfers, the Tarapur Agreement required the supply of these items.) U.S. cooperation under the 1963 Agreement became problematic following passage of the 1978 NNPA, which among other things established full-scope IAEA safeguards (FSS) as a requirement for continued U.S. supply of nuclear material to non-nuclear-weapon States. The NNPA provided for certain transitional arrangements for supply to India. Under these, the President in 1980 approved two further transfers of LEU fuel after the NRC determined that it could not make the findings necessary under the AEA to license the exports. One shipment was completed. The second, by mutual agreement of the Administration and Congress, was not sent. To avoid a breach of the Agreement, the United States instead engaged France as a surrogate supplier under the Tarapur Agreement. A decade later, France adopted its own FSS export policy and ended its supply for Tarapur. After expiration of the U.S.-India Agreement for Cooperation in 1993, China (which did not then have an FSS export policy) stepped in as a supplier. Later Russia stepped in as a supplier, invoking a "safety" exception in the NSG Guidelines, despite objections by the United States and most other NSG members. Russian supply is continuing.

The United States maintains, and has formally advised the Indian Government on several occasions, that certain U.S. "vested rights" have survived expiration of the 1963 Agreement, including a U.S. right to approve reprocessing of the fuel used in Tarapur reactor units one and two. India has consistently disputed the U.S. position, although it did agree "voluntarily" to maintain IAEA safeguards on the two reactors after the 1963 . Agreement expired. The proposed new Agreement with India does not apply retroactively to the U.S.-supplied Tarapur reactors or their fuel. However,

the Administration regards the current nonproliferation status of the Tarapur reactors and fuel as acceptable and sustainable so long as they remain under safeguards. Moreover, the Government of India has included the Tarapur reactors among the facilities to be safeguarded as part of its "civil" nuclear program; once the reactors are subject to the new safeguards agreement, they cannot be removed from safeguards unless India and the IAEA jointly determine that they are "no longer usable for any nuclear activity relevant from the point of view of safeguards" (India-IAEA Safeguards Agreement, paragraph 31).

V. Conclusion

Entry-into-force of the proposed U.S.-India Agreement will put in place a framework for mutually beneficial civil nuclear cooperation between the two countries and provide a foundation for continued collaboration on achieving nuclear non-proliferation goals.

On the basis of the analysis in this NPAS and all pertinent information of which it is aware, the Department of State has arrived at the following assessment, conclusions, views and recommendations:

1. The safeguards and other control mechanisms and the peaceful use assurances in the proposed Agreement are adequate to ensure that any assistance furnished under it will not be used to further any military or nuclear explosive purpose.
2. The Agreement meets all the legal requirements of the AEA and the NNPA, except section 123a.(2) of the AEA, which is to be exempted pursuant to section 104 of the Hyde Act.
3. Execution of the proposed Agreement would be compatible with the nonproliferation program, policy, and objectives of the United States.
4. Therefore, it is recommended that the President determine that the performance of the proposed Agreement will promote, and will not constitute an unreasonable risk to the common defense and security, that he approve the Agreement and authorize its execution, and that he submit it to Congress for its approval.

APPENDIX - IX

Report Pursuant to Section 104(c) of the Hyde Act Regarding Civil Nuclear Cooperation with India and submitted to the U.S. Congress for Ratification of the 123 Agreement.

This report is submitted in accordance with Section 104(c) of the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006 (Public Law 109-401).

The U.S.-India Civil Nuclear Cooperation Initiative was announced in a Joint Statement by President Bush and Indian Prime Minister Manmohan Singh in Washington on July 18, 2005. On December 18, 2006, the President signed into law the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006 (the "Hyde Act"), to facilitate peaceful nuclear cooperation with India by authorizing the President to exempt the U.S.-India nuclear cooperation agreement and waive two provisions of the Atomic Energy Act of 1954 ("AEA") based on his determination that certain nonproliferation commitments have been met. Pursuant to Section 104(c) of the Hyde Act, the following report details the basis for the President's determinations and provides a available information on the areas listed in Section 104(c)(2).

Separation Plan and Declaration

Section 104(c)(2)(A) of the Hyde Act requires:

"A summary of the plan provided by India to the United States and the IAEA to separate India's civil and military nuclear facilities, materials, and programs, and the declaration made by India to the IAEA identifying India's civil facilities to be placed under IAEA safeguards, including an analysis of the credibility of such plan and declaration, together with copies of the plan and declaration."

The Government of India first made its Separation Plan public on March 7, 2006 and tabled the Separation Plan in Parliament on May 11. On July 25, 2008, the Government of India transmitted the Separation Plan to the Director General of the IAEA to be distributed "to all Member-States of the Agency." The IAEA circulated the Separation Plan to Members as IAEA document INFCIRC/73I.

The Separation Plan includes a list of facilities to be designated as civil, a general description of additional facilities to be designated civil in the future, and a description of India's rationale for civil versus military designations, including a statement that the overarching criterion would be a judgement whether subjecting a facility to IAEA safeguards would adversely impact India's national security. A copy of India's Separation Plan can be found at Tab. 1¹. Designating a facility as civil marks it as not relevant to India's strategic nuclear program. The civil designation also ensures that after separation, these facilities will not be engaged in activities of strategic significance for India's military nuclear program. Facilities located in a larger hub of strategic significance, even if they do not normally engage in activities of strategic significance, will not be designated by India as civil. Also included in the Plan are dates specifying when each of the civil facilities are to be offered for safeguards according to a "phased" timeline.

The Separation Plan notes that "India has decided to place under safeguards all future civilian thermal power reactors and civilian breeder reactors, and the Government of India *retains the sole right to determine such reactors as civil*" (emphasis added). It also clarified that the "phasing of specific thermal power reactors being offered for safeguards would be indicated separately by India." And it explicitly described the distinct steps of (1) "filing a declaration regarding its civilian facilities with the IAEA" and (2) "taking a decision to place voluntarily its civilian facilities under IAEA safeguards." (See paragraph 3 of the Separation Plan)

The United States and other potential suppliers to India have international, and in many cases domestic, legal and policy requirements to ensure that items supplied under their agreements for peaceful nuclear cooperation serve exclusively the civil sector. All reactors supplied by the United States or by India's other international partners, and nuclear material used in such reactors, will be required to be designated as "civil" and subject to IAEA safeguards in perpetuity in accordance with IAEA practices. In addition, nuclear supplier nations will not be able to engage in nuclear cooperation, including fuel supply, with India's current reactors or future indigenous reactors unless they are designated as "civil" and subject to IAEA safeguards in perpetuity.

1. Please see document no. 68 (May 11, 2006) in India's Foreign Relations-2006 Edited by A.S. Bhasin.

With these conditions in mind, the Plan's civil designations cover most of India's power reactors, raising the total installed thermal power capacity under safeguards from 19% to 65% by 2014.

India identifies 14 thermal reactors as civil, which according to the March 2006 Separation Plan were scheduled to be offered for safeguards between 2006 and 2014. These include the four existing foreign-supplied reactors (TAPS-1 and -2 (the U.S.-supplied Tarapur reactors), RAPS-I and -2) and the two foreign-supplied reactors under construction (KK-1 and -2). These also include eight indigenous PHWRs, each with a generating capacity of 220 MWe: RAPS-3, -4, -5 and -6, KAPS-1 and -2, and NAPS-I and -2. India further notes that safeguards will be applied in a phased manner consistent with its agreement with the IAEA. Eight indigenous PHWRs (TAPS-3 and -4, MAPS-I and -2, Kaiga-I, -2, -3 and -4) are to remain outside of safeguards.

India opted to continue unsafeguarded operations at its operating fast breeder test reactor and also to exclude its prototype fast breeder reactor from safeguards. The fast breeder program is currently at the research and development stage and will take time to reach an advanced stage of development, according to India. India seeks to ensure that it does not face any external "encumbrances" in this process, and so chooses to exclude them from safeguards at this time. India and the United States would not be able to engage in the type of nuclear fuel cycle cooperation contemplated in the U.S.-India Agreement for Peaceful Nuclear Cooperation with regard to India's breeder reactors until India declared them "civil" and placed them under safeguards.

With regard to future reactors that India may operate, India states that it will place under IAEA safeguards "all future civilian thermal power reactors and civilian breeder reactors," retaining for itself the right to designate such reactors as civilian. While India retains the right to develop indigenous facilities for either civil or military purposes in the future, the United States expects the vast majority of future nuclear program growth to occur in India's civil sector. This expectation is based on discussions with the Government of India as well as India's need to obtain the maximum benefit from international cooperation in order to meet its enduring and expanding energy requirements.

Select research reactors and facilities are also included in the Separation Plan. India will permanently shut down the CIRUS plutonium production reactor in 2010. It will also place the foreign-supplied fuel core from the APSARA reactor under safeguards that year. India has not declared as civil the Dhruva research reactor, the Advanced Heavy Water Reactor,

and activities relating to naval nuclear propulsion at Kalpakkam. India plans to declare as civil nine research facilities: the Tata Institute of Fundamental Research; the Variable Energy Cyclotron Centre; the Saha Institute of Nuclear Physics; the Institute for Plasma Research; the Institute of Mathematics Science; the Institute of Physics; the Tata Memorial Centre; the Board of Radiation and Isotope Technology; and the Harish Chandra Research Institute. India expects these civil facilities to play a "prominent role" in international cooperation. Other Indian nuclear and nuclear-related facilities-such as those in the Bhabha Atomic Research Center (BARC) or in the Indira Gandhi Center for Advanced Research (IGCAR)-were not declared as civil, presumably because they retain a military or strategic role. India has not declared as civil the Dhruva research reactor, the Advanced Heavy Water Reactor, and activities relating to naval nuclear propulsion at Kalpakkam.

The civil facilities covered under India's safeguards agreement also include all upstream and downstream facilities involved in India's civil nuclear fuel cycle. India designates as civil the following specific upstream facilities associated with the Nuclear Fuel Complex: the Uranium Oxide Plant (Block A); both the Palletizing and the Assembly Ceramic Fuel Fabrication Plants (Block A); the Enriched Uranium Oxide Plant; the Enriched Fuel Fabrication Plant; and the Gadolinia Facility. The heavy water production plants at Thal, Tuticorin, and Hazira will also be designated as civil. While India does not consider them as "relevant for safeguards purposes," at a minimum India's Additional Protocol is expected to include them. India decided not to designate for civilian uses three additional heavy water production plants, as well as other select Nuclear Fuel Complex facilities.

India plans to continue the current policy of possible "campaign-mode" safeguards with respect to downstream facilities including the Tarapur Power Reactor Fuel Reprocessing Plant (PREFRE). Moreover, both the Tarapur and Rajasthan "Away from Reactor" spent fuel storage pools will be made available for safeguards. India decided not to declare as civil its other spent fuel reprocessing facilities, as well as its indigenous uranium enrichment capability. Subsequent to India's March 2006 separation plan, the Indian government decided to pursue development of a new civil facility dedicated to reprocessing material under safeguards. Development of this facility (and agreement with the United States on arrangements and procedures related thereto) will be required to bring into effect U.S. consent to reprocessing, pursuant to Article 6 of the Agreement.

Including upstream and downstream facilities under safeguards greatly enhances the ability to ensure that India is effectively separating its civilian and military facilities and programs, safeguarding the civil nuclear program, equipment, and materials, and that no diversion of international civil nuclear assistance is taking place to further military uses. By including both upstream and downstream facilities, India's Separation Plan covers every stage in the fuel cycle process from conversion and fuel fabrication, through the end of the nuclear fuel cycle into stages including spent fuel storage.

As a whole, the United States assesses India's plan to be credible, transparent, and defensible from a nonproliferation standpoint. When implemented, the total installed nuclear capacity under safeguards will rise from 19 percent today to 65 percent; a percentage that will increase to more than 80 percent as India further expands its civil infrastructure through foreign supply and indigenous development. Based on India's safeguards agreement with the IAEA (discussed below), appropriate safeguards will cover India's civil nuclear fuel cycle and provide strong assurances to supplier states that material and technology provided or generated through civil nuclear cooperation will not be diverted either to the military sphere or for unauthorized purposes. In addition, the total portion of India's spent fuel and plutonium stockpiles under safeguards will increase substantially over time (although the reprocessing consent in Article 6 of the U.S.-India Agreement for Peaceful Nuclear Cooperation, if and when the consent comes into effect, could increase modestly the quantity of separated civil plutonium stored in India).

With respect to India filing a declaration with the IAEA, as previously noted, on July 25, 2008, the Government of India transmitted the Separation Plan to the Director General of the IAEA to be distributed "to all Member States of the Agency (and the IAEA circulated the Separation Plan to Members as IAEA document INFCIRC/73I): Paragraph 14 of the Separation Plan describes the "civil" elements of India's nuclear program, specifically naming the 14 reactors that will be declared "civil" and establishing a timetable for placing them under safeguards, as well as describing the treatment of other types of facilities (breeder reactors, research reactors, upstream facilities, downstream facilities, and research facilities). In a speech to the Indian Parliament on August 17, 2006, the Prime Minister confirmed that the "civil" facilities designated in the Separation Plan would be submitted to safeguards in a phased manner. He made similar statements to the Indian

Parliament on August 13, 2007, after negotiations were completed on the 123 Agreement. In addition, in introducing the India-IAEA Safeguards Agreement, the Director General of the IAEA specifically referred to the significance of the Separation Plan (which had been recently circulated within the IAEA), noting that it described the facilities envisaged as coming under safeguards by 2014.

IAEA Safeguards

Section 104(c)(2)(B) of the Hyde Act requires:

"A summary of the agreement that has been entered into between India and the IAEA requiring the application of safeguards in accordance with IAEA practices to India's civil nuclear facilities as declared in the plan described in subparagraph (A), together with a copy of the agreement, and a description of the progress toward its full implementation"

India and the IAEA negotiated, in early 2008, a safeguards agreement, based on INFCIRC/66, the IAEA's approved safeguards system for states not party to the Treaty on the Non-Proliferation of Nuclear Weapons. A copy of India's safeguards agreement can be found at Tab 2.¹ On August 1, 2008, the IAEA Board of Governors approved this agreement by consensus. Thus all legal steps required prior to signature of the safeguards agreement have been concluded. In his statement to the Board of Governors on August 1, 2008 Director General El Baradei stated:

"The text before you is an INFCIRC/66-type safeguards agreement based on the Agency's standard safeguards practices and procedures In the case of the draft before you, it is an "umbrella agreement", which provides for any facility notified by India to the Agency in the future to become subject to safeguards The "umbrella" nature of this agreement provides a more efficient mechanism for ensuring that safeguards requirements can be met. It satisfies India's needs while maintaining all the Agency's legal requirements As you can see from India's Plan, which has been circulated for the information of all IAEA Member States, a total of 14 reactors are envisaged to come under Agency safeguards by 2014. As with other safeguards agreements between the Agency and Member States, the agreement is of indefinite

1. Please see Document No.117

duration. There are no conditions for the discontinuation of safeguards other than those provided by the safeguards agreement itself. The termination provisions contained in the agreement are the same as for other 66-type agreements. Naturally - as with all safeguards agreements - this agreement is subject to the general rules of international law. Therefore, the agreement should be read as an integral whole. The preamble provides for contextual background and safeguards are implemented in accordance with the terms of the agreement."

Specifically, paragraph 11 of the safeguards agreement describes the items subject to safeguards:

"11. The items subject to this Agreement shall be :

- (a) Any facility listed in the Annex to this Agreement, as notified by India pursuant to paragraph 14(a) of this Agreement;
- (b) Any nuclear material, non-nuclear material, equipment and components supplied to India which are required to be safeguarded pursuant to a bilateral or multilateral arrangement to which India is a party;
- (c) Any nuclear material, including subsequent generations of special fissionable material, produced, processed or used in or by the use of a facility listed in the Annex or in or by the use of any nuclear material, non-nuclear material, equipment and components referred to in paragraph 11 (b);
- (d) Any nuclear material substituted in accordance with paragraph 27 or 30(d) of this Agreement for nuclear material referred to in paragraph 11 (b) or 11 (c) of this Agreement;
- (e) Any heavy water substituted in accordance with paragraph 32 of this Agreement for heavy water subject to this Agreement;
- (f) Any facility other than a facility identified in paragraph 11(a) above, or any other location in India, while producing, processing, using, fabricating or storing any nuclear material, non-nuclear material, equipment or components referred to in paragraph 11(b), (c), (d), or (e) of this Agreement, as notified by India pursuant to paragraph 14(b) of this Agreement."

Paragraph 14(a) provides that India shall "notify the Agency in writing" of its decision to offer a facility for safeguards, after which that facility is included on the Annex to the safeguards agreement. This step of "notifying" the Agency of a facility offered for safeguards will be preceded by India's filing a "declaration" of civil facilities to be placed under safeguards in a phased manner; this filing will occur upon entry into force of the safeguards agreement.

Once a facility is listed in the Annex, safeguards will continue indefinitely unless "India and the Agency have jointly determined that the facility is no longer usable for any nuclear activity relevant from the point of View of safeguards" (paragraph 32). While there are a number of conditions for the termination of safeguards on materials (e.g., material is diluted to the point where it is no longer usable), these termination conditions, as noted by the El Baradei statement, are in accordance with standard IAEA practices, including INFICIRC/66. Thus, the facilities and materials subject to safeguards as described by paragraph 11 (a)-(c) are under "safeguards in perpetuity in accordance with IAEA standards, principles, and practices."

India has indicated that it will submit facilities to safeguards under the India-IAEA safeguards agreement "as declared in" the Indian Separation Plan. As noted by the IAEA Director General, the "umbrella"-type safeguards agreement is well-suited for placing the facilities identified in the Separation Plan under safeguards in a phased, manner. In addition, it is well suited to adding future indigenous reactors that India may construct for civil purposes, as well as reactors that India may import from international suppliers.

Full implementation of the India-IAEA safeguards agreement will require signature of the agreement by both the IAEA and India. The agreement will enter into force once India informs the IAEA that India's domestic legal requirements for entry into force have been met. The Government of India's cover letter transmitting the Separation Plan to the IAEA contained a statement of its "intention to move forward in accordance with the provisions of the Safeguards Agreement after its entry into force." In the meantime, Indian discussions with the IAEA on implementation of the safeguards agreement are ongoing.

IAEA Additional Protocol

Section 104(c)(2c) of the Hyde Act requires :

"A summary of the progress made toward conclusion and implementation of an Additional Protocol between India and the IAEA, including a description of the scope of such Additional Protocol."

To further strengthen safeguards on India's civil nuclear facilities, consistent with its July 2005 Joint Statement commitment; India is in discussions and working closely with the IAEA to conclude an Additional Protocol that would give the IAEA expanded rights of access and additional information regarding India's civil nuclear facilities, including information on exports and imports of trigger list items. These activities, as well as others required to be reported and made available for access under an Additional Protocol, would not otherwise be subject to safeguards. Entry into force of an India-IAEA Additional Protocol could, therefore, provide even more transparency into India's civil nuclear activities.

Indian External Affairs Minister Pranab Mukherjee noted in his statement of September 5, 2008¹ that India was "working closely with the IAEA to ensure early conclusion of an Additional Protocol to the Safeguards Agreement." Indian officials have conveyed a letter to IAEA counterparts outlining the contours of a proposed Protocol, and the IAEA is currently reviewing India's proposal. The details included in this letter as well as substantive discussions between Indian officials and the IAEA prompted IAEA Director General Mohammed ElBaradei to conclude on September 10, 2008 that India has made substantial progress toward concluding an Additional Protocol consistent with IAEA principles, practices, and policies that would apply to India's civil nuclear program. We look forward to conclusion of this Additional Protocol at an early date.

Fissile Material Cut-Off Treaty

Section 104(c)(2)(D) of the Hyde Act requires :

"A description of the steps that India is taking to work with the United States for the conclusion of a multilateral treaty banning the production of fissile material for nuclear weapons, including a description of the steps that the United States has taken and will take to encourage India to identify and declare a date by which India would be willing to stop production of fissile material for nuclear weapons unilaterally or pursuant to a multilateral moratorium treaty."

1. Please see Document No.121.

In August 2006, Indian Prime Minister Singh told the Indian Parliament¹ that India was willing to join a "non-discriminatory, multilaterally -negotiated and internationally verifiable FMCT ... provided its security interests are fully addressed." Following this statement, India has publicly endorsed the negotiation of an FMCT in the Conference on Disarmament (CD)² and has worked with the U.S. and its international partners to commence FMCT negotiations in that forum. In a 2007 session of the CD,³ although India initially posed procedural objections to the proposed Program of Work, which included among other items negotiations on an FMCT, India later dropped this objection and supported the measure after the U.S. decided to join consensus support of the Program. In a 2008 session of the CD, India was also supportive of U.S. efforts to realize an effective Program of Work for the CD; India made several constructive suggestions that were incorporated into the draft program of work presented in that session (CD/1840).

Despite the cooperative working relationship between the U.S., India, and some other countries in the CD, obstacles remain in securing consensus on a Program of Work in the CD that includes negotiations on an FMCT. Nevertheless, the U.S., India, and other like-minded states continue to seek a way forward. The U.S. has now given its support to work plan CD/1840 as the best, albeit not ideal, option available for forward movement on the FMCT.

In the March 2008 session of the CD, India made a statement expressing support for consensus on a program of work that took into account "the interests of all stake-holders." In July 2008; India told the U.S. that its Ambassador in Geneva would, at a July 29 CD meeting, publicly declare broad support for an FMCT and efforts to reach consensus on a work plan.

At that meeting, the Indian Ambassador repeated India's support for consensus on a program of work that takes into account "the interests of all stake-holders." India followed this with a statement in an informal session on July 31, where they reiterated their long-standing support for negotiating an FMCT in the CD.

1. Please see Document No.72 p. 461 in India's Foreign Relations-2006. Edited by A.S. Bhasin.
2. Document No. 530 p 1869 India's Foreign Relations-2006
3. Please see Document Nos.585(p.2275), 586 (p.2283), 587(p.2284), 589 (p.2287) in IFR. 2007 Ed. By A.S. Bhasin.

On September 5, 2008, Indian External Affairs Minister Pranab Mukherjee stated, "We are committed to work with others towards the conclusion of a multilateral Fissile Material Cut-off Treaty in the Conference on Disarmament that is universal, non-discriminatory, and verifiable."

In addition to discussions at the CD on an FMCT, the U.S. remains willing to explore other intermediate options. We continue to encourage an early end to the production of fissile material production for weapons by all states. Toward that end we have urged India as part of our bilateral dialogue to put in place a moratorium on fissile material production, as we have done. India has rejected this notion in favor of working this issue at the CD.

Preventing the Spread of Enrichment and Reprocessing Technology

Section 104(c)(2)(E) of the Hyde Act requires :

"A description of the steps India is taking to prevent the spread of nuclear-related technology, including enrichment and reprocessing technology or materials that can be used to acquire a nuclear weapons capability, as well as the support that India is providing to the United States to further United States objectives to restrict the spread of such technology."

India has a solid nonproliferation record on enrichment and reprocessing. (ENR) transfers; we are aware of no Indian transfers of ENR equipment or technologies to another state. India furthermore is supportive of international efforts to limit their spread to states that do not already possess ENR.

India has been supportive of U.S. efforts to work with other states to develop incentives to encourage states without ENR not to pursue these technologies. One such effort is the IAEA fuel bank initiative. Toward that end, India sent a letter dated 18 August 2008 to IAEA Director General ElBaradei indicating India's interest in participating as a supplier nation in the IAEA's effort to establish international fuel banks. In this letter, Dr. Anil Kakodkar, Chairman of India's Atomic Energy Commission, reaffirmed that "India will refrain from the transfer of enrichment and reprocessing technologies to States that do not have them, and support international efforts to limit their spread."

Indian External Affairs Minister Pranab Mukherjee reiterated that in a September 5, 2008 public statement that:

"India will not be the source of proliferation of sensitive technologies, including enrichment and reprocessing transfers. We stand for the strengthening of the non-proliferation regime. We support international efforts to limit the spread of ENR equipment or technologies to states that do not have them. We will work together with the international community to advance our common objective of non-proliferation. In this regard, India is interested in participating as a supplier nation, particularly for Thorium-based fuel and in establishment of international fuel banks, which also benefit India."

Export Controls

Section 104(c)(2)(F) of the Hyde Act requires :

"A description of the steps that India is taking to secure materials and technology applicable for the development, acquisition, or manufacture of weapons of mass destruction and the means to deliver such weapons through the application of comprehensive export control legislation and regulations, and through harmonization with and adherence to MTCR, NSG; Australia Group, and Wassenaar Arrangement guidelines, compliance with United Nations Security Council Resolution 1540, and participation in the Proliferation Security Initiative"

India committed under the July 18, 2005 Joint Statement, which launched the Civil Nuclear Cooperation Initiative, to harmonize its export controls with and unilaterally adhere to the Missile Technology Control Regime (MTCR) and NSG Guidelines. Through our various discussions since then, India has assured the United States that it has taken the necessary steps to have in place and fully implement effective and comprehensive export controls to deny unlawful access by states or non-state actors. Moreover, India has given assurances of a high-level political commitment to this effort.

India's June 2005 "Weapons of Mass Destruction (WMD) and their Delivery Systems (Prohibitions of Unlawful Activities) Act"¹ and subsequent

implementing regulations bring Indian export controls further in line with widely accepted export control standards for preventing WMD proliferation and are consistent with the kinds of measures that UN Security Council Resolution 1540 requires states to implement. The WMD Act, with its stronger "catch-all" provisions, considerably strengthens the government's regulatory ability to control transfers of otherwise uncontrolled items that could contribute to a WMD or missile program of concern.

To assist India in strengthening its export control system, the U.S. held two rounds of experts-level export control talks with India (October 15-16, 2007 and August 11-12, 2008). During these talks, the U.S. gained greater understanding of India's export control laws and regulations, their history, its Special Chemicals, Organisms, Materials, Equipment, and Technologies (SCOMET) list, and how its controls are implemented and enforced. As a result of our engagement with India on its export control system, India not only provided greater clarity on that system but also took specific steps such as issuing a revised SCOMET notification on September 7, 2007.

With respect to harmonization with the NSG and MTCR, in addition to issuing the revision to the SCOMET list in 2007, India explained how the Government of India sometimes uses broader terms than is utilized in the NSG or MTCR; this is done so as to exercise greater licensing oversight. India further explained that there are no substantial differences between its guidelines and those of the NSG and that the only linguistic differences flow from India's nonparticipation in the NSG. The U.S. assesses that India has harmonized with the MTCR and with the NSG up through the 2005 revisions, and has the means in place to make future updates to its guidelines and control lists if it chooses to do so. Furthermore, India's SCOMET list already captures some of the follow-on updates to the MTCR. We understand that this harmonization process will continue as an element of India's unilateral adherence to the NSG and MTCR. The Government of India has assured us that it has in place a process to make changes to the SCOMET list. Ongoing review and strengthening of India's export controls is built into the Indian system through regular inter-ministerial working groups as well as the Advisory Committees set up in November 2006 under the WMD Act of 2005.

India stated its adherence to the NSG and its annexes in a letter dated September 8, 2008, to Dr. Mohammed El Baradei, the Director General of the International Atomic Energy Agency. Likewise, India stated its adherence to the MTCR and its annex in a letter dated September, 9,

2008, to Mr. Jacques Audibert, the MTCR Point of Contact in Paris. Taking into account these statements, the U.S. assesses that India has adhered to the guidelines and annexes of the NSG and the MTCR, and has done so in a manner consistent with the procedures and/or practices of those regimes.

As part of our strategic partnership, and in the course of a variety of dialogues, including annual nonproliferation talks, we discuss with India a wide range of nonproliferation and export control-related issues, including harmonization with and adherence to the Australia Group (AG) and Wassenaar Arrangement (WA), endorsement of the Proliferation Security Initiative, and implementation of UN Security Council Resolution 1540. We have discussed areas of differences between the SCOMET list and the AG as well as the process of adherence. With respect to the W A, India is in the process of developing a munitions list, and has welcomed outreach by the W. A. Chair. Discussions with India regarding PSI are ongoing. Since October 2007, India has attended as observers three PSI exercises and the PSI Fifth Anniversary Workshop for non-PSI partners. With respect to UNSCR 1540, India has submitted to the Committee established by UN Security Council Resolution 1540 its initial report as well as two subsequent reports on steps it has taken to meet its UN Security Council Resolution 1540 obligations, and continues to support the Committee's work.

Dissuading Iran from Acquiring WMD

Section 104(c)(2)(G) of the Hyde Act requires:

"A description and assessment of the specific measures that India has taken to fully and actively participate in United States and international efforts to dissuade, isolate, and, if necessary, sanction and contain Iran for its efforts to acquire weapons of mass destruction, including a nuclear weapons capability and the capability to enrich uranium or reprocess nuclear fuel and the means to deliver weapons of mass destruction."

The Government of India has taken several steps to support the U.S. in this regard and to bring Iran back into compliance with its international obligations, particularly those pertaining to its nuclear weapons program.

As a member of the IAEA Board of Governors, India voted in favor of both the resolution that found Iran in noncompliance with its IAEA Safeguards Agreement in September 2005 and the resolution that reported Iran's

noncompliance to the UN Security Council in February 2006. Responding to the adoption of three Chapter VII UN Security Council Resolutions (1737 in 2006, 1747 in 2007, and 183 in 2008), India reported that it is fully implementing their provisions, including those related to preventing Iran's acquisition of sensitive technology that could facilitate its uranium enrichment program or any future action to reprocess spent fuel.

India has also maintained a strong public line of support for P5+ 1 and U.S. diplomatic efforts to resolve international concerns with Iran's nuclear program. Furthermore, India has stressed that it does not favor the emergence of additional nuclear weapons states in the region and that all states must adhere to commitments under international treaties and be transparent in fulfilling these commitments. In this vein, India has called on Iran to cooperate fully with the IAEA on numerous occasions and delivered the same message to the Iranians during bilateral consultations.

Nuclear Suppliers Group Exception

Section 104(c)(2)(H) of the Hyde Act requires:

"A description of the decision of the NSG relating to nuclear cooperation with India, including whether nuclear cooperation by the United States under an agreement for cooperation arranged pursuant to section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153) is consistent with the decision, practices, and policies of the NSG."

On September 6, 2008, the Nuclear Suppliers Group approved a policy statement¹ by consensus excepting India from the Group's full-scope safeguards requirement for civil nuclear trade. This decision was made at the second of two Extraordinary Plenary sessions held August 21-22 and September 4-6, 2008. This historic decision by the NSG strengthens global nonproliferation principles while assisting India to meet its energy requirements in an environmentally friendly manner.

This exception involved intense scrutiny and debate by and among participating governments. On September 5, 2008, Indian External Affairs Minister (EAM) Pranab Mukherjee issued the following statement on the Civil Nuclear Cooperation Initiative, which was helpful in garnering additional momentum towards consensus:

1. For text please see Document No.128.

**Statement by External Affairs Minister of India Shri Pranab Mukherjee
on Civil Nuclear Initiative.**

September 5, 2008

To reiterate India's stand on disarmament and nonproliferation, EAM has made the following statement:

(For text of the statement please see Document No.121.)

With these assurances reaffirmed, NSG Participating Governments agreed by consensus on an exception for India on September 6, 2008. This decision is consistent with the cooperation envisioned under the U.S.-India peaceful nuclear cooperation agreement detailed below as well as with NSG practices and policies. This policy decision:

- exempts India from the NSG's full-scope safeguards requirement as a condition for transfer of Trigger List items for peaceful purposes and for use in IAEA safeguarded civil nuclear facilities, provided that the transfer satisfies all other provisions of the NSG Guidelines.
- contains an information exchange clause, which is consistent with current practice of the NSG.
- calls for intensified dialogue between the NSG Chair and India; this dialogue already exists. It is useful for it to be intensified not only as part of this decision, but also given India's decision to adhere to the NSG, which involves remaining abreast of and in line with changes to the NSG list and guidelines.
- addresses the desire expressed by some Participating Governments for an explicit review mechanism and/or for the ability to respond in the event that India abrogates its commitments, such as a nuclear explosive test or safeguards violation. This ability to consult in response to some problem is already provided for under Paragraph 16 of the Guidelines; any participating government may exercise this ability if they consider circumstances warrant.
- notes that Participating Governments will maintain contact and consult through regular channels to "consider" matters related to

this decision consistent with the NSG's existing authority and practice.

- provides for enhanced outreach between India and the NSG Chair following this decision and in light of India's decision to adhere to the NSG. This is consistent with enhanced outreach that we support with all adherents and is especially important in light of the civil nuclear trade with India to result from the NSG's decision.

Envisioned Scope of U.S.-India Peaceful Nuclear Cooperation

Section 104(c)(2i)

"A description of the scope of peaceful cooperation envisioned by the United States and India that will be implemented under the agreement for nuclear cooperation, including whether such cooperation will include the provision of enrichment and re-processing technology."

Envisioned civil nuclear cooperation with India will include a number of activities, which are described in general terms in the Proposed Agreement for Cooperation Between the Government of the United States of America and the Government of India Concerning Peaceful Uses of Nuclear Energy Article 2(2). These activities are to take place in accordance with the provisions of the Agreement and each Party's applicable treaties, national laws, regulations, and license requirements and may include, but are not limited to, the following areas:

- Advanced nuclear energy research and development in areas agreed to by the Parties;
- Nuclear safety matters;
- Facilitation of exchange of scientists for visits, meetings, symposia and collaborative research;
- Full civil nuclear cooperation activities covering nuclear reactors and aspects of the associated nuclear fuel cycle including, technology transfer on an industrial or commercial scale between the Parties or authorized persons;
- Development of a strategic reserve to guard against any disruption of supply over the lifetime of India's reactors;

- Advanced research and development in nuclear sciences including biological research, medicine, agriculture and industry, environment and climate change;
- Supply between the Parties, whether for use by or for the benefit of the Parties or third countries, of nuclear material;
- Alteration in form or content of nuclear material as provided for in Article 6 of the Agreement;
- Supply between the Parties of equipment, whether for use by or for the benefit of the Parties or third countries;
- Controlled thermonuclear fusion including in multilateral projects; and
- Other areas of mutual interest as may be agreed by the Parties.

Article 2(3) of the Agreement specifically provides that the Parties may undertake transfers between themselves or their authorized persons of nuclear material, non-nuclear material, equipment, components and information.

In Article 2(4) of the Agreement, the U.S. and India further delimit the scope of cooperation by affirming that the purpose of the Agreement is to provide for peaceful nuclear cooperation and not to affect the unsafeguarded nuclear activities of either Party. Nothing in the Agreement is to be interpreted as affecting the rights of the Parties to use for their own purposes nuclear material, non-nuclear material, equipment, components, information or technology produced, acquired or developed by them independent of any nuclear material, non-nuclear material, equipment, components, information or technology transferred to them pursuant to the Agreement. The Agreement is to be implemented in a manner so as not to hinder or otherwise interfere with any other activities involving the use of nuclear material, nonnuclear material, equipment, components, information or technology and military nuclear facilities produced, acquired or developed by them independent of the Agreement for their own purposes.

Article 3(1) of the Agreement again specifically provides that information may be transferred between the Parties, and that such information may cover, but need not be limited to, the following fields:

- Research, development, design, construction, operation, maintenance and use of reactors, reactor experiments, and decommissioning;

- The use of nuclear material in physical, chemical, radiological and biological research, medicine, agriculture and industry;
- Fuel cycle activities to meet future world-wide civil nuclear energy needs, including multilateral approaches to which they are parties for ensuring nuclear fuel supply and appropriate techniques for management of nuclear wastes;
- Advanced research and development in nuclear science and technology;
- Health, safety and environmental considerations related to the foregoing;
- Assessments of the role that nuclear power may play in national energy plans;
- Codes, regulations and standards for the nuclear industry;
- Research on controlled thermonuclear fusion including bilateral activities and contributions toward multilateral projects such as the International Thermonuclear Experimental Reactor (ITER); and
- Any other field mutually agreed to by the Parties.

Article 3(2) provides that the above cooperation may include training, exchange of personnel, meetings, exchange of samples, materials and instruments for experimental purposes and a balanced participation in joint studies and projects.

Article 3(3) states that the Agreement does not require the transfer of any information outside the scope of the Agreement, or information that the Parties are not permitted under their respective treaties, national laws or regulations to transfer.

Article 3(4) provides that Restricted Data, as defined by each Party, shall not be transferred under the Agreement.

Article 4(1) provides inter alia for the Parties to facilitate nuclear trade between themselves in the mutual interests of their respective industry, utilities and consumers and also, where appropriate, trade between either Party and a third country of items obligated to the other Party.

Article 4(2) provides *inter alia* that authorizations, including export and import licenses as well as authorizations or consents to third parties relating to trade, industrial operations or nuclear material movement, should be consistent with the sound and efficient administration of the Agreement and should not be used to restrict trade.

Article 5(1) provides that nuclear material, non-nuclear material, equipment and components may be transferred for applications consistent with the Agreement. However, any special fissionable material transferred shall be limited to low enriched uranium, except for "small quantities," which may be transferred pursuant to Article 5(5) for use as samples, standards, detectors and targets, and the accomplishment of other purposes as agreed by the Parties.

In considering the scope of civil nuclear cooperation with India, the issue of spreading sensitive technologies is often raised. The requirement of section 123a.(9) pertains to situations that may result when sensitive nuclear technology is transferred pursuant to a section 123 agreement for cooperation. Article 5(2) of the Agreement provides that sensitive nuclear technology shall only be transferred under the Agreement if provided for by an amendment to the Agreement, and Article 5(2) further provides that sensitive nuclear facilities and major critical components thereof shall only be transferred under the Agreement if provided for by an amendment to the Agreement. Accordingly, the requirement in section 123a.(9) is not relevant to the proposed Agreement, and the requirement in section 402(b) of the NNPA precluding the transfer of major critical components of facilities for uranium enrichment nuclear fuel reprocessing, or heavy water production unless an agreement for cooperation "specifically designates such components as items to be exported pursuant to [such] agreement" is also satisfied.

Article 5(4) provides that the quantity of nuclear material transferred under the Agreement shall be consistent with any of the following purposes: use in reactor experiments or the loading of reactors, the efficient and continuous conduct of such reactor experiments or operation of reactors for their lifetime, use as samples, standards, detectors and targets, and other purposes as the Parties may agree.

Article 5(6) records verbatim certain political assurances relating to reliable

supply of nuclear fuel given to India by the United States in March 2006. The Agreement language does not have the effect of converting these political assurances into legally binding commitments.

Articles 5(2), 6-10, and 14 address the specific requirements of section 123a. of the Atomic Energy Act of 1954 (AEA).

Article 11 provides that the Parties shall cooperate in following the best practices for minimizing the impact on the environment from any radioactive, chemical or thermal contamination arising from activities under the Agreement and in related matters of health and safety.

Article 12 contains additional provisions with regard to implementation of activities falling within the scope of the Agreement.

Article 13 provides for consultations at the request of either Party regarding implementation of the Agreement and the development of further cooperation in the field of peaceful uses of nuclear energy on a stable, reliable and predictable basis. It further provides that the Parties shall endeavor to avoid taking any action that adversely affects cooperation under Article 2, which is the general "Scope of Cooperation" article.

Article 15 provides for dispute settlement through negotiations between the Parties.

Article 16 provides for the Agreement to have an initial duration of 40 years and to continue in force for additional periods of 10 years each, subject to a proviso that either Party may terminate the Agreement by giving written notice to the other Party six months prior to the close of a period. It also provides for continuation in effect of key nonproliferation provisions of the Agreement in the event of its termination.

Ensuring Cooperation Does Not in Any Way Assist India's Nuclear Weapons Program

Section 104(c)(2)(J) of the Hyde Act requires :

"A description of the steps taken to ensure that proposed United States civil nuclear cooperation with India will not in any way assist India's nuclear weapons program."

As previously described, India has developed a Separation Plan, (INFCIR/731) to separate civil and military nuclear facilities. The India IAEA safeguards agreement, which was unanimously approved by the IAEA Board of Governors on August 1, 2008, establishes procedures for applying safeguards to India's "civil" nuclear facilities in accordance with IAEA standards, principles, and practices. The stated purpose of the safeguards agreement is to ensure that no safeguarded item is "used for the manufacture of any nuclear weapon or to further any other military purpose and that such items are used exclusively for peaceful purposes." To this end, IAEA safeguards are designed to detect and prevent diversion from civil to military facilities, making the conclusion of this safeguards agreement the key to ensuring that civil nuclear cooperation could not be used to advance a nuclear weapons program. The U.S. does not in any way support India's nuclear weapons program.

Under the Safeguards Agreement, the IAEA will verify that all of India's current and future civil nuclear facilities and material, as well as certain upstream and downstream facilities, are used only for peaceful purposes. Once a reactor is under IAEA safeguards, those safeguards will remain in place on an unconditional basis until the reactor is jointly determined by the IAEA and India to be no longer usable for nuclear activities relevant from the point of view of safeguards. This Initiative will only allow for nuclear cooperation to proceed with facilities subject to IAEA safeguards, monitoring, and inspections to ensure that the civilian nature of the work therein is not compromised. This also provides an incentive for India to declare any future reactors as civil and thus bring them into this framework of nuclear cooperation; otherwise no foreign material and technology would be available for their construction and operation.

For dual-use nuclear exports administered by the Department of Commerce, there are several ways the U.S. is assured that exports are going to reliable recipients of U.S. origin items and have not been diverted to unauthorized end users or end uses. As part of the license application package, we require certification that the item(s) will not be used in any of the prohibited activities described in 744.2(a) of the Export Administration Regulations (EAR). Through the licensing process, the intelligence and enforcement communities provide information on the bona

fides of prospective end-users. Commerce determines the bona fides of the transaction and suitability of the end-user through the use of pre-license checks. This information is then used to make licensing decisions. As part of the approval process, export licenses normally have conditions attached that prohibit re-export, retransfer, or use in sensitive nuclear, chemical, biological, or missile end uses. We require applicants to inform end-users of the licensing conditions. In addition, the U.S. has an end use assurance letter from the Government of India that commits it to ensure that items are not transferred from or through India for use in prohibited unsafe guarded nuclear, WMD, or WMD delivery programs. Also, through post-shipment verifications, the U.S. visits recipients of U.S.-origin items to ensure that the items have actually been delivered to the authorized ultimate consignee or end-user and those items are being used as stated on the export license application.

The transfer of nuclear fuel technology requires authorization by the Secretary of Energy under Section 57(b) of the Atomic Energy Act of 1954 as amended. The regulations that implement Section 57(b) are found in 10 CFR Part 810, which require that prior to such approval, government-to-government assurances outlining the controls/conditions that will be used for securing this technology must be in place. This includes the requirement that the transfer, anything derived from the transfer, and anything that is produced or modified in a facility constructed as a result of the transfer will be used for peaceful purposes. Further, the United States places additional conditions on an authorization to transfer the technology that limits access and prohibits the retransfer of the technology.

As great progress has been made in bringing the U.S.-India Civil Nuclear Cooperation Initiative to fruition; India has been brought closer to the nonproliferation mainstream. India has completed a Separation Plan, negotiated a safeguards agreement, and made substantial progress towards an Additional Protocol. India has greatly improved its export controls and pledged to maintain the highest international standards on restricting the transfer of sensitive technologies. The U.S.-India bilateral relationship has been revamped and has facilitated cooperation on "many key regional and global issues, such as dissuading Iranian attempts to acquire WMD and completing an FMCT

in the CD, and this close cooperation is expected to continue in the future, advancing U.S. strategic interests and increasing U.S. national security. Civil nuclear trade with India will increase global energy security and advance U.S. and Indian economic interests while at the same time strengthening the global nonproliferation regime. In meeting its nonproliferation commitments under the Hyde Act, India has made a great step forward in taking its place as a strategic partner for the U.S. now and in the future.

APPENDIX - X

United States-India Nuclear Cooperation Approval and Nonproliferation Enhancement Act (Enrolled as Agreed to or Passed by Both House and Senate).

Washington (D.C.), October 1, 2008.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

SECTION 1. SHORT TITLE AND TABLE OF CONTENTS.

- (a) Short Title- This Act may be cited as the `United States-India Nuclear Cooperation Approval and Nonproliferation Enhancement Act'.
- (b) Table of Contents- The table of contents for this Act is as follows:
 - Sec. 1. Short title and table of contents.
 - Sec. 2. Definitions.

TITLE I--APPROVAL OF UNITED STATES-INDIA AGREEMENT FOR COOPERATION ON PEACEFUL USES OF NUCLEAR ENERGY

- Sec. 101. Approval of Agreement.
- Sec. 102. Declarations of policy; certification requirement; rule of construction.
- Sec. 103. Additional Protocol between India and the IAEA.
- Sec. 104. Implementation of Safeguards Agreement between India and the IAEA.
- Sec. 105. Modified reporting to Congress.

TITLE II--STRENGTHENING UNITED STATES NONPROLIFERATION LAW RELATING TO PEACEFUL NUCLEAR COOPERATION

- Sec. 201. Procedures regarding a subsequent arrangement on reprocessing.
- Sec. 202. Initiatives and negotiations relating to agreements for peaceful nuclear cooperation.

Sec. 203. Actions required for resumption of peaceful nuclear cooperation.

Sec. 204. United States Government policy at the Nuclear Suppliers Group to strengthen the international nuclear nonproliferation regime.

Sec. 205. Conforming amendments.

SEC. 2. DEFINITIONS.

In this Act:

- (1) **AGREEMENT-** The term 'United States-India Agreement for Cooperation on Peaceful Uses of Nuclear Energy' or 'Agreement' means the Agreement for Cooperation Between the Government of the United States of America and the Government of India Concerning Peaceful Uses of Nuclear Energy that was transmitted to Congress by the President on September 10, 2008.
- (2) **APPROPRIATE CONGRESSIONAL COMMITTEES-** The term 'appropriate congressional committees' means the Committee on Foreign Affairs of the House of Representatives and the Committee on Foreign Relations of the Senate.

TITLE I--APPROVAL OF UNITED STATES-INDIA AGREEMENT FOR COOPERATION ON PEACEFUL USES OF NUCLEAR ENERGY

SEC. 101. APPROVAL OF AGREEMENT.

- (a) **In General-** Notwithstanding the provisions for congressional consideration and approval of a proposed agreement for cooperation in section 123 b. and d. of the Atomic Energy Act of 1954 (42 U.S.C. 2153 (b) and (d)), Congress hereby approves the United States-India Agreement for Cooperation on Peaceful Uses of Nuclear Energy, subject to subsection (b).
- (b) **Applicability of Atomic Energy Act of 1954, Hyde Act, and Other Provisions of Law-** The Agreement shall be subject to the provisions of the Atomic Energy Act of 1954 (42 U.S.C. 2011 et seq.), the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006 (22 U.S.C. 8001 et. seq; Public Law 109-401), and any other applicable United States law as if the Agreement had been

approved pursuant to the provisions for congressional consideration and approval of a proposed agreement for cooperation in section 123 b. and d. of the Atomic Energy Act of 1954.

- (c) **Sunset of Exemption Authority Under Hyde Act-** Section 104(f) of the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006 (22 U.S.C. 8003(f)) is amended by striking 'the enactment of' and all that follows through 'agreement' and inserting 'the date of the enactment of the United States-India Nuclear Cooperation Approval and Nonproliferation Enhancement Act'.

SEC. 102. DECLARATIONS OF POLICY; CERTIFICATION REQUIREMENT; RULE OF CONSTRUCTION.

- (a) **Declarations of Policy Relating to Meaning and Legal Effect of Agreement-** Congress declares that it is the understanding of the United States that the provisions of the United States-India Agreement for Cooperation on Peaceful Uses of Nuclear Energy have the meanings conveyed in the authoritative representations provided by the President and his representatives to the Congress and its committees prior to September 20, 2008, regarding the meaning and legal effect of the Agreement.
- (b) **Declarations of Policy Relating to Transfer of Nuclear Equipment, Materials, and Technology to India-** Congress makes the following declarations of policy:
- (1) Pursuant to section 103(a)(6) of the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006 (22 U.S.C. 8002(a)(6)), in the event that nuclear transfers to India are suspended or terminated pursuant to title I of such Act (22 U.S.C. 8001 et seq.), the Atomic Energy Act of 1954 (42 U.S.C. 2011 et seq.), or any other United States law, it is the policy of the United States to seek to prevent the transfer to India of nuclear equipment, materials, or technology from other participating governments in the Nuclear Suppliers Group (NSG) or from any other source.
 - (2) Pursuant to section 103(b)(10) of the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006 (22 U.S.C. 8002(b)(10)), any nuclear power reactor fuel reserve provided to the Government of India for use in

safeguarded civilian nuclear facilities should be commensurate with reasonable reactor operating requirements.

- (c) **Certification Requirement-** Before exchanging diplomatic notes pursuant to Article 16(1) of the Agreement, the President shall certify to Congress that entry into force and implementation of the Agreement pursuant to its terms is consistent with the obligation of the United States under the Treaty on the Non-Proliferation of Nuclear Weapons, done at Washington, London, and Moscow July 1, 1968, and entered into force March 5, 1970 (commonly known as the 'Nuclear Non-Proliferation Treaty'), not in any way to assist, encourage, or induce India to manufacture or otherwise acquire nuclear weapons or other nuclear explosive devices.
- (d) **Rule of Construction-** Nothing in the Agreement shall be construed to supersede the legal requirements of the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006 or the Atomic Energy Act of 1954.

SEC. 103. ADDITIONAL PROTOCOL BETWEEN INDIA AND THE IAEA.

Congress urges the Government of India to sign and adhere to an Additional Protocol with the International Atomic Energy Agency (IAEA), consistent with IAEA principles, practices, and policies, at the earliest possible date.

SEC. 104. IMPLEMENTATION OF SAFEGUARDS AGREEMENT BETWEEN INDIA AND THE IAEA.

Licenses may be issued by the Nuclear Regulatory Commission for transfers pursuant to the Agreement only after the President determines and certifies to Congress that--

- (1) the Agreement Between the Government of India and the International Atomic Energy Agency for the Application of Safeguards to Civilian Nuclear Facilities, as approved by the Board of Governors of the International Atomic Energy Agency on August 1, 2008 (the 'Safeguards Agreement'), has entered into force; and
- (2) the Government of India has filed a declaration of facilities pursuant to paragraph 13 of the Safeguards Agreement that is not materially inconsistent with the facilities and schedule described in paragraph 14 of the separation plan presented in the national parliament of India on May 11, 2006, taking into account the later initiation of

safeguards than was anticipated in the separation plan.

SEC. 105. MODIFIED REPORTING TO CONGRESS.

- (a) Information on Nuclear Activities of India- Subsection (g)(1) of section 104 of the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006 (22 U.S.C. 8003) is amended--
 - (1) by redesignating subparagraphs (B), (C), and (D) as subparagraphs (C), (D), and (E), respectively; and
 - (2) by inserting after subparagraph (A) the following new subparagraph:
 - (B) any material inconsistencies between the content or timeliness of notifications by the Government of India pursuant to paragraph 14(a) of the Safeguards Agreement and the facilities and schedule described in paragraph (14) of the separation plan presented in the national parliament of India on May 11, 2006, taking into account the later initiation of safeguards than was anticipated in the separation plan;'.
 - (b) Implementation and Compliance Report- Subsection (g)(2) of such section is amended--
 - (1) in subparagraph (K)(iv), by striking `and' at the end;
 - (2) in subparagraph (L), by striking the period at the end and inserting `; and'; and
 - (3) by adding at the end the following new subparagraph:
 - (M) with respect to the United States-India Agreement for Cooperation on Peaceful Uses of Nuclear Energy (hereinafter in this subparagraph referred to as the `Agreement') approved under section 101(a) of the United States-India Nuclear Cooperation Approval and Nonproliferation Enhancement Act-
- (i) a listing of--**
- (l) all provision of sensitive nuclear technology to India, and other such information as may be so designated by the United States or India under Article 1(Q); and

- (II) all facilities in India notified pursuant to Article 7(1) of the Agreement;

(ii) a description of--

- (I) any agreed safeguards or any other form of verification for by-product material decided by mutual agreement pursuant to the terms of Article 1(A) of the Agreement;
- (II) research and development undertaken in such areas as may be agreed between the United States and India as detailed in Article 2(2)(a.) of the Agreement;
- (III) the civil nuclear cooperation activities undertaken under Article 2(2)(d.) of the Agreement;
- (IV) any United States efforts to help India develop a strategic reserve of nuclear fuel as called for in Article 2(2)(e.) of the Agreement;
- (V) any United States efforts to fulfill political commitments made in Article 5(6) of the Agreement;
- (VI) any negotiations that have occurred or are ongoing under Article 6(iii.) of the Agreement; and
- (VII) any transfers beyond the territorial jurisdiction of India pursuant to Article 7(2) of the Agreement, including a listing of the receiving country of each such transfer;

(iii) an analysis of--

- (I) any instances in which the United States or India requested consultations arising from concerns over compliance with the provisions of Article 7(1) of the Agreement, and the results of such consultations; and
- (II) any matters not otherwise identified in this report that have become the subject of consultations pursuant to Article 13(2) of the Agreement, and a statement as to whether such matters were resolved by the end of the reporting period; and

(iv) a statement as to whether--

- (I) any consultations are expected to occur under Article 16(5) of the Agreement; and
- (II) any enrichment is being carried out pursuant to Article 6 of the Agreement'.

**TITLE II--STRENGTHENING UNITED STATES NONPROLIFERATION
LAW RELATING TO PEACEFUL NUCLEAR COOPERATION**

**SEC. 201. PROCEDURES REGARDING A SUBSEQUENT
ARRANGEMENT ON REPROCESSING.**

- (a) **In General-** Notwithstanding section 131 of the Atomic Energy Act of 1954 (42 U.S.C. 2160), no proposed subsequent arrangement concerning arrangements and procedures regarding reprocessing or other alteration in form or content, as provided for in Article 6 of the Agreement, shall take effect until the requirements specified in subsection (b) are met.
- (b) **Requirements-** The requirements referred to in subsection (a) are the following:
 - (1) The President transmits to the appropriate congressional committees a report containing--
 - (A) the reasons for entering into such proposed subsequent arrangement;
 - (B) a detailed description, including the text, of such proposed subsequent arrangement; and
 - (C) a certification that the United States will pursue efforts to ensure that any other nation that permits India to reprocess or otherwise alter in form or content nuclear material that the nation has transferred to India or nuclear material and by-product material used in or produced through the use of nuclear material, non-nuclear material, or equipment that it has transferred to India requires India to do so under similar arrangements and procedures.
 - (2) A period of 30 days of continuous session (as defined by section 130 g.(2) of the Atomic Energy Act of 1954 (42 U.S.C. 2159 (g)(2))) has elapsed after transmittal of the report required under paragraph (1).

- (c) **Resolution of Disapproval-** Notwithstanding the requirements in subsection (b) having been met, a subsequent arrangement referred to in subsection (a) shall not become effective if during the time specified in subsection (b)(2), Congress adopts, and there is enacted, a joint resolution stating in substance that Congress does not favor such subsequent arrangement. Any such resolution shall be considered pursuant to the procedures set forth in section 130 i. of the Atomic Energy Act of 1954 (42 U.S.C. 2159 (i)), as amended by section 205 of this Act.

SEC. 202. INITIATIVES AND NEGOTIATIONS RELATING TO AGREEMENTS FOR PEACEFUL NUCLEAR COOPERATION.

Section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153) is amended by adding at the end the following:

- e. The President shall keep the Committee on Foreign Affairs of the House of Representatives and the Committee on Foreign Relations of the Senate fully and currently informed of any initiative or negotiations relating to a new or amended agreement for peaceful nuclear cooperation pursuant to this section (except an agreement arranged pursuant to section 91 c., 144 b., 144 c., or 144 d., or an amendment thereto).'

SEC. 203. ACTIONS REQUIRED FOR RESUMPTION OF PEACEFUL NUCLEAR COOPERATION.

Section 129 a. of the Atomic Energy Act of 1954 (42 U.S.C. 2158 (a)) is amended by striking 'Congress adopts a concurrent resolution' and inserting 'Congress adopts, and there is enacted, a joint resolution'.

SEC. 204. UNITED STATES GOVERNMENT POLICY AT THE NUCLEAR SUPPLIERS GROUP TO STRENGTHEN THE INTERNATIONAL NUCLEAR NONPROLIFERATION REGIME.

- (a) **Certification-** Before exchanging diplomatic notes pursuant to Article 16(1) of the Agreement, the President shall certify to the appropriate congressional committees that it is the policy of the United States to work with members of the Nuclear Suppliers Group (NSG), individually and collectively, to agree to further restrict the transfers of equipment and technology related to the enrichment of uranium and reprocessing of spent nuclear fuel.

(b) **Peaceful Use Assurances for Certain By-Product Material-** The President shall seek to achieve, by the earliest possible date, either within the NSG or with relevant NSG Participating Governments, the adoption of principles, reporting, and exchanges of information as may be appropriate to assure peaceful use and accounting of by-product material in a manner that is substantially equivalent to the relevant provisions of the Agreement.

(c) **Report-**

(1) **IN GENERAL-** Not later than six months after the date of the enactment of this Act, and every six months thereafter, the President shall transmit to the appropriate congressional committees a report on efforts by the United States pursuant to subsections (a) and (b).

(2) **TERMINATION-** The requirement to transmit the report under paragraph (1) terminates on the date on which the President transmits a report pursuant to such paragraph stating that the objectives in subsections (a) and (b) have been achieved.

SEC. 205. CONFORMING AMENDMENTS.

Section 130 i. of the Atomic Energy Act of 1954 (42 U.S.C. 2159 (i)) is amended--

- (1) in paragraph (1), by striking 'means a joint resolution' and all that follows through ', with the date' and inserting the following: 'means-
- (A) for an agreement for cooperation pursuant to section 123 of this Act, a joint resolution, the matter after the resolving clause of which is as follows: 'That the Congress (does or does not) favor the proposed agreement for cooperation transmitted to the Congress by the President on XXXXX .',
 - (B) for a determination under section 129 of this Act, a joint resolution, the matter after the resolving clause of which is as follows: 'That the Congress does not favor the determination transmitted to the Congress by the President on XXXXX .', or
 - (C) for a subsequent arrangement under section 201 of the United States-India Nuclear Cooperation Approval and Nonproliferation

Enhancement Act, a joint resolution, the matter after the resolving clause of which is as follows: `That the Congress does not favor the subsequent arrangement to the Agreement for Cooperation Between the Government of the United States of America and the Government of India Concerning Peaceful Uses of Nuclear Energy that was transmitted to Congress by the President on September 10, 2008.',

with the date'; and

(2) in paragraph (4)--

- (A) by inserting after `45 days after its introduction' the following `(or in the case of a joint resolution related to a subsequent arrangement under section 201 of the United States-India Nuclear Cooperation Approval and Nonproliferation Enhancement Act, 15 days after its introduction)'; and
- (B) by inserting after `45-day period' the following: `(or in the case of a joint resolution related to a subsequent arrangement under section 201 of the United States-India Nuclear Cooperation Approval and Nonproliferation Enhancement Act, 15-day period)'.

Speaker of the House of Representatives.

Vice President of the United States and

President of the Senate.

APPENDIX - XI**Statement by US Secretary of State Condoleezza Rice
after the Congressional Approval of the U.S.-India
Agreement for Cooperation Concerning Peaceful Uses
of Nuclear Energy (123 Agreement).****Washington (D. C.), October 2, 2008.**

I applaud Congressional approval last evening of the U.S.-India Agreement for Cooperation Concerning Peaceful Uses of Nuclear Energy (123 Agreement). This would not have been possible without strong bipartisan support and close cooperation from the Congress over the past three years. I especially appreciate the support of the leadership of both parties to expedite approval of the initiative in recent weeks.

The U.S.-India 123 Agreement reflects the transformation of our relations and a recognition of India's emergence on the global stage. The Agreement bolsters our partnership with the world's largest democracy and a growing economic power, and will provide economic and job opportunities for our economy. The Initiative will help India's population of more than one billion to meet its rapidly increasing energy needs in an environmentally responsible way while reducing the growth of carbon emissions.

The approval of the U.S.-India 123 Agreement will also enhance our global nonproliferation efforts. The Agreement reflects a common commitment to share both the benefits of the international system and also the burdens and responsibilities of maintaining, strengthening, and defending it. I am pleased that Congress has endorsed this opportunity to bring the United States and India closer together. I look forward to a new strategic partnership with India that will provide global leadership in the years ahead.

APPENDIX - XII**Statement by the US President George W. Bush on the occasion of signing of the Bill on the India - United States Nuclear Cooperation Approval and Non-proliferation Enhancement Act.****Washington (D. C.), October 8, 2008.**

I am pleased today to sign into law the United States-India Nuclear Cooperation Approval and Nonproliferation Enhancement Act, which approves the U.S.-India 123 Agreement. The passage of this legislation by the Congress marks another major milestone in achieving the vision that Prime Minister Singh and I set forth on July 18, 2005, to transform the relationship between our two countries and to establish a strategic partnership. This Act will strengthen the relationship between the United States and India and deliver valuable benefits to both nations.

The legislation does not change the terms of the 123 Agreement as I submitted it to the Congress. That Agreement is consistent with the Atomic Energy Act and other elements of U.S. law. This legislation is important as it enables me to bring the 123 Agreement into force and to accept on behalf of the United States the obligations contained in the Agreement.

The Agreement grants India advance consent to reprocessing which will be brought into effect upon conclusion of arrangements and procedures for a dedicated reprocessing facility under IAEA safeguards.

In addition, the legislation does not change the fuel assurance commitments that the U.S. Government has made to the Government of India, as recorded in the 123 Agreement.

The passage of this legislation reflects the common view of my Administration and the Congress as to the value of nuclear cooperation and is in the interest of the United States and India.

APPENDIX - XIII

Statement by U. S. President George W. Bush while signing the H.R. 7081, the United States-India Nuclear Cooperation Approval and Nonproliferation Enhancement Act.

Washington (D. C.), October 8, 2008.

THE PRESIDENT: Thank you for coming. Welcome to the White House. Today, I have the honor of signing legislation that builds on the growing ties between the world's two largest democracies, India and the United States. (Applause.) This legislation will enhance our cooperation in using nuclear energy to power our economies; it will help us work together even more closely to reduce the danger of nuclear proliferation across the world.

This legislation represents more than three years of hard work by a lot of people. I appreciate the work of the Indian-American leaders from across the nation. (Applause.) I thank the members of the United States Congress for working hard on this piece of legislation. I'm especially grateful for the leadership provided by Speaker Nancy Pelosi, John Boehner, Senate Majority Leader Harry Reid and Republican Leader Mitch McConnell, who worked hard to make sure this bill made it through both Houses at the very end of the session. (Laughter and applause.)

I thank the leaders of the Foreign Affairs Committees in the House and the Senate -- Senator Joe Biden; Dick Lugar; Chris Dodd, who is with us; as well as Representatives Howard Berman and Ileana Ros-Lehtinen. I also welcome the members of Congress here on the stage who worked hard to get this legislation done. I appreciate so very much the contributions of two leaders who played an important role in crafting this legislation -- the late Henry Hyde and the late Tom Lantos. (Applause.)

Other members who've joined us -- John Warner, Senator from Virginia; Eliot Engel, Democrat, House Foreign Affairs committee member from New York; Congressman Joe Crowley from New York. (Applause.) Members of the administration who have joined us -- Mr. Vice President, thank you. I appreciate the hard work that Secretary of State Condoleezza Rice did to bring this deal to fruition -- (applause) -- as well as Secretary Sam Bodman, at the Department of Energy.

I am so honored here that -- to have the Ambassador of India to the United States with us -- Ambassador Sen, thank you for joining us. (Applause.) And I appreciate very much the incredibly efficient work of our Ambassador, David Mulford, and his wife Jeannie -- thank you for being here. (Applause.) You didn't do so bad yourself, Ambassador -- (laughter.)

I thank the congressional staff who worked hard on this legislation. I congratulate you for the constructive work. I appreciate the supporters of the U.S.-India Nuclear Civil Agreement that are here today. All in all, welcome. This is a -- it's a big deal. (Applause.)

Even though the United States and India are separated by half the globe, we are natural partners as we head into the 21st century. Both our nations emerged from a colonial past to establish vibrant democracies. We have welcomed investment and private enterprise to become leaders in the global economy. We have stood against the dangers posed by extremists, who have carried out attacks in both our countries. We have demonstrated that we cherish liberty, honor human dignity, and respect the rule of law.

Despite these common interests and values, it was not long ago that relations between the United States and India were strained. In recent years, we've worked to transform our relationship into a strong strategic partnership. One area where we saw tremendous potential for cooperation is energy. As our economies have grown, our demands for energy have grown, as well. It's become increasingly clear that we need to generate that energy in ways that are safe and clean and secure.

One energy source that can generate large amounts of electricity with zero emissions of air pollution or greenhouse gases is nuclear power. So three years ago, Prime Minister Singh -- who I consider a dear friend -- and I resolved to work together on a landmark agreement paving the way for our nations to cooperate on nuclear power. By undertaking new cooperation on civil nuclear energy, India will be able to count on a reliable fuel supply for its civilian reactors, meet the energy demands of its people, and reduce its independence [sic] on fossil fuels.

For our part, the United States will gain access to a growing market for civilian nuclear technologies and materials, that will help American businesses create more jobs for our people here at home.

Our agreement will also strengthen global nonproliferation efforts. India has committed to operate its civil nuclear energy program under the safeguards of the International Atomic Energy Agency and other international guidelines. India will continue to build on its strong record of responsibility in operating its nuclear facilities. And India and the United States will cooperate more closely to keep the world's most dangerous weapons out of the hands of extremists and terrorists.

The bill I sign today approves the 123 agreement I submitted to Congress -- and establishes the legal framework for that agreement to come into effect. The bill makes clear that our agreement with India is consistent with the Atomic Energy Act and other elements of U.S. law. By passing this legislation, my administration and Congress demonstrate our common view that nuclear cooperation is in the interest of both the United States and India.

The legislation makes no changes to the terms of the 123 agreement I submitted to Congress. It enables me to bring that agreement into force and to accept on behalf of the United States all the obligations that are part of the agreement. The legislation does not change the fuel assurance commitments that the United States government has made to the government of India, as recorded in the 123 agreement. The agreement also grants India "advance consent to reprocessing" -- which will be brought into effect upon the conclusion of arrangements and procedures for a dedicated reprocessing facility under IAEA safeguards.

This agreement sends a signal to the world: Nations that follow the path of democracy and responsible behavior will find a friend in the United States of America. (Applause.) The American people are proud of our strong relationship with India. And I am confident that the friendship between our two nations will grow even closer in the years ahead.

Laura and I send our best wishes to the hundreds of millions of people in India and around the world who will begin celebrating the ancient festival of Diwali later this month. (Applause.) As we offer our prayers for a happy new year, we can be thankful that the relationship between the United States and India has never been more vibrant and more hopeful.

And it's now my honor to sign the United States-India Nuclear Cooperation Approval and Nonproliferation Enhancement Act. (Applause.)

(The bill is signed.) (Applause.)

APPENDIX - XIV

Editorial in the *Indian Express*: Savour the change

New Delhi, September 8, 2008.

Although the perennial critics - some opportunistic, many ideological and others simply habitual - will pick nits in the historic waiver written exclusively for India by the 45-nation Nuclear Suppliers Group last Saturday, New Delhi should go beyond triumphalism and ponder over the lessons learnt. India should have no illusions that it was sweet reason - for example, the argument that India has "impeccable" non-proliferation credentials - that ultimately silenced New Delhi's opponents in the NSG. It was Washington's brutal exercise of power that forced the recalcitrant members of the NSG, including China, to stand down. That every member of the NSG had a veto, and India had little leverage over them meant New Delhi needed all the high-level intervention it could mobilise from Washington.

US President George W. Bush's willingness to spend so much political capital in promoting the nuclear deal with India was itself rooted in power calculus. The Bush administration recognised three years ago that rapid economic growth was improving India's relative power position in the international system. For Bush, the nuclear deal was about investing in India's rise and working with New Delhi to create a new framework of great power relations in the twenty-first century. If improved economic performance is making India the pivot of the Asian balance of power, its political class and security establishment have found it difficult to shed the inherited third world mindset.

The nit-pickers who pore over the text of India's recent nuclear agreements fail to appreciate the changed geopolitical context. If text was all that mattered, the UN Security Council should have been hounding India to give up its nuclear and missile programmes, as per the unanimous resolution 1172 passed in June 1998 in the wake of Pokharan II. What has changed since then are India's relative gains in the international system and its new strategic partnership with the US. No wonder then, the sceptics turned out to be wrong at every turn of India's nuclear drama. If official India had been sensitive to the logic of power, it might have fared a lot better in its campaign a few years ago for the permanent membership of the UNSC. Then, China easily undercut India, thanks to US neutrality. This time, strong US support trumped Beijing's attempt to block India's entry into the nuclear club. As it reflects on the NSG experience, Indian diplomacy should lose no more time in moving decisively from its traditional emphasis on the power of the argument to the more effective argument of power.

APPENDIX - XV

Editorial in the *Economic Times*.

New Delhi, September 8, 2008.

The NSG okay for the Indo-US nuclear deal is historic and of monumental economic and political significance, for India and the world. The unanimous go-ahead from the NSG would mean unprecedented opportunities to boost our energy security, step up international technology co-operation and open up myriad possibilities for coagulating investment and funds across the board.

It's also a victory for PM Manmohan Singh's perseverance against all odds, a triumph for the ruling UPA and a great achievement for Indian diplomacy. There was a slight delay in India getting the NSG waiver, but it had much to do with the need to be seen centrestage and domestic political compulsions in NSG member-states like election-bound Austria and New Zealand.

Of course, the statement by the foreign minister on India's steadfast resolve on non-proliferation did help. China was not very forthcoming in backing the deal, and at times was actually obstructive, but its sullied record on nuclear proliferation in our neighbourhood did not particularly sway matters in its favour. And quite rightly too.

The deal now is to be tabled in the US Congress - where there is bipartisan support - and so can well be expected to be expressly approved. It marks a watershed in relations between the US and India, the world's biggest democracies.

Increased Indo-US co-operation would have beneficial repercussions globally. The NSG waiver will also enable India to do nuclear commerce with countries like Russia and France, thus facilitating a policy of multi-alignment in nuclear cooperation.

The Opposition has labelled the deal a sell-out that would allegedly compromise India's strategic interests and debar nuclear testing. But the 123 agreement with the US is explicit on the provision for testing, should the geo-political situation sufficiently warrant such a move on our part. In any case, as per article 5(2) of the agreement amendments are required for India to access sensitive nuclear technologies.

So even after the Indo-US deal is signed into law by President Bush, there would be enough scope to amend and fine-tune it to suit our specific interests. As India keeps up the economic growth momentum, there would surely be greater scope for trade and give and take.

APPENDIX - XVI

Editorial in the *Asian Age*: "Manmohan's Finest Hour".

New Delhi, September 8, 2008.

The India-US civil nuclear cooperation agreement has generated much controversy over its merits and demerits. The UPA government and Prime Minister Manmohan Singh were at the receiving end of harsh, unsparing and often personal criticism for persisting with it despite some aspects of the deal being seen by a section of our society as harmful to long-term national interests. The waiver obtained by India from the Nuclear Suppliers Group in Vienna on Saturday, however, admits of no controversy, much less criticism, on the ground of it endangering the national interest in any way. The waiver represents one of the most significant post-independence foreign policy achievements of India in as much as it has gained for India membership in the global nuclear club without imposing on it the mortification of subscribing to the Non-Proliferation Treaty (to which, incidentally, all the NSG's 45 members are signatories), or to the Comprehensive Test Ban Treaty, opened the doors for foreign investment in the nuclear power generation sector, and will provide the country access to the latest nuclear technology. Despite the Vienna outcome's many positive aspects, the waiver is under attack from some political groups who appear determined, in some cases out of sheer cussedness, to denigrate it. Their criticism cannot stand impartial scrutiny in the face of the extraordinary gains accruing to this country from the waiver.

At the same time, the waiver represents in more senses than one the personal political triumph of Dr Manmohan Singh, who provided strong, credible and inspired leadership to his negotiating team to reach for India's objectives undeterred by the motivated criticism at home. Dr Singh remained steadfast in his commitment to the very concept of freeing India from its three-decade-long isolation from the nuclear mainstream through a cooperative deal with

the United States. He refused to be disheartened by the cruel barbs hurled at him by his critics, particularly in the Left and BJP ranks. He kept faith till the last, even though his dedication to the cause he chose to champion was often a source of personal humiliation and an assault on his dignity, specially when the Left parties treated him as a "bonded slave."

But the remarkable nature of Dr Singh's triumph gets even more significantly highlighted if we remember that even his own partymen tended to share, mostly in private, the assessment of a section of the political class of him being the "weakest Prime Minister ever" in independent India. Even Congress president Sonia Gandhi had initially appeared to be extremely cautious in championing the nuclear deal, and rallied round only after her son Rahul Gandhi, AICC general secretary, wholeheartedly commended Dr Singh's initiative. Dr Singh has emerged not as a weak or ineffective Prime Minister but as a visionary leader with total faith in India's glorious destiny who commands an extraordinary measure of international credibility and esteem.

It will be churlish for the Opposition parties, particularly the Left and the BJP, to persist with their personalised criticism of the Prime Minister that is often not above casting aspersions on his political integrity, doubting his patriotism and accusing him of short-changing India and its interests in the pursuit of the nuclear deal. Dr Singh deserves better even at the hands of his critics.

APPENDIX - XVII

Editorial in the *Business Standard*: "Nuclear Breakthrough".

New Delhi, September 8, 2008.

The improbable has happened, and India has gained the nuclear breakthrough that will rank as the Manmohan Singh government's high point in international relations. It has not been a process free of hiccups, nor has everything that was promised three years ago been delivered - the simple fact is that India is not on the same footing as the five nuclear "haves". However, it is now in the unique position of being able to carry on its strategic nuclear weapons programme, without international sanctions on its nuclear power programme and without signing the Nuclear Non-Proliferation Treaty (NPT); and that is achievement enough. It is a success that has tested Dr Singh's stamina, diplomatic skill and political standing. The bitter domestic opposition saw the government risking its parliamentary majority and Dr Singh himself was reportedly ready to resign if his own party was not steadfast in its support. And the reluctance of many members of the Nuclear Suppliers Group (NSG) to sign on the dotted line meant some late-night diplomatic drama late last week.

There will be those who wonder whether the compromises that India has made during the tortuous negotiations mean a real risk to strategic autonomy. The answer comes from the manifest unhappiness of those who are hostile to Indian progress, including China and Pakistan, and those whom an American diplomat once called the "ayatollahs of nuclear apartheid". If they are upset, and if China wants the same deal for Pakistan, it must be a good deal for India. So the BJP and the Left parties, which continue to be critical of the deal, must ask themselves some questions. Indeed, LK Advani said two years ago that the purpose of the deal is to "cap, roll back and ultimately eliminate" India's strategic arsenal. This is as manifestly untrue as some of the other criticisms being levelled today.

There will be discomfort about the deal being sold differently in India from what is being said in other countries, including the United States. In President Bush's letter leaked last week, Condoleezza Rice's testimony to the US Congress, and the Hyde Act itself, the message that comes through is of furthering the non-proliferation agenda, while India sees it as getting rid of that same agenda insofar as the nuclear denial regime is applied to it. It is

hard to see how both positions or intentions can simultaneously hold. Thus, although India has insisted on there being no references to strategic issues like nuclear testing in the "123 agreement" and in the NSG waiver, arguing quite logically that the agreement concerns nuclear electricity, the elephant in the room is without question the issue of what will happen if India tests, and what kind of technology co-operation will actually be on the cards.

If the key clauses are ever put to the test, it will boil down to interpreting the agreement in the context of evolving power equations. If India gains strength as an economic power and strategic player, the interpretations applied will be favourable to this country. If India is perceived as weak, then tougher measures will follow. If the overwhelming thrust of opinion in the country is that India is on the ascendant, then the agreement must be viewed in that light. What can be said at this stage is that India's diplomats and atomic scientists have negotiated well; it is now up to the latter to make effective use of what they have got to build a successful nuclear power programme. Getting imported uranium to run India's starved nuclear power plants will be an immediate pay-off.

Part of the problem for the government has been the multi-stage process (with the US government, the US Congress, and the NSG), during which it must adopt maximalist positions, while simultaneously not getting into a corner where those stated positions come in the way of the give-and-take that is the very meaning of negotiation. Has India made concessions? Yes, of course. Are those concessions that the country can live with? On the evidence at hand (the text of the NSG waiver is not yet publicly available), it would seem so. On the basis of that assessment, Dr Singh and India's negotiators deserve to be congratulated.

APPENDIX - XVIII

Editorial in the *Tribune*: "India's Hour".

Chandigarh, September 8, 2008.

WITH the Vienna conclave of the mighty and influential over, India has now become an essential part of the architecture of global power.

Over three decades after the first Pokhran test and the nuclear explosions 10 years ago, India had been kept out in the cold, denied the status of a nuclear-weapons state and much else that goes with it.

The nuclear apartheid, which was an insult to a nation of 1.3 billion people, denied it not only the status of a nuclear weapons state, but also the right to acquire wherewithal like enriched uranium, equipment and hi-tech that it badly needed for emerging as a major power of the 21st century.

India now by right can get enriched uranium for its present and future nuclear reactors and sensitive technology to develop further not only its nuclear, aero-space and defence industries, but also vast areas of industrial activity that it wants to indulge in to emerge also as a major economy of the new century.

To cross the nuclear threshold and gain legitimacy as a nuclear-weapon state, the only price India has paid at Vienna is its reiteration of its unilateral moratorium on nuclear tests - an intention it had announced on its own from the roof tops some years ago, but only after it had carried the 1998 Pokhran tests.

The NSG has by consensus waived its ban on exports of nuclear fuel and technology and without India having to sign the discriminatory Nuclear Non-Proliferation Treaty - the only exception made in the strict NPT regime.

The NSG's doing away with its ingrained resolve not to have any commercial dealings with India, because it had become a fall guy in the nuclear order controlled by a cartel of a handful of countries, is not an insignificant development in international equations.

What is heartening is that neither the waiver, nor the 123 Agreement, debars India from retaining the nuclear weapons - whatever their number it has already in its arsenal. India will continue to have the right to develop more nuclear weapons, should it come to face a serious threat to its security.

As it happens in a city club, many members have the inborn tendency not to let new-comers enter its portals. In Vienna, China surprisingly chose to be a party-popper despite its private assurances to India given during the run-up, that it will not oppose the waiver. So much for its recent declarations about its keenness to evolve an enduring friendship and strategic partnership with India!

Not only did China try to block the waiver until the last, it also lobbied hard with smaller powers that they should oppose the pro-India waiver. As China has a strong lobby among the Democrats in the US, there is a possibility that the Howard Berman letter, which George W. Bush wrote to the congressional leader months ago is said to have been selectively leaked by the Chinese. It was aimed at a last minute effort to scuttle consensus that was evolving in favour of India.

Once it came to be known that the Chinese were campaigning with the fence-sitters against India, Dr Manmohan Singh and President Bush began calling up various heads of government. The labours of Indian officials, who had dispersed all over to lobby support for India during the last few weeks, also came to be of help. But it can be legitimately asked why the Government of India never came to know about the Berman letter written as far back as January this year. What were the highly-paid Washington lobbyists engaged by India doing all these months?

The NSG waiver, which has come after a tortuous and uncertain journey, now takes the 123 Agreement to the US Congress. It has just about three weeks to take the call. With President Bush's own prestige involved and taking into account the earlier congressional vote on the Agreement, it can be presumed that the US Congress will not stand in the way. This is mainly because of the impression that it is not only the Republican; who are fond of the future of 'Indo-US Strategic Partnership'; but also that the idea conceptually came up during the democratic presidency, although it acquired clarity and vigour from the Bush administration.

It is not only China which is feeling frustrated after Vienna where at the end of the day it found it was isolated. At home, efforts of the CPM and the BJP - which happen to be in. strange company these days - have come a cropper, the Berman letter they liberally used, 'notwithstanding.

The two parties even tried to bring the UPA government down over the nuclear deal, maybe for different motivations. The CPM's opposition was partly for ideological reasons, and partly for visceral antipathy to whatever

looks American. The BJP's anti-deal stand is harder to understand, particularly when the NDA government had travelled quite a distance when it was discussing the Test-ban Treaty with the Americans.

Once the US Congress has put its seal on the 123 Agreement, which has come unscathed out of the IAEA and the NSG, India can buy nuclear fuel and high-tech from anywhere in the world. Worst-come-to-worst, the US Congress does not get the time to approve of the agreement before it becomes lame duck on the eve of the presidential polls, the Vienna consensus entitles India to buy the nuclear stuff from France and, Russia or any other country willing to do nuclear business with India.

But it is not just nuclear business that is the issue. At centre is the question what place India should have in the world.

Sceptics at home

And abroad

Sceptics at home and abroad apart, India can now hold its head high in an imperfect world where power still counts. All that India needs is a vision required of a great nation and confidence in itself to deal with the mightiest of powers.

APPENDIX - XIX

Editorial in the *DNA*¹: The Waiver, at last.

Mumbai, September 8, 2008.

The much-awaited waiver from the Nuclear Suppliers Group (NSG) - the 45-nation club that controls and regulates global nuclear commerce - has come after marathon diplomatic negotiations. There were moments of intense drama and the fate of the waiver hung precariously in balance as small countries like New Zealand, Ireland, Austria, Switzerland, Norway and the Netherlands refused to fall in line till the last moment. The . Americans had to stretch themselves to bring around the naysayer. President Bush himself spoke to the Chinese premier. Reports suggest that such was the tension in the room that there was no applause but silence at the end of the grueling session in Vienna on Saturday.

What seems to have weakened the determined opposition from the Group of Six countries was minister of external affairs Pranab Mukherjee's clear statement that India was committed to non-proliferation and that it is bound to its voluntary moratorium on nuclear testing. This is not mere rhetoric -- India's three-decade record speaks for itself. Yet, it will be the details of the waiver that will need to be studied to see if India has compromised on any major issues..

The opposition of the smaller countries is not necessarily inimical to India. Their adherence to Nuclear Non. Proliferation Treaty (NPT) is not a dogmatic position. It would be wrong to think that they had finally agreed because of American arm-twisting. The dissenting countries still have their reservations but they agreed to respect India's expression of commitment to the principles of nuclear non-proliferation.

The next stage is for the deal to be ratified by the US Congress between September 8 and September 26. The Bush White House/ will do its best, but it should not come as a surprise if some more. obstacles are to be encountered on the way. Domestically, the Indian government faces the joint opposition of the BJP as well as left parties who now will launch a renewed assault while for the UPA, the NSG waiver is a political opportunity to talk about its success in getting India into the nuclear club.

1. Daily News and Analysis.

Hopefully, the Indian negotiators have learnt their lessons with the way the deal had to pass through the NSG gauntlet. It will be necessary for India to engage with all countries, big or small, all the time. And there is a need for India to regain its past moral position about its commitment to nuclear disarmament. For the moment, the government has reason to feel satisfied that it has reached the destination charted out three years ago after braving all manner of odds, at home and abroad.

APPENDIX - XX

Editorial in *the Hindu*: Post - Vienna Scenario.

Chennai, September 9, 2008.

By lifting a 16-year-ban on nuclear commerce with India, the Nuclear Suppliers Group has wisely abandoned a policy that made no sense from the non-proliferation, commercial, or environmental point of view. Full-scope safeguards as a condition of supply might have had a certain relevance to the NSG in the 1990s as an instrument to push holdouts into the Nuclear Non-proliferation Treaty (NPT). Today, the only holdouts are India, Pakistan, and Israel. While proliferation considerations are still a factor as far as Islamabad and Tel Aviv are concerned, India's creditable record of export control, its political and strategic responsibility, and the sheer size of its economy and long-term energy needs put it in a separate class altogether. The waiver approved by the 45-nation group strikes a balance between political India's desire to safeguard the independence and autonomy of strategic decision-making and the apprehension of some NSG members that their decision might encourage India to deviate from its repeatedly stated non-proliferation and disarmament commitments. The decision makes it clear that the NSG considers these commitments to be the basis for exempting India from the requirement of full-scope safeguards as a condition for nuclear exports. Equally, there is no automatic withdrawal of the exemption in the event that one or more members accuse India of deviation. Terminating nuclear supplies will require the consent of all 45 members. The principle of consensus, which worked against the country all these years, will now be a factor in its favour - unless of course high-pressure politics intervenes to neutralise this factor of advantage.

The NSG's decision is a significant achievement for Indian diplomacy, especially since the United States, which moved the proposal and was responsible for piloting it through, tried its hardest to introduce extraneous conditions. The government will claim that for the first time in many years India has succeeded in moving the international system in a way that enlarges the country's economic and strategic options. But having multiple options in a legal and technical sense provides no guarantee that political choices will be made wisely and independently - and not under external pressure. Post-Vienna, there is one immediate and one long-term challenge Prime Minister Manmohan Singh must squarely face up to. He must immediately make it clear to the Bush administration that India will not be able to proceed with bilateral nuclear cooperation with the U.S., if Washington seeks to implement the deal in the undermining way indicated in the State Department's official response to Congressional questions. Billions of dollars cannot be spent on American nuclear facilities if there is going to be any uncertainty surrounding future fuel supplies and reprocessing consent rights. The long-term challenge is one of managing the politics of the NSG itself. India needs to enlarge its field of partners, creating a web of commercial and technological linkages with as many NSG members as possible. The waiver opens up possibilities for mutual benefit with many countries - starting with Russia, India's most reliable nuclear supplier, and France - across the full spectrum of the nuclear fuel circle. All political eyes will be on the United Progressive Alliance government's approach to post-Vienna opportunities, for example on how quickly it moves to operationalise the next, significantly expanded stage of civilian nuclear cooperation with Russia at Koodankulam.

APPENDIX - XXI

Editorial in the *Deccan Herald*: "Landmark Deal".

Bangalore, September 9, 2008.

The decision of the Nuclear Suppliers' Group (NSG) on Saturday to waive its stringent conditions for nuclear trade with India marked the culmination of India's over three decades' long quest for an honourable place in the global nuclear commerce. The country's right to engage in international nuclear cooperation was denied as a punishment for daring to conduct a nuclear test in 1974 as a demonstration of its nuclear weapon capability - a licence that was granted only to the United States, former Soviet Union (now to Russia), the UK, France and China under the non-proliferation treaty. Indeed, the emergence of NSG as a sort of cartel of 45 countries reflected a concerted attempt to isolate the odd countries like India which refused to subscribe to the NPT objective of permanently denying nuclear weapons status to any country other than the select five. Ironically, the US, which had taken the lead in shaping the NPT regime and subsequently the NSG and other nuclear-related regimes, has played the pivotal role in reopening the international civil nuclear market for India.

The landmark change would probably not have come about but for a deliberate ambiguity about the status of India's nuclear weapons programme. That India is a nuclear weapon state is a matter of fact that the international community knows but would not yet like to acknowledge it de jure. Perhaps none in the NSG would like to bolster India's nuclear weapons programme and yet in the end, the nuclear cartel chose to keep the issue aside and open the doors of international nuclear trade for Delhi.

If non-proliferation lobbyists in the US are unhappy that the Bush Administration chose to sidestep India's de facto nuclear weapon status, the political opposition in India is yet again up in arms, accusing the Manmohan Singh government of virtually converting the country's unilateral nuclear test moratorium into an international pledge as a pre-condition for the NSG waiver. The BJP has cited the recently revealed communication between American Congress and the State Department to claim that the government had bartered national security interest for the sake of the nuclear deal with the US. The truth behind the calculated ambiguity about the moratorium on testing may probably not be known for long as no test may also be warranted in the foreseeable future unless security environment around India undergoes

a dramatic change. This is why Prime Minister Singh and his Congress party are in a mood to celebrate. They now have a talking point for the upcoming parliamentary elections. The decision of the Nuclear Suppliers' Group (NSG) on Saturday to waive its stringent conditions for nuclear trade with India marked the culmination of India's over three decades' long quest for an honourable place in the global nuclear commerce. The country's right to engage in international nuclear cooperation was denied as a punishment for daring to conduct a nuclear test in 1974 as a demonstration of its nuclear weapon capability - a licence that was granted only to the United States, former Soviet Union (now to Russia), the UK, France and China under the non-proliferation treaty. APPENDIX - XXII

Editorial in the *ASIAN AGE* : Vienna: India wins the day".

New Delhi, September 10, 2008.

The way has at last been paved for India's formal entry into the global nuclear club and to an end to its 34-year-long nuclear isolation. This has been made possible thanks to the historic decision on Saturday by the 45-member Nuclear Suppliers Group to allow India, a non-signatory to the Nuclear Non-Proliferation Treaty, to engage in international nuclear commerce and secure for itself such equipment and technology as it needs to meet its nuclear energy requirements. Given the "touch and go" nature of the intense two-day negotiations at the NSG get-together at Vienna, the positive outcome, apart from being truly historic for India, is bound to be greeted with profound relief and satisfaction by all the countries which encouraged and supported India's bid to obtain a clean (meaning unconditional) clearance by way of an exception to engage in nuclear trade with countries in a position to fulfil India's needs. The NSG adjourned its Friday's deliberations at a tentative stage with no clear pointer to an outcome, positive or negative. Between Friday evening and Saturday, when the NSG unanimously granted the waiver to India, a great deal of last-minute efforts in the form of high-level interventions and diplomatic pressure seem to have been expended to facilitate a positive turn to overcome the objections and reservations of the six nations led by Austria and followed by Ireland, New Zealand, Norway, the Netherlands and Switzerland, that had stalled a consensus. The six were by themselves quite a powerful group with a potential to deny a waiver, even a qualified one, but the fact that they enjoyed the tacit support of China strengthened their stand. President Bush reportedly telephoned his Chinese counterpart, the Indian Prime Minister reassured his Norwegian counterpart and there were other delegation-level interactions during the night. China's favourable response was a major factor in clearing the air for the "sceptics". While these attempts to clear the roadblock on India's path undoubtedly helped, what emerged as the final persuader to neutralise the Austrian obduracy was apparently external affairs minister Pranab Mukherjee's suo moto statement in New Delhi on Friday evening reassuring the international nuclear community of India's commitment to non-proliferation and reiterating New Delhi's intention to abide by its voluntary unilateral moratorium on nuclear testing. Aside from Austria, the other "nonsayers" also were reportedly impressed by New Delhi's offer to be a participant, as a supplier nation for thorium-based fuel,

in the preservation of the non-proliferation regime. New Delhi invoked its diplomatic skills and reach to the full to clear the last hurdle standing between it and the main 123 Indo-US nuclear deal reaching the US Congress well in time for ratification. It will now be up to the Bush administration to ensure that the US Congress' response to the deal's ultimate clearance will match those of the IAEA (International Atomic Energy Agency) and the NSG, both of which have made their own significant contribution to the implementation of India's energy security strategy and its liberation from nuclear apartheid.

APPENDIX - XXIII

Editorial in the *DNA*¹ : Deal Come True.

Mumbai, October 2, 2008.

The last legislative hurdle in the India-US civil nuclear agreement has been crossed. The US senate has voted for it with an overwhelming 86-13 majority on Wednesday night, rejecting a killer amendment by Byron Dorgan and Jeff Bingaman (both Democrats). President George W Bush signs the bill into law on Friday, and secretary of state Condoleezza Rice will complete the ceremony with her counterpart Pranab Mukherjee in New Delhi on Saturday. It is curtains at last for the three-year drama which obsessed Indian political class and the media.

All the doubts and misgivings about whether the deal will go through for which prime minister Manmohan Singh staked his job and his government have come to an end. The Americans have kept their end of the bargain too. It has to be said that Singh stood firm against critics and detractors on his part, and he won over his Congress Party, many of whose members had reservations about it.

It was a rough passage for the deal, both in India and in the US. At home, the civil nuclear agreement was attacked by both the BJP and the Communists. The opposition in the US was from the Nuclear Non-Proliferation Treaty hawks in Washington. However, John McCain (Republican) and Barack Obama (Democrat) have endorsed the bill.

1. Daily News and Analysis.

Of course, once again there is a 'controversy' in India regarding Rice's assurances to the senate majority leader Harry Reid that if India carries out a nuclear test, then supplies of nuclear fuel and technology will be cut off. There is nothing new in that - US lawmakers want that assurance, though it does not stop us from going to other countries, now that the Nuclear Supplies Group has given its assent. But it is significant that acting chairman of the senate foreign relations committee Christopher Dodd had made the pertinent observation that India lives in a fragile neighbourhood.

A caveat though: The majority of the 13 who opposed the bill in the Senate were Democrats; which means that India will have to learn to manage the relations with the US with greater dexterity keeping in mind the prospects of a Democrat government after the November presidential and congressional elections.

Now India has to make use of this great opportunity of access to technology denied to it for 34 years. With France quick to sign an agreement with India, there will be a rush to see the commercial possibilities offered by this deal. The thrust now will be on getting the best technologies available in the international market and see how these help India's economic growth.

APPENDIX - XXIV

Editorial in the *Times of India*: It's Finally Done.

New Delhi, October 3, 2008.

It's a done deal now. Three years after it was set into motion, the Indo-US civilian nuclear agreement has seen the light of day with the US Senate voting emphatically in favour of it 86 to 13. This comes on the heels of the House of Representatives passing it with a slimmer aye margin. Doubts that the Bill might include fresh amendments not agreeable to India have been put to rest, with the acting chairman of the Senate foreign relations committee Christopher Dodd calling it "unnecessary" before floor leaders of both the parties asked their colleagues to fall in line.

This deal, along with the NSG waiver last month, ends 34 years of nuclear isolation for India and opens up the way for us to trade in civilian nuclear technology not just with the US but also with other countries such as France and Russia. In a double delight this week for Prime Minister Manmohan Singh and his team - who pushed for this deal against formidable domestic and international odds - France has already inked a pact with India. Russia too has expressed a keenness to cooperate with us. On another note, the deal's journey over the past three years has also seen the coming of age of the Indian-American community in the US - from a relatively apolitical lot to firm lobbyists for India's interests, which is welcome.

The BJP and the CPM - strange bedfellows indeed - are bound to once again raise the rhetoric of how we have signed away our right to test, and therefore pawned our sovereignty. But as we have pointed out in the past, nuclear deal or no deal, India will stand to be censured by the international community if it tests. Remember 1974 and 1998? Unless there is extreme provocation by either China or Pakistan, we have no need to test, precisely why we have a voluntary moratorium on testing. In the eventuality that we do test, the US is bound by the law of its land to suspend trade. However, there is the matter of presidential discretion as well - the US president of the day can review and waive the sanctions two months after they have been enforced.

Clearly, the benefits of the deal are worth it. According to the Confederation of Indian Industry, the deal could open up around \$27 billion in investment in 18-20 nuclear plants over the next 15 years. It would also help us develop alternate sources of power, as we simply cannot sustain depending on oil for over 70 per cent of our energy needs. Now that the deed is done, let's get on with it.

APPENDIX - XXV**Editorial in the *Deccan Herald*: In Elite Club.****Bangalore, October 3, 2008.**

The Indo-US nuclear deal has crossed the final hurdle with the US Congress giving its final nod to the 123 agreement which will allow civil nuclear commerce between India and the US. The controversial deal has gone through hard negotiations and uncertainties and faced strong opposition from different quarters in both countries for different reasons. It is a landmark event in the international nuclear regime because for the first time the accepted rules for nuclear co-operation have been rewritten for India, which will now be considered a de facto nuclear power. The IAEA safeguards agreement, the NSG waiver and the 123 agreement were steps towards that. With these enabling measures India can enter into nuclear trade deals with other countries to give a boost to its energy sector.

In spite of the Congressional approval and the earlier IAEA and NSG actions, there is a strong segment of international opinion that sees India as the gainer from the deal without having to pay anything in return. There are lingering doubts in India too about the usefulness of the agreement and even fears about its implications for India's strategic nuclear programme, especially after the assurances given by the US administration to Congress that US nuclear co-operation would be terminated and sanctions could be re-imposed if India conducts another nuclear test. The agreement apparently rests on India's unilateral moratorium on nuclear tests. But much of the opposition within the country is political and the ostensible advantages from the deal outweigh the perceived disadvantages. It would also be wrong to assume that the nuclear deal would make India a strategic ally of the US. It is too big a country to play second fiddle to another. In fact countries like France and Russia might gain more than the US from nuclear trade with India, as these countries have a more advanced nuclear industry and are less inhibited by political baggage than the US.

France has already signed a civilian nuclear trade agreement with India during Prime Minister Manmohan Singh's visit to that country earlier this week. An agreement with Russia is scheduled to be signed in December. The bilateral deal with the US is expected to be initialled on Saturday in New Delhi. The best guarantee of success of the deal is maintaining India's economic strength and international profile. The deal was basically a sign of acceptance of that, and it can hurt if we slip and lose our bargaining power.

APPENDIX - XXVI

Editorial in *The Hindu*: Do not Operationalize 1 2 3.

Chennai, October 3, 2008.

Given the riders that accompanied the passage of the U.S.-India Nuclear Cooperation Agreement through Capitol Hill, there is no reason for the United Progressive Alliance government to feel euphoric about Wednesday evening's 86-13 vote in the Senate. The 123 Agreement was always going to be subordinate to the Hyde Act and it was disingenuous of the government to argue the contrary. What made the text somewhat defensible was the balance of rights and obligations it could claim to strike within. That balance has been fatally disturbed by the White House and Congress entering reservations derogating from a number of its provisions. Those who argue that the bilateral deal is unaffected and that India cannot be bound by anything it does not sign miss the fundamental point: the U.S. has posted advance notice of its refusal to be bound by what it is about to sign. This means India must carry the burden of its obligations while being denied the clear rights the agreement gives it with respect to fuel supply commitments and the permanence of reprocessing consent rights. Implementation of the 123 was always going to be difficult given differing interpretations of the provisions on the termination of nuclear cooperation and implementation of 'the right of return.' But with the new issues opened up first by the Bush administration and then by Congress, it will be irresponsible on the part of the Indian government to operationalise the agreement - and use it as the basis to import 10,000 MWe worth of nuclear reactors from the U.S.

No doubt President George Bush will attempt to assuage Indian concerns by making a signing statement setting aside some of Congress's riders. But the bare essence of what the American legislature has done is to incorporate what Mr. Bush conveyed to it last month. Will it be proper for New Delhi to sign an agreement whose basic provisions Washington says it has no intention of treating as a legal commitment? Even if the Indian government places on record its disagreement with the U.S. position, the 123 is destined to remain a dead letter for the foreseeable future. Satisfactory fuel supply arrangements can conceivably be struck with other countries but no U.S. reactor can be bought without permanent arrangements for reprocessing its spent fuel firmly in place. For India, the Nuclear Suppliers Group waiver seemed the high point of the drama

because, in principle, it opened the doors of the world to it. But like a deviant son who appears in the closing stages to claim his inheritance, the 123 has become the plot spoiler. The UPA government must urgently take Parliament into confidence on what has happened. It must make it clear to the people of India and to the U.S. that bilateral nuclear commerce will not be possible given the refusal of Washington to accept the binding nature of the commitments it is entering into.

APPENDIX - XXVII

Editorial in the *Asian Age*: "At long last, a done deal".

New Delhi, October 4, 2008.

With 86 members of the United States Senate voting in favour of the civil nuclear agreement with India, and only 13 against, the process set in motion three years ago by Prime Minister Manmohan Singh and US President George W. Bush has reached a satisfactory conclusion. Few would have thought such a day possible. Going by the prevailing dogma, even contemplating trade in nuclear materials and equipment with a country refusing to sign the NPT and developing its own nuclear deterrent was taboo. Much of the credit for this historic development - which disregarded the belief of an age in an effort to craft a new paradigm in world affairs - goes to the unwavering political support to the idea from President Bush. Naturally, the US leader himself was ecstatic when the news of the Senate vote came in. He said the development would lay the foundation of a far-going, strategic relationship. Joseph Biden, the Democratic vice-presidential candidate, noted rightly that the voting showed that the support in the chamber was broad, solid, and bipartisan.

While two killer amendments moved by Democratic senators were shot down, the legislation that was so overwhelmingly endorsed makes it clear that cooperation in the civil nuclear field would cease if India conducted a nuclear test. This is in line with the purport of the measure passed in the House of Representatives last week as well as the Hyde Act. But Indians would not have failed to note that in order to bring the Democrats around, before the Senate vote, secretary of state Condoleezza Rice wrote to Senate majority leader Harry Reid that "most serious consequences" would

follow if India were to go in for a test in the future. Not only would nuclear cooperation cease but other sanctions would also follow.

Conceptually, there is nothing surprisingly new about this, given the traditional American perspective on non-proliferation. Equally, however, such thinking is not in accord with the spirit of the negotiations of the bilateral 123 Agreement between the two countries. Therefore, there is certain to be considerable interest in New Delhi in the presidential statement that would accompany the American legislation. Meeting the Indian Prime Minister in Washington recently, President Bush had said the final outcome ought to be such as to be acceptable to both the United States and to India. India would naturally be waiting to see what mitigating language he brings into play to align the new US legislation with the meaning and intention of the 123 Agreement signed between this country and the US.

The Indian leadership has been emphatic that it would be guided solely by the 123 Agreement, which envisages that both sides take a look at the balance of circumstances pertaining to security in the region, should India conduct a test. Essentially, this means that future testing does not automatically mean end of nuclear cooperation with the US. There is also the consideration that countries like France and Russia do not bring with them the equivalent of the newly passed American legislation in respect of nuclear trade with India. If the US envisages a transformed era in relations with India, this is something that cannot be kept out of view.

APPENDIX - XXVIII

Editorial in the *Hindustan Times*: Deal's done: Now to take advantage of it.

New Delhi, October 12, 2008.
